January 25.—A number of trenches on Hill 304 at Verdun change hands as the Germans succeed in wrenching them from the French. The French line is pierced, 500 prisoners are reported taken, and many guns captured.

More fighting on Dead Man Hill is reported from the Verdun sector, together with a number of raids, in which both sides claim success. Lieutenant Guynemer brings down his twenty-seventh airplane in the latest engagement.

January 26.—Small success, according to London, attends a violent German attack on Verdun. The French claim to have won back practically all the ground lost at Hill 304, but the statement is disputed by Berlin.

January 27.—London admits that the situation at Verdun is uncertain, as the Germans hold a small part of Hill 304, which the French try repeatedly to retake. The British troops, further north, make a new attack on the German trenches in the Somme Valley, and take 350 prisoners in the neighborhood of Le Transloy.

Paris reports that Lieut. George Guynemer has brought down five enemy aeros in three days, bringing his total up to thirty.

Seven hundred thousand inhabitants of the invaded regions of northern France are reported under enforced labor for the Germans, according to the Mayor of Ouchy.

January 28.—Hill 304 continues to be the center of the fighting in the Verdun region. The German headquarters announce repeated French attacks on the position, all of which were failures. A hand-grenade fight between French and Germans on the side of the hill toward Morte Homme is reported from Paris, with the statement that there has been a heavy artillery bombardment of the position by French guns. At Les Eparges, on the heights of the Meuse, the French enter German trenches, find many dead and take much booty.

January 29.—Four times, according to London, the French attempt by counter-attack to win back the trenches on Hill 304 which were lost to the Germans on January 25. All of the charges are declared failures, and London admits furtier that the Germans did not lose a foot of ground.

A brisk attack by the British northeast of Armentières is reported from London, which adds that the raiders reached the third German line and brought back some prisoners. A raid near Vermelles is also announced,

January 30.—The French, according to word from London, announce that they have checked the German attacks on Hill 304, but give no indication that they have regained any of the ground recently lost to the German forces. The repulse of a German attack north of Badonviller is reported, with the capture of some prisoners by the French.

January 31.—The French report gains in Alsace, as two lines of German trenches near Leintrey are raided and prisoners taken. The British also take a number of prisoners near Le Transloy, repulsing German outposts on the Angre.

EASTERN FRONT

January 24.—In the Dobrudja, the Russians cut off the detachment of Bulgars which recently crossed the Danube and annihilate them. Reports have it that by this victory the danger of an immediate attack on Bessarabia is removed.

In the Riga sector, the Germans attack between the Tirul marsh and the River Aa, forcing the Russians back a mile and a half, the distance of their earlier advance.

January 25.—The German forces continue to win on the Riga front, making small advances of a few yards each day, admits London. The latest reports mention the capture of Russian fort. positions on a six-mile front, and that prisoners to the total of 1,700 have been taken by the Germans in attacks on the River An-

January 26.—The Russians are twice driven out of positions along the River Aa, as the German forces take trenches on both sides of the stream, together with 500 additional prisoners. Russian efforts to stop the advance are temporarily successful, says Petrograd. as in one place near the river the Russians advance a mile, but are thrust back again; and near the Tirul marsh a German position, with some prisoners, is taken, but lost later.

January 28.—The Russians strike a smashing blow in the Teuton line, says London, as a mile-wide gap is torn in the ranks in Bukowina, close to the Roumanian frontier. Berlin admits that the offensives on the Sereth and Riga fronts have been temporarily stopt, and that near Meste Canesei. many prisoners were taken by the Russians and the German line had to be withdrawn "because of superior pres-sure." The reorganized Roumanian Army is reported ready for a new offensive in the spring.

January 29.—The the Russians announce the capture of more than a thousand prisoners in their offensive near Meste Canesci, London now admits that they have not pushed the advantage. The Teutons, in a new position, are said to have repulsed further Russian advances.

On the Riga front a heavy snow-storm impedes the campaigning, and in Galicia a drawn battle is reported from the Zlota Lipa banks.

January 30.—Berlin reports the renewal of fighting on the Riga front, in the River Aa district, with development favorable to the Teutons. The Russian capture of prisoners, according to Petrograd, reached the total of 1,158. men and officers.

GENERAL

January 19 .- A Berlin newspaper sets the total German losses in the war at 2,000,000 men, and estimates that there are about 7,000,000 men available, enough to carry on the fighting indefinitely.

January 25.—A small, unidentified German war-ship bombards the Suffolk coast of England during the night, inflicting slight damage. There was no panie, adds London, and no casualties.

In accordance with a recent ultimatum from the Entente, Greece presents an official apology to the Allies, expressing regret for the recent events in Athens when visiting troops were fired upon by the Greeks.

January 26.—The Russian Foreign Office indorses President Wilson's peace-address to the Senate, with the state-

The serious mistake is not made by the man who sets Nut Trees, but by the man who does NOT set them." Set a choice selection of these hardy, vigorous, "Northern Grown' Nut Trees about your home, or elsewhere on your estate-

THIS SPRING!

"Northern Grown" means specially bred to severe changes of climate and temperature, strong, vigorous, husky young trees, ready to offer unyielding resistance to severest weather; trees with a northern bred constitution that means successful growth and prolific bearing.

They are the sort worth having.

Look at this record of

English Walnuts

The Thomson Orchard, near Rochester, 228 Seedling Trees, the largest commercial bearing orchard in the East, produced in the Fall of 1915, 260 bushels of tealnuts, 32 pounds to the bushel, the bulk of which sold at 25 cents per pound, wholesale, nearly \$2,000.00. This orchard has been in bearing many years, with occasional temperature 20 degrees below zero.

Filberts

are hardy and sale to plant in zero climates, early to bear, and produce the most delicious nut meats.

Pecans

are hardy, rapid growing trees, yielding prolific crops of sweet, tender nuts, and are magnificent decorative or shade trees of symmetrical growth for Lawn, Park or Street.

Not trees are not only beautiful, and productive of an ample supply of healthful foods for your own use,

They are Exceedingly Profitable!

Home production is inadequate to supply the Home Market, and the annual importa-tion of these nuts are enormous. This is a safe and sound investment for YOU. There is a wide-open, quick, and profitable market for all you can produce, yielding gratifying dividends on your investment and calling for comparatively little labor and attention,

All our nut trees are highly ornamental You can set them with the most reasonable assurance of sucress. Absolute satisfaction on every point will be yours. Our expert advice is sought by many; it is YOURS-FREE, on request.

Our 1917 Catalogue and Planting Guide will come to you quickly on cognett. It explains Nut Culture, When Where and How is Plant; also Fruit and Koré Culture, care of Shrukr and Europeens.

ment that it has made a most favorable impression upon the Russian people.

Eleven hundred yards of Turkish first-line trenches southwest of Kut-el-Amara, together with portions of the second line, are taken by the British forces. London, which is responsible for the statement, adds that the Turkish losses were extremely heavy.

January 27.—A dispatch from Rotterdam states that the Germans in charge of Antwerp have succeeded in raising the German liner Gneisenau, which the Belgians sunk in the harbor-mouth in 1914, and have thus cleared the harbor for commercial use.

January 28.—The British auxiliary steamer Laurentic, of 14,892 tons, is sunk off the Irish coast by a U-boat or mine. One hundred and twenty-one of the crew of 300 are saved.

London hears that the British have resumed their offensive against the Turkish positions near Kut-el-Amara and retaken from the Mussulmans the trenches lost a few days before, Many counter-attacks are reported repulsed, and four hundred Turkish dead are found in the captured positions.

January 29.-New British gains are announced from the vicinity of Kut-el-Amara, as Turkish first and second lines are captured, along a front of 4,300 yards. Third- and fourth-line trenches on a front of 600 yards are also reported in British hands, while 127 prisoners are taken, and the number of dead is counted to 950.

Berlin announces the sinking, on January 25, of an Allied troop-ship in the Mediterranean by a German submarine. The vessel, which was crammed with soldiers, is said to have sunk in ten minutes.

January 31.- A semiofficial communication from Paris states that the French shot down 417 German aircraft in 1916.

Berlin states that more than 4,000,000 tons of shipping have been lost by the Allies since the opening of the war.

FOREIGN

January 25.—The Mikado dissolves the Japanese House of Representatives as a climax to a series of disturbances arising in the Diet due to the appoint-ment of Count Terauchi as Premier last fall.

Fifty natives are killed and 200 injured in an earthquake on the Island of Bali, in the Malay Archipelago. More than 1.000 houses and factories are destroyed.

January 27.-King Alfonso signs the decree prohibiting Spanish vessels from plying between foreign ports. All voyages must begin or end in Spain. The sale of ships between Spanish subjects is also limited, and heavy penalties for violation of these laws are provided.

General Pershing's men are reported on the march northward in Mexico, on the way to the border. The entire the way to the border. The entire body of 12,000 men are to be with-drawn at one time. Villistas are said to be advancing in the wake of the Americans as they leave El Valle, San Joaquin, and Charcos.

January 28.—Alfred Gonzales, President of Costa Rica, is deposed by the army, supported by a number of citizens. He is reported to have taken refuge in the American Legation.

January 29.-Evelyn Baring, first Earl of Cromer, for nearly a quarter of a century actual ruler of Egypt, dies suddenly in London, aged seventy-six.

EAD CYCLE COMPANY WEATER TO CHICAGO

Lloyd-George is exposed as three women and one man are arrested in Derby, England, and charged with conspiracy to murder. All are said to be conscientious objectors to war.

The delegates to the Mexican Constitutional Assembly sign the new Mexican Constitution upon which they have been working for two months. Landholding by foreigners is prohibited, and all natural resources of the country are declared to be the property of the Government. The Catholic Church is also affected by the practical confiscation of its property.

DOMESTIC

January 24.—After the contract for new shells for the Navy had been awarded to the Hadfields Company, of Sheffield, England, it is given out that the British Government will not permit shell-deliveries until after the war. Secretary Daniels announces that in this case the contract will be awarded to an American firm at a higher cost.

January 26.—According to dispatches from Arivaca. Ariz., a number of Mexican troopers fire upon American cowboys in a light near a settlement called Stonebouse. With the arrival of American reenforcements, the Mexican invaders are driven across the border.

The North Dakota House of Representatives, called the "Farmers' House," passes a bill calling for a new constitution for the State. The new constitution, it is believed, will call for State ownership of public utilities.

By a vote of 221 to 132, the House passes the Rivers and Harbors Bill, colloquially known as the "pork" bill, calling for disbursements of \$38,000,000 in internal improvements. The bill goes to the Senate after the resolution authorizing the President to veto items of the bill is beaten in session.

January 27.—Mayor Hiram C. Gill, as well as the Chief of Police, and an exSheriff of Seattle are indicted for violation of the Federal antiliquor laws. The charge is that of smuggling liquor into Seattle under police protection and accepting bribes.

January 29.—President Wilson vetoes the Immigration Bill passed recently by Congress because of its literacy-test requirement. The test has been vetoed before by President Wilson, and by Presidents Taft and Cleveland, on the grounds that it is unfair. It is rumored that an attempt will be made to pass the bill over the President's veto.

The first Defense Bill, carrying a total of \$51,000,000 to be spent for coast fortifications, passes the House.

The Oregon House of Representatives passes the "bone-dry" bill, prohibiting the importation into the State of any liquors. The bill now goes to the Senate.

January 31.—Washington receives the German note prescribing unrestricted warfare at sea after February 1. A barred zone is defined, into which one American vessel, operating under cortain regulations, will be allowed to go weekly. The note recalls all previous U-boat pledges given to the United States.

The Senate at Washington passes the Jones Bill to make Alaska a prohibition Territory. The bill would prohibit manufacture or sale of intoxicating liquors in the Territory and also the transportation thereto. It has not yet passed the House.

February I.—Collector of the Port Malone closes the port of New York to all outgoing vessels upon Washington's receipt of the German note.

Hudson Super-Six is Not A Brother of the Six

The Feature Which Won Its Supremacy Is Controlled By Hudson Patents

A Six now rules in Motordom—where the trend, not long ago, was toward added cylinders. A Six holds all the worth-while records. A Six outsells any other front-rank car. But it is the Super-Six, remember—with the Hudson invention—which added 80 per cent to six-cylinder efficiency.

The Light-Six type, some years ago, attained the heights of popularity. It so excelled the previous types that it was, for some years, the reigning type.

But engineers knew that in the Six at its best fully half of the power was being lost in vibration. They knew that friction and wear, within the motor, limited its endurance.

Leading engineers, including the Hudson, started out to end these faults. For a time the best way apparent seemed the V-type motor. So in 1915 — before the Super-Six was presented—the trend was to Eights and Twelves.

There can be no doubt that those types soon would have superseded Sixes. Maker after maker adopted them. The Super-Six is the only invention which turned the tide back to the Six.

An Almost Twice-Better Six

What changed the condition was the Super-Six invention, made by Hudson engineers.

They discovered the fault in the Six. Then they worked out the remedy. The result was to add 80 per cent to efficiency, with no added size or cylinders.

That vast step forward made the Super-Six supreme. Never had a motor shown such power for its size, never such flexibility, never such endurance. That fact is still true. And the evidence is, it is bound to long remain true.

But that is the Super-Six motor, invented and patented by Hudson.

It Won All the Laurels

All the worth-while records have been won by the Super-Six. That is, speed records for stock cars. Records for quick acceleration. The hill-climbing records, including Pike's Peak.

Endurance records most important of all —have been broken by enormous margins. The 24-hour record was broken by 52 per cent. The transcontinental record was twice broken in one continuous 7,000-mile round trip.

So the Super-Six excels, beyond possible question, in every quality you prize.

For men who want a great car, no car in the field today approaches the Hudson Super-Six.

Now 25,000 Owners

Now 25,000 fine-car owners are driving the Super-Six. Could we have supplied them, there would have been thousands more.

The Super-Six, in one year, has come to outsell every rival. That is, every car above \$1,200.

In that year, too, we have made Hudson bodies studies in beauty, luxury and comfort. So the Super-Six looks its supremacy.

The car is now equipped with a gasoline saver, also a development of Hudson.

If you want these advantages, and a type which can't be supplanted, your choice must be the Hudson Super-Six.

Let your Hudson dealer show you Super-Six performance.

Into a Child's Mouth

Goes Anything and Everything

For That is Child Instinct

URING the child's play hours you cannot be always on hand to prevent its putting things, and sometimes very dirty things, into its mouth.

But you can teach the child to wash its mouth morning and evening with

Dioxogen

(A teaspoonful to a quarter of a glass of water)

Then you are taking every reasonable precaution against germ infection and you are forming a habit that, if anything, is more important to health than brushing the teeth.

Many grownups of to-day are suffering because they were not taught mouth hygiene.

THE SPICE OF LIFE

Rapping Somebody.-CITIZEN-" I see we have ordered a new aeroplane for our army."

SECRETARY OF WAR-" Why, I thought we had one."-Life.

Cultivation.- "Father, what do they mean by gentlemen farmers?"

"Gentlemen farmers, my son, are farmers who seldom raise anything except their hats."-Tit-Bits.

His Best .- MINISTER-" And do you forgive your enemies? "

PENITENT-" Well, I can't say I exactly forgive them, but I do my best to put them in a position where I can sympathize with them."-Life.

Fashion Forbids,-"I am not afraid that my daughter will ever marry in haste."

" Why not?"

" It will take at least six months to prepare any trousseau she would consider fit to marry in."-Kansas City Journal.

Useful.-" Now, this is the kind of movie I like. It's educational."

"Why, it's all about a vampire."

"Just so. I may meet a vampire some of these days and then I'll know how to protect myself."-Birmingham Age-Herald.

They All Try It .- "He's a clever photographer.'

Makes pictures of people as they look, I presume.

Cleverer than that. He makes them as they think they look."-Detroit Free

Slight Mistake,-Female passenger in airplane some thousands of feet up-excitedly, "Please, oh, please, won't you go down? I've just dropt my pearl cuff-button!"

"Calm yourself, madam-that's not your cuff-button, that's Lake Eric."-Puck.

Prolonging It.—Two English workmen were discussing the war.

"It'll be an awful long job, Sam," said

" It will," replied the other.

"You see, these Germans is takin' thousands and thousands of Russian prisoners. and the Russians is takin' thousands and thousands of German prisoners. If it keeps on, all the Russians will be in Germany and all the Germans in Russia. And then they'll start all over again, fightin' to get back their 'omes."-Tit-Bits.

One Way Out.—" Waiter," he said indulgently, and yet withal firmly, "I ordered one dozen oysters. Now, in my young days, one dozen comprised precisely twelve. Why, then, varlet, dost always bring but a paltry eleven?"

The waiter adjusted his serviette to the required position on his forearm and bowed elegantly. Likewise he went, "Ahem!"

"Sir," he said calmly and evenly, " none of our patrons care to sit thirteen at table." It was just then that the explosion

occurred. New York Telegraph.

From Two Sides

1-THE ABOLITION OF VICTORY

The President said to the kangaroo:
"Don't jump as far as you're able to do."
To the kitten in front of the dog he said:
"Slow up a bit; you are getting ahead."

A policeman was trying to raise a nub On a rioter's head with a locust club. "Stop that!" cried the President. "Don't you see

That you are attempting a victory?"

Little Louise on a summer day Was beating her brother at croquet. The President saw her, if you please, "Tut, tut!" he said to little Louise.

The President noticed one bright morn That weeds were racing with the corn. He made no comment on what he saw. He may have hoped it would be a draw.

A poor wretch, poised on a perilous brink. Was trying to conquer a rage for drink. Out of the tail of a saddened eye The President saw as he hurried by.

He came to a church and found within The preacher waging a fight with sin. Stout were the blows the good man dealt; Fierce was the pious rage he felt.

"Twas plain that the adversary vile Must take the count in a little while. The President thoughtfully shook his head. "It's a difficult world," the President said.

-E. D. Beach in the New York Tribune.

II-A FABLE FOR CRITICS

The sole survivors of two wrecked ships lived on adjacent desert islands. After many years one of them managed to construct a catamaran and sailed over to the other island. He was met on the beach by Survivor No. 2. No. 2 took a look at the visitor, and then thoughtfully heaved a dolomite at him. No. 1 accepted the challenge, and replied with a similar bit of applied geology.

Then they fit all over the place.

After a while, exhausted, they stopt to rost.

A brilliant idea came to No. 1. "Why not," he said, "cease fighting, and help each other gather coconuts?"

No. 2 considered the proposition.

"Your idea has great Literary Merit,"
he replied. "But I am sure it is Impractical. It sounds to me like only an Iridescent Dream."

"I guess you are right," sighed No. I.
"I have always heard that you can't change Human Nature, and that we must Face Facts, and not be misled by the Utopian Visions of Amiable Pacifists. But my idea did seem rather reasonable until we remembered all these things."

Then they went to it again; and very soon the sand-crabs were quarreling over their whitening bones.—H. C. T. in The

New York Tribiene.

THE PRESENT DEBT TO US OF FOREIGN COUNTRIES

T IS shown in a recent Wall Street Journal article that foreign countries are now in deht to the United States to the extent of a total of approximately \$2,-500,000,000, and that owing to the return by them to us of our own securities since the war began our international credit position has been improved to the extent of more than \$4,500,000,000. The largest of our foreign debtors is Great Britain, whose new collateral loan of \$250,000,000 brings her borrowings in this country to over \$1,000,000,000, which is more than twice as much as any other country has borrowed here, and nearly as much as all the other foreign loans put together. France comes next with outstanding loans of approximately \$500,000,000.

In addition to a total of foreign loans placed in this country amounting to \$2,345,570,000, it is estimated that we have taken over \$150,000,000 of foreign government internal loan bonds since the war started, including \$55,000,000 of the two Canadian internal issues, more than that of Russian ten-year internal 51-s, some of the French Republic's last internal loan, and others.

Meanwhile, with the actual foreign indebteduess to us at the present time approximately \$2,500,000,000, our own indebtedness abroad has been reduced over \$2,000,000,000 by the repurchase of our own securities from foreign holders. So that there has been an improvement in our international credit position of \$4,500,000,~ 000 simply through the repurchase of our own securities and making loans to foreign countries, which "goes a long way toward making us a creditor, instead of a debtor, nation." The outstanding foreign loans, with the offering basis, where known, and the due dates, are specified by The Journal as follows:

Angle-French Se, on \$35%, basis	1920	\$400 DECEMBER

WALL STREET'S BIGGEST YEAR IN A DECADE

During the year 1916, sales of stocks on the New York Stock Exchange were the largest known since 1906, a fact which provides an interesting comment on statements often made in recent dull years that the world never again would see such stockexchange activities as prevailed in earlier periods, one familiar reason given for the prediction being the absence of great leaders, while another was the changed conditions brought about by legislation, Government supervision, etc. Along with the statement as to sales of stocks was made another as to bonds, in which the trading set a new high record, while, as a whole, the financial transactions of the year were the most active the country had ever known. Sales of stocks in 1916 made an aggregate of 232,842,807 shares, against 172,000,000 in 1915. The bond sales reached \$1,171,625,250, which in round numbers was an increase of more than \$200,000,000 over the preceding year. Some other interesting data on the subject were printed recently in the Philadelphia

"These totals are exclusive of sales of 'odd lots' of stocks, which would swell the aggregate by many more millions; nor do they include 'over-the-counter' transactions in bonds, in which the dealings are virtually beyond computation. Quite as important in estimating the increased wealth of the country is the return by pur-chase to American investors of hundreds of millions of dollars of American securitiesmostly high-grade bonds and shares-formerly owned by foreigners which were taken over privately and assimilated in the course of the tremendously active twelve months.

Figures dealing with the country's foreign loans and the inflow of gold for the year—the latter item approximating \$700,-000,000-but faintly convey the extent to which the domestic financial structure has been buttressed. Economists differ as to the immediate benefits derivable from these stupendous gold holdings, but are virtually at one in believing that this vast board of precious metal will make the United States financially and industrially supreme for years after the channels of international trade resume their normal flow.

Industrial conditions may be summarized by the statement that many contracts for peace-products have been placed as far ahead as 1918, while available supplies of copper and other base metals for the next six months have been largely preempted. This does not necessarily imply the maintenance of prevailing quotations for these and other commodities, nearly all of which rose during the year to record-breaking tevels.

"Most encouraging auguries are offered by the transportation stocks, whose intrinsic worth was so firmly established in the final month of the year. Net earnings of the leading railway systems for the calendar year, exceeding \$1,000,000,000. are greater by one-third than those of 1913. Emergence of many minor roads from their long periods of receivership and financial embarrassment is one of the outstanding features in the country's great forward strides.

"Dealings in bonds on Exchange, at a par value of \$1,161,625,250, set a new record. The year's dealings in stocks have

THE CROWTH IN OUR WEALTH LAST YEAR

From figures published in its annual summary at the beginning of the present year, The Journal of Commerce draws conclusions as to what was the extent of our growth in wealth in 1916. Our population increased about 1.6 per cent., the value of our agricultural products, at the same time, about 29.9 per cent., an increase due more to higher prices than to larger production, but in some eases a result reached in spite of smaller production. The writer says further:

"While wheat fell off in quantity from

over 1,000,000,000 bushels to less than 640,000,000, or 36.7 per cent., the total value increased 9 per cent. The corncrop was also over 15 per cent, smaller and more than 32 per cent, higher in value. Only a few crops show an increase in quantity, and these, with the exception of rice, show a much larger increase in value. Cotton, for instance, gained only from 11,101,000 to 11,511,000 in number of bales, or less than 4 per cent.; its total value advanced over 79 per cent., or from 8002,-303,000 to \$1,078,711,000. These general results were largely due to the foreign demand caused by the war and the relative shortness of crops in most of the grains.

"For mineral products the record was ore irregular. The aggregate value inmore irregular. ereased only about 9 per cent., but that of pig iron advanced over 8812 per cent., the the putput was only 321; per cent. greater. For copper the quantity was 42 per cent. greater and the value 92 per cent. higher. In both these cases the war demand was mainly responsible. The coal-supply, both anthracite and bifuminous, declined somewhat both in quantity and stated value. Petroleum was reduced over 16 per cent, in value, the there was 6 per cent, increase in quantity,

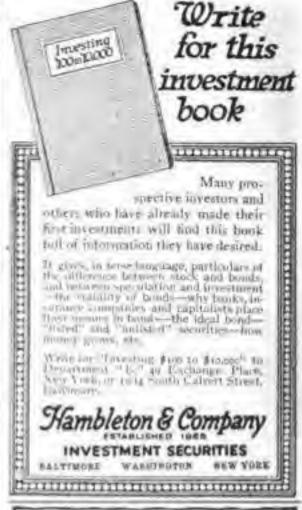

"Among statisties of trade and finance it is shown that imports increased in value by 37 per cent, and exports by nearly 55 per cent. Railroad revenues advanced 17 per cent.; lake commerce in tomage 29 per cent. New incorporations during the year were 70 per cent, more than the previous year and building construction 40 per cent, higher in cost. The amount of money in circulation was 111; per cent, more, leans of national banks 1514 per cent, greater, and bank clearings 40 per cent. It is impossible to differenriate the cause and effects in these latter statisties, but all were affected by the kind of 'prosperity' that came from war in Europe, which was very unequally shared by the people of this country."

THE SHRINKAGE IN BRITISH SECURITIES

Since January 1, 1915, there occurred on the London Stock Exchange for 387 British issues a loss of \$1,750,000 in quoted values. For the month ending on December 18, the declines were approximately \$200,000,-000. The greatest decline was shown in British and foreign Government stocks. American railway stocks, meanwhile, advanced. Since July 30, 1914, the day before Germany declared war on Russia, the decline in these 387 securities was \$2.91% 000,000. A writer in The Wall Street Journal says further on this subject:

"Taking the depreciation during the past twelve months, it appears that the must striking decline took place, naturally, in British and foreign Government stocks, nine British and Indian securities showing a decrease of \$265,000,000, and thirty-one foreign Government stocks \$200,000,000. The decline has also been heavy in railroad issues, twenty-six British railway ordinary shares depreciating during the year \$60,-000,000, eleven dehenture stocks \$100,-000,000, and thirteen preference stocks \$120,000,000. Twenty-four foreign rail-way scenities (exclosive of Americans) de-Twenty-four foreign railpreciated to the extent of \$23,000,000.

"On the other hand, there were some noteworthy eases where the value of se-urities showed substantial appreciation over the twelve-month period. This approviation was mainly manifested among the industrial scrurities, reflecting the war business and increased operations, A representative collection of thirty-eight commercial industrial shares added \$57,-000,000 in value, six copper-mining slures. increased \$52,000,000, seven shipping shares

Two chains, one on each rear wheel, are absolutely necessary—

One is rather a detriment and in most cases is even inclined to accentuate the skid and throw the car out of balance.

Is it any wonder the differential looks pained and worried when inexperienced motorists insist upon working it overtime?

Do you know the purpose of the differential and how it operates?

Without it no motor car would be able to turn a corner evenly and smoothly.

Power is supposed to be transmitted evenly to both driving wheels. When either of these wheels meets with resistance, the ever watchful differential transmits that power to the other where there is less resistance.

Now, what is the result when a chain is used on only one wheel?

A certain amount of resistance or gripping.

So the power naturally goes to the other wheel and as this has no gripping surface, it spins. The specific purpose of the chain is thwarted, worse still, it has a natural tendency to accentuate the skid.

Furthermore, can't you see this spinning will unnecessarily wear the tire and throw your whole car out of alignment?

Suppose one of your brake rods smashed and only one remained effective. What would happen when you applied the one brake?

Your car would swerve, of course. An added uneven strain would be thrown upon the whole mechanism, doing probably irreparable damage.

The conditions are similar.

The necessity for brakes for both wheels and chains for both wheels is obvious and clearly defined.

If one chain would do the work, why use more?

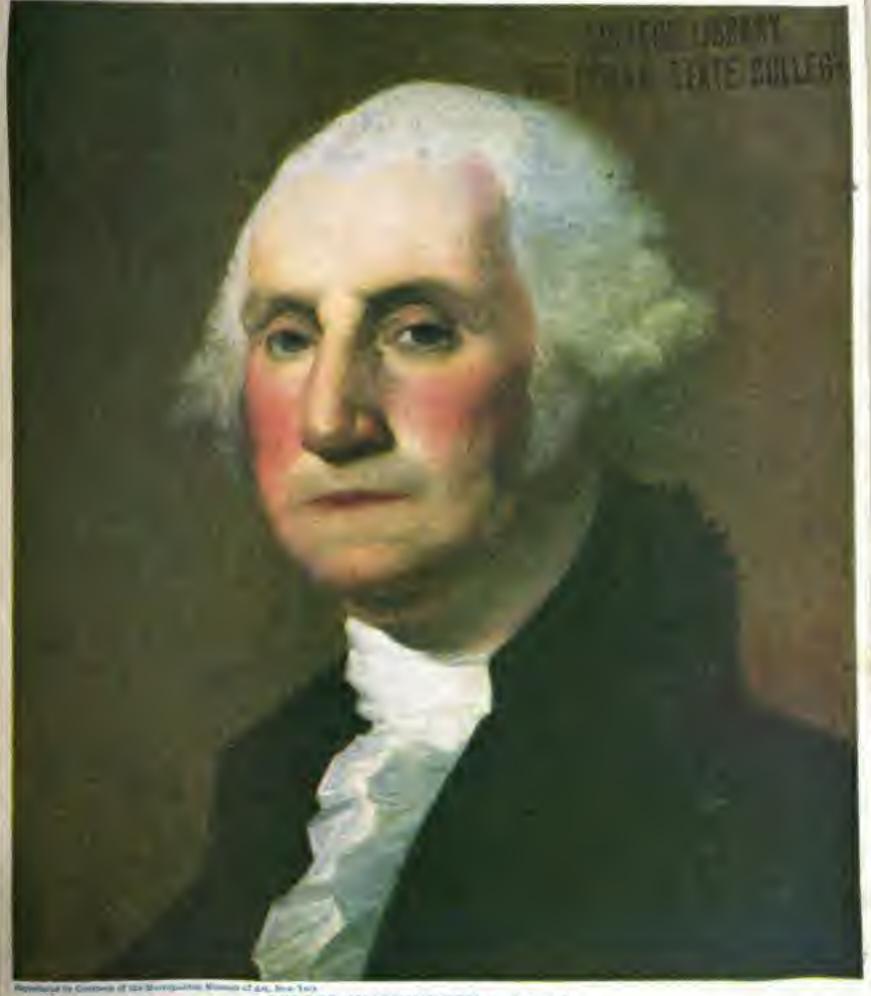

But motorists and mechanics who are well posted gaze with pity at the man who foolishly drives with only one chain when two are absolutely necessary on the rear wheels and two on the front wheels are an added precaution.

Weed Chains for all Styles and Sizes of Tires are Sold by Dealers Everywhere.

OUR FIRST LINE OF DEFENSE. BATTLE-SHIPS OF OUR ATLANTIC FLEET HEADY FOR ACTION.

OUR STATE OF PREPAREDNESS FOR WAR

THE HOUR when the United States enters the war will seal Germany's doom," declares J. L. Garvin in the London Observer, who goes on to predict in more specific terms that American ingenuity will find new ways of coping with the submarine, and that "the addition of the United States Navy to the Allies' buttle strength would perhaps make possible operations which might finally destroy German hopes at the source." But to balance against this flattering Euglish view of our military effectiveness, we have the disquieting assurance of the Chicago Erening Post that "the United States of America is prepared for war neither commercially nor phys. ically," since "we have neither a merchant fleet to carry our commerce nor an army and navy to protect it." The crisis "finds us unprepared," agrees the Chicago Tribune, which adds that our Navy "is grossly undermanned," its personnel now being twenty-four thousand short of the authorized seventy-four thousand. Still another pessimistic witness, described by the New York Tribune as "one of the highest of our naval authorities," is quoted as saying that because of our weakness in airplanes and submarine-chasers we would be unable to prevent a blockade of our own ports by German U-boats. But, at any rate, whether or not we are prepared to meet the strain of war as it is now being waged in Europe, remarks the Philadelphia Record, "we are in better trim for hostilities than we have ever been at the beginning of any previous struggle." For "our Navy is now larger than ever before," we have had two and a

an unprecedented scale, and "the mobilization on the Mexican border has contributed greatly to the fighting strength of the Army by the practical training it has given to one hundred and fifty thousand members of the National Guard,"

Thus, behind the question of the rôle we may be destined to play in this war lies the question of our material preparedness. What are the facts? As many editors remind us, the entrance of the United States would add to the ranks of Germany's foca a nation of 113,000,000 population, whose stock of gold is as large as the combined gold reserve of France, Russia, and the United Kingdom, whose pig-iron production is greater than that of all the other countries of the world combined, and whose copperoutput in 1916 was twice that of the rest of the world. The American Navy, with 151 fighting ships and a tonnage of 1,097,-000, ranks third among the navies of the world, and our merchant marine has a gross tonnage of 8,470,000. And while we have immediately available for our fighting-line on land, according to the Chicago Tribune, only "about 50,000 regulars and 100,000 partially trained militia troops," we have more than 21,000,000 males from eighteen to forty-five years old, and 4,778,000 of these, according to the estimates of Mayor Mitchel's Committee on National Defense, would not be exempt from national service because of sickness, physical defects, industrial necessities, or dependent families. We are reminded that England entered the war with an army of only about 200,000, and improvised an army of 5,000,000 while she fought. And we have the ashalf years' experience in the manufacture of war-munitions on surance of a prominent American army officer that, thanks to the

THE SUBMARINE'S MOST DANGEROUS ENEMY. SOME OF OUR FIFTY-SEVEN TORPEDO-BOATS.

development of munition-plants in the past two years, "we can provide ordnance and equipment for an American army as rapidly as it can possibly be used in the event of a war with Germany."

When diplomatic relations were broken, the nation prepared in a mood of sober resolution to meet war if it should come. The Governor of New York ordered the National Guard and the Naval Militia into service to guard the bridges and water-supply of New York City. The railroad brotherhoods and the railroad companies declared a truce in their eight-hour-day fight. The great steel and ship-building companies offered their plants, representing billions of dollars of capital, to the Government. The American Red Cross mobilized throughout the country. The War Department planned for the immediate creation of a reserve of ammunition for an army of one million men. The Secretary of the Navy asked Congress for legislation giving the Navy Department complete control of all the wireless systems in the United States, and asked authority to commandeer private ammunition- and equipment-plants. Drastic measures were framed for dealing with spice. Amendments were added to the Naval Appropriation Bill providing an additional \$150,-000,000 to hasten the construction of one hundred and thirteen war-ships authorized at previous sessions and now being built. The appropriation for anti-aircraft guns for the defense of navy-yards and magazines was increased in the House by \$2,700,000; and \$1,000,000 was appropriated to buy the basic patents of an airplane suitable for war-purposes. Mr. Henry Ford announced his readiness and ability to build for the Government without profit "one thousand small submarines a day and three thousand motors a day." The Comptroller of the Currency reported to Congress that the United States is "entrenched financially almost as firmly as it is possible for any human government to be." And President Frank A. Vanderlip, of the National City Bank, stated that the banks are prepared to absorb the proposed \$500,000,000 Government Treasury note issue without a murmur, and more if necessary. Says The Wall Street Journal:

"Lloyd George once spoke of the 'silver bullet' winning the war. Our financial arsenals are filled with those bullets, goldplated at that. We can send them to the Allies by the ship-load so long as the war lasts.

"America can take upon itself a larger part of the task of feeding the armies and civilians of the Allies. Where Germany is hungry, we have grain. Next spring we can increase the acreage of cereals, potatoes, and foodstuffs in general. Governmental regulations may even be directed to that end. We have more than 22,000,000 dairy-cows, 40,000,000 head of cattle, 48,000,000 sheep, and 67,000,000 swine. These animals mean food, clothing, and leather.

"There are 25,000,000 horses and mules, ready for the battlefront, or the farm, or wherever their labor is needed. . . . War calls for copper, steel, coal, and many chemicals. In the possession of these military necessities we are the strongest and best-prepared nation of the world. "If the short-sighted Kaiser sees nothing but a mobilization of untrained men behind our little Army, he makes his last and greatest mistake."

Few are aware of the great industrial mobilization set in motion by the National Council of Defense. The New York Tribune says of it:

"If five years ago any one connected with the Government at Washington had stood up in a meeting of manufacturers and labor men and suggested that 20,000 companies send to the national authorities reports of their equipment for making products needed in time of war, and that the Government be given the right to commandeer whole industries and set them to work for the nation, there would have been a storm of opposition and a general outery of 'Socialism.'

"Yet we are told that all this has been authorized and that it is only the beginning. Out of hundreds of larger automobile-manufacturing concerns, provision is made so that less than a score would be making cars the day following a declaration of war. Arrangements, it is said, will soon be perfected so that in the event of a serious crisis the entire industrial life of the nation would be immediately transformed into a cooperative public service. Government orders and Government inspection are to be the rule in times of peace in order to secure efficiency in the day of need.

"These and other plans of the National Council of Defense will mean probably the greatest change that has ever occurred in our history as a nation. The war has brought about at a single stroke a development of national consciousness the world over which years of agitation for Governmental control could not have achieved."

Army and Navy officers agree, according to the Washington correspondents, that war with Germany would present a naval rather than a military problem. Our Atlantic fleet, now mobilized at Guantánamo, says the New York World, "is in better fighting condition than any fleet that has flown the American flag." Altogether, says the Springfield Republican, "our Navy can add 40 per cent. to the Entente lead on the sea." In fact,

"The addition of this strength would from the first render an attempt to escape on the part of the German fleet, bottled up in the Kiel Canal and the Baltic, far more improbable than it has been even up to date. The chances of an actual dreadnought-to-dreadnought clash between Germany and the United States are all but negligible.

"A serious battle with German war-ships off our coast could only occur after the breaking of the first British line of the defense which has held since the time of the Spanish Armada. And even in the almost incredible event that the British seapower were broken, the Germans could hardly be expected to gain their victory without suffering such losses that their prospects for defeating the American squadron would be slight.

"The prime duty of our fleet would be to keep the food-ships plying between America and Great Britain. Its first practical service would in all probability be performed in patroling the coast with our lifty-seven destroyers against an attempted blockade on the part of Germany's great war-submarines of the U-53 type, and in convoying merchantmen beyond the submarine cordon which Germany might seek to throw round us."

Our naval efficiency can be greatly increased, according to the Council of National Defense, by new inventions and methods worked out by the Naval Consulting Board. Some of these devices, according to a member of the Board, "are far in advance of anything known to European navies, and in the event of a conflict will give us a decided advantage." The Cleveland Leader predicts that in case of war the shipping of the Great Lakes will be drawn on "to help provide a huge fleet of dispatchboats, troop-transports, supply- and hospital-ships, and wreeking and salvage vessels, as an auxiliary to Uncle Sam's sea-fighters." But our greatest need, in the opinion of many observers, will require a fleet of "sea wasps" to deal with the submarine menace, Preparations to build such a motor-boat patrol-fleet, we are told, have already been begun by the Navy Department. These small, swift craft are to be equipped with fore and aft guns, wireless, search-lights, and unique bombing-devices. Says the New York Evening Sun:

"Yachtsmen estimate that not fewer than one thousand boats of a type of which only a few exist in the United States to-day would be necessary for the proper patrol of the coast. In view of the speed with which patrol-boats were built for England it is believed that the one thousand boats could be built in much less than a year to substitute or supplement the work against submarines that may have to be done in the first instance by the private-owned volunteer craft. The United States has now two types of patrol-boats that were constructed for test and as a guide for yachtsmen. Both boats, one thirty-five feet in length and the other sixty-six, are capable of doing twenty-five to thirty miles an hour."

In the aeronautical branch of our defenses we are admittedly very weak, and the National Aerial Patrol Commission asks for the stationing of one thousand hydroaeroplanes along the coast and the training of five thousand aviators. If war were declared to-day, writes Mr. Sterling Patterson, the United States might be able to bring together three hundred trained aviators and about the same number of machines. Moreover—

"There is not a single kite-balloon or dirigible, or even an aeroplane, connected with the coast-artiflery. There are seventy-three forts and forty-five field-batteries virtually at the mercy of long-range guns of battle-ships lying beyond the point of vision of artiflery-observers. Every European nation maintains both balloons and aeroplanes for the purposes of observation at coastal forts. Stationary balloons are considered absolutely essential in the work of range-finding.

"Comparison of our aeronautical equipment with that of any

proportionately great European Power fills one with a sense of impotence. Great Britain, for instance—which, incidentally, is believed to be somewhat less fit aeronautically than Germany—has between three thousand and five thousand aviators. It has more than three times that number of aeroplanes."

"Direct military intervention of the United States in the war in Europe is not practicable, even were America to desire it," according to the military expert of the London Times. But military experts in Washington are quoted as predicting the passage of a universal-service law soon after a declaration of war, not only to provide a defense against invasion, but to give an offensive weapon against Germany if the war should continue two years more. Meanwhile the Philippine Senate has adopted a bill providing for a Philippine army division of 25,000 men, and the Japanese of Hawaii are prepared to offer to the United States the services of 15,000 trained Japanese reservists. Says the Hawaii Hochi, of Honolulu: "Forgetting whatever minor differences there may have been, the Japanese of Hawaii stand ready to serve loyally the flag under which they live." And in the New York Tribune we read:

"A call for 500,000 volunteers, apportioned among the States according to population, would probably be the first move of President Wilson in case of war. Under the existing law, it is necessary for him to call out the National Guard before issuing any call for volunteers, but he can demand volunteers immediately after issuing such a call."

There is a division of opinion in the American press on the question of sending American troops, in case of war, to fight on European soil. "If we failed to send an expeditionary force we would disgrace ourselves," thinks the New York Evening Sun; and the New York Tribune reminds us of Italy's unsuecessful attempt to maintain a separate war against Austria:

"The United States might as well take beed now of Italy's experience. The Entente Allies can help us even more than we can help them. Getting together with them at the start would be a counsel of the soundest wisdom and highest expediency."

On the other hand, Japan has sent no troops to fight on European soil; and in the Springfield Republican we read:

"It would be possible for the United States to act in cooperation with Germany's enemies, once Germany becomes our own enemy, without actually joining the Entente combination. It would be possible for the United States to remain politically isolated in its aims, while acting in a military sense with the Western Allies. It would be possible for the United States to wage its own war and make its own peace. In fighting England in 1812–1814, the United States did not form an alliance with Emperor Napoleon, nor join forces with England's enemies."

ONE OF THE GIANTS THAT GUARD OUR GATES. A POURTEEN-INCH DISAPPEARING GUN AT SANDY HOOK.

Copyrighted by Universit & Underwood, New York.

GERMANS AND AUSTRIANS IN NEW YORK CITY SWEARING ALLEGIANCE TO THE UNITED STATES.

After our severance of diplomatic relations with Germany many cities reported a rush of subjects of the Central Powers to become American citizens. In New York City in one day nearly a thousand Germans. Austrians, Bulgars, and Turks took out their first citizenship papers.

WHERE GERMAN-AMERICANS STAND

ECALLING THE CLEAVAGE of sympathies among our people that so suddenly revealed itself at the outbreak of the war, editorial observers were keen to note the effect of our break in diplomatic relations with Germany, and they rejoice in the main to find that while everywhere deep regret is exprest that the President should have felt it obligatory to give his passports to Count von Bernstorff, the German-American and Austro-American population bear witness in various demonstrations throughout the country to their unswerving loyalty to the United States. "Germany is their mother, but the United States is their bride," is the slogan. Of course, some German editors and spokesmen modify or almost wholly disagree with this sentiment, but, on the whole, the attitude of this part of our people may be summed up in the expression of the Omaha Tribune, described in press dispatches as the largest German daily paper in the West, and which formerly was a severe critic of the Administration. "Our allegiance belongs to America first, last, and all the time," this journal declares. "We have duties toward our adopted country. These duties we must perform and will perform above all considerations, regardless of what the future may have in store for us." Another characteristic opinion comes from Mr. E. C. Steinmann, president of the German-American Alliance of Colorado, who is quoted in a Denver dispatch to the New York Times as saying that "the man who violates his oath of allegiance is a traitor, and no specious plea of any nature whatsoever will serve to change that fact."

In a dispatch from Portland, Oregon, we read that on February 4 German-American citizens of that city assembled to the number of one thousand five hundred to celebrate Emperor William's birthday. When they met at the German House they found it decorated entirely with American flags, all German costumes had been discarded, and German national songs eliminated from the program. When "America" was played by the orchestra, we are told, the audience rose en masse and sang the anthem. Philadelphia dispatches inform us that on February 8 the German-American National Alliance, representing three million constituents, indersed the President's action in breaking with Germany. In a statement to the press Dr. Charles J. Hexamer, president of the organization, is quoted as saying that in case of war—

"We will organize German-American regiments, and, in caso of a call for volunteers, we mean to show the American people with what readiness and patriotism we will answer a call to arms for the defense of the flag and the country.

"In case of war we will at once turn over all the moneys we have raised for the German Red Cross and German widows and orphans to the American Red Cross and for the benefit of widows and orphans of our boys who have to give their lives to defend our country against Germany."

An official expression of allegiance is reported from Hoboken, a city with a large German population said to have been strongly in favor of the Teuton cause as against the Allies. The City Commissioners, we read, passed a resolution which runs as follows:

"Resolved. That we do hereby express our unqualified approval and commendation of the action of the President in making known to the Imperial Government of the Empire of Germany that the United States will not submit to its dictates or to the dictates of any other foreign Government in an attempt by them to restrict the free use of the seas by vessels of the United States; and

"Resolved, That it is our fervent wish and prayer that the friendly relations beretofore existing between the United States and the Imperial Government of the Empire of Germany shall not be marred by any overt act of the said Government in the cause of the prosecution of the warfare with the Empire of Great Britain and its allies, and that ere long peace shall reign in all lands and among all people, who may become molded into a great brotherhood of men."

In New York we hear of the authorized representatives of more than five hundred German-American societies gathered at the Arion club-house to arrange for a charity bazaar in aid of the war-sufferers of the Teutonic Powers. But the greatevent of the previous day, the break with Germany, temporarily put the plans for the bazaar by the board, and, as related by a New York Sun reporter, "in response to a call they instantly pledged their loyalty by a rising vote," and sent a telegram to the President of the United States "to which the best native American could not object." Among the speakers quoted by the Sun man, the most impressive, perhaps, was Mrs. E. J. Dornhoefer, president of the German-American Ladies' Alliance of Manhattan and Queens, who is thus pictured:

"Thirty-five years my husband has been a citizen, and we are good Americans' thus began a matronly looking woman. Her speaking voice was a delightfully rich contralto. She rose suddenly from a chair far forward, and the crowd swung their chairs around so that they could hear her better. The fact

that her voice trembled a bit and that there were unmistakable tears on her cheeks did not cause a loss of interest.

"Fifteen of mine are in the war in Europe—brothers, uncles, cousins, and nephews, and five of them I know have been killed and more I do not know about, she went on in an impassioned flow of German that was a delight to listen to. 'As a little girl I saw the war of 1870, and I know what America of this generation does not know, all about the frightful suffering of war. So I pray God we will not go to war—with Germany or any other country.

"'I love my Fatherland. Why shouldn't 1? What I think

personally about all these things I keep to myself. But—my three boys, they are Americans. What must be, must be. I would be a bad mother if I did not teach them to love and live and die for their country. America. Let there be no war. But if war must be, they will march out to fight for their America. They told me so in our home in Queens only this morning, and it made me happy to hear them say so. And it made their papa happy, too."

As to the German-American press, an inquiry addrest by the New York Tribune to sixteen newspapers in various sections of the country reveals the fact that they deeply regret the break, a great number pledge loyalty, many plead that we may be kept out of war, and some charge Great Britain with having first offended against international law. Editorial observers generally issue warnings against the hot-headed partizan, whether in a newspaper column or in the street, and the Chicago Herald criticizes Mr. Horace Brand, editor of the Illinois Stants-Zeitung, who is quoted as saying in his journal that if America entered the war a "war of races would break out in our midst; passion would be aroused and hate engendered; internecine warfare would result." Basing its assertion on tangible evidence, The Herald believes that Mr. Brand "does not represent the sane and soher German-

American population of Chicago," or that he "voices the sentiment of his race resident in the United States," and it adds:

"The loyal German-Americans of Chicago should reason with Mr. Brand. They should point out to him that it does not redound to Chicago's credit to have practically the only German editor in America who breathes threats or prophecies of that most horrible thing, a race-war."

The Chicago Tribune is one of many journals to remind American-born citizens that the "feelings which are tearing the souls of so large a body of Americans impose a serious duty on the rest of us." Above all, we are told, every citizen should avoid "every word or act which may make the United States any less a unit," and it adds:

"The German-Americans are good citizens of the United States. While we are in our right senses we have no doubt of that fact. We must see to it that we remain in our right senses. To lose the German-Americans would be a greater loss to the United States than to lose half an army."

"STARVING ENGLAND"

SINCE THE ONLY EXCUSE offered for Germany's intensive submarine campaign "is desperate necessity—the imperative need of self-preservation, the deliverance of Germany from starvation, and defeat by starvation of Great Britain," the practical question is—Will it work? For, adds the Baltimore Sun, "if no appreciable effect can be produced on the British food situation," the move "represents the extreme

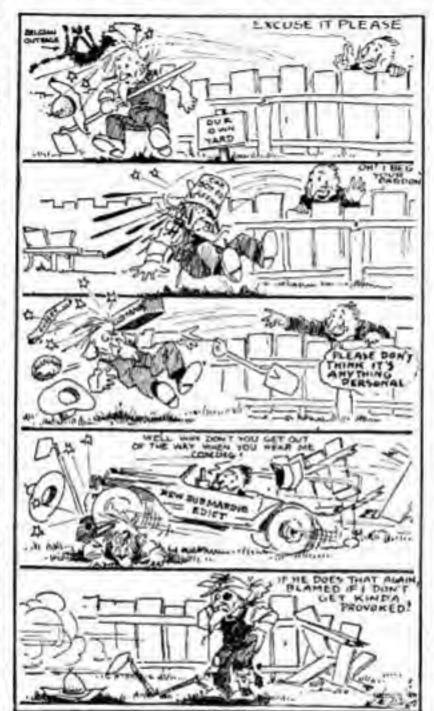

> As the New York Times estimates the chances of starving England, "it does not seem that ruthlessness is such an infallibly sure road to success as to be worth all its employment will cost." Similar doubts occur to the New York Commercial, which observes:

"The British Isles can be made self-supporting, or so nearly so that a blockade would not starve the people.

"Even if the British Isles can not produce enough food, so much can be added to the present production that all that will be preded can come in through a single guarded port. . . . Just what is wrong with the submarines is not known, but they do not, and presumably can not, attack battle-ships and cruisers. England has enough war-vessels to line a lane into Liverpool from the open ocean, and as long as she can do this Germany can not starve the people, tho they may have to tighten their bolts."

Since this matter of "starvation" is rather complex, the New York Evening Post suggests that "the safest method of approach is to ask, What must the German submarines accomplish in order to reduce England to the condition in which Germany herself stands in the matter of food?" The Evening Post estimates that before the war England imported two-thirds of

her food, and three times as much per head of the population as did Germany; that is, "the respective food-import needs of the two nations were 66 per cent, and 22 per cent. The Allied blockade has virtually out off German imports," depriving the German people "of nearly 20 per cent. of its food requirements for more than two years. . . . For the English people to suffer the same percentage of deprivation, England must lose a little more than one-third of her food importations," or "onethird of her available shipping tonnage." At the end of 1916, British merchant shipping was approximately what it was when the war began, "a little over twenty million tons," So The Evening Post concludes that "Germany must sink something like five million tons of English ships before England is as near to 'starvation' as Germany is to-day," and that means twice as much as she sank during the first twenty-nine months of the war. "Berlin's own estimate of Britain's merchantmarine losses up to the end of 1916 is 2,794,000 tons. Germany must sink three times that amount of tonnage and more before

AND SOME FOLKS ACCUSE US OF "RUSHING INTO WAR!"
- Darling in the New York Trillanc.

she brings England to her knees; and she must do it, by her own account, in a few months."

Now the first results of the German submarine campaign were impressive. In the first week of February there were sunk, according to the New York Times, fifty-nine ships (thirty-two of them British) with a total tonnage of 115,219. But, comments the Baltimore Sun, keeping in mind the Econing Post's computation, "at this rate, it would require about 714 days, or

"THE PREEDOM OF THE SEAS.""

— Bonabey in the Cleveland Plain Dealer.

nearly two years, to destroy five million of British commercial tonnage; . . . if the rate of the first week is not vastly exceeded, the blockade will be virtually a failure so far as starving Great Britain is concerned."

Other editors call attention to the provisions being made by England to cope with the submarine crisis, such as the convoying and arming of merchantmen. And these plans, a writer in the New York Times points out, are known to include "a swarm of mine-sweepers, the utilization of scores of fast destroyers, a vast fleet of submarines, naval hydroplanes, and many thousands of fast-going motor-boats, each fitted with one, and in some instances two, light guns; the use of nets made of the strongest of metals, and, of course, countermining."

But the Milwaukee Free Press laughs at the stories of a great British antisubmarine fleet. We may be sure, it says, that—

"Whatever antisubmarine weapon the British Government may possess, it has been used to the utmost up to this time. And if it was used to the utmost with such complete failure in limiting even Germany's restricted undersea warfare, how much more futile will it be now that Germany has turned loose hundreds of her newest submersibles under a wide-open policy?

"Every sane Englishman knows that, with Germany's establishment of an intensive submarine blockade, the foodsupply of the island will have dwindled to nothing within sixty or ninety days."

Perhaps, remarks the Philadelphia Evening Ledger, "what the U-boats are expected to do is to decrease France and Italy's supply of food and coal and Russia's supply of munitions rather than to starve England." This, the New York Evening Post thinks, would be "a much more attainable object," and Bethmann-Hollweg revealed it plainly "in the emphasis he laid on the food and coal difficulties in France and Italy." So that the purpose of Germany's new step "is not the speedy ending of the war by a body-blow at the arch-enemy, but intensifying the pressure on other members of the Entente in the direction of a separate peace."

JAPAN'S INSISTENCE ON LAND-RIGHTS

FEENLY AS WE FEEL about unrestricted submarine warfare and jealous as we are of our rights on the high seas, we are also under obligation to be considerate of the rights of other nations, observes the New York World, with a critical glance at the legislators of Oregon and Idaho for their attempt to enact autialien land-ownership bills into law at the very moment our international relations were reaching the highest point of tension. The contention of those States is that the legislation would rule against all aliens alike, but outside observers claim that it is directed chiefly at Japan and recall the situation in California in 1913 when Secretary Bryan, at President Wilson's request, made a journey to that State in an effort to induce the abandonment of anti-Japanese legislation. The "consequence, if not the direct purpose," of the Oregon and Idaho legislatures, The World goes on to say, was to embarrass the United States, and it charges them with "a profest intention to assert State rights regardless of the national interests and engagements." The climax was brought about, press dispatches inform us, by the approach of the Japanese Ambassador, Mr. Annaro Sato, to the State Department. No formal protest was lodged, according to a Washington correspondent of the New York Times, but it was made evident that the Japanese Government had no intention of abandoning its opposition to any legislation that might discriminate against its citizens. The State Department sought the immediate cooperation of the Senators from Idaho and Oregon. Senator Chamberlain, of the latter State, is quoted by a Washington correspondent of the New York Technic as saying to Mr. Frank L. Polk, Counselor of the State Department, that "To advise the legislature of my State not to pass a bill preventing Japanese from acquiring land there would be to act directly contrary to the dictates of my conscience," But Senator Borah sent a telegram to the State Senate of Idaho, which the press record in part as follows:

"I am quite in favor of Idaho exercising the right when necessary to say who shall own her land, but in this critical hour for our Government we ought not to exercise that right unless the situation commands us to do so. Furthermore, I have reason to believe the whole matter can be adjusted satisfactorily through diplomatic channels."

In response to the request of the State Department, the alienland bills were killed in both States, and the prompt action of Idaho and Oregon wins them warm praise for their genuinely patriotic spirit in putting the welfare of the nation before their individual interests. Japan objected to the proposed Idaho bill, Boise dispatches advise us, for the same reason, that it is opposed to California's similar antialien land-ownership law. And we bear from Salem that Oregon's antialien land bill was aimed to prohibit Japanese, Chinese, and Hindus from owning land or making long-term leases. The author of this bill, Senator Wilbur, of Hood River, is reported by the press as saying in the State Senate that he withdrew it of his own volition, and without pressure from the State Department, and he added:

"I have not lost faith in this bill. I think the time is coming when members of the Oregon legislature will be sent here with instructions to pass such a law. I hope the time is coming when we should no longer submit to the dictation of a foreign Power in our internal affairs.

"If these were normal times I would not withdraw this bill, but on account of existing conditions I wish to leave the Government at Washington free to handle the situation."

The Pittsburg Desputch and other journals point out that present internal difficulties in Japan made the alien land-law movement most inopportune, because "in the disturbed condition of popular feeling there over the political complications that led to the dissolution of Parliament there is danger of dragging in this American legislation as an issue and forcing the Government to radical action." We read then:

THE NEW DICTATION.

-Hope in the Chicago Tribuoc.

-Westerman in the Columbus Ohio State Journal.

TWO HOLD-UPS.

"Under the agreement with Japan, Tokyo claims the United States has consented to Japanese ownership of agricultural as well as other land, the point in dispute. If that is so, the State legislation would be in conflict with the treaty which, under our Constitution, has all the force of the supreme law of the nation. The test would come before the United States Supreme Court if it could be got there. But neither Government wishes it carried to that point, preferring to rely upon a sort of 'gentlemen's agreement' which avoids involving the honor of either nation."

There is something seriously wrong with our national structure, remarks the Brooklyn Eagle, when in a national crisis it is necessary for the Federal Government to plead with two State legislatures not to embarrass the Government by passing State laws contravening a solemn agreement entered into with a foreign Power. While there is nothing alarming in the present situation, it is highly illuminating, according to this journal, which wonders how we can ever formulate an international policy "if the Government is impotent to carry out its contracts," and it adds:

"More than once we have had to confess our imbility to enforce in our own courts the treaty rights of aliens. We have had soloun agreements overridden by vetoes of State legislatures or by labor dictators. Even now . . . there is no likelihood that there will be anything more than a postponement of the embarrassment for the Federal Government, which can do nothing but plead with the legislatures in question."

To those who would criticize Idaho and Oregon for deliberately adding to the anxieties of the nation in a time of crisis, the New York Evening Post says such an intention is "inconceivable." This journal adds:

"What happened in the Far West is not really a case of putting local prejudice above the national necessity. It is rather an illustration of parochialism here in the East. These measures have no doubt been under consideration for some time in Idaho and Oregon, but have aroused no attention elsewhere because they had not yet led up to a crisis; it is the crisis that makes good newspaper copy. The sudden danger as regards Germany, by turning people's minds to all the possibilities involved in war, threw Idaho and Oregon into sudden relief."

IGNORANT ALIENS BARRED

THE THIRD STRIKE is not necessarily an "out" in some games, it has been observed. Three times the literacy test for immigrants was approved by Congress only to succumb to a Presidential veto. But a fourth opportunity is given; Congress overrides the veto, and there is a "home run" instead of a "strike-out." The score stands, and after May I illiterate immigrants will be denied access to our less hospitable shores. This bill, the first to be passed over President Wilson's veto, was carried by a vote of 287 to 106 in the House; and 62 to 19 in the Senate. Thus, observes a Washington correspondent of the New York Times, has Congress victoriously "ended a fight for the restriction of immigration by the literacy test which began in 1897, when President Cleveland vetocd the measure. President Taft also vetoed the provision, and President Wilson has done so twice." To be admitted under the new law, says The Times editorially,

"Aliens over sixteen must read in any language or dialect designated by the immigrant 'not less than thirty or more than forty words in ordinary use'; and aliens who on account of race or religious persecution have had no opportunity to get an education are exempt from the test. Any admitted or admissible alien, or citizen of the United States, 'may bring in or send for his father or grandfather over 55 years, his wife, his mother, his grandmother, or his unmarried or widowed daughter, if otherwise admissible, whether such relative can read or not; and such relative shall be permitted to enter,"

"The literacy test apart, the Immigration Bill contains elaborate and detailed provisions of exclusion, most of which are to be commended. 'All idiots, imbeciles, feeble-minded persons, epilepties, insane persons,' and so on, paupers, defectives, eriminals, the tuberculous, anarchists, these and other exclusions for physical or moral reasons and the welfare of the State, will, if faithfully administered, be a national protection."

Not the South alone, but "the labor element in the North, the American Federation of Labor, the farmers' organizations, and millions of citizens demand restricted immigration," shouted Congressman Burnett during the debates in the House of Representatives. But the Minneapolis Journal is inclined to the belief that "Mr. Wilson more accurately represents the sentiment of the country" regarding Mr. Burnett's measure than does Congress. If the daily press reflect public opinion, The Journal is apparently correct. In his veto message President Wilson thus briefly stated the chief arguments against the test now adopted:

"The literacy test constitutes a radical change in the policy of the nation which is not justified in principle. It is not a test of character, of quality, or of personal fitness, but would operate in most cases merely as a penalty for lack of opportunity in the country from which the alien seeking admission came.

"The opportunity to gain an education is in many cases one of the chief opportunities sought by the immigrant in coming to the United States, and our experience in the past has not been that the illiterate immigrant is as such an undesirable immigrant. Tests of quality and of purpose can not be objected to on principle, but tests of opportunity surely may be."

Moreover, added President Wilson, to exempt from the test aliens fleeing from religious persecution "might lead to very delicate and hazardous diplomatic situations," since "the immigration officials would be obliged in effect to pass judgment upon the laws and practises of a foreign Government and declare that they did or did not constitute religious persecutions."

The President was right, declares the New York World, "the illiteracy test is un-American, a dangerous and mischievous innovation." According to The World,

"The success attending legislation of this kind in Congress must be attributed to the influence, altogether out of proportion to its numbers, which organized labor exerts over that body. Unionism's aim is not so much the advancement of learning as the creation of a labor scarcity, and it makes illiteracy a fatal defect, because that is likely to be the most far-reaching. Considering the part that unlettered immigrants and the children of unlettered immigrants have taken in the development of the United States, it is amazing that for a quarter of a century nothing has stood in the way of these bigoted and selfish designs of a comparatively small class but the true Americanism of three Presidents."

Now "the door to opportunity in America is no longer open to those who without fault have failed to obtain opportunities elsewhere"; and the Philadelphia Record adds, "the futility of the action is fully equal to its unfriendliness." The New York Sun would "thank God that Abraham Lincoln did not live to see a statute put on the books which brands his father as an undesirable citizen." "The increase of ability to read and write is an incident in the progress of civilization," the San Francisco Ukronicle observes; "the mainspring of progress is an honest mind in a sound body." "Some who know how to write and speak English who do so too much are bothering us considerably more" than the illiterate immigrants just now, in the opinion of the Washington Times; or, as the St. Louis Republic explains, "the black-hand criminal is always writing notes." Further to demonstrate that Congressmen do not rast their votes according to editorial sentiment, we might quote a score of equally vigorous protests from other representative papers.

Yet the Congressmen who voted so solidly for a literacy test, are not altogether without newspaper support. "The true American," in the opinion of the Cincinnati Times-Star, "will not regret that at last our great ports will cease to be a profitable dumping-ground for enterprising steamship companies, which in past years have lured illiterates to 'the land of the free' for the passage-money there was in it." The Boston Transcript also believes that the literacy test is supported by the prevailing sentiment of the American people as the only apparently available form of restriction. And the Troy Record approves it as "the only practical barrier yet suggested to stem a tide of inflowing multitudes who may wish to leave Europe at the conclusion of the war."

COMMENT FOREIGN

CAN THE "U"-BOAT WIN THE WAR?

VIIE EMPHATIC DISAPPROVAL aroused throughout the neutral world by Germany's resumption of unrestricted submarine warfare leads many competent observers to inquire whether the Patherland is not paying too high a price for what may, after all, prove an expensive luxury. Even in Germany itself there are naval critics of high standing who do not hesitate to warn the German nation that submarine

warfare may not yield the great results that have been expected. To this number belongs Captain Persius, who, in the Berliner Tugeblatt, asks whether the submarine war on merchant shipping will be "a most important factor in bringing about peace," and he is by no means sure that it will. Writing at the beginning of the year and having in mind just such a development as has transpired, he says:

"The increasing success of our submarines has in the last few months become surprizing. Nevertheless, nothing would be more foolish than to build up hopes on this and think, for example, that our successes must go on increasing at the same rate, so that in spring we might be sinking a million tons a month. The more the submarine war on commerce increases, the more serious become the difficulties it has to face. The number of ships daring to go to sea declines, the ships which still sail are more strongly armed, and the skill of their captains in repelling submarine attacks increases. __astly, the number of enemy instruments for destroying submarines

increases. . . . It would be a sin against our own people to conceal the truth-that endless waiting and inexhaustible confidence are necessary in our submarines till they will finally be able to reach the desired goal.

"If one underestimates the difficulty of the task, it is sheer ingratitude to our submarine crows, who are beyond all praise, who fearlessly set out again and again on voyages full of danger beyond description, ready to offer their lives for their country, perhaps in a most painful fashion, . . . That German submarines are inspired by an untiring activity is shown from the figures of tonnage destroyed: 1915; January, 14,000 tons; February, 27,000; March, 83,000; April, 33,000; May, 93,000; June, \$4,000; July, 77,000, etc., In 1916 the figures rose rapidly. In January-February, 238,000 tons were sunk, in March and April, 432,000 tons. In September, 141 enemy ships were sunk of 182,000 tons, and 39 neutrals of 72,600 tons, and in October. 146 enemy ships of 306,500 tons and 72 neutrals of 87,000 tons. In November the tourage rose to 408,500, and the December total, not yet published, will, it is hoped, be similar.

"The English Navy finds itself practically impotent against the losses of the mercantile marine. Its submarines can not return like for like to the enemy. The merchant shipping of the Central Powers has disappeared from the seas since the outbreak of war, so that it can not be attacked. Where traffic still goes on, as in the Baltie, the English and Russian submarines have been a failure. We have done our best, so far with success, to turn the fact that we are cut off from the world's markets to our advantage. We cherish the expectation that the enemy will not be so able to adapt themselves to the altered situation when the economic war has been intensified still more, There is therefore a contest between us, the object of which is to eripple the other side economically. The future still conceals from us who will hold out longest in the race."

Admiral Lacaze, the French Minister of Marine, tells the French Senate that Germany's move is "horrible, but ineffective."

> This judgment be bases upon the performances of German submarines in the past, and states that during the last eleven months they have sunk only one-half of 1 per cent, of all the tonnage entering French ports. As reported by the Paris Journal des Débats, he began by stating that the aim of the German Government was rather to terrarize than to destroy;

> "The Germans are trying to do now what they always have done. The world ought to know that they have endeavored to terrify us since the beginning of the war. Disregarding the bumanitarian engagements they made at The Hague, they have not hesitated to throw crews and passengers into frail boats and abandon them to the waves in tempests far from any coast. In a great many cases, even recently, numbers of their victims who could not be reached in time died of hunger, thirst, and cold. What more horrible than that can the Germans do? There is not a man in the world who has not learned with horror of the deeds of which the Germans have

been guilty. The declaration of The Army, the Navy, and civilians tu-day does not move us, all maintain the same calm before the horrible crimes of our

After saying that the French naval authorities had taken every precaution, he continued:

"Fifty-one million tons of merchandise entered our ports during the last eleven months. One-half of I per cent, has been sunk by submarines. Possibly in the future this proportion will be a little higher, but the sole result will be that the country will understand more thoroughly that we are at war."

The great majority of the German papers think that the new campaign marks the beginning of the end of the war, which, they confidently believe, will be brought to a victorious conclusion before the summer. The Berlin Lukal Anzeiger voices the general opinion when it says:

"What is now demanded of our U-boats surpasses all they have heretofore accomplished. They are expected to shut off England, France, and Italy, from all oversea communication, a task which only a few years ago no sane person would have thought worth discussing. No higher praise could be paid to the excellent reputation which our I'-boat commanders have created for themselves within two years than the fact that to-day nobody doubts their ability to accomplish this gigantic task.

"They will do it. As to that, there is only one opinion in all

A STRAIN ON THE AFFECTIONS NORWEGIAN (to Swede: - What-you here, too? I thought you were a friend of Germany? -Punch (Landon) SWEDE- I was

Germany and among her allies. They will impose Germany's victorious will upon a vainglorious enemy.

"In these last two years they have gained immense experience in the new method of warfare. They have learned to fight wind and sea and British ennning and their boats have developed an efficiency never dreamed of before. They have to deal with a hostile merchant fleet, which in the hard service of the war has lost much of its former efficiency, being manned by crews that are certainly no longer first class. The best seamen

were long ago absorbed by the navy. Their places were taken by colored men, and we know by experience how the sight of our U-boats affects the spirit of hostile and neutral crews. Our U-boat commanders do not fear the enemy's mysterious means of destruction, of which there has been so much talk of late. The conviction that the whole German people is behind them will lead them and their brave crews to the highest spheres of glory.

"Our enemies are seen to be already in fear of what is coming. They were asking for it and shall not be disappointed.

"As to the neutrals—we can
no longer be bothered by their
opinion. We have only one duty
now—to win. To this end we
must look neither to right nor
left until the German war-aims
are reached,"

OUST THE HOHENZOLLERNS

Such is the leitmohif of a pamphlet issued by the "Association of Male Citizens of Southern Germany" entitled "The Only Way Out." It is published in Munich and is from the pen of a presumably pseudonymous "Heinrich Sieger." His thesis is that Germany's victories resemble those of King Pyrrhus, only more so, each victory being, in fact, more costly than a defeat. He writes:

"Germany cries, 'We will fight till the last man, and when no more men are left we will enroll women and obl men,' but the people themselves are convinced that no maneuver of this sort can avert ultimate defeat, which at this moment is mathematically certain."

The pamphleteer regards Germany's present situation as identical with that of the French Empire a century ago. When the crucial moment comes will William II., he asks, stand prepared to sacrifice himself for the German people as Napoleon did? He adds:

"Even as France avoided terrible peace-conditions by deposing Napoleon, so Germany, faced by the vision of final catastrophe, will one day be driven to decide on deposing the King of Prussia in favor of a Bavarian ruler. The house of Wittelshach has fulfilled all its duties to the Empire, its escutcheon is unstained, and in this war it has won its laurels again and again. Not only would the German Empire under a Wittelshach dynasty offer the necessary security for a European peace, but also the possibility of realizing a still greater Germany."

The writer foresees that England, France, and Russia will never consent to negotiate peace with the present Kaiser or the German Crown Prince, whereas "with the disappearance of the Hohenzellerns it will become possible for Germany to promote and cement cordial relations with England, as has happened in Great Britain's relations with France."

The Zurieb Vollsrecht says that the document here summarized voices a state of opinion very widely diffused in Bayeria.

KARL I. HOUSECLEANING

TEW BROOMS SWEEP CLEAN," says an old proverb, and the new Emperor of Austria seems to be using the broomstick protty freely to sweep out the old officials at Vienna and Budapest. Both in Entente and neutral lands there is a tendency to believe that Karl I. is a little restive under the direction of his more powerful ally

at Berlin. Many observers think that the Austro-Hungarian ruler would welcome peace at any price that would maintain the integrity of his realm, and that he is working to that end, despite the avowed peace-aims of the Entente pointing to the disruption of the Dual Monarchy should that combination of Powers ever attain a position where they can dietate a victor's peace. The London Nation discusses the situation and remarks upon the political explosion in Austria that followed the young Emperor's accession, It says: "There has been in a few weeks

a complete uphenval in the political world of Vienna. Since the young Emperor came to the throne, one Premier (Dr. von Körber) has been dismissed, and another (Dr. von Spitzmüller) has failed to form a Ministry. Both of them are Germans, The Foreign Minister of the Dual Monarchy, Baron Burian, a nominee of the Magyar Dietator, Tisza, has also fallen. The two men who have climbed to power (Count Czernin as Foreign Minister and Count Clam-Martinic, as Austrian Premier) are, both of them, Czechs, and both belong to the group which worked

-Passing Share (London). for very definite ends under the murdered Archduke Franz Ferdinand. We know, or can guess, some of the questions at issue during these crises—the calling of the Reichsrath, the status of Galiria, the future of the South Slays, the periodical 'compromise' (Ausgleich) with Hungary, and the means of attaining an early peace. It is admitted that the initiative in the recent German overtures for peace came from the Dual Monarchy. It is said that Austria, in the last stages of privation, and at the end of her endurance, without actually contemplating a separate peace, is trying to open separate conversations with Britain and France in order to prepare the basis for a general peace. Nor can we fail to guess that the Kaiser's sudden departure from Vienna, on the eve of the old Emperor's funeral, must have followed some sharp

The lesson that The Nation draws from these signs is thus exprest:

difference of opinion with the young Emperor.'

"What we may say tentatively, however, is this: The German-Magyar ascendency is no longer scenne, and some, at least, of the Slavs of both monarchies have a brighter prospect before them. If they can be rendered contented, the Dual Monarchy is no longer tied by the necessity of self-preservation to the German Empire. "Central Europe," even on the political side, is not inevitable. On its economic side, it is well known that even the Magyars dread the German commercial ascendency."

Neutral journals also believe that Austria-Hungary is now in the process of an "evolution toward peace" as the Journal de Geobre expresses it. The Swiss organ continues:

"From the moment the young couple ascended the throne

CALLING THE BLUFF.

William. Our arms baxe triumphed, yet our noble offer of peace has been impodently rejected by the enemy. What is our next step?"

THE EMPEROR KARL I. REPEATS HIS CORONATION DATH REPORE THE PEOPLE.

me Hungarian Premier, Count Tisza, whose political future is in the balance, stands at the left, between Cardinal Czernoch, the Primate of Hungary, who is administering the outh, and the Emperor. This correspond took place outside the Cathedral of St. Mary, at Budapest.

and in a few short weeks the Empire has traversed years of history. At Court a clean sweep has been made, and the chief influence has now passed to Count Berchtold and Prince Lobkovitz, whose name has hitherto been unknown in active politics.

"But the dismissal of men such as Privy Councilor Singer-Sieghart, the all-powerful instigator of Germanie policy in Austria; Baron Machio, the Departmental Chief of the Austrian Foreign Office; and especially Count Forgach, for ten years the instrument of anti-Servian policy and author of the ultimatum to Servia in 1914, and consequently one of the men most directly responsible for this war, is particularly significant. It clearly betrays the Emperor's intention to rid his entourage of those compromised in the origin of the present struggle.

"Karl I. has no more use for the partizans of war. Is it because he wants peace? Austria is certainly in need of it, and we understand that she has never dared to publish the result of her last war-loan. Even her own Germanophile press points out certain dissonances between the Orders of the Day issued to their armies by the German Kaiser and Karl I. Count Golnehowski, who is now in Switzerland as representative of his Sovereign, is allowing certain rumors to circulate."

Turning to the sister kingdom of Hungary, signs are not lacking that changes as radical are soon to take place in the political world. The attention of the Hungarians is focused upon Count Andrassy, a bitter opponent of the now all-powerful Count Tisza, whose rule was characterized by Count Andrassy in the Hungarian Parliament as one of "unserupulous oppression and corrupt and arbitrary methods." At his coronation Karl bestowed upon Count Andrassy the order of the Golden Fleece, universally held to be one of the highest distinctions in Christendom. Count Tisza does not possess it and the Pesti Nuplo thinks that the bestowal of the honor on Count Andrassy marks the end of Count Tisza's long ascendency. It writes:

"To become a member of the Order of the Golden Fleece almost makes one a member of the Royal House, the possessor of the decoration being addrest by the King as mon ther country.

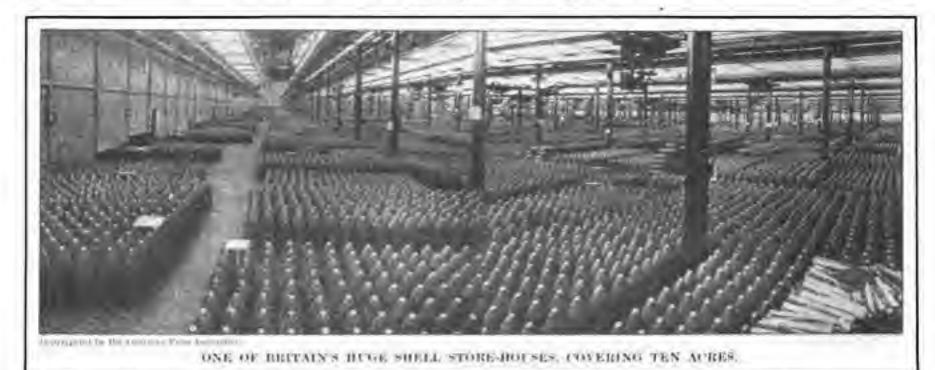

The honor bestowed on Count Andrassy means the virtual dismissal of Count Tisza, for it shows that by his attack upon the Premier he did not become unworthy of the honor."

The Budapest Nepszara holds similar views and says:

"In political circles, the news of Count Andrassy's decoration with the Golden Floece produces the impression that it is a moral impossibility that Count Tisza should remain in his position. After the unqualified attack delivered against him by Count Andrassy, that the latter should be rewarded by a decoration of this kind shows that Count Tisza's fall is inevitable."

The fall of Count-Tisza, says the London Morning Post, would be an event of far-reaching importance. The London organ thinks that the appointment of Count Andrassy would bring peace nearer by destroying the present close cooperation between Berlin and Budapest under Count Tisza. It proceeds:

"The Huggarian Prime Minister has throughout played a most prominent part in bringing about the war and in the warpolicy of the Central Empires. He was instrumental in establishing German domination within and beyond the Monarchy, and was the dupe of Germany with regard to her ambition to control one-half of Europe for the furtherance of the scheme regarding the Near East, known as the Bagdad-Berlin scheme. It was he who helped the Germans to establish the 'military unity," the single command, and thus enabled them to lay hands on the armies of the Monarchy in such a manner as to make disentanglement impossible, and it was he who silenced the Hungarian press and Opposition in the interests of Germany and Austria. His services, in fact, have been invaluable to the German Government in securing for it the political and military advantages it possesses at present in the Central Empires. Count Tisza's fate, therefore, is a question of immense importance from the point of view of the present world-conflagration. The Monarchy is an indispensable asset to Germany, and therefore it is a matter of supreme importance to her whether its destinies are to be controlled by her sworn friend and ally Count Tisza or a young and vigorous ruler resolved on concluding

THE ENTENTE FACING HUNGER

THE FAILURE OF U-BOAT WAR, say some of the German economists, would still leave the Enterte countries confronted by the specter of starvation. The success of the present submarine campaign, they tell us, will bring England to her knees within a month, but in any case the whole Entente will see famine by the end of April. This view is discust at length by Dr. Paul Rahrbach, one of the lenders of the German socialists, in the Berlin Deutsche Politik, a weekly of great influence, where he remarks that the crops at hand in England, France, and Italy, together with all possible imports. will suffice only until "April, 1917, when the Entente will be where they wanted us to be: facing starvation if the Dardanelles remained closed. And our Army, our Navy, and our allies will see to that." Dr. Rahrbach quotes from the tables compiled by that eminent economist, Dr. Herman Weil, of Frankfort, and we learn that-

"England, France, and Italy need at least eighty million quarters of wheat and three million quarters of maize which they can not themselves produce. Consequently, the total imports of wheat required in all will be approximately \$5,000,000 quarters. Of this quantity all the countries able to supply the Entente—except Russia—can ship only one-balf."

The Entente can not look either to this country or to Canada, Dr. Rahrbach says, for—

"The United States and Canada will hardly furnish more than between 12,000,000 and 12,500,000 quarters, and it is very probable that in view of the constantly growing prices an embargo will be ordered to check the high cost of wheat consumed by these two countries themselves.

"The United States produced tifty million quarters less and Canada twenty-seven million quarters less than in the previous

year.

A survey of the other grain-producing countries is then made, and we are told:

"From old crops in Argentina, Australia, and India, and via Archangel the Entente may, in the most favorable event, get thirty-two and a balf million quarters, the figures being four, ten, five, and one million quarters, respectively.

"A round trip by import steamers to North America, including the loading of the vessel, requires one month; to Argentina, about three months; and to Australia, about four and a half

months.

"From the two latter countries the Entente may, therefore, receive between ten and twelve million quarters—but not before August, 1917, and then only if the import and export of all other goods are eliminated in favor of foodstuffs.

"The harvest in India does not begin until March. Thus far, too, it is problematical what, if any, quantities the Entente may get from that country. "Thus, as long as the Dardanelles remain closed, the deficit of nine million tons of wheat can not be covered.

"Owing to the decrease in fodder output, the American output in pigs will be considerably reduced and meat prices are rising steadily."

Germany and her Affies are quite self-supporting in the view of this authority, and he sums up that aspect of the situation by remarking:

"A benignant Providence gave us and our allies bountiful crops, and we can not only face the coming year with certainty and calmness, but will be able to accumulate great reserves for 1918.

"The German barvest of 1916 is officially stated at five million tons. The actual canvass will exceed this early estimate by several million tons."

A certain grim satisfaction at the plight of the Entente is exprest by Dr. Rahrbach in this final paragraph:

"What we would witness if the conclusions of the material here presented are realized—and the figures are so certain, so accurate, are based upon such reliable data that they can not help but come true—would be such a crushing punishment of fate for the lunger plan which England has mapped out against us that the word of ancient history, 'Nemesis,' certainly would describe it."

GERMANY'S RAILROAD TROUBLES—The official aunouncement that great numbers of long-distance and local passenger-trains to different parts of Germany had to be canceled on January 22 has directed attention to the serious shortage of rolling-stock in the Fatherland, where food difficulties are increased and even the supplies of munitions for the front are endangered by lack of transport facilities. The Westminster Gazette writes:

"The growing shortage of steel in Germany for export, and even for munitions, is due to the lack of railway facilities even more than of labor. As Mr. Max Hoschiller has pointed out in the Temps, for some ten years before the war German manufacturers and traders were constantly demanding more goods trucks, but the railway authorities never provided enough. During the war railway traffic, judging from the receipts, has increased appreciably, not only through the transport of troops and munitions, but because the sea-routes are closed, and the import of coal, except from Belgium, is stopt."

Further details are given by the Gazette de Lausanne, which says:

"Normally 8 per cent. of the locomotives are in [process of] repair and the same proportion of coaches. At present 23 per cent. of the actual total rolling stock is out of action from some cause or other. And this proportion must increase, because nowadays German boiler-tubes are made of cast metal and do not last half as long as the old copper and bronze boilers. Further, the Army's needs increase steadily, and the rolling stock has to serve a greatly extended service, embracing Belgian, French, Servaen, Russian, and Roumanian territories."

SCIENCE - AND - INVENTION

HOW THE RAILROADS MAY SAVE MILLIONS

organ that from one-quarter to one-third of the total coal bill of our railways—a proportion representing from 75 to 100 million dollars annually—is spent in kindling, preparing, cleaning, and maintaining fires on grates when locomotives are not actually using steam to move. This would all be saved by using fuel in such form that it would not have to be employed merely to "keep up a fire." Such fuel is the oil used on California railways; but it is not likely that oil can ever be widely burned in locomotives. This means, says the writer of a paper summarized in Railway and Locomotive Engineering (January), the increasing use of pulverized coal, requiring the special equipment of locomotives to burn it, but worth the expense because of improvement in service and economy of operation. We read, in substance:

"Next to labor, the largest single item of cost for transportation in this country is the fuel for locomotive operation, and as in the final analysis the cost per passenger or per ton-mile is largely conditioned upon the unit of motive power per hour, it is easy to realize what the cost must be if power is wasted.

"The necessity for conserving the supply of oil in the rapidly exhausting fields for other than railway-fuel purposes will soon climinate it from locomotive service, while the higher prices and shortage in supply of the larger sizes and better grades of solid coals now in demand for the commercial trade will bring about the use of the less salable by-product of the mines in pulverized form.

"Steam-locomotives will eventually have to be equipped so as to approximate to electric machines by the use of pulverized fuel, which in turn will eliminate smoke, soot, enders, sparks, and fire hazards; reduce noise, bring down the time for dispatching at terminals, and stand-by losses; and increase the daily mileage by providing for longer runs and more nearly continuous service between general repair periods.

"The large quantity of steam required by the modern locomotive necessitates excessive rates of evaporation, such as can only be effectively and economically produced by the burning of fuel in suspension, in order to utilize the heat units that now go out of the stack and into the ash-pan when solid fuel is fired

"By mechanically feeding and burning pulverized fuel, arduous labor on the part of the fireman is replaced by the more skilled manual control of combustion, and assistance is given to the engineer in the operation of the becomotive and permits a better chance for the observation of track and signals.

"The opportunity for reducing the non-productive time of

existing locomotives, and for relieving terminal congestion that is now caused by the necessity for cleaning fires, ash-pans, flues, and smoke-boxes; inspecting and repairing draft, grate, and ash-pan appliances, and for firing-up and supplying firing tools and equipment to becomotives burning coal on grates, makes the use of pulverized fuel one of the most effective and economical means for increasing the net carning capacity of present single-and double-track steam roads.

"From investigations up to the present time, it has been found that any solid fuel that, in a dry, pulverized form, has two-thirds of its content combustible, is suitable for steam-generating purposes. Domestic and steam sizes and qualities of anthracite, bituminous, and semibituminous coals and lignite and peat, as well as the inferior grades, such as anthracite culm, dust, and slosh and bituminous and lignite slack, screenings, and dust, are all suitable for burning in pulverized form.

"As over 8,000,000 tons of pulverized fuel are now being used annually in the United States for industrial kilos and furnaces, it is not thought that the equipment or process for preparing pulverized fuel requires any comment.

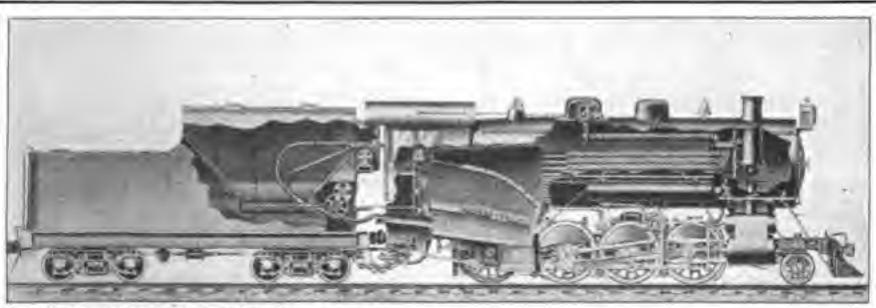

"The total cost to prepare pulverized fuel properly in a suitably equipped drying and pulverizing plant ranges from 15 to 45 cents per ton, depending upon the capacity of the plant. For a railway coaling station of average capacity this total cost will be less than 25 cents per ton.

"For firing up a locomotive, the usual steam-blower is turned or in the stack, a piece of lighted waste is placed on the furnace floor, just alread of the primary arch, after which the pressure fan and one of the fuel and pressure-air feeders can be started. After firing up, the regulation of the fuel- and air-supply is adjusted to suit the standing, drifting, or working conditions, the stack-blower being used only when the locomotive is not using steam."

Not the least of the advantages claimed by the advocates of pulverized fuel is the very great reduction of the troubles due to clinker:

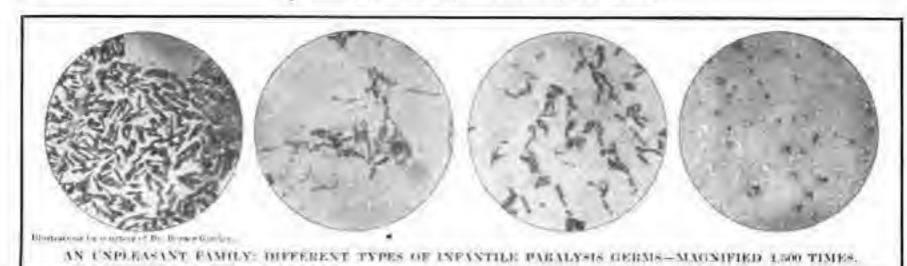

"Clinker is of two kinds, 'hard' and 'soft.' 'Hard clinker' is formed by the direct melting of some of the ash. It hardens as it forms and usually gives but little trouble. 'Soft clinker' is formed by the slagging of the ash, and is either pasty or fluid, and steadily grows in size. 'Honeycomb' or 'flue-sheet' clinker is formed by the condensation or coking of tarry matter or vapor as it strikes against the firebox sheets, and results in the accumulation of a relatively soft, light, ashy substance that grows or spreads over certain areas of the arch and the metal parts of the furnace.

"With the use of pulverized fuel the usual difficulties resulting from the formation of hard and soft clinker are climinated, but

TO STOP THE WASTE OF FUEL: A LOCOMOTIVE ARRANGED FOR BURNING PULVERIZED COAL.

with fuels containing certain intrinsic combinations of ferrous silicates, which fuse at comparatively low temperatures, the homeycomb formation will result when the proper air-supply and combustion conditions do not obtain."

To summarize the claims made for the powdered fuel:

"With pulverized fuel a locomotive having the boiler filled with cold water may be brought under maximum steam pressure within an hour, and the fuel feed then stopt until it is called for service. When standing or drifting, at terminals or on the road, the fuel feed may also be discontinued, as the steam pressure can be quickly raised. After the trip or the day's work is over, the locomotive can be immediately stored or lowed, the ash-pit delays being entirely eliminated.

"In this respect the use of pulverized coal is one of the most attractive and quickest methods for increasing the carning capacity of present single- and double-track steam-railways.

"From the actual operation of steam-locometries in regular train-service the use of pulverized fuel has demonstrated in particular the practicability of climinating smoke, einders, sparks, and fire hazards; increasing draw-har horse-power per hour per unit of weight; improving the thermal effectiveness of the steam-locometive as a whole; reducing non-productive time at terminals; utilizing otherwise ununitable or waste fuels; climinating archaes labor; providing greater continuity of service and producing more effective and economical operation and maintenance."

AN UNPLEASANT FAMILY

Is THERE a poliomyelitis family, or infantile-paralysis group of organisms? Dr. Horace Greeley, of Brooklyn, writing in The Medical Record (New York, January 13) is inclined to think that the curious history of the epidemic may be better explained if we adopt this hypothesis. The bacillus assumes all sorts of forms, as the accompanying pictures show, and they change greatly from one stage of growth to another. The bacillus seems to Dr. Greeley to resemble those of the distemper group which cause hemorrhagic blood-poisoning in various domestic animals. If so, epidemics among domestic animals, reported to have occurred before or with attacks of infantile paralysis, would be explained. The recent outbreak in West Virginia, contradicting as it does the belief that the disease is always quiescent in the winter time, lends especial interest to these speculations. Says Dr. Greeley:

"If certain cases were contracted from the lower animals, it would explain such occurrences as coincident or prior epidemics of distemper (as reported from Alaska by Pierson), or of extensive paralytic disease of fowls, as occurred in the Washington epidemic and as has been reported in connection with the Westphalia (Germany) and various Scandinavian outbreaks. This would also help to explain the rural sporadic cases and the greater number of males, especially among adults, that it attacks when prevailing in the country. This was notable in the Iowa epidemic, as reported by Frost.

"The ready growth of the organism in milk and its resistance to heat would render it easily possible for certain cases of the disease to be caused by infection carried in this medium. It is evident that pasteurization would not protect. However, for milk to be directly held responsible for many cases, we might have to incriminate the cow as a potential 'carrier' of the germ.

"In connection with the readiness with which the germ grows at ordinary stimmer temperature (70° Fabr. and over) and the striking effect on-coming cool weather has had upon all epidemies, one can not avoid the conclusion that multiplication of the organism as a saprophyte lorganism that lives on dead organic matter] must take place and be of main importance in the spread of the disease.

"The remarkable way in which the spread of the malady is affected by the atmospheric temperature; the experiments detailed in reference to the growth of the organism at temperatures known to prevail when the disease is at its height, and its ready growth in milk and resistance to the pasteurization process, together with the ease incidence among the children of milk-drinking age, all strongly indicate that milk may be a very important factor in the spread of poliomyelitis."

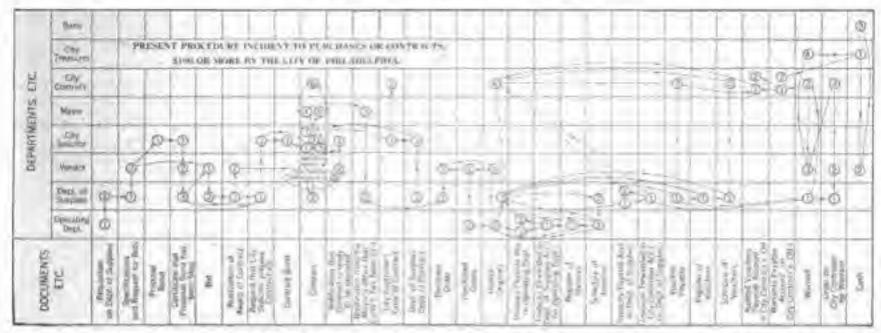

TWO WAYS OF MARKETING FOOD

A RECENT INVESTIGATION of the parcel post as a means of getting food-products directly from the farm to the consumer is compared editorially in Table Talk Cooperstown, N. Y., January) with a test of transportation by motor, made by a Chicago packing-firm. The parcel-post plan, after exhaustive investigation by the University of Wisconsin, was pronounced a failure by that institution. The motor-trip from Chicago to New York was apparently not only successful from the advertiser's standpoint, but also as a practical demonstration. Says the editor of Table Tulk:

The particular object of this auto demonstration was to show that the packer has a means of distributing our meats to us, even the railways might fail. Strikes, fortunately, come few and far between; but when they do come this is a practical demonstration of the packers' ability to keep meats in circulation. War, should it come, might be another means of taking our railways out of public service for shipping of foodstuffs. Here, then, the packers have a second line of defense in their great auto-trucks. This particular truck which made the test run earried products to thirty-five cities and letters to their respective mayors.

"There is much more than appears on the surface of this demonstration of the packer's ability to distribute his products to all his branches, keeping the means of doing so under his own management. It shows just how independent meat consumers can be of strikes and local disturbances which hold up usual means of shipping when the men who have the meat to distribute can man their own autos and send them out from their great packing-plants to their smaller plants and from there to the retail shops. It shows, too, how well equipped our modern meat industry is to take care of every emergency which may arise to interfere with the business.

"Why, in this connection, can a packer do successfully what I note Sam's parcel post—accepting the University of Wisconsin's decision—can not do." Why is it impracticable for the farmer to sell his products direct to his customers via the parcelpost route? The answer is the simplest thing one can imagine. To sell his hams and bacon and other meats, to say nothing of the rest of his farm-products, the farmer needs must do what every other individual in business must do—build up his trade and have his distributing machinery. He can not mail his products but or miss on the chance of the one to whom he mails them buying them. He must either advertise in local consistent in the chance of the one to be sell to the chance of the one to whom he mails them buying them. He must either advertise in local consistent

"A LITTLE TALE OF RED TAPE." MAP OF THE ROUTE TO BE TRAVELED WHENEVER PHILADELPHIA SPENDS OVER \$100.

papers, or he must write direct to other friends and thus create a demand for his wares. This 'drumming up trade' is a business in itself. It is the job of the middleman or retailer—a thankless task, if we may judge from the many attacks made upon the retailer or middleman in the past few years. Now the average farmer knows the raising of stock and of produce much better than he knows the retail business. He reads price-lists from the side of the seller, not of the buyer. To keep track of market fluctuations while he peddled his meats through the mails would be no small task. He would have to stand the loss of spoiled goods which his mail-order customers refused to accept. But why go into further details? Any one can see just where the plan of sending meats, especially by mail, is not practical."

SAVING A CITY'S STEPS

OOK ON THIS CHART and then on that! The big one with the complicated lines is a map of the steps that must now be taken in the fine old town of Philadelphia when a city department wants to buy goods costing more than a hundred dollars. The little one, with the comparatively simple routes, shows the way in which the Bureau

of Municipal Research of that same city would do it. The charts are published in the Bureau's weekly bulletin entitled Citizens' Business (Philadelphia). Says the editor, under the title "A Little Tale of Red Tape":

"The highly complicated diagram above shows the steps that are taken when a city department in Philadelphia purchases any article which costs \$100 or more. It has taken years to develop this 'system.' It has been built up bit by bit and each step has had some particular reason for its adoption. It was 'practical,' that is, each process was added in response to some immediate need. But look at it! And then think of the hours of time (taxpayers' money) and the reams of paper it requires to go through all of these financial and bookkeeping meanderings.

"Laws have been passed, bookkeeping accounts opened, record systems installed, legal instruments provided, not with a view to the ultimate objects to be attained, but to overcome some minor difficulty which at some time existed or some one thought did or would exist. It looks very much as a railroad would look if the road-bed were made to go around all the fallen trees, boulders, hills, creeks, and other obstacles that lay across the path to some vague place

which no one was particularly anxious to reach. In our present system, the administrative engineer who has built the road around a log or a rock has felt very well satisfied with his accomplishment. Has the time yet arrived when we know sufficiently well what we want to write it down in black and white, and then to work out the simplest and straightest route from where we are to where we want to be? The chart below shows how we could straighten the road and arrive at exactly the same place in considerably less time, with immensely less effort and with correspondingly less expense."

MORE CITY MANAGERS?

OW THAT NEARLY A HUNDRED of our smaller cities have "city managers"—usually civil engineers—directing the business of the city, some of the largest municipalities are beginning to consider abandoning present forms of government in favor of an executive selected by "directors." We are told by Engineering and Contracting (Chicago) that the change is now advocated by daily papers in Philadelphia, Pittsburg, Cincinnati, Cleveland, Chicago, Kansas City, and Minneapolis. Says this magazine:

DEPARTMENTS ETC. **DOCUMENTS** ETC Opening Sers. Dept DHA Φ. in Printing and Intelligible Ø-Ø Request for Bids 0 0 350 Fusherin Order Partners and Acres of Samuel of Fare Samuel Govern 00 Ereck. Ø

PROPOSED PROCEDURE INCIDENT TO PURCHASES OR CONTRACTS.

\$100 OR MORE BY THE CITY OF PHILADELPHIA.

HOW THE ELIMINATION OF RED TAPE SAVES STEPS.

"In Cleveland, for example, a nominating committee appointed by fifty civic organizations has just met to consider the selection of fifteen men to investigate the city-manager plan. Among the members of this committee is Dr. Charles S. Howe, president of the Case School of Applied Science. The Cleveland Press urges a change in the city charter to enable the city to adopt the modern method of managing a city like a stock company. The Press says: 'The conduct of city affairs should be in the hands of a thoroughly trained and welltried city manager, chosen not for a definite period, but to hold office as long as he does his work well.' At last the American public begins to see that periodic selection of councilmen and mayors by election is a poor way of getting good municipal government. Imagine a railway system operated under the direction of men selected anew every two to four years by popular vote! The glib speaker, the sweet smiler, the hearty hand-gripper, would then have a better chance of being president of the railway than the man who had spent all his life studying and practising railway construction and operation. The fact is that our entire system of 'representative government,' in which representation comes solely through elections, is an uneconomic system, and is destined shortly to be changed."

CAN WE FORESEE THE FUTURE?

AWO DISTINCT POINTS are to be considered before this question can be answered. First, is the future, like the past, something definite and incapable of change? I left my house at four o'clock yesterday and turned down the street to the left. Could I, if I had wished, have waited until 4:15, or have turned to the right instead. If so, I could have nullified any prediction that might have been made. Secondly, even granting the future to be absolutely fixt and only one course of events possible, can we get at their connection with the present so clearly that we can tell what they will be?

These are no new questions. They seem simple enough, but students have never agreed on the answers, and possibly never will. In La Revue (Paris), we have the opinion of Camille Flammarion, the French astronomer. Flammarion assures us that "future events can be foreseen very exactly and without possibility of contest"; but he does not say whether he means all future events, or some future events. As will be seen in one quotation below, he admits that man's will is a factor in much that occurs, so that the question reduces to that of the predictability of that will. Flammarion quotes the following passage from the great Laplace's "Essay on the Theory of Probabilities," to show that even a century ago the fixity of the course of events was maintained by philosophers. Said Laplace;

"All events, even the apparently most insignificant ones, are as solidly bound up with the great laws of nature as the revolutions of the solar system. In our ignorance of the links uniting them to the entire system of the universe, we assumed for them either final causes or the frenks of hazard, according to their regular or accidental succession. But these imaginary causes have been successively set back the farther our knowledge advanced, and disappear entirely before a sound philosophy which sees in them only the expression of our ignorance of the true causes of the actions of nature and man.

"An intelligence which, for one single instance, could be imagined to embrace the knowledge of all natural forces and of the mutual relationship of all beings comprising the universe, could sum up in one formula the movements of the largest celestial bodies and of the atoms. To this intelligence nothing could be uncertain; the future and the present would be one for it. The spirit of man, in constructing our science of astronomy, has attempted the first feeble outline of that all-embracing intelligence."

Are we not free agents, then? Only partially, Flammarion thinks. Our freedom, he asserts, is comparable to the relative freedom of a passenger on a steamer in mid-ocean; "he can read and write, smoke, and play eards at will, but he can not leave the steamer," Returning to his main subject, the author sums up his standpoint as follows:

"The future is no greater mystery than the past. At the time of the eclipse of the sun, predicted by Arago, of July 8, 1842, I was four months and eleven days old; when the eclipse of August 11, 1999, will take place I will have been dead long ago. What does it matter? Past, present, and future are one. There can be no doubt that everything that happens had to happen, from the crimes of Nero to those of William II. But who will, nevertheless, pretend that the latter, who is mainly responsible for the death of 5,000,000 human beings. has been made of the same stuff as St. Vincent de Paul? Neither one nor the other were or are automata, slaves of determinism.

"The future is determined by many circumstances, but the will of man, as far as mankind's fate is concerned, is one of, and not the least, among the determining factors. This antifatalistic doctrine of determinism is the only philosophy worthy of our position in this world and as near to truth as we feeble beings can approach.

"Properly speaking, we do not foresee, we merely see the future. The astronomer calculates the normal orbit of a comet, but it is possible that the comet be attracted to the atmosphere of a large planet. If the astronomer has not taken into account this possible perturbation, his prediction will, of course, be wrong."

WORLD-WIDE CONTROL OF NARCOTICS

THAT THE SUCCESSFUL SOLUTION of the drugproblem lies in an international agreement which will control the evil at its source is pointed out by Charles B. Towns, of New York, an expert in drug-legislation, in a pamphlet entitled "Federal Responsibility in the Solution of the Habit-Forming Drug-Problem." He would include in the terms of such an agreement all that class of drugs known as "hypnoties," taken indiscriminately to relieve pain and induce sleep.

No real progress can be made, Mr. Towns asserts, until we can control the source of supply. The most drastic laws which this country could possibly enact would not at this time eliminate the illicit traffic in habit-forming drugs. The countries that produce such drugs must prohibit their sale except under conditions internationally agreed upon. Writes Mr. Towns:

"One reason why the countries which do not produce these drugs should restrict the manufacture and sale of them to the quantities needed for their own home use is that horrible abuses are growing out of the commercializing of narcoties. I cite

two or three cases to illustrate this.

"The Federal Government has recently uncovered in New York City a firm who set themslves up as being wholesale druggists. They were able to do this by paying the Government the annual tax of ten dollars! They import quantities of opiates which they can not sell legally in the United States except upon written order blanks which are supplied by the Government. This same firm, however, exports large quantities of these drugs into Mexico to an individual or a concern. There is no law in that country which affects the sale of such drugs in any way whatsoever. This Mexican concern can smuggle, these goods back into this country without any trouble at all; and this is just what they do. Here is one unmistakable big loophole, and every revenue officer knows it and is trying to close the hole, but finds it a hard job.

"Then our revenue officers find on a Japanese ship in San Francisco Harbor some three hundred thousand dollars' worth of opiates, which they attempt to seize. But they are immediately advised that it is a shipment destined to Vera Cruz; and you can see what becomes of it after it reaches Vera Cruz! The illicit traffic is such drugs has not only put an enormous premium upon the price of such drugs to the illegitimate user of them, but it has in the past ten years quadrupled the cost of such drugs for legitimate medical needs. If commerce in these drugs were made a Government monopoly it would immediately eliminate every unfavorable factor connected with this habit-forming drug situation as far as traffic in habit-forming drugs was concerned. It would exact an accurate accounting of their sale and use, and, most important of all, the Government could fix the price and limit the profit on such products. To do this would mean the practical wiping out of the illicit-drug traffic, for nothing now keeps it alive but the enormous profits to be made

in it. No profit, no 'dope.' . . "Even the, in trying to avoid the illicit traffic in these drugs, we are able to secure the cooperation of the countries immediately surrounding and adjacent to us, the lawless drug-seller would be little inconvenienced. While this country took the initiative in bringing about three international conferences on this opium question (one, the first, being held in Shanghai, the other two at The Hague, in 1912 and 1913, respectively), practically no good came out of these conferences to this country, so far as this habit-forming drug-problem was concerned. For one thing, we could not go into these conferences with clean hands. Nor did the countries now at war at that time feel that these drugs were any immediate problem to them. The conditions which have grown out of the war, bowever-and I have been in a position to ascertain the facts-have made this habitforming drug-problem a world-problem; and all these nations that, previous to the war, treated this habit-forming drugproblem only as an incident, will have to take it up after the war from an entirely different standpoint.

"As soon as the war is over the time will be right and ripe for us to bring about the necessary international understanding on this subject with all the prime Powers of the world. True, we can not hope to solve the problem successfully at home until we have been able to get an international understanding; but in the meantime we must do the next best thing. We must take up the domestic side of this problem, starting with the

importer, manufacturer, wholesaler, and retailer, and without fear or favor must take such means and must enact such measures as will restrict the consumption of all these drugs to legitimate medical needs."

TAKING THE OFFICE ALONG

PLAN by which a traveling man may have all the conveniences of his office, even while he is "on the read," is described under the above heading in System (Chicago, February). Correspondence and other routine duties have no chance to accumulate, for they are handled as they come

up. All the facilities are ready to hand in the "office trunk" which this man has had specially built for him, and is shown in the picture. Says the magazine just named:

"The following is a list of the articles the trunk is designed to hold:

1 typewriter.

I portfolio with all sample forms and bulletins requived for presenting the product to any prospect.

I four-drawer steel cardindex (three by five) for prospects and users. Capacity about four thousand cards.

4 pocket rating-books.

1 complete sample ma-

2 sample drawers.

I bouse organ hinder with house organs.

I sales and commission ledger.

I letter partfullo for correspondence. Several sales manuals and

bulletin-books.

Advertising and stationery.

THE OFFICE HE TAKES IN HIS TRUNK.

"The trunk is made of three-ply veneer covered inside and out with fiber and strongly reenforced with iron corners and small angles. The partitions are made of veneer and covered with thin brass at the front. The dimensions are twenty-four inches by twenty inches by eighteen inches. The weight, empty, is about eighty pounds; filled to capacity, about one hundred and seventy pounds."

The principal advantages of the trunk, says a user, are:

"I. I have complete office facilities with me at all times.

"2. My prospect files are always up to date and I have all my correspondence records with me wherever I go.

"3. I can keep up my records while on the road when time is heavy on my hands.

'4. I have all facilities for handling any sale that may arise."

"SILENT MUSIC" FOR THE SICK-A system of "silent music," installed by a Chicago firm in a hospital at Ottawa, Ill., is thus described in Hospital Management (Chicago, January):

"It consists of a spring-motor cabinet with a turntable similar to the ordinary phonograph without a horn. Attached to the cabinet is our special music-transmitter, corresponding to the tonearm and reproducer on the ordinary phonograph. The transmitter is energized by the vibrations of the needle traveling on the record, and transmits these electrical vibrations over a system of wires throughout the hospital. The wiring terminates at outlet jacks alongside of patients' beds. The patient can be furnished with a head receiver attached to a cord and plug. When the plug is inserted in the jack alongside of the bed, the patient may hear the music by placing the receiver against the ear. The recorder is inaudible unless the receiver is held close to the ear, and consequently one patient may receive entertainment while the patient in an adjoining bed may sleep without disturbance."

NITRATE-PLANTS FOR WAR-NEEDS

THE PROPOSED ERECTION of a large Government by droelectric plant for the electrical fixation of atmospheric nitrogen, a work which would take years and cost millions, can be justified on only one condition, says Mr. Frederick Darlington. This eminent consulting engineer recognizes the need of large-scale production of artificial nitrogen compounds for the purposes of peace as well as those of war. But there is no need, he says in a letter to the New York Times, for a plant on the scale of the Muscle Shoals project, unless

> there were no other suitable supply of power, As a matter of fact, he says, we have such a supply "in the surplus power of 1,500 hydroelectric plants scattered all over the country." Mr. Darlington clucidates:

"By 'surplus power' is meant that power which a plant can generate but can not apply to any commercial purpose, It is the wasted power, the power in the water that goes over the spillway. Its amount varies with different plants, but almost all have a large surplus at night, when the industries they serve are at rest; others have large amounts during periods of high water; and in some cases a great deal of the normal power is surplus, because many dams have been built to take care of all the water that may flow past, even

if only a small part of the total capacity can find a market. According to the Merrill Report, presented to the Senate January 20, 1916, our hydroelectric plants have a total capacity of over 5,000,000 horse-power, and at least half of this amount is surplus; or, in other words, over 2,000,000 horse-power is at present being wasted, part of it continuously and part of it during certain portions of the day or year.

'Many power-plant managers have made anxious inquiries regarding the manufacture of nitrogen compounds so that they can turn this waste power into profit. Could they do so, nitrogen-plants would spring up all over the country, employing hundreds of men, supplying cheap fertilizer to farmers, forming an unlimited supply of explosives in time of war, and utilizing some of our natural resources now going to waste. Certainly this would be a far better solution of the nitrate problem from every point of view than the erection of a Government plant at great public expense."

"Well," asks Mr. Darlington, "why is not this being done?" And he replies that it is "because we do not know how." To remedy this condition,

"It is self-evident that the United States . . . should place in the hands of its business fren and engineers the necessary information on the electrical fixation of nitrogen. And this the Government could do without going to the expense of building a huge hydroelectric plant of its own by establishing small, quickly built, and comparatively inexpensive plants at several points where surplus power is available. These plants would supply the Government with its nitrates in normal times; they would be experimental stations where the several electric processes could be investigated and whence complete information regarding them could be disseminated; and they would form training-schools for engineers who would go forth and create a new industry for the United States."

LETTERS - AND - ART

A GREAT AMERICAN CARTOONIST OF THE WAR GONE

AN AMERICAN CARTOONIST whose work hung on the walls of foreign cabinet ministers, because in their view his cartoons were "the finest and most effective seen in any American newspaper during the war," has not lived to see the end of the struggle. Luther D. Bradley died on

January 9. The Liver-ARY DIGEST has almost come to look upon him as one of its staff, for, the his work appeared originally in the Chicago Daily News, it was freely reproduced for our readers. Special cable dispatches of condolence came to his paper from editors of two great London newspapers, The Daily Chronicle and The Daily News. "Journalism all over the world has sustained a very serious loss," says Mr. Robert Donald, editor of the former, at the same time a:lding:

"He struck a hold human note and presented his ideas with telling effect. He commanded all the elements of pictorial art, and some of his war-eartoons were as aniusing as they were clever and effective. Bradley was the finest and most finished artist. In presenting the vital and topical issues of the war in the form of eartoons he was the best exponent of the great overshadowing causes of justice and humanity, in defense of which the young man-hood of Europe are sacrificing their lives by the million."

Bradley's quality was fully appreciated in his

home city even by rivals of his own paper. The Chicago Herald thus speaks of him:

"A fine quality of vigorous idealism characterized his work. He saw events, local, national, and world-wide, in a large way. His pictures summed up justly public opinion upon many important issues. He had, too, the rare satisfaction of doing his best work up to the day of his death. In fact, altho he was in his sixty-fourth year, Mr. Bradley was enabled to show his most brilliant gifts during the last three years of his life.

"Withal he led a calm, simple life. The fact that his drawings were highly prized by statesmen of Europe and America did not lure him from the unaffected quiet which he preferred. Always he kept the freshness of youth, taking up through last summer a boy's zest in swimming in Lake Michigan. Newspaperdom has been deprived of a fine figure in the death of Carteonist Bradley and thousands have lost a friend."

Briefly condensed, the facts of his career appear in the New York Evening Post:

"He was born in New Haven, Conn., in 1853, and after a

brief stay in Northwestern University, he went to Yale, where he was graduated in 1875. He entered his father's real-estate office in Chicago. In 1882, however, his ambitions underwent a change. After traveling extensively he became interested in newspaper work in Australia. He drew cartoons for Australia Tid-Bits, Melbourne Life, and Melbourne Prach. Bradley was fond of athleties and was of athletic build. While at Yale he was a member of the erew. He is survived by a widow and four children."

In the appreciations of him written by his associates on the Chicago Daily News, Mr. Henry J. Smith points out that his personality was of the plain, everyday sort. "He did not dress the artist part, nor try to look it." But—

"His work was his work. He never threw a halo around it, nor did he ever imply that because he did that sort of work, he was a being of a higher order. In connection with this absence of 'pose' it is worth mentioning that Luther Bradley produced his cartoons without nearly as much academic preparation as weekly periodicals regu-

they seemed to reveal. He read three weekly periodicals regularly, others desultorily, and he dipt into thoughtful books as they came out. But he did not try to know everything. His real library was the picturesque, laughable, and dreadful book of life itself, as disclosed to him in the news of the day. He illumined these from the inexhaustible batteries within him. He did not seem to need the artificial light that came from other minds."

Another associate, Mr. Charles H. Dennis, dwells more particularly on Mr. Bradley's mental attitude in respect to his work. "He was incapable of compromising with his convictions," we are told, "but he was always ready to consider evidence tending to show that his convictions were wrong," He was of the fiber of the reformer, satirizing especially the

LUTHER D. BRADLEY.

"In presenting the vital and topical issues of the war in the form of cartoons," says a foreign celltor, "he was the last exponent of the great overshadowing causes of justice and humanity, in defense of which the young manhood of Europe are sacrificing their lives by the million." He died in Chicago January 9.

THE HARVEST MOON.

-One of the earliest of Bradley's war-cartoons in the Chicago Dolly News.

social habits that he regarded as signs of a weakening in the stamina of the people. Thus:

"Always looking for good causes to help, he frequently express the desire to 'strike a blow' for this or that. In a world with so many wrongs to be combated he had no patience with frivolous subjects for cartoons. He took his talent too seriously, he took life too seriously, to waste his time on littlenesses. He was eager to attack any piece of injurious folly or any social tendency indicating deterioration of the mental, moral, or physical fiber of Americans. Cartoons of the type of the one in which he contrasted the sturdy boy of an earlier generation trudging to school through snow-drifts with the languid stripling of to-day stepping into an automobile and saying, 'School, James,' gave him particular pleasure.

"A consistent enemy of individual and national flabbiness, he rejoiced in honorable achievement of every sort. For the great men of the past he had a particular reverence. The birthdays of Washington and Lincoln seldom or never passed without his drawing lessons from their lives for the profitable consideration of the people of to-day. For Roosevelt he had an unwavering admiration and he never grew weary of depicting that virile American in the act of doing some strenuous thing or other. This big, gentle-hearted artist dearly loved also to picture women admonishing their husbands on matters of public duty or serenely setting them right when they were in the midst of some wrong-headed action typically masculine. He believed that women commonly had a finer, truer sense in matters of social service than had men, and he championed their cause effectively by expressing in many ways his conviction that as a rule they were no less clear of vision than pure of purpose in dealing with public affairs. On behalf of children, misunderstood at home or mistreated anywhere through poverty or neglect or the barbarities of war, he was always ready to fight in flaming indignation.

"When the European War broke out Bradley, in the full enjoyment of his ripe creative power, turned with passionate energy to the task of depicting the gigantic criminality of militarism. The scathing indictments which he drew against it were reproduced in publications throughout the world. Their remarkable merit brought him wide fame and soon he was proclaimed by many the greatest of American cartoonists. From the earlier war-cartoons—such as the one entitled 'The Harvest Moon' and showing a skull-shaped luminary pouring its rays down upon an illimitable plain covered with corpses—to the last three or four of the wonderful series, including 'Just Another Little Fellow' [recently reproduced in The Literary Digest], showing the slender corpse of stricken Roumania over which the ponderous wheels of war has passed—they met with wide recognition as masterpieces of the cartoonist's art.

"Bradley's life went out suddenly, but peacefully, while his creative power as an artist was at its height. In taking him, death ended the career of a devoted champion of goodness, simplicity, and gentleness, of progress and truth."

RESCUING THE FOLK-SONGS

THE KENTUCKY MOUNTAINS are being ransacked by enthusiastic folk-song gatherers of these lyric remnants of the past. Miss Loraine Wyman is one of the "pickers-up of unconsidered trifles," and her results: have appeared in a volume called "Lonesome Tunes." What is found in these remote districts are the songs of English peasants, many of them also garnered in the English countryside by the late Baring-Gould and Mr. Cecil J. Sharp. In these parts of the Alleghanies dwell English, Scotch, and Irish, more untoucked by other European influences than any other people living in the United States. They are shy of giving up their stories, and Miss Wyman tells of all sorts of ruses employed to persuade the natives, some of them children, to sing for even an audience of one. The enthusiasm for collecting old songs is much greater in England, where probably the field is richer and the pursuit has been followed longer; but Mr. Sharp regards this belatedness in investigation as something of an advantage, The present-day collector goes about it in a very different way from the eighteenth-century musician, having set up quite a different standard. He has realized, says Mr. Sharp in The Musician (Boston), that "his first and chief obligation is to record just what he hears, no more and no less, and that the esthetic as well as the scientific value of his work depends wholly upon the truthfulness and accuracy of his transcriptions." Mr. Sharp speaks of two theories respecting the origin of folk-song:

"Some hold that folk-songs were composed in the past by individuals, just like other songs, and have been handed down to us more or less in-correctly by oral tradition; that they were the fashionable and popular songs of a bygone day, the compositions of skilled musicians, which found their way into the country villages and remote neighborhoods where, altho long forgotten in the towns and cities of their origin, they had since been preserved. To put it in another way, the folk-song, it is contended, is not a genuine wild flower, but, in the jargon of the botanist, a 'garden-escape.'

"The opponents of this school, however, imprest by the fact that the essential characteristics of the folk-song—its freshness, spontaneity, naturalness, and unconventionality—are the very qualities which are conspicuously absent from the popular songmusic of the past, maintain that folk-songs are the products not of the individual, but of a people or community, and that we are indebted to the process of oral tradition not merely for preserving them, but for molding, developing, and, in a sense, creating them as well.

"This is not the occasion to enter into a lengthy discussion

GOING BACK-TIME TO BEXT SOME PLOWSHARES INTO SWORDS

-Bradley in the Chicago Daily News.

upon an abstruse and highly controversial question of this sort. Suffice it to say that the writer is a stout upholder of the communal theory of origin; that he believes that the nature of the folk-song and its history can be satisfactorily explained only on that hypothesis; that the most typical qualities of the folksong have been laboriously acquired during its journey down the ages, in the course of which its individual angles and irregularities have been rubbed and smoothed away, just as the pebble on the seashore has been rounded by the action of the waves; that the suggestions, unconsciously made by individual singers, have at every stage of the evolution of the folk-song been weighed and tested by the community, and accepted or rejected by their verdict, and that the life history of the folk-song has been one of continuous growth and development, always tending to approximate to a form which should be at once congenial to the taste of the community and expressive of its feelings. aspirations, and ideals."

In rendering folk-songs for an audience the accompaniment is an important point. Mr. Howard Brockway has provided accompaniments for the songs in Miss Wyman's collection and they aim to hold to the simplicity and spirit of the original. On this point Mr. Sharp writes:

"With the purist, a simple solution is to dispense with an accompaniment altogether, on the ground that it is an anachronism. But this is surely to handicap the folk-tune needlessly and to its detriment. For as it takes an artist to appraise the value of a picture out of its frame, so it is only the expert who can extract the full flavor from an unharmonized melody. Musically, we live in a harmonic age, when every one, consciously or subconsciously, thinks in chords; when even the man in the street is under the influence—if only he knew it—of the underlying harmonics of the popular air he is whistling.

"And herein lies one of the fundamental distinctions between folk- and art-song. The former, in its purest form, being the product of those in whom the harmonic sense is dormant, is essentially a non-harmonic tune; whereas the latter, of course, is demonstrably constructed upon a harmonic basis.

"If, then, the need of an instrumental setting to the folk-song be granted, we have next to consider what is its ideal form; and this, likewise, is largely a matter of individual taste. Sir Charles Stanford, for instance, advocates a frankly modern treatment. 'The airs,' he says, 'are for all time, their dress must vary with the fashion of a fraction of time.'

"Personally, I take a different view—and Sir Charles admits that there are two sides to the question. For it seems to me that of the many distinctive characteristics of the folk-air one of the most vital—at any rate, the one I would least willingly sacrifice—is that which makes it impossible to put a date or assign a period to it, which gives to the folk-air the quality of

permanence, makes it impervious to the passage of time, and so enables it to satisfy equally the artistic ideals of every age."

Then there is the singing, which is perhaps the most important of all:

"Traditionally, folk-songs are sung not only without gesture, but with the greatest restraint in the matter of expression; indeed, the folk-singer will usually close his eyes and observe an impossive demeaner throughout his performance. All who have beard him sing in this way will. I am confident, bear witness to the extraordinary effectiveness of this unusual mode of execution.

"Artistically, then, it will, I think, be found that the most effective treatment to accord to the folk-song is to sing it as simply and as straightforwardly as possible, and, while paying the closest attention to the clear enunciation of the words and the preservation of an even, pleasant tone, to forbear, as far as may be, from actively and deliberately attempting to improve it by the introduction of frequent changes of time, crescendos, diminuendos, and other devices of a like character."

One of Miss Wyman's finds is called "Peggy Walker," and was retrieved in Harlan County, Kentucky, giving a rather cynical version of "The Girl I Left Behind Me":

1

There was a joily farmer who lived a neighbor nigh, (bis). He had but one fair daughter, upon her I cast my eye.

11

I asked her if she'd be willing for me to cross the plain, (bis) And if she would be true to me till I return sgain.

111

She said she would be true to me until death did decline, (bis). Then I shook hands and parted with the girl I left behind.

IV

I set my beat for Iceland, strange people I might see, (bis) I met Miss Peggy Walker, she fell in love with me,

V

I quit my work one evening, went walking up the street, (bis). The stage was just returning and a post-boy I did meet.

VI

He handed me a letter that I might understand, (bis) The girl I left behind me had gone with another man.

7.11

Whilst I stood there lamenting, said he, "Poor boy, don't cry. (bix) For I have money a-plenty, to serve both you and I."

"THE FINAL ANSWER!

-Bradley's last carteon for the Chicago Daily News.

THE LANGUISHING BRITISH STAGE

DUBIOUS RECORD for 1916 is reported by the London stage. "It would almost seem as if the war had had a stultifying effect on the playwright's imagination," says the London Times, and it is unwilling to concede to any of the things already achieved the title of "the great war-play." That is still to be written. "It looks as if the greatest dramatic theme in history will have to wait for proper treatment until peace has returned to the world." One or two plays are mentioned, so far not known to us, such as "The Man Who Stayed at Home," "Home on Leave," and "London Pride," and the record is that they have appealed to "the audience of the moment," but they are also judged as "hardly worthy to rank as the drama's contribution to the literature of the great upheaval." The people have, however, sought amusement as a distraction from more serious thoughts, and the theaters have struggled bravely with "war-conditions, darkened streets, Zeppelin-raids, daylight-saving, the entertainment tax, the growing competition of the cinematograph theater, and the music-hall." The Times's record runs in this wise:

"Sir Arthur Pinero has given the stage nothing during the year; the only contribution from Mr. Henry Arthur Jones has been the production in the country of 'We Can't Be as Bad as All That,' which was seen in America some years ago. Sir James Barrie has written one delightful fantasy—'A Kiss for Cinderella.' Apart from this, he has furnished various little sketches for charity performances, which achieved their object even if they added but little to his reputation.

"Mr. Bernard Shaw's record is blank; so is that of Mr. Galsworthy and Mr. Granville Barker, the the silence of the latter a partly to be accounted for by the fact that he has placed his services at his country's disposal. Mr. Arnold Bennett has been too busily occupied with novels and war-articles to write for the stage. Mr. Sutro's contribution has been limited to a war-savings sketch for the variety theaters. Mr. Vachell, who a year ago was justly looked upon as one of the bright hopes for the future, has been disappointing. It would almost seem as if his stock of original plots was nearly exhausted, for he has shown a tendency to rely on a collaborator, and one has missed the sparkling gaiety of his earlier work. Mr. Harold Brighouse achieved one triumphant success in 'Hobson's Choice,' but a second production from his pen, 'The Clock Goes Round,' was an overambitious effort to interpret fantasy in the terms of everyday life. Mr. Louis Parker has written a moderately successful play about Disraeli, in which he took certain liberties with historical facts. Mr. Rudolf Besier has been associated in a couple of plays, both of which attempted to delineate the char-

acteristics of the Prussian, while of Mr. Edward Knoblock's two works 'Home on Leave' has proved the more successful. On the brighter side of the picture Mr. Somerset Maugham wrote in 'Caroline' one of the wittiest comedies that the London stage has seen for some time."

The record will be slightly modified if one remembers that some of the silent playwrights, like Shaw and Barker, have been vocal on the American stage, Mr. Barker even now about to launch a new play in New York. As for the acting, we are told there would be difficulty in picking out individual performances which would stand out clearly as dramatic triumphs

"Possibly the war itself accounts for this. Mr. Henry Ainley, Mr. Godfrey Tearle, and a host of others are playing in the greatest drama of all; two promising young actors, Mr. Basil Hallam and Mr. Shiel Barry, have made the supreme sacrifice.

"Sir Herbert Tree has been in the United States, either acting for the moving pictures or celebrating the Shakespearian tercentenary away from the poet's native land. Sir Johnston Forbes-Robertson has definitely retired from the stage. Mr. Cyril Maude is in America, and Sir George Alexander has strayed to the variety theaters. A year ago the majority of playgoers would have picked out Mr. Ainley's performance in 'Quinneys' as the most striking piece of work. This year, however, the task would be much more complicated, and it would be hard to choose between the contending claims of Mr. Dennis Eadie as Disraeli, Mr. H. B. Irving as the 'spoot' medium in 'The Barton Mystery,' Mr. Joe Nightingale—one of the real discoveries of the year—in 'Hobson's Choice,' and Mr. du Maurier as the 'infalliable' policeman in 'A Kiss for Cinderella.'

"The performances of three actresses stand out from the rest. Miss Doris Keane by her performance in 'Romance' [an American actress in an American play] has placed herself in the first rank of emotional actresses—the one would prefer to see her in a new part before forming a definite idea of her adaptability. Miss Madge Titheradge has added to a steadily growing reputation by her performances in 'Tiger's Cub' and the Drury Lane melodrama, 'Best of Luck,' while Miss Renée Kelly has returned from America to achieve immediate popularity in 'Daddy

Longlegs,

"Despite Sir Herbert Tree's absence from England, Shakespeare has not been entirely neglected during his tercentenary year. Mr. Martin Harvey's Red Cross season at His Majesty's was particularly successful, while the 'all star' performance of 'Julius Cæsar' at Drury Lane in May culminated in the knighthood of Frank Benson, an honor which was as generally welcomed in the theatrical profession as it was well deserved. A word also should be said for the splendid work which has been carried on by Mr. Ben Greet at the 'old Vic.' Week in, week out, performances of Shakespeare have been alternated with operatic productions at popular prices."

RELIGION-AND-SOCIAL-SERVICE

THE PUBLIC SQUARE AT YPRES AND THE CATHEDRAL.

This town has been captured and recaptured several times. The French now hold it and are endeavoring to repair some of the damage.

THE NEW SPIRIT IN THE FRENCH CHURCH

THE CHURCH OF FRANCE, in the course of this war, has had the "opportunity of showing its mettle," says Georges Goyau, the famous church historian; and he adds: "It is revealing to the country the real place it occupies in the national life." Mr. Goyau was the author of the remarkable article in The LITERARY DIGEST of November 18, on the relationship between the German and French Catholies. In the Revue des Deux Mondes (Paris), he presents another lucid article on the Catholic question, this time treating of the rebirth of French Catholicism after nearly half a century of callousness on the part of the population and of persecution by the Government. Waldcek-Rousseau, the former Premier of France, in a speech before the French Senate in 1903, stated that "Catholieism survives in France, if not as a religious law faithfully observed by everybody, at least as a social statute respected by the vast majority." The French Church is indeed a moral power to be reckoned with, declares Mr. Goyau, "and when the war-toesin had rung throughout the land, when the hour of death had been welcomed as an old dear friend, all misunderstandings of the past melted away, and now for fully twentyeight months the Church could again place itself at the disposal of France."

Professor Goyau also relates with emotion and gratitude the patriotic sacrifices made by the Protestant churches and the synagogs of France: out of 490 pastors of the Lutheran and Reformed persuasions 180 are in the trenches; all students of the Paris Rabbinical, Seminary and more than three-fifths of the officiating rabbis of the Republic left for the front; two of them were killed, one is missing.

"When, after this war is over, our sister Churches will write their own martyrology, Catholic witnesses will rise to glorify their dead. The whole Catholic press rendered a well-deserved homage to Chief Rabbi Bloch, of Lyons, who was mortally struck by a German bullet while he attended a dying Catholic soldier, holding the cross to his livid lips."

After these prefatory remarks the author traces, in his inimitable style, a picture of the life and activity of the Catholic Church from the unforgettable July days of 1914 to date. One-third of its priesthood followed the call of their country. The Paris diocese alone has already buried forty-five of its members. The Cardinal-Archbishop of Lyons had to enlist laymen to fill the gaps in his decimated clergy. Bishops have become again parish priests.

"Eleven young French monks, surprized by the German invasion in their convent in the grand duchy of Luxemburg, disguised themselves, walked stealthily into Belgium, and from there to France, immediately joining their barracks. Dominicans and Jesuits vie with each other in patriotic devotion. The Church, cheerfully accepting the abrogation of its time-honored immunities, with a noble gesture commanded the young priests to shoulder their rifles. 'Your parish,' explained the Cardinal-Archbishop of Reims, Monseigneur Luçon, to his priests, 'is henceforth your regiment, your trench, your ambulance. Love it as you have loved your Church. Perhaps you will be buried on the battle-field. What of it? Why should we priests not give of our blood?' Thus, the priest is no longer isolated from

the people; he has become an integral part of it. The Dominican sergeants and Jesuit lieutenants have built the bridge. And who, on the other hand, would have believed, a short three years ago, that a company of French soldiers, educated in the godless school of the Republic, should, before preparing for assault, receive absolution on their knees?

A parallel case to this kneeling company receiving absolution is the scene in the Bois d'Argonne, of March 7, 1916, when "the successive waves of a regiment, marching to the attack, bowed themselves before the representative of God, de Chabrol, chaplain of the division, whose hand, while the guns were thundering, made the sign of the redemption." This is a textual quotation from an order of the day by the commanding general.

Mr. Goyau does not forget, either, the heroic work of the nuns. At Gerbéviller, when the village was in flames and a German officer was going to give the order to burn down the Red-Cross pavillon, Sister Julia placed herself before the lieutenant and with superb courage defied him to commit the sacrilege. The Bavarian, taken aback, bowed his head andthe parillon was saved.

Not less courageous was Sister Gabriela, of Clermont-en-Argonne. The army of the Crown Prince arrived there at the end of August, 1914. "We will take care of your wounded," she said, "if you save the town." It was promised. The promise, however, was not kept. The nun stept before the colonel: "Well, I see the word of a German officer can not be relied upon." The town was saved and twenty-five French wounded prisoners owed their lives to the plucky sister, who, in April, 1916, received the war-medal, "the major making his little congratulatory speech while I was completing the bandage of my poor poils whose head was resting on my lap," Professor Goyau quoting verbatim the report of the decorated nun.

Fifty-nine priests and seminarists of the Paris diocese received their crosses under similar conditions; the natural love of the soil and the love of the Church, combined, produce heroic souls of a peculiarly noble blending. The olden days when bishops were the supreme lords of towns and counties were revived, if only for a short time, at some places, such as Meaux, shortly before the battle on the Marne. On September 3, 1914, the armies of von Kluck were expected any moment, and the civil agthorities fled. Bishop Marbeaux took possession of the City Hall and with a rare skill organized the various municipal services. Generals Joffre and Gallieni had stopt the triumphal onslaught of the German troops. September 9, the civil authorities returned to Meaux and Mayor Marbeaux gave in his resignation. Similar was the situation in Soissons and Châlonssur-Marne; the cathedrals again became civic centers.

"But our priests, in the midst of the brutal butchery, are not unmindful of the Savior's advice to love even our enemicsabove all, if the latter are in great stress themselves. Thus Rev. Landrieux, of the Cathedral of Reims, while the church was burning, saved from its ruins at the risk of his life a group of wounded German soldiers. The enraged population was going to lynch them. 'You will have to kill me first,' said the courageous priest.

"Words fail to describe as they deserve the deeds of Bishop Lobbedeye, of Arras, and his clergy. The tradition of the catacombs revived; a cellar was transformed into a church, and here the bishop read his mass. The priests threw off their soutanes to become police and firemen, moving-men, and gravediggers. One of them, de Bonnières, of noble birth, went every morning, braving the bullets which whistled about his ears, into the suburbs begging the soldiers for the left-overs from their meals to distribute these pittanees among the starving poor of Arras.

"Thus, before the enemy the old union of church and state had been effected. The same population, the same Government, which before the war had adopted the slogan, 'The priest's place is the church,' requested the cooperation of the elergy. And the Church obeyed the call. Everything was forgotten. 'Who cares now,' exclaimed Cardinal Savin, 'for the religious misunderstandings, political quarrels, and personal rivalries of the past! France first! United by the common danger, we learned to know and respect one the other, and after the war we will solve the grave problems which had separated us before the war. Our victory will be our main ally in this future work of pacification.

Forever memorable will remain that great religious manifestation at Paris during the Battle of the Marne week, in honor of St. Geneviève, the patron of the French capital. She and Joan of Arc became again the divine protectors of France. The people of Paris fell on their knees on the famous heights of Montmartre, the mountain of the saint-martyrs of the past, a place historical in the annals of France. Even the skepties thanked the Church for its resuscitation of the religious spirit. France again remembered that she had once been 'the eldest daughter of the Church.' . . .

"Not later than November 9 last, none less than our grand old man, Alexandre Ribot, Secretary of the Treasury, spontaneously declared in the French parliament that the French elergy, poor as it is, has laid its savings on the national altar in the shape of generous subscriptions to the various war-loans. This war, cruel as it is, has at least achieved this: it made of France one large united family, a real Union Socree, and the priest is anxious to seal this civic concord through the harmony

of souls."

PITY FOR THE "ALIEN ENEMY"

THE "ALIEN ENEMY" is not without his angel of mercy in most of the countries at war-especially Germany and England. In the latter country is organized an "Emergency Committee for the Assistance of Germans, Austrians, and Hungarians in Distress," whose membership is largely recruited from the Society of Friends, tho many of the higher clergy, as well as Viscount Bryce and Lord Haldane, are members. Last year, according to the Society's report, nearly \$100,000 was contributed and disbursed. One of the most interesting items of the report, according to The Friends' Intelligencer (Philadelphia), is that dealing with the response from Germany—there has been "continuous evidence that the reciprocal work is going on in Germany." The Friends' Intelligencer deals with the work of the Bureau of Inquiry and Assistance for Germans Abroad and Foreigners in Germany, which has offices in Berlin under the direction of its secretary, Dr. Elizabeth Rotten. We read:

"Constant mutual inquiries are made and answered, and there have been several sympathetic references to our work in the Berliner Tageblatt which are extremely encouraging.

"Through Dr. Rotten we received the following resolution, dated May 4, 1916 (translated): 'The Königsberg Branch of the German Peace-Society has learned with pleasure of the acts of brotherly love practised by the Emergency Committee, Not only were feelings of deep gratitude aroused among the members, but they felt strongly impelled to help in like manner enemy aliens in Germany.

"On November 12, 1915, Dr. Rotten wrote that she had been in Belgium, getting permission to take home Belgian and French children who had been left by their parents before the outbreak of war in those parts now occupied by the Germans, and says:

"I was also to bring the first little group with me myself. Others will be fetched during the week by other ladies of our committee. We spent the night in Frankfort in the houses of German ladies who are already looking forward to their future little guests. The whole expedition will belong to one of the pleasantest peace-remembrances of the war.'

"The following extracts from her letters speak for themselves: "January 6, 1916 (in reference to the preceding Christmas),

"'In spite of the fact that the numbers of permanent workers in the office and out of it increase all the time, we have work here from morning to night, often including holidays. But we do it gladly, for it is a labor of love, . . . We have sent large consignments of warm clothing and food to the civilian prisoners' camps at Ruhleben and Holzminden, to be distributed among those that received nothing from other sources. French and Russian civilians are interned at Holzminden.

"July 5, 1916. The relatives of the interned men at Ruhleben are eared for by us in exactly the same manner as formerly, but as some of them have been repatriated their number has diminished. On an average we spend about 4,000 marks a month for the relief of these cases, the money coming exclusively from German sources. . . . The reason that we deal more with independent foreigners than with prisoners hes in the fact that there is a great number of other organizations (especially the Y. M. C. A.) who look upon this as their particular province and are doing very good work."

Dr. Rotten is quoted as telling of a meeting held on June 20, in the house of Prince Lichnowsky, formerly German Ambassador in London, at which some of the leading people of Germany were present. "Speeches were made to describe and forward the work of the Bureau, its aims were unanimously appreciated and acclaimed, and the desire was exprest to extend work in the same direction." Further:

"In both countries at Christmas, efforts were made to bring some loving-kindness into the lives of these forlorn victims of the war. In Eugland toys for the children were collected and sent out or given at Christmas-tree parties, and owing to the kindness of friends £00 in money was also specially sent to be expended on Christmas-dinners. The fact of being remembered at a time when even old friends have turned the cold shoulder seems to be what has pleased and touched our 'alien' mothers even more than the gifts themselves. Thus one writes:

"'It is indeed very kind of you to think of me these sad and lonely days. It is nice to have some one kind to us. I have written and told my husband of your gift. I am trusting in the dear Lord to bring peace in the coming year, and that the great prayers of us all will soon be answered, as I am so tired

of this sad, lonely life.

"'A little kindness from strangers—it makes you believe in

human feeling again."

"Our last extract is from a leifer from Fraulein Jens, December 30, 1915, describing what the German ladies did for

the needy prisoners at Hamburg:

"We had altogether about 400 marks, and out of this fund 100 pareels containing about 3 marks worth of goods were purchased and handed over with 100 marks in money-for sick and needy prisoners into the care of the camp chaplain. He took the opportunity of explaining in our presence to three of the eamp "captains," an Englishman, a Frenchmen, and a Russian, the object of the gift. They were greatly touched and most grateful. The Englishman thanked us in the name of his country,"

BRITAIN'S NON-CONFORMIST CABINET-The astonishing advance in democracy made by England since the beginning of the war is noticed in various manifestations by political observers. But another proof of the new order is remarked by The United Presbyterous (Pittsburg) in the religious affiliations of the British Cabinet recently organized. Mr. Lloyd George, the colossus of democracy that has arisen as if magically from the confusion and din of government in wartime, is also the "first Non-conformist in actual membership with a Free Church to be Prime Minister." The retiring premier, Mr. Asquith, we are told, had left Congregationalism for the Church of England long before he acceded to the post of leadership. Socially, as well as religiously, the summary of the church affiliations of the new Cabinet "signifies a great advance in democracy" observes The United Preshyterium, which informs us that:

"Mr. Lloyd George is a Campbellite Baptist. Mr. Bonar Law, a son of the Presbyterian manse, is a Wee Free Presbyterian. He gets his name 'Bonar' from his father's admiration for Rev. Andrew Bonar, a well-known Scotch elergyman. Mr. Arthur Henderson is a Wesleyan Methodist lay-preacher and a leader of the Brotherhood movement. Sir F. E. Smith was brought up in Wesleyan Methodism. Austen Chamberlain has family links with Unitarianism. The Minister of Munitions, Dr. Addison, is a Presbyterian. George Barnes, the Pension Minister, and one of the products of the labor movement, is a Congregationalist. The Postmaster-General, Albert Holden Illingworth, is a Baptist. John Hodge, the Minister of Labor, is a Wesleyan Methodist. Gordon Hewart, the Solicitor-General, had early associations with Congregationalism,"

In view of these appearances at the front in a time of strain and crisis of strong men affiliated with the Free Churches of England, Scotland, and Wales, says The Congregationalist

(Boston), "it is not surprizing that the Free Church organizations are discussing in a tone of hope and expectation the future power and influence of Non-conformity." It adds: "In spite of certain overtures for popular support and certain social moven ents in the Established Church, that Church is so thoroughly representative as a whole of the conservative and aristoeratic forces of the Kingdom that the progress of democratic influence and feeling, in spite of all migrations for social reasons, tends to give the Free Churches a larger and larger proportionate influence in the national life."

NEW YORK'S "INFIDEL MISSIONS"

CAMPAIGN for the destruction of Christianity is not only under way in New York, but its entrenchments are thrown out in a number of secularizing organizations. Christians have been "settling back with a sense of scenrity in their Christianity, content to have pastors and a few other leaders take the entire responsibility of extending the Gospel," says The Missianary Review of the World (New York). While some, at least, have been contented with such a course, the "Freethinkers" have been banding themselves together and pledging each other support, until this journal sees "confronting the Christian Church a strong, energetic, and persistently busy organized force of infidelity whose members are actively engaged in denying the deity and authority of Jesus Christ and attempting to overthrow the Christian Church." The Review bases its observations on facts furnished it by Mr. John N. Wolf, superintendent of the Beacon Light Gospel Hall, which are these:

"Several infidel organizations in New York City are known by various titles that do not indicate their real character. Their favorite methods of attack are: first, aggressive outdoor meetings; holding meetings at Madison Square and in all the principal thoroughfares at noon and at night whenever the weather permits. At these meetings Jesus Christ and the Bible are held up to ridicule, and many blasphemies are uttered.

Distribution of infidel literature is a second method of attack. Books and pamphlets written by Tom Paine, Robert G. Ingersoll. Voltaire, and others are widely distributed to the young men who make up most of the audiences, and who eagerly buy almost anything that is offered in that line. A monthly magazine is also published for the purpose of 'educating the public

and freeing them from the bondage of religion."

"A third form of this saturie activity is the debate, held sometimes at the public squares and sometimes in halls. favorite themes at these meetings are: The Resurrection, The Virgin Birth, The Trinity, The Deity of Christ, and The Authenticity of the Bible. These debates are often earried on by educated and able men, who display considerable familiarity with the subjects. The enemy of God has able generals.

"Another method employed to spread infidelity is the establishment of 'Sunday-schools.' At least four of these in New York City have come to our attention recently. Boys and girls of the neighborhood are brought together and are taught that the Bible is not true and that Jesus Christ was either a mere man or is the mere ereation of somebody's distorted imagination. Not long ago a seemingly prosperous man boasted that his two boys, ten and twelve years of age, could and did 'argue Christianity out of their schoolmates whenever the opportunity afforded.' What

harvest must we expect from such seed-sowing?

This aggressive infidelity and agnosticism are a challenge to the Christian Church to proclaim the Gospel by word and deed to the anchurched and unsaved multitudes of men, women. and children in our cities. Many pastors and laymen are recognizing the opportunity offered by the street-meeting to reach the masses, and year after year, during the spring, summer, and fall months, they have gone out into the highways and byways preaching the Word of Life. If the average Christian layman were only half as energetic and enthusiastic in witnessing to his faith as the average 'Freethinker' is in voicing his unbelief. the activities of organized infidelity in New York City would be met with such a wave of aggressive evangelism as has not been known since the apostolic days. Men and women, boys and girls, would then be brought from under the blighting, damning influence of intidelity into the light and liberty of the Son of God."

CURRENT - POETRY

'HERE are many "poetry magazines," but so far as we know Contemporary Verse is the only American magazine devoted wholly to the publication of poetry. It contains no criticism, no essays, no letters, nothing but verse, and that usually of a high order of excellence. In every issue there is sure to be at least one poem so interesting as to justify the publication of that number of the magazine. In the January issue, among much that is original and attractive, we find these stanzas, full of thought and color, by a poet whom many consider the foremost of his craft in England. The philosophy of these lines may not appeal to all readers, but no one can deny their beauty and sincerity.

THE CHOICE

By John Massoulla

The Kings go by with feweled crowns: Their horses gleam, their banners shake, their spears are many.

The sack of many-peopled towns
Is all their dream;
The way they take
Leaves but a ruin in the brake.
And, in the furrow that the plowmen make.
A stampless penny; a tale, a dream.

The Merchants reckon up their gold.

Their letters come, their ships arrive, their freights are glories:

The profits of their treasures soid.
They tell and sum:
Their foremen drive
Their servants, starved to half-alive.
Wheee labors do but make the curth a live

Of stinking stories; a tale, a dream.

The Pricate are singing in their stalls. Their singing lifts, their incense burns, their

praying clamors;
Yet God is as the sparrow falls.
The try drifts.
The votive arms
Are all left void when Fortune turns.
The god is but a marble for the kerns
To break with hammers; a tale, a dream.

O Beauty, let me know again

The green earth cold, the April rain, the quiet
waters figuring sky,

waters figuring sky,
The one star risen.
So shall I pass into the feast.
Not touched by King, Merchant, or Priest;
Know the red spirit of the beast,
Be the green grain;
Escape from prison.

We take this poignant lyrie from Good Housekeeping. It is an interesting variation on a theme that has inspired much good poetry.

WHEN YOUTH WENT

BY MARGARET WIDDENER

It was not when I plead with her And on a tragic day Clung sobbing to her skirts of rose That Youth went away:

Oh, not when from the cruel glass
My face showed lined and chill.
Her eyes burnt wild behind the mask.
Her pulse hurt me still.

But when I saw young lovers pass And watched them, well-content. Nor felt my eyes grow hot with tears To gaze where they went,

Oh then, I knew my time was through And pleasured in the day. At peace to knew of love and spring. And Youth, gone away. Here is a gay little song from "Songs Out of School," by H. H. Bashford (Houghton Millin Company). It has a lilt suggesting Alfred Noyes, and the second and third stanzas are specially rich in volor.

ROMANCE

BY H. H. BASHTORD

As I came down the Highgate Hill.
The Highgate Hill, the Highgate Hill,
As I came down the Highgate Hill.
I met the sun's bravado,
And saw below me, fold on fold.
Gray to pearl and pearl to gold.
London like a land of old.
The land of El Dorado.

Oh, Drake he was a sallor bold.

And Frobisher, hir Walter, too.
But ne'er they saw so rich a realm

As this that lay before us;

Methinks they strode beside me still.

Blood of my blood down Highgate Bill.

Methinks they felt the self-same thrill.

And sang the self-same classus.

And Keats he pinned us half-way down, Keats the chemist, Keats the cierk, Oh, Keats he joined us half-way down. And laughed our lasty haughter. And halfed with us the far lagsons. The mystic groves, the hid doubloous. And all the passionate, spicralld noons. And the feasts that fall thereafter.

As arm in arm down Highgate Hill,
Down Highgate Hill, down Highgate Hill,
As arm in arm down Highgate Hill,
We met the sun's bravado.
And saw before us, fold on fold.
Gray to pearl and pearl to sold,
London like a land of old.
The land of El Dorado.

In many of the most recent war-poems there is to be seen a new spirit if not of impartiality, at any rate, of sympathy. The poets are admitting that there are two points of view, and that is an advanceover the narrow and bitter partizanship of a year or two ago. This poem, rom Louis How's "A Hidden Well, Lyries and Sonnets" (Sherman, French & Co.), is the work of a man who sides with the Allies, and yet can see courage and loyalty among the troops of the Central Powers, This nobly wrought sonnet might well mark with Charles Sorley's "To Gormany." reprinted in these columns some time ago. It is as well made, and as high in thought.

EPITAPH FOR A GERMAN SOLDIER

Br Louis How

He thought his country right and loved her well.
He marched a hundred miles on blending five.
And cronched in puddles with a crust to rat.
A bloody crust that had a powder smell.
He sang to drown the rearing of a shell;
The vision in his eyes was very sweet—
He saw a flower-bordered German street—
And with a clean French buillet-wound be felt.

And those that loved him never are to know
If he was even showeled in a trench.

Grotesque and grim who was their fair delight
From that sweet seed but recollections grow
Without a ray of hatred for the French,
He fought for what was wrong, but he was

The poetical drama has within the last two years received much attention at the hamls of poets. In "The Story of Eleusis" (Macmillan), Mr. Louis V. Ledoux presents a lyrical drama, in the Greek manner, that deals with the story of Persephone. The chorus, which we quote from Act IV, entitled "Persephone in Hades," is recited by a long procession of the dead coming from the palace of Hades to meet Persephone. Mr. Ledoux not only has written a very fine piece of elegiac verse in English (a difficult enough task with that language), but he has also skilfully and artistically preserved the true classic atmosphere and spirit of elegiac verse.

CHORUS

From " The Story of Eleusis"

By Locis V. Laboux

We who were lovers of life, who were fond of the hearth and the homeland,

Cone like a drowner's cry borne on the perilons wind.

Gone from the glow of the similght, now are in extle eternal.

Strangers sli in the place dear to us once as our own.

Happy are they; and they know not we were as strangers before them;

Nay, nor that others shall come; Knowledge belongs to the dead.

Life is so rich that the living look not away from the present:

Eyes that the sun made blind been in the dusk to see,

Once we had friends, we had kindred; all of us now are forgotten.

All but the hero-kines, lords of the glory of war: These, with the founders of cities, live for a little in stories

Told of the deeds they did, not of the men that they were.

Those who were mighty but linger, shadowy forms in a legend;

Never the ministrel's tale tells what they were to their wives.

None on the lips of remembrance live as their children knew them:

Merged in the darkness, kings rank with the recordless dead.

Whether our lifetime brought to us joy or the burden of sorrow,

Whether in youth or age, all when we come from the earth

Clinking to memories wander slow through the

tush from the proferred cup Lethe's oblivious draught.

Long are the years and uncounted passed in the seasonless twilight

Thinking of things that were, feeling the ache of regret; Slowly the echoes fade and the homeland hills

slowly the refuse fade and the homeland hills are forgotten:

Over the flame-swept waste waters of healing are poured.

Lavees of action, lovers of sunlight, lovers of ocean, Shepherds, tillers of earth, yea, at the last we forget.

Longer a woman remembers words that were uttered in moonlight.

Girthood's vision and dream, pitiful things of the home.

Here by the rivers of Hades: Phlegethon, Acheron, Letbe,

Wisdom comes, and the dead judge what they did with their lives:

Never the clustering vineyard yielded to any its fulness—

Ah, but the children here playing their desolate games!

The Faith of America Must Not Falter in This Supreme Crisis

God Reigns, and In His Mame the Belgian Children Must Be Fed

HE BREAK between the United States and Germany brings an appalling crisis to Belgium. The crisis does not come from any failure in the plans for relief. Even if we go to war with Germany to-morrow, that does not mean a failure in those plans. It may cause a brief delay. It may require changes in personnel. But those plans were made with just such an emergency in mind. The danger is not that they will fail, but that the faith of the American people may falter and the supply of funds be checked just when it ought to be flowing in a mighty flood.

What Hoover says

O MATTER what occurs in the relations between the United States and any of the Latter the United States and any of the belligerent powers," says Herbert Hoover, chairman of the Commission for the Relief in Belgium, "the feeding of the populations of Northern France and Belgium shall go on." When the Lusitania was sunk, provisions were made for either Holland or Spain to fill the places of Americans on the Commission's work and carry it forward if war ensued between the United States and Germany. There is no reason to suppose that the new "war zone" drawn around Great Britain by Germany will stop the relief ships any more than the smaller war zone drawn in February, 1915, stopped them. Those ships are allowed to go through the zone immune. "These ships fly the flag of the Commission for Relief in Belgium," says Mr. Hoover, "and this is to-day the only flag at sea that is immune from attack or seizure."

What, Then, is The Danger?

THE DANGER is that the faith of America will falter at this juncture. God pity the alowly starving children of Belgium if it does! Even if the work of the Commission is made more difficult by the new situation, is that any reason for adding to the difficulties and withholding funds at the time of greatest need? It is the time now to redouble exertions, not to diminish them. Even if we go to war with Germany, France and England are also at war with Germany, and yet they have been contributing tens of millions of dollars to Belgian relief where we have contributed millions. War or no war, the CHILDREN OF BELGIUM WILL NOT BE ALLOWED TO STARVE, if America does not now fail in her duty. If we falter now, even for a few days, the consequences may be something appalling.

Send On Your Money in Absolute Confidence that it will be Applied to One Object Only. - the Feeding of the Belgian Children

THE GREAT heart of the American Nation has awakened as never before, and, in addition to the splendid sum of more than \$200,000 which has already been received and is acknowledged in this week's issue, we are assured of the organization of unselfish men and women in hundreds of villages, towns and cities throughout the country to further this great work. The principals in the schools of the country are taking it up with vigor. The pastors of churches in every State in the Union have already begun an aggressive campaign in this life-saving work. The newspapers, always to be relied upon in great emergencies of this kind, are giving and preparing to give their splendid energy to this great cause. So instead of raising \$1,000,000 as we had originally announced, we determined not to stop until the entire \$15,000,000, which was necessary for the year 1917 to give this supplementary ration to the unfortunate children in unhappy Belgium, has been received. Be sure to read opposite page.

Make checks payable to BELGIAN CHILDREN'S FUND, and make them as large as possible (\$12 is the unit for one child's extra ration each day for one year), and address all letters to Belgian Children's Fund, care of The Literary Digest, 354-360 Fourth Ave., New York

"IN THE NAME OF GOD THE FATHER"—GIVE!

MERICA HAS BEEN RESPONDING nobly to THE LITERARY DIGEST'S appeal for Belgian Children, "IN HIS NAME." As this is written (on Tuesday, February 6), the sum contributed during these few days since that appeal went forth reaches over \$200,000, mainly from individual givers, by whose generous action we have been thrilled-Following the splendid lead of Lancaster, Pa., other cities have gone forward in their efforts to assure concerted giving toward our Belgian Children's Fund, and there are inspiring assurances that not only will this Fund attain the proposed Million Dollars, but may multiply such vast amount several times.

But now a new issue arises. The relations between Germany and the United States have been broken. If war follows, what will become of the Belgian Children's Fund? Can we safely increase it? Will it surely reach the hungry ones to be benefited by it? So our friends are widely asking, by mail and by telegraph. Shall they go forward with their local plans?

We answer YES, after taking careful counsel, altho we can not state in full our reasons why. Belgium's need will be as great as now for many months to come, whether there be peace or war; it may be greater, if war continues and widens. And Humanity will find a way to feed those hungry Belgian Children, if the means be supplied. In the name of God the Father they must be fed. Even if this may not finally follow through American hands on Belgian soil, other hands will take to them the food which American philanthropy contributes. Giving in the Name of God the Father will open doors through which our gifts can reach those half-starved little ones amid their ruined homes. The spirit which moves behind our Belgian gifts will assure channels through which those gifts must go. It is the spirit moving a New Jersey lady when she writes enclosing a check for \$120, and says: "I am sending you what I had planned to spend on a ten days' pleasure trip-a trip to which I can claim no right when so many little children are starving." It is the spirit revealed in thousands of letters from which we would make extracts, did space permit.

Therefore, again we say: GIVE, IN THE NAME OF GOD. THE LITERARY DIGEST will exercise the most constant watchcare over every dollar given on behalf of those needy ones for whom our appeal is made. All possible caution shall be observed in the transmission of funds. Let the good work go forward, wherever it has begun. We are freely contributing our space to its promotion. Added to THE DIGEST's own contribution of \$6,000 cash, fully paid in, and its advertising space, worth many thousands of dollars more, its publishers are spending thousands of dollars of their own cash additional to spread the Fund's publicity. We are going ahead on the basis of our great faith in God and Humanity, to aid in a benevolence which the world recognizes, which Providence will protect, and which Humanity must hold sacred.

Make checks, money-orders, or other remittances payable to Belgian Children's Fund, make them as large as possible, and address all letters to Belgian Children's Fund, care of Tun LITERARY DIGEST, 354-360 Fourth Avenue, New York.

Contributions to THE BELGIAN CHILDREN'S FUND—Received from February 1 to February 6 inclusive.

REVIEWS OF NEW BOOKS

In deference to some hundreds of requests from subscribers in many parts of the country, we have decided to act as purchasing agents for any books reviewed in The Literaly Digital. Orders for such books will hereafter be promptly filled on receipt of the purchase price, with the postage added, when required. Orders should be address to Funk & Wagnalls Company, 154-360 Fourth Avenue, New York City.

NOTABLE RECENT WAR-BOOKS

PROBABLY few readers have any comprehension of the great extent of war-literature that has appeared in this country and Europe since the conflict began in August, 1914. That the mass has already exceeded in amount everything written for a hundred years on the Napoleonic wars, that it exceeds all that has been written for fifty years on our Civil War—two topics each of which, before this conflict, was known to have produced the largest amount of literature extant in the world pertaining to any single theme except the Bible—would admit of each proof

of this mass, articles in newspapers and periodicals make the largest part, but when the war had been in progress only one year, the books pertaining to it published in England numbered more than two thousand. And in Germany the number was much greater. Hinrich of Leipzig, in statistics covering the period from the outbreak of the conflict until the end of 1915, classified as war-literature (his figures including paniphlets as well as bound books) no fewer than 8,095 publications. Practically all the literature published in Germany has been more or less directly connected with the war, and other literature has suffered in consequence. So have newspapers and magazines, of which it was estimated that about three thousand had suspended publication in Germany by the end of 1915. What the number of books published in France may have been, or in Russia, Austria, or Italy, no means seem for the present to be at hand for determining. Following are some of the more recent war-books as selected from a larger mass in a belief that readers of The Literary Digest will like to larve attention called to them as has been done with the war-books of earlier periods since the conflict began.

Northellife, Lord. At the War. With portrait, Pp. viii-355. New York: George II, Doran Company, 42 net. Postage, 14 cents.

Probably Lord Northeliffe is the journalist who holds the largest auditory in the world. His publishers speak of him as "the strongest voice in England." His book, made up of his letters, telegrams, cablegrams, and other writings about the war, has been published at the request of the British Red Cross Society, and Order of St. John, the profits to go to the joint committee of those societies. The book is written in the noted journalist's best vein and it deserves a respectable place among the still rapidly accumulating war-books. The volume opens with a sketch of "the army behind the Army," a fine portrayal of the civilian might of England. It supplements Mrs. Humphry Ward's story of what is being done in Britain's workshops by men and women. Lord Northeliffe had criticized with unusual severity certain features of the civil administration bearing upon the war, and his strictures have seemingly borne fruit. Much has been written about German efficiency, but what has now assumed formidable proportions is English efficiency. The author speaks with enthusiasm of "the miraculously changed conditions, from the point of view of efficiency

and economy" in which his country enters the third year of the war.

"Scattered among the army behind the Army are schools where war is taught by officers who have studied the art at the front. Here in vast camps the spectator might easily imagine that he was at the front itself. Here the pupils fresh from England are drilled in every form of fighting. There is something uneanny in the approach of a company to a communicating trench, in its vanishing under the earth, and its reappearance some hundreds of yards away, where, clambering 'over the top,' to use the most poignant expression of the war, the soldier-pupils dash forward to a vociferous bayonet charge. At these great reenforcement camps are gas-mask attacks, where pupils are passed through underground chambers filled with real gas, that they may become familiarized with one of the worst curses of warfare. And at these miniature battle-fields, all of them larger than the field of Waterloo, are demonstrating lecturers who teach bombing. The various types of machine guns are fired at ingenious targets all the day long. There are actual dug-outs in which pupils are interned, with entrances closed, while gas is profusely pro-jected around them. Urater-fighting is taught with an actual reproduction of the erater. Such schools are known to exist throughout Germany, but no Prussian thoroughness can better these British wartraining schools in France.

There are graphic sketches from the lives of Joffre, Haig, and Cadorna, of Roims and Verdon. A considerable portion of Lord Northeliffe's book is devoted to the Italian campaign, which he describes in words of enthusiasm. Of all the phases of the grandiose conflict that he was enabled to get a glimpse of, the spectacle of war in the Dolomite Alps seems to have left the deepest impression. Lyric touches are found here and there in his descriptions, as for instance, in such sentences as these; "As the sun rose, the great peaks of the Dolomites stood out like pink pearls, set here and there in a soft, white vapor. Coming through a Canadian-looking pineforest, with log-house barracks, kitchens, and cantoeus beneath one such peak, I was reminded of Dante's lines: 'Gazing above, I saw her shoulders clothed already with the planet's rays."

Revention, Count Francis on. The Vampire of the Continent. Translated with a preface by George Chatterton-Hill. Pp. 480-225. New York: The Jackson Press. \$1.25 net. Postage, 10 cents.

The character and import of Count Reventlow's book — a philippie against England-are suggested by its title, "The Vampire of the Continent." The translation, an abridgment of the original, is by George Chatterton-Hill, Ph.D. The book itself is readable and interesting, tho marred by exaggerated hatred of England. Count Reventlow, whose utterances are so often met with in the newspapers, is regarded by Germany as one of its ablest publicists. He is a clear thinker and writer. like a trained journalist. The object of his book, which has been supprest in Great Britain and its colonies, is to discredit England in the eyes of neutrals by exhibiting her as the consistent exploiter of Europe for selfish ends. Count Reventlow advances the historical thesis that England, from the beginning, has consolidated her power and Empire at the expense of the other European nations, whom she has incited to wars in order to appropriate their ruined commerce.

Bachelor Breakfasts

Teach in a delightful way the time-saving convenience and strengthgiving value of Grape-Nuts.

A morning dish of Grape-Nuts with cream, as the ecreal part of the meal (with perhaps some fruit and a cup of Instant Postum) contains all the elements for nourishment worded until lunch time.

Grape-Nuts — containing an it does all the rich nutriment of whole wheat and barley, including their vital mineral elements for perfect upkeep of body, brain and nerve — has often proved more sustaining than neals requiring more time and work to prepare. Wonderfully delicious!

Every table should have its daily ration of

Grape-Nuts

"There's a Reason"

He asserts and aims to prove from the facts of history that the British Empire is founded directly on piracy. The English began, he says, by robbing the Spanish treasure-ships, acts "of murderous and dastardly brigandage," which are held up to Englishmen to-day as deeds of prowess. They continued by robbing Canada and the States from the French, Gibraltar from the Spaniards, India from the French and the Portuguese, South Africa from the Dutch, Egypt and Cyprus from the Turks, Malta from the Italians, "and last but not least," Ireland from the Irish.

In developing his argument the author shows skill, as, for instance, when he summons to his aid Admiral Mahan's testimony as to England's policy during the War of the Spanish Succession, thuse "England . . . meanwhile was building up a navy, strengthening, extending and protecting her commerce, seizing maritime positions-in a word, founding and rearing her sea-power upon the ruins of that of her rivals, friend and foe alike," The author's knowledge of the history of European international diplomacy is imposing, and his attempt to set forth the clashing ambitions which resulted in the war is not without genuine interest. The chapter of most timely import in the book is the one descriptive of the upbuilding of Germany's navy and of her commercial floots in face of the opposition on the part of the dominant Power.

Chéradame, André. The Pan-German Plot Unmasked. Berlin's formidable peace-trap of "The Drawn War." With an introduction by the Earl of Gromer, O.M. With maps, 12ms, pp. xxii-215. New York: Charles Scribner's Sons. \$1.25 nst. Postage, 10 cents.

By Pan-Germanism Mr. Chéradame means "the doctrine, of purely Prussian origin, which aims at annexing all the various regions, irrespective of race or language, of which the possession is deemed useful to the power of the Hohenzollerns." This doctrine, the author claims, is one of steady growth and accretion, and a realization of it has already been on the verge of achievement. He holds even that acceptance of the German offer of a drawn game would make it real within a decade at the furthest. How vast a project l'an-Germanism is, the author aims to make apparent. Mr. Chéradame has concentrated on this subject for over twenty years. in studies in the very lands now occupied or directed by the Germans. On the strength of these studies, which included interviews with the rulers and statesmen of those countries, be, long before the war, predicted a Pan-German movement for world-dominion. In the present volume, written in the early summer of 1916, he predicts the German offer of a drawn game that was made last November-the most "formidable peace-trap," be calls it, that the Prussian war-lords have yet conceived. He aims to show by citation from German sources, with the aid of thirty-one maps, by the logic of facts, the deadly purpose of subjection to German control of practically the known world. Grant to Wilhelm and the Prussians no more than they now have -control of Middle Europe, the Balkan Peninsula, and Turkey, the direction of an army of from fifteen to twenty-one millions. would be theirs in full mastery from the North Sea to the Persian Gulf. This army would be fully equipped within a decade, would flank both Egypt and India, the Mediterranean would be under control, Africa and the Mediterranean peoples

Forty Thousand Miles on a Fifth Avenue Bus

In the eleven months ending October 31, 1916, the Fifth Avenue Coach Company, New York, had placed in service 259 Goodyear S-V Pressed-On Truck Tires. On this date Mr. G. A. Green, Chief Engineer of the Company, looked up the records of these tires and sent to Goodyear the most remarkable tabulation of truck tire performance the world has ever seen.

Of the 259 tires, eleven had been retired from duty.

In Mr. Green's words these tires had "failed." But before "failing" they had delivered an average mileage of more than 17,000—the lowest nearly 10,000 and the highest more than 28,000.

Two hundred and forty-eight were still running. Three of them had gone between 35,000 and 40,000 miles. Two months later, on December 31, one of these three had gone 49,324 miles. And still going.

Thirteen had covered between 30,000 and 35,000 miles.

And still going.

Fourteen had gone between 25,000 and 30,000 miles. And still going.

But the work of S-V for the coach company, though spectacular because of the number of tires employed, is merely an index to what this wonderful tire is doing, in varied service, all over America.

If your trucks are not equipped with S-V's probably you are not getting all that you ought to get, in efficient tire service—at a low cost.

The Power Behind the Thought

He selects the keys. At his deft touch the silent power of the Robbins & Myers Motor sets in motion the intricate mechanism that records the figures his brain directs.

His mind is untrammeled by operating detail. He knows that the Robbins & Myers Motor is there to give dependable power to the thought he centers on the work in hand.

Nearby is a boy addressing mail by means of the same sure power delivered by another Robbins & Myers Motor. A young woman operates a motor-driven typewriter. In the shop massive punch presses and other machines, big and little, are Robbins & Myers operated.

For assurance of this same silent, dependable operating efficiency, manufacturers of the better electrically-driven devices equip their product with Robbins & Myers Motors.

Their high quality standard demands the best. They realize the value of twenty-one years' experience in quality motor building.

They know that the name Robbins & Myers stands for dependability in motors—from 1/40 to 25 horsepower—for operation on all commercial direct and alternating current circuits.

If you are a user of motor power, a manufacturer of electrical devices, or a dealer, more facts await you regarding Robbins & Myers service.

The Robbins & Myers Company, Springfield, Ohio The World's Largest Exclusive Manufacturer of Electric Faus and Small Motion Branches in All Principal Cities

Robbins & Myers Motors

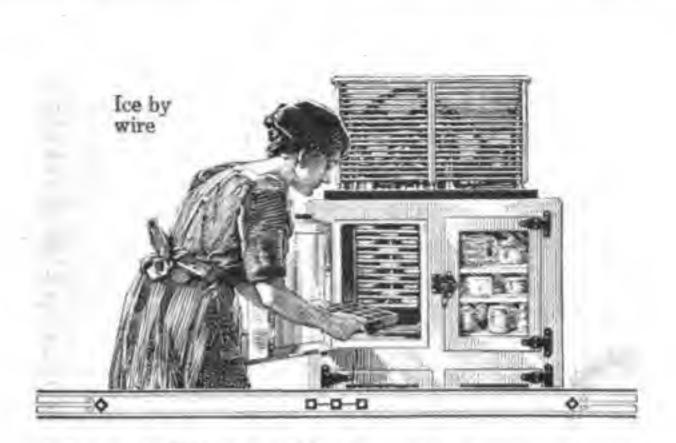

already ripe plums, and the Americas

The conditions at the end of the first Balkan war menaced, in the success of the Slavs and the defeat of Turkey, the success of this purpose. The second Balkan war was therefore precipitated and so forestalled defection or federation of the Slav elements in the Dual Empire, which would have rained German plans by releasing Austria as a whole from subservience to the Hohenzollerns. That the Allies at last have seen the menace appears from their demands with respect to the Austrian Empire in their reply to President Wilson's peace-note. As an exposition of peril from a ruthless Power, the volume is preeminent. The author has hitherto been a Cassandra, prophesying truth in vain. But facts are now speaking. A drawn game, according to this author, means Teutonic domination of the world within a decade.

Treitschke, Heinrich von. History of Germany in the Nineteenth Century. Translated by Eden and Cedar Paul. Volume I. New York: McBride, Nast & Co. \$3.25 net. Postage, 16 cents.

A Hindenburg deserves a Treitschke. Stein, Hardenberg, Scharnhorst, Blücher, and other heroes of the War of Liberation live again in the pages of the German historian. The heavy-featured Prussian general who threw back the Czar's millions is just such a German warrior as he delighted to honor. The rise of Prussia and the rebirth of German imperialism are to Treitschke a part of God's plan for rewarding those whom he regards as the elect among nations and races, the actual details of working out that plan being left to certain great Germans who in this history, quite human Germans the they are, become demigods. Indeed, it might be said that the author covers their honest, useful, unpretentious figures with eloquence and rhetoric till they stand forth in shining armor.

In the early days of the war, when men of letters were scarching heaven and earth for the remoter causes of the conflict, Treitschke's responsibility, his share in the Prussianization of Germany, were made much of, but there was then no English translation of Treitschke. Now the first volume of his work is made accessible to American readers; and, since we are talking less of those who started the war than of those who are going to stop it, the book may be read as simple history rather than as part of a great propaganda. Diseussion of Treitschke's historical method, interesting as it is, may profitably be left to the university professors of history. Readers who make due allowance for the fact that Prussia and the Hohenzolieras are the very soul of that Germany whom Treitsehke worships can recognize the justice and wisdom of much of his comment on the growth of the Prussian State and the evolution of the Teutonie Empire. After a chapter briefly reviewing German history from the Peace of Westphalia (1648) to the outbreak of the French Revolution, Treitschke tells of the effect of that Revolution on Germany, the ensuing wars. the domination of Napoleon, the degradation of Prussia, her reawakening, and the War of Liberation that ended in Napoleon's exile to Elba. The style is heavy and involved, with a somewhat typically Teutonic turgidity. Yet there is an oratorical quality about it which at times carries the reader along, and even rises into bursts of eloquence at the east of patriotism. One sometimes thinks of Gibbon. Pro-

Now! Put efficiency into your refrigerator—and inaugurate a new epoch in the kitchen. A dependable cold-maker—sanitary and economical-Isko is the practical home refrigerating device for which the world has long waited. Turns electric current into currents of fresh, clean, dry coldfood-preserving cold. Simple-nothing to get out of order-can be easily installed in any refrigerator. Maintains a low, even temperature-more economically than ice. Freezes ice cubes for table use-and desserts. Why tolerate longer an unwholesome, troublesome refrigerator? Isko costs only \$275, f.o.b. Detroit. Send for full information today. Isko, Inc., 1730 Mt. Elliott Ave., Detroit, Mich.

Rubber Footwear Holds up Colds

RUBBER footwear is the "Stop! Look! Listen!" preventive to the possible cold. It insulates the foot, keeping out cold and moisture, both of which are frequent causes of "snuffles." Many a cold in the head has traveled all the way up from "cold feet!"

But rubber footwear may be good, bad or indifferent—and only an expert can tell, by observation alone, which is which. So the leading makers put their brands on all their products to protect you. Almost from the very beginning of the rubber industry, these trade-marks have pointed the way to rubber footwear of supreme quality, style, fit and workmanship.

Seventy-four years of successful manufacturing and the experience of fortyseven great factories are back of every pair of rubber shoes, overshoes, arctics, boots, etc., produced by the United States Rubber Company, the largest rubber manufacturer in the world.

Rubbers that fit wear twice as long as rubbers that do not fit.

United States Rubber Company

haps Treitschke might be thought of as an argumentative German Gibbon, who can not forget the theses he has set out to prove, and who depicts the rise of his own living and beloved nation, rather than the decline and fall of an ancient alien empire.

Swope, Herbert Bayard. Inside the German Empire. In the Third Year of the War. Illustrated with Photographs. Octavo, pp. zxi-366. New York: The Century Company. \$2 net. Postage, 14 cents.

What is taking place within the besieged fortress? What is the mode of life of the people of beleaguered Germany? Are they despairing or expectant of victory? Are they starving, as is frequently reported, or are they able to hold out against the gradually constricting ring of steel and fire? These are the questions, of immense interest to the rest of the world, which are answered in this highly interesting, wellwritten volume by a trained American journalist. "Inside the German Empire" is based upon a series of articles which appeared in the New York World. Mr. Herbert Bayard Swope, their author, was in France and England at the outbreak of the war, and in Germany during the first four months of the conflict, in the service of his paper. The earlier visit, as he re-marks in his Introductory, gave him a standard of comparison which enabled him "to contrast the picture of the wild exaltation of 1914 with the serious, somber Germany of to-day." In clear, vigorous English, and with a journalist's instinct for significant phases of the grandiose drama that he saw from behind the scenes and after took part in, Mr. Swope tells the story "of German energies in the fields most interesting and important to America -the story of the empire spiritually and politically, financially and industrially"discusses her food, her military, her subject peoples, her heroes, her attitude toward herself, toward her enemies, and toward the rest of the world-in short, "the story of her strength and weaknesses."

What was the general impression made upon this keen and intelligent, and really neutral, American observer? He gives it without reservation, and with conviction absolute.

"Seventy million people with their backs against the wall; seventy million people fighting as one; seventy million people, and not a quitter among them. That is the deep impression made on me by Germany. Powerful as is the pressure upon them, heavy as are the blows they receive, dark the their eventual prospects may be, the spirit of patriotism, of stedfastness, of courage, of defiance that the Germans are showing burns as brightly and as fiercely to-day, after more than two years of the war, as at the outset."

But beneath all these attributes, the American newspaper man could discern "a subtle change in the fabric of the German spirit." From a certainty of victory the popular feeling has been "universally prest down to a fear of defeat." From the ambition of world-dominance it has changed to a struggle for existence. Hope of conquest has shifted to a determination not to be conquered. "Exaltation has given way to desperation, and the fear that Germany once sought to impose upon others is now being imposed by others upon Germany."

Significant of the revolution which has taken place in the sentiment and spirit of the nation is the author's observation that at the outbreak of the war the word

You and a Thousand Times You

Suppose a day had thirty-six hours instead of twenty-four—and you had four hands instead of two—and you could be two places at the same time instead of one—

You'd be a superman, wouldn't you?

But it hasn't, and you haven't, and you can't!

There is only one You. If you could give a thousand men your knowledge of the business—your ambition—your personality—then

It would, and you would, and you could!

The thing that makes you you isn't the way you comb your hair or wear your clothes. It isn't your person—but your personality.

Put that personality into a thousand Multigraphed letters and you can accomplish thirty-six hour results in twenty-four hour time—do the work of four hands (or more) instead of two be two places (or more) at the same time instead of one.

That's one Multigraph accomplishment — to carry your message — your personality — you — into all parts of your business world.

Think of the possibilities when you, plus a thousand times you, work together in carrying out your plans.

Or, make it ten thousand or a hundred thousand times you—for it's all one and the same to the Multigraph.

Are you confined, restricted, tied-down to you, twenty-four hours, two hands and one place? Expand, man, expand and take your business along with you!

The Multigraph is the easiest way—the coupon the quickest route.

The Multigraph Senior

ELECTRICALLY driven and completely equipped for high-grade printing with printers' ink, type or electrotypes, or for producing type-written letters in quantities.

Prices, \$670 to \$720. Hand driven models, \$175 up. Easy payments.

You can't buy a Multigraph unless you need it.

Produces real printing and form-typewriting, rapidly, economically, privately, in your own establishment

A Car Whose Quality Lifts It Above the Level of Its Price

Though priced at less than \$1000 Saxon "Six" has forced—actually compelled—people to think of it in the terms of costly cars.

No other car we know of has ever accomplished this feat.

Can you think of any car in any other price class whose superiority is as distinct and pronounced as that of Saxon "Six" among cars costing less than \$1200?

The answer of course is in the motor—the famous Saxon "Six" highspeed motor.

In high-gear work, in pulling power, in smoothness, in flexibility, Saxon "Six" gives a performance that seems incredible in a car from the less-than-\$1200 class.

If you search for specific reasons for this superiority of Saxon "Six" you can find them most quickly through comparison with other cars of like price.

Consider if you will a certain car of "less-thansix-cylinders" of similar price and good reputation.

At a speed of twenty miles per hour this "less-than-six" under test developed 1512.73 power impulses per minute.

Saxon "Six" showed 2993.925 impulses per minute.

Or, under the same workingconditions the Saxon "Six" motor showed nearly 98% greater continuity—greater smoothness—greater uniformity of torque. Now you will see just how much advantage accrues from the 98% smoother power-flow of Saxon "Six."

This well-known car of less-than-six-cylinders, previously mentioned, in repeated trials required 30 seconds to reach a 45 miles per hour speed from a stock-still stand.

Under the same conditions Saxon "Six" time and again duplicated this feat in 23 seconds.

This shows 22% faster pick-up in favor of Saxon "Six."

A hill-climb test illustrates what this smoother power-flow means in developing greater pulling power.

This "less-than-six" shifting gears once climbed a mile-long hill in 2 minutes flat.

Saxon "Six" — without shifting gears—did it in I minute and 2 seconds.

These instances are not cited as extraordinary performances of Saxon "Six." Nor are you to view them as such. For they are not

Rather are they representative of the type of performance Saxon "Six" gives.

And they picture, with fairness, we believe, the inherent superiority of Saxon "Six" over any other at less than \$1200.

Saxon "Six" is \$865; "Six"

SAXON "SIX"

A BIG TOURING CAR FOR 5 PEOPLE SAXON MOTOR CAR CORPORATION, DETROIT

in every one's mouth was siegen (conquer, or win). When Mr. Swope revisited the country two years later another word was being used-durchhalten (stick it outhold out). The much-talked-of animosity toward this country, cherished throughout the Fatherland, is well vouched for by the author. "Throughout Germany today," he writes, "the hatred for America is bitter and deep. It is pulpable and weighs you down. All the resentment, all the blind fury, Germany once reserved for England alone have been expanded to include us, and have been accentuated in the expansion. The Germans have an outlet for their feelings against England . . . but against America they lack a method of registering their enmity. And so this bitterness which can not be poured out has struck in and saturated the whole empire."

Countess of Warwick. A Woman and the War. Pp. 270. New York: George H. Doran Company. \$2. Postage, 14 cents.

The Countess of Warwick is known as a brilliant and outspoken writer, an ardent suffragist, a prominent society woman, and an intimate friend of royalties, so what she has to say about problems growing out of the war is worth consideration. Even when she is surprizing, she is stimulating and instructive. One of her protests is against allowing the press to think for us; she also claims that "it does not suffice to think; one must make thought the prelude of action." The best way to read and digest such a meaty work is to consider each chapter separately. Even when her birth and sympathies make her naturally partizan, she has things to say of general importance and interest. She firmly believes that the late King Edward both could and would have prevented the war had he lived, and she also believes that much of the war-legislation is ill-considered and unsatisfactory. Her treatment and criticism of the drink subject, the legal claims of war-babies, and war-time nursing and its abuses are brutally frank and startling, but her essays are convincing and her tributes to Lord French and Lord Haldane most sincere. The book is written with piquancy and thrilling frankness, but always interesting, and it commands respect.

Railey, W. F., The Right Bon., C.S. The Slave of the War-Zone. Pp. 246. New York: E. P. Dutton & Co. \$1.50 net. Postage, 16 cents.

This is not a war-book, and yet to its vivid pages the war lends a tremendous interest. Some of its chapter-headings indicate why: Life in Eastern Galicia; The Heart of Poland; Scenes in the Karpathians; Budapest; Croatia; Belgrade; Life in the Balkans; Serajevo, the City of the Great War; Servia's Agony. etc. The Introduction shows tersely and clearly the early relation between Teuton and Slav peoples in central Europe; and it is of the latter, their habits and customs, their dress, their amusements, their music, their political and religious aspirations, that this work treats. "It is an account of these Slav peoples." its author says in his Preface, "as they were living when the war came on them like a blast from a burning, flery furnace, and how they fared in its awful presence." Slovak, Croat, Servian, Pole, Montenegrin-Slavs, all-they and their habitats fascinate the reader, as they seem to have fascinated all intelligent travelers through those unfamiliar lands, to one of whom English

"'Two Weeks' Addressing Now Done In One Day"

This Same Speed and Accuracy Await You

"It gives me prest pleasure to any that the DHEX-ALL put is one office four years ago has being a most wonderful help in our work. Bills that most no require two needs to address are now address of in a day. Our system proposes two states in most indiameters and addresses on rach. By the most that making done without the possibility of sever and way quickly. I regard it as a very efficient machine and adment indispensable where a lat govern our term that the thomsands at most them." (Signed) JAMES BURTON, Bugt. Fort Seatt Water Works, Fort Seatt, Kanna.

With a DIREX - ALL you can save time, labor and expense in your mailing, listing and billing departments just 25 surely as does the Fort Scott Water Works.

And, in addit: ..., the DIREX-ALL will insure an accuracy of work that will add to the efficiency of your office, and the effectiveness of your service.

Whether your mailing list is large or small, or whether your listing and billing is light or heavy, there is a DIREX-ALL for your particular needs —one that combines the threefold convenience of a mailing, listing and billing machine.

The DIREX-ALL is the modern addressing machine with typewriter ribbon principle and one-piece metal plates. Filing the imprinting plates gives you a complete index system that takes the place of cards. Operation so simple that a boy or girl can do it all with wonderful accuracy and dispatch—guaranteed!

An interesting book, "Doing the Day's Work Better," pictures and describes the particular DIREX-ALL made for you, no matter what your line of business. Free for the asking. Write to our nearest office today.

30-Day Building: Austin Standard

YOU can move into a new factory-building, like the one illustrated, in just 30 working-days after you tell us to go ahead-whether it's two hundred feet or a half-mile long. And it will be a substantial brickand-steel structure, built quickly because everything is standardized and ready in advance—structural steel prefabricated; other materials in stock or under contract.

Besides the building shown here-Austin Standard No. 1-there are two other 30-day types, two 60-day types, and two multi-story types that take a little longer time. No. 3 is 100 feet wide and any desired length in multiples of 20 feet, with only one column to every 2,000 square feet.

Austin Standard Factory-Buildings have been constructed in many localities for nationally known manufacturers whose names we shall be glad to furnish upon request. We also design, con-struct and equip distinctly individual buildings. Write, phone or wire us for full particulars.

readers are indebted for this uncommonly informing volume. His graphic text is accompanied by many photographic illustrations happily supplementing it.

Hunt, Edward Eyre. War-Bread: A Personal Narrative of the War and Relief in Belgium. Pp. 374. New York: Henry Holt & Company. 1916. \$2 net Postage, 12 cents.

In this first authoritative account of the Belgian relief work in book form we have a wonderfully vivid picture of Belgium's needs and of America's contributions, by a man with actual genius for writing and for doing things. After visiting Antwerp, under conditions which thrilled with exeitement as the Germans took possession of that fortress, Mr. Hunt became head of American Relief work there, and served as such a whole year. The story he tells is full of intensest interest, told in a style that should make it a classic of its kind. It is liberally illustrated.

Beck, James M., LL.D., The War and Human-ity. A further discussion of the ethics of the world-war and the attitude and duty of the United States, Pp. 332. New York and London: G. P. Putnam's Sons. 1916. \$1.50 net. Postage 10 cents.

In seven essays, originally speeches, comprising this book, Mr. Beck proves himself a severe critic of our national Administration. He condemns it for the sinking of the Lusitania, for the execution of Miss Cavell, and for the policy of unpreparedness. It should have allied this country with the Allies, he believes; at any rate, it should have broken with Germany at the outset of Germany's undersea efforts. He writes with a facile pen and great vigor.

Philipson, Coleman (M.A., I.I.D., Ph.D.), Termination of War and Treatles of Peace, Large octavo, pp. xiii-486. New York: E. P. Dutton & Co. \$7 not. Postage, 18 cents.

The author of this elaborate and learned study of international law and international relations, as these are to be viewed with reference to the war, is a noted authority in England. As the author of "Studies in International Law," "International Law and the Great War," as well as by other works, he has gained a reputation as an able writer and commentator in that field of jurisprudence which now has such vast import for the world. Dr. Phillipson's new work, designed, as he says, "to fill a gap" in the literature of his chosen domain, is a comparative and analytical study, based for the most part upon original documents, and accompanied by comments and critical observations founded on what he conceives to be the fundamental principles of international law and general jurisprudence. The plan of the book, as summed up almost in the author's own words, is as follows: First, he considers the methods of terminating wars without recourse to treaties of peace, viz., by a reciprocal intermission of hostilities or by conquest or subjugation. The various claims and difficulties that arise in the one case, and the numerous problems and controverted matters in the other discust, and the questions of premature annexation and the validity of conquest are examined. The author next sets forth the juridical consequences of forcible annexation from the point of view of state succession: More elaborate exposition is allotted to the normal mode of ending wars, viz., by concluding a treaty of peace. One-third of the volume is taken up by the Appendix, which opens with the Treaty of Paris (1815), and concludes with the Treaty of Athens (1913).

PERSONAL GLIMPSES

GERMAN RULE IN POLAND

WE had, not long ago, the German proclamation of the new Kingdom of Poland, with the Imperial assurances of good-will toward the unfortunate nation, coupled with suggestions that a Polish Army, ready to defend the land against the Russians would not be unwelcome. In fact, it rather seemed as if the future of the Polish Kingdom, and the German goodwill toward it, depended almost entirely upon the response of the population to the recruiting program.

The Germans had been ruling a greater part of Poland for a year, and recently a prominent resident of Vilna, arriving in America, brought to the New York Times the first uncensored story of what the German rule had done to the conquered territory. The informant, who was of Jewish race, left Vilna through the efforts of the American Jewish Relief Society, and made his way to Rotterdam, whence he sailed for this country. We read that-

The German authorities made every effort to discourage him, telling him that the British were in the habit of taking all Russian subjects off steamers leaving European ports for America and sending them back to Russia, but as he was above military age he was finally allowed to depart.

There were thirty Russian Jews in the party which left Vilna, and the they had paid second-class fare they were shut up in a box car and kept locked in during the entire nine days' journey across the Continent cia Königsberg and Berlin. After reaching Rotterdam they had no further trouble.

The Jewish population of Vilna, which is nearly half of the whole, was celebrating Yom Kippur in the synagogs when the Germans marched in, and the services were not molested. But immediately on their arrival the Germans went to the city hall, where the municipal authorities had remained, and proceeded to confiscate all the money they found there. This was only the beginning of the requisitioning of much of the movable property to be found in Vilna.

The first requisition was for sleeping outfits for the soldiers. Every householder was compelled to furnish a bed, with pillows and bed-clothing, for every window in his house. Then every family was ordered to furnish a statement of the amount of food and flour which it had on hand. The strictest assurances were given that this was for information only and that the food would not be confiscated; but it was confiscated without pay only five days later, and from that time on the civil population has been compelled to buy back the food from the German owners.

Cards calling for half a pound of bread were issued at first at the price of 11 copecks, but later the charge was raised to 16-a little more than five cents. But the supply of bread has never been adequate. The bakeries are open at six o'clock in the morning and the lines of housewives begin to gather sometimes as early as two o'clock. Not infrequently a woman will

ROBABLY because when blackboards were invented nobody thought of any other color.

Printing, too, was entirely a matter of black and white in its earlier stages, but look at the color in your books and magazines today. We have reached a new era in educational methods and schoolroom appoint-Nowadays we want color, cheerfulness, attractiveness in our schools.

Is it necessary that the blackboard should be black? No. A crayon mark will contrast just as sharply with a dark green surface and there you have life and color instead of black with its absence of color.

That is the reason for Beaver Greenboard; the writing board with a rich, restful green tone excellently adapted to schoolroom use.

Beaver Greenboard and Beaver Blackboard both have many points of advantage to recommend them. They cost about a third as much as slate, because they are lighter and cost less to ship and to apply. They will not crack, chip, warp nor bulge. Will not wear shiny with use. Are easily cleaned with water and easily kept in excellent condition.

Beaver Greenboard and Beaver Blackboard have behind them the reputation of the Beaver Board Companies, the manufacturers of Beaver Board, noted for the quality and uniformity of their products and are backed by a broad guarantee as to durability and satisfaction.

Simply write your name and address at the bottom of this advertisement and send to the address below. Sample and literature will be sent to you.

American Technical Society Bept. A2402 Chicago, U.S.A. take her stand in line at two or half past and wait till ten o'clock, only to find when her turn comes that the bread is all exhausted. Each household is allowed two pounds of meat twice a week, but must pay 2 rubles (64 cents) a pound, including the bones. Eggs cost 25 copecks each and must be purchased sub rosa. The narrator knew of a man who secretly bought a goose last fall and was compelled to pay 45 rubles for it. There is no sugar left at all; the only sweetening obtainable is saccharin.

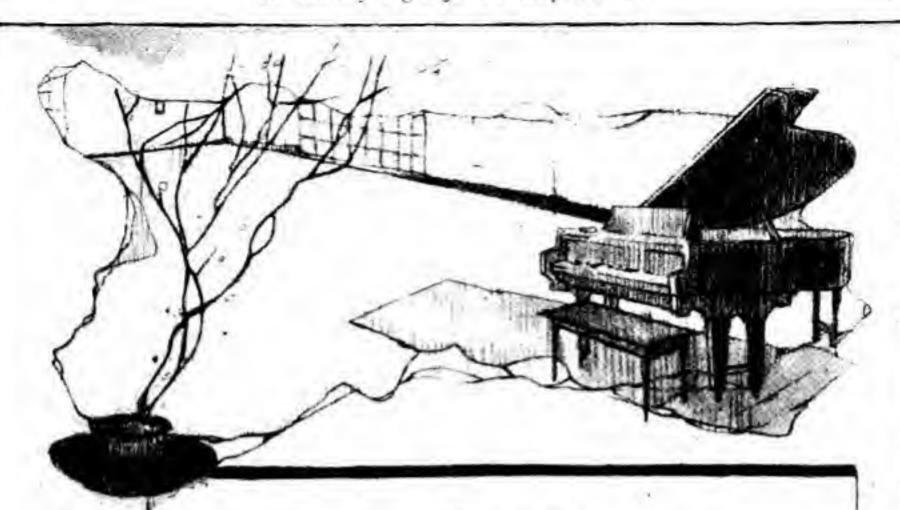

All horses and carriages were seized as soon as the Germans marched in; the automobiles had already been commandeered for the Russian Army. Nearly half the population fled before the oncoming of the Germans, leaving their houses vacant; and all the furniturechairs, tables, beds, pianos-and everything in these houses have been shipped away to Berlin. All the furniture stores have been looted, too. Among the families which stayed there has been comparatively little confiscation of property, after the initial requisition of beds and bedding, except for copper. Every pot and kettle and samovar has been seized, and many of the ornaments in the churches; and all leather in any form has been likewise taken.

And then there is the much-talked-of shortage of food. Every one feels the pinch of inadequate rations; even the German soldiers, who have generally had what they needed, regardless of whether there was enough left for the civil population, even these are short of the necessary supplies. The shortage among the non-combatants is probably responsible for the huge increase in the death-rate, for since the Germans took Vilna in 1915 the mortality figures have increased fourfold. The account continues:

Children are of course particular sufferers and the tokens of starvation are evident among them on every hand. Yet the German officers continue to have almost everything they want except beer, which is not obtainable. In the beginning the officers were quartered on the population and paid nothing for their lodging, but some months after the first occupation of the town a club was opened at which most of them now live.

The search for money is conducted with great vigor, and whenever the authorities of the invading army find that any coin is in the possession of civilians they take it away and give German paper in exchange.

The industrial and commercial life of the community has been entirely supprest. There is a German theater, and newspapers continue to appear in German, Polish, and Yiddish, but that is the extent of the city life. The wine-shops have been closed and the population keeps very much behind closed doors. Civilians are forbidden to be abroad after ten o'clock at night, and the violation of this ordinance by only a minute or two is punishable by a fine of thirty marks and a jail sentence of five days. And the appearance of men, at least, on the street in the daytime is infrequent, for they know that at any moment there is need of labor for military objects, either in the immediate neighborhood of Vilna, or, indeed, anywhere in Poland, the passing civilians are liable to seizure and compulsory labor,

An Invitation

SINCE even the most literal and conservative statement of the Ampico's achievement is likely to sound incredible, we pass over any attempt at verbal description.

We simply invite you to hear the Ampico itself, either at the nearest Ampico dealer's or even better at one of the "comparison concerts" which we have devised as the most effective means of securing for the Ampico the prompt public recognition to which an invention of such importance is entitled.

Every important musical center in the country will hear at least one of these "comparison concerts" in which the Ampico will play the encores of such artists as Godowsky, Ornstein, Adler and Volavy, reproducing the artist's interpretations with the utmost fidelity.

If the Ampico were less remarkable such a test would be fool-hardy. As it is, the "comparison concert" is the most convincing demonstration that could well be imagined.

The Ampico may be used also for playing any 88-note roll, to which you may impart your own interpretation. And the tone and touch of the piano itself are unimpaired for hand playing.

The Ampico may be had in the world's oldest and best pianos: the Knabe (1837), Haines Bros. (1853), Marshall and Wendell (1836), and the renowned Chickering (1823). Write for our illustrated catalogue and for further information regarding the Ampico.

Let Us Present Edgeworth, Mr. Pipe-Smoker

When you have been presented with a sample package of Edgeworth Smoking Tobacco, and have tried it—the chances are you will feel glad to have met Edgeworth.

It is the kind of tobacco that pleases the—we were about to say the particular pipe-smoker but "pipe-crank" expresses it better if it doesn't give offense.

Men smoke Edgeworth because they like it not because it's an easy brand to ask for, which it isn't, and not because it is a popular, everybody-smokes-it brand.

As a matter of fact, Edgeworth may never be the largest selling pipe tobacco. Most pipesmokers work up to Edgeworth. Those who do like it, like it so well that there is small chance of their ever smoking any other kind.

It will cost you nothing to find out whether you like Edgeworth.

If you will send us your name and address and the address of the store where you buy most of your tobacco, a sample of Edgeworth Smoking Tobacco will be sent to you.

> Hetter ask us for the sample. If the flavor of Edgessorth appeals to you, you might as well begin to smoke it now as later.

> One thing the sample will prove. Edgeworth does not note just like all other tobaccom.

If you are kind of vearning for the right tobacco, Edgeworth may be it. You will know when you have toed the sample.

Edgeworthcomes in two forms, Plug Slice and Ready-Rubbed, and is on sale practically everywhere.

Slice is made in compact, rather good-looking rectangular plugs, and cut by thin, keen blades into even slices. Packed in a box you would hardly know that it was cut at all to look at it. One of these slices rubbed up in the hands will just fill the average pipe. Edgeworth Ready-Rubbed is made exactly the same as the Plug Slice, but is rubbed up before packing and comes from the tin ready for the pipe. Let us know whether you would prefer to try the Plug Slice or the Ready-Rubbed.

PLUG SLICE

The retail prices of Edgeworth Ready-Rubbed are 10c for pocket size tin, 50c for large tin, \$1,00 for handsome humidor package. Edgeworth Plug Slice is 15c, 25c, 50c and \$1.00. Mailed prepaid where no dealer can supply, but except in a few isolated cases all dealers have it.

Write to Larus & Bro. Co., 5 South 21st Street, Richmond, Va. This firm was established in 1877, and besides Edgeworth makes several other brands of smoking tobacco, including the wellknown Qboid—granulated plug—a great favorite with smokers for many years.

To Retail Tobacco Merchants—If your jobber cannot supply Edgeworth, Larus & Brother Co. will gladly send you a one or two dozen carton of any size of the Plug Slice or Ready-Rubbed by prepaid parcel post at same price you would pay jobber.

At one time there was an apparent attempt to reopen the commercial life of the town by allowing the importation of manufactured articles from other parts of Poland, but this was only a device for collecting the goods more conveniently, for as soon as sufficient stocks had been assembled in Vilna they were all confiscated and sent away to Berlin. Yet in spite of this complete stoppage of the city's commercial life an assessment of 2,400,000 marks was laid on it last summer.

Actual deeds of violence against the population have been comparatively infrequent. There have been a few cases of attacks on women, but not many. The narrator of the story knew of a man named Sharkoff who was a little slow in answering the ringing of his door-bell by a patrol of troops, and who was promptly bayoneted when he did appear. On the day after the occupation two girls who were selling kyass at the railroad station asked for payment from some German soldiers who had taken large quantities of the drink, and the Germans promptly shot them. This, however, was attributed to the lawlessness of individual soldiers and was not a symptom of the attitude of the authorities, the the narrator had not heard that the soldiers were punished. But the striking of civilians by soldiers is frequent and seems to be unrestrained.

Forced labor began two weeks after the entry of the Germans, and has become more and more frequent, until last summer almost all the able-bodied men up to seventy years of age were employed on some sort of auxiliary labor for the German armies. Many able-bodied men have been deported to Germany, and practically all who have been at work have been compelled to labor in some way against the Russian armies.

The ethnic situation in Vilna is complicated; nearly half the population is Jowish and there is a strong Lithuanian element. From the beginning the Germans tried to make the most of this by playing off the Poles and Lithusnians against each other. They rather supported the Poles and held up the promise of a Polish kingdom to rally the nationalist forces to their side; but the Lithuanian aspirations for autonomy were also enepuraged, and when occasionally bitter quarrels broke out that almost led to bloodshed between the two nationalities the Germans exprest great satisfaction and declared, "This is our work."

But it is the Jews who have suffered most under the German occupation. Hard as was their lot under Russian rule, the Jews are now praying for the return of the Russian armies and their deliverance from this greater hardship. The refugee who tells of conditions in Vilna states that there is no comparison between Russian treatment of the Jews and that which they have had at the hands of the Teutons, and adds:

"The German authorities subject us to constant inquisitions; the German soldiers strike and heat our people on the streets. When Brussiloff broke through the Austrian lines in the south in June, and there was for a long time apparent readiness on the part of the Germans to evacuate the city at a moment's notice, all the rabbis directed their congregations to pray for the speedy return of the Russians."

On the second day of the German oc-

Greatest Cough & Voice Lazenge an Earth

cupation, while long lines of German artillery were passing through the streets, a shell jolted out of a caisson and exploded in the street. Crowds of the population were lining the curb, watching the progress of the invading army, and a Jewish boy was killed by fragments of the shell. His mother burst into tears, where-upon a German officer said jestingly: "That would never have happened under the Russians, for they had no shells. We can afford to drop them in the streets."

There was in Vilna a Jewish cemetery two hundred years old, which had become the center of many traditions, and was deeply venerated by the whole community. The Germans turned a number of brokendown horses into it to pasture among the The Russians had always respected it. There was a Jewish old men's home where the average number of deaths in time of peace was ten or twelve a month. When the Germans commandeered the food in the city and began to dole it out to the population the reduced nourishment began to tell on the old men, and the death-rate leaped to ten a week. When this happened the leaders of the Jewish community begged the German Commandant to allot a somewhat larger portion of bread to the home. "What's the use?" was his response. "They're only old men; they'll die soon, anyway. Much better give them poison."

The feeling against the Jews seems to have two principal bases—the belief that they are acting as spies for the Russians and the firm conviction that most of them have stores of money which they will not give up. A party of 1,200 Jews was taken away to work outside of Vilna, at the end of last summer, being paid thirty pfennigs—a little over seven cents per day. When Yom Kippur arrived two hundred of them refused to work on the religious festival, and they were severely beaten by the German soldiers.

The German armies which occupied Vilna in September, 1915, were composed of young and stalwart men. But in April of last year these troops were transferred to more active fronts, and their places were taken by reservists, who looked as if they had come from a home for invalids. They were old men, some of them with white beards; many bow-legged, some hunch-backed, some even who were blind in one eye. Of late the shortage of food is so great that the Germans have put up a plant outside of Vilna, where they are said to be trying to make some sort of safe food out of horses that drop dead from overwork. There are many eases of suicide among the German soldiers, some even among the officers, and usually these are due to sad and depressing letters from home. The German soldiers were proud enough when they first swept into the city, toward the end of the great offensive of 1915, but with the dragging by of many months this feeling has evaporated.

The quarrels between Lithuanians and Poles are paralleled by bitter wranglings between German and Austrian soldiers, which have been particularly intensified since the Austrian collapse before Brussiloff last June. German officers have declared that if the Austrians again give up so readily the Germans will stand behind ready to shoot them down, and this naturally does not soothe the pride of the Austrians.

Twice last year—during an offensive on the northern part of the front in March, and again in the summer, when Brussiloff's early successes seemed to indicate that the whole eastern line might have to fall back—the Germans packed up their archives and prepared to evacuate on a moment's notice. Among all classes of the population, and even among the German soldiers, according to the belief of the civil population, there is a firm conviction that some time the Russian armies will break through and sweep the Germans out of the city. Meanwhile Vilna waits, and starves.

"THAT LITTLE GIRL FROM ALASKA"

THE New York Herald discovered her; she had come all the way from Alaska to see real civilization for the first time in her seventeen summers. Never before had she gazed at such buildings, nor ridden on such busses and subway-trains. She was the "innocent daughter of the frozen North." according to the metropolitan papers; she was the "child of the snows."

It is unrecorded just how she arrived in New York, but after she had put up at one of the city's best hotels, the newspapers, one after another, got wind of her advent. Reporters flocked to her suite; she was invited everywhere; she was even offered a position in a well-known musical comedy. The public were of course anxious to learn what she thought of this "civilization," and she was followed continually by interviewers. Here is what one of them wrote of her in The Herald:

She learned with wonder that there were bell-buttons beside the top seats of the Fifth-Avenue busses, and she dragged her way along Fifth Avenue, "window-wishing" for the finery, and the jewels, and precious treasure glimmering from the windows.

It was her first real view of civilization as it is contrasted with life at Koyukuk, where the outside world is but dimly known. Until the park came to her view she never dreamed that a Central Park existed. Names that are household words meant nothing to her. Of all the notables of finance, the stage, the clergy—the whole world—she has heard of but one, Mrs. Finley J. Shepard, because "she was so kind," and of John D. Rockefeller, because he has an "oil-house" up in Juneau.

She sat tense and expectant at the Century Theater last night watching the parade of fantasies across the stage. Her exclamations and her peals of laughter that floated out over the house made many turn their heads and stare in amazement at the broad-shouldered, bright-eyed girl, whose cheeks were flushed with amazement. Her laughter was the free, unrestrained laughter of those who have the wide spaces to breathe in.

The first sight of chorus girls in the airy and extremely economical costumes caused her to blush violently.

"Say," she asked fiercely, "is this a burlesque joint?"

She was assured that it was not, but an attraction of quite some note.

Everything was new-astonishingly, wonderfully new-to her.

Later, with certain footsteps, but wide, amazed eyes, the girl threaded her way back of the stage and met the various principals, each of whom bestowed on her a

You know your factory costs down to a tenth of a cent-

You keep a time sheet on the individual worker. Labor is the most expensive thing you buy—and you get facts, not theories, as to what labor produces.

Yet you stick to shorthand in writing your letters. And letters are just as vital product as factory product. Shorthand is hand labor. It is obsolete and it is inefficient. And it is costly. It makes you write every letter twice—once in shorthand and once on the typewriter. It makes your typist waste her time taking dictation and waiting to take it. You don't get as many letters as you should, or as well written or accurate letters; you don't enjoy personal convenience in dictation; and you pay at least a third more than you should for every letter.

You can change all this the day you get out of the hand labor class and dictate to The Dictaphone.

Reach for your telephone and call The Dictaphone, and arrange for a demonstration on your own work. If you do not find that name in the book, write to

picture. Then she came home, her day over.

And the next day she did other things and had other stranger adventures. She was taken on a seeing-New-York trip, through the cafés and restaurants. The indefatigable reporter of *The Heroid* summed it up for his readers, concluding:

Altogether, it was a pleasant and somewhat tiresome day for the young woman whose eyes are being opened so wide by professional awakeners,

Among the many communications seekfing aid, advice, a visit, and mere friendship
was an invitation by telephone from Dr.
Alexander Cummings, of the University
Forum, which is considerably intellectual,
to address the Forum next Tuesday night.
Miss Sachen agreed that she would, and
she will talk on "Life in Alaska and Its
Contrast to Fifth Avenue." The address
will be given at the Washington Irving
High School, at Irving Place and Sixteenth
Street.

But, alas, the lecture was never given. Something dreadful happened, entirely unforeseen by the fair damsel who was drinking in Eastern civilization in such delightful drafts. It had a terrible effect on her adventures, and on her invitations. It had even a worse effect upon her admirers and the gentlemanly young reporters who had usbered her into so many places of interest and exclusiveness. We leave it to the New York Sun to tell all the harrowing details, and in its pages, nay, even on the front page, where it shone with fatal prominence that all might read, we find:

She accepted the invitation to lecture, promising to appear, as the invitation had suggested, in the furs of her Northern home.

But, said Nick Sachen, of 500 Dugarro Avenue, Kansas City, Kan., yesterday in an interview, to the San's correspondent in Kansas City, "it's all bunk! Louise is my daughter and she hasn't been shooting moose and caribou in Alaska all her life.

"She left here last fall to grab off eight bucks a week in Chicago shooting biscuits in a beanery," added Louise's alleged papa.

"There's some fellow named Jack something that's stuck on her. He's a saloonkeeper some place up in Alaska. Last summer when Louise pulled this stuff about Jack I told her she ought to marry him while the going is good.

"My daughter was in Alaska for about two years. She worked in some boarding-house up there. But she blew back here to Kansas City last June. I didn't see much of her the, because she spent most of the time living with a woman friend of hers down the street. She came here with some diamonds—I should say so! 'Where'd you get 'em?' I asked her, 'I saved my wages in Alaska and bought 'em,' she told me."

So, as they probably say in Alaska, "the game was up," and the next day's Sun carried the "sweet little girl's" valedictory to the world. We are told:

"Here I was, handing Broadway the bunk by the bushel, and going stronger with each edition of the newspapers," sighed Miss Louise Sachen to a large con-

THE MOODY BIBLE INSTITUTE 153 Institute PL, Dept. U-1 , Chicago, III. gregation of reporters assembled around her in the Hotel McAlpin yesterday afternoon, and "-holy fathers!-what bappens" Pop, away out there in Kansas City, up and spills the beans!"

"Well," she said listlessly as she sat down, a suspicion of tremor in her voice as she prepared to face the music, "Go ahead. Ask me, boys, I'll tell you the whole truth. Go on-I bunked Broadway for a week and Broadway liked it, and liked me. And now because the town has found out it's been bunked I suppose it's sore and wants to bust into me, Go ahead and

"But listen here!" she cried with head raised suddenly as she gazed straight at the critical audience before her, "you boys got to get one thing right. I never did no wrong to nobody in my life-not even to myself. I carned by working hard the four dollars a day I spend for a room here, I was in Alaska. I hate Kansas City. When I got here I said I was from Alaska, which was true.

"There was a piece in the Kansas City papers when I got home from Alaska last May and I thought maybe the New York papers would publish a piece about me if I said here I came from Alaska. But I thought it would be just a few lines - I never gave no thought to all these columns after columns of bunk here -never dreamed of it.

"This, I s'pose, will be the fare-thee-well interview, Louise. But while it lasted it sure was one of those things.

"You see, I always was crazy to see New York, like pop said in that interview yesterday.

"So I came. The McAlpin was the only hotel I'd heen told about, so I came here, meaning to go to a boarding-house in a day or so and then get a job. Ask them at the desk didn't I ask about boarding-houses when I first came here. And I got kinda lonesome and used to talk to people at the desks down-stairs about Alaska. One of 'em ealled up a newspaper-ask 'em yourself if they didn't-and-and-well, yip! yip! bang! bang! bang!"

"Did you plan on the way to New York to tell all those yarns about Alaska?"

"Sure," replied Miss Sachen promptly. "But I didn't think I was going to tell so many. But coming into this town I remembered how we girls at Spalding's used to talk how it'd be great to get New York newspapers talking about me like Kansas City papers did when I got back from Alaska.

"Say," cried the girl, all her enthusiasm over the great adventure back again full flood as memories of the invitations, the visits back stage, and all the dazzling glories of the week came to her, "wasn't it a pip!"

And what is she going to do now? She doesn't know, she answered ruefully, the smiles dying out of her face again. She has just the clothes she bought in Alaska and Chicago, and-a very few greenbacks.

"Me for the boarding-house some place o-morrow," concluded Miss Sachen, onetime celebrity for a week. "Then I'll hoof it out and find a job. So-long, interviewer' -this with a bit of wistfulness in her smile-"I s'pose, like it says in the weepy song, 'You'll nevah see muh face again. G'by! But it sure was some whiz while it was whirling."

And she took from a bell-hop the latest of the hundreds of letters to arrive. In the envelop was an invitation from a member of the faculty of Temple University, Philadelphia, asking her to lecture there next Saturday on Alaska.

AutoStrop Safety Razor

Useit for 30 days.

If you like it, pay.

\$5 for it. If not,
return it.

To Dealers: This is your assurance of the continuation of our Trial-Offer sales policy. Actual results justify this. You may rely upon full protection against loss under its operation. Write for particulars.

The unusual merit of the AutoStrop Razor makes it safe for us to leave the decision to your personal satisfaction, and this offer is made without any qualification whatever.

The habit of self-shaving is so great a convenience it is never abandoned unless it involves discomfort through poor equipment and dull blades.

The AutoStrop Safety Razor is more than a razor, more than a safety device. It is stropped, it shaves and is cleaned without removing the blade; and like a perfectly stropped, ordinary razor, the blade improves with use.

That is why we offer it on approval. That is why dealers loan it on 30 days' trial. Write to us if you have any difficulty in borrowing it from a dealer.

We wish every man who shaves to have an opportunity to try this razor.

Those who know the convenience of self-shaving, should experience the supreme comfort of shaving daily with an edge that does not grow dull, but actually improves while in use.

CURRENT EVENTS

EUROPEAN WAR

WESTERN FRONT

February I.—Berlin states that German aircraft have dropt bombs, doing considerable damage along the Western front, particularly at Albert, Dombasle, and St. Quentin, and near Péronne and Bapaume.

The total number of German prisoners taken in France in January is set by Paris at 1,228, including twenty-seven officers.

The British report improving their position slightly north of Beaumont-Hamel, raiding the German lines, with considerable loss to the Teutons.

February 2.—Hot fighting is reported from the Somme sector, in the region of Gueudecourt, where the British, in an attack, penetrate the German trenches and take fifty-eight prisoners.

February 3.—Patrol-fighting and trenchraiding are reported from the Ancre Valley, where the British state that they have further improved positions near Beaumont-Hamel, at the same time repulsing German attempts to enter their trenches. Berlin announces only cannonading along the Somme.

February 4.—London reports a British advance of 500 yards on a three-quarter-nile front along the Amere, penetrating advanced German trenches. The attack, the first British attempt to force the Somme front since November, is considerably hindered by mud.

February 5.—Heavy fighting is resumed along the Somme, says London, concluding with the British capture of 500 additional yards of German trenches northeast of Gueudecourt, in the direction of Bapaume. Four German attacks are beaten off.

February 6.—After a terrific bombardment, the British advance near Grandcourt, taking more than 1,000 yards of German trenches. Berlin denies this reverse. Allied aviators are again reported active, London admitting the loss of two machines, but stating that ten German planes have been brought down. Small French successes are announced from Verdun and Lorraine.

February 7.—The British troops take Grandcourt as well as a near-by position. A slight gain near Miraumont is also reported.

EASTERN PRONT

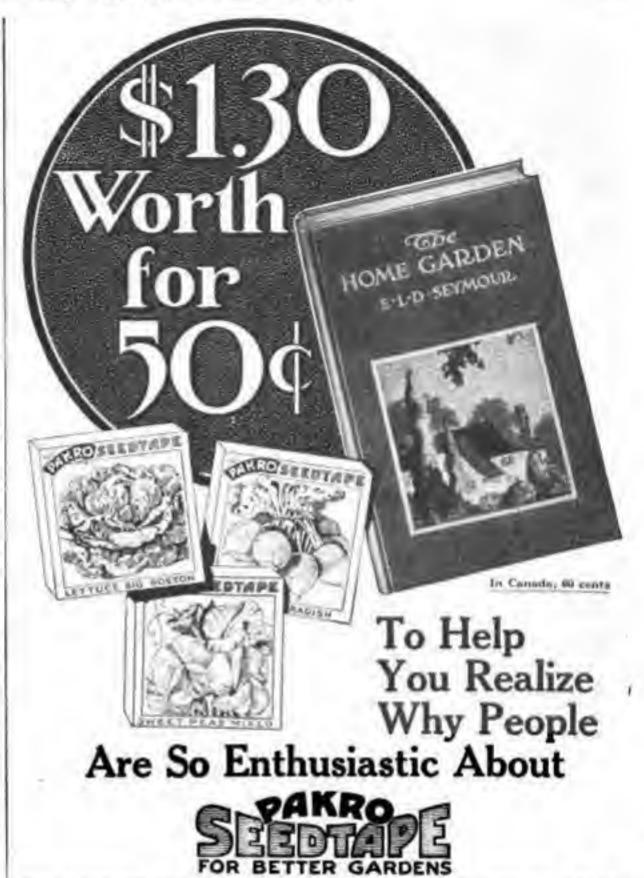

February 1.—In the Riga sector the Russians drive the German forces out of their recently captured positions near Kainzem. The latest gains in Bukowina are held and 1,000 additional prisoners are taken, says Petrograd, near Jacobeni, southwest of Kimpolung.

February 3.—A German attempt to resume the Riga offensive fails completely, says London, in the face of Russian infantry resistance and the use of armored cars near the River Aa. The armored cars advanced to the first-line trenches, driving the attacking Teuton forces back into their positions.

February 4.—The repulse of five German attacks at different points of the River An sector is reported by London. Drawn fighting is the story of the day's bulletins from both sides.

71

February 5.—The German attack on the Riga front is extended as attacks are made on the Russians at Friedrichstadt and along the River Aa. All are repulsed, says London.

Here's a truly delightful new book in which Mr. Seymour virtually carries you right into one of the beautiful gardens about which he talks, and there tells you in most happy vein, authoritative, rasy to understand information—just how to plan your garden, and how and when to plant the different Vegetables and Flowers.

Mr. Seymour is well known as the author of "Garden Profits," editor of the "Garden Almanac," associate editor of "Country Life in America." The book is beautifully bound in boards, spleudidly and abundantly illustrated in colors, and its regular price is \$1.00.

Pakro Seedtape consists of thoroughly tested seeds of only the best of prize-winning strains, spaced in a thin tissue paper tape exactly the correct distance apart. It assures higher percentage of germination, a stronger plant life, fine straight rows, and a fine, even stand. It can be planted a whole row at a time, and no thinning out is necessary.

To prove to you how much better it is, we offer you a copy of Mr. Seymour's book and three packages of Seedcape, regular value of which would be \$1.30, at a special introductory price of 50c. (in Canada, 60c.). Simply send post-office money order or stamps for the book and the Seedcape. Send it to-day.

Wagner Fall Version Bey 858 Sidney, Ohio

February 6.—In Galicia the Russians report that several German attacks on trenches southwest of Brody, as well as near Kiselin, have been repulsed.

February 7.—German troops cross the Sereth in Moldavia for the first time, but are driven back across the river by Russian gun-fire. On the Beresina the Teutons take an island in the river and part of a Russian trench, with fifty-two prisoners. They are later driven out.

Paris hears from the Roumanian Minister of Foreign Affairs that Roumanians in the territory captured by the Germans are also being deported, the the French, Russians, Italians, and Portuguese, protected by the Spanish legation, are being left.

GENERAL

February 1.—The Turkish cavalry makes additional progress against the Russians in northwest Persia, as they occupy Dizabad and approach Sultanabad, Trenches on the Tigris near Kut are reported successfully raided by the Mussulmans,

In the first day of the unrestricted U-boat warfare announced by Germany, ten ships are sunk and eight lives lost, according to reports from Lloyd's.

February 3.—The British gain more German trenches on the Tigris, advancing some 300 yards along the right bank, and taking many prisoners. The Turkish casualties are reported very heavy, with but slight losses to the British.

A delayed dispatch states that on February 1 a Fokker was brought down from a height of 7,000 feet.

February 5.—Brazil's answer to the recent German note to neutrals is announced completed after conference with the Governments of Chile and the Argentine Republic. It is said to embody a most emphatic protest against unlimited U-boat warfare.

February 6.—Spain and Switzerland, the first two neutrals to amounce their responses to President Wilson's suggestion, protest the German warfare decision, but say nothing about breaking off relations.

The tonnage of vessels sunk by German U-boats from February 1 to date is reported to exceed 86,341 tons. Fortyfive vessels have been sunk since the greater submarine warfare was inaugurated, including a number of neutral boats.

February 7.—Stockholm announces that the three Scandinavian nations have decided to issue a joint protest to Berlin on the German warfare note. Sweden, however declines to accept President Wilson's invitation to break with Germany.

The British liner California, formerly of the Anchor Line, is torpedoed on the seventh day of unrestricted warfare, and sinks with a loss of perhaps a hundred lives. One American on board is reported saved. Twelve other ships are sunk with a total tonnage-loss for the day of 25,669.

FOREIGN

GENERAL

February 1.—Prince Ching, former Chinese Premier and Minister of Foreign Affairs, dies at Tientsin, in his eightieth year.

February 5.—Paul Alfred Rubens, composer of scores for many popular musical comedies, dies in Falmouth, England, aged forty-two.

GARDEN PREPAREDNESS IN 1917

The success of the garden depends in large measure upon preparedness. This year preparation calls for more serious thought and action than ever before. There is a shortage of seeds, a deficiency of potash for fertilizers, and a freight congestion making shipments exceptionally slow. Yet the fruit or vegetable gardens this year will have added value. Every such garden this year will counteract the high cost of living. And every flower garden now as ever will be a source of delight to lovers of the outdoor world. Among the maxims of garden preparedness the following are most important:

EARLY SEED ORDERS

Plans should now be sketched and the amount of supplies estimated. All seed orders should be dispatched immediately. If you delay you may not get what you want and you will certainly not be accorded later the service awaiting you now. Reservation orders to nurserymen for fruit and urnamental trees and shrubs should be placed at once.

ORDERS FOR FERTILIZERS

should be decided upon and placed now. Freight shipments are abnormally slow this year, and you may not get your fertilizers in time if you do not order unusually early. Remember all fertilizers must be on hand before the spring plantings begin.

GO OVER THE TOOLS

It may be that some are broken and need repair, or you may need some new equipment this year. Be sure you have everything necessary to begin the spring work as soon as Jack Frost permits. Remember the best tools are the only once to buy—that cheap tools are inefficient and uneconomical.

THIS SPRING'S FLOWER SHOWS

In addition to the pleasure of seeing the most beautiful productions, the spring flower shows are rich in suggestions for the garden lover. The biggest of these shows is the International Flower Show held under the auspices of the Horticultural Society of New York and the New York Floriets' Club. This exhibition will be housed at the Grand Central Palace. New York, March 15th to 22nd. Last year more than 100,000 visitors attended the New York show and plans are being perfected to make this year's exhibition even finer than the superb display of 1916. In Philadelphia a spring rose exhibition is to be held this year under the auspices of the American Rose Society. Many local shows are scheduled in other cities.

GARDEN DEPARTMENT

The literary Digest

February 6.—The Department of Commerce of Switzerland leases a fleet of ships to transport food from abroad, according to dispatches received at Washington.

February 7.—Diomede, Cardinal Falconio, formerly Apostolic Delegate to the United States, dies in Rome, aged seventy-five.

DOMESTIC

THE AMERICAN CRISIS WITH GERMANY

February 1.—In a similar note to the one sent to the United States from Berlin, Austria-Hungary declares for intensitied naval warfare, comparable to that proposed by Germany.

February 2.—A number of transatlantic liners, including the American liner St. Louis, are held up in New York, awaiting instructions from the Government as to sailing in the face of the German warning. No word is forth-coming from Washington, where the President confers in secret session with the Cabinet and a group of Senators.

President Wilson addresses a joint session of Congress, and announces that the German Ambassador, Count von Bernstorff, has been given his passports, and that Ambassador Gerard has been recalled from Germany as diplomatic relations are broken off. Waris rumored to be a matter of hours, awaiting the first German overt act.

A number of State Governors call out the State militias to do guard duty to prevent possible damage by fanatics or criminally disposed persons.

February 3.—The American steamship Husulouic is torpedoed by a German submarine. As the vessel had been warned and its crew saved, this is not construed as an overt act.

Spain takes over the American diplomatic interests in Berlin as Ambassador Gerard orders all American consulates in Germany closed.

February 4.—President Wilson requests all American diplomats in neutral countries to sound the feelings of neutrals on the American break with Germany, explain its cause, and state that the President feels that the cause of peace will be aided by similar action on the part of other neutrals.

Secretary Daniels orders the reserve force of the Atlantic Fleet ready for immediate service. Nineteen battleships and other vessels are to be fully manned.

Germany accedes to the American request for the release of the seventy-two Americans taken from ships sunk by the raider in the South Atlantic and brought to a German port by the steamer Yarrowdale.

February 5.—President Wilson occupies himself with Army and Navy preparations, and offers no comment on the press rumor that relations with Austria are to be broken at once.

London hears that an American citizen has been killed with three other members of the crew of the British steamer Eacestone when the life-boat in which they had taken refuge was shelled by a German submarine. Washington awaits confirmation of the report.

The naval authorities at Manila seize twenty-three German vessels in the harbor, taking the crews ashore. Customs officials, examining the captured boats, report that every one has received extensive damage, apparently at the hands of their crews.

Above everything else the name Certain-teed stands for quality, efficiency and economy. Any product bearing the name Certain-teed will deliver all three in heaping measure.

Certain-teed

is the most efficient type of roofing for all kinds of buildings. For the sky-scraper a built up roof of Certain-teed is now recognized as the ideal roof. For factories, especially where the roof area is considerable, the light weight, economy and long life of Certain-teed make it by far the most desirable type of roof. For garages, out-houses, farm-buildings, the economy, ease of laying and long life make Certain-teed superior to any other. For residences Certain-teed Slate Surfaced Shingles are artistic, light weight, economical.

Certain-teed costs less to buy, less to lay, and less per year of life. It is light weight, clean, unitary and fire retanisait. It will not dry out or rust, and is absolutely weathertight.

Certain steed is made in three thicknesses, but in only one quality
the best. It is guaranteed for 5, 10 or 15 years, according to
thickness (1, 2 or 3 ply), but will outlive the period of guarantee.

The long life of Certain-teed is due to its quality and the saturation of a special blend of soft asphalts, which is coated with a blend of lorder asphalts. This keeps the inner saturation soft and prevents drying out.

Certain-seed is made in rolls, both plain and slate surfaced; also in slate surfaced shingles for residences.

> If you are building, or need a new roof, it will pay you to investigate Certain teed before decaling upon any type of roof.

For sale by good dealers, everywhere.

Certain-teed

These paints and varnishes are made by experts and mixed by modern machinery, so that every can exactly conforms to the expert chemists' formula, both as to ingredients and color.

With modern facilities for manufacturing a full line of paints and varnishes, on a large scale, with unlimited resources, and the extensive sales organization of the Certain-teed Products Corporation, costs are materially reduced, and Certain-teed Paints can be sold for less than good paints usually cost.

The professional painter can not mix his own paints and compete with Certain-teed Paints any more than the little shormaker can compete in price and attle with the hig shoe factories. It is better, both for the painter and the man who pays for the job, if the painter uses Certain-teed Paint. All uncertainty is eliminated, waste and left-overs are avoided, and the quality is assured.

Besides, Certain-teed Paint is guaranteed to give satisfaction. Instead of the pointer's guarantee you have the guarantee of a business which has become the largest of its kind in the

world, because it makes and sells good goods at the lowest possible price, and backs them with all of its enormous resources.

If you do your own painting it will pay you to use Certain-teed. If you employ a painter, insist, for his own good as well as yours, that he use Certain-teed Paints.

Write Today | From booking | How to register Street | Str Dickson School of Memory, 1754 Hearst Bldg., Chicago, IL. President Wilson issues a proclamation by virtue of the authority recently conferred upon him by the Shipping Act, forbidding the transfer of American ships to foreign control.

February 7.—Rumor has it that the partial wreckage of all German ships interned in American ports was ordered secretly on February 1. Ninety-one vessels are reported to have received damage to their machinery, and it is said that it will take three months to put the boats into commission again.

Minister Egan at Copenhagen receives sensational dispatches from Ambassador Gerard to the effect that he, his staff, and all American consular officials are detained in Germany pending the safe delivery by the United States of Count von Bernstorff and the German crews of captured ships.

After six hours' debate, the Senate indorses the President in the break with Germany by a vote of 78 to 5.

February 8.—The State Department noti-fies all American ship-owners that merchant vessels under the American flag may arm against submarines but that no naval convoys will be supplied by the Government. Immediate sail-ings of American liners are postponed pending the decision about mounting

GENERAL

February 1.—Count Adam Tarnowski von Tarnow, the newly appointed Austrian Ambassador to the United States, arrives in New York. He reiterates the Teuton decision to fight the war out to a finish with all means at command,

The House overrides the President's veto of the Immigration Bill and passes it by a vote of 285 to 106 after a fortyminute debate in which party lines are ignored. It will go at once to the Senate.

The Democratic Emergency Revenue Bill passes the House unamended, by a vote of 211 to 196. It is designed to raise \$248,000,000.

After conference with the Administration, Senator Borah takes steps to repress the anti-Japanese land bills in the legislatures of Oregon and Idaho. The uncertain international situation is given as the cause.

February 2.—The Alaska Bone-dry Prohibition Bill passes the House without a roll-call and goes to the President for signature.

The State Senate passes the Indiana State-wide prohibition bill, 38 to 11, and returns it to the House.

Governor Rye signs the Tennessee "bone-dry" bill, which goes into effect March 1.

Governor Witheyeombe signs the Oregon bone-dry" bill, which becomes law immediately.

General Pershing, with his forces, retiring from Mexico, is reported but six miles from the border. He is said to be accompanied by more than 1,100 refugees of all nationalities who fear to stay in Mexico after the troops are withdrawn.

Oregon responds to the advice of the Administration, killing the anti-Japanese land bill in the State Senate. In Idaho action on the bill is "indefinitely postponed."

February 5.—The Senate passes the Immigration Bill over the President's veto, by a vote of 62 to 19. The "literacytest" clause as well as the "alien-exclusion" clause remain in the bill and become active as laws.

MEAD CYCLE COMPANY

That's the way Mr. H. S. Schwartz, Pres. of The M. Werk Co., expressed his entire satisfaction with the Ferro Concrete Buildings which comprise his big plant at St. Bernard, Ohio. These new buildings, containing a total floor area of 146,200 square feet, are used for the manufacture of soap—Tag Soap. These

CONCRETE BUILDIN

have already demonstrated to the Company's officials marked advantages over their old plant. Probably the most important is the big increase in the daylight available. The great strength of Ferro Concrete permits of exceptionally large window area. Another feature of unexpected merit is the concrete floor construction, its superiority

over wood for withstanding the acid spilled during the process of manufacture being quickly demonstrated.

The advantages of Ferro Concrete

Buildings have been recognized by a great many manufacturers, among them being such well-known names as National Cash Register Co., American Snuff Co., Eastman Kodak Co., National Lead Co.

Ferro Concrete construction is adapted for manufacturing buildings, office buildings, warehouses, hotels, municipal buildings, and

most large structures, Let Ferro Engineers cooperate with you on your next building problem.

Let us send you liter-ature describing Ferre Con-crete Buildings—their ad-vantages, their cass.

Picking the One in a Thousand

You say to Westinghouse "I want a motor for my appliance" or "mill" or "machine."

Westinghouse says to you "You want the motor for your appliance" or "mill" or "machine."

What a difference that may make in dollars saved and troubles avoided!

Of the thousands of different kinds of Westinghouse motors there probably are a number that will serve your purpose. There is but one that will do it best.

To Westinghouse, selecting that one is as important as building the highest-grade motor. Whether you want a motor for a steel mill or a washing-machine, a railroad locomotive or a coffee-grinder, Westinghouse will study your own requirements to determine the right type, size and characteristics.

Often this means weeks of careful investigation on the ground by trained engineers, followed by thorough testing at the Westinghouse plant.

In these investigations and tests, Westinghouse engineers have the great advantage of Westinghouse experience in the application of practically every kind of motor, from 1/100 to 15,000 horsepower. As a result they can not only recommend just the right one for you but may also be able to suggest mechanical changes that will simplify your problem and save you thousands of dollars.

"ANew Planby Old Interests."

A STEADILY GROWING AND NATION-WIDE INTER-EST IS BEING EVINCED BY

Experienced Investors of Moderate and Small Incomes

IN OUR NEW METHOD OF DISTRIBUTING THE PROFITS

(always satisfactory and often very notable) which are still being made on legitimate timber purchases in selected regions under our own arbitrary terms, and on conditions based upon our own positive and exclusive knowledge.

It is well known that many of the most substantial fortunes of today are rooted in timber investments of past years. It is a fact that the similar opportunities of today are less frequent, but when they do occur they are as remarkable as they are unusual, and our

New Lacey Profit-Sharing Bonds

extend to a public wider than our usual clientele the exact advantages (and all of them) which here-tofore have accrued to the initiated few. Their desirable new leatures plus all the usual characteristics of high grade accurities are apparently approviated by discriminative investors who instructively ignore many conventional investment offerings because of limited or uncertain returns. The legitimate expertations are identical in character with those realized one large scale of individual investment through James D. Larry & Company throughout a period of sevens.

THE RISING COST OF INHERITING \$10,000,000

WRITER in the New York Times-Annalist has looked into the State laws affecting taxes on inheritances, into the existing Federal tax, and into the proposed new Federal tax, and has applied his data to a consideration of the question, What would be the cost of directly inheriting \$10,000,000 in each of thirty-two States which he names? Taxes on inheritances were already high in forty States when a Federal income tax was first imposed. In all of these States, except California, the tax was doubled by the Federal tax, while the proposed increase will make the amount collected by the Federal Government 50 per cent. greater than it now is: The proposed new law has been made part of an Emergency Revenue Bill indorsed by the Democrats in caucus of the House and now before Congress. Following is a table which the Annalist writer compiled to show what in thirty-two States would be the tax on \$10,000,000 under the existing State laws and what it would be with the proposed new Federal law in force:

	Street, 1-05		A SIGNET SCHOOL SELVE & MINISTER.

State Tax Total State and Federal

The writer of the article discusses the matter further in some detail. Inasmuch as the States differ greatly in the amount of tax imposed, he selects first one of the States imposing the lowest amount of tax, Arizona. Following are points in the article;

"Mr. Any One, Jr., by the death of Mr. Any One, St., falls heir to an estate of ten million dollars. Being a direct heir, Mr. Any One, Jr., gets off with the maximum of exemption and the minimum rate of taxation under the inheritance-tax laws of most of the States, but his direct heirship in no way lessens the weight upon him of the Federal tax on estates. Arizona would be a good State to die in from the point of view of the man with \$10,000,000 to bequeath, provided that his millions fell entirely within the jurisdiction of the State and provided also that they were left in lolo to Mr. Any One, Jr. Under Arizona's inheritance-tax law, in that case, the State would take for itself only \$99,950 of Mr. Any One's estate. With the Federal tax of \$841,000 (figured at the present legal rate) added to the State rate, Mr. Any One's estate would pay total inheritance and estate taxes amounting to \$940,500. Under the increased Federal rate proposed by Mr. Kitchin's committee, however, Mr. Any One's death taxes would mount up to \$1,-361,450, or 13.60 per cent. of his estate.

"Arizona, however, is not in a class by itself. Mr. Any One's heirs would fare as well in Montana, or Georgia, or Michigan, or Nebraska, or Oregon, or Washington, which States and the Federal Government, under the proposed increase in estate taxes, would charge him only \$1,361,000 or so, and permit Mr. Any One, Jr., to take the balance of about \$8,738,000. This cost could be even scaled down in the case of an estate probated in North Carolina and left to an heir within that State's jurisdiction. North Carolina's rate, plus the proposed increased Federal tax, would be only \$1,336,485, or 13,36 per cent.

"Assume, however, that Mr. Any One. Sr., died in California, which State since Oklahoma remodeled the law which practically would have confiscated an estate of this size, represents the extreme in taxation of inheritances. Under the California law, Mr. Any One, Jr., if he happens to be a minor, is exempt from taxation on the first \$24,000 of his inheritance, but from that sum upward the tax applies progressively, with the result that the State's share in his fortune amounts to \$1,449,150, or 14.49 per cent. This is the rate of

progression;

"The Federal estate tax at the rate at present in force would deduct \$841,000 more from the total, bringing the double tax up to \$2,290,150. With the proposed 50 per cent, increase the Federal Government's share would be \$1,201,500, raising the total of the inheritance and estate taxe-to \$2,710,650, or 27,10 per cent., and leaving a balance of \$7,709,850. The table which follows presents a comparison of the existing rates of the Federal estate tax and the increased rates which are proposed in the pending Emergency Revenue Bill:

Estator as Graded	Present Tax. Per Cent.	Propord Tax, Pro Cent.
T p to \$\$50,000	1	4.1
\$50,000 to \$150,000	2	3.
\$150.000 to \$250.000	.3	41
\$250,000 to \$450,000	4	. 6
\$450000 to \$1,000,000	. 5	71
\$1, PROPER to \$2,000,000,	6	0
\$2,000,000 to \$3,000,000,	7	400 -
\$2,7MHI, JARA CO \$4,7MHI, MAX	8	12
\$4,0000000 to \$5,000,040	71	434
Over \$3,000,000	10.	15

"There are thirty-two States which have inheritance-tax laws that apply to the supposititious case of Mr. Any One. In the accompanying table are shown the rates and amount of tax in each of these States combined with the Federal tax as now proposed. Twelve other States exempt direct heirs in their inheritance-tax laws, but in these instances the rates applicable to collateral heirs usually are higher. These twelve States are Delaware, Iowa, Kansas, Kentucky, Maryland, Missouri, New Hampshire, Ohio, Pennsylvania, Texas, Vermont, and Virginia. There are four States which have no inheritance-tax law. These are Florida. Mississippi, New Mexico, and South Carolina.

THE SUGAR WE USE

Sugar was recently cited by a writer in The Journal of Commerce as an article of peculiar interest, since it affords "a clear and easy illustration of the effect of prevailing conditions on production, consumption, and prices." Sugar in a small way is an article of necessity, but in a large way it is one of luxury. Hardly more than a century ago it was a scarce and eastly article. Men now living can well remember when it was common practise in most families to use brown sugar at ordinary meals, reserving the white for special occasions. More recently sugar has become plentiful and cheap, largely because of the discovery of processes for making it from beet-root in latitudes where sugar had never been produced before. Since the war began, the interruption of that industry and of traffic in it in Germany and France has led to dislocation in the sugar trade. From Washington was issued recently an interesting statement on the subject of sugar, which is summarized as follows by the writer in The Journal of Commerce:

"The world's production, which had increased from 31,242,000,000 pounds in 1906 to 41,972,000,000 in 1914, receded to 37,193,000,000 pounds in 1916. The consumption in this country last year is set down at 7,900,000,000 or 591,000,000 less than the average for the three years preceding. With such large figures the difference is not so impressive as it looks. The per capita consumption is stated as 73.13 pounds in the fiscal year 1916, compared with 86.04 in 1915, 89.14 in 1914, and 75.74 in 1906. The production in the United States, not including its external possessions, was 2,026,000,000 pounds last year, of which 1,748,000,000 was derived from beets and 277,000,000 from cane. The receipts from Hawaii amounted to 1,137,000,000 pounds; from the Philip-pines, 217,000,000, and from Porto Rico, 850,000,000, while imports from foreign sources reached 5,416,000,000. To offset this last, 1,686,000,000 pounds were ex-ported from the United States.

"Everybody knows that there has been a considerable advance in the retail price of sugar as the result of the shortened supply in relation to demand, but it has become such a relatively cheap article of consumption that the effect has hardly been felt. This is mainly due to the fact that a small portion of the total supply serves as anything like a necessary article of food, and it is easy to cut down the allowance. A large portion is used in compounding confectionery, sweet drinks, and rich articles of food which are sheer luxuries, and not always an altogether wholesome one. One useful purpose that it serves is contributing rather liberally to the revenue of the Government at slight

cost for collection."

A Real 10c Cigar for 5 Cents

You men who have been accustomed to smoking ten-cent straights and two for a quarter cigare will find my J.R.W. cigar a most delightful smoke.

The rare leaf I use in my rigar is selected for me from the glodeest tobacco-raised in the Voelta dis-trict in Cuba. In my 40 years experience as a smoker I have never found a cigar with the smooth, mellow, delightful taste of my J.R.W. cigar.

Real Tobacco Value

When you buy my J.R.W. cigar you are paying for straight tobacco goodpess —nothing else. My cigar roses direct from me to you. You pay no salesmen s expenses, no store up-keep, no dealers profits.

And besides, J.R.W. rigars are always fresh. No standing on shelves or in show cases until they lose that so oth, fresh taste like in cigar stores. I make only enough to fill immediate orders.

Try Five Free

I don't want you to luy a box of these cigars antil you are sure you will like them, both my pure fame on your maines card or betterhood together with roc to partially enverynching, postage and resenue, and I will send you these cigars to try free.

Smoke five of them, you like them, send up \$2 for for the full box of fifty. Write me today and try this readly delightful rigar.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current se of words, the Funk & Wagnalls New Standard Dictionary is committed as arbiter.

Readers will please hear in mind that no notice will be taken of anonymous communications.

"J. H. C.," Jasper Ala — Is the following sentence correct: 'The largest circulation ever attained by any musical publication in the world?' I maintain that either the world 'ever' or the phrase 'in the world' should be eliminated. Am I correct?"

"Ever" and "in the world" are not mutually redundant, as one refers to time and the other to place. Their omission would result in a somewhat hald announcement.

"S. O. H., Dallas, Pa.--"Please tell me if the following sentence is good English, or, if it is not, if it is permissible to use it in informal conversa-tion? If it is incorrect, please say what is wrong with it—' is this all the farther we have gone?"

The sentence seems to convey no meaning. The LEXICOGRAPHER presumes that what is meant is "Is this as far as we have gone?" or "Have we gone no farther than this?"

"M. A. C." Chattaneoga, Tenn.—"Is the word italicized in the following sentence correctly used? The several Companies baving insurance on this party should, by working tearther, get a prorunon decision before the Court of Appeals."

It should read "pro rate decision," not "proration decision."

"M. B.," Hyde Park, N. Y.—"(1) What is the difference in meaning between the words sick and ill? Does the English usage of these words differfrom the American? (2) kindly give me the name of the writer first comparing people to bromides and sulphides, and the name of the work in which the comparison occurs."

(1) FUNE & WAGNALLS New Standard Dictionary defines the work sick as follows: "1. Affected with disease of any sort; not in good health: ill; alling; as a sick child; the prevailing use in the United States, and formerly in England but now frequently restricted there. 2. Affected with a desire to vomit; nauseated: now the prevailing sense in England." In England the word "ill" has practically replaced "sick," except in the sense given in definition 2 above. Of course, "ill" has a far wider range of meaning than "sick," as it is applied to moral as well as material evil. (2) Gelett Burgess, in "Are You a Bromble?" was the first writer to compare people to bromides and sulphides.

"H. R. P.," Boston, Mass.—"I have road in a new grammar that the is always to be used when using reverend or homerable with the names of persons, as, for example, 'The Hunorable James Jones.' Is it necessary to do this also in address-ing an envelop, or would Reverend and Hunorable be sufficient in that case, without the Du

The definite article the should be used before such titles as Rev. and Him, etc., but in commerical practise this sign of culture has been sacrificed to that which it considers expediency,

"J. S. A.," Robbinsville, N. J.—"In the fol-lowing sentence I branded as improper the use of the word 'lesser.' Will you please advise if I did so with authority?—'As our volume grows, and our factory methods advance, we are able to give our patrons better cars at lesser price."

"Lesser price," is correct. "Lesser" is defined as "Less; archale or poetic except in the sense of smaller, inferior, or minor: often preceded by the definite article; as, lesser lights; the lesser prophets: opposed to greater."

"C. A. P.," Springfield, Mass.-"Is the follows writing, she would join me in good wishes to all the family.' Should not 'were' be replaced by the family."

The correct form is, "If Mary knew that I am writing," etc.

"M. W.," Shoshone, Wyo.—(1) "Which of the following is correct and wby?—'One more day,' or 'One day more.' (2) Also, 'Name one characteristic of ruch of the following,' or 'Name one characteristic ruch of the following?' Could the latter be used if grammatically incurrect, that is, would usage make it correct?"

(1) Either is correct. In the first case "more" Is an adjective; in the second case it is an adverb; but the meaning is precisely the same. (2) "Name one characteristic of each of the following," fa correct.

A little over a hundred years ago all west of the Alleghenies belonged to France, Spain and No Man.

Even in 1850 there were about 100,000 people in the Union Pacific territory. Today there are 10,000,000. Shacks have become skyscrapers. The desert has been made to bloom. Western industries serve the world.

All know of the remarkable development of the 11 Union Pacific States since the completion of the line in 1869.

It was Lincoln who urged the construction of an east and west railway. He insisted that the Government help to build it, 'not only as a military necessity—as Gen. Dodge had said—'but as a means of holding the Pacific Coast to the Union."

From this ideal of a United Republic came the name: Union Pacific.

Since the reorganization of this national railway in 1897, over \$269,700,000 have been invested in improvements—the debt of \$60,000,000 to the Government has been paid in full—and the whole people benefited.

In these 48 years the West has won prosperity. The states have won solidity. The Union Pacific has won the public's gratitude.

Today the nationalized Union Pacific is the main link between East and West—a boulevard of steel for passengers and freight.

SOME OF THE GERMAN MERCHANTMEN SHELTERED SINCE THE BEGINNING OF THE WAR IN MANILA BAY.

EFFORTS OF AMERICAN PACIFISTS TO AVERT WAR

THE UNDOUBTED SINCERITY of our leading peaceadvocates does not prevent some keen editorial observers from pointing out that many of their activities in the present crisis play directly into Germany's hand. And this yiew gets strong support from a United Press correspondent with Ambassador Gerard, who cables from Paris that the "German-financed" peace propaganda in America is regarded with suspicion by American officials on the other side as "a play for time that will enable Germany to make such disposition of her submarines as will enable her best to strike at America in case of war," "As unbridled submarine warfare is the last desperate phase of German aggression upon the laws and liberties of the world, so the proposition that the American people must not and can not go to war in self-defense without submitting the question to a referendum is the expiring gasp of German propaganda in the United States," affirms the semiofficial New York World. And in another issue the same paper declares that "if war between Germany and the United States shall follow, not least of those to blame will be those American allies of the Kaiser who seek so desperately to convince Europe that the United States will not be driven by any aggression or insult to defend its rights." While no one, remarks the New York Tribune, will accuse the pacifists of consciously seeking to befriend Prussian militarism, "the fact remains that Germany could well afford to endow a large part of their activities."

"It is no mere accident," adds The Tribune, "that pro-German propaganda everywhere outside the Fatherland has made common cause with destringire pacifism." And it quotes "a high Federal official" as saying that "most of the peace-propagandists are pro-German," and that large German funds in this country are at the service of the pacifists.

However this may be, the diplomatic break between the United States and Germany was the signal for an unprecedented outburst of pacifist activity in certain quarters. The Socialist party of America issued a proclamation to the Ameriean people urging them to demand of the President and Congress that "American citizens and American ships be forbidden to enter the war-zone, except at their own risk"; and Socialist leaders in many American cities denounced our break with Germany and urged Socialists and workers to refuse to fight in case of war. Mr. Bryan called upon the American people to petition Congress against war under any provocation short of actual invasion. A coalition of peace-organizations calling itself the Emergency Peace Federation, and claiming to speak for 2,000,000 American citizens, sent a delegation to the White House to urge that the settlement of all our disputes with foreign Governments be deferred until the present war is ended; that Americans be kept out of the war-zone, and that no war be declared without a referendum to the people. The slogan "No War Without a Referendum" was adopted by such bodies

as the American Neutral Conference Committee, the Women's Peace Party, and the American Union Against Militarism. Five members of the United States Senate—Kirby, of Arkansas; Vardaman, of Mississippi; Gronna, of North Dakota; Works, of California, and La Follette, of Wisconsin—refused to inderse

the President's course in severing diplomatic relations. In the House, Representative James R. Mann, of Illinois, defended the unrestricted use of the submarine, and Representative Henry T. Helgesen argued that "the United States could have waived her legal rights to the freedom of the seas without losing any of them and without the loss of dignity."

This attitude, however, is not the attitude of all pacifists or of all Socialists. Thus Henry Ford, when war threatens his own country, decides to discontinue his Neutral Conference for Continuous Mediation, the peaceorganization born of the pilgrimage of his famous peace-ship, Oscar II.; puts his great plant and organization at the service of the United States in the event of war, and admits that "sometimes the best thing a pacifist

ean do is to help get a fight over as quickly as possible." Charles Edward Russell, a leader among American Socialists, declares: "I am not yet convinced that it is impossible for one to be a Socialist and at the same time be an American; but if it is, I am an American." Mrs. Harry Gilbert, president of the Universal Peace League, points out that "this is a time for all sincere advocates of peace to refrain from clouding the counsel of wisdom by appeals to the President," who is "essentially a man of peace, and needs no prodding to preserve it." And the New York Peace Society sends the President a resolution which, in the opinion of the New York Times, "expresses admirably and completely the spher feeling and opinion of the American people at this time." This resolution reads in part as follows:

"Even at the cost of tolerating much against which our

people's sense of justice has rebelled, we have long forborne to break diplomatic relations, and, because of this record of our Government, its present course deserves and will have the support of all patriots and all friends and promoters of abiding peace.

"As an organization devoted to this end, we tender, as we

hope every other American peacesociety will tender, an unqualified support for our President's action in defense of American rights and the rights of humanity."

Ex-Secretary of State Bryan, on the other hand, may be regarded as the chief spokesman of those pacifists who think that even further murders of Americans at sea should not be considered a cause of war. In a statement addrest to the American people he suggests six different ways of meeting the submarine crisis. To quote:

"There are several alternatives from which to choose. First, we can postpone until the war is over the settlement of any dispute which can not now be settled by peaceful means. Secondly, we can keep American citizens off belligerent ships. Thirdly, we can refuse clearance to ships of the United States and other neutral countries carrying contraband and passengers on

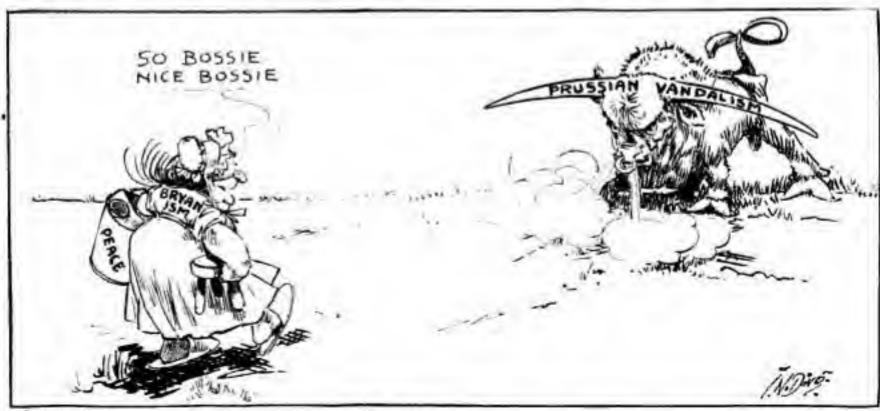

the same ship. Fourthly, we can withdraw protection from American citizens who are willing to jeopardize the nation's peace by traveling as seamen with contraband on American or neutral vessels. Fifthly, we can, if necessary, keep all American vessels out of the danger-zone for the present, just as the mayor of a city keeps citizens in their homes when a mob is in possession of the street. Sixthly, Congress, which has exclusive power to declare war, can submit the declaration to a referendum vote, making exception in case of actual invasion.

"We can not depend upon precedent to meet an unprecedented situation. Other alternatives are likely to be suggested. The most important thing is that the officials at Washington shall know that the people at home protest against entering this war on either side, with its frightful expenditure of blood and treasure; that they are not willing to send American soldiers across the Atlantic to march under the banner of any European monarch or to die on European soil in settlement of European

Countyipled by Universed a Underwood, New York,

NOT PACIFISTS. PERHAPS, BUT GUARDIANS OF THE PEACE

Gunners of a United States war-ship grouped around a target on which they have scored repeatedly at a four-mile range.

quarrels; and that they are not willing to surrender the opportunity to render a supreme service to the world as a friend to all and peace-maker when peace is possible.

"Wire immediately to the President, your Senators, and your Congressmen. A few cents now may save many dollars in taxation, and possibly a son,"

Enlarging on the first suggestion, he said to a correspondent of the New York Tribunc:

"I believe that a large majority of the American people would prefer to postpone final settlement of any dispute until the war is over rather than go into this war.

"It is no surrender of a right to postpone enforcement of it. For instance, if I am on the sidewalk and see a drunken chauffenr running his car toward me. I know be has no right to come up on the sidewalk, but I would prefer to step aside and settle with him when he is sober, instead of standing on my rights and leaving my widow to settle with him."

And in a speech delivered in Madison Square Garden on February 2, under the auspices of the American Neutral Conference Committee, he thus further explained his position:

"Some nations must lift the world out of the black night of war, and ours is the nation to perform that task. I believe that Providence has selected this nation to lift the morals of God, as now used between man and man, up to the level of nations. We can not do that if we go into this war.

"No nation has challenged us, and I don't think any nation will challenge us, but if, in a moment of excitement, one of the madmen of Europe does do that very thing, I think we should say to him: 'No. We have priceless ideals to preserve and 100,000,000 people to protect and to guard, and we will not get down with you and wallow in the blood and mire to conform to your false standards of honor."

The two basic ideas behind Mr. Bryan's suggestions are to defer the settlement of disputes with Germany until after this war is over and to keep Americans out of the danger-zone. These ideas, which have been adopted as the platform of the Emergency Peace Federation, are denounced as "pernicions" by the Baltimore American. Mr. Bryan's attitude, thinks the Milwaukee Sentinel, "insults the President, who has moved heaven and earth to keep us out of the war." And in the opinion of the

Philadelphia Inquirer, "it comes perilously close to the borderline of treason." Mr. Bryan wants peace, concedes the Baltimore Sun, but his course is "the surest way to bring about war." For "if Germany pays any attention to what he and his associates are saying and doing, it can have only the effect of encouraging that nation to further aggressions; and that will make war inevitable." On this issue, says the Brooklyn Eagle, Mr. Bryan "is not in touch with the sweeping sentiment of loyal Americanism, which, from Maine to California, sustains our President."

Turning to American Socialism, we find its attitude thus officially stated by its National Executive Committee:

"We are opposed to wars between nations, because war is a reversion to brutal barbarism. We are opposed to the presont threatened war in particular, because no great war has ever been waged with less justification and on more frivolous pretexts.

"The German submarine warfare does not threaten our national integrity or independence, not even our national dignity and honor. It was not aimed primarily at the United States and would not affect the American people. It would strike only those parasitic classes that have been making huge profits by manufacturing instruments of death or by taking away our food and selling it at exorbitant prices to the fighting armies of Europe.

"The workers of the United States have no reason and no desire to shed their blood for the protection and furtherance of the unholy profits of their masters, and will not permit a lying and venal press to stampede them into taking up arms to murder their brothers in Europe.

"The six million men whose corpses are now rotting upon the hattle-fields of Europe were mostly workingmen. If the United States is drawn into war, it will be the American workers whose lives will be sacrificed—an inglorious, senseless sacrifice on the altar of capitalist greed.

"Workers of America, awaken! The hour is grave; the danger is imminent; silence would be fatal! Gather the masses in meetings and demonstrations. Speak in unmistakable tones. Let your determined protest resound from one end of the country to the other!"

"There is not an American workingman who wants to travel in the war-zone just now, and if there is an Astor or a Vanderbilt. who feels impelled to go there, let him do so at his own risk," says Victor Berger's Milwaukee Leader (Socialist). But the Buffalo Enquirer retorts that on the contrary—

"American workingmen more than any other kind of Americans are traveling through the war-zone and desire to continue traveling there.

"Every one of the Americans so carefully towed from the

UNDER ORDERS FROM ADMIRAL HUNGER.

—Cesare in the New York Evening Post

Housatonic to within rescue distance of a British patrol-boat was an American workingman, an American sailor going about the business of earning a living for himself and his family in a legitimate way, where he had a perfect right to be.

"Every one of those American workingmen would have been drowned without a chance for his life if the policy announced

in the latest German note had been carried out.

"It is to protect American workingmen more than any other class of Americans, not only sailor workingmen, but the workingmen of Buffalo and all the rest of the country, that the United States Government is endeavoring to prevent the sinking of ships carrying American toilers and American wares."

Terrible the war is, says Charles Edward Russell, "war between Germany and the United States would be a thing to rejoice and be glad about," because "ninety days after these two countries declare war, it will be all over, and the war in Europe will be over, too." Altho Mr. Russell is regarded as one of the most influential of American Socialists, his attitude is in startling contrast to that of the Executive Committee. In a widely quoted letter to the press he says:

"There is not the slightest evidence or indication that any manufacturing, financial, or speculative interests had any part in bringing about these conditions. The sign of such interference would be unmistakable to any experienced observer; but there has not been one such sign, and reflection will, I am sure, convince any one that there could not be.

"For the present friction with Germany this country has not the least responsibility. Against every conceivable effort on our part to keep the peace a quarrel has been forced upon us. Unless it can be imagined that the American speculators formed and directed the policy of the German Government, it is preposterous to say that they had any hand in causing these events."

GERMANY'S FOOD-PROBLEM

OW MANY POUNDS HAVE YOU LOST?" is the popular greeting of the day in Germany, according to press dispatches that come from Bern on the arrival there of Ambassador Gerard and certain correspondents who took advantage of the occasion to make their exit. Not the least among their reasons for being glad to get beyond the borders of the Teutonic Empire is the fact that they are through wrestling with Germany's food-problem, we read, and reports from this and other sources incline some editorial observers to ask what good it will do Germany to submarine England into starvation if she herself starves in the act? Yet while food is very scarce, Bern advices state that one seldom sees any person showing marks of underfeeding. the some elderly persons and some anxious mothers look emaciated, and reduced weight is quite general. We are informed further that physicians writing for the medical journals assert that children are now evidently undernourished, lacking fats in particular, yet the "merry sledding throngs" in the parks during January never suggested want of food. The general verdict is that the health of the people is better than before the war, when "overeating had almost assumed the character of a national besetting sin." The people are mostly disposed to jest about short rations when the pinch is not too keen, it appears, and andiences at the variety shows "laugh heartily at topical songs turning upon shortage of food and the prevalent issue of substitutes."

Nevertheless, men in authority recognize that Germany is confronted with a problem of increasing difficulty, and/the next four months are regarded as especially critical because the supply of vegetables, except potatoes and turnips, is practically exhausted. As to potatoes, the 1916 crop was only two-fifths that of 1915, and this shortage, precluding potatoes as feed for live stock, resulted in the prenature slaughter of vast numbers of pigs. But as the number of pigs increased in 1910 up to September by nearly four million, the country "seems to have an ample meat margin on the present scale of consumption," and the Bern dispatches state that:

"Practically all ment is sold on a card entitling each person to half a pound weekly, but dishes made of kidneys, lungs, and other scraps can be bought in restaurants without a card. Game and poultry are exempt from the card system, and command extraordinary prices. The maximum prices of pork and mutton range from fifty to seventy cents, but a dollar more is paid at back doors, for, despite Germany's genius for organization, much surreptitious dealing prevails. Even German officials, usually models of the strictest obedience to the laws, give bungry children the advantage of a loose interpretation and do not put awkward questions.

"The rich, of course, suffer comparatively little. They are still able to buy high-priced poultry or fish. Turkeys, goese, and chickens are still displayed in windows, and bear labels announcing that they can be purchased at from \$1.30 to \$1.60 a pound. Cases have even been reported where a fat goose brought more than \$30. The poorer people, especially in Berlin, are undoubtedly suffering from hunger, as their food is confined mainly to bread, potatoes, turnips, and low-grade marmalade. It is generally asserted that in the country districts the food-problem is less pressing than in the big cities, producers retaining

supplies for home consumption."

In contrast with such news from Germany, we have the reports that Austria's grain store will not last until the next

harvest is reaped, and also a dispatch from Amsterdam in which

an unnamed authority is quoted as saying: "Constantinople is a starving city, where very certainly dozens of poor creatures perish every day, and where for a year and a half typhus, cholera, and plague have never been absent as epidemics. Constantinople is dirty, and over all hangs the terrifying specter of famine.

which also threatens nearly all Turkey in Europe."

The New York Times recalls that for months past we have

STATE OF THE STREET

OUR PREPAREDNESS, AS CARTOONISTS SEE IT.

heard widely divergent accounts of food conditions in Germany and calls attention, first, to reports that may be called of an official nature, because they are prepared by or under the supervision of German authorities. Next we have stories told by occasional "strongly pro-German travelers" arriving here from Berlin, who were well provided with money and lived in the best hotels. They "proved by their own experiences" that food in Germany was plentiful and cheap and that "talk about hunger and hardship was a product of the malignant British imagination." But now we have a dispatch from Stockholm in which there is a detailed statement by an Associated Press correspondent of facts as he found them, and this journal goes on to say:

"The picture drawn by this correspondent—who wrote, be it remembered, under the strictest orders neither to magnify nor to minimize—is not one of quite desperate misery, but it is sufficiently terrible, nevertheless. According to him, the mass of the German people, as represented in the capital, are far from sufficiently fed, and only the soldiers at the front have enough to eat. Prices, as a rule, are kept low by effective Government order, but while potatoes, for instance, are cheaper than they are here, it is only in minute quantities that they can be bought, and many other ordinary foods can not be obtained at all.

"The state of affairs thus revealed is probably tolerable for the present and might be endured for some time to come by a people as united and devoted as are the Germans, but it obviously ean not go on indefinitely without producing the most serious lowering of the national health and strength."

In the same Stockholm dispatch, the New York Sion notes as items of war-time's bill of fare "'a decoction of roasted acoras, rye, chicory, and what-not that goes by the name of coffee'; brews of linden blossoms and raspberry leaves in place of tea, hardly any meat, no cheese, no sausage; beer 'all but undrinkable,' no fat, ten ounces of potatoes a day, flour that takes bours of waiting in line to procure, no eggs for five weeks, altho 'it had been hoped' to allow one egg per person each two weeks." The correspondent reports many complaints from people who said: "I feel hungry all the time," and The Sun remarks:

"Each time he tightens his belt, each time he feels the gnawing at his vitals, the German citizen must be asking himself: 'For what am I suffering so? Is it for victory? Of what avail is a victory if we perish awaiting it? Can we not make peace satisfactorily with all our conquests? If we can not make a reasonable peace with the lands we hold now, what will enable us to make it?'

5

58

"Anticipating the question, the German Government replies: 'Starving England will solve everything!'

"But if the effort to starve England fails? What answer then, O Hohenzollern?"

A HORNETS' NEST IN CUBA

THE POSSIBILITY that we may have to send an army to Cuba at this critical period is naturally disturbing to Washington. And "the idea that foreign intrigue may be active in Cuba as well as in Mexico to embarrass the United States inevitably forces itself on the mind" of the New York Times, "altho there is no proof that there has been any other cause of the revolution than the unfortunate uncertainty of the Presidential election." Many of our papers had printed editorials congratulating Cuba on her splendid behavior through this undeniably difficult period when the news of revolts came. The sequence of events, as gleaned from news dispatches, seems to have been something like this:

President Mario Menocal, after serving one four-year term. sought reelection as the Conservative candidate, being opposed by Dr. Alfredo Zayas, Liberal, in a hotly contested campaign. The election was held on November 2, and the first returns indicated the election of Zayas. The Conservatives refused to admit defeat, and contested the election. After some days of wordy strife, the two parties agreed to refer the dispute to the Central Election Board, in Hayana, whence it was finally referred to the Supreme Court. The Supreme Court affirmed most of the returns favorable to Zayas, but ordered new elections in certain districts, the most important being in Santa Clara Province, on February 14. Conservative methods during this whole period have been bitterly attacked by the Liberals, who have alleged corruption, coercion, and illegal use of governmental influence. Early in February bands of antigovernment raiders appeared in the eastern provinces; on the 10th the Government announced the discovery of a plot to kidnap the President, and arrested the plotters; on the 12th the Santiago garrison revolted and seized the city; about this time Gen. José Miguel Gomez, ex-President and real leader of the Liberal party, disappeared from Havana; the Government officiall, minimized the movement, but announced the purchase of 10,000 rifles and 5,000,000 rounds of ammunition in the United States, and issued a call for volunteers. Here, observes the Philadelphia Press, "are the makings of a first-class revolution."

But Cuba is not free to indulge in revolutions, of the first

or any other class. By the Platt Amendment, a part of the Cuban Constitution, and secured by treaty with the United States, the United States Government is pledged to intervene to maintain a stable Government in Cuba. On February 12 our Government sent a message to the Government of Cuba expressing the hope that the disputed election might be settled peaceably. Two days later Secretary Lansing issued a warning to the Cuban people through Minister Gonzales, in which he called attention to the reports of insurrection in several provinces and said:

"During the past four years the Government of the United States has clearly and definitely set forth its position in regard to the recognition of governments which have come into power through revolution and other illegal methods and at this time desires to emphasize its position in regard to the present situation in Cuba.

"Its friendship for the Cuban people, which has been shown on repeated occasions, and the duties which are incumbent upon it on account of the agreement between the two countries, force the Government of the United States to make clear its future policy at this time."

There is no threat in this, but "the rights of the United States in this case are so indisputable that warnings unheeded should be followed quickly by the use of terce," says the New York World; "with the world affame, we can not tolerate further anarchy at our doors."

No signs of German or other foreign machinations in Cuba have been discovered by Washington, according to a New York Times correspondent. The New York Tribune, however, quotes an unmamed Cuban official as declaring that "outside interests are fomenting" the trouble in his country. The Herold, remembering President Carranza's recent moves and the raid into New Mexico, avers that the chief German intrigue has centered in Mexico, and after calling attention to unsettled conditions not only in Cuba, but in Central America, Haiti, and Santo Domingo, says in its Washington correspondence:

"The danger of German intrigue and German money touching the flame to any one or all of these inflammable political situations is regarded here as one of the most serious problems faced by the United States. The United States confronts this grave crisis with Germany with a hornests' nest upon its back which may break forth at any minute."

THE STORM.

-Harding in the Brooklyn Eagle,

INDIANA "REDEEMED DRY"

NDIANA HAS "RISEN FROM THE RANKS of the damned to the ranks of the redeemed," in twelve years. according to J. Frank Hanly, her former Governor and recent Prohibition candidate for the Presidency, and the note of exultation in his remark is typical of the feeling of the antiliquor allies as the Hoosier State enrolls as number twenty-five in the "dry" column. Indianapolis dispatches inform us that when the Senate was voting in favor of the bill a great crowd from all sections of the State was on hand and "enthusiasm ran high as hymns rang through the State House." It was probably the most remarkable gathering ever seen in the capitol, we are told, and the victory for prohibition is called clean-cut because the law is said to be one of the most stringent enacted in any State. Some claim that it will make the State "bone dry," for it not only prohibits the sale and manufacture of liquor, but the shipment of intoxicants in any quantity into the State. A man may have one gallon of whisky and twelve quarts of beer in his house when, on April 2, 1918, the bill becomes effective, yet he will not be violating the law. He may have that amount of liquor thereafter if he travels outside the State and brings it home for his own use. A person may manufacture wine, vinegar, or eider for his own use, but a druggist cannot keep liquor for sale on prescription for medicinal purposes. We read in an Evansville dispatch to the Indianapolis News that as a result of this law more than one thousand brewery-workers in that city will be forced to seek other employment, and that nearly three hundred saloons with more than as many bartenders will be forced out of business. The breweries, it is said, will manufacture soft drinks, but will not employ the number of men now used. We are told further that between two and three millions are invested in the wholesale and retail liquor industry, and that closing the saloons will mean a loss of \$149,000 a year to Vanderburg County, in which Evansville lies. An indication of the unanimity of effort to secure this legislation is given by Mr. Edward W. Clark, secretary of the Prohibition State Committee and editor of The Patriot Phalanz, the Prohibition State paper, who is quoted in the press as saying:

"The result could not have been attained without the splendid

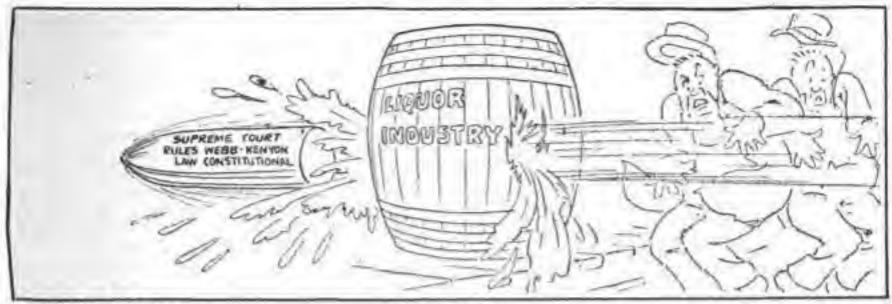

PROPINQUITY.

McCutcheson in the Chicago Tribune;

and harmonious cooperation of all the antiliquor forces of Indiana in the Dry Federation. It was a pull all together for victory.

"In this hour of rejoicing there is credit enough for all organizations that had a part in the fight, and I am sure none will want to withhold a share of praise from the Prohibition party."

The Indianapolis News congratulates the State and both houses of the legislature for passing a measure which represents "evidently the sentiment of the people of Indiana." and points out that, as the culmination of a long campaign, opposition to prohibition in the State Senate "melted away" and the final battle was won easily. The liquor lobby did its worst and its best, but "could not unsent the firm majority which stood for prohibition" for—

"Many people demonstrated long ago that they could not use inquor in moderation or to their advantage. Both from economic and moral grounds they came to the conclusion that it was pure selfishness to insist on the right for the few to drink beer and whisky when it was causing so much mischief to the many.

"The bill as passed affords time in which investments and employment in breweries, distilleries, and saloons may be converted to more useful and happy pursuits. Already brewers are contemplating uses to which their establishments may be advantageously turned in harmony with the industrial trend of this age. In the West these interests have been found readily adaptable to condensed milk, refrigerating, and canning establishments, and in the end all have prospered."

The New York Evening Post notes the provision of Indiana's law which permits a resident of the State to go beyond its borders and bring with him on his return not more than one gallon of whisky and twelve quarts of heer strictly for home consumption, and it observes that "this may give much encouragement to Saturday-afternoon trips to Chicago and other near-by places in irrigated territory preparatory to week-end parties." Incidentally this journal and others note the steady progress of the prohibition movement in other commonwealths, and we are reminded that as a result of the Webb-Kenyon decision of the Supreme Court, Oregon and Tennessee, which already had State-wide prohibition, have passed "bone-dry" laws, that Utah is in the "dry" column, and that a bill putting the Territory of Alaska in the same class has been sent to the President for his signature, having passed Congress in both branches. The majority of the States are now dry, remarks the New York Evening Mail, which calls attention to the fact, however, that the bulk of the nation's population is still in wet territory, and this journal adds:

"They will undoubtedly remain there so long as New York, Pennsylvania, and Illinois remain local-option States. The Bryan prohibition campaign is dependent on the South for its greatest support, as the list of 'dry' States shows. Down South the question is largely one of negro control. Drunkenness among negroes has terrorized many sections and is responsible for the stringent antiliquor laws there.

"While the Far West has joined the South in the movement, there is no evidence that the big States of the East are likely soon to do so. They seem to be content with existing law."

The roster of "dry" States at present reads as follows:

	Effective	Effection		K	Effection	
Alabama	1915	Kansas	1880	Oregeni -	1916	
Arizona	1915	Maine	1858	South Carolina	1016

		Oklahoma	1.90%			

TWO MORE SUFFRAGE STATES

HEN GOVERNOR FRAZIER signed the North Dakota presidential and municipal woman-suffrage: bill, he brought the number of suffrage States up to thirteen. But the suffragists "original thirteen States" soon became fourteen, for three weeks later Ohio women were given Presidential suffrage as their 1917 valentine. There is still a possibility that after the Governor of Ohio signs the hill passed by the legislature the antisuffragists will put through a referendum aiming to kill the law in the fall election. But North Dakota's partial suffrage law will go into effect on July 1 next. notes The Suffragist (Washington); "next November North Dakota women will vote for most county and municipal officers, and in 1920 they will vote for President of the Unted States." Ohio, a larger State, has twenty-four votes in the Electoral College. But The Suffragist does not count these when it says of the North Dakota victory:

"The victory in North Dakota raises the number of States in which women affect national policies by voting for President to the goodly number of thirteen. There are about 125,000 women in North Dakota who, from now on, possess a national power that all parties must take into consideration. Women will now vote for five more members of the Electoral College. Hereafter 4,250,000 enfranchised women will take their part in deciding ninety-six electoral votes—nearly one-fifth of the whole Electoral College of 531 members. One-third of the Senate and one-sixth of the House now come from States in which women vote."

Another suffrage organ, The Woman's Journal, of Boston, comments interestingly on the fact that "the triumph of popular government in North Dakota"—meaning the control of the State Government by the Farmers' Non-Partisan League—was "so soon and so appropriately followed by a triumph for equal suffrage." While "this legislature of farmers is made up mainly of men inexperienced in politics," and "may be expected to make some mistakes." its members "made no mistake when they enfranchised North Dakota's women. If any women on

earth deserve the ballot, it is the hard-working farmers' wives."

Old defeats in North Dakota, says this writer, Miss Alice
Stone Blackwell, in another editorial, are now "swallowed up
in victory, and so will every suffrage defeat be in course of time.

Truth often loses a battle, but never loses a war."

The method which has proved so successful in Illinois, North Dakota, and Ohio, is being tried by the suffragists in other States. According to the New York San, "the National Woman Suffrage Association is back of the movement to introduce a Presidential suffrage bill in every State wherever there is no State campaign on. Should the New York referendum be a defeat next fall, as it was in 1915, New York suffragists will undoubtedly put their strength into a fight for Presidential suffrage, which doesn't have to be referred to the voters."

Suffrage success in North Dakota has not only given suffragists a "cup of pure delight" to drink, as one of them said, but has aroused something like envy among the daily papers in less favored States. "How long," asks the Providence Journal, "will Rhode Island be a laggard in this inevitable and democratic reform?" To the Omaha News, "it isn't pleasing to think that the time may come when Nebraska will be the only black State on the suffrage map of this part of the country."

President Wilson, as the Buffalo Times notes, has written to Mrs. Carrie Chapman Catt, congratulating her on the action of the North Dakota Legislature. This makes it clear to The Times "that the declaration of the Democratic national platform in favor of woman suffrage through action by States has the cordial support of the Administration." So far, however, the President has refrained from lending any aid to the movement for securing an amendment to the Federal Constitution enfranchising women. The young women of the Congressional Union who have been picketing the White House gates have not been able to wring from him one word favorable to their particular crusade.

But congratulatory messages and editorials are by no means

the only response to the suffragists' success in North Dakota. The Illinois and North Dakota plan is denounced by the Louisville Post as "a travesty on popular government, on representative government." The Post has in mind the defeat of a suffrage amendment in a referendum vote in North Dakota in 1914 "by a majority of nearly 90,000." So has the Rochester (N. Y.) Herald, when it denounces the action of the North Dakota legislators in providing for the resubmission of the suffrage question to the electors (in addition to the passage of the partial suffrage law) as "deliberate and cynical contempt by a handful of legislators of a popular decision recently recorded upon a matter which the Legislature and both sides of the controversy submitted to the people for such decision." If, it asks, "the act of the electorate in rejecting or adopting woman suffrage was not to settle the question, at least for a reasonable period, why submit the question in the first place? And if it should be regarded as conclusive for the present, why submit the same question again in two or three years?" But, continues The Herald.

"This is by no means the most discreditable feature of the action of the North Dakota Legislature. At the very session in which it was voted to resubmit the suffrage question so recently determined, it was also voted to extend to women by statute certain limited voting powers which were included in the suffrage proposition voted down two years ago. This legislative subversion of the formally pronounced will of the electorate, if it related to any other question, would be roundly condemned, we may assume, by many of the very persons who are conspicuous in the agitation of woman suffrage as a panacea for loose and lawless methods of government. But when a Legislature behaves with light-hearted indifference to constitutions, precedents, and sound principles of law-making, its misconduct is excusable if only it advances the suffragist cause.

"Perhaps it will be possible for the more sagacious of the suffragist leaders to perceive that the end so dear to their hearts is less likely to be furthered by wearying voters who have given patient and respectful attention to their proposals and have rejected them than it is by abiding by a decision at least until public opinion has had an opportunity to be reformed."

COMMENT FOREIGN

ENGLAND ALARMED

ISTINCT PERTURBATION finds expression in the English press, and there seems little doubt that the German submarine menace to Britain's food-supply is beginning to get on the nerves of the British people. For the first time in the war we find responsible journals admitting that Britannia no longer rules the waves, a condition of affairs

very startling even to the phlegm of the average Britisher. The London Spectator. in an article on the submarine danger, makes this admission with great clearness and solemnity. It says:

"We are not going to try to make the flesh of our readers creep by using the language of exaggeration, but we feel bound to say that this is, in our opinion, not the moment for going to sleep and thinking that we need not bother about food economy, that we can continue to turn huge quantities of cereals into intoxicants. and not worry our heads to husband our resources. That would be fooled in the extreme. Nothing could justify such action except that complete command of the sea which is given by the destruction of the enemy's naval forces, and in no other way. While the enemy's Navy, whether above water or below water, is in being, we have only got the command of the sea in name. In reality, that command is temporarily in abeyance. To put the matter with scientific accuracy, tho we have superior sea-power, and so the potentiality of obtaining the command of the sea, we have not got the thingitself, nor can we claim the immense advantages, moral and material, which go with the command."

After drawing some comfort

from the fact that "the enemy fleet is compelled to remain in its own ports and to challenge us from safe retreats," The Spectator considers the submarine activity, and asks:

"What are we to do about the submarines, and the raiders, and the other assailants of our commerce? The land part of the answer is easy: (1) Conserve our food in every way consistent with the health and vigor of the nation—live like a beleaguered city. (2) Produce as much food at home as we possibly can. (3) Be perpetually building new ships to take the place of those that are sunk. But the all these things are sound, they are not enough, and besides, if they stood by themselves, they would be a very humiliating policy for the greatest naval Power on earth to pursue. They are policies of negation and defense, things which every Briton who remembers his history should look upon with the utmost contempt if advanced, not as auxiliaries, but as the main line of action. They are methods of defense which hitherto we have left to the foreigner. "Our true naval policy is to search out the enemy sea forces

and destroy them, whether they be raiders or battle-ships or submarines. We do not say that this policy is easy. We certainly do not say that it ought to be pursued in a mad-bull spirit. But we are sure that unless attack remains, as it always has been hitherto, the guiding spirit of the fleet, we have received from some internal defect a far greater blow than the Germans ever have been or ever will be able to give us. But we have

> not suffered this injury. We do not suggest for a moment. that the Navy, or even the politicians who give orders to it, have abandoned the idea that the rôle of our strategy is an offensive rôle, and that he who stands on the defensive is beaten before the battle has begun. The Navy knows this truth well enough. But time is of course an essential element. It may be as wrong to do the right thing at the wrong time as to do the wrong thing first, last, and all the time.

"The nation must remember, if it is inclined to be impatient, that we have had previous periods in our naval history when there was a good deal more watchful waiting done than even now, and, further, that there is no greater madness than for civilians to try to hurry the sailors or soldiers into what those experts regard as inopportune action."

Other journals of equal standing and importance take a grave view of England's position. The London Observer, however, comments on the amount of tonnage sunk and professes to believe that submarine activity is but a temporary expedient which will soon pass. None the less, there is an anxious note in its tone:

"Any attempt to turn that serious but passing state of things to factious uses will be put down. But the National

Ministry knows well that in this connection more than any other Cromwell's injunction applies, 'Neglect no means.' None.

"Every personal as well as every mechanical resource must

be employed.

"The first submarine menace was totally supprest by that genius of contrivance and expedition, Lord Fisher, now unemployed. For the same purpose the hands of Sir John Jellicoe and the whole constitution of the Admiralty must be strengthened in every conceivable way. In the whole fighting policy of the Allies that is the primary concern. We are certain that Sir Edward Carson is the man to look at it from that point of view and to 'neglect no means' whatever,"

The London Nation, never a very cheerful organ, remarks:

"Unless we can sink German submarines faster than they are being built, and build British merchantmen faster than they are being sunk, we approach the margin of peril. Sir John Jellieoe has warned us in terms which show that he wants the help that public opinion can give him, and the sooner that is

SOWING THE MINES. An Italian mine-layer about to faunch her cargo, which forms an

effective protection from submarines.

applied the better. If the Admiralty which exists does not give him the instrument be needs, a new one must be forgedand at once."

It goes on to argue that the need of labor at home is greater, in the face of the submarine peril, than that of soldiers at the front. It argues:

"The transport question is, indeed, the one question of the The German counter-blockade has succeeded in considerably reducing our resources, and there can be no doubt that the enemy intends to press it until it brings that pressure to bear upon our direct military communications. Under the circumstances, any further release of labor for the front should be regarded as a fresh burden on transport, and an additional check upon our power to repair the ravages of the submarine campaign."

RUSSIANS HUNGRY AMID PLENTY

CTARVATION AMID PLENTY is one of the anomalies of life in Russia to-day, for while she is one of the great wheat-producing countries of the world, some of her citizens are actually in want of bread. This is due to the utter disorganization of the general production and distribution in

GETTING THROUGH.

- Q Jugend (Munich).

the heart of the country. The lengths to which this has gone can be measured from the fact that it has awakened the temporarily sleeping the ever-present constitutional question, and we are told that serious political trouble will arise unless the people are taken into the confidence of the Government. The situation is set out with great clearness by Mr. Philips Price, a well-known authority on Russia, who, writing from Tiffis to the Manchester Guardian, says:

"Any one who has lived in Russia during the last two years will have observed the steady deterioration in the capacity of the country to distribute its masses of accumulated produce. Last summer, before the harvest, it was estimated that the stocks of cereals in the southern governments amounted to 3.05 poods per person-a pood is 36.11 pounds; while in the northern governments there were only .5 pood per person. Since the harvest it appears that there are something like one million poods of cereals lying in the eastern, southeastern, and Siberian governments untouched, while nearly all the big towns of the north, center, and southwest are experiencing want.

"It is not simply a question of transport. That was made clear by a circular issued by the Minister of Railways lately to the effect that there were enough ears now to deal with the transport problem, only the produce did not offer itself at the distributing centers. It appears that a number of causes convince the peasants that their safest form of wealth at the present time lies in stocks of produce. Chief of these causes is the debased paper currency and a general lack of confidence in the future: These difficulties could be overcome by establishing effective distributing organizations in the different centers. These bave, in fact, come into being in the last six months, but the psychology necessary for their effective working is absent. Thus provineral produce commissions have been formed, but Ministers can not agree as to their methods of activity, and the people distrust the influences that control them. The result is that the accumulations of stock in one part of the country and the state bordering on famine in others continue."

The confusion has been augmented, says Mr. Price, by the struggle for political domination between the Ministry of Agriculture and the Department of the Interior and the intervention of the Duma and the municipalities, or zemstros, both of which demanded a greater share of responsibility and power. Mr. Price continues:

"In October a large list was prepared giving the prices in the different governments at which cereals were to be sold. The produce commissions were then instructed to requisition at these prices and hand over the purchases for army supply and general consumption. But at this point differences of opinion on the commissions between the Agrarians and the zemstro representatives in regard to purchase prices prevented any progress being made. The remsires, in the interests of the country, stood out against monopoly prices.

While this dispute was going on Mr. Protopopoff, the Minister of the Interior, proposed in the Council of Ministers that the whole produce question should be taken out of the hands of the Minister of Agriculture and given to his department. The fundamental idea in Protopopoff's plan was to allow the country to return to the normal system of commercial exchange without

any State interference, requisitions, or fixt prices."

Mr. Protopopoff, whose accession to power was hailed by the Progressives as rapturously as they now denounce his continuance in office, failed to remedy the confusion, and the Duma demanded that the responsibility be turned over to it. The Reactionary party, naturally, opposed this, but Mr. Price tells us that the Conservatives are now at odds over their war-policy:

"It seems that, while the Right in the Duma and the country are united in opposing the Progressive block in its demand for an increase of the power of the Duma, it is nevertheless divided on questions of war-policy. One part is not unfavorable to peace with Germany, because it fears that the further continuation of the war will give the people an irresistible claim for closer participation in the government of the country. The other part is more strongly nationalist and Slavophil, and is prepared to run the risks mentioned in order to realize Russia's desires in Constantinople and Poland. It would be a mistake, therefore, to assume that the strong resistance in Government quarters to any idea of concession to the wishes of the Russian people is the result entirely of German reactionary influences from without. No doubt this has some effect, but the class from which the reactionary type of mind is drawn is found in both countries. It would be much more correct to regard the situation created now in Russia by her internal economic crisis as a purely domestic one between the Government and the people."

The Russian papers contain bitter protests over the condition of affairs, and in the Petrograd Vedomosti, Prince D. D. Abalenski tells us:

"The confusion in the provisioning of the provinces continues, and particularly in those where the Governors have assumed the burden of the food question things are thoroughly

"There are endless conferences everywhere and the whole thing does not progress. Supplies are slow in coming and the cities are starving."

INDIA'S ANARCHISTS

GITATION AND TERRORISM alternately, in small doses, have marked the policy of the Bengali Radicals for some years past, and the world at large has been anable to determine whether Bengal was seething with rebellion or merely disturbed by a handful of extreme but determined men. Now we get a vivid picture of anarchy in Bengal drawn by Lord Carmichael, who rules that explosive province for the British Raj. Among his fifty million subjects, says Lord Carmichael, the anarchists form an insignificant minority, yet he considers that anarchism has taken a much more insidious hold on Bengal than the general public realizes. He also is certain that men who, more than likely, resorted to terrorism in the first instance "through honest, the misguided, convictions, are fast degenerating into common criminals, highway robbers, murderers, and general enemies of human society." Lord Carmichael divided the Bengali terrorists into a number of groups, and his elever analysis, as reported by the Calcutta Amrita Bazar Patrika, runs:

"... We believe that there is one group—not perhaps a very large group—which forms, so to speak, the brains of the conspiracy. Its members instigate the crimes. They are men probably of keen intellect, with much self-control and much force of character, and they may be idealists, their criminality may be in thought rather than in action, they may never have fired a pistol or used a weapon of any kind, they may never themselves have stolen anything, they may never themselves have profited by the result of crime, but they are the most dangerous criminals, for they inspire others. If only those who constitute the brains of the conspiracy are once under Government control and rendered powerless to influence others, or if they once cease to exist, the conspiracy will die.

"Then there is a group of men who are, so to speak, the hands of the conspiracy, men who actually commit the crime; some of them have been accessory to murder, some of them have themselves committed murder—in some cases more than once—and almost all of them have been dacoits (highway robbers). It is not always easy to say what their motives were originally. perhaps we may give them that credit—they were actuated by what seemed to themselves and to their associates high ideals. but most of them have long since become common criminals. Whatever may be the ideals which actuate those who suggest the crimes, those who commit them follow for the most part the same impulses which lead common criminals to commit brutal murders and robberies. . . . This group, too, is of vital importance to the conspiracy, for if all those who form it were eaught or should cease to exist the conspiracy would, at least for a time, be powerless, . . . But the two groups are formed from different types of men, and recruits may perhaps

"... Besides those whom I have described as the brains and those whom I have spoken of as the hands of the conspiracy, there is a large number of persons, many of them quite young men and boys, connected, the some in a much less degree than others, with the conspiracy. Many of these may almost be said to be innocent, others are nearly as guilty, from the point of view of the State, as those who form the brains or the hands, but they all help the brains or the hands. Some help in organizing the movement; they have no intention of ever committing a daceity or a murder themselves, they have not the courage needed for that, but they make it easier for bolder men than themselves to do these things. They give or let their houses as resorts to those who are engaged in crime; they help to arrange for the defense of any members of the organization who are prosecuted in a law-court."

be more easily got for the group who form the hands than for

the group who form the brains.

The Governor of Bengal says that he considers that those who act as "recruiters for the movement" are the worst among the conspirators. Who are they, and how do they act? Lord Carmichael tells us that some are brilliant journalists, like Ram Chandra, the proscribed editor of the Hinduston Godor, or professors and schoolmasters, like Professor Parmanand, once of the Punjab University and now serving a life sentence for his participation in the attempt to gain political freedom by force. He continues:

"Only too often these recruiters are schoolmasters and are thus in a good position to influence young men. They act in the most insidious way: they use the noblest part of a boy's nature as a means to their end, for they work on his feelings of patriotism, on his unselfishness, on his willingness to help suffering. These recruiters are enemies to their own country, and it is about them that there is the greatest ignorance. . . . What we know of them we have learned almost wholly from those whom they have led astray, but who have often too keen a sense of honor and are sometimes too frightened to tell all they know. In attaining their end they use terrorism as well as persuasion, and I feel certain, I am sorry to say, that they often seize the opportunity which membership in a charitable society . . . or participation in the relief of distress gives them to meet and

WASH CHANDRA.

TWO INDIAN RADICAL LEADERS.

to influence boys who have noble ideas, but who do not have enough experience to judge where a particular course must lead.

"Such societies naturally attract public sympathy. People think that all who take part in their work must be good men. Parents are glad to see their sons joining them, little thinking that in doing so they run the risk of becoming enemies to their country."

What the Governor describes as the gradual perversion of a lad of generous patriotic impulses by anarchists is thus sketched;

" . . . One step leads to another, an innocent boy, full of the spirit of self-sacrifice and of devotion to his motherland, auxious to do something to make his fellow countrymen happier and better, is employed perhaps as a messenger; he may have no idea of the character of the messages he is taking, but in taking them he gets to know persons who are themselves steeped in crime, who want to implicate him in crime, and who do their best to implicate him in crime. When he finds out the truth he may wish - such boys have, I know, often wished - to escape, to give up evil practises, but then comes in the terrorism: he is threatened; it is pointed out to him that he has taken an oath-that is their custom-to serve the conspiracy; he is told, he is shown evidence to convince him, that the conspiracy is more powerful to hart than the Government is, for it can give information about him, if it likes, to the police, and it can bring about his death if he offends it."

Lord Carmichael considers that anarchy and political unrest in India can only be obliterated by the force of an enlightened public opinion. He says:

"I believe that we can not stamp out the evil by executive methods alone; we must have popular opinion with us; we can not have popular opinion with us unless we induce the people to think somewhat at least as we think."

ITALY'S FAMOUS ALPINE TROOPS ON THE MARCH IN THE SNOW.

CHINA'S FINAL BLOW TO OPIUM

THE CURSE OF CENTURIES will soon vanish from China," says the Peking Gazette, which tells us that after March 31 the opium traffic must cease absolutely. Up to the present time opium could be imported into China from India under a treaty with Great Britain signed in 1911, and this traffic was the monopoly of the Shanghai Opium Combine. The Clark University Journal of Race Development discusses the question at some length, and says:

"Anticipating the end of the opium connection with Great Britain, the Chinese Government recently communicated with the British Minister in Peking, requesting that a British envoy be deputed to China to head an investigation into the opium-suppression campaign in China. At the same time circulars were sent to all the provinces preparing them for the impending complete extirpation of the traffic as follows: (1) All the opium plantations in the land were ordered to be swept away during a period of three months from September to November, 1916; (2) the trading in opium had to be entirely stopt between December, 1916, and March, 1917; (3) smoking of opium is to cease in a period of three months from March to June, 1917."

It would seem that these provisions are received with popular favor, for The Journal proceeds:

"Bonfires have been frequent since these orders went into effect, the Chihli Opium Prohibition Bureau, at Kalgan, making perhaps one of the most spectacular affairs. A large quantity of opium was gathered together with all the opium-smeking instruments the officials could lay their hands on, invitations were issued, and a delegate from the National Opium Prohibition Union was requested to come as a witness. The acting president, Mr. An Ming, responded, and the ceremony proceeded in due and thorough order, lasting from eight in the morning to one in the afternoon, with the civil governor of Chihli, the military governor of Kalgan, the police authorities, and citizens from all neighboring sections an enthusiastic audience. This is typical of scenes being enacted in many parts of China."

Big Business, however, did not surrender without a final struggle, and we read:

"The Shanghai Opium Combine is the only legal surviving distributor of opium, having secured a license to carry on its traffic until March 31, 1917, in the provinces of Kwangtung, Kiangsu, and Kiangsi. To their bribe of \$16,000,000 for the privilege of an extension, to their threat of withholding their extra duty of \$1,750 per case, the Chinese Government has lent a deaf car. The opium traffic must go, and as quickly as possible. The threat of the Combine to stop the payment of the additional duty, even if it is carried out—which is unlikely—would only mean a loss to the Government of something like \$5,000,000. According to trustworthy information, the Combine can sell between October, 1916, and the 31st of March, 1917, three thousand cases at a valuation of \$5,000,000, a small sacrifice where the physical and moral welfare of the country are at stake. And President Li and his Cabinet have lost no time in declaring that there shall be no compromise."

CHINA WAKING UP—The opheaval of the Monarchy has meant more than a political change in China, rays the Peking correspondent of the Shanghai North China Daily News; he describes it, indeed, as being also an entire revolution of the mental attitude of the Celestial, and he writes:

"The President's visit to Paotingfu yesterday is suggestive of the process of development slowly but surely taking place in China. A thousand students graduated at the Military Academy in the old capital of Chihli, and the President went one hundred miles by train to attend the graduating exercises, leaving at 9 a.m. and returning at 4 r.m. Therein are contained three facts, remarkable because they are indicative of a state of things inconceivable in China a generation ago.

"The least significant fact is that it is possible to journey a hundred miles from Peking into the interior, to do solid business at one's destination, and to return to the capital, all within a few hours.

"Next comes the fact that one thousand young Chinese of the better classes have just completed a military education of a modern character, fitting them for commissioned rank.

"Thirdly, the Ruler of the State calmly walks in and out of his palace, drives along streets in his motor, brushes through crowds at railway stations, makes a popular address to a crowd of lads, and all the time is doing what everybody thinks natural and proper.

"Truly, the times are changing. This trip of the President is indicative of nothing less than a revolution of thought in the mind of China, a revolution of which the possibilities are equally endless and encouraging."

SCIENCE - AND - INVENTION

MOVIES FOR EVERYBODY

I MUST BE ONLY a question of time when the amateur photographer will be able to use a moving-picture camera as easily, and almost as cheaply, as he now uses his kodak. The time, in fact, has already arrived, if we are to believe Mr. Ernest A. Dench, who writes on "Movies as a Hobby," in The Popular Science Monthly (New York, February). Those who have besitated to take up motion-pictures on the ground of expense are assured by Mr. Dench that the private field is no longer monopolized by the wealthy. Those who fear that the motion-picture camera is too complicated are informed that it is not. It differs from the still camera only in its machinery for controlling the shutter. When a crank is turned the lens opens and closes. At each turn of the crank eight frames, each of which is one inch wide and three-fourths of an inch in height, are exposed. He goes on:

"As the standard speed is sixteen frames a second, you must not turn the crank more than twice each second. With watch in hand you should be able to adjust this speed. This, at the same time, enables you to gage how much film you have consumed. Twenty feet is regarded as sufficient for the average scene.

"It is more than mere handle-turning, believe me! Unless you attend to this detail steadily from start to finish, there will be a decided jerkiness about the results. The knack of obtaining an evenly balanced scene is to watch the view-finder while turning the crank.

"Do not let people move about too quickly unless you have a reason for permitting them to do so, as a quick walk becomes a run on the film. Their movements will, in all probability, be blurred. The professional einematographer never allows people to travel more than sixteen inches to the second.

"You will, if you are wise, confine yourself to outdoor work, for interiors are only for the advanced worker. It is only when the daylight is exceptionally good that the special lighting equipment can be avoided.

"If you have not the time or feel you would rather gain experience before attempting this delicate work, then you can send the negative out to be developed. The charge will probably be one cent a foot. You will, of course, need at least one positive printed from the same. The charge for this service usually is five cents a foot, which includes the raw film. Any explanatory matter you want inserted costs eight cents a foot. A conservative estimate for a twenty-foot scene with explanatory subtitles is about \$1.30.

"After you are completely through with the negative, you can reproduce some still prints from the same. One of the animated newspapers has occasion to run stills of the principal incidents depicted for publication in their house organ. Extracts from positive copies come out very indistinctly, so still prints are run off from the particular scenes in the negative.

"The next step lies in viewing your completed efforts. Naturally, it is not enough to east your eyes over the strip of celluloid. You want to see it in motion and magnified to a life-like size. You will need, of course, a projecting machine. There are several miniature machines, at prices ranging from \$50 to \$150, adaptable for the purpose.

"The pictures are projected at the rate of sixteen to the second. Handle the film carefully when putting it on the projector and do not relax the pains taken until you unspool the reels. 'Always' is the best motto. This precaution will insure the film being kept in perfect condition. Mend all breaks as they occur, and this applies also when the film leaves the sprockets."

It is possible, of course, that when the movie becomes a household toy its apparatus may be modified in some way. Here, for instance, is a projecting machine that differs from the common kind as a reflectoscope does from an ordinary lantern. The light is reflected from its film instead of passing through it, says Mr. E. A. Dime, who describes it in *The Scientific American* (New York, January 27):

"In place of a transparent film through which the powerful beams of a sputtering are lamp pass, there is a paper ribbon upon which the light rays from thirteen 21 candle-power, circularly arranged incandescent lamps impinge, and from which they are reflected. So intense is the illumination upon each lingle picture of the paper strip, when it is in position, that it

By courtery of "The Scientific American," New York.

A motor-driven motion-picture camera which needs no tripod, can be operated by pushing a button, and can use paper films.

A projector which uses the paper films. Prints are taken from a regulation film, and the pictures are reflected upon the screen.

MOTION-PICTURE APPARATUS FOR HOME USE.

appears, as viewed from the front, to be a white-hot rectangle. As a matter of fact, however, a very large proportion of the red and infra-red rays of the spectrum—the heat rays—are absorbed by the ring of aluminum reflectors placed outside of the lamps for the double purpose of directing the light rays to the picture on the paper strip while at the same time absorbing the heat from the light and rendering the latter harmless to the paper when concentrated upon it. As over 95 per cent, of the electrical energy of an incandescent lamp is dissipated in the form of radiant heat, one can readily see how important it is to absorb this heat, preventing it from reaching the paper. . . . The loss in illumination from the use of aluminum in place of silver is estimated to be about 20 per cent.

"It is claimed that the new projector gives a hundred times
the illumination per square inch of surface of any of the commercial reflecting apparatus at present on the market for projecting colored postal-cards and the like. This, of course, is
necessary because of the small size of the picture on a standard
film, which is reproduced the same size on the paper ribbon used
in the reflecting motion-picture machine. As the ribbon can
be stopt at any point when being run through the projector, any
picture which it is desired to examine can be studied, so that all
the advantages of the usual reflectoscope are retained, coupled
with the delight of motion-pictures of children, animals, or
anything one wishes to photograph.

"Prints on paper can be made from any standard motionpicture negative film, but for home use a very neat camera has been devised in which the 100 feet of film and the shutter are actuated by a small 8-volt electric motor. . . . To operate it, all that is necessary is to press the button. . . . A compact developing outfit is supplied with the camera, so that the amateur can develop and print his own pictures at home in

any dark room of ordinary dimensions.

"As the illustration shows, the projector is very simple and is operated by a crank. The lamps and reflectors are so arranged within a drum that they illuminate the one picture in place in the 'gate,' and this is thrown on the serven through a central lens. The film is carried on two reels in the usual way. A picture 3 x 4 feet in size and larger is practical; in fact, standard-sized screen pictures for hulls and theaters will soon be attained."

COMPETING WITH NIAGARA

Ningara Falls would seem to make Buffalo a peculiarly unfavorable place for the site of a huge electric plant, run by steam-power. And yet the very necessity of overcoming this formidable competition seems to have so stimulated the ingenuity of the engineers who planned the huge new station of the Buffalo General Electric Company that it appears to be noteworthy for high efficiency. In automatic boiler-operation, in the economical consumption of fuel, in the use of distilled water for feeding the boilers, and in the means taken to guard against loss of heat, this plant would seem to be far ahead of any of its predecessors and calculated to hold its own almost within hearing of the roar of the falls. To quote and condense an editorial in The Electrical World (New York, February 3):

"At first thought it seems a shade worse than carrying coals to Newcastle to build a steam generating station within short range of the great hydroelectric plants at Niagara. It must be remembered, however, that these plants are seriously handicapped in ultimate output by the small-minded policy of the Government in checking the use of water, and that the great industries which have grown up about Niagara demand even more power than can conveniently be furnished. Consequently the present plant has been undertaken with extremely high efficiency as its chief motive. Further, the art of automatic boiler-room operation has been carried very far so that not only is the plant of high thermodynamic efficiency, but it is unusually economical from the standpoint of labor.

"Fundamentally, it is a typical turbo-generator plant specialized for the extremely economical use of fuel. The boiler system is notable for the large size and high thermal capacity of the units. The fuel is dumped from ears into a crusher which reduces the run-of-mine coal to uniform size, and this is lifted by a conveyor to a 7,500-ton bunker at the top of the boiler-house. Thence it is distributed to the stokers by gravity and from this point the operation of the system is as nearly automatic as it can be made. The forced-draft fans are automatically controlled in response to the steam-pressure. All the boilers have a complete system of automatic-draft regulation, and the entire fuel feed system is designed to operate with as little human attention as is possible. The firing system is guaranteed to give an over-all boiler efficiency ranging from 70 to 77 per cent., according to load. This very high figure combines with the high turbogenerator efficiency to give the station about the highest overall efficiency from coal pile to bushars as yet recorded.

"One quite unusual feature of the plant, aside from the provisions for firing, lies in the use of distilled water for the boiler feed. The engineers foresaw that the raw water from the Niagara River would cause scale, which would materially reduce the efficiency of the plant and necessitate shut-downs for cleaning, consequently an evaporating plant of the capacity of fifteen tons of water per hour was provided. The distillate not needed at once for the boilers is being stored in a tank system intended at all times to contain enough distilled water to fill a boiler immediately. A complete system of metering the feed water is in use, and the provisions for the saving of heat at every stage of the system are remarkably complete. Both feed-water system and the main steam-piping are in duplicate, the latter being of valves, and the whole piping system is elaborately heat steel with extra heavy flange bolting, and special steel insulated, the main steam-pipes having four inches of magnesia coating. With respect to the elimination of thermal losses all along the line from the stokers to the turbo-generators this station appears to be equaled by few and excelled by none. It impresses one as a singularly well-planned generating station which ought in economy of operation to repay many times over the care that has been spent upon it."

LUCK AND PRIMITIVE RELIGION

AN EXPLANATION of primitive or savage religious beliefs, which links them very closely with the existence
of what we call "chance" or "luck," is made by A. G.
Keller in The Scientific Monthly (New York, February). The
basic idea of this explanation he credits to the late Prof. William G. Sumner, of Yale; the elaboration of it is his own. The
average man ascribes to "luck" those happenings whose causes
are obscure to him. The educated man know, that the causes
are there, but he is apt to use the term just the same. The
savage recognizes the existence of these causes, but is not content with lumping them together under a general name. He
must personify them, and the result is that he peoples nature
with all sorts of hidden beings. Says the writer, in substance;

"Luck is a name for that which is inexplicable on our stage of knowledge, or in view of our unwillingness to take the trouble to get or apply that knowledge. It is what we are too ignorant or too unenterprising to figure out. Omitting the latter consideration as representing the entrance of the personal equation, the importance assigned to luck varies inversely with the amount of knowledge. This means, however, since the knowable is immeasurably vast, that the luck element will always be an immeasurably representation.

"Perhaps it is superfluous to point out that we currently recognize this relation of chance and knowledge. If a man 'takes no chance,' it means that he is informing himself to the utmost-indeed, he may even be fully informed and 'betting And after listening awhile to a person whinon a sure thing." ing over his bad luck, are we not often exasperated into a partial personal investigation of his ease, with the result that we find 'not so much bad luck as bad management'? Again, when the small boy lays his finger upon the hot stove, we comfort him and say: 'Hard luck, old chap!' It was that, to him—he 'didn't know any better.' And, in our condolence, we put ourselves in his place. If a grown man should do the same thing and howl over his experience, the answer might be: 'Serves you right! You knew better than to do that-or, anyhow, you ought to have known better.'

"Now the savage is like the child. His knowledge, beyond the restricted sphere of immediate experience, is small. The explicable, to him, is an exceedingly limited range; and the range of the inexplicable, the unreckonable, is correspondingly wide. Add to this the fact that ill luck, even a little of it, is a vastly more serious matter to him than to civilized man, and the significance to his destiny of the luck element is indefinitely enhanced. It forms for him, as the facts show, one of the major conditions of life on earth; and his adaptation to it, as he sees it, works out into an important set of social structures.

"And if we recall the manifold dangers surrounding human life, before the barrier of civilization was built up to afford it some protection, we shall not be surprized at the prevalence of interest in avoiding ill as over against interest in attaining good. Our far-away ancestors, and their present-day representatives, the nature-peoples, lived and live in a direct relation to physical environment, one full of perils of a vital order. They were and are victims of a vivid fear of calamity; the 'free and noble savage' was a philosopher's fantasm.

"With the aleatory [or luck] element, especially in its negative phase of ill fortune, filling the perspective as an enduring and real menace—forming one of the major conditions of life the primitive man at once sensed the discomfort that enforces adaptation. His attitude could not be one of indifference, nor could his mind develop or harbor the more evolved conceptions that characterize a higher civilization. Yet he must do something to avoid ill; and for that he must have some explana-

tion of the inexplicable.

"This was the issue that lay before the primitive folk in the face of this peculiar and inevitable life-condition. If anybody imagines that they attacked the issue and solved it by a conscious rational procedure, he has yet a great deal to learn about the early stages of society's evolution. Primitive people could not even have formulated the issue, let alone applying ratioeination to it. They felt it in a dull sort of way, and squirmed and fumbled about to dodge the pain or secure some alleviation. How, automatically and unrationally, to get hold of some explanation of the inexplicablethat seems to be a problem indeed for childlike minds with but slight and unreliable equipment of matter and method."

The explanation universally adopted by primitive peoples was that of spirits, and the origins of savage religion are thus linked very closely with the existence of what we call "chance" or "luck." To quote again:

"It is not asserted that the recognition, conscious or unconscious, of the element of chance summoned into being the idea of the spirit environment. That conception arose from other sources altogether. But it was there, and it explained the otherwise inexplicable. The two conceptions dovetailed together, and out of this situation arose that important complex of social institutions of primitive times which we know as primitive religion.

"The two conceptions still cling together. Inexplicable or unforeseeable calamities are still designated, generalizing, as 'acts of God' or 'acts of Providence.' What men can understand and provide against they do not so designate. The range of the aleatory element has been much restricted by the growth of knowledge—we do not need the supernatural explanation of fossils, or thunder, or the plague any more, but explain by 'lower' causes where they can be collisted.

"However the range of the aleatory element, as the inexplicable, is and always has been infinite; and so the inroads of knowledge and science amount in the end to subtracting something from infinity. The remainder is still infinity. But it satisfies the mind and clarifies the course of social evolution to note this one among the several cases of adaptation to lifeconditions exhibited by the race. If there had been no luck element, there might have been a very different sort of animism, daimonism, and religion. As it actually has been, the former was a condition of life on earth to which men automatically adjusted themselves by recourse to the development of the religious institutions."

A VEGETABLE EFFICIENCY-CHART

A SCHEME to put modern efficiency methods into the backyard vegetable-garden is described in The Garden Magazine (New York). It consists of a piece of board with horizontal grooves cut at equal distances and numbered to represent rows in a garden. The perpendicular columns are ruled for the months of the growing season and are of width proportionate to the activities of these months.

Card strips cut into lengths to correspond with the period of time that the crop will occupy the ground have the crops' names written upon them and are inserted along the row grooves. Says the writer:

"By this means the gardener can see at a glance just what space will be available in the garden at any given date according to the plantings then in the rows. Taken in connection with one hundred and ten various planting tables, . . . the beginner would be better able to visualize the development of his garden plot and plow ahead for successions."

The inventor, Mr. Charles Garwood Hodges, writes that on a 35 x 35-foot plot in his own garden, using this chart, he raised \$50 worth of green vegetables last year. He says:

"The object of this chart is to teach the novice, as well as the experienced man, intensive gardening as practised by experis to make two vegetables grow where one grew before. It enables one to visualize and plan in advance for the whole season his entire garden. It is astonishing what your small back-yard plot can be made to yield by heavy fertilizing and this scientific method of arrangement. This tested and proved practical system teaches at a glance what usually requires several years to learn from experience, To the progressive gardener this chart is a boon finan-

cially (doubling his income) and a source of never-ending interest."

The chart is useful also as a constant reminder of the time for planting successive crops of vegetables such as peas, green corn, beans, and the like. By following the planting schedule indicated by the eard strips, the gardener's table should be supplied continually with these vegetables from the maturing time of the first planting throughout the remainder of the bearing season. The chart serves, therefore, as a practical and constant planting-guide for the entire garden season.

HOW THE GARDEN-CHART SYSTEM IS USED.

TO OPEN UP RUSSIAN ASIA

LMOST NO INTEREST has been taken by Americans in a movement in Russian Asia approximately duplicating our westward migration of several decades ago. The Russian colonization of Siberia, Trans-Caspia, and Turkestan has not attracted in this country the attention that would have been expected among a people who have themselves colonized and developed a wilderness in much the same manner. The march of the Russian pioneers to the East is startlingly similar to our own great pioneer overflow to the West, and the conquering of a continent wrongly reputed to be a desert, and overrun with hostile tribes, goes on steadily with them, althowith more system and more governmental direction than accompanied our great pioneer movement. The railway phase, corresponding to the projection and construction of our own transcontinental railways, is now in progress. In our issue for November 25 last we excerpted an article by Edouard Blanc, the French explorer, on the Russian colonization of Siberia and the Asiatic steppes. In a subsequent issue of the same magazine, the Annales de Géographie (Paris), Mr. Blane treats of the transportation phase. He writes:

"The Trans-Siberian alone could not suffice for the purpose. It had to be supplemented sooner or later by a complete net of local, agricultural, and mining railroads. At the start, for political and economic reasons, the State had to take the initiative. After two years of preliminary labor, the plan was finished in July, 1911, and the work itself began at the end of that year with an initial credit of \$106,000,000. The total mileage of 12,000 was to be financed with \$800,000,000.

"The general plan was analogous to that of the transcontinental lines of the United States and Canada, parallel roads with transversal or diagonal lines as feeders; but while the North-American distance between the parallel systems is about ninety nules, the distance in Asiatic Russia, in view of the sparsity of the population, is 180 miles."

Our author treats separately of the Trans-Siberian, the Trans-Caspian, and the Orenburg-Tashkend line. The first section of the Trans-Siberian Railway from Tcheliabinsk, the entrancegate to Siberia, to Irkutsk, is 1,962 miles long; the length of the Trans-Baikal line, comprising the detour around Lake Baikal, built during the Japanese war to avoid transfer across the lake, is 911 miles, ending on the Chinese frontier. Thence to Vladivostok, eta Harbin, the distance in 1,029 miles. Finally, the Ussuri branch, from Habarovsk to Vladivostok, which, after the completion of the Amur system, will form part of the main line, is 461 miles long. The total distance from Moscow to Vladivostok, as our author puts it for his French readers, is ten times the distance from Paris to Marseilles. For Americans it may be put as 1,500 miles farther than from New York to San Francisco. Passing next to the Trans-Caspian Railway, our author says:

"Its construction goes back to the heroic epoch of the conquest of Turkestan. Without connection with the European network, with a precarious base on the eastern shore of the Caspian Sea, without port and drinkable water, General Annenkoff built this railroad across the land of the hostile Turkomans, who opposed the Russian invasion with desperate courage. The principal halting-places were Geok-Tepe, made famous through General Skobeleff's siege and victorious assault; Askabad, the later capital of the Trans-Caspian Province: Merv; Tehardjoui, where the Amu-Daria (the ancient Oxus), the greatest stream of Central Asia, was crossed, and, finally, Samarkand, the historic capital, already in the hands of the Russians. The total length of the line, from Krasnovodsk, on the Caspian Sea, to Samarkand is 906 miles.

"After fifteen years the line was, under enormous difficulties, extended, first, to Tashkend, the political capital of Turkestan, and, finally, to Fergana, in the upper valley of the Syr-Daria (the ancient Jaxartes). This valley is the orchard of Asia, feeding 3,000,000 inhabitants and providing the neighboring countries with dried fruits and cotton, which latter, for the last twenty-five years and owing to the Russians, has become the principal source of the country's wealth. The district capital,

Andijan, which in 1889 had a population of 40,000, now has 78,000. The total length of the Trans-Caspian from Krasnovodsk to Andijan is 1,223 miles."

Recently four new branches have been built, the whole being now known as the Railroad of Central Asia, and bearing the general character of a strategical line. The construction, in 1895, of the railroad from Rostof on the Don to Petrovsk on the Caspian Sea, changed the situation somewhat. A few years later the European line reached Astrakhan. But the transportation of freight was still fraught with many difficulties. Central Asia got her regular service only after the completion of the Orenburg-Tashkend line. Europe now regularly gets her furs and wool from Turkestan, which, in turn, ships her much-needed petroleum directly from Baku. Of the Orenburg-Tashkend line Mr. Blanc writes:

"This line, which has replaced a caravan-track of 1,320 miles, passes through a desert where the commercial possibilities at the beginning were nil. Nevertheless, in the course of years, the enormous export of Central Asiatic cotton has paid all the expenses of construction and administration. This has carned for the line its nickname of 'The Cotton Line.' It has become the commercial railroad of Turkestan, while the Trans-Caspian has remained the administrative, political, and strategic line.

"The Orenburg-Tashkend system was built with great rapidity. Begun in 1900, it was in working shape in 1904 for more than 600 miles; from Tashkend on it follows the course of the Syr-Daria River. On reaching the northern edge of the Aral Sea, it turns aside to Orenburg, passing through the steppes. The stations are few and of little importance; its total length is 1,338 miles. The traffic is very considerable; in 1909 it amounted to 1,083,389,000 tons, of which 435,060,000 went from Europe to Asia and 648,329,000 in the opposite direction,"

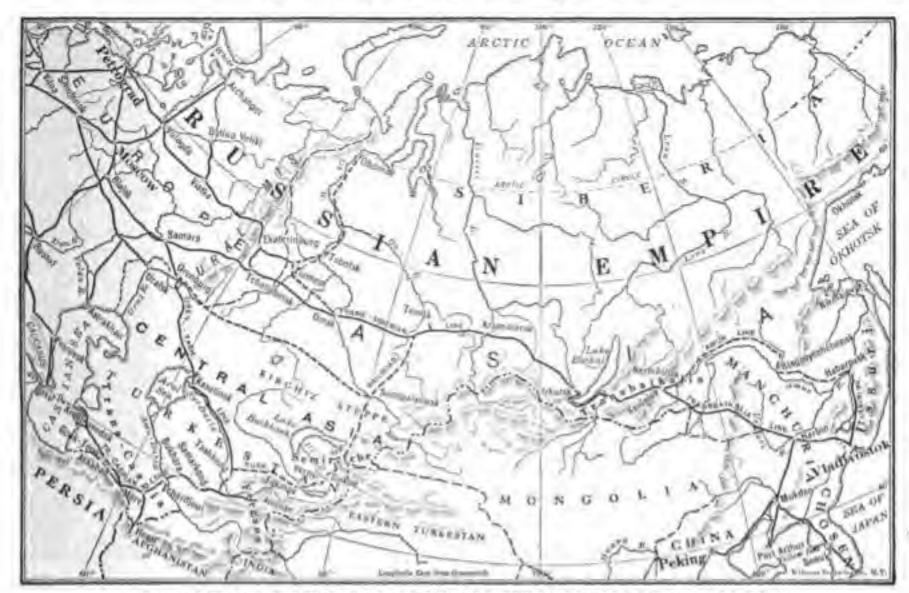

To this vast net of Russo-Asiatic railroads the new system, now building, and officially known as the Turkestan-Siberian Railroad, must be added. One of its many purposes is to form a link with the Trans-Siberian and Trans-Caspian, thereby conneeting the latter still closer with the European system. Its main importance, however, lies in furthering the Asiatic colonization scheme of the Russian Government. The principal distriet to be reopened to European settlers is the so-ealled "Land of the Seven Rivers" (Semiretche), about 600 miles from the northeastern border of Turkestan. One of its largest cities is Tokmak, the ancient capital of Djaggatai, one of the sons of Ghengis Khan. The present chief town is Vernyi, founded by the Russians and having a population of over 40,000. The cemeteries of the old Nestorian colonists are very numerous, and the Syrian inscriptions on the tombstones, engraved vertically in Chinese fashion, are a great archeological curiosity. Another and a still more isolated district to be covered by the new railroad, lies southeast of the Land of the Seven Rivers, and is surrounded by lofty mountains. Its principal city is Prievalsk, called so after the Russian explorer, Prjevalski, who died there in November, 1888. To quote further:

"The European colonies founded in these regions, althoprosperous, have suffered from their enormous distance from Europe, 1,800 miles to the Ural Mountains. It took a month with a combination of railroad and relays, or three months with one's own horses, to reach that Asiatic Switzerland. The Government intends gradually to instal there the European Don Cossacks as a kind of military outpost against the yellow races and, at the same time, as carriers of Russian colonization to the semisavage mountaineers.

"The Cossaeks, who are an anomalous element in their present European surroundings, will be absolutely at home in the land of Kuldja and in the fertile valley of the river Ili, both reconquered by their brethren quite recently for the Little Father in Petrograd.

"Here, in a climate to which they are adapted, with rich pasture lands and great fishing possibilities, with enormous hunting-grounds lying before them, the Cossacks will easily amalgamate with the natives, and, in time of war, be able to furnish 200,000 riders and 400,000 horses, every Cossack having a reserve horse.

"If there could have been transported in time a sufficient

WHERE RUSSIA IS BUILDING A GREAT RAILWAY SYSTEM TO DEVELOP ITS "FAR EAST."

number of Don Cossaeks from Orenburg to Manchuria, the Battle of Mukden would have probably taken another turn. As things stood, the Russian commander-in-chief had only 15,000 horses—his infantry was 685,000 strong—to oppose to the flanking movement of the Japanese general.

"Fortunately for Russia and the Allies, the new railroad, whose plan was approved by the Czar as far back as 1903, was not ready yet at the outbreak of the present war, for how would it have been possible to earry the Cossacks back to the Western battle-fields over the munition-cumbered Trans-Siberian Railroad?"

The author gives a detailed description of the construction of the new line, whose length, including branches, almost equals that of the Trans-Siberian. Lack of wood for sleepers and of coal adds to the difficulties of this gigantic piece of engineering, which will open to European civilization practically a new country, in the very heart of Asia, with enormous possibilities for further development:

"Russia, through this Turkestan-Siberian Railway, intends to become, among other things, independent of the American cotton market. Every inch of land that can grow the precious plant is utilized. Corn and rye, formerly cultivated, are replaced by importation from western Siberia. One can understand how, under these circumstances, the Russian Government is interested in hastening the completion of the road.

"But this is not the whole scheme. Engineers are now studying in Petrograd the plans for a new line to run south of the Trans-Siberian, at a distance of 240 miles, parallel to its western section. The terminals will be the river Ural and Semipalatinsk; its length, more than I,200 miles. If the economic and political situation demand it, construction will begin simultaneously at both ends."

Still other lines, either contemplated or already in construction, are those from Tyumen to Omsk, the northeast Ural line (also known as the Tavda line), the Obdorsk and Troitsk branches. The improvement of the Central Siberian system is still in its earliest stage; no decision has yet been made even regarding the important Lena line, which is expected to open the goldbearing basin of that river. The Russo-Japanese War revolutionized to a certain extent the Asiatic railroad policy of the Russian Government. The two former terminals of Port Arthur and Dalny have been eliminated, and even Vladivostok is now reached by a roundabout way. The direct line, passing through Manchuria and Harbin, over Chinese territory, is in danger of being cut off in time of war. To sum up, within two years after the European War, Russia will be in the possession of a vast railroad network in northern and central Asia, which will permit the Empire of the Czar to open a new chapter in the economic history of the world.

A HOSPITAL FOR TYPHOID "CARRIERS"—A unique hospital recently established at Addington Park, near Croydon. England, by the Red Cross Society, is described in The Modern Hospital (St. Louis, February). Says this magazine:

"Originally started for the treatment of acute infective cases, such as enteric fever and dysentery, it has developed into a sort of 'elearing-house' for earrier eases; consequently most of the patients are, from a clinical point of view, convalescents. They are, however, retained in hospital until bacteriological examination has shown that they can be discharged without being a danger to the community as 'carriers.' Dr. E. C. Hort, the honorary physician and director of the laboratory, has reported on the work done, and an important point appears to have been established-namely, that antityphoid inoculation tends to reduce the proportion of carriers among those convalescing from the disease. The persistence of bacterial infection long after acute symptoms have ceased, and even when the patient appears to be in good health in every way, has long been recognized as a difficulty in the management of these cases, and the non-recognition of this fact has undoubtedly in former years brought about the spread of the disease, especially in India. Ordinary hospital accommodation is not available for the care of such convalescents, nor do they need hospital treatment in the usual acceptation of the term; but for the protection of the community at large they require to be segregated, with the most minute and constant supervision over disposal of the exercta, such as is impossible of attainment in their own homes. The Addington Park Hospital has been expanded from time to time, and now accommodates 1,700 patients, most of whom, however, have themselves recovered from the disease, tho they are not free from infectivity to others,"

REEDUCATING THE WOUNDED

NE OF THE ALLEVIATIONS of the human misery due to the European War is the organized and intelligent effort in the belligerent countries to rescue disabled soldiers from the scrap-heap to which they were formerly consigned. The results have been marvelous, and the gain both for society and the individual has been enormous. Men who in

LLOYD GEORGE IN WOOD.

A caricature of the British Premier made by a disabled English soldier at the Lord Roberts Workshops, Fulham Road, where the workers make a specialty of painted wooden figures.

other ages would have been morose and pitiful dereliets, or contented recipients of public charity, now know the joys that spring from the accomplishment of useful and interesting work, at a compensation which assures independence.

In some cases, indeed, there has been a gain both for the individual and the community, since the man debarred from the hard manual labor which formerly gained his livelihood has developed unsuspected artistic ability in the exercise of crafts calling for less of physical strength, but more of judgment, taste, and skill. The current number of Les Arts (Paris) has an article upon the exhibition recently held at the Musée Galliéra of articles made by mutilated men who have been recducated professionally. The curator of the museum, Mr. Eugène Délard, observes:

"When the idea of this exhibition came to us, six months ago, some people, while warmly approving the idea, found it overbold and a trifle premature. The directors of the Reeducation Centers themselves were prudently reserved and exhibited a tendency to defer the date of the exhibit, which, to be convincing, must necessarily show results rather than attempts. This was an excess of modesty on their part, a misunderstanding of their own merits, and also of the infinite resources of our race, which rarely foresees, never prepares, but adapts itself to everything with marvelous decision and facility.

"After paying a just homage to the zeal, devotion, and highly intelligent direction of the teachers who receive the wrecks of the war and reinstate them in the laborious life of their native land, we must bend the knee before these brave men who, after having so nobly paid their debt to their country with their own persons, now devote their splendid courage and their patient energy to regain their place in the world of labor with precarious

"We have here a prodigy of will-power which few among us had suspected. To appreciate it, we have only to think for a moment of the change of habits, the transposition of existence, which awaits even those who return uninjured from the war. For a long time they have fived an intense physical life, alert and adventurous, with rushing blood and muscles taut for sudden efforts involving various risks. And if they will undoubtedly have a good deal of trouble in regaining order and methods, adapting themselves to slow and peaceful tasks, what shall we say of those who face such tasks still suffering from the wounds received, and in doubt and anguish as to the future?

"But they may be completely reassured. The proof has been given—and how magnificently and how movingly—that the cripple will not linger on the margin of life, that he is not a weakling, a social outcast, the object of a casual charitable pity, but an element of useful energy, a creature of conscious valor and strength who has reconquered by lofty struggle his place in the society of workers, and will assist in the rebirth of the country he has helped to save."

To be convinced of this, says Mr. Dèlard, the public has been enabled to see "the extraordinarily rapid readaptations which are revealed in all branches of work in the Gallièra exposition, and the skill, the ingenuity, the mastery of these new workmen whom nothing had seemed to predestinate to the work they accomplish." Even more! Numerous among them are those who have found the means, in this stern test, of "rising some degrees in the social scale and bettering their condition." Some cripple suffering from the loss of arm or leg, and who formerly was a miner, mason, or the like before the war, has now become a cabinet-maker, jewel-maker, an industrial designer, or clerk, already employed and honorably earning his own livelihood. The encouraging story proceeds:

"If the Musée Galliéra had held to its initial and clearly defined program of professional education, properly so called, it would have been very interesting, to be sure, but more severe of aspect, with drier documentation, holding to a field which in itself has but remote relations with art. In receiving, besides cripples returned to civic life, wounded men whose cases are still uncertain, and who will perhaps eventually become almost free from pain, we have stimulated individual initiative, encouraged imagination, and have here and there discovered genuine artists among occasional workers.

"It is to these that the Exposition owes its gaiety of aspect.
its charm, its color, and, we do not hesitate to declare, its very
modern note; for there is no appreciable difference in general appearance from other exhibitions of current decorative art heretofore given in the museum.

"From this exhibit, whose popularity grows daily, certain information, infinitely precious and comforting, is to be derived: in the first place, life henceforth is assured by labor to the thousands of beings who remain, despite their physical losses, live forces, useful wheels, far more numerous than one would have believed, in the great social machine, for it is now averred that 80 per cent, of the cripples are perfectly teachable; in the second place, the hearty enthusiasm of the crowd which fights to obtain the work of these brave men, the commerce which solicits them, the industry which reclaims them.

"To cite but one example, the directors of the great bazaars of

A TAPESTRY EXECUTED BY A ONE-ARMED CRIPPLE.

Men who were formerly manual laborers have, since being cripplest," developed unsespected artistic ability in the exercise of crafts calling for less physical strength, but more of judgment, taste, and skill," so there is gain both for the individual and the community.

Paris and the provinces have come to us asking to be put in touch with the bureaus of reeducation. And it is the renaissance of the French toy which will spring from this, and its flight into the world whence the German rubbish had driven it.

"And the same thing is true in other industries, every one among manufacturers and customers having it at heart to employ the cripples for the restoration of national production which is now assured."

WHEN TEUTON MEETS TEUTON

TS IT LINCOLN OR NIETZSCHE whose principles will prevail in the days to come? The issue is set by a gentleman of Germanie birth and residence, Dr. Osear Levy, and is met by a fellow Teuton, in America, Mr. J. S. Eichelberger. Dr. Levy is quoted in the New York Times as saying that "democracy is doomed," and "Dr. Levy is undoubtedly a great psychologist," says Mr. Eichelberger in a tone that reminds us of Mark Antony's asseverations that "Brutus is an honorable man." Dr. Levy has the right, says his critic, "to glorify Nietzsche and to despise America as 'the greatest area of middle-class mentality that the world has ever known." But Mr. Eichelberger sees that "one hundred million brave and free people" are willing to defend democracy from whatever quarter "There is no division, there are no parties, factions, races, conditions, or creeds in the United States who will not serve or suffer, live or die, 'that government of the people, by the people, for the people shall not perish from the earth." Thus is quoted the guiding star of democracy as against the one that leads its enemies. Dr. Osear Levy is the English translator of Nietzsche's work and is his greatest champion. He lived in England prior to the war, but being unnaturalized, he was compelled to return to Germany. His statement about the collapse of democracy is passed on through the New York Times of February 4, by Franz Hugo Krebs, who received it from the learned doctor. This Nietzschean apostle calls the war "stupid and hopeless," and thinks Europe will emerge from it "united, as Nietzsche has already pointed out." Nietzsche, we are told, "made many caustic remarks about both the Germans and the British because he disliked the materialism of both countries, and when the war broke out the Cologne Gazette quoted him as to the British and the London Times as to the Germans, thus furnishing one of the many literary incongruities of the war." The author of "Thus Spake Zarathustra" in fact, hore a large part of the burden of philosophical responsibility for the conflict. Dr. Levy feels that his great teacher has at present no "particular message to any but a limited number in America"; but if he could speak he might restate what his disciple here formulates:

"This war will result in greatly strengthening the opposition to democracy. The democratic parties announce that a war like this will never happen again, but their announcements will now be distrusted by most thinking men. They have had their chance for over a hundred years now, since the French Revolution, and they have made a mess of it. The more numerous they got, the worse matters went, until it finally came to this war.

"The democratic play is over. It was the greatest theatrical swindle ever produced by any manager. On the bill-board, outside the theater, was announced a play entitled 'Fraternity, Brotherhood, Peacefulness, and Mutual Understanding,' and when you had paid your money, gone in, and sat down to see the play, you saw the bloodthirstiest melodrama ever acted, and, worst of all, it was not even melodrama, but a dreadful reality.

"Democracy has been caught red-handed in connection with this war. The peacefulness of democracy does not arise from strength but from weakness, its teachings increase the number of weak people in responsible positions, and experience proves that weak people are prone to quarrel. The presence of one Bismarck or Disraeli would have prevented this war. Democracy suppresses great men. It claims to wish to give every one a chance. By giving every one a chance, you give no one a chance. If everybody is somebody, nobody is anybody! If you educate all, you suppress genius which can seldom flower

under a 'popular' or 'democratic' education.

"This war is a war of nation against nation—the first of its kind in history; Henry Ford, the American philanthropist, recognized this fact shortly after he landed in Europe. 'This is not a war of kings and emperors,' he said; 'this is a war of people against people, hence no single man can stop it'; then promptly and quite rightly he returned to America. This war will teach people the world over to distrust their old values. It will warn them against longer trusting their teachers and philosophers and their politicians as well. It will undermine the belief in the people and also that of the people in itself. It will illumine the absurdity of government by the slaves for the

Plot graphs by coursesy of Noband & Backgravite.

ST. JAMES'S CHURCH IN RICHMOND, VIBOTNIA.

A gent worthy of our best architects in a city that shows few

slaves. It will, in short, shake the faith in democracy to its foundations,

"Americans can well take heed of present conditions on the Continent. The misfortunes of Europe to-day may be the misfortunes of the United States one day. The future has plenty of wars and revolutions in store for us all. An unbiased view-point is a necessity for those of us who will have to face life one day in a responsible position. The old Romanticism will not do any longer; the future belongs to Friedrich Nietzsche."

To all this Mr. Eichelberger retorts:

"A psychologist greater than Dr. Levy wrote into our Declaration of Independence one hundred and forty years ago:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness."

"Let us compare the psychology of Jefferson, of Washington, of Franklin, Lincoln, and Wilson with the psychology of Bismarck, Nietzsche, Dr. Levy, and Kaiser Wilhelm!

"Strangely enough, the Prussian psychology of 'blood and

iron,' brains and birth, slaves and supermen, is actually half a century younger than the psychology of democracy in the Declaration of Independence.

"Therefore, the Teutonic psychology can claim little consideration on any basis of priority. Can it claim more in a

comparison of results accomplished?

"The psychology of the professors and the supermen has guessed wrong in every instance. As The Times has frequently pointed out, the Teutonic rulers were 'surprized' at England's action, at Belgium's resistance, and at the quality of fighting exhibited by the despised and 'degenerate' democracy of France. Now the Prussian professors are astonished that America should feel no sympathy with the efforts of subsea supermen to destroy the lives of Americans of mere 'middle-class mentality.'

"Dr. Levy alludes to 'the absurdity of government by the slaves for the slaves.' This is the Teutonic psychologist's understanding of the phrase used by Lincoln in the most sublime prayer ever uttered since Christ himself told men to address

Our Father who art in Heaven':

"'That the nation shall, under God, have a new birth of freedom, and that government of the people, by the people, for the people shall not perish from the earth' is the prayer, the purpose, and the inspiration of every American.

"Is democracy doomed? Shall government of the people or government by the Prussians 'perish from the earth'?

"The future will decide this question definitely, but at present the outlook is worse for the Prussians than for the people.

"This is the present issue. This will be the future issue, whatever happens. America, with its 'middle-class mentality,' has produced every invention by which supermen seek to subdue the earth and undermine the seas. The genius of Washington and of Lincoln is not dead. It can not die until the people of this Union perish. Where we need to match the mechanism of modern warfare, democracy will ever develop our Edisons and our Grants. Where the statecraft of the supermen is wrong, it can not hope to conquer the wisdom of a Wilson who is right."

WHERE LIBRARIES ARE SUPERFLUOUS

T IS ALLEGED that there is no public library in Richmond, Va., and that furthermore Richmond has its back up against having one foisted upon it. Some few of its people with an overdose of Northern ideas may desire one, and try to arouse what the North calls civic sentiment in favor of such an institution. But other doughty defenders of Richmond's libraryless state ask, "What excuse is there for laying out cash on a public library when certain streets here in Richmond' are so quagmiry that three ambulances went in to the axle, not long ago, while racing to the relief of a distrest Richmonder?" The last person you'd expect to see the situation in such a light would be a Bostonian, but one such is to be found in Rollin Lynde Hartt, who has the temerity to tell the Transcript's readers that "Happy were Boston could the sacred book-morgue in Copley Square be kicked into the Charles River with as little detriment to the intelligence and good taste of the community as the absence of a public library has occasioned here." And the whole happy situation is due to "the Southern genius for talk." Mr. Hartt reveals a state of affairs in Richmond so like Dublin as to arouse the resentment of all patriotic Irishmen:

"They are the most charming talkers on earth. Instead of burying their noses in books when the sun goes down, they sit about and chat. Match them at that if you can. A subject will last from dinner to bedtime. They turn it over and over and inside out and illumine it with the quaintest observations, the most comical stories. By comparison, reading becomes odious, because at once toilsome and solitary.

"And what should the South read about? Only two things interest it intensely—the 'lost cause' and the negro. Neither subject has been written of from the Southern point of view. Or at all events it amounts practically to that. 'Tom' Page has said his say in print. One of the Lees has written her interpretation of the Confederacy. Moore, Murphy, and Mrs. Hammond have dealt with Southern problems as Southerners should, while Cable has dealt with them as a Southerner should not. Quite a few Southern novelists have had their fling. But in the main this is a 'silent South.' It has had nothing in the least resembling its rightful quota of authors. Climate explains

partly. One feels a profound disgust for pen and ink. One would rather talk or listen. Besides, the South is proud. Maligned, misunderstood, and at times wantonly misrepresented, it sits back and remarks: 'Why contradict such nonsense? It is beneath a selfrespecting region's dignity.' Sometimes I rather agree that it is.

"As a result, the vast proportion of books on the issues that most concern the South are by Northern writers and no more prized here than they deserve to be. Other books, broader and more generous in their spirit, yet viewing the case with a kind of forced sympathy, give offense by their failure to come at facts. The mainstay of reading, in the North, is not only kerosene; it

is also and more emphatically the institution known as Sunday. From the literary viewpoint, the South has no Sunday. Not by the wildest feat of imagination can I picture a Southerner running to a library on Saturday afternoon to stock up with literature that will make existence tolerable till Monday morning. Sunday is to him a day of rest and gladness-literally-and withal a day of worship. He goes to church. In the afternoon, he goes ealling.

"That is typical. Nobody reads, everybody talks, and the talk makes a capital substitute for reading. It is not all homorous. To a great extent it prowls the realm of general ideas and is philosophie. Which is another reason why Richmond, with something like two hundred thousand people, has no public library. Over and over again the project has bobbed up. Invariably it has been overridden by philosophie objections. Purely at random, I recall remarks that show how Southerners are inclined always to go back to principles. Said one of them: 'I don't believe in the poll tax, It should be included in the State tax.' Said another: 'I don't believe in public schools. It is unfair to tax the childless or men whose children are grown and make them foot the

books? Simple fairness forbids."

A scoffer from "up North" might perhaps use such facts to "reflect unlimited discredit upon the intelligence of Richmond." But he will first have to satisfy such a super-Bostonian as Mr. Hartt, who continues:

bills for educating other people's youngsters.' So, when it comes to the question of a public library, there are those who say:

'Why tax non-readers in order to give readers free access to

"You will find among Richmonders a degree of culture and a prevalence of it that unite to astonish. All the things we regard as the underpinnings of culture they lack. Few Southerners have been abroad. In the whole length and breadth of the South there is no public museum of fine arts. In general, the South neglects books. Such being the ease, one would expect crudity everywhere. Instead, one finds taste. When I first saw the beautiful new church of St. James's, I said, 'Ah, McKim, Mead & White'-then, on second thoughts, 'Ralph Cram.' But, no; it was designed by the Richmond architects, Messrs. Noland and Baskerville. On the other hand, one notes an amazing absence of architectural 'calamities.' Or take the feeling for good furniture, good silver, good textiles. In Boston houses and Boston shop-windows, there is more rubbish to be discovered in a half-hour than all Richmond contains. The movies, it is true, are more frequented by upper-class patrons than in the North, but the best theatrical companies visit Richmond for one night, or sometimes two, and Richmonders are gladly paying six dollars a seat for the coming performance by the Ballet Russe. Some are paying ten.

"How to explain all this: It will not do to say that these Southerners are descended from English nobles. Go look at the English nobles. They can show no such level of intellectual and esthetic fineness. Cultivated in spots, they are vulgar in spots. Nor will it serve if you assume that the New
South has inherited in its very blood the fineness of the Old
South. You collide at once with the evolutionary principle
that denies the transmission of acquired traits. The real
explanation, I suspect, is to be detected in the potency of
talk. The Old South educated its boys at Oxford and Cambridge. They brought home ideas and standards and ideals
that have been handed down, generation after generation, by
word of mouth.

"Some day, when a billionaire takes it into his head to shower

INTERIOR OF ST. JAMES'S, RICHMOND,

Where the spirit of Colonial days is happily wedded with modern taste and busury.

riches on a Southern university, our boys will come South for their education. They will get it out of books, but they will get it much more out of talk. They will go back North with an added faculty—the use of the vocal organs."

BROADWAYS POOR THEATRICAL TASTE—Whenever Broadway falls down and leaves a gap in its armor, be sure the dart from some out of town daily will find its mark. So The Democrat and Chronicle (Rochester) rallies the old tradition that a play "must have the seal of approval of Broadway because Broadway sets the correct standard of theatrical taste," and it points a moral from the recent failure of Tom Wise's splendid performance of Falstaff on the Great White Way:

"What the theatrical opinion of Broadway is really worth has been demonstrated in the case of the 'Merry Wives of Windsor,' with Mr. Wise acting the part of Falstaff. The play has been withdrawn from the stage of the Park Theater, after a brief stay, for lack of patronage. Mr. Wise, in a little farewell speech, observed that New York was full of leagues and organizations that were constantly demanding more Shakespearian productions on the stage, but when a misguided manager took them at their word, and invested a large sum in the production of one of Shakespeare's plays, the Shakespeare enthusiasts all stayed home. The fact of the matter is that theatrical taste in New York is corrupted by the presence of a large, frivolous, theatergoing public which has no stomach for serious dramatic productions, and is responsible for the weary succession of socalled musical comedies, all cut after one pattern, with which the stage is afflicted. Managers who are disposed to look upon the drams as an art rather than a plaything should appeal for support above, and not below, the Harlem River."

RELIGION-AND-SOCIAL-SERVICE

HOW NEW YORK HELPS HOMELESS GIRLS

If A GIRL goes hungry or homeless in New York, it is not the fault of the New York police, St. Mary's Home, the Charity Organization Society, or the Travelers' Aid Society. So says a New York Herald writer who put all these agencies to the test; still, not to make the halo of the city blaze too brightly,

she adds that "New York's attitude toward her respectable girls is apathetic." The difference lies in the word "respectable," for agencies to assist the other kind are active enough. The test made by The Herald through Miss Ann Grosvenor-Ayres was in answer to the challenge of a letter sent to its columns by one "Working Girl," who confest that her appeals for help at five or six well-known "homes" were repulsed. "In every one I was refused any help whatever," she says, "in some politely, others vaguely, and in the last one quite curtly." In each case, she says, her crime was that she was respectable and not a fit subject for "reforming." Since then, she adds, "I have attended the Woman's Night Court and seen half a dozen agencies offer help to the hardened women of the streets. Magistrate McAdoo is the first man big enough to see through-and speak of itthe shallow, sentimental thing eafled 'charity.'" The letter has caused discussion, and Miss Grosvenor-Ayres presents her test experiences. Her first appeals were made to policemen along the street, each one of whom befriended her and tried to direct her to a place where, with only fourteen cents in her pocket, she could find shelter for the night. Her plan, after putting one officer to the test, was to escape his watchfulness and try another. Her story of encounter with the officer who had the task of dealing with the traffic about the Metropolitan Opera-House at the hour of -. the audience's egress is worth repeating:

"The big policeman in charge at the carriage exit received me cordially, as one might a person armed with a letter of introduction. The exits had just been thrown open and an impressive gathering waited for the automobile numbers to be announced. They stood in little groups, commenting upon the evening's performance,

but their chatter was desultory, for every eye was fixt upon the figure in charge of their release—the big traffic policeman. He meantime was racking his busy brain to think of a 'shelter' he had heard of for girls, somewhere down Fourteenth Street way.

"'I believe,' said the policeman suddenly, 'I've got that name among my papers. I'll take a look,'

"Which he did while traffic paused, and 'Mildred Andrews' became the stared at instead of staring. It may sound more esthetic to describe as the 'cynosure of all eyes' any object that ladies of luxury see fit to favor with a glance, yet it was with a simple stare that their eyes rested upon 'Mildred Andrews'—theirs and their escorts' and chauffeurs'. What could a girl with shabby clothes and a battered grip mean by holding up the city's traffic?

"MILDRED ANDREWS."

Otherwise Miss Ann GrosvenorAyres, who finds that New York's heart
goes out to poor. "respectable "gibs.
as well as those "fit for reforming."

"The policeman finished his search. 'I'm sorry,' he said, 'but it doesn't seem to be here. I'm sure the place is on Four-teenth Street. Anybody down that way could direct you. But I'll tell you what to do first, my dear—go around to the officer at the front door here and say I sent you. He's pretty sure to know the place. I ought to, but nobody's asked me

anything like that for a long time, and I've

forgotten.'

"Traffic moved on, while 'Mildred Andrews' moved around to the main door of the Metropolitan. To Policeman No. 5709 she said:

"The policeman around the corner sent me. I asked him where there was a home for girls—a place I could get in without paying. He said you would know,"

"'Let's see are you a stranger here?'

"'No, but I'm out of work and have no

place to stay."

"'I was going to say if you were a stranger you might apply to the Travelers' Aid. If you belong here it's different. I think you'd better go down to the Young Women's Christian Association in Fifteenth Street.'

"But some one told me you have to pay there. I've only got fourteen cents."

"Well, I'd go there all the same. They'll know the proper place to send you. It's getting on after eleven, and you don't want to be wandering around the streets much later alone. All the theater crowds are out now, so you'll have plenty of company on your way."

"Mildred Andrews," who for the time being stood for Miss Grosvenor-Ayres, carried her investigating appeal to the Margaret Louisa Home, and reports this colloquy with the person in charge:

"We have only one vacancy, she stated. That is, you'd have to share the room with some one else. It would be sixty-five cents."

"I can't pay in advance,' I confest.
Don't you know of anywhere I could go
a free place where they take care of girls

until they get work?"

"There are such places in town. But they close at eleven o'clock. You see, it's nearly twelve now. The only place I can recommend to-night is a hotel near by, where you can get a room for a dollar a day. If you have luggage I don't think they'll require you to pay in advance."

"Carefully and courteously the young lady directed me to the dollar-a-day hostelry, but since I did not see how 'Mildred

Andrews's' fourteen cents could multiply even to satisfy a hotel clerk—or, more vulgarly but vitally, to satisfy her own empty stomach—I went back to Policeman No. 7779."

From the St. Mary's Home in West Fourteenth Street came a quick offer of help and "no questions asked";

"'I came here alone,' I explained hurriedly. 'An officer said you would take me in. I've been out of work'—

"Yes,' said the portress, 'I know. I'm going to fix up a bed for you here. You're welcome to stay and no questions asked."

"She spoke with decision. I realized the power of these last words as no booklet, tract, or spoken praise of St. Mary's Home had ever before conveyed. It was true, then, that this 'shelter,' founded thirty-nine years ago by that rare and wonderful woman, Miss Susan M. Osborne, really did extend a welcome to homeless women, with 'no questions asked.'

"To presume upon hospitality thus trustingly given was

impossible.

"Would you mind,' I asked the portress, 'if I just telephoned to a friend before I put you to this trouble? If she's in I can go to her for the night. I was getting afraid I mightn't be taken in anywhere if I waited any longer, that's why I came here.'

"'It's never too late to come here,' was the reply. 'You can stay and welcome if you like, but if you'd prefer you can tele-

phone to your friend."

"I rang up my home number, rousing the frightened maid to ask her if she could harbor me for the night, and cut off before she regained sufficient sense to laugh at me. I took up my grip and said to the portress: 'My friend will let me come. Thank you for offering to let me stay here.'

"'I hope you don't have to go far. We would have done our

best to make you comfortable."

At the Charity Organization "Mildred Andrews" found a keen inquisitor who had many questions to ask, but a friendly spirit and a willingness to help not only for immediate but future needs. Her final call was at the Travelers' Aid Society:

"'It's too late for a young girl to be out,' said the matron. 'We'll make you comfortable here.' She asked only my name and last address before saying good-night. My room was spacious; there were two beds, and the matron said if any one else came I would have to share with her. Everything was clean and comfortable—and there was no clothes-bag. Nor was the big bathroom down the hall equipped with a compulsory shower or antiseptic soap.

"In the morning I was called for breakfast at half-past seven. The table down-stairs was laid for five; I was the first to come in, and the maid served me promptly. It was a simple, wholesome breakfast of boiled eggs, rolls, and coffee. A girl who could speak no English took her place opposite me, and next there came a loud elattering from above, with a good deal of hilarity in unmistakable intonations; three English girls bounded in, and, like Clesar, came, saw, and conquered.

"That trio could have galvanized an army into action, let alone a genteel breakfast-party of five. This was their first day in America; they had just landed from England and were

to be married that morning at half-past nine o'clock.

"Do you realize this is our wedding-breakfast?' demanded

one as they sat down.

"'You know we didn't bargain to spend the night here,' one of the girls suddenly told me. 'The bally old boat got in tweive hours ahead of time. Even so, our boys got there to meet us, but what do you think—the agent of this Travelers' Aid wouldn't let us go with our Johnnies until we were properly wedded. This must be a jolly wicked old city—they're so afraid of white-slavers. The boys are coming at half-past nine, with the rings and licenses and all. Will you stay and stand up with us."

"But 'Mildred Andrews,' alas, had previously committed herself to investigating a new position as typist at nine o'clock. She was forced to decline the unique honor of serving as triple

bridesmaid."

DR. PARKHURST'S DEPRESSION—"Our civilization, broadly considered, is a dead failure," is one of the statements reported in the New York Times as being made by Dr. Charles H. Parkhurst at the annual meeting of the Congregational Church Extension Society of Manhattan and Brooklyn at Plymouth Church, Brooklyn. He wanted, he said, to take the opportunity to express some matured convictions of forty years in the ministry—such as these:

"There is no spot in the page of history so black as the blot that has just recently been dropt upon it. Our civilization is brilliant, but it is unboly. The fruits of our civilization, such as intelligence, discoveries, inventions of all kinds have been among the most efficient contributions to the brutalities of the last two years.

"The current ebullition of the patriotic spirit is wonderful and from one point of view is most encouraging, but it is purely the outcome of our humanism. The world will continue to be a fighting world until it is a better world, and when it is a matter of fighting, the nation with the weakest military equipment will be the victim of a disastrous liability."

THE FLAG IN THE CHURCH

THE PRESENT NATIONAL CRISIS leads an Episcopalian bishop to suggest to his denominational papers
that they urge "placing the flag in all our churches,"
to teach "the relation of the Church to patriotism and its Christian expression," and the suggestion is heartily welcomed by
The Living Church (Milwankee) and The Churchman (New
York). The latter thinks that "the very appropriateness of
his suggestion is the sufficient appeal for its adoption." Not
only now, but at all times, it says, let the flag be displayed
in the churches, "as a perpetual reminder of our God-given
mission as a nation to the peoples of the world." And it indorses the words of another bishop who said on the occasion
of the unfurling of an American flag and a banner of the cross
in a Pittsburg church:

"The banner of the cross wears the sacredness of Calvary. The Stars and Stripes were consecrated at Lexington, at Bunker Hill, and amid the prayers and privations of Valley Forge. They gain no additional sacredness from the holy place where they are now standing. Rather, one may reverently say, they confer new consecration upon the holy place itself. They stand for God and Fatherland; for religion and patriotism; and there are no words in human speech nor any conceptions in the heart of man more sacred than these."

"It is a mistake," The Living Church declares, "to suppose that the national emblem is an inappropriate addition to the ornaments of the church." Rather,

"The Church has always inculcated patriotism, and the American flag is a proper symbol to be borne and displayed in every American church. But the Church also teaches an internationalism as well, that most always be correlated with patriotism and that ought, much more than in history it has done, to preserve nations from a national selfishness that stands in the way of the recognition of the rights of other nations. The Cross and the Flag interpret each other.

"And we are hoping that without any special call, churchmen have fallen to their knees in imploring guidance for the nation, its executive, its legislators, and its people, in this hour of perplexity. Let the prayer for Congress, which has fallen so generally into disuse, be gived and used regularly at least during this present period of anxiety, when the President may, any day, be impelled to present himself before the houses of Congress and ask them to authorize him to use military, naval, and economic force in the performance of his duty. The prayer for the President ought to be exceptionally earnest. And well may we pray that we, and the whole American people, may rise to our duty and do whatever may be laid upon us with all our might, in the fear of God."

SIGNS OF A VANISHING PROTESTANTISM—Revelations of the Census Bureau present a danger for Protestantism that needs attention, says The Christian-Evangelist (Disciples, St. Louis). The danger can be met, it thinks, only by an evangelism that more nearly resembles that of the Catholic Church than the revivalism of the Protestant. In the first Federal birth-statistics ever published the States of New York, Pennsylvania, Michigan, Minnesota, the New England States, and the District of Columbia are dealt with. The highest death-rate in this area was found in New Hampshire and the lowest in Minnesota. The highest birth-rate was in Massachusetts and Connecticut, and the lowest in Maine. The greatest excess of births over deaths was in Minnesota and the least in Maine. This journal finds here disclosed some interesting facts with regard to racial progress and characteristics as well as their bearing upon the future of the Protestant churches;

"For example, the death-rate among negroes is shown to be higher and the birth-rate lower than it is among the whites. On the other hand, the birth-rate among the foreign-born population is shown to be astonishingly higher than it is among the native Americans. In Connecticut, where in 1910 about 30 per cent. of the population was foreign born, the children born from foreign parents comprised 63 per cent. of the total. The excesses of the birth-rates of the foreign born over the nativeborn population varied from 40 per cent. in Minnesota to 300

per cent. in Connecticut.

"Apparently these figures indicate two tendencies in our American social life. First they indicate that the white race is slowly supplanting the colored in population; and, secondly, that the foreign-born whites are supplanting the native born. In this latter fact lies a great danger for American Protestantism. The majority of our foreign-born population are Jews, Catholies, or Freethinkers. The growth of the Roman Catholic Church is largely due to the greater proportion of births among immigrants. The same church which prescribes celibacy for its elergy encourages large families among the laity. It is noticeable that Catholicism grows up almost entirely by absorbing its own children rather than by proselytism. Protestants frequently let the children get away from them and then hold big revivals to bring them back. We need an evangelism which will hold the children quite as much as one which will bring them again into the fold."

HOW THE POPE TRACES LOST SOLDIERS

NVERY DAY the Pope receives about two hundred letters "from distracted parents, wives, and sweethearts in all of the belligerent nations, pleading that he use his good offices to learn whether their loved ones, about whom they are unable to hear anything, are dead, wounded, sick, or prisoners." And, as we learn from an Associated Press dispatch from Rome printed in The Intermountain Catholic (Salt Lake City), he reads every one of the letters himself. Of course, he can not investigate every easo personally. But after reading an appeal, he makes a memorandum on its envelop and semis it to the department of lost soldiers, which has been established in the Vatican, and employs some thirty clerks under the supervision of one Father Huisman. The work of this office is described as follows:

"The department has access to official records transmitted by the Prussian Minister of War to the Hole See at Lugano, Switzerland, and has offices at Paris, Constantinople, Vienna, Brussels, and Padeborn, Westphalia, Germany, with several minor branches in other countries.

"The department has become one of the most highly organized of any in the Vatican. It writes several hundred letters a day, and to date such letters have run up to a total of more than five million. As the department returns all money enclosed in letters of appeal, and as a person writing from England ean not well enclose Italian stamps for international correspondence, the stamp bill alone of the department has been upward of two hundred thousand dollars.

"After making an official demand on the Government of the country where the lost soldier is supposed to be, the department causes each new name to be posted up in the military prison-camps, by the aid of a Catholic chaplain always present, in the hope that some of the lost soldier's comrades may see the name and offer some clue that will lead to his location. Several thousands of such lists have been printed. There are one hundred and ten lists, each containing two hundred names, for the Italian Army alone, making thus a total of twenty-two thousand lost Italian soldiers. Aside from this, the department has copies of official army prisoner lists, arranged by nations, and it immediately searches these lists carefully for the name of the lost soldier.

"Despite the difficulties of the task, the department has so far been able to find more than ten thousand lost soldiers, and the Pope has received a treasured collection of letters of thanks from families, often from little children, who address him as 'Mister,' or who give him the title-names of popes dead many

hundreds of years.

"The correspondent of the Associated Press on a visit to the department saw a bundle of letters that had been just sent by the Pope, possibly seventy-five in number, and on the envelop of each one in his own handwriting were written directions concerning its disposition. Among the heap was a letter from his sister, the Countess Persico della Chiesa, of Genoa, the Pope's bome city, asking that a search be made for a certain soldier of Genoa. 'The Countess begs attention again,' the Pope had written on the letter. Another one of the letters was one of thanks from a French family whose son, Jean Laforgue, had been for two years in the Orient without being able to send news to his family of himself, but the Pope had been able to discover this lost son at Samsam, in distant Turkey."

MR. WILSON'S PEACE-VISION

THE POWER TO CONCEIVE, uphold, and practise ideals is, inherently, a religious power, since it is based upon a conception of human duty and human opportunity which finds its sanction and its inspiration in considerations that transcend the merely material view of life." This is a statement of the idealism shown by President Wilson in his address to the Senate about the world's peace after the war, exprest by The Guardian (London), organ of the Established Church. It places Mr. Wilson alongside the "Czar Liberator," alongside "Mr. Chamberlain when he insisted upon giving easy terms to the Boers," and "President Lincoln when he fought for the first essential of human liberty." The Guardian thinks that Mr. Wilson, in using "the remarkable freedom of speech and action enjoyed by an American President to advertise the world of his lofty conception of its duty toward the maintenance of peace," has done what "practically no other great executive officer could have done." It sees further that "the nobility of his vision of the future, of a world banded together to prevent war, of a universal and permanent reign of peace, makes an appeal which will come home with far greater force to Europe than to America," Continuing:

"We have already exprest our conviction that when this worst of all wars is over a definite and practical attempt must he made by a real concert of states, great and small, to place an insuperable barrier in the way of the greed and ambition of powerful countries, especially where small and weak ones are concerned. It is impossible for the world to sit still and calmly contemplate the practical certainty that some time during the next half-century there should be a deliberate repetition of the events which are drenching the universe with the blood of its young men and draining it of the treasure which should be used for the progress of civilization and the happiness of humanity.

"Hitherto mankind has lived through periodical alternations of war and peace, and in modern times there has been a tendency for war-making to become not only a science, but a business deliberately learned and followed with all the ardor of enthusiasm. When a man runs a highly specessful business he is always in danger of becoming absorbed in it, and the present aggressor has grown so fat and prosperous upon more than fifty years of sucresoful war that it would have been astonishing had be failed to learn what seemed to be the obvious lesson that fighting pays. That it should have been possible for President Wilson to say recently that it is now universally taken for granted that peace must be followed by definite action for the prevention of war is a significant indication of the extent to which his great ideal has already made progress. Nor eau we doubt that much of that progress is attributable to the support he has himself given to the suggested League of Peace, and we are in cordial agreement with his dictum that the New World must be a party to it.

"Short of such participation it would be difficult to secure that the force guaranteeing peace should be 'so much greater than the force of any nation now engaged, or any alliance hitherto formed or projected, that no nation, no probable combination of natious, could face or withstand it.' For the moment we need not make too much of the obvious fact that the adhesion of America to an omnipotent League of Peace might imply her creation of great armies and navies, or remind Mr. Wilson too pointedly of the opinion of Admiral Mahan that the British fleet has been the ultimate guaranty of that Monroe Doctrine which he hopes to see made world-enveloping. Under the new way of international life to which he looks forward there might be more methods than one of guaranteeing the peace. It would be not only absurd, but wrong, to carp at the ideal of that continuous peace which would be the most splendid boon ever conferred upon the world. It is every man's plain duty to work for the success of such an ideal, and the nations owe a debt of gratitude to Mr. Wilson for his courage in so stedfastly supporting the idea of war against war."

"KEEP ON AIDING BELGIUM," IMPLORES MR. HOOVER

ERBERT C. HOOVER, Chairman of the Commission for Relief of Belgium, was given a dinner at the Hotel Astor in this city on Tuesday evening, February 13, when over 600 prominent persons honored him by their presence, and Mr. Hoover made an address which thrilled all who listened. Referring to Germany's decision that Americans must not continue-their relief work in Belgium, announced only the day previous, Mr. Hoover urged that his hearers not only continue their efforts for relief, but increase them. And he further said:

"If it is necessary for the Americans to retire in favor of some other neutrals, the obligation upon the world will remain. The world can not resist the call of six millions of women and children for the bare subsistence of life.

"God still reigns, and no matter what our temporary difficulties may be, the same faith and the same furce which have enabled us to

go thus for will enable these people to be saved.

"Whether at the hands of this particular group of men, or at the hands of whatever neutral nation to whom the responsibility for administration of the work falls, the obligation of the Amerlean people to support such an administration, and thus to support these people, is no less than if it should happen to be directed by Americans themselves. It is an obligation toward humanity. There can be no slackening of our endeavors; there can be no relaxation of our responsibility in this matter."

Mr. Hoover said that ships of the Commission were in ports all over the world, and that the Commission had proposed to Germany that the work be earried on by other neutrals, or that lanes be agreed upon for its ships to pass in safety.

Answering a natural fear that food intended for Belgians had fallen or might fall into hands of the German Army, Mr. Hoover stated:

"We are satisfied that the German Army has never eaten onetenth of I per cent, of the food provided. The Allied Governments never would have supplied us with \$200,000,000 if we were supplying the German Army; and if the Germans had absorbed any considerable quantity of this food the population of Belgium would not now be alive.

"The crying need of Belgium to-day," declared Mr. Hoover, is the care of 1,200,000 children for whom the Commission has been earing, and particularly of more than 400,000 babies, under three years of age, whose mothers have brought them twice every day to the Commission's canteen for milk,"

Mr. Hoover's address inspired an editorial atterance by the Brooklyn Eagle headed "Belgian Relief Must Go On," in the course of which reference was made to the meager Belgian Issuefactions of certain rich American States as compared with those of Australian and Canadian provinces, and to the new sense of responsibility that should be felt here, and The Eagle further said:

"To speak of a new sense of responsibility indicates a belief that the work of Belgian relief will go on, in spite of the withdrawal of the Commission's agents, even in spite of war between the United States and Germany. The Eagle so believes. Some way will be found to continue a charity that simply must be continued in the interest of ordinary humanity. . . , What is required now are, first, an abiding faith that the worst developments of war can not extinguish a splendid enterprise of merey, and, secondly, a resolve to support that enterprise to the utmost of our ability as a rich and prosperous people."

In a statement to the Associated Press, in London, on the 14th inst., Lord Robert Cecil, British Minister of Blockade, paid a remarkable tribute to the work of Mr. Hoover and his American associates, and closed by saying:

"I am sure that while we must say farewell to the American directors in this work we need not do so to American interest in the work. On the contrary, I am sure the American people will take pride in competing with the Allied nations in giving financial support to the great enterprise with which the name of America must forever remain associated."

His words may be accepted as prophecy by the thousands of Digest readers who have already contributed and the thousands more who will emulate their example, because moved by their spirit. We have room for but a few illustrations of it:

From far-away Hawaii comes a remittance of \$1,200, sent by one Digest reader who requests that his name be not mentioned, but who says: "I hasten to donate the enclosure toward the Belgian Children's Fund, with the hope that the million dollars you look for may become ten times that sum before contributions ecuse."

"I would suggest that you send out your appeals frequently, as people lose them or put them aside." So writes a California lady, whose check for \$500 is in evidence that her good impulses move quickly.

Says the president of a New York savings-institution: "I was greatly pleased to find that you clearly state there is to be no expense attached to the distribution (such as salaries, etc.). This fact prompts me to enclose my check for \$25."

"The Belgian children must be saved," says another New-Yorker, "and it ought to be possible to raise the money in this city alone." To prove this he remits \$36.

"As the father of four children I can not pass your appeal un-

imprest," says one parent, enclosing his check.

"Enclosed find my check for \$60 to save five from slow starvation," says a Trust Company's president in Pennsylvania. a reader of The Digest for many years."

Make cheeks, money-orders, or other remittanees payable to Belgian Children's Fund, make them as large as possible, and address all letters to Belgian Children's Fund, care of Tue LITERARY DIGEST, 354-360 Fourth Avenue, New York:

Since the above was put in type German authorities have decided that Americans may continue administering Belgian Relief.

Contributions to THE BELGIAN CHILDREN'S FUND—Received from February 7 to February 13 inclusive.

Beneficial for children, sick or well

Franco-American Broths, made from pure meat juices in kitchens famed for cleanliness, are ideal for the youngsters. They are splendidly and wholesomely stimulating to the digestive system, increasing the flow of gastric juices and contributing to the proper assimilation of food.

Franco-American Broths for hwalids

Wise mothers, as well as physicians, know the vast importance to the growing child of a sound, healthy, ac-tive digestion. They appre-ciate also how great an aid Franco-American Broths are in maintaining the digestion in such a healthy condition. For those children who cannot digest milk properly these broths are especially welcome. They are also valuable

Quality Wire Aëroplane Service

The electrical currentignition circuit of an aeroplane must be reliable. The slightest defect in the insulated wire may stop the engine in midair. Aeroplane service is but one of the many exacting forms of use for

ECC Insulated Wire

Millions of feet of ECCO are being used in homes, all kinds of buildings and factories. In telephone, telegraph, railway signal, aeroplane and automobile service, ECCO is known as the dependable wire. Quality counts with experts, and every one using electrical current for any purpose, from call bell circuit to high tension transmission, is assured of quality when ECCO is used.

As a guarantee of dependability ECCO is marked every three feet on the outer surface of the braid. Each coil is separately tested, and certified copy of such test furnished upon request.

Remind your architect to specify ECCO, and insist that it be used by your contractor.

Nowadays everyone is interested in the use of electricity, and our booklet on Electrical Installation is in universal demand. May we send a copy of this booklet to you?

The Electric Cable Company Makers of ECCO Wire for every pur-

We Are Sure You'll Like This Tire

The element of chance in the production of an automobile tire is negligible.

Quality in raw materials, rubber and fabric, is clear to the expert eye; routine processes in the modern factory are definite and exact; for the rest, experience and equipment rule the result.

The goodness or fault of the tire you buy from your dealer depends in the main upon the intention of the maker who produced it, and upon his ability to put his intention into effect—almost your surest guide in purchase is the proof of these as seen around you every day.

What tires do your friends use? How do they speak of them?

The chances are most of them use Good year Tires—more motorists do, the country over, than use any other brand.

The chances are, also, that they

speak warmly and commendingly of them — Goodyear buyers are repeat buyers, as Goodyear's steadily mounting sales will prove.

More Goody ear Tires would not be sold, and continue to be sold in increasing numbers, if the intention of their maker and his ability to express it in the tires themselves, were not satisfactory.

That is obvious, as it is obvious that the tires which serve a plurality of American motorists better, also will serve you better.

For you, the purchase of a Goodyear Tire may be an experiment; for us, the winning of your continued patronage is a certainty.

For, as we have said, the element of chance in the production of an automobile tire is negligible.

And we know with scientific precision just why Goodyear Tires serve most motorists—and will serve you—better.

Having the intent to go on producing such tires, and the ability to do it, accomplishing a dependable manufactured result is entirely within our grasp.

And, certainly, we should not wish to abandon the practice which is the very foundation of our business.

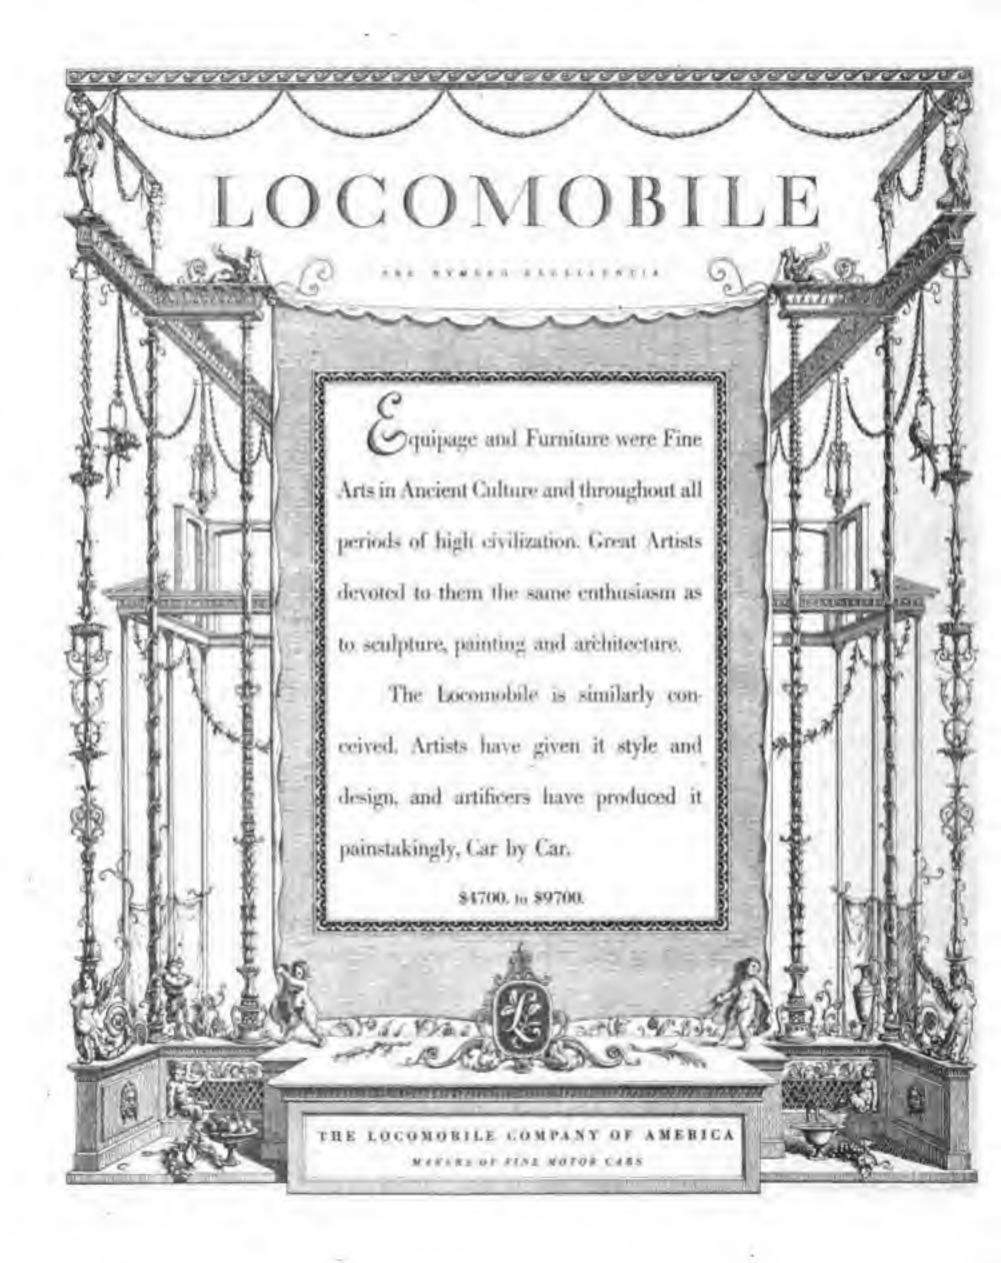

So we are sure that the Goodyear Tire you buy will engage your good-will, and that the ones which follow will hold it permanently.

And you can be sure that any and all of them will deliver service consistent with this program.

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

Kelly-Springfield Tires

Some people have luck; others have Kelly-Springfields. The trouble with luck is that it isn't a thing you can count on.

M SECURITION OF THE PROPERTY OF THE PARTY OF

Bight miles of concrete on Cambria-Wrights Corners Road in Niapara County, N. Y. Built by Harrodine Bros., Spencerport, N. Y., Contractors, W. M. Acheson, Division Engineer, State Highway Department.

Durable Roads Are Obtainable the Motorist Should Act

Motor clubs and associations everywhere are joining the movement for good roads. The motorist knows better than anyone else how serious is the road problem of today. Next to the farmer, he is the most vitally concerned. It is motor car traffic which is tearing our highways to pieces, making them unfit for travel and piling up maintenance costs which no community can afford. These are very likely to be recovered by the community in higher taxes. The only remedy is the quick and systematic building of permanent highways.

The three million motor car owners in this country are a power if they all pull together and urge, each in his own community, a sufficient mileage of permanent roads. They are property owners and tax payers, entitled to be heard.

The point is to be definite about it, to settle upon a system of permanent roads in county or state, and then raise enough money by a bond issue to build the most enduring type.

For the following reasons, this should be concrete:

1. Concrete makes a hard, even road surface, onaffected by weather.

2. It is easy to build in any locality; the materials are

3. The concrete surface is just right for motor car traction. It is even without being slippery. The gritty

surface gives tires the grip needed.

4. Concrete is safe and comfortable to drive on.

Every motorist knows how it feels to swing upon a clean, even stretch of it, after jolting over ruts, holes and mud.

5. Its universal use in great engineering works is evidence of its solidity and strength.

6. The upkeep is negligible.

It costs less to build than any other permanent road.

WHY BUILD ROADS NOT DESIGNED FOR MOTOR CAR TRAVEL DIST motorist to answer by organized, definite action.

It takes a lifetime to build a system of permanent roads by laying scattered stretches with current road funds. You want your roads good while you are still alive to enjoy them.

Road officials are glad to build permanent roads of concrete, if the tax payers want them. Bring the matter to their attention in your community, after acquainting yourself with the facts. Write for Bulletin No. 136.

CONCRETE FOR PERMANENCE

CURRENT POETRY

DR. HENRY VAN DYKE, relieved, by his resignation from the post of United States Minister to Holland, from the bonds of diplomatic silence, contributes to the New York Times this intensely passionate expression of his feelings in the world's crisis. Those who share his emotion will be glad of his spokesmanship, and others will not let the bitterness of his partizanship blind them to the excellence of his verse.

MARE LIBERUM

BY HENRY VAN DYKE

You dare to say with perjured lips; We fight to make the ocean free !-You whose black trail of butchered ships Bestrews the bed of every sea Where German submarines have wrought Their horroral Have you never thought What you call freedom men call piracy?

Unnumbered ghosts that haunt the wave Where you have murdered cry you down, And seamen whom you would not save

Weave mew in word-grown depths a crown Of shame for your imperious head. A dark memorial of the dead, Women and children whom you left to drown,

Nay, not till thieves are set to guard The gold, and rerealrs called to keep O'er peaceful commerce watch and ward, And wolves to herd the helpless sheep, Shall men and women look to thee, Thou ruthless Old Man of the Sea. To safeguard law and freedom on the deep!

to nobler breeds we put our trust The nations in whose sacred lore The "ought" stands out above the "must," And honor rules in peace and war. With these we hold in soul and heart, With these we choose our lot and part Till liberty is safe on sea and shore.

Several of the poems of Alan Seeger, the young American who died fighting with the Foreign Legion on the field of Belloyen-Santerre, have already been reprinted in these columns. A volume of his poems has recently been published by Charles Scribner's Sons, with a sympathetic introduction by William Archer. From it we quote this stately and spirited ode. The poet had hoped to read it in Paris on Decoration day, before the statue of Lafayette and Washington, but his "permission" unfortunately did not arrive in time. Of it Mr. Archer writes: "If the war has produced a nobler utterance, it has not come my way."

ODE IN MEMORY OF THE AMERICAN VOLUNTEERS FALLEN FOR FRANCE

In hore been read before the statue of Lajayetic and Washington in Paris, on Decoration day, May 20, 1916)

BY ALAN SEEGER

Ay, it is fitting on this holiday, Commensorative of our soldier dead. When-with sweet flowers of our New England

Hiding the lichened stones by fifty years made gray-

Their graves in every town are garlanded. That plous tribute should be given, too, To our intrepld few Obscurely fallen here beyond the seas. Those to preserve their country's greatness died;

But by the death of these Something that we can look upon with pride Has been achieved, nor wholly unreplied

Can sneerers triumph in the charge they make That from a war where Freedom was at stake America withheld and, dannted, stood aside.

11

Be they remembered here with each reviving Spring. Not only that in May, when life is lovellest: Around Neuville-Saint-Vaast and the disputed crest.

of Vimy, they, superb, unfaitering.
In that fine onslaught that no fire could balt.
Parted impetuous to their first assault;
But that they brought fresh hearts and springlike,
too.

To that high mission, and 'tis meet to strew With twigs of lilac and Spring's earliest rose The cenotaph of those

Who in the cause that history most endears Fell in the sunny morn and flower of their young years.

111

Yet sought they neither recompense nor praise.

Nor to be mentioned in another breath

Than their blue-coated comrade whose great days

It was their pride to share—ay, share even to
the death!

Nay, rather, France, to you they rendered thanks (Seeing they came for honor, not for gain). Who, opening to them your glorious ranks. Gave them that grand occasion to excel. That chance to live the life most free from stalo and that rare privilege of dying well.

IV

O friends! I know not since that war begar From which no people nobly stands alonf if in all moments we have given proof Of virtues that were thought American. I know not if in all things done and said All has been well and good. Or if each one of us can hold his heast As proudly as he should.

Or, from the pattern of those mighty dead Whose shades our country venerates to-day. If we've not somewhat failen and somewhat gone astray.

But you to whom our land's good name is dear.
If there he any here

If there be any here Who wonder if her manhood be decreased, Relaxed its sinews and its blood less red Than that at Shiloh and Anticiam shed He proud of these, have joy in this at heast, And cry: "Now heaven be praised That in that hour that most imperiled her. Menaced her liberty, who foremost raisest Europe's bright flag of freedom, some there were Who, not unmindful of the antique debt. Came back the generous path of Lafayette: And when of a most formidable for She checked each onset, arduous to stem-Foiled and frustrated them-On those red fields where blow with furious blow Was countered, whether the gigantic fray Rolled by the Mense or at the Bois Sabot. Accents of ours were in the flerce melec; And on those furthest rims of ballowed ground Where the forlors, the gallant charge expires, When the slain hugler has long crased to sound, And on the tangled wires The last wild raily, staggers, crumbles, stops, Withered beneath the shrapner's iron showers: Now heaven be thanked, we gave a few brave

There holding still, in frozen stedfastness.

Their bayonets toward the beckening frontiers.

They lie our comrades—the among their pears.

Clad in the glory of fallen warriors.

Grim clusters under thorny trellies.

Dry, furthest foam upon disastrons shorrs.

Leaves that made last year heautiful, still stow

Now heaven be thanked, a few brave drops are

OHTS."

Dry, furthest foam upon disastrons shors. Leaves that made last year beautiful still stown Even as they fell, unchanged beneath the changing moon:

And earth in her divine indifference
Rolls on, and many paltry things and mean
Prate to be heard and caper to be seen.
But they are silent, calm; their eloquence
Is that incomparable attitude:
No human presences their witness are,
But summer clouds and sunset crimson-hued,
And showers and night winds and the northern

It's not a big undertaking to Brighten Up America, if every home owner does his part. Paint your house inside and out. Protect every surface around your home. It will benefit your country, your neighborhood, and, most of all, it will benefit you.

There is a Sherwin-Williams finish for every surface. There is a Sherwin-Williams dealer in practically every city and town. Get S-W products and Brighten Up.

Our text book of painting instructions for the home owner will be sent free on request. Our Decorative Department offers free helps to all who desire expert advice and suggestions.

America Is Famous For Better Tools

A great part of America's reputation for making superior machinery rests on American toolmakers. No more momentous improvement in tools has ever been made than in the design of the Gun Tap shown below. In one step the tap has been changed from a continually breaking, expensive trouble-maker to an efficient, modern tool.

The Gun Tap is first the tap that weers out before it breaks. 190% is the usually accepted figure for breakage with ordinary taps.) Then it is the easiest cutting tap, and the first type to cut correctlywith a shearing action. It cuts more accurate threads, requires less power, and holds its size longer, than any other type.

Thus the Gun Tap makes possible a production greatly increased in accuracy and quantity.

For further details and reasons sely, send for Bulletin on Gun Taps.

Nay, even our salutations seem profans, Opposed to their Elysian quietude; From an ignobler plane And undistinction of our lesser parts: Hall, brothers, and farewell; you are twice blest, Double your glory is who perished thus.

For you have died for France and vindicated us.

From "Songs Out of School," mentioned last week, we also take this interesting little morality-a trifle too didactic, perhaps, but engaging, nevertheless, in its simplicity and its music.

THE HIGH ROAD

BY H. H. BASHFORD

Oh, once you were a bridle-path, An hundred years and more ago, Across the hills, and o'er the hills. Your slender way you went; Great-granded was not married then, I wonder whom you carried then Across the hills and o'er the hills. By many a steep ascent.

"On steady horse they went their way, My stripling shoulders bore them well, Across the bills and o'er the bills. By valleys green and gold; The gipey to his tent I took. The landlord for his rent I took. The lover to his lady's hearth. The farmer to his fold."

And now you carry motor-cars. Are bross and white and fair to see, Important pax; he know you well. So straight you are and strong. And now you carry king a sometimes, The tramp of armies rings sometimes, Across the hills and o'er the hills Your mighty ways along.

"Yes, now I carry kings sometimes, Important people know me well, And men of wealth and motor-cars I bear from town to town. If only I could know them now, What wonders I could show them now, The simple folk that loved me once. Refore I gained renown."

Dear road, your weret tell me now, Who also would be great like you. And rise above my present lot, And lose my humble name, How came it that the bridle-path, The slender, fond, and idle path, That once you were in days gone by Has won so great a fame?

"Grim engines have gone over me, With granite have they walled me in, With iron tools they wrought at mo. And labored long and late. Twas thus I had to pay for it. And there's no other way for it-They hammer down your wayward earth. And so they make you great."

We find this exquisite picture in The New Republic.

A BREAD-AND-BUTTER LETTER

BY ALICE DUES MILLER

There is a willow grows beside a pool. Its long gray branches sweep the marble rim And from those waters shadowy and cool The stars shine large and dim.

From open valleys filled with little lakes All through the night a hundred breezes blow, All through the night the little willow makes A whispering soft and low.

Here in the dusty street there are no trees To whisper and the sky is dark and gray. And yet I see the stars, I feel the breeze So far, so far away.

-the final seal of protection

If your car is worth insuring, it's worth the additional protection of a J-M Fire Extinguisher - positive protection, secured at slight outlay because of the 15% reduction in insurance premium thus gained.

And when the car is two or three years old-when only a limited percentage either of its cost or its real value to you can be covered by insurance—then, more than ever, you want protection. Equip your car with the

Johns-Manville Fire Extinguisher

Efficient on all incipient fires-even from gasoline or electrical arcs and the only one-quart extinguisher with a two-way method of operation. Can be discharged by pumping or by air pressure previously pumped up—an invaluable feature in tight corners.

The J-M Fire Extinguisher is approved and labeled by the Underwriters' Laboratories, Inc.

To the Trade: Ask the nearest J-M Branch for details - generous dis-counts, uniform and rigidly maintained regardless of size of order. coupled with a sales policy designed for your protection.

Price, in nickel or bress finish, bracket included—\$8.00. Buy it from your local dealer.

PERSONAL GLIMPSES

THE RISE OF HENRY FORD

WHEN you get a pacifist backed against the wall, he's the fiercest fighter you ever saw. He spits fire." It was something like this that Henry Ford, who had sent out the famous peace-ship last year, told the reporters when war was first threatened with Germany and they were anxious to know what the inventor would do. And when Ford had launched that dictum, he proceeded to show he meant it by offering his factories, together with his entire personal fortune of probably a hundred million dollars, to the Government. Moreover, he offered it all without interest or profits of any sort.

Nor was this all. He announced his belief in the submarine as a means of defense, and he offered to build for the ation a thousand one-man submarines a day for any specified length of time enough to string in a bellicose necklace around the country's coast. That is thesort of pacifist Henry Ford is.

But he is also a self-made man: he went to work early and stayed late; he plugged hard summer and winter, with endless industry and faith in an ultimate goal, until now he has become not only one of the richest but one of the best-loved men in America. Just how he made himself is the theme of a very interesting and timely work written by Ruth Wilder Lane, and published by Ellis O. Jones, of the Ford peaceexpedition. In its pages are given many generally unknown details of the manufacturer's life and rise. It is absorbing to follow the account of the early days of the Ford tractor, the Ford car . . . in fact, the automobile in general as it was constructed bit by bit, in the brain of the inventor. Concerning the genesis of the tractor, we are told:

As a boy, he exhausted the possibilities of the farm-shop. His last work in it was the building of a small steam-engine. For this, helped partly by pictures, partly by his boyish ingenuity, he made his own patterns, his own castings, did his own machine-work.

His material was bits of old iron, pieces of wagon-tires, stray teeth from harrows—anything and everything from the scrappile in the shop which he could utilize in any imaginable way. When the engine was finished Harry mounted it on an improvised chassis which he had cut down from an old farm-wagon, attached it by a direct drive to a wheel on one side, something like a locomotive connecting-rod, and capped the whole with a whistle which could be heard for miles.

When he had completed the job he looked at the result with some natural pride. Sitting at the throttle, tooting the ear-splitting whistle, he charged up and down the meadow-lot at nearly ten miles an hour, frightening every cow on the place. But after all his work, for some reason the engine did not please him long.

"We Could Strike a Match-

anywhere inside the basement walls, while outside water stood against them for three

weeks," writes Mr. H. T. Liebert, architect—in referring to the basement of the Trevelen Building, Fond du Lac, Wisconsin.

The walls of this building were made permanently watertight and damp-proof with

MEDUSA WATERPROOFING

Medusa is not a surface paint or mixture but the original integral waterproofing—a material that becomes an inseparable part of the Portland Cement without affecting its strength, setting or color and making a concrete or stucco absolutely water-tight and damp-proof.

No matter what your waterproofing problem is, whether it be a retaining wall; a basement or cellar walls for a home, bank building or factory; a tunnel; floor; or a swimming pool or reservoir, Medusa Waterproofing will make your concrete permanently water and damp-proof.

And remember the time to water-proof is when you build. Put your waterproofing problem up to our engineers. Their services are at your disposal. Telling us the kind of structure you contemplate building will enable us to give you specific data.

entials the

REFINED AND IMPROVED in many important details, making for betterment in performance and in riding qualities, but essentially the same in design. For we Reo Folk saw to it that this Six was fundamentally right before we let the first one leave the factory.

SINCE THEN WE HAVE incorporated such , changes as we thought would enhance the pleasure of riding in this car—longer wheel base; improved apring suspension; improved carburetor; silent spiral-bevel driving gears; and other features formerly found only in Sixes of the highest price.

BODY DESIGN IS NEW—in keeping with the progress of the art, the vogue and the preference of buyers.

THIS CONCESSION we always make to the buyer a body made to his taste and in the latest style.

IN THE CHASSIS we give him that which we know he ought to have—if our long experience and engineering ability is worth anything.

IN EXTERNAL DETAILS it is your ideal of a luxurious equipage—in mechanical principles and construction it is our idea of what constitutes a good automobile.

REO 3-UNIT SYSTEM makes what we believe to be "the Most Accessible Automobile in the world"—hence the law upkeep cost of Reo Sixes.

"50 PER CENT OVERSIZE" in all vital partasuch as bearings, shafts, frame, gears, wheels, suring, radiator, etc. makes this Reo Six somewhat heavier than some of other similar "rated" power and passenger capacity.

THAT IS THE BEST GUARANTEE of the quality that is in this Res Six. For we do not skimp on either the size of parts nor quality of material to meet a price competition.

ORDERS FOR THIS NEW REO SIX must be in your Reo dealer's hands well in advance of the time you desire delivery.

DEMAND IS TREMENDOUS and will increase immeasurably as the big Spring demand opens up and as owners begin to extol the superiorities of this big, beautiful. New Reo Six. For surely at \$1250 this is "The Gold Standard of Values" in Sixes.

Taylor Instrument Companies
ROCHESTER N.Y.
Thank a French English Thermoneum for Every Furnace

Possibly the lack of enthusiasm with which it was received disappointed him.

And again, in the following series of events we see the fundamental idea of standardized manufacturing reminering out of the contemplation of a standardized manufacturing reminering out of the contemplation of a standardized that, after he had come to Detroit and found work as a mechanic, he moved rapidly forward until he was carning enough to get himself a few of the things which were not exactly essential to keeping life in his body. So, we read:

He bought a watch. It had taken him only a few months to master his task in the dry-dock works so thoroughly that his wages were raised. Later they were raised again. Then he was getting five dollars a week, more than enough to pay his expenses, without night-work. He left the jeweler's shop, but he brought with him a watch, the first he had ever owned.

Immediately be took it to pieces. When its scattered parts lay on a table before him he looked at them and marveled. He had paid three dollars for the watch, and he could not figure out any reason why it should have cost so much. "It ran," he says. "It had some kind of a dark composition case, and it weighed a good deal, and it went along all right—never lost or gained more than a certain amount in any given day,

"But there wasn't anything about that watch that should have cost three dollars. Nothing but a lot of plain parts, made out of cleap metal. I could have made one like it for one dollar, or even less. But it cost me three. The only way I could figure it out was that there was a lot of waste somewhere."

Then he remembered the methods of production at the James Flower Company. He reasoned that probably the watch factory had turned out only a few hundred of that design, and then tried something else alarm elocks, perhaps. The parts had been made by the dozen, some of them had probably been filed

down by hand, to make them fit.

Then he gut the great idea. A factory—
a gigantic factory, running with the precision of a machine, turning out watches
by the thousands and tens of thousands—
watches all exactly alike, every part cut
by an exact die.

How he began thinking of inventing a self-propelling vehicle for private purposes is given us in the account of a fortuitous experience he had on the streets of Detroit. As had happened before with many inventors, this was a mere incident, one which would have been passed over by the average man without a reflection. But with Ford it was different. Miss Lane tells us how he was shopping in a down-town store, and came out with his arms full of bundles. She continues:

He came out of the store, just at the moment that Detroit's pride, a new steam-propelled fire-engine, came puffing around the corner. It was going at the rate of fifteen miles an hour, with impressive clatter and clang, pouring clouds of black smoke from the stack. Detroit's citizens crowded the sidewalks to view it as it went by. Henry Ford, gripping his bundles, stood on the curb and looked at it. Here

was his first chance to see a steam-engine built to run without a prepared road-bed and rails.

It was the original of one of those pictures we sometimes see now with a smile, nurmuring, "How quaint!" A huge round boiler, standing high in the back, supplied fully half of its bulk. Ford made a hasty calculation of the probable weight of water it carried in proportion to its power. The result appalled him. He thoughtfully watched the engine until it was out of sight. Then he resumed his way home. On the train he sat in deep thought, now and then figuring a little on the back of an old envelop.

"I couldn't get that steam-engine out of my mind," he says. "What an awful waste of power! The weight of the water in that boiler bothered me for weeks."

So it was that he began to think of using gasoline, and, after much toil, succeeded in building a satisfactory engine. Then came the problem of hooking it up to wheels. We are told that his thoughts ran along some such line as this:

Always before, carriages had been pulled. Naturally enough his first thought was to apply the power of the engine to the front wheels. Then how should he steer? What mechanism should be use, powerful enough to turn the hind wheels, against the pull of the engine, and flexible enough to respond quickly and make a sharp turn? Then there was the problem of the throttleand the gears. The machine must be able to go more slowly, or to pick up speed again, without shutting off the power. The driver must be able, when necessary, to throw off the power entirely, and to apply it quickly again, without stopping the engine.

Often Mrs. Ford came out said sat on a box, watching while he fitted parts together or tried different transmission devices. He had settled finally on a leather belt, passing over the fly-wheel and connecting with the rear axle. A pulley arrangement, controlled by a lever, tightened or loosened this belt, thus increasing or decreasing the speed of the automobile. That broad strip of leather, enclosed, running from the engine on the rear axle to the pulley under the front scat, was the parent of the planetary system of transmission.

Then comes the tale of the trial trip. It is a true bit of mechanical history, as picturesque as the maiden voyage of "Fulton's Folly" up the Hudson. We learn:

The machine was almost finished. A few more screws, a tightening of the leather belt, the placing of the steering-lever, and it would be complete. He had spent four years of hard work, and harder thought, on its building.

The engine was in place, the gears adjusted. He tightened the leather belt and tested the pulley again. Then he set the rear axle on blocks of wood, lifting the wheels from the ground and started the engine. The cough of the cylinder quickened into a staceato bark, the fly-wheel blurred with speed. Then Ford tightened the pulley, the broad leather belt took hold. The rear wheels spun.

She was running!

It remained only to test the machine in actual going on the ground. Ford went to work on the steering-gear. He

When you install a set of Bethlehem Five-Point Plugs your troubles end, expenses cease. Scientific investigation and progressive development have brought the Bethlehem Five-Point to the premier position which it now occupies.

Designed and manufactured only after the most thorough study of

the theory and practice of ignition, it is right on every count!—and yet it costs no more than ordinary plugs.

100 Years of Vital History The World's Greatest Story of the World's Most Critical Period

Nearly a century of vital history fills the interval between Napoleon's fall and the maturing of the Franco-Russo-English understanding. It was a century of national apheavals and international readjustments which had so important a hearing upon the alliance of the powers for the present war. A knowledge of the events of this period and the men who controlled them is indiscensable to the man or woman, boy or girl, selso would understand the attitudes and motives of the nations to-day. This great story of the world's evolution is completely, fascinatingly, authoritatively told in one, big, line, inexpensive volume.

A HISTORY of the MODERN WORLD

By Oscar Browning, M. A.

One of the world's greatest intermed authorities.

It describes the world's dominant figures of the last handred years and what they accomplished—Linguin, Biomarck, Edward VII, moved of others. It tells of our Civil War, the evolution of the German Empires, the barth of the French Republic, the beginning of the Triple Alliance which Italy repositated in rule; the Boer War, the Russes Inpanes War, and all the other againstant political and military events of this period it is a graphing story of a new world in the making. Get it and read it. History and Biography give the greatest education. greatest education.

New, inexpensive, one-volume edition. Fana pages, cloth hound, \$2.00; by mail, \$1.20.

FUNK & WAGNALLS COMPANY

had thought it all out before he had made all the parts. Now he must put them together, fit them into place, and test them.

At midnight he was still working. At one o'clock he had the front wheels blocked up and was testing the steering-lever. It needed some changes. At two o'clock they were finished. He started the engine again and it missed fire. Something was

wrong with the spark. At three o'clock he started the engine again, nailed a couple of old boards together for a seat and opened wide the shed-doors. The rain was falling in torrents and under foot the light snow had turned to thin slush on the frozen ground. It was very dark. He pushed the machine into the yard and hung a lantern over the dashboard for a headlight. Inside the shed, Mrs. Ford, in a voice shaking with excitement, begged him to wait until morning, but he did not listen. The engine and steering-gears were protected from the rain and no discomfort could have equaled for him the disappointment of another delay.

The time had come when he could prove his theories. He would not waste one minute of it. The engine was already running. He stept into the car, sat down, and slowly, carefully, tightened the pulley. Then, in the first Ford automobile, he rode away from the old shed. When he felt the machine moving under him he tightened his grasp on the steering-lever. Suddenly the light of the lantern showed him a dozen things he had never noticed in the yard before. The clothes-pole loomed menacingly before him, a pile of flower-pots seemed to grow out of all proportion to its fordinary size. The machine wobbled unsteadily, while he desperately struggled to drive it in a straight line. He turned it from the flower-pots, jerked it back in time to avoid running into the fence, and headed straight for the clothes-pole. It seemed to jump at him. At the last minute he thought of the pulley. He loosened the leather belt, the engine spun wildly, the ear stopt. Henry Ford got out, breathing hard, and pushed the machine around the clothes-pole.

"You see, I not only had to make the machine, but I had to get into it and learn how to steer it while it was running,' he says. It occurred to him that he would like a good wide space for the job. After he had rescued the machine from the clothes-pole he turned it toward the street. Chug-chugging away, he passed the house, drove over the gravel sidewalk, and turned down Edison Avenue. The scattered houses were dark and silent, every one

was asleep.

The little machine, rattling and coughing, proceeded through the thin slush in jerks and jumps, doing valiantly with its one cylinder. Perched on the rough board seat, Henry Ford battled with the steeringlover, while on the sidewalk Mrs. Ford, wrapt in her shawl, anxiously kept pace with them. It was not difficult to do, for the ear was not breaking any future speed limits. At the end of the first block Ford turned the car successfully, and rode down the side street, zigzagging widely from side to side in his effort to drive Fortunately, Detroit's straight ahead. streets are wide. When he had passed the second block he began to wonder how to turn and drive back. At the end of the third block he solved the difficulty. He stopt the ear, jumped out, lifted it around, and headed it for home. By this

time the engine was missing again, but it continued gallantly to jerk and push the light car forward until Ford had reached his own yard. Then he stopt it and pushed the machine into the shed.

Then he just realized that he was very hungry. He came into the kitchen, looked at the cold, greasy frying-pans, remembered that he was out of bread and thought of an all-night lunch-wagon that stood near substation A, where sometimes he bought a cup of coffee when he was working there. The automobile stood waiting in the shed; he told himself that he wanted to test the steering-gear anyway again. He went out, started the engine, elimbed in and chug-chugged away through the silent, deserted streets to the lunchwagon.

Coffee Jim, loating among his pans and mounds of Hamburger steak, was astonished to see the queer little machine jerking and coughing its way toward him. He remembered Ford, and while he sliced the onions and cut the bread for Ford's midnight luncheon they talked about the automobile. Afterward Coffee Jim examined it in detail and marveled. When Ford took him for a little ride in it he became enthusiastic. Soon it was part of Ford's routine to drive the little car to the lunch-wagon at midnight, have a cup of coffee and a hot sandwich, and a chat with Coffee Jim. They became friends.

It was, strangely enough, Coffee Jim who later put up the money to enable Ford to enter a car in the newly established automobile races. A special machine was built, and Coffee Jim paid the bills. Friendship had done what business and capitalism would not even attempt. The account continues:

It was another debt on Ford's shoulders, but he accepted it and immediately began to work on a racer. With the intention of startling sedate business men, he obeyed the injunction to "build her hig-the roof's the limit." The result was certainly startling. Four enormous cylinders gave that engine 80 horse-power. When it was finished, a friend named Cooper and Ford took it out one night for a trial. People started from their sleep for blocks about the Ford house. The noise of the engine could be heard miles. Flames flashed from the motor. In the massive framework was one seat. Cooper stood thunderstruck while Ford got in and grasped the tiller.

"Good Lord, how fast do you figure she'll do?" he asked. "Don't know." Ford replied. He put on the power, there was a mighty roar, a burst of flame, and Cooper stood alone on the eurb. Far down the street he saw the car thundering away. A few mimites later it came roaring back and stopt. Ford sat in it, white.

"How far did you go?" Cooper asked. Ford told him. "Do you mean to say she makes a speed like that?" Cooper ejaculated, aglast. "She'll make better than that. I didn't dare to give her full power," Ford replied. He elimbed out and stood beside Cooper, and the two looked at the ear in awe.

See here, I hope you don't think that I'll drive that thing in the races," Cooper. said after a time. "I wouldn't do it for a gold-mine. You'll have to do it."

"I should say not!" Ford retorted. "I won't take the responsibility of driving her

Prince Albert answers your smoke appetite's demand for quality

Smash square-in-the-eye all the tobacco notions you ever had in your life and blaze away on Prince Albert! And, smash all the coupon or premium notions you ever had, too, for Prince Albert hands you nothing but quality. No inducement other than quality has ever been offered men to smoke Prince Albert! National or state restrictions against coupons or premiums can in no way affect Prince Albert's sale!

You get such a whale of tobacco joy out of every cool, fragrant, tasteful, biteless pipe-load of P. A. it'll seem like shifting from the peanut gallery to the parquet!

And you'let P. A. make that say-so good quick as you can canter for a supply!

For, Prince Albert's middle name is "More-smoke-smiles" because it is quality tobacco! And, if you're out for high-top tobacco-joy, via quality, you'll certainly bump right up against the real article when you play this tip and prove out

the national joy smoke

No "ifs" about this line-of-talk! Because, Prince Albert has won-allthe-way ever since it hit the turnpike over seven years ago! Yes, sir; got to the jimmy pipe boys in the bushes, in the big and little towns, while today it's "P. A. for mine" in every civilized language all over the globe.

What's the answer? Prince Albert quality is backed by an exclusive patented process that removes bite and parch! Smoke it with your cut-out on; speed up your puffs like you were in a hurry! We tell you P. A. won't bite!

When we hand you such cheery news, line up on Prince Albert like you were carving-tender-turkey, for you'll cash in a lot of jummy pipe fun that'll make you want to stretch those smoke hours all out of kilter! P. A. does that thing day-in-day-out for men who are game to invest a small piece of change, because it has the quality!

Wherever you travel, Prince Albert is right there at the first place that sells tobacco. For the tappy red bay you pay a nichel; for the tidy red tip, a dime. P. A. is also seld in handsome pound and half-pound tin humidars - and - in that clover pound ergelal-gloss humidae with spunge-maistener top that heeps the tobacco in each perfect condition.

R. J. REYNOLDS TOBACCO COMPANY, Winston-Salem, N. C.

Distinction in Your Own Car

If you give man his choice, he will reject the commonplace and select the distinctive every time. It's in the blood.

human life, said long ago: "The communion of men upon earth abhors identity (similarity) more than nature does a vacuum. Nothing so shocks and repels the living soul as a row of exactly similar things, whether it consists of modern houses or of modern people, and nothing so delights and edifies as distinction."

And what more delightful possession can one have than a distinctively individual motor car—a car designed precisely to your personal taste, and embodying your own ideals of what a genuinely good car should be? You can make your wishes come true by ordering a Winton Six. Our artists are at your service, keen to create for your ownership an exceptional, distinctive, delightful private vehicle. at full speed to win every race that was ever run. Cooper, if that car ever gets really started, it will kill somebody sure."

Ford and Cooper regarded the juggernaut car for some time in meditative silence.

"Well, I guess you've built a real racer there, all right," Cooper said admiringly. "Yes, it looks as if I had," Ford answered.

"Yes, it looks as if I had," Ford answered.
"The question is what good is it? Is
there a man on earth who'd try to drive it?"

"Well, I've got some nerve myself, and I don't want to," Cooper admitted. He walked around the ear and then looked again at the engine. "How fast would the darn thing go, I wonder?" he said.

"Get in and try her," Ford suggested. Cooper climbed in, Ford eranked the engine, and again sleeping Detroit jumped from its bed. The ear leapt and shot down the avenue.

When it roared back again Cooper stopt it in the middle of the street.

"That settles it for me," he said.
"She must have made forty miles an hour, and she wasn't half running, at that.
I won't take her out on the track."

Suddenly Cooper had an idea,

"See here! I know a man—if there's a man on earth who would take that ear out, he's the one!" he said. "He isn't afraid of anything under the shining sun a bicycle-rider I raced against in Denver. Oldfield's his name—Barney Oldfield."

"Never heard of him," said Ford.
"But if you think he would drive this ear let's get hold of him. Where is he?"

"He ought to be in Salt Lake now," Cooper answered. "I'll wire him."

The message went to Oldfield that night. Couzens was told of the situation, and the three men waited anxiously for a telegram from Salt Lake. It came late the next day, asking some further questions about the ear and stating that Oldfield had never driven an automobile. Cooper wired again.

The track meeting was to be held the next month. Time was short. Oldfield, if he came, would have to learn every detail of handling the machine. Even with an experienced man, the danger of driving that car in the races was great. Cooper and Ford haunted the telegraph offices.

At last the final reply came. Oldfield would drive the car. He would arrive on the first of June, exactly one week before

the date of the race.

The day of the track meeting dawned. Ford and Cooper, tense with anxiety, went over the ear thoroughly and coached Oldfield for the last time. Couzens, hiding his nervousness under a bland, confident manner, gathered his group of business men and took them into the grand stand. The free-for-all was called. Half a dozen cars were entered. When they had found their places in the field, Barney Oldfield settled himself in his seat, firmly grasped the two-handed tiller which steered the mighty car, and remarked, "Well, this chariot may kill me, but they'll say afterward that I was going some when the car went over the bank."

Ford cranked the engine, and the race was on.

Oldfield, his long hair snapping in the wind, shot from the midst of the astounded field like a bullet. He did not dare look around; he merely clung to the tiller and gave that car all the power it had. At the end of the first half he was far in the lead and gaining fast.

The crowd, astounded, hysterical with excitement, saw him streak past the grand stand a quarter of a mile ahead of the nearest ear following. On the second lap he still gained. Grasping the tiller, never for a second relaxing that terrific speed, he spun around the course again, driving as if the field was at his beels.

He roared in at the finish, a full half mile ahead of the nearest car, in a threemile race. News of the feat went around the world, and in one day Ford was hailed as a mechanical genius.

From then on, the manufacturer Ford was a made man, but not so the philan-thropist Ford. But that too was not long in forthcoming, for like the good business man who knows there are larger profits if the equipment be up to date, Henry Ford knew that good men, working under good conditions, were essential to true success. The fact was:

He had been studying relief - plans, methods of factory management in Germany, welfare-work of all kinds. When he had finished his consideration of those reports, he threw overboard all the plans other people had made and announced his own.

"Every man who works for me is going to get enough for a comfortable living," he said. "If an able-bodied man can't earn that, he's either lazy or ignorant. If he's lazy, he's sick. We'll have a hospital. If he's ignorant, he wants to learn. We'll have a school. Meantime, figure out in the accounting bureau a scale of profit-sharing that will make every man's earnings at least five dollars a day. The man that gets the smallest wages gets the biggest share of the profits. He needs it most."

On January 12, 1914, Ford more than satisfied the expectant manufacturers of the world. He launched into the industrial world a most startling bombshell. "Five dollars a day for every workman in the Ford factory!"

"He's crazy!" other manufacturers said, aghast. "Why, those dirty, ignorant foreigners don't care half that! You can't run a business that way!"

"That man Ford will upset the whole industrial situation. What is he trying to do, anyhow?" they demanded when every Detroit factory workman grew restless.

The news spread rapidly. Everywhere workers dropt their tools and hurried to the Ford factory. Five dollars a day!

When Ford reached the factory in the morning of the second day after his aunouncement, he found Woodward Avenue erowded with men waiting to get a job in the shops. An hour later the crowds had jammed into a mob, which massed outside the buildings and spread far into adjoining streets, pushing, struggling, fighting to get closer to the door.

Six weeks after the plan went into effect in his factory a comparison was made between the production for January, 1914, and January, 1913. In 1913, with 16,000 men working on the actual production of cars for ten hours a day, 16,000 cars were made and shipped. Under the new plan 15,800 men working eight hours a day made and shipped 26,000 cars.

This was surely a triumph equal to winning that first motor race. And yet it seems to have been even nearer the heart of the builder, for it vindicated his personal philosophy. As he phrased it:

"When I saw thousands of men in

STANDARD DECTROSARY

Detroit alone fighting like wild animals for a chance at a decent living-wage it brought home to me the tremendous economic waste in our system of doing business," Ford said. "Every man in those crowds must go back to a job-if he found one at all—that did not give him a chance to do his best work because it did not pay him enough to keep him healthy and happy.

"I made up my mind to put my project through, to prove to the men who are running big industries that my plan pays. I wanted employers to see that when every man has all the money he needs for comfort and happiness it will be better for everybody. I wanted to prove that the policy of trying to get everything good for yourself hurts you in the end."

He paused and smiled his slow, whimsical

"Well, I guess I proved it," he said.

PICTURES THAT CONVERTED BRYAN

THIS is the tale of how four pictures converted William Jennings Bryan to three of his most widely known principles. It was not through any series of tracts, nor any endless array of statistics, nor the colloquies of a bevy of speakers that Mr. Bryan, if we are to credit the St. Louis Post Dispatch, was converted to woman suffrage, for instance. It was the work of the Teutonic painter, Bodenhausen. That artist's celebrated "Madonna" did what years of speaking, writing, and logicbandying had failed to do. It made Mr. Bryan a suffragist. We read:

Mr. Bryan began to champion the cause of woman suffrage after gazing upon Bodenhausen's "Madonna." He turned against liquor when he saw Hovenden's "Breaking Home Ties," a picture with a strong appeal to the heart; and the idea that world-peace and universal brotherhood should be the next step in a rising civilization struck him foreibly, he declared, when he beheld the paintings, "Apotheosis of War," and the familiar "Christ Before Pilate."

"Bodenhausen's 'Madonna' imprest me more than any other one thing as the strongest argument for woman suffrage," Mr. Bryan explained, "for it embodies the spirit of mother-love. When my wife carried my first child down-stairs to me, thirtyone years ago, in our Lincoln home, I was so struck by the expression of love in her eyes that I there and then became convinced that woman was deserving of any trust that man might impose in her. Some years later I stood awestruck before Bodenhausen's 'Madonna' in a Kansas City artgallery, and I saw in it the expression of mother-love. It took me back home to the time when Ruth was born, and I saw again the divine expression of mother-love that wreathed the face of my wife when she exeried Ruth down to me.

"The mother argument is the strongest argument in favor of woman suffrage," Mr. Bryan continued, "I love my children as much, I think, as a father can; but I am not in the same class with my wife in this respect. I do not put any father in the same class with the mother in love for the child. If you would know why the mother's love for a child is the sweetest, tenderest, most lasting thing in the world, you will find the explanation in the Bible:

Not for This Kind of Car

If a car-builder is insistent on having his car sell for a certain fixed price, he must, of course, make his selection of parts on a price basis.

Figuratively speaking, it becomes an auction where the lowest bidder, irrespective of quality, gets the business.

And that makes Timken-Detroit Axles out of the question-

First-Because it costs money to put Timken-Detroit engineering, absolutely reliable materials, and uniform, buished workmanship into motor-car axles.

And, therefore, Timken-Detroit could not hope to come out lowest in a bidding contest.

Second—Because we will not enter such a contest under any circumstances. The character of the cars that are equipped with Timken-Detroit Axles is good evidence of Timken-Detroit quality-just as their use of Timken-Detroit Axles is evidence of the car's high standard of quality. We cannot afford to jeopardize our own reputation or that of our customers for protecting the safety of the car owner.

Building a good axle first and pricing it afterward, is not, however, an expensive policy. It results in more value for dollars expended. It produces axles at the lowest cost consistent with the highest quality. It saves repair expense for car owners.

Nine years of exclusive devotion to good axle building has proven that that is what the most prominent and progressive ear-builders are after.

As we look back over the years and recall the names of cars that have vanished, and of others that have won the confidence of the great public, there is one thing of which we are rather proud-

Timken-Detroit Axles have been subject to continuous improvement. They have never claimed perfection-but they've always been the very hest we could build.

And that is why they have always traveled in mighty good company.

FUNK & WAGNALLS COMPANY, 153-350 Fourth Avenue, New York

Where your treasures are, there will your heart be also.'

"The child is the weasure of the mother. She invests her life in her child. When the mother of the Gracci was asked, Where are your jewels?" she pointed to her sons. The mother's life trembles in the balance at the child's birth, and for years it is the object of her constant care. She expends upon it her nervous force and energy; she endows it with the wealth of her love. She dreams of what it is to do and be, and if a mother's dreams only eame true, what a different world this world would be!

"The most pathetic struggle this world knows is not the struggle between armed men upon the battle-fields; it is the struggle of a mother to save her child when wicked men set traps for it and lay snares for it. And as long as the ballot is given to those who conspire to rob the home of a child, it is not fair to tie a mother's hands while she is trying to protect her home and save her child.

"If there is such a thing as justice, surely a mother has a true claim to a voice in shaping the environment that may determine whether her child will realize her hopes or bring her gray hairs in sorrow to the grave.

"Because God has planted in every human heart a sense of justice and because the mother argument makes an irresistible appeal to this universal sense, it will finally batter down all opposition and open woman's pathway to the polls."

Hovenden's painting, "Breaking Home Ties," with its hopeful youth bidding farewell to his mother, while the family stand about the rural living-chamber in characteristic attitudes of pride and parting, is well known to all art-lovers. Few paintings convey such a strong picture of aspirant youth, full of illusions and potentialities. Of this we are told:

The strong appeal to the heart imprest Mr. Bryan more than any other thing with the dangers with which a young man's path in life is beset, particularly the saloon, he declared. He first saw this picture on exhibition at the Chicago World's Fair, where it was acclaimed one of the most popular paintings on exhibition. Bryan asserted that one need not gaze upon this picture for long until it becomes evident that the mother depicted here is sending her heart and hope out into the world with the boy, with the admonition to keep to the way of righteousness, and Mr. Bryan feels that she also knows the saloon will be her boy's stumbling-block.

With the saloon out of the way, Mr. Bryan pointed out, the burden of this boy's absence would be reduced by more than half for the mother, and the realization of her hopes for the boy would be more likely than if it were there to retard his progress in life.

"The great load of misgiving in a mother's heart when her boy leaves home to make his own way in the world," Mr. Bryan said, "would give way to joyous hope were the saloon removed from the path that he must tread - if he could go into the world with no danger of temptation from this menace to mind, morals, and life."

Mr. Bryan is further reported to have said that his first work on the peace-plan

This \$198,470 Check

Wilson & Company's First Annual Sprinkler Saving

Mr. Thos. E. Wilson, President of Wilson & Company, the great packers, wanted the best possible safeguard against having their \$150,000,000 a year business interrupted and disrupted by a fire.

He found that Grinnell Automatic Sprinklers would reduce the average insurance rates on his packing plants 85%.

His shrewd business judgment told him that the insurance companies could not afford to make such a sweeping reduction unless the fire-danger in those plants was going to be practically wiped out by the Grinnell installation.

Forthwith, he contracted to have Grinnell Automatic Sprinklers installed in all the large plants of Wilson & Company.

As the Grinnell Systems were completed, the new low insurance rates went immediately into effect.

In the Kansas City, Oklahoma City and Chicago plants the Grinnell Systems have been installed a year.

The above check for \$198,470 shows the first year's saving in insurance premiums to Wilson & Company on these three plants alone, which sum was also their first payment to us.

These savings will come annually. In less than three years the insurance companies will thus repay to Wilson & Company what it cost them to protect their business against fire.

When the other plants are equipped, Wilson & Company's annual insurance savings will be proportionately increased, and in a few years an annual insurance saving greatly in excess of \$200,000 will be entered on Wilson & Company's books as "all profit."

Many concerns make the same ratio of saving as Wilson & Company even though their insurance premiums are as low as \$500 a year and, what is more important, secure the same measure of protection.

If you have the slightest doubt about your being able to make a substantial saving, write to us.

In case you cannot spare working-capital, we can give you the names of reputable concerns who make a business of accepting insurance savings as partial payments for a sprinkler system. This plan not only safeguards your working-capital from the calamity of fire, but also, practically with no investment, adds a Grinnell Sprinkler System to your real estate assets.

Your big American business man is in love with his business. He believes in keeping that business going, not chancing it in a fire.

Why not take a leaf from the books of the wisest business concerns in America, and get in touch with us to determine quickly the cost of protecting your going business? Address the General Fire Extinguisher Company, 274 West Exchange Street, Providence, R. I.

was started about a year after seeing the pointing, "Apotheosis of War," with its hideous mound of skulls rising from an arid plain and watched over by a host of lonely vultures. It is the soul of death, decay, and rain. Mr. Bryan, who says that he had been giving what he could, previously, to further the cause of international peace, found in this picture a stimulus far beyond any other in strength. His feeling against war, his belief in its futility and waste, were intensified to the last degree by this inspired painting. Out of the impression he gained then the new peace-plan was born.

He first projected the plan editorially, in 1905, and it was indersed a year later at a peace-congress in London. From that time on he presented it at every opportunity. He proposed it to President Taft when Mr. Taft was preparing treaties with Great Britain and France, and the President used part of the plan, Mr. Bryan asserted. The treaties were rejected, however, but not because of the peace provision, Mr. Bryan explained, but because of another provision, which was interpreted as interfering with the powers of the Senate.

The parrative adds:

Mr. Bryan stated that when President Wilson called him to Trenton to proffer him the office of Secretary of State, he told the President-select that the plan, with the President's indersement, would be accepted by the world. President Wilson indersed the plan, Mr. Bryan pointed out, and heartily supported the negotiations which Mr. Bryan later conducted with other nations through their representatives, in discussions at the State Department, which began in April, 1913, and resulted, two years later, in peace-treaties with thirty nations.

Mr. Bryan regards his peace-plan as his greatest contribution to the world, and for that reason, he declared, he had the artist who made his picture for the State Department pose him in the attitude of offering the planto representatives of the foreign nations.

In his tour of the world Mr. Bryan saw the painting, "Apotheosis of War," in a Moseow art-gallery, and when he became Secretary of State had our Ambassador at Petrograd send him a copy.

"It is all that war comes to—a pile of skulls," Mr. Bryan declared. "Destruction, death, and decay truly are the apotheous of war."

Another powerful argument against war, but particularly for peace and civilization, is depicted by the subtle brush of the painter of "Christ Before Pilate," Mr. Bryan asserted. This picture, he explained, portrays the mob spirit, which is war on a smaller scale. Here he sees men in belligerent attitudes, striking at the Redeemer of Mankind—striking at the law of love; at the very foundations of civilization.

"No intelligent, thoughtful being can gaze upon this picture without emotion, or without detesting strife of any kind," Mr. Bryan declared. "The example of Christ, who stands before the mob in the presence of a representative of the Roman law of force, calm, placid, and forbearing, can not but have a salutary effect upon the world, and mankind will surely come to emulate the Prince of Peace when the world awakens to the folly and sin of anger and strife."

Notwithstanding the present great war, Mr. Bryan is confident that world-peace

Wilmo Manifold

Increases Gasoline Mileage 42% to 54% by Actual Official A.A.A. Tests

Wilmo Manifold on an Overland. Note the complete accessibility to all parts. Once attached the Wilmo Manifold becomes a permanent part of the engine itself—simplifying it to a remarkable degree.

Wilmo Sizes and Prices:

Ford-T	\$ 7.50
Maxwell-25	\$,50
Overland-59-69-79	10.00
Studebaker-17-4	10.00
Saxon-6	10.00
Overland—83	10.00
Overland—80	12.50
Oakland-6-32	12,50
Buick-6-D44-45	15.00
Studebaker-17-6	15.00

The above Wilmo Manifolds are the present stock sizes now ready for delivery. Manifolds for other makes of cars will be added from time to time.

Poor mileage, bad lubrication and carbon are the three great weaknesses in the automobile industry today.

The fault is not at the door of the automobile manufacturer or the maker of the carburetor. Both have done their work well.

The trouble is poor gas. And for this the oil man is not to blame. It is an economic condition imposed by the imperative needs of conserving the supply of gasoline.

Every engineer knows that heat will vaporize gas. The great problem has been how best to apply heat so as to secure the full driving power from every drop of gasoline,

The solution to this problem is the Wilmo Manifold, made by the Gillette Motors Company, Mishawaka, Indiana. In the Wilmo Manifold the heat of the exhaust gas is fully utilized to superheat and completely vaporize the incoming mixture.

Result — every drop of gasoline of whatever grade fully converted into power — no waste — no unexploded gasoline to leave an engine-destroying residue. And —

—gasoline mileage increased 42% to 54% by actual official tests of the American Automobile Association — also an engine virtually free from troubles due to carbon!

The diagram below shows the scientific principle and great simplicity of it all.

The Wilmo Manifold is attached to the engine in about thirty minutes with an ordinary monkey-wrench. No holes to bore.

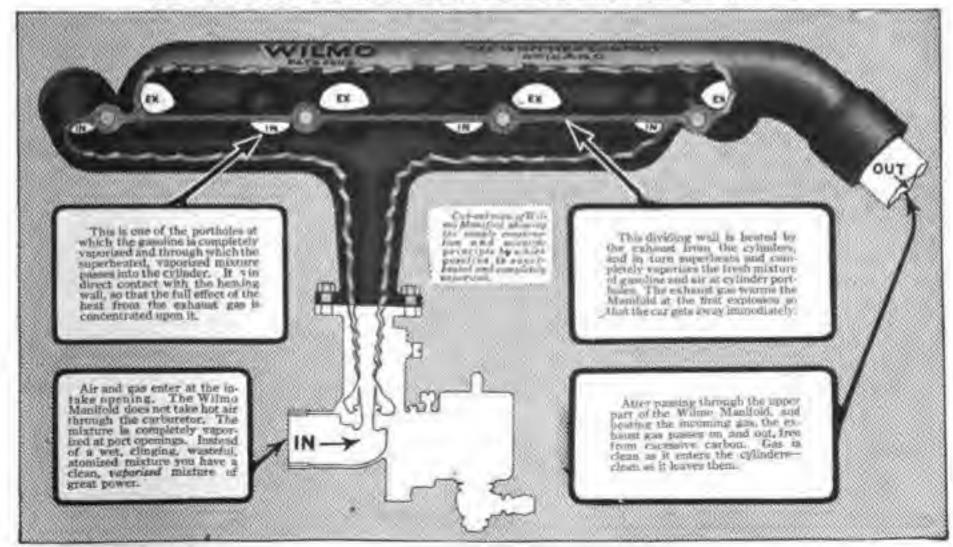

Backed by the absolute money-back guarantee of a reliable company composed of responsible business men.

The Wilmo Manifold is sold by auto supply dealers and garages everywhere. Write for complete information, official tests, etc. Give name and address of your dealer.

Dealers and Garage Men -Write for complete sales data.

The Whittier Company
First National Bank Building, Chicago, Illinois

We also have a device which applies to any engine, whether "L" or "T" head type. Wonderfully efficient as an economizer of gasoline and a complete eliminator of carbon.

THIS FIRE LASTED JUST TWO AND ONE HALF MINUTES

There was no panic; no wild stampede to a fireescape or stairway.

There were no shrieks or groans. No wives or mothers waiting, pale with horror, while charred bodies were carried from the ruins.

This employer was ready for fire. Ready with Pyrene. Pyrene on pillars. Pyrene against walls. Pyrene at stairway landings. Pyrene in elevators. Pyrene in the dynamo room. Pyrene in the offices.

When fire came several men grabbed Pyrenes. The concentrated extinguishing liquid smothered the fire in no time. Pyrene kills fire—quick.

Any manufacturer who hasn't his factory equipped with Pyrene plays a monstrous game of chance.

FUNK & WAGNALLS COMPANY :: :: 354 Fourth Avenue, New York

ultimately will prevail. He is not discouraged because of the European situation, but says he is more hopeful than ever that civilization will bring the world to its senses and a grim realization of the folly of torce.

LIFE DURING THE WAR IN GERMAN CAPITALS

WE are so accustomed to identify Prussia with Germany, considering Berlin as the capital of the German Empire, which is only politically true, that we generally overlook the fact that Bavaria and Saxony are still sovereign kingdoms, and Munich and Leipzig, and even the East-Prussian towns of Hanover, Breslau, and Königsberg, play important parts in the municipal and political life of Germany. We mention just these five places because Fritz von Ostini, Dr. Ludwig Stettenheim, Hugo Wislizeny, Fritz Ernst, and Dr. Fritz Hellermann, in Deutsche Kraft (Berlin, Leipzig, and Vienna) devote highly interesting monographs to the description of life during the war in the above cities, in the order mentioned. These bird's-eye views, presented by competent eye-witnesses, offer us the opportunity to verify and complete our ideas about the true situation in the gigantic German "fortress." East and west, north and south, are represented, and such cities were selected as had peculiar problems of their own to solve. Thus this German group truly represents the quintessence of German citylife from the July days of 1914 to the present hour. We are given this picture of Munich:

"The phlegm of the inhabitants of the Bavarian capital is only a superficial one. When the alarm-bell rang, the people became vehemently excited. It was not, however, the excitement of fear, but of revolt at the thought of the criminal attack on the part of our foes. Munich is particularly blessed with Russians and Servians frequenting our universities, colleges, and art schools. Under these circumstances, it was quite natural that the spy fever, which suddenly broke out throughout the German Fatherland, should have reached a particularly virulent phase in the beautiful town on the Isar.

The newspapers were filled with wild reports of all sorts of explosions, assassinations, and what not. Every Russian girl student, every monk, was suspected of earrying concealed weapons. Soon the police, by expelling or arresting all Slavs living within our walls, relieved us of our anxiety. With the complete elimination of the -ski's and -vitch's the old antebellum phlegm returned, and this phlegmatic physiognomy has remained so far the facial expression of Munich throughout the war.

We are situated so far from the trenches that the echo of the Krupps, Skodas, and Maxims only rarely disturb our exterior calmness. But that does not mean that mourning-veils and wounded soldiers are absent from the life in our streets; we feel this black streak in every fiber of our being. In the first week we looked at these poor

victims with a sort of shy, embarrassed curiosity, and we often offered them alms, not knowing in our awkwardness how to express our sympathy.

And here Herr von Ostini tells us of a touching personal experience:

I could not help getting angry at these humiliating manifestations of brotherly love. When I, however, passed one day through St. Mary's Place with my youngest wounded son and a little boy stealthily approached him, offering him his big pear, I began to understand these acts of clumsy philanthropy.

One of the most beautiful wings of the royal palace, the Hall of the Nibelungs, was, almost immediately after the outbreak of the war, transformed into a Red Cross sewing circle where, under the direction of the Queen and her daughters, ladies of the aristocracy, and the richest burghers work as hard as professional seamstresses.

Munich took a particularly meritorious part in the restoration of eastern Prussia, which had been so cruelly devastated by the Czar's hordes. Our earpenters worked day and night to furnish those poor people with complete outfits for their reconstructed homes. We had, further, to take care of our artists' colony, totaling about five thousand souls. Their incomes were almost suddenly cut to a minimum. We were anxious as far as possible to avoid humiliation and pauperization. Our municipality offered the walls and façades of almost all of our public buildings to our artists' brushes and chisels. Well, we learned at this occasion a bitter lesson: the number of real artistis, able to do the work competently, proved to be insignifi-cantly small. The rejected "artists" inundated the market with "war-pictures" painted in Munich and absolutely without any artistic or historical value.

Let us be frank: up to this hour the great times through which we pass have not yet found their adequate artistic expression. The events rather paralyze

creative genius.

The theaters continued their activities, often with a very abundant program. The attendance, of course, is small. Wounded soldiers and officers fill the pits. The civilians are not in a very receptive mood just now.

A similar situation prevails in the restaurants. One has to go there because one must eat and drink. But the old animation has departed. Gradually our dandies and elegant ladies have disappeared from public places. We have become very sober, indeed. We learned quickly that there were only two fashions admissible in war-times such as ours: khaki and the simplest possible dark-gray suit.

There are very few automobiles and cabs to be seen on our thoroughfares. On the other hand, the street-cars are crowded; the soldiers to whom the franchise was extended abused their privilege to such an extent that it had partly to be taken away

from them.

Only when great victories are announced can a stir be noticed among the population. And now even triumphant bulletins leave us dull and quiet—not indifferent, however. There is not a house in the city where at least one dead is not mourned, one wounded has not to be taken care of. We keep our flags inside. Assemblages of more than ordinary size are only seen before the bulletin-boards

"Standard" Plumbing Fixtures Make the Difference—In Appearance and Efficiency

EVERY factory or other institution with plumbing conditions like those shown below is losing money because of the decreased human efficiency caused by such a state of affairs. Every concern with the clean, wholesome conditions created by a "Standard" installation like the one shown above is adding to its profits—to say nothing of the satisfaction in having such sanitary surroundings in a place where many people are employed. How about your plumbing problems? Are your employes better for themselves—and better for you—as a result of modern, sani-

If not, you need our book on "Factory Sanitation"— with its helpful advice and illustrations. It is an able treatise, by men who know, and is sent free on request.

Then we have service men in most of the manufacturing centers who will be glad to discuss the question of good plumbing with you.

Write for book—call for a service man—and see "Standard" fixtures at any showroom listed herewith.

"The Ambitious Woman in Business

ness, whether you work in an other or factory, whether at a desk, behind a counter, if at a ma-chine, you need the advice and information in this book. Eleman Gilbert, the author, gives you, from a woman's view mount, the practical knowledge that long vagerience and deep study at home-so have given her -knowledge that will help you to do better work and earn more money.

Some of the Things This Book Tells You

live to fit yourself better for your position; How to increase your earning capacity; How to secure a raise; How and why to learn more about your work: What employers pay for different kinds of work; Should business women marry? What habits are profitable? What is the opportunity in the office field? How stenography leads to success; How women can succeed in Advertising; How to win as a Sale-swoman; How to rise in a retail or department store; How to secure and fill elecutive positions; How to manage finances.

These and many other subjects are treated in a simple, practical way that makes them of immense value to every woman who wants to command a better position and a larger salary. Contains also much that it of great interest to every employer of women—information and plans (or developing a more by all and efficient staff.

Cloth bound, 403 pp. Illustrated with pholographs and charts. Price \$1.50; by mail \$1.62.

FUNK & WAGNALLS COMPANY, :: 354-360 Fourth Avenue, New York

of the newspapers, in particular of the Münchener Neurste Nachrichten. memorable evening on which we waited for Italy's final decision will not so soon leave our memories. But our Italian guests, who had almost monopolized the fruit and vegetable trade with us, have not been importuned. However, we will not forget the treachery—we southerners who loved Italy so dearly and had so many and intimate ties with that beautiful country.

There are only a few miles from Munich to Leipzig, the center of the German booktrade, the seat of the famous regular worldfairs. But the atmospheres are quite different; Richmond and Philadelphia might, in our terms, best express the psychological distance. Dr. Stettenheim, in his prefatory remarks, can not help reminding the reader of the great centennial celebration, on October 16, 1913, of the Battle of Leipzig, attended by representatives of the Czar and his army who came to participate in the dedication of the Russian Memorial Church erected on the historic battle-field in memory of the 24,000 Russians who found there their death fighting against the common enemy, Napoleon Bonaparte. We are told:

Six months after the centennial the Russians began their mobilization against Germany. The news of the assassination of Archduke Francis Ferdinand struck our city particularly hard; it was the deathknell of our great Exhibition of Books and Imprints. Our, the German barbarians', first care was to protect the exhibitions of England, France, and Russia, three of our most splendid sections. In spite of the war, we inaugurated May 1, 1915, our Book and Graphic Museum; and, in the course of time, we added thereto, as natural sequels to the exhibition, a photographie museum, a German school museum, and a German Museum of Commerce.

Neither did our university arrest its activities, altho of its 4,515 students in 1914-15, 2,575 had followed the call of the Fatherland. The names of the fallen students are gathered in a book, and when the war is over they will be engraved upon a great tablet of honor. The professors of the university contributed their share to the enlightenment of the public on the causes and meaning of the war, and none of us will ever forget the addresses of the late great historian, Karl Lamprecht, and our famous philosopher, Wilhelm Wundt,

From the halls of science to those of art is a short step. Let us then first consider the situation of our stage. We originally intended to merge our three large theaters, but for social and financial reasons finally decided to continue all three of them separately. The directors and actors renounced voluntarily a considerable part of their salaries and royalties.

Deeper yet were the reasons for the maintenance of our famous Gewandhausconzerte. We believed it was our duty, in these times of excitement and sorrow, to offer the public the elevating and soothing influence of music. For the same motives, the spiritual concerts were continued in St. Thomas Church.

April I, 1915, at the first birth-centenary of Prince Bismarck, we inaugurated

Krith's Magazineon Newstands Henry, 13.10 From All Eight Books and KETTE'S a View, 16.00 KEITH'S, 984 McKnight Bidg., Minosopolis, Mino. - a splendid monument in honor of the great statesman. Our book-trade has, of course, suffered more than the rest-no sale of scientific and technical works. Fiction, however, was in great demand, and, of course, war-literature flourished. We have started a library to embrace all notable books and pamphlets on the war published in the various countries, Easter and autumn fairs were held as if there had been no world-war. We continued with the construction of our great railroad terminal.

Thus we see that Leipzig had been even less affected by the events than Munich, Let us now have a glance at the city from which William II., frightened by the Russian invasion, called the present idol of Germany, Field-Marshal von Hindenburg. That city, Hanover, is one of the great military centers of Prussia. When the Hanoverian troops under their commander, General von Emmieh and General, now Field-Marshal, von Billow, left the town, in the early August days of 1914 to invade Belgium, the streets and marketplaces offered an image of sadness and desertion. It was here, in a now famous coffee-house, that pensioned -off Hindenburg, together with his present chief. aide, Ludendorff, discust and criticized the blunders of the Grosser Generalstab and its head, Count von Moltke. We read of the city:

Hanover, together with its neighboring Linden, an industrial bechive, counts about 400,000 inhabitants. With the very outbreak of the war, everything suddenly stopt in the city proper; the houses in the way of construction, shops and offices, were deserted, and it was not before our first victories on both fronts that gradually industrial life reassumed its former aspect. We did, of course, our duty in alleviating misery and taking care of our wounded heroes. We have suffered finaneially, and are suffering yet, but we are keeping our heads above water.

Our famous technical and veterinary institutes and, which struck us harder yet, the upper high schools, were emptied. The theaters, which at the beginning of the war closed altogether, were the greatest sufferers. The same is true of our large artists' colony, in whose behalf we had to organize charity concerts and charity tombolas.

It will be worth our while to follow Herr Fritz Ernst to the east of Germany, to the capital of Silesia, Breslau, of which he says:

We had a hard awakening when, simulaneously with the departure of our son and brothers for the front, the rumor spread that Russian emissaries poisoned our river Oder and some of our wells and fountains. We suspected a spy in every stranger, and not even intimate friends were quite free from humiliating suspicion. After a few days, however, we recovered from our hysterical nervousness.

Our city being a fortress, the state of siege was immediately proclaimed. Every morning thousands of workingmen due trench after trench around the formerly so peaceful town, which had soon been crowded by the forced immigration of the

inhabitants of the neighboring villages and boroughs. Wild rumors of automobiles filled with gold, ranging through the streets in the direction of the Russian frontier, filled the air.

Gradually, all Silesia was covered with first-class forts and fortresses to protect us from the fate of East Prussia, which has been so barbarously devastated by the Russian hordes. After the retreat from Tarnowka we prepared ourselves seriously for a siege. The post-offices and telephone-booths were suddenly closed, in the banks metal and valuables were ready for transportation into the interior of Germany, When we saw in our streets the figures of the Emperor and of Hindenburg we breathed freer.

The danger was over, but only for the time being. More than once, during the first months of the war, the specter of a siege appeared before our eyes, above all, immediately after the taking of Peremysl by the Russians, which brought them so dangerously near to Krakow and to

Silesia's frontiers. It was not before April of 1915 that Hindenburg felt safe in commanding the refilling of the trenches.

Altho we had our share of the general misery, we kept a stiff upper lip, and, to quote one instance only, almost from the very start (September, 1914) our four theaters decided to continue their performances as regularly as possible. But, to our shame be it confest, those of our dramatic stages which produced the classical plays of our great dramatists remained empty while the houses giving grotesque so-called "war-scenes" were packed.

Here our author reproduces textually a highly characteristic argument of a Breslau bourgeois: "Excuse me, sir—in times of peace, well, I do not care. I go once in a while to a serious play. But now, during this horrible war! I see the whole day nothing but mourning and misery. I go to the theater in the evening to forget for a few hours all these seenes and want to have a hearty laugh."

Mr. Ernst, at the conclusion of his essay, treats himself to a whack at the censor who gagged the press of the town in a very cruel fashion. "To retain all the Do Not's our editors have to have a record memory."

From Dr. Hellermann we gather a sheaf of details about the general feeling at Königsberg, the famous town of Kant, which was so near the Russian border, and felt the first fears of invasion. The informant remarks:

I can say nothing about the military secrets of the fortress Königsberg. But I can reveal this, that the antiquated forts were quickly replaced by modern structures. Of course, the military authorities became automatically the lords of our town. All those who had no citizen rights were expelled and no new immigration tolerated. Thus our population gradually dwindled down. We are practically cut off from the world.

Every evening all of our restaurants and coffee-houses (i.r., bakeries and lunchrooms) are closed at eleven o'clock, saloons at six. Therefore, there is, of course, no night-life. Our university—only a handful of professors and students are left—has been transformed into a military hospital:

and the same fate befell our city theater, our stock exchange, and most of our public balls. Operettas and cinemas continue, however, to be crowded to the utmost. Concerts of light music are also well frequented. The Goethe Society does its utmost to keep up some appearance at least of literary life.

It goes without saying that our Russian transit commerce has suddenly come to a complete standstill. The Russian invasion of eastern Prussia added to our difficulties. No other city felt the effect of the war so directly as we. We smelled, so to say, the odor of the burning and devastated cities of Eydtkuhnen, Gumbinnen, Stallupöhen, Goldap, Lyck, and Insterburg; for weeks and weeks these were like cities of the dead.

We heard the sounds of the guns when our troops victoriously repelled a Russian attack east of the fortified Deime line. But our worst war-experience came when the hundreds of thousands of refugees from the nearest towns placed themselves under the protection of the walls of our fortress. We could not keep them with us; no room, no food, and, besides, the rules of a fortress in time of war are very strict. Thus, these poor men, women, and children, after receiving some "first aid," had to take up once again their wandering staffs.

In multiplying the experiences and incidents above detailed by the thousand, we are able to visualize the situation which reigns throughout Germany—it is the state of siege by gradation.

His Reason.—A bright-eyed little boy in a sailor-suit saluted the occupants of a passing motor-car so quaintly that they stopt to give him sixpence.

"You're very polite, little fellow," the lady motorist said. "Do you salute all the strangers who pass in the same way?"

"No, no, ma'am, only motorists," the boy stammered, fingering his sixpence nervously. "Father says I've to be polite to them, because motor-cars bring him trade."

The lady seemed disappointed.

"What is your father's trade, my little man? Does he repair motor-cars?"

"No, ma'am; he's an undertaker," was the little fellow's response,—Tit-Bits,

WARNING!

BEWARE OF SUBSCRIPTION SWINDLERS!

Swindlers are at work throughout the country soliciting subscriptions for popular periodicals. We urge that no money be paid to strangers even the they exhibit printed matter apparently authorizing them to represent us, and especially when they offer cut rates or a bonus. THE LITERARY DIGEST mailing list showing dates of expiration of subscriptions is never given out to any one for collection of renewals. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspeet that the members of your community are being swindled, notify your chief of police or sheriff, and the publishers, and arrange another interview with the agent at which you can take such action jointly as may seem proper.

> Funk & Wagnalls Company, 354-360 Fourth Avenue, New York City.

The Man on the Dock

DOWN on a dock at New York, where ships come from afar to discharge their cargoes of crude rubber, is a man with a strange occupation.

He goes from case to bale marking the

rubber.

His wonderful skill rejects or accepts the rubber according to its fitness, and the best of it goes to 47 factories of the United States Rubber Company, the largest rubber manufacturer in the world.

The man on the dock is the outpost of a scientific organization, a magnificent body of 260 chemists, engineers and other technically trained men, who, with 841 inspectors, stand guard over the integrity of the rubber goods made by the United States Rubber Company.

When the rubber moves from dock to factory it meets the advance guard of these men. They sample and test it by the most exacting methods

known to the chemistry and physics of rubber. They divide it into classes according to the varying characteristics of its parts. They blend and treat each huge class to make it uniform.

They select and mix these different classes of rubber to get just the combination of desired properties.

This is because each kind of goods made—tires, shoes, garden

hose—demands its own peculiar group of specialized characteristics.

As these various products move through the factory, they pass at every step under the keen eyes of inspectors, alert for flaws and faults.

But not yet do they reach the selling force. The finished factory products are tested repeatedly to see that they conform to the quality standard set for strength, elasticity, softness, resistance to wear, and the effect of heat and light. They are run on special machines that in a few hours duplicate the wear and tear of months of use; and finally pass the last ordeal of severe actual service tests.

The consummation of all this skill and care is found in every product you buy under the United States Rubber Company's trade-marks.

From the forest tree to the purchaser, this scientific control shines out in all our enormous

production—all styles of rubber footwear; canvas rubber-soled shoes; weatherproof clothing; tires for automobiles, motor trucks and all other vehicles; druggists' rubber goods, insulated wire; soles and heels; belting, hose, packing, mechanical and moulded rubber goods of every description.

United States Rubber Company

Prejudice

The Duke of York Removed the cork And tilted up the flagon.

The label read: Treuedeutscherrheinerweinimmünchengemachte, So now he's on the wagon.

-New York Sun.

Fixing the Blame. - A glue-factory stands near a certain railway. Its charms are not for the nose, and therefore a lady often carried with her a bottle of lavender salts. One morning an old farmer took the seat beside her. As the train neared the factory, the lady opened her bottle of salts.

Soon the whole car was filled with the horrible odor. The farmer put up with it as long as he could, then shouted, " Madam, would you mind puttin' the cork in that 'ere bottle? "-New York Tribune,

Fooled 'Em. " It is remarkable," said Mr. Gruntler, " how mean some people are. I had with me on a fishing trip two friends who evidently were familiar with my reputation as an angler. Before starting, one of them made the following suggestion: We will agree that the first one who eatches a fish must treat the crowd." assented to this, and we started. Now, don't you know, those two fellows both had a bite, and were too mean to pull them up."

"I suppose you lost, then?" remarked the friend.

"Oh, no," replied Mr. Gruntler. "I didn't have any bait on my hook."-New York Telegraph.

What St. Louis thinks of The NEW EDISON

ST. LOUIS REPUBLIC

PROBLEM OF MUSIC IN HOME SETTLED BY DIAMOND DISC

Edison Machine 'Re-Creates' Voice Beside It at Victoria Theater Concert.

BY BOMER MOORE. When Mark Silversione announces an Edison Diamond Diac concert in the Victoria Thealer It is a furegons constusion that the "Standing Room Coly" sign will be displayed. From Coh!" sign will be displayed. From erchestra pit to root the multitude filled every nock and enter, and the enthusians was commensurate with the attendance. It is a wanderful litting even in this age of actentific won dars—to see and hour an instrument "recreating"—as Mr. Silverstane sails then human voice that is right there heade it, new singing with it and now listening to it, thrilled by the non-Actournment of the Cornant personality—almost a dual personality. The problem "to hear cornelves as ethers heat ta" has been solved even if we can't as yet "ass obtacless as others see to."

The vocal solved tast evening was the brautiful Anna Case of the Metrophilas Cornant of New York.

politan Opera Company of New York. Her voice was richer than ever before. Her voice was incomer than were re-lar style has brundered and matured and bacoms more musicianty. There is a heart in it that gues to the heart and and-poise and sensitivement that prophesies a brilliant musical future for this young artist. Miss Cass sang the well-known air fract Chargentiar's "Louise," "A Song of India," by Rim-aky-Korsakow, and a number of folk songs, "The Old Folks at Home" be-ing among the number.

songs, "The Old Folks at Home" being among the number.

Arthur Walsh, the violinist, played the Schubert "Ave Maria" with the Diamond Duce, and also the famous "Meditation" from "Thais," by Massenet. Besides these selections be accompanied Miss Case, voice, violin and the "Recreator" biending Inio one beautiful tonal picture.

The voice of Thomas Chalmers displayed the merits of that good old tune, "Answers" by Alfred G. Robyn, who used to so completely belong to St. Louis that St. Louis nearly, if not quite, balonged to him.

Mr. Silverstone is, by these concerts, contributing very largely to the advancement of musical taste and inferent in this city. Doubtiess, many went to the performance last night not of curiosity, but that element acon gave place to genuine enjoyment of the preserve.

gave place to genuine enjoyment of the program. The problem of music in the hame is solved when the singing of the groatest artists is made pos-sible by an instrument that does not betray itself in the very presence of

ST. LOUIS POST-DISPATCH

3500 Sudeaver to Bistinguish Surural Votes From Phinagraph. was that at the Yumeria Tranier Sale arthy systing when Mor Acon Case, the young grove dame, of the Matropolitan Opera Company, appeared to Pare 1980 princip hickory to a come nest

of Thomas A. Edison's wonderful phone. graphic invention.

After an opening address by Mr. Mark Silverstone, who arranged the test, Miss Case stood herids the new Edison phoenograph and sang several numbers with the instrument, records of which had previously been made from her voice. An perfectly did the instrument bland with her roots that the auditory posts.

on parastry on the marrowen than on the role that the audience could not detinguish except by her lips when this Case reased singing. During rendrition of the Song of India, the house was derived and until the lights were turned on to one knew after Case had

left the stage. Besides a rare reculent treat, the test convinced many akeptins of the triumph of Mr. Edison's gentus in re-creating the human voice in all its naturalness.

AN INVISIBLE EXPENSE OF TRUCK OPERATION WHICH CAN BE AVOIDED

A invisible item of expense, often overlooked by motor truck users, is the time lost for repairs. The unavoidable items of fuel, oil, tires and upkeep appear on your books, but they may not be nearly so serious a leak in your profits.

It is estimated that three days of lay-up and idleness will cost the owner more than a month's operating expense (driver's wages excluded).

In the operation of a White Truck this avoidable expense is reduced to a minimum. The White stays in active service more working days in the year than is true of any other make of truck of which we have found any record.

As He Saw It .- " John, dear," wrote a lady from the Capital, "I enclose the hotel bill."

"Dear Jane, I enclose a check," wrote John in reply; "but please don't buy any more hotels at this price-they are robbing you! "-Tit-Bits.

His Part.-" So you confess that the unfortunate young man was carried to the pump and there drenched with water? Now, Mr. Fresh, what part did you take in this disagreeable affair? "

UNDERGRADUATE (meekly)-" The left log, sir." - Christian Register.

Those Sudden Changes.

He knew she had a heart of ice, And yet be sought to win it; He thought it would be cool and nice In summer, could be be in it; But a woman loves a man to fool, As he found when he got her; For, instead of keeping cool, She kept him in hot water. -Indianapolis Star.

Artists' Problems.-The story is revived of a society woman who wrote to Paderewski for "a lock of hair." She received this reply: " Dear Madame: M. Paderewski directs me to say that it affords him much pleasure to comply with your request, You failed to specify whose hair you desire. So he sends samples of that of his valet, cook, waiter, and mattress belonging to M. Pullman, proprietor of the coach in which he traveled in America."-Public Opinion (London).

Experience.- " Have you ever had any experience in handling high-class ware? asked a dealer in brie-à-brac of an applicant

"No, sir." was the reply, "but I think I can do it."

" Suppose," said the dealer, " you accidentally broke a very valuable porcelain vase, what would you do? "

"I should put it earefully together," replied the man, "and set it where a wealthy customer would be sure to knock it over again."

"Consider yourself engaged," said the dealer. "Now, tell me where you learned that trick of the trade."

"A few years ago," answered the other, "I was one of the 'wealthy-customer' class."- New York Telegraph.

You Get The Job

"We've been watching you, young man. We know you're made of the stuff that wins. The man that cares enough about his future to study an I. C. S. course in his spare time is the kind we want in this firm's responsible posiyou know, and I wish we had more like you."

The boss can't take chances. When he has a responsible job to fill, he picks a man trained to hold it. He'swatching you right now, hoping you'll be ready when your opportunity comes.

The thing for you to do is to start today and train yourself to do some one thing better than others. You can do it in spare time through the International Correspondence Schools Over 5000 men reported advancement last year as a result of their I. C. S. training.

The first step these men took was to mark and mail this coupon. Make your start the same way—and make it right now.

Northern Aluminum Co., Ltd., Toronto, Ont.

Welding made this new steam boiler possible

In constructing the boiler of this new steam automobile, the manufacturer's design called for neatness, light weight, strength and the ability to withstand high pressure. Oxy-acetylene welding solved the problem, just as it is making stronger, neater and better metal prodnets possible in every line of manufacture. If you use bolts, rivets or threaded joints in your product, it will pay you to know the possibilities and savings of oxy-acetylene welding.

Oxy-acetylene welding funs two or more pieces of metal at intense heat, giving a strong. neat, permanent joint.

The Prest-O-Lite process is inexpensive— simple to operate. We furnish a high-grade welding apparatus for 500 (Canada, \$7.5), are ti-lene service and special metal-cutting blow-pape provided at extra cost.

The great, universal system of Press O. Lite Service The great, universal system of Press, O. Line Service Intrushes ready-to-use dissolved acceptance in convenient, partiable cylinders in sizes to said every need—maures prompt exchange of empty cylinders for full ones—everywhere. Press, O. Lite Dissolved Acceptene gives better webls, quicker work, lower operating costs. Makes the entity portable for use inside or outside the shap. Avoids the initial outlay and depreciation of making crude accepted in carbide generators.

For Quick, Permanent Repairs

Millions of dollars' worth of valuable castings, machine parts and routs are being reclaimed from the lonk pile through this process. The rather used of the outht may be saleed by just one report, and the saving will include the time and delay exaced by a shirt-down as well as the cast of a new part.

Write for details on any manufacturing or regar operation. Our instature describes confront of savings by one and please world-

CURRENT EVENTS

THE EUROPEAN WAR

WESTERN FRONT

February 8.—The fighting on the Somme front continues, and heavy blows by the British are reported. The Germans lose an important position on the crest of Sailly-Saillisel Hill, which had dominated the St. Pierre Vaast Wood, A number of prisoners and a machine gun are taken. On the Ancre the British also take Baillescourt Farm, threequarters of a mile from Miraumont. A trench near Grandcourt, to the southward, is also among the day's gains.

February 9.—Berlin states that the recently reported attack on Sailly-Saillise! Hill was only partially successful, and that the British troops there are hemmed in by the Germans. More raids are carried out on the Somme front, and, to the northward, the British destroy a number of dugouts southeast of Ypres and take prisoners. A French repulse of a Teuton attack is reported from Hill 304, at Verdun.

February 10.—Contrary to yesterday's German report, the British announce that they have held the hill at Sailly-Saillisel against attack and are firmly established. Several air engagements are reported, in one of which Lieutenant Guynemar brings down his thirty-first aeroplane. The Allies bombard the railroads and factories near Rombach and Hagondange, and in the Sarre Valley.

The British infantry attack on a milefront in the Somme sector, taking a strong German trench system, with slight losses. A firm foothold is also-gained on the slope of Serre Hill, northeast of Beaumont-Hamel, on the road to Bapauine.

February 12.—Additional British gains along the Anere are reported from London, as 600 yards of trenches are occupied after a night attack near the Beaucourt-Phisicux Road, west of Miraumont. A German counter-charge fails, being repulsed by fire from the Lowis guns in use. Six British attacks, says Berlin, failed during the one night.

February 13, -The British penetrate several hundred yards into the German positions east of Souchez and inflict severe damage on the entrenchments there. Four mine shafts, a trench railroad, and several dugouts are destroyed. Dugouts are also razed portheast of Neuville-St, Vaast, east of Ypres, and prisoners taken. The French report destructive fires on the Teutons' works near Quennevieres, and the penetration of trenches north of Reims.

February 14.-More ground is won by the British on the Somme as a post is captured near Grandcourt, south of the Ancre, with large losses to the Teuton forces. Berlin, however, states that north of the Anere repeated British attacks were unsuccessful.

EASTERN FRONT

February 8.—The Russians report taking a trench near Kirlibaba, in the Hun-garian Karpathians, and holding it in the face of two counter-attacks.

February 10.- A minor engagement in Galicia, in which the Germans raid a Russian line, taking seventeen prisoners and a few machine guns, is the only fighting reported from the Eastern

February 12.—Near Kiselin, east of Kovel, the German raiders enter a Russian

Mitchell Junior-a 40-h.p. Six 120-inch Wheelbase

7-Passenger 48 Horsepower 127-inch Wheelbase

How Mitchells Differ

Because of What John W. Bate Has Done

Hundreds of Extras

Factory efficiency has been made a fine art in this plant. John W. Bate, our efficiency engineer, has spent millions to attain it.

This entire plant, covering 45 acres, was built and equipped to secure it. Now our new body plant completes it. We urge you to learn where these tremendous savings show in extra value.

For a Lifetime Car

Part of this saving pays for 100 per cent over-strength. Our margin of safety used to be 50 per cent. It has now been doubled.

Steering parts, gears, axles, etc., are made oversize. Our rear springs are built so that, in two years, not a single spring has broken.

Over 440 parts are built of toughened steel. Parts which get a major strain are built of Chrome-Vanadium. The steel in Mitchells costs us up to 15 cents per pound, And we do not skimp on weight.

The result is safety, freedom from repairs and troubles. And a car which probably will serve men for a lifetime. Time will prove, we believe, that this double strength is worth half the price of the car.

\$4,000,000 in Extras

There are 31 extra features in Mitchells, most of them exclusive. On this year's output these extras cost us about \$4,000,000.

They are things like a power tire pump, an easy control, a ball-bearing steering gear, engine primer on the dashboard, a light in the tonneau, a locked compartment, etc.

Every one is a wanted feature. Yet they are impossible, at a modest price, without Mitchell factory efficiency.

Extras in Luxury

The Mitchell has long been considered by experts one of the handsomest cars on the street. The output is largely sold in metropolitan centers.

Yet this year we have added 24 per cent to the cost of finish, upholstery and trips ming. We are giving you heat-fixed finish, extra-grade leather, and scores of new dainty touches.

TWO SIZES

Mitchell s roomy, 7-passenger Sis, high-speed, sconomical, 48-horsepower motor. Disappearing extra seats and Il extra features included.

Price \$1460. f. o. b. Rocine

Mitchell Junior a 5-passenger Six with 129-inch wheelbase. A 46-horsepower motor— 14 - inch smaller bore than larger Mitchell.

Price \$1150, f. s. b. Racine

Also all styles of enclosed and convertible bodies. Also demountable tops,

All this results from another economy, We now occupy our new body plant. All Mitchell bodies, open and enclosed, are built here now, under Bate efficiency methods. And this added luxury clearly shows the result.

What So Important?

What else is so important?

Extra values like these, without extraprice, come only through efficiency. Under other methods all these values are wasted in the shop.

Mitchell stands unique among fine cars in respect to efficiency. For a dozen years John W. Bate has worked here to attain it.

Go to your Mitchell dealer and see the results. Compare it with cars built otherwise. If you can, take an engineer with you, and we will abide by his verdict.

\$1150 Mitchell Junior

Note that this year's line includes two sizes-the Mitchell and the Mitchell Junior. But the Mitchell Junior-for five passengers-is still powerful and roomy.

This is also for efficiency. So the man who wants a 5-passenger car med not pay for more power or more room than he needs.

MITCHELL MOTORS COMPANY, Inc. Racine, Wis., U. S. A.

Are Recognized as Standards of Quality

This is made plain by the judgment of the great majority of America's high-grade motor car manufacturers. Sparton Motorhorns are standard equipment on 42 leading automobiles. More than three times as many leading motor cars are equipped with Spartons than with any other make of horn.

There are lower priced horns than Sparton, but price was not considered by the engineers of these 42 companies, who conducted exhaustive tests to determine upon the horn most efficient and most reliable under all conditions.

Here are some of the leading American cars that use Sparton Motorhorns as standard equipment.

New Sparton Gasoline Vacuum System

This is the latest addition to the Sparton line of quality products. Subjected to every possible test on all types of motors under varied and rigorous conditions, it has quickly proved itself the most efficient device of its kind yet produced.

Sparton Radiators and Fans

The superior worth of these Sparton products has been conclusively demonstrated by their efficient performance on numerous high-grade motor cars. Sparton Honeycomb Radiators and Radiator Fans are in such demand that we have been obliged to make an extensive addition to our factory to increase their manufacture.

(10

position, taking forty-two prisoners and a machine gun. They are shortly after driven out again.

February 13.—Berlin announces the German capture of a Roumanian defense south of Vale Putna, on the northern end of the Roumanian front, with 163 prisoners and a vast quantity of warmaterial. The repulse of two Russian attacks on the upper Sereth is also reported.

Paris admits that the Teutons have successfully resumed the offensive in Macedonia, taking a hill position east of Paralovo, in the Cerna bend.

On the other hand, the Italian forces occupy Ersen, northwest of Koritza, while the British execute profitable raids on Palmes and in the Doiran region.

February 14.—After a two days' battle, the German troops still remain in possession of mountain positions near Meste Canesci, in the Bukowina. The unsuccessful Russians are said to be moving back to take up a new stand east of Jacobeni, after losing 1,200 prisoners to the Teutons.

GENERAL

February 8.—The British steamer Turino is sunk off the Irish coast by a U-boat, and, it is reported by London, one American is killed. President Wilson gives instructions to have the facts of the case collected and presented to him.

The loss of ships in the German U-boat campaign is reported to date as follows: February 1, 10 ships, 13,039 tons; February 2, 8 ships, 7,337 tons; February 3, 6 ships, 10,159 tons; February 4, 2 ships, 2,623 tons; February 5, 5 ships, 8,729 tons; February 6, 14 ships, 44,457 tons; February 7, 13 ships, 30,352 tons; February 8, 10 ships, 21,504 tons.

Sweden and Holland refuse to follow the United States into breaking relations with Germany. From South America, however, come endorsements of the President's stand from Uruguay, Panama, and Bolivia.

February 9.—Berlin sets last month's loss of aircraft at 89 planes. Of these, 34 were Teutonic eraft and the remaining 55 belonged to the Allied forces.

The ship-loss for the day due to U-boats is reported at 6 boats, of 10,424 total tonnage.

Two envoys, the Minister to Vienna and the Minister to Turkey from Roumania, are degraded by the Roumanian Government for remaining in enemy territory after the beginning of hostilities. General Socecu is tried by court-martial and sentenced to five years' penal servitude and degradation on charges connected with his command at the battle of the Argechu River, on December 4 last. This was the battle which lost Bucharest to the Germans.

February 10.—Reports from London dispute the German statement of airplane losses for January. It is stated that Allied airmen have accounted for 75 German aircraft in the month, while the British loss is set at 15. The French losses are unpublished.

The tonnage loss in vessels for the day is set at 22,271 tons (7 ships).

A line of Turkish trenches on the Hai River in Mesopotamia is reported taken by the British, in a resumption of the offensive south of Kut-el-Amara.

February 11.—An Austrian attack is launched on Göritz from the eastward, and gains, according to report, some slight advances. The invaders are generally repulsed, and seventy prisoners fall into Italian hands.

The tonnage loss for the day in ships is reported to be 5,211 tons (2 vessels).

An official British report describes the most recent success at Kut, stating that the Turks were driven back 800 to 1,200 yards on a front of three miles. The report adds that the Turks suffered great losses.

February 12.—With a 300-mile funnelshaped safety lane of armed patrol-ships the British Government is said to have made the arrival and departure of liners from Channel ports and Liverpool safe. The sinking of ships by U-boats declines from day to day, the latest report stating that only five ships have been sunk, of a total tonnage of 8,441.

Five German army corps, according to Copenhagen, concentrated on the Dutch frontier, furnish an effective explanation for the refusal of Holland to adopt the policy recommended to neutrals by the United States toward Germany.

The Italian line east of Göritz, recently penetrated in places by the Austrians, is announced by Rome to be completely reestablished. In the operations more than 100 prisoners are captured and the Austrian forces finally repulsed.

Italian scaplanes successfully raid the Austrian base at Pola, according to Rome, returning undamaged after dropping a number of bombs on the arsenal and on ships in the harbor.

February 13.—Four more ships are sunk by U-boats in the new warfare, including the 12,000-ton White Star freighter Afric, which is sent to the bottom with seventeen missing. The total tonnage loss for the day is 14,198.

Spain's intervention in the war is considered probable, announces London, with the exprest approval of the Pope in case the German submarine policy is not altered.

The Russian authorities call the class of 1918 to the front, following a call two days before for the previous class. These additions are reported to give the nation 1,000,000 more troops.

February 14.—Five more ships are added to the list of those submarined in the month's U-boat warfare, with a tonnage loss of 6,456, bringing the total to 101 ships, of 208,010 tons, for the month. One of these vessels is the American freighter Lyman M. Law, carrying no contraband, and sunk without warning off Sardinia. The crew is reported safe.

Norway, Sweden, and Denmark, in identical notes, protest the new German U-boat policy to Berlin, declaring that it is illegal. The Scandinavian nations add that they reserve the right to act if lives are lost in the danger zone.

FOREIGN

February 8.—A decree is published in Madrid placing all the wireless in Spain under the control of the Government.

February 9.—The Chinese cabinet endorses the move of the United States regarding Germany and affirms that China is ready to break off relations with the Central Powers if the ruthless warfare is prolonged.

February 12.—From Copenhagen comes the report that two German munitions factories, at Thorn in East Prussia and at Glueckauf in Quickborn, have been blown up. Sixty-three persons are reported killed and scores wounded.

Eleven labor leaders are arrested in Petrograd charged with fomenting revolutions to transform Russia into a social democratic republic.

AFFADRS IN CUBA

February 11.—The Cuban Government announces that about thirty soldiers have been arrested for participating in a

Bran Is The BestWay

It is Nature's laxative.

Drugs are artificial. If served daily, the bran effects are constant.

When served in Pettijohn's, bran becomes delightful.

You will never go without it when you try it for a week. It often doubles life's enjoyments.

Pettijohns

Rolled Wheat-25% Bran

A breakfast dainty whose flavory flakes hide 25 per cent unground bran.

Pettijohn's Flour—75 per cent fine patent flour with 25 per cent bran flakes. Use like Graham flour in any recipe. Both sold in packages only.

revolt near Mariano. Uprisings are reported at Canas, Havana province, where a commander has been killed by his men; in Santa Clara province, and elsewhere. The Government is taking every precaution to maintain order.

February 12.—Secretary Lansing forwards to Havana an appeal to the Cubans not to plunge their country into another revolution because of the Presidential elections. He adds a "regret that intervention would have to be resorted to by the United States in case of disorder.

February 14.—The Cuban Government is notified that the United States would not recognize an insurrectu Government in the island. It is also admitted at the War Department that 10,000 army rifles and 2,000,000 rounds of ammunition have been sold and sent to the Cuban Government.

RELATIONS WITH MEXICO

February 10.-Villa is reported moving with a band of 25,000 armed men toward the border in the wake of General Pershing. This move is considered especially alarming because of reported German backing given to the bandit. General Funston declares this rumor incredible and unfounded.

Henry P. Fletcher leaves Washington for Queretaro, on the way to present his erestentials as the first American Ambassador to Mexico in three years.

February 12.—Secretary Lansing receives a formal note from First Chief Carranza asking the United States and other neutrals to join in banning exports of food and munitions to the belligerent countries. Containing a number of arguments previously advanced by the Central Powers, the note is believed by many to be the result of German instigation in Mexico.

Ignacio Bonillas, one of the representatives of Mexico on the recent Mexican-American Joint Commission, is appointed by First Chief Carranga as Ambassador to the United States.

February 13.—Armed Mexicans cross the border near Hachita, N. M., and carry off three Mormons, a number of Mexiean ranch hands, and a quantity of live stock.

February 14 -- A band of Villistas, led by General Salazar, seize Ojitos, an American-owned ranch in Mexico, and hold five Americans for ransom. An investigation is started.

THE AMERICAN IMBROGLIO WITH GERMANT

February 8.—Berlin announces that former Ambassador Gerard will leave for Bern and that there has been no detention other than the delay attending arrang-ing passports for the Consular-service members who accompany him. A special train has been put at his disposal.

The German Foreign Office requests former Ambassador Gerard to sign a proposal reaffirming the two old treaties of 1799 and 1828. The envoy refers the Government officials to the Swiss and Spanish intermediaries.

London announces a prompt agreement by the British Government to grant safe-conduct to Count you Bernstorff during his return home to Berlin.

February 9.—Henry Ford announces that he will turn over to the Government in case of emergency, not only his factories, but his personal fortune, esti-mated at more than \$100,000,000. He will accept no interest or other profits.

February 11.—Former Ambassador Gerard reaches Zurich, Switzerland, together

with a staff and accompaniment of 120. The returning envoy proceeds at once to Bern.

February 13.—It is announced at Washington that an advance was made by the German Government, through the Swiss legation, offering to reopen the discussion of submarine methods during the continuance of the present operations. The answer of the United States is to the effect that the Government refuses to discuss the international situation with the Imperial Government until the U-boat warfare is abandoned and the Sussex pledges are restored.

It is emphatically denied at Berlin that the German Government is contemplating or offering any inducements to the United States to avoid war. Ideas of further parley or the exchange of notes are disclaimed by officials in authority according to the day's dispatches. The Spanish Ambassador takes over the deserted American embassy in Berlin.

President Wilson, with the Cabinet, prepares a bill of particulars containing the grievances against the German Government, with special emphasis on the refusal to liberate the seventy-two American seamen brought in on the steamer Varrowdale.

Rome is the source of a report to the effect that Austrian authorities are striving to avoid a break with the United States by ordering all Austrian C-craft to fly the German flag when outside the Adriatic.

February 14.—Count von Bernstorff, recent German Ambassador to the United States, sails from New York on the first. leg of his return journey after dismissal.

Dispatches from Bern state that the German authorities in Belgium have ordered Minister Whitlock to lower the flag from the American legation in Brussels and have stopt his attempts to communicate with Washington. Other German indignities are alleged to have been reported to Mr. Gerard at the Swiss capital.

DOMESTIC

February 8.-Work is begun on the fortress at Rockaway Point, Long Island, within eight days after the appropriation for it in Congress. A number of sixteen-inch guns will be mounted there for the protection of New York Harbor.

February 9.—Governor Goodrich signs the State-wide prohibition bill making Indiana a "dry" State after April 2, 1918. This is said to be one of the most stringent "dry" measures enacted in any State.

February 11.—Democratic leaders in Congress admit that due to the international situation all internal improvement bills, commonly known as "pork," have been side-tracked in favor of preparedness measures. The "pork" bills are said to be definitely scrapped and more than \$100,000,000 saved.

February 13.—The largest naval appropriation in the history of the country passes the House. It calls for the expenditure of more than \$368,000,000, and is passed by a vote of 353 to 23.

The bills increasing the postage rate on second-class mail and reducing the drop-letter rates are defeated in the Senate by a vote of 37 to 34.

February 14.—The State Senate passes the Reynolds bill, granting Presidential suffrage to the women of Ohio, by a vote of 20 to 16. It has already been passed by the House and Governor Cox has stated his intention of signing it.

How Hudson Super-Six Saved the Six

A Review of the Crisis in Motordom

Only engineers knew it, but a year ago a crisis impended in Motordom. The light-weight Six—long the favorite type—was waning in popularity. The trend was towards Eights and Twelves. It seemed for a time that certain limitations would force the Six out of the field. Note how the Super-Six reversed that condition.

For years the Light Six was the leading type. Hudson was its foremost exponent.

It was so much smoother than former types that enthusiasts called it finality.

But it never fulfilled expectations. It nowhere near ended vibration. It won hardly a record. About every performance record that counted—save a few won by V-types—was still held by Fours.

Multi-Cylinders Came

At that juncture Hudson engineers—and numerous others—began to build V-type motors. That is, two Fours or two Sixes so set at angles as combat the Six limitations.

The trouble, remember, with all types yet developed, lay in excessive vibration. That caused friction and wear. It lessened power and endurance. The object of the new types—the Eights and Twelves—was to minimize that waste.

Numerous upper-grade cars adopted them. The Hudson shop had its V-types perfected. For a time it seemed that the fate of the Six was sealed.

Then Came the Super-Six

But early in 1915 Hudson engineers discovered the cause of motor vibration. And they set out to remedy it in a new, mathematical way.

In June they applied for a patent. In December the patent was granted. It gave Hudson control of a basic invention which solved the problems better than anyone had dreamed.

It added 80 per cent to the efficiency of the best Six ever built. That is, to its power and endurance. It gave the new Six—the Super-Six—a supremacy too great to be questioned.

The First Year's Result

The Hudson Super-Six has been on themarket a year now. It has won all worth-while records—that is, records made with a stock motor. In speed, power and endurance, in hill-climbing and quick acceleration, it has out-performed all other types. It won the chief record—the 24-hour record—by a margin of 52 per cent.

It twice broke all endurance records in a round trip from San Francisco to New York. It ran 7000 miles at over 80 miles an hour without showing any wear on the bearings.

It has gained the supreme place in Motordom. It has come to out-sell any other front-rank car. It is now outperforming all rival cars for 25,000 owners.

Today every man who seeks the best in a fine car must choose the Hudson Super-Six.

Not Like Other Sixes

But don't confuse the Super-Six with Sixes of the old type. The Super-Six is a unique type—a basic invention, controlled by Hudson patents. It differs from other Sixes more than Eights or Twelves do.

Numerous makers abandoned the V-types because of the Super-Six. The added cylinders seemed useless additions when the Super-Six so excelled.

But no other Six is like the Super-Six. Our patents prevent approach.

A New Gasoline Saver

This year we add to the Super-Six another exclusive advantage. It is a gasoline saver, remarkably effective. At a nominal cost it can be added to any Hudson Super-Six.

And our latest bodies, in every style, are masterpiece productions. They are built to match the Super-Six supremacy.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current se of words, the Funk & Wagnalls New Standard Dictionary is comsulted as arbiter.

Regders will please bear in mind that no notice will be taken of anonymous communications.

- "H. L. G.," Washington, D. C.—"(1) Which is the correct form to use in the following sentences: His whereabouts is (arc) unknown; their whereabouts arc (is) unknown? (2) Kindly indicate the correct punctuation in this sentence. 'Said deed purports to convey the fee simple title excepting, however, the minerals and mineral rights which, according to the abstract (page 9) were by deed dated March 13, 1809, conveyed to John Davis."
- (1) "Whereabouts" takes the verb in the singular. (2) "Said deed purports to convey the fee simple title, excepting, however, the minerals and mineral rights, which, according to the abstract (page 9), were by deed dated March 13, 1890, conveyed to John Davis."
- "A. Q." Washington, D. C.—"Is the following sentence correct? 'The procedure should follow, as near as may be, that prescribed by the act of tass.' If the word 'near' is not incorrect as used above, would it be better to use 'nearly' in the same sentence?"

Near being an adverb can be used with perfect propriety in the sentence which you cite. It is not necessary to use nearly, altho the writer himself prefers that word.

- "H. H. W.," Concord. N. C.—"Kindly inform me whether or not the following sentences are correct, and why. (1) 'I rureled the stocking.' (2) 'Very slowly and with the most explicit explanation he goes through with a card-trick or two.' (3) 'The Governor granted a holiday that the students might attend, which they did.' (4) 'It is the uncorrected consensus of opinion that he will be cleried." be elected.
- (1) "I rowled the stocking" is correct, meaning "I took apart the threads of the stocking." (2) Better say, "With the most detailed explanation." (3) "Which they did" is correct, the antecedent being the idea of "attendance," implied in the words "might attend." (4) "Ununimous consensus" is, strictly speaking, a pleonasm, but, in ordinary parlance, "consensus" does not convey fully the idea of absolute unanimity;
- "J. H. B.," Owen Sound, Ont., Can.—"Is the expression, 'The exception proves the rule,' good scales?' Does not an exception to a rule tend to disprove the rule and not to prove it?"

The idea of the exception proving the rule is that it places it in a clearer light by contrast, You could verify this by consulting the grammar of any language, with its rules and exceptions. Or, in a different sphere, you might observe bow poets emphasize an idea by introducing contradictions of it. A notable case occurs in Byron's "Slege of Corinth," where the idea of midnight silence is brought out strikingly by the mention of various sounds that broke the silence.

"W. K.." New York, N. Y.—" How is the word observing pronounced, and what is its meaning?"

The word is pronounced liber-tin-i's as in hit; r as in over, and is defined: "1. One who gives free rein to his desires or appetites; a debauchee. a rake. 2 [1-] A member of a free-thinking pantheistic sect of the sixteenth century, in the Netherlands, France, and elsewhere. The sect held that God is the only being, and that man can not sin, and practised licentiousness. 3. One of the party in Geneva that opposed Calvin's reforms. 4. [L-] Bib. A member of a Jewish symagog of that name. Acts vi. 9. 5. In Roman history, a manumitted slave, or a freedman, or the child of such a person. 6. [Archaic.] One who does not brook restraint. 7t. A free-thinker. st. A freeman, as of a corporate town."

"E. C. G.," Philadelphia, Pa., "Kindly give me the meaning of the phrase Italia Irredenta."

The phrase means "unredeemed Italy," Irredentist is one of a party formed in Italy about 1878 to secure the incorporation with that country of regions Italian in speech and race, notably the people of the district around Trieste and Trent in Austria, Nice in France, Corsica, and Malta, but subject to other governments. Such regions are called Italia irredenta, or unredeemed

THE - FRANKLIN - CAR

WHAT IS SCIENTIFIC LIGHT WEIGHT

PROGRESS is a fight, not so much against ignorance and stupidity, as against the tendency of the human mind to run in grooves.

The great mass of motorists has never been able to look ahead in automobile construction. It reasons backward from what it sees close at hand.

It takes as long to get a wrong idea out of its head as to get a right one into it.

At first, all fine automobiles were ponderous, heavy cars, complicated and expensive. It took the weight to justify the price.

Besides, that was the way men mostly thought about the automobile—a sort of Pullman-car feeling.

So the heavy car was what the average motorist saw close at hand. And reasoning backward, he built up a fine assortment of fallacies: such as, the heavy car was easier to ride in, that it kept the road better, that it made the owner more impressive, that there was virtue in the big wheel base.

Actual motor car experience shows up and disproves these fallacies.

Now the heavy car is going out of fashion.

If you doubt this you can prove it for yourself by going into any fine car salesroom. The automobile salesmen are very eager to tell you that their new models are considerably lighter than last year's, if that happens to be the case. But they say nothing about weight if their new car is heavier or the same weight as their former model.

But the average motorist cannot entirely free his mind from the old grooves. He still looks for an eyeful of cumbersome car and mechanism. He still lingers over the big wheel base.

For fifteen long years the motor world has fought each advanced principle in Franklin Car construction and then finally come around to it!

Among fine automobiles the Franklin was the first scientific light car, and for fifteen years it has been the consistent exponent of Scientific Light Weight.

You may have noticed lately how many cars are making their appeal to the public on light weight.

Now, as an enlightened motorist—not one of the unthinking mass—you want to discriminate between a car that has had some of its weight chopped off to meet public demand and the one motor car in America that is today as it always has been—a consistently Scientific-Light-Weight car.

The Franklin construction calls for the finest materials that can be put into a car. The choice of materials is a special Department of Science in itself. The use of these materials is another—saving weight ounce by ounce all over the car.

The car that has Scientific Light Weight to offer you (not merely lightness) can show actual results in facts and figures—in gasoline mileage—in tire mileage.

It can demonstrate to you a new comfort and reliability, smooth-rolling quality, flexibility, easy control, a resiliency, that saves not alone the expense but the annoyance of tire trouble.

In our next announcement we shall take up some actual results of Scientific Light Weight as proven by the Franklin Car.

INVESTMENTS - AND - FINANCE

HOW WE COULD RAISE THE MONEY FOR A WAR

WHILE events early in February, when our diplomatic relations with Germany were severed, had made it possible that this country might at an early day he forced into the European War, the situation did not at once excite much concern in financial circles, because of the unprecedented prosperity and the financial resources of the country, which had been strengthened by vast accumulations of gold brought in from foreign countries. At the same time, the possibility of our getting into the war brought foreibly to the front questions as to what means could be adopted to finance our participation in the conflict. Besides the financial strength of the country, as shown in its stock of gold, other bases for confidence existed in our new banking system and the benefits that would come to American financiers from the experience of European financiers since the war began. Numerous expedients had been tried out in Europe and this experience would be of great value to us. A writer in the New York Times Annalist believes that in the event of war, this country would impose additional taxes, much as it did at the time of the war with Spain, but he notes a general expectation in financial circles that the Government would rely mainly on the tale of bonds, including a large popular loan to be sold at par. The facility with which bonds could be put out is obvious from the fact that our national debt is now so inconsiderable—less than one billion dollars that the annual interest charge per capita is less than twenty-three cents. Following is a table which the writer gives to show our wealth, population, debt, resources, etc.;

*Or latest available statistics: tLess cash in Treasury.

Bankers are said to have exprest a belief that our Government would find no difficulty in disposing of a five-hundred-milliondollar issue of bonds at 3 per cent., while at 3½ per cent, bankers believe we could sell a billion dollars in bonds. Following are other items in the Annalist article:

"Inasmuch as there is no fixing the probable duration of such a war, and no way of knowing how much such a conflict would cost, the suggestion has been made that, the Government arrange for a comprehensive plan of financing, making provision for the sale of \$5,000,000,000,000 of

securities should such an amount be found necessary. In this connection, attention is directed to the desirability of giving the initial issue a conversion privilege by providing that holders of the first series of bonds shall have the right to exchange their securities for subsequent issues in the event that the later issues are put out at a higher rate of interest. If this plan is followed, it is contended, individuals and institutions desiring to make investments will not hold off making their purchases in the hope of buying United States bonds of a higher rate, but will promptly subscribe to the first issue. Moreover, an arrangement of this kind—adopted both by Great Britain and Germany—less the merit of not penalizing the patriotic citizen who avails himself of the first opportunity to invest his funds in the Government obligations.

"Aside from the consideration of patriotism, and there is no gainsaying its effectiveness as a stimulant, United States Government bonds will have a large sale by reason of the fact that they will be exempt from all Federal, State, and local taxation. This fact is an important one for the reason that in recent years various States have materially raised their rates of taxation, and Congress has increased the Federal income-tax rate. Moreover, in the event of war, it is not improbable that it will be deemed necessary to still further increase the tax on incomes.

"As a suggestion of the response that would be given to the offer of Government bonds, it is only necessary to refer to the experiences in 1898, when the United States was obliged to finance a war with Spain. In June of that year Congress authorized the issuance of 3 per cent, bonds to the amount of \$400,000,000, 'or as much thereof as may be necessary.' The law provided that the bonds be first offered at par as a popular loan under such regulations prescribed by the Secretary of the Treasury as would give opportunity to the citizens of the United States to participate in the subscriptions. In furtherance of this idea the bonds were issued in denominations as low as \$20. Only \$200,000,000 of the bonds were offered—the issue being redeemable after ten years and payable at the end of twenty years. Every effort was made to give the offering wide publicity. and the newspapers of the country, supplied with the information, printed display announcements without charge. Circulars and blank forms were distributed among post-offices, express companies, and all the banks. A period of thirty-one days was allowed for the receipt of subscriptions. The loan was nearly four times oversub-scribed, the 320,226 applications received totaling approximately \$1,500,000,000.

The most popular subscription was for \$500 bonds, of which the number was 180,-573. There were 11,483 subscriptions for less than \$100, and 14,974 subscriptions ranging from \$100 to \$180 each. Subscriptions for more than \$4,500 numbered 28,376. The total amount of bonds issued was \$198,792,660. Of the total, \$132,449,900 have been refunded into the 2 per cent, consols of 1930 and \$2,396,800 have been repurchased for the sinking fund and canceled, and \$500 have otherwise been pur-chased and canceled, leaving outstanding at present \$63,945,460, which mature on August 1, 1918.

"In gaging the successful subscription to the prospective Government loan by the results obtained in 1898, it is important to bear in mind certain facts: First, the 3 per cent, bonds of that date bore the circulation privilege, and were useful to national banks desiring to take out notes, while a bond issue to be put out now would not, in all probability, earry this privilege. Secondly, that by reason of the circulation privilege, the 1898 bonds sold at a premium in the open market and a great many speculators purchased the bonds at par from the Government and immediately resold them at 103 in Wall Street. In this connection, it is interesting to recall that the Treasury Department discovered at that time that a president of a railroad in Chicago, who saw excellent opportunities for profit in the sale of the bonds, had all his office-boys and clerks send in subscriptions. In cases where the Department discovered irregularities the subscriptions were rejected.

'On the other hand, there is every indication that the prospective issue will prove a far greater success than the Spanish-War bonds. First, because the country has grown in population and wealth in these twenty years, and, secondly, because new taxation has made it particularly advantageous for citizens to place their surplus funds in Government bonds, which are taxexempt. It should be remembered that at the time of the Spanish-American War the Federal statutes did not contain an incometax law. With the population larger by over one-third, and with an increase of 72 per cent, in per capita circulation, to say nothing of the other notable signs of expansion, it is practically impossible to estimate the volume of subscriptions based on the experience of 1898. It is a fairly safe guess that the country is in a position to quickly supply the Government, if med be, with as much as \$5,000,000,000.

"The interest-bearing debt of the United States is smaller now, and was even before the outbreak of the war in Europe, than that of any other nation. It amounts to \$971,562,590. According to the latest re-port of the Secretary of the Treasury, the interest charge on this indebtedness is \$23,-084,635 per annum, making the average cost of carrying the debt 2.36 per cent. In 1898 the annual interest charge was \$34,-387,409 and the per capita expense was more than double what it is to-day. The debt of the United States is less than onethird of Great Britain's national debt prior to the war, and less than one-sixth that of France, while the population of this country is larger by 15,000,000 than the combined populations of England and France. It has been estimated that the average income of every man, woman, and child in the United States is \$300 a year. If each person contributed one week's salary, or one-fiftieth part of his or her earnings, namely, \$6, to the payment of the national debt, it would be possible for the United States to have an annual interest charge of \$612,000,000, or a national debt of over \$20,000,000,000.

"In connection with the problem of warfinancing, attention should also be given to
the resources of the Federal Reserve Banks
and their facilities for note expansion. It
is estimated that the issue power of these
banks will permit of about \$1,000,000,000
additional circulation. These institutions,
together with the Federal Reserve agents,
have a stock of gold in excess of \$800,000,000. The outstanding issue of Federal Reserve notes is approximately \$292,000,000,
of which \$12,000,000 are covered by commercial paper, the amount covered by gold,
dollar for dollar, being about \$280,000,000.

"The law requires that there should be kept a gold reserve of 40 per cent, against the Federal Reserve notes issued, and that the twelve banks shall maintain a 35 per cent, reserve of lawful money against deposits. At the present time the cash reserve against net deposit liabilities, after setting aside 40 per cent, gold reserve against aggregate net liabilities on notes in circulation, amounts to nearly 78 ½ per cent. In the event that Congress passes the pending amendment to the Federal Reserve Act which provides for the carrying of larger

"Acceptances"

A big progressive step in Commerce and Banking

AMERICAN business men and bankers are rapidly increasing the use of this valuable instrument for financing trade, which is simply the buyer's acknowledgment of the correctness of an invoice with the agreement to pay for the goods at a stated time.

The use of the acceptance strengthens the credit of the buyer, enables him to buy to better advantage, systematizes his purchases and payments. For the seller, it reduces the burden and loss of the complicated and unproven open account. To the bank, it provides approved commercial paper. It turns the buyer's credit and the seller's wares into immediate money.

New and profitable business opportunities are now opened by this new line of financing for the banker, the business man, and the investor.

The general use of the acceptance in the United States had its actual beginning shortly after the outbreak of the European war. At that time, under the New York State Banking Law, the Guaranty Trust Company was the only institution in New York accepting sterling drafts payable at a future date,

> How the American market for acceptances is being built up; why the acceptance is a readily-negotiable credit instrument, and why it is a sound, circulating medium of finance, commanding a low interest rate, is told in our descriptive booklet entitled, "Acceptances," which will be sent to any address upon request.

reserves with the reserve banks, and the twelve Federal banks come into possession of more gold, their power to issue notes will be considerably in excess of \$1,000,000,-000. It should also not be forgetten that under the law the Federal Reserve Board has power to compel one reserve bank to rediscount for another and that it has authority to temporarily suspend or modify the reserve requirements of member banks. No nation at any time has been in a better position to undertake the financing of a costly war than is the United States at the present time."

AS TO THE LABOR-MARKET IN NEW YORK FACTORIES

There was published in Albany early in the year an interesting statement as to the condition of the labor-market in New York State in November, 1916. It was sent out by the Industrial Commission of the Department of Labor, and was based on reports from about 1,500 representative firms having over half a million of employees and a weekly pay-roll of more than \$8,000,000. It was believed that about one-third of the factory-workers of the State was represented in this presentment, which showed that "a new high peak in manufacturing activity" had been reached in New York. Each industrial group reported new high records for wages and five of them new records for number of employees. Following are items selected from the report:

"As compared with November, 1915, each group employed more workers and paid out more wages. The increase in the total number of employees was 13 per cent, and in the total aggregate of wages 28 per cent. As compared with November, 1914, the increase in employees was 29 per cent, and in wages 58 per cent. The average weekly carnings of the total number of employees reporting in November, 1916, were \$15.17 as compared with \$14.93 in the previous month. The average weekly earnings were \$13.47 in November, 1915, and \$12.32 in November two years

"The stone-, clay-, and glass-products group reported 2 per cent. fewer employees and I per cent, less wages than in October. The decrease occurred chiefly in the onscellaneous stone- and mineral-products industry. Glass reported increased activity. As compared with November, 1915, the group as a whole had one-fifth more workers and paid out two-fifths more wages,

"In the metals, machinery, and conveyances group, which has far more work-

ers and pays out much more wages than any of the others reporting, there was an increase of 4 per cent, in employees and of 5 per cent, in wages from October to November. This was a new high record in both respects. Ten of the twelve industries in the group reported increases in employees and wages, chief among them being the manufacture of iron- and rolling-mill products, of firearms, tools, and cutlery, of cooking. beating, and ventilating apparatus, and of machinery. In the manufacture of brass and copper goods, there was slightly de-ereased activity. As compared with November, 1915, there were one-fourth more employees and nearly one-ball more wages.

The wood-manufactures group established a new high record in November, with 2 per cent, more employees and 6 per cent, more wages than in the preceding months. Each of the industries paid out more wages, and all except one-lumber and its products had more employees. As compared with one year ago, there were one-fourteenth more employees and one-

fifth more wages paid.

"The furs, leather-, and rubber-goods group attained a new high level of activity in November. The increase over October was 3 per cent, in employees and S per cent, in wages. The manufacture of furs and fur goods reported slightly less activity, but every other industry in the group, including shoes, which is much the largest, reported substantial gains over October. As compared with November, 1915, there were in the group as a whole one-eighth more workers and one-fourth more wages were paid.

"The chemicals group reported a nominal reduction (less than .5 per cent.) in number of employees as compared with October, but paid out 3 per cent, more wages. The reduction in number of workers occurred chiefly in the manufacture of drugs, in which there was also a decrease in wages. The other industries reported increased activity. As compared with one year ago, there were one-seventh more em-

ployees and one-fourth more wages.
"The paper industry reached a new high level in November in both number of workers and in amount of wages. The increase over October was 6 per cent, in the former and 9 per cent. in the latter. Pulpand paper-mills are running at capacity. As compared with one year ago, one-fifth more workers were employed and one-third

more wages were paid.

"The printing and paper-goods group reported a negligible decrease in number of employees in November as compared with October, but paid out 2 per cent. more in wages, establishing a new high record in the latter respect. Printing the principal factor in this group—shared in the increased wage payments. One-sixteenth more work-

A Little Money Saved

In times of general prosperity, when in-stances of large fortunes made quickly are in the public eye, the average man is likely to forget that a little money saved and-invested wisely often means the ability to grasp a big opportunity if it presents itself.

When the price of time-tested dividendpaying industrial and railroad stock acts to a level where the income yield is exceptional there are special inducements for saving. We have outlined some specific suggestions in Circular N 9, "What Small Amounts May Mean."

COME, LET US REASON TOGETHER!

Suggesting to Preachers and Bible Students a Way to a Broader Vision

Pastors, your gospel is the same as that of every other Preacher in Christianity's history. You deliver your message in a different way but it is based upon the same Word, it is to satisfy the same need. Then, must not the reasoning together of many of the bearers of this message give you a clearer, broader vision of the truth? Must it not remedy individual oversight—correct the mistakes possible in individual philosophy? For you to recognize this fact is for you to feel your genuine need of a faithful presentation of other Preachers' Scripture-interpretation. And you want the most practical, authoritative, and complete work of this kind—at a reasonable cost. We can offer just that to you.

THE PULPIT COMMENTARY

IN 51 VOLUMES

Authoritative Opinious "One of the most walmake note to a Manister of which it is possible for

What It Is and What It Does

We might liken The Pulpit Commentary to a great searchlight which lights up and brings into relief all the potential details of the Bible. Each yerse, in both Old and New Testaments, is taken up in order. The context is explained fully, the customs of the people and the nature of the country referred to are described, characters and motives are discussed. Revised translations are included and in many cases arguments against the authenticity of the Bible are answered. No one can feel any uncertainty as to the meaning of any sentence in the Bible after a study of the exegetical presentation in this work. Following the explanatory sections is

A System of Valuable Homiletics

Every conceivable help in preparing sermons is offered, Exposition and application of the text are presented by a number of contributors to furnish various view-points. Suggestive sermon outlines are given on each verse-not to supply sermons for the Pastor but to furnish him with the interpretation of other men, to brouden his appreciation of his subject, to inspire him with his individual message. This work, makes possible virtual discussion of any Scriptural passage with the many eminent Religious authorities who produced it. Its value to every Minister one hardly be overestimated.

"Out of the perutural actions to action to the perutural action of the perutural to the perutural of the perutural to the pe "I have so been "They so been tamey in suring that The Fal, it to make they compensately in product 1 at the cost which have drouge Literature that comments the suring the time of comments arise."

Opportunity Is Knocking

at the study-door of every Preacher who reads this page. The young minister will never regret securing The Pulpit Commentary: with a Bible Dictionary he could get along without any other theological books. Older men will find that this work remedies the deficiencies of other commentaries, for it is unlversally acknowledged to be the largest, most scholarly, and most exhaustive commentary on the entire Bible. This great work is nowavailable to every man who feels his need of it. It is being offered at a remarkably low price and under an arrangement that will make its purchase a heavy burden to none

Price Reduced Nearly Two-Thirds

Instead of the original price of \$175, you pay only \$65, making it a genuine bargain. The original price of \$175 was a truer estimate of the value of these books. The set will be sent you, prepaid, before you pay a single dollar. You may take 10 days to examine the books, and if, at the end of that time, you consider them satisfactory, remit \$2. The balance of the \$65 will be payable \$7 per month. If the set does not prove satisfactory, you may, within ten days, notify us and hold the books subject to our shipping directions, and your experience will not have cost you a dollar. We are sure that no examination will convince you of the great value of these books.

The Wonderful Potentiality of the Bible

will be irresistibly brought home by this great work. Here are 51 large volumes explaining and interpreting the one-volume Bible, and there is no limit to the enlargement and development which the suggestiveness of these books makes possible. Every verse in the Bible is a mine of vital thought. These books may be considered the tools for digging out the gold. Their study will fan the fire of inspiration in every Pastor.

Right Makes Might

That is the reason for the firm position this work has taken in the Religious world and the universal endorsement it has received from Religious leaders both here and in England. The mighty RIGHT of The Pulpit Commentary lies in its absolute authenticity, its highly developed and modern practicability, and, most of all, in the VISION of its inspired authors.

Fine Oak Bookcase—FREE

is included as part of every set. This handsome piece of furniture will be an attractive addition to any room besides being a lng space-saver for the 51 volumes, holding them in compact and easily accessible form.

Every Preacher and Bible Student should examine these books and prove for himself what a valuable addition they will be to his hbrary. The blank below, filled out and sent to us, will bring the set to your study for free examination.

ers were employed and one-tenth more wages were paid out in the entire group than in November of last year.

"The textiles group in November employed 3 per cent. more workers than in October and paid out 4 per cent. more wages. The aggregate of wages paid constituted a new high record for this group. There was a slight decrease of activity in the manufacture of woolen goods, but every other industry in the group reported gains. Chief among these was the manufacture of cotton-yarn and cotton goods. As compared with November, 1915, onetwentieth more workers were employed and one-sixth more wages were paid.

The clothing, millinery, and laundering group had a negligible reduction in num-ber of employees in November and 1 per cent. reduction in amount of wages paid. Two industries only-women's clothing and millinery—reported decreased ac-tivity. Men's clothing and men's shirts each reported a gain over October, but a decrease of 17 per cent. in women's clothing and a similar decrease in millinery counteracted these gains. As compared with November, 1915, there were 2 per cent. more employees and one-tenth more wages

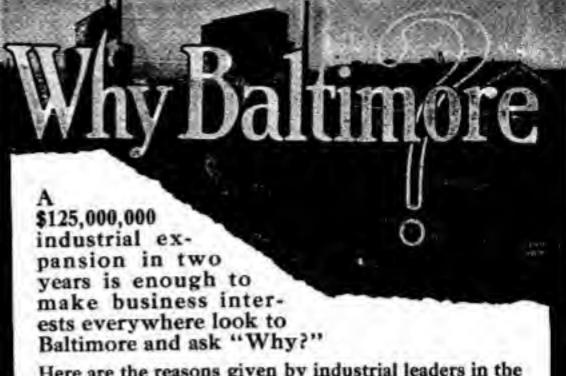

"The food, liquors, and tobacco group employed 3 per cent, more workers and paid out 5 per cent. more wages than in October. This was a new high record for wages in this group and the greatest number of employees since October, 1914."

COMMODITY PRICES IN GREAT BRITAIN

At the beginning of January, 1916, the increase in retail-food prices in Great Britain over those for July, 1914, the year before the war began, was about 45 per cent. On January 1, 1917, the increase had reached 87 per cent., these percentages being based on statistics collected for the British Board of Trade Labor Gazette, as affeeting upward of 500 returns as to principal articles of food in about 200 British towns, having populations of from ten to fifty thousand, and in about 250 of smaller size. The average percentage by which prices at the beginning of 1916 and 1917 exceeded the normal prices of July, 1914, is shown in the following table, printed in the London Economist, figures for large towns and for small towns and villages being shown separately:

Here are the reasons given by industrial leaders in the United States-among them Charles M. Schwab, Bethlehem Steel Company; J. E. Aldred, Capitalist; M. M. Upson, Secretary Raymond Concrete Pile Co.; B. W. Dudley, President Prudential Oil Company (all of New York)—why they located plants in Baltimore:

- "Its geographical position making it the best manufacturing and distributing point on the Atlantic Coast."
- "The nearness of Bultimore to the coal fields: the low price of coal
 and its good quality." Coal is delivered at Sparrows Point, Bultimore,
 at 20 cents per gross too less than at Bethlehem or other cities similarly situated, with a profitable differential over other seaport cities,
- "The low freight rate to and from Baltimore by rall." Baltimore has
 a 3 cent per hundred pounds differential under New York and Boston
 to and from the West; a 2 cent per hundred pounds differential under
 Philadelphia.
- "The low cost of power 4,008 per thousand kilowatte for electricity; 35 cents per thousand feet for gas, the lowest on the Atlantic Seaboard."
- 5. "The deep water channel which permits the largest ships to enter port day or night." Channel has a depth of 35 feet from ocean to piers.
 6. "The low cost of living in Baltimore and the comforts and conveniences within reach of laboring classes." The labor is permanent, as Baltimore has a larger number of individual home owners in the laboring classes than any other American City.
- "The disposition of the authorities to be reasonable about tax sastsaments and the co-operation of banks and the city officials." Machinery and tools are exempt from all taxation.

The Bethlehem Steel Company, by locating in Baltimore, will make a saving on freight rates alone of \$800,000 each year. This is equal to 5% profit on an investment of \$16,000,000.

Let us figure with you how, by locating your factory in Baltimore, you can capitalize its many advantages. If you are interested, a special representative will call on you at your factory, and analyze your specific business and tell you what Baltimore has to offer.

JUST PUBLISHED Round the Year in the Garden

in the Garden

a new book by H. H. Thomas, the famous gardening expert. Just the thing for the amateur or the professional who is interested in keeping his garden benatited as long as possible. Tells all about the flowers of the four reasons and outlines the work of each month in the flower, facility is the first mouth treated, white planting of Spring flowers, lifting of the more tender plants, and planning for the coming year, and planning for the coming year, and bere a host of thing that will bely you to beautify your garden and to achieve worth while results. Crown 800. Class, benedifully illustrated with 12 dent lookey photographs by H. E. Corke and 6 shall four plates, \$2.00; by mail, \$2.12. Funt & Wagnalle Company, \$22 beautify seems.

The Economist explains that in arriving at the general percentage increases in the above table the several articles were "weighed in accordance with the proportionate expenditure on them in pre-war family budgets, no allowance being made for the considerable economies which result from changes in dictary which have been widely effected since the beginning of the war, especially in those families in which the total income has not been increased by advances in rates of wages, greater regularity of employment, increased output, or the working of overtime." As an illustration of the possible extent of economies in this direction, it is stated in The Economist that if, for example, eggs were eliminated from the dietary, margarin substituted for butter, and the consumption of sugar and fish reduced by one-half that prevailing before the war, the general percentage increase since July, 1914, instead of being 87 would be 45. With reference to other items of expenditure, there have been substantial increases, except with regard to rents, "but the average advance has not been so great as with food." The increase since July, 1914, in the cost of all items ordinarily entering into working-class fam-

ily expenditure, including food, rent, clothing, fuel and light, etc., was estimated "at about 60 per cent, at the beginning of 1917. as compared with 30 per cent. a year earlier. taking the same quantities and descriptions of the various items at each date and climinating advances arising from increased duties.

Very few articles escaped the abnormal influences which were brought into play by the war. The principal causes of the rise are cited by the London Times as restricted shipping, pressing demands for war-material, searcity of labor, and manipulation in markets. Besides prices for foodstuffs, prices for certain raw materials are given by The Times. Principal among increases in this class was copper, the rise having been over 60 per cent. The year's closing price for copper was £139 a ton, the highest price for the year having been£153 and the lowest£84. Lead showed little change. Tin ranged from £161 to £205 a ton. Wool closed the year at from 30 to 50 per cent. higher, while cotton, "after a year of unprecedented fluctuation, closed 30 per cent. higher." In petroleum the rise was 35 per cent. In rubber there was an actual decline of 30 per cent.

CHANDLER SIX \$1395

HOUSANDS of men choose the Chandler because of its mechanical superiority, which to them is so obvious, while other thousands choose it for its beauty of design, its grace of line, its roominess and its comfort.

All who choose the Chandler have reason for pride in their possession. For this splendid car combines, in an unusual degree, good taste, style and dependability.

If one Chandler feature predominates over all others, it is doubtless the exclusive Chandler motor, now commonly called "The Marvelous Motor," refined throughout four years of conscientious manufacture, without radical or experimental changes, to a point approximating perfection.

CHANDLER MOTOR CAR COMPANY

New York Office: 1790 Broadway CLEVELAND, OHIO

Cable Address: "Chanmotor"

Greater power-longer life-lower upkeep costs!

A 100,000,000 mile mile
"endurance run," by of a
some 15,000 Haynes you
"Light Six" owners pow
during the past 2%
years, is made the basis for all
statements herein contained.

For the 1917 Haynes is akin in power-plant, weight and principal mechanical structure to Haynes "Light Sixes" of the last 33 months.

Fifteen thousand owners have found these cars close to mechanical perfection. A few minor structural betterments have been the limit of change. This despite our quarter-century of automobile and motor building experience.

Thus—in 1917 cars, which, for refinement and modernness of equipment, excel all other new models—are you able to know accurately in advance: That good performance is permanent.

8,000 miles on tires. Remarkably high mileages from gas and oil. A mere traction of a cent per mile for repairs. Everywhere you hear it said "The Haynes is a big, powerful car but you can afford to run it."

The Haynes "Light Six"the car YOU get with its regular stock gear ratio-will perform for years as follows:

Any speed between one and easy miles per hour without shifting from high gour.

Pick-up from a stop to shirty miles per hour in 7/2 seconds.

Climb "low gear" grades on high.

Develop more pulling power at
moderate appends, or through

m derate appends, or through and, and and enore, thun any other 3/2 x 5-inch 6-cplinder meter.

That upkeep will be extremely low for years to come. That long life is a certainty. That depreciation will be slight.

"Demonstrations" prove little. What "doctored up," speciallygeared "stock" cars, nursed along by skilled professionals, can do, proves nothing.

But take 15,000 cars. Let 15,000 average everyday motorists run them for 100,000,000 miles. Let them drive over all kinds of roads—in weather fair and foul—for periods up to nearly three years. There you have a test. There you have

a true examination for endurance. The results of such use mean everything.

And such is the 100,000,000 mile "endurance run" which assures the long life and permanently low after costs of each Haynes.

SPECIAL OFFER FOR 20c

We will send these three great Floral Novelties and two more-five altogether-for only 20c, 3 lots (15 picks.), for 10c. See nor Catalogue for colored plates, culture, etc.

ADDRESS: JOHN LEWIS CHILDS,

ICE-PROOF MASTODON PANSY PLANTS

SPECIAL OFFER FOR SPRING DELIVERY. Have a Beautiful Bed of Pansies at 5mall Cost.

We grow a cong viscous plants of the Mastedon Pansy in open ground from September oven area that are ready for delivery from January to May. For the Southern and Panic States are can ship now. For colder latitudes shipments are made as early in entropy a the classican depart out. They are hardened by the ice and above of winter, and resisting are ready to jump into vigorous drowth and bloom. Price mixed colors, postpoid, 25 for 50c; 100 for \$1.75; 300 for \$5.00

NEW SEEDLINGS OF JAPAN IRIS

Immease Size Wonderful Colors Quick Blooming

We have directored a womberful strain of Hybrid Seedling Iris Kaempferi that are marvels in beget and perfective of bloom with a wide range of exquisite colors in bloc. Lavender, white rish purples, plum-red, finted, striped and mottled in end-less carlety. These Iris are perfectly hardy and bloom profusely, bearing large petalod double and single flowers. Flowers seven to ten inches across on stalks four feet high, and on two alike.

Strong route for quick blooming. 5 for 50c; 12 for \$1.00; 100 for \$6.00

SPECIAL COLLECTIONS OF BEST BULBS

Being the largest growers of Gladioli we can make the following attractive offers for finest Bulbs and best sorts. All Postpaid.

5 OF THE NEWER AND FINER GLADIOLI FOR 25c

Every set in this cultrition stands high arms the very finest sorts of to-day. The 5 for 25c

Klond Snow Cloud - White suffused pank. Baron Hulot - Fine blue.

Attraction Koss scarlet, white center. Halle - Orange Pink; very large,

FINEST MIXED GLADIOLI
All colors and varieties, 25c per doz. .
\$1.75 per 100; \$15.00 per 1000.

GERMAN IRIS
Firest sorts mixed, 60c per doz., \$4.00 per 100.

NEW DAHLIAS Eight aplendid sorts named for \$1.00, **NEW CANNAS**

Ten extra fine sorts (mostly new), named, for 75c.

OUR CATALOGUE of Flower and Vegetable Seeds, Summer-Hardy Perennials, Vines, rare new flowgring shruis, and the greatest new Fruits and Berries, sent free to all who apply. Scores of Sterling Novelties.

We are the largest growers of Gladioli, Cannas, Publics, Lilies, Iris, etc. Our gar-

does at Fheal Park and Flowerfield comprise more than one thousand acres. We are bradquarters for all Sommer-flowering Bulbs, and our stocks are large and complete.

ORDER AT ONCE. THESE OFFERS WILL NOT APPEAR AGAIN

"GIVE US FOOD, MR. MAYOR! OUR CRILDREN ARE STARVING!"

WOMEN OF NEW YORK'S KAST SIDE CLAMORING SEFORE THE CITY HALL FOR RELIEF FROM THE HIGH COST OF LIVING.

FOOD RIOTS IN THE UNITED STATES

I UNGER RIOTS in the richest city of the Union in a period of unprecedented national prosperity are startling enough to arrest the attention of our city, State, and Federal legislators even at a time when the shadow of impending war obscures all minor issues. Almost as if by preconcerted signal, on February 20, the women of various tenement districts of New York and Brooklyn began a campaign of riotous protest against the high price of food in the local markets. They upset the push-carts and barrows of the foodpedlers, and in some cases threw kerosene on the stock. They improvised boycotts and drove away intending purchasers. Hundreds of women of the East Side marched to the City Hall shouting "Give us food!" "Feed our children!" And later a mass-meeting adopted resolutions calling upon the Government for relief.

"Those who are hungry are increasing by thousands as the cost of living ascends the scale," declares Senator Norris, of Nebraska, and Senator Borah, of Idaho, sees a parallel between present conditions in this country and those which immediately

preceded the revolution in France, when the people marched through the streets of Versailles crying for bread. Even if the charge is true that these riots are being stage-managed and accelerated by agents of the Central Powers who wish to see Congress supplement Germany's submarine campaign by placing an embargo on the exportation of foodstuffs to the Entente Allies, they nevertheless emphasize a situation which bears with special severity upon the poor of our cities. As the New York Tribune remarks, "the plain fact is that in a year of unparalleled 'prosperity,' with wages in many industries inereased and unemployment almost an unknown quantity, there is wide-spread discontent, discomfort, actual suffering among workers because of the cost of foods." Whatever the other influences that may have contributed to the recent riotous demonstrations of incensed housewives in New York's tenement districts, editorial observers point out, the pressure of rising food-prices is a fact, and is not to be ignored. How much of this pressure is due to the world-wide shortage in crops and the drain made upon the supply by the warring nations, and how much to

TERMS: \$3 a year, in advance; three months, \$1; single copy, 10 cents; postage to Canada, \$5 cents a year, other foreign postage, \$2.00 a year. BACK NUMBERS, not over three months old, 25 cents each, over three months old, \$1.00 each. SEMIANNUAL INDEXES, issued in January and July will be sent free to subscribers who apply for them. RECEIPT of payment is shown in about two weeks by date on address-label; subscription including the month named. CAUTION: If date is not properly extended after each payment, notify publishers promptly. Instructions for RENEWAL, DISCONTINUANCE, or CHANGE OF ADDRESS should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. DISCONTINUANCE: We find that many of our subscribers prefer not to have their subscriptions in-

terrupted and their files broken in case they fail to remit before expiration. Notwithstanding this, it is not assumed that continuous service is desired; still, subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. PRESENTATION COPIES: Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

such factors as the greed of food-speculators, the congestion of the railroads, and the scarcity of agricultural labor, are questions upon which even expert opinion has not yet reached an agreement. To shed light upon this subject, and to provide remedies if possible, President Wilson has directed the Federal Trade Commission "to investigate and report the facts relating to the production, ownership, manufacture, storage, and distribution of foodstuffs,"

Meanwhile we learn from the New York market reports that the prices of potatoes, cabbage, and onions are now twice what they were in Civil-War times; that in a brief two months

THE MAILED FOOT-AND THE CONSUMER.

-Cesare in the New York Energy Part.

potatoes have gone up 100 per cent.; onions, 366 per cent.; cabbages, 212½ per cent.; beans, 300 per cent.; and beets, 100 per cent. A Chicago dispatch quotes representatives of the packers as predicting a new increase of from 10 to 40 per cent. in retail prices of means. Reports from Kansas City, Milwaukee, and Omaha agree in their accounts of steadily soaring food-prices. And Mr. Joseph Hartigan, New York's Commissioner of Weights and Measures and Secretary of Mayor Mitchel's Committee on Food Supply, predicts that unless the spring crop of garden-truck from the South and Southwest proves unusually large, this city will have to face a period of high prices for foodstuffs unparalleled in its history. Talking with a representative of the New York Tribune, Commissioner Hartigan emphasized these three underlying factors in the present situation:

"Subnormal production. The failure or partial failure of certain crops has greatly decreased the supply of food-products.

"An abnormal amount of exports. Since the war began, and especially within the last six months, an excessive amount of food-products has gone out of this country to help feed Europe.

"A large increase in the consumption of foodstuffs in this country, due primarily to the general prosperity brought on by the war, which has caused many American families to increase their table expenditures."

Conditions are aggravated, too, he said, by speculation:

"It seems to be an individual privilege for any dealer in foodproducts in this country to hold back his supplies for higher prices, if he chooses to do so. There doesn't seem to be any effective way as yet to stop this practise. There have been investigations and inquiries going on for the last two and a half years, and yet nobody has ever been arrested or indicted or fined."

And then he added more ominously:

"I am afraid that New York will experience such high prices in the next three months as to make the situation alarming.

"Wholesale dealers state that canned foods are disappearing from the market and that reserve stocks are entirely wiped out. This condition is due, it is said, to the vast amount of canned and preserved foodstuffs purchased here by foreign countries for future shipment.

"Cereals in enormous quantities are being shipped out of the country. Wholesale dealers complain that they can not fill retail orders. One large cereal concern is reported to have contracted for 100,000 barrels of prepared oats to be delivered at scaboard before June 1, 1917."

Representative Meyer London, Socialist Congressman from New York City, makes this contribution to the discussion:

"A dollar now is worth only 12 or 15 cents of its normal value as far as its food-purchasing value is concerned.

"The most remarkable thing about conditions in New York is that there has been no increase in wages in the biggest industry in New York City and State—the clothing industry. This usually is a safe barometer that reflects any prosperity. There is no doubt that there is prosperity somewhere, and prosperity usually is reflected first in the industries that furnish the necessities of life—food and clothing. The only explanation I can find is that the enormous increases in food-prices have eaten up increased wages so that the masses are not even able to buy an extra suit of clothes.

"Prosperity, of course, is with us somewhere, but it has not come down to the great masses of the poor, who usually are the first to feel prosperity or hard times. I believe there is no solution now but national regulation of food."

Another suggestion is offered by Mr. J. P. Griffen, president of the Chicago Board of Trade, who urges the railroads to give right of way to shipments of foodstuffs. In a telegram address to the presidents of the Eastern railroads, he says:

"Despite all your assurances, no relief has been afforded to move grain and other food-products out of Chicago.

"The present searcity of supplies borders on famine in many communities, with consequent inflation of values directly chargeable to the failure of railroads to meet this national emergency.

"I request that instructions be issued by you forthwith probibiting movement of any freight at this time except foodstuffs, coal, and other commodities necessary to sustain human and animal life.

"Unless this is done there is great danger of riot and anarchy throughout this land. The present situation is largely caused by railroads giving preference to commodities other than those necessary to maintain life. Failure to meet the situation is squarely up to the railroads."

The New York Econing Sun tells of one commission merchant who made a profit recently of \$500,000 in onions, which he bought at \$3 a bag and sold at \$14. The food-speculator is the real cause of food-riots, thinks the New York World, which urges the State to exercise its police power and take over the food-supply "by due process of law," for a "just compensation" to be later determined. Governor Whitman, recognizing the situation as "the most serious, perhaps, in the history of this State," gave his approval to a pending bill which would empower a Food and Markets Commission, "in case of an emergency creating or threatening to create a scarcity of food," to "take such measures to secure relief as it may deem desirable." Of this emergency clause the Governor says:

"In my opinion it will enable the commission to commandeer food anywhere within the State in a time of crying necessity such as the present. I think it would enable the commission to take over cold-storage plants and administer them on behalf of the State in the interest of distribution along lines that would quickly relieve a stringency in food. I think that under this clause the dictatorship in force in Germany could be duplicated here, always providing that the emergency exists."

The Evening Post cites figures to show that on January 1, four-fifths of the potato-crop of New York State was being held

back by the farmers for higher prices. And in the New York Globe we read:

"In 1916 the country produced 400,000,000 fewer bushels of corn than in 1915; of wheat, 400,000,000 fewer bushels; of oats, 200,000,000 fewer bushels; of barley, 50,000,000 fewer bushels; of potatoes, 100,000,000 fewer bushels. In these five crops production was down 1,150,000,000 bushels, or ten bushels pe reapita.

"A glance at these figures sufficiently indicates one cause of higher prices, and the cause is of such a nature as to suggest

that noisy visits to the Mayor will not remove it.

"Yet things can be done that are not done. The American system of distribution is wasteful and extravagant. Speculators in supplies are permitted to extort. Retailing has overhead expenses that require too high a profit percentage. Toll-takers of all kinds have successfully interposed themselves between producers and consumers. Reats going to landlords are higher in New York than in any other city in the world. We have no market system and attempt to get along with methods which may be appropriate to a village, but not to a concentrated population of 6,000,000.

"These things have long been known, yet neither the City Hall, nor Albany, nor Washington does anything to the purpose. From time to time there are 'investigations,' but no results. Few are disposed to grapple with the realities of the situation, and when any one makes any definite practical proposal, he is fallen on by all sorts of special interests which have a pecuniary

concern in perpetuating bad conditions."

The inquiry into food-conditions called for by President Wilson is to be conducted by the Federal Trade Commission with the cooperation of the Department of Agriculture. The subject will be considered under ten heads, as follows:

"Meat and meat products, dairy products, poultry and eggs, including cold storage, fish, cereals and milling products, vegetable oils, perishable fruits, sugar and canned goods, perishable vegetables and tee."

Upon the findings of this investigation, Washington dispatches tell us, the President intends to formulate a program of remedy, legislative or administrative, or both. How soon we may expect relief by this route is not stated. In a letter sent to the Commission and to the Secretary of Agriculture, he says in part:

"While the population of the nation has increased 26,000,000 since 1900, the production of the two leading cereals, corn and wheat, while tending to increase, has shown only a slight advance, and that of the meat products in the same period has shown an increase of only 3,500,000 pounds—a decrease of twenty-nine

pounds per capita.

"Much can be done, and is being done, to change this situation through improved methods of production and through the control or eradication of plant and animal diseases. But there are problems also of distribution; and, in some respects, the problems presented in this field are the more difficult. . . . It is obvious that there will be no sufficient incentive to enlarge production if there does not exist an unobstructed and economical system of distribution. Unjustifiable fluctuations in prices are not merely demoralizing; they inevitably deter adequate production.

"It has been alleged before committees of the Congress and elsewhere that the course of trade in important food products is not free, but is restricted and controlled by artificial and illegal means. It is of the highest public concern to ascertain the truth or falsity of these allegations. No business can be transacted effectively in an atmosphere of suspicion. If the allegations are well grounded it is necessary that the nature and extent of the evils and abuses be accurately determined, so that proper remedies, legislative or administrative, may be applied. If they are not true it is equally essential that the public be

To the Milwaukee Leader (Socialist) an investigation now seems like locking the barn-door after the horse is stolen, because "our surplus food-supply has already been shipped abroad." But the Chicago Herald rejoices at the possibility of a "real" investigation at last:

informed, so that unrest and dissatisfaction may be allayed.

"The country is in the mood for an investigation that will be long and deep and thorough. It is tired of these continued flurries about high prices that get nothing except possibly a politician into Congress or some other job or into the newspapers."

NEW TREATMENT FOR OLD TREATIES

EVEN WHILE DR. ZIMMERMANN, German Foreign Secretary, was declaring that there could be "no step backward" in the new submarine campaign that might send American citizens to the bottom of the sea, other high authorities in Berlin, so the New York Sun observed with amazement, "were invoking our old treaty of 1828 with Prussia for the protection of Germans in America against internment if hostilities should break out." This amazement was shared by a

WANTED-Evans in the Baltimore American.

goodly number of the Sun's contemporaries. Germany, protested the Milwaukee Sentinel, evidently considers Article XXIII of the 1828 treaty, which would protect her citizens, "a sacred document," while Article XII, which should protect our ships, "is a mere scrap of paper." The New York World is no more emphatic than dozens of other dailies in exclaiming that when our ships "were warned off the sea" by Germany, the century-old agreement "was ripped to ribbons." Even the Milwaukee Leader, edited by a pacifist Socialist of Austrian birth, finds it difficult to understand how Germany, under this treaty, can "find sanction for its submarine campaign as it affects American shipping."

Twice, it is noted in the daily press, have events focused attention upon this "musty old document"—first, when both Germany and the United States admitted its bearing on the William P. Frye case, and more recently when the German Foreign Office prest the departing American Ambassador to reaffirm and enlarge the treaty provisions relating to citizens of either nation left war-bound in the jurisdiction of the other. In view of the "negation" of other provisions by the German war-zone decree, this suggestion is set down by the Philadelphia Record as a noteworthy "exhibition of nerve," and the subsequent similar communication through the Swiss Minister at Washington is held to be "equally impertment."

In view of these incidents and the heated editorial discussion of the Prussian treaty or treaties, it is important to understand the exact status and history of these agreements. The New York Sun has called attention to some of the essential facts in a notable editorial, and Mr. S. E. Edmunds, lecturer on international law in the St. Louis University Law School, has written

to the New York Times a letter elucidating certain phases of this chapter in our diplomatic history. From these two sources, supplemented by other newspaper articles, are taken the following paragraphs of quotation and explanation:

The first treaty of "commerce and amity" between the United States and Prussia dates from 1785, before the one country had found her Constitution and the other had lost her Frederick the Great: the American negotiators were Benjamin Franklin, Thomas Jefferson, and John Adams. This treaty was revised in 1799, while John Quiney Adams was our representative in Berlin. In 1810 this second treaty expired by time limit, but it was revived in 1828. Secretary of State Henry Clay and Ludwig Niederstetter, representing Prussia, signed their names to an instrument reaffirming certain portions of the old treaties, it being expressly stated that Article XII of the treaty concluded between the parties in 1785, and Articles XIII to XXIV, inclusive, of the similar treaty concluded at Berlin in 1799, "are hereby revived with the same force and virtue as if they made part of the context of the present treaty" of 1828.

Article XXIII, of 1799, thus reenacted in 1828, contains those provisions which the Germans would now like to see reaffirmed and expanded by our Government. It is effective in ease of war between the United States and Prussia (now represented by the German Empire). In the first place, it says:

"If war should arise between the two contracting parties, the merchants of either country then residing in the other shall be allowed nine months to collect their debts and settle their affairs, and may depart freely, carrying off all their effects without molestation or hindrance."

Further provisions of this portion of the treaty relate to the treatment of women and children, scholars, fishermen, and artizans carrying on their peaceful occupations in unfortified places, and also to the humane treatment of prisoners of war taken by either side. The above provisions are clinched by this general declaration;

"Neither the pretense that war dissolves all treaties, nor any other whatever, shall be considered as annulling or suspending this or the next preceding article; but, on the contrary, that the state of war is precisely that for which they are provided, and during which they are to be as sacredly observed as the most acknowledged articles in the law of nature and of nations."

All this, which so interests Wilhelmstrasse, comes into play only when and if the peace of a century and a half between the United States and Germany is broken. Certain other provisions, meant to be effective whenever one of the two signatory nations is at war with a third Power, are of very much more pressing concern to the editors of the American press. In particular, the Article XII of 1785, reaffirmed in 1828, has been found intensely interesting. It reads as follows:

"If one of the contracting parties should be engaged in war with any other Power, the free intercourse and commerce of the subjects or citizens of the party remaining neuter with the belligerent Powers shall not be interrupted. On the contrary, in that case, as in full peace, the vessels of the neutral party may

navigate freely to and from the ports and on the coasts of the belligerent parties, free vessels making free goods, insomuch as all things shall be adjudged free which shall be on board any vessel belonging to the neutral party, altho such things belong to an enemy of the other; and the same freedom shall be extended to persons who shall be on board a free vessel, altho they should be enemies to the other party, unless they be soldiers in actual service of such enemy."

The revived Articles XIII, XIV, and XV from the treaty of 1799 provide that contraband carried in neutral bottoms may not be confiscated, but must be duly paid for; after a contraband cargo is removed, a neutal vessel must be allowed to proceed to its destination. If a neutral merchantman is convoyed by a neutral man-of-war, the war-ship's commander has but to state that the other ship is under his protection to establish the status of ship and cargo without further examination.

Read this part of the treaty—more especially that Article XII—says the New York Sun, "and remember that it is written on the same scrap of paper where are recorded the contract engagements to which statesmen at Berlin now call attention and which Berlin asks us to reaffirm." Washington is no longer under obligation to consider the Prussian treaties, in the opinion of the Detroit Free Press. since they are no longer in existence; Berlin is "demanding recognition of the non-existent."

But to so good an authority on international law as Prof. Ellery C. Stowell, of Columbia University, this position seems quite untenable. Germany might violate the treaty articles relating to neutrality, and "with the outbreak of hostilities those articles would be at an end. On the other hand, the two articles relating to the state of war are as distinct as the they had been included in a separate treaty." They are made especially and solely "for the event of war, whatever may have been its cause," says Professor Stowell, as quoted in the New York papers, and the United States will, therefore, strictly observe them. In any event, he adds, "they are nothing but what any civilized state should accord on the basis of humanity."

The changes suggested by Germany would amplify the existing treaty so as to place Germans in this country and Americans in Germany, in case of war, on almost exactly the same footing as neutrals, and for an indefinite time, instead of the nine months' period provided in the treaty.

These suggestions are to be ignored by our Government, the New York Tribune's Washington correspondent learns. But the President has relieved the anxiety of some aliens lest their bank-deposits should be seized in ease of war by authorizing the statement that "all such fears are entirely unfounded." This the New-Yorker Studie-Zeitung bails "as a word of deliverance" which is "better than treaties."

MORE WATCHFUL WAITING.

-Brown in the Chicago Daily News.

WHERE THE OTHER NEUTRALS STAND

HE "CYNICAL SATISFACTION" of the German press that the "other neutrals" did not break with Germany impels some of our editorial observers, such as the Philadelphia Record, to assert that nevertheless their judgment is exactly the same as that of the United States, that the German course is "a violation of the law of nations and of the law of civilization." And the Seattle Times says an net which in the case of the United States is "heroic," in their

case "might border on insamity." The New York World cites Berlin newspapers as attributing the course of the small neutral nations to the sad fate of Roumania, and remarks that nothing is said of the tragedy of Belgium. which is "infinitely more a deterrent and formerly quite as much a Prussian boast." Aside from the United States and Latin America, we are further informed, neutrals in this confliet are "weak either in men or in money or in their exposure to attack," but their moral influence is "emphatically on the side of the President," who probably never expected anything more.

The roll-call of neutral opinion on Germany's course of action, remarks the Boston News Burcau, is virtually complete with the tripartite protest of Denmark, Sweden, and Norway, and it adds "that practically the whole non-belligerent world has told Germany in words of varying force but of single import what it thinks of the program she

elaims 'moral grounds' for inaugurating.' Sweden gives out the text of the joint note, this journal goes on to say, which declares that the Teuton blockade is illegal because of distance from shore, lack of prize-court provision, dangerous operation by means of submarines, lack of distinction among victims, trespass upon traffic between neutrals, etc. We read also that—

"Berlin is told that full reservations are made not only for 'material damage,' but also for the vital issue concerned—'loss of human lives."

"Holland on February 7 told Berlin that it 'can only see in such destruction of neutral ships violation of the rights of pations, to say nothing of an attack upon the laws of humanity."

"The Spanish Premier has said: 'It was our absolute duty, incumbent on all governments, to protect the lives and properties of our citizens against illegal attacks."

"Switzerland 'protests energetically' against the 'attack upon the rights of peaceful commerce."

"Brazil has protested to Berlin against the 'imminent menace of unjust sacrifice of lives, destruction of property, and wholesale disturbance of commercial transactions."

"Peru serves notice that it considers the U-boat program 'opposed to international law and the legal rights of neutrals.' Bolivia uses still stronger language. Argentina laments 'such extreme measures,' and expresses opinion by inference in saying it will in cases that arise apply 'principles and fundamental rules of international law.'

"China flatly tells Berlin that the consequence of the new program 'imperiling lives and property in violation of international law' will be a severance of relations.

"And all the neutrals, including even Greece, serve notice of full reservation of rights of their ships and citizens.

"The whole world—the joint 'opinion of mankind'—points the finger of accusation at Germany as a deliberately lawbreaking criminal," While it is not difficult to understand the refusal of the European neutrals to follow the lead of the United States, says the Chicago Post, it is more so in the case of South-American countries, who could risk but little in making common cause with us. These nations that now hold back are forfeiting their right to a determining part in the ultimate readjustment, which The Post conceives to be "the most serious phase of their cautious policies," and this journal adds:

"For this reason it would be well could the western world be

represented by both northern and southern continents. The United States would welcome the comradeship of Brazil, Argentina, and Chile. These four great republies could speak for the democracies of the Americas in a voice of power.

"For this reason, too, it would be well if the claims of the smaller nationalities, now represented by Belgium, Servia, Montenegro, and Roumania, could be strengthened by the pleas of Holland, Denmark, and Switzerland."

But the New York Herald points out that the attitude of the neutrals of South and Central America is dictated by the diplomatie situation in which they find themselves. This situation is "that of the United States before the sending of the Susses ultimatum on April 19 of last year." They have not had the direct issues with Germany that we have had, it is pointed out, however much they approve the stand taken by this Government in the Sussex case, and the step made necessary by Germany's recantation of its pledges following that affair. The

fact is, The Herold adds, that "diplomatically the Sussex ultimatum and the resultant understanding was ours, not theirs."

Altho the other neutral nations have not severed diplomatic relations with Germany, remarks the New York Evening Post, they have nevertheless made clear their attitude toward that nation's policy of "lawless and inhuman warfare at sea." And this fact, "when it penetrates to the consciousness of the German people," will not be without effect. For—

"In the end a nation even in desperate mood must experience a sense of recoil and apprehension when it is made aware that its policy goes counter to the deeply rooted convictions of the civilized world."

Admiration for China is exprest in many quarters because that Government of all the Powers that have followed the lead of the United States in notes of protest to Germany, remarks the Brooktyn Eagle, is the most aggressive, the "the dignity of the Orient" is in her phrasing, and this journal quotes from the document the declaration that "if, contrary to expectation, this protest be ineffective, China will be constrained, to its profound regret, to sever diplomatic relations," "No weased words" are these, comments The Eagle, and the Pittsburg Chronicle Telegraph points out that—

"China will not be able to do much physically in the event of a war between the United States and Germany, but this action shows that the Chinese heart is located in the right place. China does not forget that the United States was the first nation to recognize the new Chinese republic; neither does it forget that the Kaiser's orders to the German portion of the punitive expedition into China, on the occasion of the Boxer insurrection, were characterized by great severity, in marked contrast to the orders issued to troops of other nations,"

GERMAN NOTION OF NECTRALS' PLACE.

-Thursty in the Scattle Daily Times.

Opprighted by the International Frontiscome, New York

ONE OF THE 550 "SEA WASPS" BUILT BY AN AMERICAN FIRM FOR THE BRITISH NAVY.

These "submarine chasers" are 80 feet fong, draw only 4% feet of water, have a speed of 22 knots, and can turn in their own length. Each is armed with a 3-inch rapid-fire gun on the forward deck.

"LIMITED-LIABILITY" WAR

N CASE WAR COMES with Germany, what is to be our relationship with the Entente Alliance? This is a difficult question which the Newark News would have us consider thoroughly in advance. There is, on the one hand, our reluctance to become entangled in "any territorial or commercial aspirations" held by the Alliance, and, on the other, our purpose "to fight Germany in the most effective way possible, if it comes to war," Mr. Oswald Garrison Villard recently returned a categorical "No" to the question whether he would resist an invasion of America. On the very same day Congressman Callaway (Dem., Texas) publicly asserted that it would be "cowardly for the United States now, or at any other time, on any pretext whatever, to declare war on Germany." Now the true American attitude, the St. Louis Globe Democrat believes, is represented neither by such pacifists as these, nor by "the Gardners," "the pro-Ally enthusiasts who urge the United States to side with the Entente Allies." As a "clear-cut declaration of the American position," the St. Louis ellitor recommends this statement made by Congressman Lenroot (Rep., Wis.) who said in the course of a speech containing a rebuke to the ultra-pacifists in Congress:

"Representing the great American people here, we will vote to maintain, by force if need be, our liberties upon the sea; but that does not mean that we will vote a general declaration of war against Germany. It does not mean that we will intervene in the European war. It does not mean that we will send our men to the trenches of Europe. It does not mean that we are to sit in and determine the terms of settlement of European questions. It means only that we are going to settle our difficulty with Germany by compelling her to respect our rights upon the sea.

"If war must come, it will be a war opon the sea, destroying every German submarine that we can and protecting our own ships until such time as Germany shall cease to be an outlaw upon the sea. When Germany shall again respect our rights our quarrel with her will be over and we will be ready to make peace with her, regardless of European nations or European quarrels."

The Globe Democrat thanks Mr. Lenroot and says for itself:

"We should not fight for a united or an independent Poland, for Italy irredenta, for making Constantinople a Russian or a neutralized port, for reparation to Belgium, for the restoration of Alsace-Lorraine, for laying the ghost of Prussian militarism, for keeping Germany from a place in the sun, or for any of the other ostensible ends of the great war. Our concern would be to make Germany quit sinking merchant vessels without opportunity to rescue crews and passengers.

"Whether any step we took would help or hinder the cause of the Entente Allies would be a mere incident." Uncle Sam, if forced into war with Germany, says the Milwaukee Sentinel, "would 'fight his own hand,' and having gained his own end would cease fighting." As The Sentinel reminds us:

"He 'fought for his own hand' against Great Britain in 1812, and not as an ally of the Continental Powers with whom England was embroiled. Nor would the United States in case of war become a party two facts to the compact between the Entente Allies not to conclude a separate peace."

It is the belief of the Harrisburg Patriot (Dem.), controlled by the chief manager of President Wilson's campaign for reelection, that the President is himself inclined to this view. Mr. Vance McCormick's paper agrees that "to embrace the cause of the Allies at a time like this would involve all the far-flung agreements of that coterie of nations, the partition of Europe, the destinies of African and South-Sea colonies, and a deal of other affairs in which the United States has no interest whatever."

On the other hand, the Indianapolis Star declares it foolish to imagine we would "go it alone" in case of war with Germany. Ex-President Taft recently warned against the folly of "limiting the extent or demand of a war" in advance. And his brother's newspaper, the Cincinnati Times-Star, declares that "there is no such thing as a limited-liability war," If war with Germany comes, says the New York Globe, we will be safe from invasion only "because the Allied nations are sacrificing their boys in the trenches . . . and are we to accept all this without thought of belp?" The New York World is convinced that we have now "come to a point at which our national interests run parallel to the interests of the western countries that are at war with Germany." So is the Newark News, which says:

"In so far as the purpose of the Entente is to put an end to the control of Germany by the gospels of force, militarism, and domination, we are entirely in accord with the Entente and must recognize the fact. We are not fighting simply because of submarine warfare, altho it is that which will bring war if it comes. We will be fighting because the revival of submarine warfare simply shows that Germany has not changed her mind as to the eventual results of a policy of force; is not, as we once believed, receptive to similar international ideals as were exprest in the 'liberal peace'; prefers to attempt to dictate terms by arms. Once provocation is given, we could not stop fighting simply because Germany might abandon submarine warfare to get us out of her way. Until Germany showed a change of heart and a different outlook as to her relations with the world, we could not think that we had accomplished our purpose."

If we go to war with Germany, it will not be over any particular "overt act," asserts the New York Tribunc; "we shall fight to defend a principle." Hence we should cooperate to the fullest extent with Germany's present enemies, for, only thus can the principle for which we fight be securely reasserted." A "localized, isolated, imitation war" would just suit Germany, we are told. But The Tribune does not expect such a war, and agrees fully with the military expert of the New York Times, who says:

"We can not enter the war alone. Whether we like it or whether we do not, if we declare war on Germany or she on us, we become one of the Allies. To conduct the war all by ourselves, without regard to the general plan of the Entente, ignoring them completely, would be the safest and surest method of suicide."

The policy outlined by Mr. Lenroot, the New York San admits, expresses the wishes of many Congressmen, of a large section of the American people, and probably of the President himself; yet it is a policy "filled full of the very gravest menace to the future well-being of the United States." For the time being, says The Sun, the "humanitarian issues of the war," the killing of Americans, affronts to our representatives, and acts of German sympathizers in this country, may all be forgotten or condoned, "and war be based on the sinking of a single ship. But with the very first erack of a four-inch gun fired from an American cruiser at a German submarine the whole black indictment of Germany would be writ large on the consciousness of this nation, and the war would be fought in the name of humanity."

UNCENSORED NEWS FROM GERMANY

THE NEWS FROM GERMANY has been so confusing during the past year that the public has been in doubt about the real conditions in the Empire, remarks the Des Moines Capital, which, with other journals, gives great weight to the uncensored dispatches coming from correspondents who have left Germany since the rupture of relations. The most striking item in the news transmitted is that the real "boss" of Germany is General von Ludendorff, First Quartermaster-General, who is the Chief of Staff of Field-Marshal von Hindenburg and also his trusted colleague. His hand is felt now not only in the strategic direction of the armies of the Central Powers, but also in Germany's whole economic and social life. Paris dispatches say that Americans arriving from Berlin, who were in a position to see "what was taking place behind the screen," report that General von Ludendorff appears to be the brain of the Army, while Field-Marshal von Hindenburg is the arm that executes his military plans. Ludendorff's voice in purely political and foreign policies, we are told, is due to his immense influence in the entourage of the German Emperor.

It appears that he dislikes Americans and is contemptuous of their military strength, the aware of its potentialities, and holds that so far as any military organization is possible it could not be brought to bear upon the present war, which will be finished, in the opinion of General von Ludendorff, before the United States could get into action. It is the conviction of the von Ludendorff group, we are told, that the submarine war can be successful against England within three months, and that in any event it is "a powerful arm for immediate and continual use until the war is ended." The military situation in Germany, according to this Paris dispatch, is beginning to be affected by the exhaustion of man-power. All men between the ages of eighteen and forty-five have been gathered for the Army, and workmen within these ages have been replaced by men physically unfit for active service or below or beyond the age limits, and we read-

"The German loss in dead, officially placed by the last public announcements as having reached slightly beyond 1,000,000 officers and men, is, according to cautious estimates, 300,000 or 400,000 beyond that figure. The sanitary service of the German Army has been very good, and because of this a high percentage of wounded soldiers has been able to return to the

active army. Yet the number of permanently disabled among the wounded probably will bring the irreplaceable losses considerably beyond the 2,000,000 mark."

A different account of Germany's military condition appears in an Amsterdam dispatch to the London Times, which quotes an American who has lived for eighteen months in Frankfort as saying that every German man of military age who is not

THE ARM AND BRAIN OF GERMAN DEFENSE.
Field-Marshal von Hindenburg and General von Ludendorff.

engaged in the munition-industry has been ordered into the Army, with the result that the German troops are now more numerous than at the beginning of the war. The resultant drain on other industries is supplied in large part by the mobilization of women workers. In a Paris dispatch from Mr. Carl W. Ackerman, formerly in Germany as representative of the United Press, we read that a feminine army of a million will step into the places of all possible civilian male workers and that the women's activities will take them right up to the firing-lines. The plan was arranged by the War-Service Bureau, and the women who volunteered first will be given perferential consideration in the appointment of officers. Certain women directors will be sent to headquarters on the various fronts to direct their auxiliary forces in cooperation with the military commanders. Empress Augusta gave first evidence of this extreme measure by her appearance at headquarters on the Kaiser's birthday, when important decisions were reached.

Ludendorff ist dafür ("Ludendorff is for it") is the prophetic phrase that has preceded all the great decisions of recent German policy, we learn from an Associated Press dispatch from Geneva. It preceded the introduction of universal auxiliary labor service, the conversion of German industry to an absolute war-basis, the transfer of Belgian workmen to Germany, the tightening of the food-distribution regulations, and finally unrestricted submarine war. We are reminded that in the exciting days of 1914, when the original German commander in the East had

determined to retire before the superior Russian forces, General von Ludendorff was hurried eastward from Imperial Headquarters and picked up Field-Marshal von Hindenburg on the way to save the situation. Now he has only extended to all Germany the system which he introduced in the East when von Hindenburg was merely the overcommander of the Eastern forces. In the occupied districts of Russia full control of the administration lodged with General von Ludendorff, and to him were referred such questions as a new customs tariff for Poland, regulations for the tobacco trade, and new municipal regulations.

When he secured control of the factors of general economic life in Germany, we are told, his first decision was to remedy as far as possible the error of General von Falkenhayn, former Chief of the General Staff, who had attempted to fix the figure for the maximum consumption of munitions and had sadly underestimated the required amounts. General von Ludendorff's determination was to produce "not the amount of guns and munitions which experts might calculate as necessary, but the maximum amount of which Germany's industries were capable." To this end he subordinated all else, and we read that—

"From this came Germany's scheme of mobilizing the entire labor-supply in direct service of the Army. The idea of the compulsory employment of Belgian labor in German industry, it may now be stated, was also General von Ludendorff's, not Governor-General von Bissing's, or, at any rate, when Governor-General von Bissing and the civil administration of Belgium raised against this scheme the impossibility of carrying it out without exciting diplomatic complications, it was 'the higher military authority' which overruled the objection and ordered the plan put into effect,"

This Geneva informant also says that it is an open secret that the farming classes are "holding out" food-supplies from the general stock for the nation's necessities, and it appears that the "von Hindenburg appeal" to the patriotism of the farmers to provide extra fats for munition-workers, which brought out tons of pork and lard from hidden places, was inspired by General von Ludendorff. We read then:

"All these decisions and determinations, of course, are covered by Field-Marshal von Hindenburg's name and authority, but the Field-Marshal leaves such non-military problems almost exclusively in the hands of von Ludendorff—the man who, as far as that is possible, is the dictator of Germany."

GERMAN TRENCHES BEING SHELLED BY PAR-DISTANT PRENCH GUNS.

The heavy artiflery situated far in the rear keeps up an almost increasant bombardment of some section of the Western front.

THE WAR TO END THIS YEAR

PEACE WITH VICTORY will be attained this year, says Field-Marshal Sir Douglas Haig, who tells us that be is now in a position to break through the German line on the Western front at any point and at any time that he may choose. This optimistic estimate of the difficulties that he be-

fore him was made by the Field-Marshal for the benefit of a group of French journalists who were received at the British Head-quarters in France. Sir Douglas Haig said, however, that railroads and artiflery were still needed before the final "push" came:

"Our two most serious prececupations at present are railway and artillery. We have had to construct within the last few months in the rear of our lines over 350 kilometers of railway lines, and recently I sent for the managers of the greatest railway companies in England. I showed them on the spot what had been done and what remains to be done. They understood the urgency and extent of the task.

"As regards munitions, we have realized the maximum. At

this moment we can supply our allies in excess of their needs. We must, however, have more artillery, especially heavy artillery. The point is not merely to be equal to the enemy, but to overwhelm him with the whole of our strength."

When the British leader was asked if he would begin an offensive shortly, he replied:

"Who will commence it, the French, the Germans, or ourselves, that matters little. If the enemy commences either in the north or south in salients which appear to him favorable or on the former fields of battle, we are ready to receive him, and his effort will cost him dear. We have armies trained and fully equipped, so that at no moment will there be a possibility even in the rear that he can be able to reentrench himself.

"You ask me whether we shall break the German front.

Most certainly we shall, and severely and at many points. The Germans, to defend themselves behind their front, have a very powerful network of railways. The first attacks of the general offensive may find themselves defented at some points. But we shall strike with full force until we achieve the total destruction of the German Army."

Peace may not come signed,

THE SPRING OFFENSIVE!

Once again the Spring sowing will be differently watered with ink.

— © Kladderadaisch (Berlin).

Jamary I, 1918, says the Field-Marshal, but peace, in the sense of victory gained, will certainly be attained in 1917. As he phrases it:

"The year will be decisive in the sense that one will see take place on the battle-fields the decision of the war, that is to say, the event after which Germany will be shown to be beaten militarily. It may be that the year of decision is also the year of peace. We all desire and shall do everything in our power to bring about the desired result. Peace can only come with absolute victory, which will be attained by the force of our arms."

The Field-Marshal is not alone

in this opinion, for, according to the Moscow Russkoye Slova, General Brussiloff, addressing his staff officers, remarked:

"Information at my disposal and my personal conviction warrant me in saying that I am certain—just as certain as that I am standing before you—that during the coming year the enemy will be finally and completely routed."

That Germany is equally confident that the end will come this year—also in victory—is evident from the German press, which expect an early Franco-British attack in the West. The Berliner Tageblatt, in discussing prospects, says:

"All German intentions are veiled in impenetrable silence.

All the greater is the noise made by the enemy about factical moves as the prelude to overwhelming strategical ideas. Only

one thing is sure—that the whole German front, strong, menacingly armed, and bitterly determined for the final fight,

believes in great events in the spring.

"It appears that of our two enemies the Englishman has the toughest will for the fight. Most of the French remain faithful believers in the idea of victory, and will pursue the combined plans under the banner of their hopes. Over there, as over here, there are the same tense expectation and yearning for the end of this terrible time. The English, in so far as they are new-comers in this theater of war, seem to approach the matter somewhat more coldly. They have been well worked up by their Government and their Press, so that even some of the front-line troops seem not to have been affected at all by the German offer of peace,"

Far greater efforts than ever before, thinks the Frankfurter Zeitung, will be put forth by the Entente in the spring, and the Central Powers will continue "to go on fighting in a theoretical defensive, which, however, ean, of course, find its strategical expression in a practical offensive." The Frankfurter Zeitung continues:

"The question where we, and where the enemy, will take the offensive is stirring all minds in these weeks of preparation, and as a natural psychological consequence rumor is again in a state of activity. For the daily press to make complicated calculations about this question is unfruitful, because the necessary foundations for its solution are lacking. And what the enemy press write about it must also—with a difference of only more or less—be based upon speculation.

"The taking over of parts of the French front on the Somme by the English Army, which is some two million strong, permits the inference that French forces are to be released. These released forces, strengthened by new formations, will presumably take the offensive between the English right wing and the Swiss frontier. But the decision as to where this offensive will militarily be most appropriate we leave to the French General Staff. This French offensive is being prepared by reconnaissances, which in some cases are of quite a vigorous kind, and by 'retaining' feelers along our front, while we, for the matter of that, proceed in exactly the same way."

STOPPING THE TRAIN.

THE KAISER—"Hi! Hi! Why don't you get out of my way?" —Esquella de la Torratra (Barcelona).

BRITAIN AND THE GERMAN COLONIES

HOLDING IS KEEPING," say the British statesmen when discussing the position of the German colonies, all of which, with the exception of a tiny area in German East Africa, are now in Allied hands. At the same time they do not at all approve of the same doctrine being applied to Belgium, Poland, and other territory now occupied by the Central Powers. While these views have long been current, it is now officially announced that, come what may, the German colonial possessions are not to be restored after the war. As reported by the London Morning Post, Mr. Walter Long, British Colonial Secretary, speaking at a meeting at Westminster City Hall, thus announced the British policy:

"We have acquired possession of different German colonies in various parts of the world as a consequence of this war.

"Now, I speak with knowledge and with responsibility, and I speak as the representative for the moment of those overseas dominions which are the pride and glory of our Empire to-day, when I say: 'Let no man think that those struggles have been fought in vain. Let no man think that these territories shall ever return to German rule.'"

If the British succeed in carrying out their program, Germany stands to lose a vast amount of territory. The London Daily Chronicle sketches Germany's colonial empire for us when it remarks:

"Germany has lost all her colonies except one (German East Africa), and that vast territory will soon be in possession of the British forces who are fighting there. The following are the areas in square miles of her lost possessions:

SW. Africa	322,450	Pacific Colonies	94,640
Kamerun	300,000	Klaochow	200
Togoland	33,700	Total	750,990

"The area of German East Africa is 384,180 square miles, The German Empire in Europe comprises 208,780 square miles of territory."

THE OFFENSIVE.

GERMANY (in the breakers)—"Is it imagination—or do my legions really begin to waver?"

—De Amsterdammer.

Commenting editorially on Mr. Long's statement, The Chronicle Says:

"Mr. Walter Long made a very important declaration yesterday-namely, that none of the German colonies would be restored. He used words implying that this was not his individual opinion, but the decision of the Ministry,

"We welcome the declaration because (like the Czar's declaration to his Army about Constantinople and Poland) it clears up a point which there are risks in leaving ambiguous. In regard to Germany's Pacific colonies, and also to Southwest and East Africa, the British Empire has a vital interest, because a decision to return them to Germany would cause a grave breach between the mother country and three of the five Dominions. We are morally pledged to the Dominious in the

"In regard to the Kamerun, France and Belgium are inter-

ested as well as ourselves; and we can not imagine that either of them would willingly consent to have Germany for a neighbor there again. Togoland is a small colony, but it was used to erect a great wireless station for the assistance of Atlantic commerceraiders; and the submarine development strengthens the argument against returning what would be a merely strategical asset.

"Japan's retention of Kinochow is taken for granted. Mr. Long's statement might be usefully supplemented some time by a similar one regarding the Mesopotamian end of the Persian Gulf. It bears much the same relation to India that German Southwest Africa bears to the Cape; and India deserves to have the claim put on record."

How Germany values her colonies can be seen from a recent

article by Paul Rohrbach in the Kölnische Zeitung, where he states that need of raw materials makes colonies imperatively necessary to the future of the Fatherland. He continues:

"Of course, after our experiences in the matter of colonies, it is advisable to include a strong African colonial policy among our war-aims at the conclusion of peace, and create a real colonial empire in one or two big, compact blocks out of the hitherto scattered possessions which can not be permanently defended. Once this foundation is obtained, it will also be possible to found the necessary lines of connection—the fact that the African coasts on the east and west are only approachable in a few places favors this assurance strongly-and to make an organic, selfsupporting, self-defending colonial empire out of the whole."

Dr. Solf, Germany's Colonial Minister, thinks that the colonial question will ultimately involve Germany in another war with the Entente. His arguments are set forth in a pamphlet from his pen, entitled "The World's War-Lessons for Our Colonial Policy," and his conclusions, as quoted by the Berlin Kreuzzeilung, run:

"If the statesman is permitted to draw conclusions from the teachings of the past, I find sure comfort for my colonial hopes in the conviction that the coalition which the world-war has raised up against us can not last. The Entente is an artificial formation, which is contrary to all history and the traditions of each of the Western Allies. The Entente will go to pieces on the impossibility of attaining its end, the annihilation of Germany. When the cannon are silent, we may reckon upon the arrangement of a grouping of the Powers which will better protect the world's peace. Our protectorates will never have to submit to such an unfavorable constellation as the present one."

The Essen Rheinisch-Westfälische Zeitung, however, significantly remarks:

"We, too, have still territories in our hands which we need not return to their original owners. Of this the British Government must also take note."

GERMANY'S NEED OF VICTORY

NCONCLUSIVE PEACE means a victory for the other side. On this point the publicists in both belligerent camps agree, and both sides urge their respective nations to fight on until victory is gained. The semiofficial Kolnische Zeitung tells us why Germany needs, and must gain, a victory by drawing an awesome picture of Germany in defeat:

"What our enemies want is pretty much all that we or our allies possess. The Russian wants Constantinople, Galiein, the Bukowina, East and West Prussia, and Posen; the Italian wants Trieste and a part of Tyrol; the Frenchman wants Alsace-Lorraine and the left bank of the Rhine; the Englishman wanta our Colonies, and of course also Heligoland and the ports on the North Sea and the Baltie. Our Navy, the whole of our artil-

lery, and all our munitions are to be handed over, our Army is to be disbanded, and our people is to be made defenseless.

"In addition, our people would Further, our

have to restore all the territories injured in the course of the war. and give guaranties for the future that it will never again take its own independent road, which might cross the roads of other peoples. people would have to pay a war indemnity of, let us say, \$25,000,-000,000, and our enemies would be so kind as to facilitate the raising of this sum by taking over the administration of all public undertakings, controlling communications, forests, and other profitable possessions, so as to deprive the State of all revenue. In a word, our enemies want nothing more and nothing less than to destroy Germany and to make our German people into the beggars of Europe.

"What this would mean ought to be clear to everybody in these expensive times. Thanks to our highly developed industry, our country was hitherto able easily to feed its seventy million inhabitants. The standard of living had improved constantly in all parts of the Empire, because of the constantly increasing opportunities of work. Emigration had almost entirely ceased, and had even given place to immigration and the return of emigrants. If our enemies have their will, our industry, by means of cunning cutting off of the imports of raw materials, will be reduced to a very modest level, totally inadequate for the needs of our people. Our people will be compelled to become once more the people of poets and philosophers, watching with hungry eyes how our enemies at their loaded tables enjoy their common spoils. And then, under the pressure of general want and of sorrow at the loss of the Fatherland, emigration will set in again, and the sons of our people will fertilize with their sweat the workfields of the world for the benefit of other people, while foreigners grow rich in Germany."

Going on to consider an inconclusive peace, the great Rhenish organ argues that some tangible asset must be acquired by conquest to offset the enormous burden of taxation the present war involves:

"Even a premature conclusion of peace, without a proper decision, would, for our people, be equivalent to a defeat. Our people would have to bear enormous burdens, and it must not be forgotten that the decisive war would have to be fought in a few years after a short peace-pause. If our people had to cover the interest on our loans, provide for the disabled soldiers, think of the widows and orphans, and at the same time arm appropriately for the coming war, they would have, according to a superficial calculation, to provide every year a sum of about three billion seven bundred and fifty million dollars. This sum would have to be raised by taxation. And in addition to the almost intolerable burden of taxation we should have the disturbing expectation of the decisive war. Who could accept this? Hard the the sacrifices for our people may now be, what we have to do is to hold out and win the prize of victory."

NEARLY ALL CONE.

GERMAN EAGLE-"Dash it all, there's the last of my Colonial tailfeathers nearly gone," -Westminster Gazetie.

IN FREE POLAND

Ling in the press of the Allied countries, where it is alleged that the plight of Poland is worse even than Belgium's. While such stories must be received with considerable reserve, yet there is something significant in the persistence with which they appear, and it tends to show that conditions in Poland and Belgium have much in common. From a neutral country we take this account of the state of Poland as told by a Polish gentleman from Warsaw to the Amsterdam Telegranj. He says:

"The Germans have installed themselves in the great Polish

eity as if they were at home. For some time past there has been a resumption of business in the city, especially in certain Jewish quarters, notably Nalevki, Gesia, and Bielanska streets. All industry in the country is dead. The factories are closed, and the machinery of the greater part of them has been taken down and sent to Germany.

"The German authorities have removed the bells from the Orthodox churches, and also from certain Roman Catholic churches.

"Attempts have been made to seduce us by fallacious promises to enrol in the German armies and factories. Very few have been taken in by these efforts, and those who accepted the German offers have only regretted it. The Germans are employing propagandist agents for the Polish Legion. They are Poles from Posen with a strong German aecent. The population laughs in their faces,"

Deportations to Germany to fill the depleted ranks of labor seem to have taken place in Poland as well as Belgium:

"The suspicion of the Labor party is justified by the mass deportations of workers from Poland, hundreds of thousands of whom are condemned to hard labor without trial. At Praga,

the largest suburb of Warsaw, the Polish laborers have refused to work for the German military authorities and have been punished severely.

"All the material for industry—the copper, the factory machinery, the dynamos, the motor parts, the cotton, and the wool—has been confiscated by the invader. In a certain number of

large factories and warehouses only the four walls remain. The Kommandantur requisitions everything, even to clothing and the shop-earpets. Provisions are becoming constantly searcer, and the poorest part of the population at Vola has begun to kill dogs for food.

"More crushing and agonizing than this increasing famine,

"More erushing and agonizing than this increasing famine, however, is the moral oppression, the menace of which is over the country. The 'Courts of Blood' perform their work without cessation. Firing parties are always at work. In the neighborhood of Pilava innocent people have been shot.

"Before my departure I saw with my own eyes how the Germans proceed in the sweeping away of men. At night cordons of troops surrounded a working-class quarter at Warsaw not far from the Nadwislanska Station with loaded rifles, 'Alles beraust' ('All out') ordered a sergeant. Then occurred a tragic scene. The soldiers chose here and there those men and women whom they thought suitable, separated brothers and sisters, mothers and children, and compelled those whom they declared good for slavery to leave immediately. Thus more than 100,000 men and women were removed from the part of the country under the Government of Warsaw."

If the above is a reliable account of current events it is not

surprizing that the Poles have not hailed their new-found freedom with any great enthusiasm, and it is evident from the Berlin papers that "all is not going well with the new Polish kingdom," as Die Post puts it. In describing the meeting of the first Polish State Council recently held in Warsaw, Die Post notes the lack of political cordiality between Germans and Poles, and proceeds:

"Despite the utmost efforts on the part of the German authorities, the principal political groups of 'Congress-Poland' will not cooperate effectively. The State Council was to meet before Christmas; but negotiations dragged on. . . . Also the number of volunteers for the Army is negligible. Both the National Democrats and the Realists have demanded the postponement

> of the Army question until the Polish State has been definitely formed. If such views persist or gather strength, there will be no doubt that the Provisional State Council will be a mere rump. . . . These experiences lead us to feel that, as the outcome of all our exertions on behalf of Poland, Poland refuses to be Germany's friend."

The Petrograd Kurjer Polski, one of the organs of the "Realists," who demand the inclusion of Galicia and Posen in any new Kingdom of Poland, is inclined to think that Austria is willing to cede Galicia to any really stable Polish State, but that German Poland will never be released by Prussia. These views receive some confirmation from the comments on President Wilson's reference to Poland in his recent peace-note. For example, the Kölnische Volkszeitung remarks:

"And there is a further point in President Wilson's peace program which we must reject as entirely outside discussion, and even an intolerable suggestion—namely, his demand for a united, independent Poland, Clearly, he has in mind the separation of the

regions formerly belonging to the Kingdom of Poland, now betonging to the German Empire. In this matter we can only say, 'Hands off!' If President Wilson values our friendship, then be should never mention this question again,"

OLORIOUSLY FREE

Occurs Official.—"I am deputed by the All-Highest, dear Poland, to welcome you into the comradeship of arms which you have assumed of your own free and independent will."

-Mucha (Moscow, late Warsaw).

FEMININE TROUSERS FORBIDDEN—The relaxations of war seem to have had curious results in southern Germany, where some of the ladies have shocked their neighbors by assuming a masculine freedom both in manner and attire. The military commander of the Munich district, says the Berliner Tageblatt, has issued an order which runs:

"The appearance of many ladies in Garmisch-Partenkirchen (a favorite resort in the Bavarian Alps) has provoked among the population of that place lively anger and indignation. Anger was particularly directed against those ladies, not seldom of ripe age, who, without sporting reasons, continually show thems does in public in trousers. It happened that ladies in this costume visited church during service. Such behavior is detestable to the homely, serious feeling of the mountain population. In consequence thereof, many disagreeable scenes occurred in the streets. The authorities, clergy, and private persons approached the military authority with a request for the help of the latter, who has authorized the local authority at Garmisch to proceed energetically, if necessary with police measures of compulsion, against the nuisance,"

SCIENCE - AND - INVENTION

DOES THE "MELTING-POT" MELT?

Is the United States "The Melting-Pot" of the races? Dr. Ales Hedlicka, of the National Museum of Washington, thinks not—at any rate, not yet—all our poets and playwrights to the contrary notwithstanding. He has been investigating the older contents of this pot, and finds that even the material which went into it first has not yet melted. Several hundred members of the old, white, American stock have been measured and examined to find whether the people making up this stock are tending to become alike—whether a new subtype of the human race is being formed here, due to inter-

marriage, environment, and the pressure of circumstances. Dr. Hrdlickafinds that such is not the case. Even the descendants of the Pilgrim Fathers, the Virginia Cavaliers, the Pennsylvania Dutch, and the Huguenots, while possibly not as much unlike as their ancestors were, are still, he thinks, far from a real blend. Says The Journal of Heredity (Washington, March):

"The Melting-Pot' is a figure of speech; and, as far as physical anthropology is concerned, it will not be anything more in this country, at least for many centuries.

Dr. Hrdlicka has had this investigation under way for four years, and it is not yet fully completed for Americans of unbroken American ancestry for even three generations are much searcer than was supposed when the work was undertaken. Even the proud 'Mayflower Descendant' is more likely than not, it would seem, to have at least one grandfather or grandmother who was born abroad. So the investigator has, up to the present time, been able to get only about three-fourths of the two hundred men and two hundred women whom he wants, and the conclusions here annonneed must be regarded as not wholly final, yet doubtless reflecting the real conditions. With this understanding, some of the more remarkable of the preliminary results, based on the first one hundred men and one bundred women measured, may be cited.

"The most striking result of the examinations,' Dr. Hrdlicka says, 'is the great range of variation among old Americans in nearly all the important measurements. The range of variation is such that in some of the most significant determinations it equals not only the variation of any one group, but the combined variations of all the groups that enter into the composition of the Americans.' This fact would be interpreted by the geneticist as an evidence of hybridity. It is clear that, at the very beginning, a number of diverse, altho not widely differing, stocks must have made up the colonial population; and intermarriage and the influence of the environment have not welded these stocks into one blend, but have merely produced a mosaic-like mixture. This is good evidence of the permanence of inherited traits, altho it must be qualified by the statement that it does not extend equally to all the features of the body, the face, bands, and feet having been found less variable than, for instance, the stature or the form of the head."

Dr. Hrdlicka finds that the stature of Americans of the old stock, both men and women, is 'agher than the European average, except in Scotland. The weight is about the same as in Europe, with a slightly greater tendency to stoutness in the women. The general proportions of the body he classes as medium. He says of these:

"Great fluctuations are shown, particularly in the chest—a feature which shows distinctly poor development among the women, often accompanied by deficient development of the breasts and shoulders. Indeed, one of the most striking of the facts brought out is that, barring individual exceptions, the women of the old American stock appear to be below par, physically. The males are, on the whole, admirable specimens

of the white race; the females are not infrequently undersized, underdeveloped, and weak in comparison with what they should be. This difference is not due, the investigator thinks, to heredity, but is solely a matter of bringing-up. It is already being corrected in the younger generation, he thinks, for under the stimulus of widespread interest in sports, outdoor life, and a sensible manner of living, not a few of the younger women and girls whom he has measured seem to be superior to their mothers. But he sees still room for improvement, if the women of the old American families are to be as a class such physically good types of womanhood as are the American men of manbood."

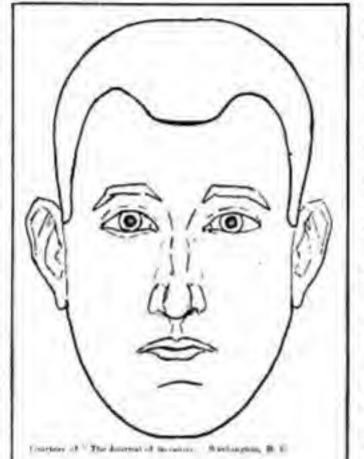

The American face, according to Dr. Hrdlicka, is high and oval, often somewhat narrow in the women. The forehead is well developed, the nose and ears long. Our faces seem to be growing narrower and our jaws smaller. Despite our supposed North-European ancestry, he finds no pronounced blonds. The men are apt to be dark and the women light. Only one-tenth of the women, and not a single man, had red hair. Most of the eyes were blues and browns, and black eyes were few. The head-form differed widely, but is noteworthy for its good development, especially in the men. The

writer goes on:

"Dr. Hrdlicka's study has further given him opportunity to find whether there are any marked geographical types among the old Americans: whether, for instance, the first families of Virginia are measurably different from the Puritans of New England. He believes that they are not—that such differences as are recognized are merely those of training, habits, dress, and social customs; and that this, likewise, holds true of the Westerners, whose more or less recognizable type Dr. Hrdlicka finds to be merely a matter of home influence, education, and dress, and not so much of structure or physiology.

"Two main objects were in view when the study of the old Americans was undertaken. One was to establish reliable norms or standards for anthropological comparisons. This purpose will be accomplished as soon as the number of subjects studied becomes large enough.

"The other main object in view was, as already said, to determine whether the descendants of the early American settlers, living in a new environment and more or less constantly intermarrying, were being amalgamated into a distinct subtype of the white race. Enough has already been found, as

Several hundred descendants of old American families have been measured, and this face has been made up of the average of each feature in all the individuals. Thus the diagram, drawn to scale from Dr. Hrdlicka's data by C. H. Popenos, shows "the mean man of the old white American stock." It is pointed out that the most conspicuous peculiarities of the type are the oblong outline of the face and the well-developed forehead.

THE AMERICAN PACE.

this preliminary report shows, to prove that such amalgamation has not taken place to any important degree. The persistency in heredity of certain features, which run down even through six or eight generations, is one of the remarkable results brought out by the study.

"If the process could continue for a few hundred years more, Dr. Hrdlicka thinks, it might reach a point where one could speak of the members of old American families as of a distinct stock. But so far this point has not been reached; the Americans are almost as diverse and variable, it appears, as were their first ancestors in this country."

SOME NEEDED INVENTIONS

AN ARTICLE entitled "What to Invent" was printed by The Electrical Experimenter (New York) in May last. Ever since, we are told in the February issue, the editors have been besieged by would-be inventors

for another list of the kind. Evidently there are hosts of inventive-minded persons who want to invent something, but feel the need of a shove in some particular direction. In the editor's words, "there exists an unsatiated demand for practical ideas of this kind." The editor, therefore, makes the suggestions quoted below, prefacing them with what he calls "a few words of advice to fortune-hunters via the Patent Office." He says:

"The practical-minded inventor, as well as the one who has but a modest income, should always ask himself these important questions, before spending his money on models or patent fees:

"First, Is the device useful? Secondly. Does it fill an actual want? Thirdly, If so, is the device practical and can it be readily manufactured and marketed? Fourthly, Is there a similar article on the market already?

"Only if these questions

have been answered satisfactorily to the inventor should be begin spending money on the device. Too many inventors are prone to rush to the Patent Office without asking themselves these all-important questions, with the net result that out of one thousand patents issued by the United States Patent Office less than three are ever taken up by a manufacturer or are actually exploited by their inventors.

"Then, again, far too many inventors are anything but practical-minded. Most of them lack business sense, and for this reason every inventor should submit his idea to at least one trusted business friend, who is not intoxicated with enthusiasm, as is almost every inventor worthy of the name."

The suggestions below are believed by the writer to cover all requirements. There is, he says, repositive demand for all, and if the correct solution is found, each invention will undoubtedly prove a handsome money-maker. Here are the needed inventions:

"Electric Air Cooler,—At the present time we use fans in the summer to 'cool' our sweltering humanity. Fans really don't cool, but simply stir up the heated atmosphere, and by causing drafts evaporate the moisture on our skins. This gives a cooling sensation. Electric fans, however, do not reduce the room temperature to any great extent, and for that reason are makeshifts at best. We should produce cold (lowering of the temperature) by some other electrical means. Peltier showed us that cold can be produced by crossing a bar of bismuth with a bar of antimony and sending an electric current through it in a certain direction. This is Peltier's cross. Why can not this principle—or a similar one—be supplied on a commercial scale, and incidentally make a fortune for its inventor?

"Electric Insect - Destroyer.—Every summer we are exasperated by flies and mosquitoes. Why not keep them out of the house or kill them by some electrical means? Electrically charged wire-netting has been used already, but it has many inherent faults. As a rule such netting can not be used on windows, as water or moisture puts the device out of order. Something more practical is required. Insects as a rule keep away from highly charged conductors (high frequency or Tesla currents). Perhaps this hint will put somebody on the right track.

"Electric Toys.—There is an immense market for cheap, electric toys. Something is wanted to keep a boy amused with a good electric toy operated by a dry cell. Years ago we saw an electric motor that sold for ten cents and actually ran. It was badly designed and badly made, otherwise the five- and ten-cent stores would be selling a million or more of them a

year. Here is a rich field, and it matters little if the article can be marketed for ten cents or one dollar—if the toy is right.

"Electric Window Attractions.

—A vast field for the elever inventor. Movable window attractions are in ever-growing demand. Everybody stops and looks at the least mystifying movable sign or what not. Electricity and magnetism supply unending combinations, and, providing the device is novel and cheap, thousands can be sold. Every retail store can use one. Can you supply it?

supply it?

"Bell 'Softener,'—A poor title for want of a better one. The harassed modern business man is of late developing what is termed as the 'telephone heart.' Every time the phone rings he starts, and if he is very nervous he jumps involuntarily. At home his wife is developing the same discussed.

veloping the same disease. What is wanted—badly wanted—is a device that will do away with the harsh, abrupt sound. Something 'soft' and mellow that doesn't jar one's nerves, and at the same time is not too

muffled, otherwise the calling signal can not be heard in the next room. Simply unserew the gongs and replace with your device. Can you furnish half a million at, say, one dollar each?"

Courters of "The Telephone Server," New York.

DIRECTING THE BATTLE BY TELEPHONE.

One of the actors in the great motion-picture hattle-scene which is being staged is here talking to director-general Cocil B. De Mille, who is stationed at the central camera-stand, wearing a telephone set connecting him with the posts of twelve assistant directors.

MOVIES BY TELEPHONE—In the production of a recent moving-picture play, we are told by *The Telephone Review* (New York, February), the telephone played a novel and useful part. Says this paper:

"Cecil B. De Mille, the director of the production, used telephones in connection with each camera and in this way was able to picture fourteen hundred men in a battle scene which extended over one hundred acres. Mr. De Mille was assisted by twelve directors stationed with cameras at various advantageous points around the field. Each director, as well as Mr. De Mille himself, was equipped with a standard telephone operator's set, an arrangement which enabled the directorgeneral to control the movements of the participants and direct the entire action of the battle from his post at the central camera stand. Everything that Mr. De Mille spoke here could be heard in the twelve different parts of the field by the twelve subdirectors at their cameras. The manager of the film company has stated that 'Usually at least two days are required to rehearse a scene of this magnitude, but by means of the telephonic instructions as given by Mr. De Mille, a little less than an hour was required for the perfection of the details prior to

THE DREAD OF WAKEFULNESS

HAT INSOMNIA for which no direct cause can be found is actually caused by the patient's fear that he will not be able to go to sleep is asserted by Dr. James J. Walsh, of New York, in International Clinics (December). Our quotations are from an abstract made by the author for The Medical Review of Reviews (New York, February). Patients, Dr. Walsh says, keep themselves awake for fear lest they are not going to sleep and in dread of the serious consequences of their wakefulness. This is true whether their 'nocturnal vigilance,' as one medical lover of long words called it, manifests itself at the beginning of the night or toward the end. Of course, wakefulness at the beginning of the night may be due to tea or coffee or sometimes, in young folks, to drinks containing caffeine, some of which are dispensed commonly in drug-stores.

Loss of sleep in the later part of the night, or in the early morning rather, is due to hunger oftener than to anything else. He goes on:

"Patients should be relieved of their anxiety just as far as possible. The dread name insomnia, which, as so many newspaper suggestions and innuendos insist, carries with it the danger of resultant insanity or nervous breakdown, should not be used, but the patient's condition should be simply called wakefulness. No one has ever been hurt by wakefulness alone, provided he or she has been in bed for eight hours. It seems to make no difference whether people sleep or not, because there are a large number of cases on record now where people either have been awake, or have been fully persuaded that they were awake and not a few of them were reasonably intelligent people, university professors and the like -nearly every night for weeks or even months at

a time, and yet have survived without injury to health. Old physicians will often tell of their own experience with wakefulness and their solicitude with regard to its effect upon their health, and yet they are alive to tell the story at past eighty years of age. People inclined to be wakeful should read quietly, have something to read near them if they do not sleep, and should be sure that they have good airy rooms and be persuaded that no harm will come to them and that nature will take whatever sleep she needs. The dread of insanity after insomnia is unfounded. People on the way to the asylum are sometimes wakeful, but their wakefulness is the effect and not the cause of their insanity. There are always other signs of the insanity, and wakefulness or insomnia is never the first.

"Sleep is largely a habit, and people who have been accustomed to go to bed at midnight or later and then try to go at ten o'clock will, unless they have been out a great deal during the day, commonly not sleep until their usual hour. If they become solicitous, then they readily keep themselves awake, worrying about their sleep. Insomniaphobia is just such a dread as akrophobia, the dread of heights, or agoraphobia, the dread of open spaces, or claustrophobia, the dread of narrow places, or the dread of the dark, all of which are quite unreasoning fears that disturb people very much. To give drugs for them is

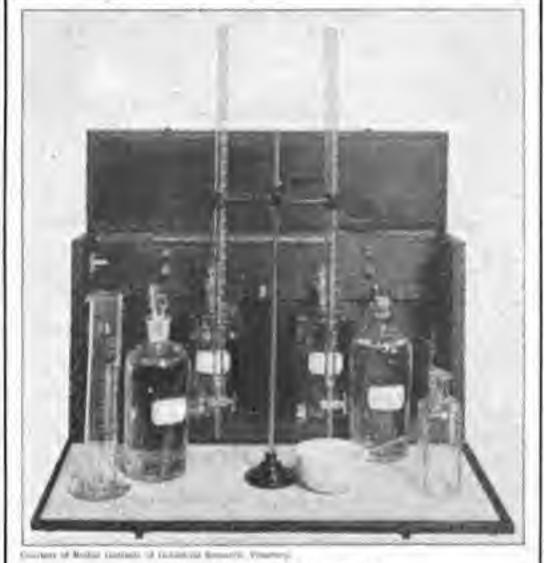

always a mistake. Certain physical measures, a hot foot-bath taken for ten minutes, a glass of warm milk with some nutmeg scattered rather plentifully over its surface, a hot-water bottle to the feet, massage of the muscles of the head, which keep people from feeling certain muscle tightnesses which they are often prone to call headache, all these, with even a cool pack in the summer time, may be employed; but drugs for wakefulness never do good and always do harm."

A LABORATORY IN A SUITCASE

A "SUITCASE" LABORATORY, which, for compactness, is a close competitor with the portmanteau theater, has been devised by the Mellon Institute of Industrial Research, in Pittsburg, Pa., for the use of laundrymen in testing the materials that they use. Says the Pittsburg Sun:

"The miniature laboratory . . . is one of the most recent

results of a research into the methods and materials of the laundry industry, instituted in the Mellon Institute under the auspices of the Allegheny County Laundrymen's Exchange Reduced almost to the ninth degree of simplicity, the new laboratory may be operated by any laymen who will follow the terse directions which accompany it. When closed, the device. closely resembles an ordinary suitease. . . . It may easily be carried without danger of breaking the glass equipment. Raise the handle side of the 'suitease,' lower the side which forms the lid of a normal suitease, and the laboratory is ready for operation. The lowered side provides a table for experiments. A metal base is fixt in its center. Into this a metal rod is inserted and to this affixt a clamp, made to hold the long glass tubes, or burettes, in which the tests are made. A graduate glass for measuring solutions, four bottles containing standard solutions for testing the

THE "SUITCASE" LABORATORY.

bardness of water, the presence of chlorin, of alkali, and of acid; and three small bottles, containing respectively potassium iodid, phenolphthalein, and methyl orange, complete the equipment.

"This device, according to Mr. Elledge [the designer], has been made to guard laundrymen against possible misrepresentation of laundry materials by merchants. It permits the laundryman to assure himself, without the expense of a formal chemical analysis, that everything used in his establishment for cleansing goods is of a sort that will do no harm to the goods entrusted to him. The result of the use of the new laboratory, if is predicted, will be a higher standard of laundry work. Damaging impurities by this means will be detected and eliminated, and the wear of washing on linen and other fabrics will be minimized. The purpose of the laundry research in the Mellon Institute. it is explained, is to awaken laundrymen throughout the country to interest in the value of chemistry to the laundry. In Pittsburg, according to institute authorities, this is not necessary, since the Allegheny County Laundrymen's Exchange has been the pioneer in applying chemistry to the laundry as the intelligence department. As a result of the work done in the Mellon Institute, similar activities are to be launched in Canada, under the auspices of the Canadian Government."

A GOOD FOOD WASTED

TE ARE THROWING AWAY, or otherwise wasting, in this country, some fifteen million tons yearly of valuable food from a single source—our milk-supply. We skim the fat from the milk and use it as cream or butter, but the food-value is mostly in the non-fatty parts, which we call contemptuously "skim-milk" and throw away or give to the pigs. Its sale is even prohibited by ordinance in New York and elsewhere. Whatever reason once existed for such a law as this, there is none to-day, writes John Phillips Street, chemist of the Connecticut Agricultural Station, in The Forward (New York, February). How a prejudice so violent against a valuable and wholesome food could have originated Mr. Street finds it hard to understand. Perhaps, he thinks, it dates back to the time when eream was separated from the milk by gravity and skimmed milk was necessarily old milk. There can be no reason for it to-day, when separation by centrifugal force shortly after milking leaves the skimmed milk fresh. He goes on:

"In spite of the delicious taste of cream, it is not the most valuable part of the milk, as some apparently intelligent people appear to believe. The exact contrary is, in fact, the case. The part of the milk left after the cream has been removed contains practically all the protein, sugar, and mineral salts. In the ordinary mixed dict, moreover, a sufficient amount of fat is supplied by meat, butter, lard, etc., so that the loss of this ingredient from the milk is of relatively little importance. Protein, on the other hand, being the most costly of the food-elements, is the one most likely to be lacking in inexpensive meals, altho generally used to excess by those who can afford it:

"For those who have to figure cost closely, therefore, skimmed milk offers a very valuable source of the most expensive element of the dictary. It is the cheapest available source of animal protein at the present time. Whole milk is cheaper than either meat or eggs as a source of protein; but skimmed milk is even cheaper, costing, under normal market conditions, only half as much as meat, and skimmed-milk cheese, if we could have it, would be cheaper still, and much better for some purposes than the whole-milk product."

The Department of Agriculture has estimated, the writer goes on to say, that five cents' worth of bread and skimmed milk will furnish nearly one-third of the daily food requirement of a man engaged in moderate muscular work.

"In our days of plenty, now apparently gone forever, we might afford to despise such a valuable food. We assuredly can not afford it to-day. Skim-milk should not, of course, be sold as whole milk, or skim-milk cheese as whole-milk cheese, or frozen condensed skim-milk as ice-cream; but those who want these products ought not to be prevented, as they now very generally are, from getting them.

"At least 1,600,000,000 pounds of butter are made annually in this country, and from this are obtained about 28,000,000,000 pounds of skimmed milk. About 2,000,000,000 pounds in addition are obtained from the sale of cream. This gives us an annual supply of 30,000,000,000 pounds of cheap, nutritious, and digestible food, which nevertheless is banished, both by law and public opinion, from the table and the kitchen to the barn-

yard. "The art of drying milk has now been brought to such a point of perfection that the albumen is not congulated, nor the enzymes destroyed in the process, and milk-powders, whether made from whole or skimmed milk, would be an invaluable resource in the preparation of domestic dictaries, if we were permitted to have them. One of the disadvantages of milk is its extreme perishability, but dried milk will keep indefinitely, and can be used in any way in which milk in its original form can be employed. Dried skimmed milk would furnish a cheap and constantly available supply of animal protein. At the present time in the United States, however, dried milk, of whatever kind, can hardly be said to be available for home use. It is searcely known except to the large consumer and is sold chiefly to him. The State of Connecticut, for some unexplained reason, prohibits the sale of milk-powders except in the original package. Presumably the wise legislators had in mind the possible contamination of the milk after the opening of the package, but in a State where dipt whole milk may be sold without any restriction whatever, this seems like straining at a gnat and swallowing a camel.

"The sale of condensed skimmed milk is entirely prohibited in some States, and when sold it is generally in large containers, which are not suitable for family use. In the form of cheese, skimmed milk serves purposes for which whole milk is not suitable. American cheese of the Swiss type is best when made from skimmed or partially skimmed milk. Yet the label, 'skimmed-milk cheese,' which some States require it to bear, stamps it as inferior in the minds of persons not acquainted with this fact.

"Preference for whole milk as a beverage is said to be largely a matter of habit; but if the family does not care for skimmed milk in this form, there are many ways in which it can be employed in combination with other foods. Many appetizing and nourishing soups can be prepared with a basis of skimmed milk to which the pulp of some vegetable such as beans, peas, potatoes, corn, or celery is added to give flavor and body. It can be used in cakes, puddings, and custards, and in the preparation of cereals, while in bread-making it can be substituted with great advantage for water. In British experiments it was found that the use of skim-milk not only increased the nutritive value of the bread, but increased the yield from a given quantity of flour.

"At the Maine Agricultural Experiment Station it was found that bread made from skim-milk contained one-eleventh more protein than water bread, and that it was quite as completely digested as the latter.

There is, in fact, no end to the ways in which this valuable substance may be employed, and if fat is wanted, it can be added in the form of butter, which is often cheaper when separated from the milk than when sold as a part of it, or of some of the less expensive fats. Some dishes, of course, would be richer in flavor if whole milk were used rather than skimmed, but in other cases the difference is not appreciable. When the skimmilk is substituted for the water usually used there will be an improvement instead of a loss of flavor.

"A recent Government bulletin made it abundantly clear that the days of cheap neat are past and that this food is likely to grow searcer rather than more plentiful. It is plain, therefore, that we can not very well afford to let 30,000,000,000 pounds of an animal protein food go to waste every year, or serve only as a cattle food, particularly now when the nations of Europe are engaged in destruction instead of production, and are looking to us to supply their deficiencies."

MORE MATHEMATICS NEEDED

Science and mathematics is given in our colleges, thinks Prof. Thomas E. Mason, of Purdue University. The engineering student is skimped in his mathematics, and the mathematical student is given little chance to study the practical application of his formulas. By "mathematics," Professor Mason warns us, he means not the solution of problems, but the study of the principles underlying classes of problems. The sconer some plan is worked out whereby the engineering student of mathematical ability is given a chance to develop it, or the mathematical student with a tendency to applied mathematics is given opportunity in that direction, the sconer, he says, will come "the time of fulness of the development of applied science." Says Professor Mason in a recent address printed in Science (New York):

"Mathematics has been a well-nigh indispensable tool in the development of the natural sciences and their applications. On the other hand, the natural sciences and particular problems set by science have challenged the ability of mathematicians and spurred them on to the achievement of larger results in pure mathematics. Whoever can strike this flint of mathematics upon the steel of natural science and produce fire is doing the world service. The oftener fire is produced the greater will be the development of both mathematics and natural science.

"Can you realize what would happen, just what stage of eivilization we should be in, if all that is developed by the use of mathematics could be removed from the world by some magic gesture." Every branch of physics makes use of mathematics; chemistry is not free from it; engineering is based upon its developments; sociology, economics, and variation in biology make use of statistics and probability. Our sky-scrapers must disappear; our great bridges and tunnels must be removed; our

ASSEMBLING COMPLICATED CARRESTERS.

SKILLED WOMEN WORKERS IN AN AUTOMOBILE PACTORY.

transportation systems, our banking systems, our whole eivilization, indeed, must step backward many centuries.

"Mathematics and its symbolism appear in rather unexpected places. S. G. Barton, of the Flower Observatory, University of Pennsylvania, says that in the 'Encyclopedia Britannica,' written not for the specialist so much as for the general reader, there are one hundred and four articles which make use of the notation of the infinitesimal calculus, of which only about one-fourth are pure mathematics. You may be surprized to know that you need the infinitesimal calculus to read the articles on clock, heat, lubrication, map, power-transmission, ship-building, sky, steam-engine, and strength of materials."

WOMAN'S NEW JOBS

OST OF US KNOW that women are very largely taking men's places in those European industries from which their husbands and brothers have been removed by the necessities of war. We have all read of the women munition-workers of England, of the female train-crews in France, and of the increased employment of women in agriculture throughout Europe. And yet most of us will be surprized to learn that in this country also women are being called upon to do work ordinarily reserved for men. They are doing it well, too, so that it has become doubtful whether, with the return of normal times, they will be dislodged from the post of vantage that they now occupy in these unaccustomed industries. Says a writer in The Scientific American (New York, February 3):

"Because of the extraordinary industrial inflation of the past two years, skilled labor has become scarcer and scarcer. Employers have been forced, willy-nilly, to put women and girls to work at tasks formerly closed to them, and which it would never have been suggested, in ordinary times, that they were capable of performing. We reproduce on this page several views from the factory of one of our leading automobile manufacturers, showing the technical nature of some of the work which this concern is now entrusting to women. This work includes the assembling of all wiring, primer systems, and switch apparatus, the inspection of pistons and all other small parts, and the operation of drill-presses and other light metal-working machines.

"The officials of the company in question are in accord with

all other employers who have been forced by the condition of the labor market to employ women for men's work when they state that they would not willingly return to the old regime. This is not due to direct financial considerations, as is so often the case where women replace men in elerical work; for, in this instance at least, the women are paid the same wages or piecerates as were the men. But the statement is made, without reserve, that for all manner of skilled labor requiring close application, great accuracy, and considerable manual ability, but no extreme physical strength, women are superior to men. They turn out more work, and better work, in a given time,"

Why should this be so? The writer says he is not a psychologist, and he does not pretend to account for it. He continues:

"We do not know to what extent the claim is justified that labor-unionism makes for deterioration of individual work. We believe that the labor-union, under ordinary conditions, affords the worker who is naturally inclined to 'soldiering' more scope for the exercise of his talents in that direction than he would have under the old system of stricter individual accountability to the employer. But the importance of this factor would depend upon the proportion of such workers, and consideration of this point would promptly lead us back to the initial statement of this paragraph.

"It may be, of course, that the observed difference in favor of woman is due to the novelty of her new employments, and that in time she will wear down to the level of the men. Time alone can tell this. It is suggested, on the other hand, that woman is actually an inherently better worker than man. An even stronger probability is that she is a more conscientious one. We know of an errand girl, hired because boys were not to be had, who covers regularly in less than an hour a route from which her boy predecessors seldom if ever returned in less than two hours. In this particular case, if the novelty element were to enter at all, it would seem that it should make for reduced efficiency through greater interest in the sightseeing aspect of the job.

"Another suggestion which we have heard is that the trend of modern industrial development is such as to remove from most operations the strength factor, in which the male excels, substituting therefor the skill factor, in which, according to the hypothesis, the female has the advantage. If this view be actually justified, it is plain that we are moving toward an unparalleled economic upheaval. In any event, if woman shall ultimately be able only to compete with man on an equal basis in a large number of occupations formerly closed to her, the effect will be fundamental. The working out of the entire situation, both here and abroad, will be well worth watching."

LETTERS - AND - ART

A "HELLENIST" SCULPTOR DRIVEN HERE BY THE WAR

HE FLIGHT OF ARTISTS and art-dealers from the war-stricken art-centers of Europe to the peace of New York is compared by one fanciful writer "to a similar flight from Byzantium to Florence, after the Turks occupied Constantinople, in the fifteenth century." Strangely enough, some of the earliest arrivals were men representing the newest

stands Russian, Polish, French, or German, Nadelman, who is always ready to flame up with enthusiasm, will soon convince you of the essential simplicity of his enigmatic designs. He has a charming way of modulating his conscric with expressive gestures, and you quickly see the logical relation of the geometrical forms to those beautiful sculptures which in the first flush of unexpected pleasure are compared with Greek master-

> pieces and arouse the hope that here at last we have a man who has found at least a spark of the buried fire of the ancients. Nadelman's explanations are, indeed, so clear that they serve not merely as a vindication of his theoretical drawings and sculptures, but he even enables a layman mentally to transform the intricate curves and shadows into the subtle play of light on his polished marble, bronze, or mahogany statuettes.

"One of his most interesting artistic doctrines deals with the respect which an artist owes to the peculiar nature of the material in which he works. 'A rough stone, Nadelman says, 'will refuse all the positions we may wish to give it if these are unsuited to it. By its own will, it falls back into the position that its shape in conjunction with its mass demands. Here is a wonderful force, a life, that plastie art should express, and if this life of the material is not destroyed, but is cultivated and enriched by the artist, it may acquire a wonderful power of expression that will stir the world.'

A piece of sculpture, therefore, should be created like a crystal—physical laws should govern its fashioning, and the more of art there is discoverable in the work, the less the individuality of the artist becomes apparent."

Nadelman's drawings and his "researches in sculpture" inight entitle him to a place within "the vague group of artists known as Post-Impressionists"; but this designation Mr. Birnbaum finds "hopelessly confusing in the presence of his extraordinary portraits and the beautiful heads which for want of a better word we shall describe as Hellenistic." The artist declares that "noble abstractions like 'La Mysterieuse' are the flowers of his achievements." Nadelman, as contrasted with Rodin, has not displayed such constructive powers nor such wealth of imagination, but in comparing the smaller sculptures "the higher praise does not always fall to the lot of the older artist." In fact,

"The obvious difference here is the romantic emotionalism of Rodin as contrasted with Nadelman's intellectual calm or his purely decorative quality, and it is regrettable that his mahogany decorations in low relief which adorn a New York residence can not be publicly shown. His work often suggests a mood of musical melancholy, but we do not find here the

ELIE NADELMAN, WITH HIS ASSISTANTS, IN HIS STUDIO.

Visitors who enter here are "astonished at the apparently conflicting works which greet their eye."

departures in European art—the Futurists and such. One not to be classed in any of the labeled categories is Elie Nadelman, the Polish sculptor. He is declared by Mr. Martin Birnbaum to have made his presence immediately felt. When one examines his achievements, so we are told, one is "so astonished at the apparently conflicting works which greet the eye that the critical faculties are at first in a maze," The sculptor was born in Warsaw, in 1885, and studied art there; but "it would seem that his early education conferred only irritation upon him," and he went to Paris, where he lived until the débacle. Whether the East and West of Europe failed to fuse or not, Mr. Birnbaum, writing in The International Studie, does not venture to suggest; he can not, however, conceal his mild bewilderment in the presence of the master and his work, when he says:

"Beside a serenely calm mask on the lips of which a strange smile lingers, there are distorted figures in impossible postures, and curious drawings which, when examined superficially, show no trace of obvious or delicate beauty. The average person will hesitate to laugh at these grotesque works, having recently heard of so many brilliant experimentalists whose creations should be approached with respect, and even reverence, and if one underquivering flesh, the cestasy of desire, the grappling men and women, the insatiable longing and force of sex, which are always present in Rodin's palpitating figures. The creatures of Nadelman's fancy are, indeed, often strangely sexless. Beauté plastique, according to him, should not be a matter of emotion. A sculptor must never be sentimental or didactic. He may, indeed, arouse your feelings-and Nadelman is often humorous, and even witty on occasions-but, primarily, plastic art is not concerned with love or patriotism or kindred feelings, and you find accordingly that his loftiest conceptions are almost cold in their austerity and severe simplicity. Even some of the fine mahogany sculptures which have the advantage of rich color lack the warmth of living flesh. Nadelman seems to put his keen intelligence and acquired Gallie taste, rather than native passion, into his work. His art savors at times of mathematical formulas, and, like the work of the great Belgian, George Minne, it is occasionally pure architecture in miniature. If, however, these are shortcomings, it is nevertheless refreshing to find a comparatively young man with such strong convictions taking his position, in spite of Rodin's supremacy, in the popular mind. The intellectual note and aloofness are intensified by the extraordinarily high polish which he gives to his surfaces, and which, he claims, enables his works to acquire tone without dirt, after the manner of antique marbles."

THE CLASSICS FIGHTING FOR LIFE

LASSICAL LEARNING is fighting for its life in England as well as in Germany, and it is not the young students who are trying hardest to keep the breath of life in its body. "Tom Brown" has had courage to speak out, and we find that the war has put him fully in touch with the needs of a practical training for his future career. At recent conferences of educational associations at London, Leeds, and elsewhere, views on the future utility of the classics for modern life were uttered by Viscount Bryce, Prof. Gilbert Murray, Dr. W. H. D. House, and others, and it is the views of these men that The Morning Post gives the "Tom Browns" a chanco to appraise. Viscount Bryce thinks it should occasion no surprize that the study of the Greek and Latin languages should now be disparaged. for "a reaction against the undue predominance they enjoyed in education a century ago was long overdue," How he explained the change is shown in these words reported by The Morning Post:

"The most striking feature in the economic changes of the last eight years has been the immense development of industrial production by the application thereto of discoveries in the sphere of natural science. Employment has been provided for an enormous number of workers, and enormous fortunes have been accumulated by those employers who have the foresight or the luck to embark capital in the new forms of manufacture. Thus there has been created in the popular mind an association, now pretty deeply rooted, between the knowledge of applied science and material prosperity. It is this association of ideas, rather than any pride in the achievements of the human intellect by the unveiling of the secrets of Nature and the setting of her forces at work in the service of man, that has made knowledge of physcial science seem so supremely important to classes of minds that never before thought about education or tried to estimate the respective value of the various studies needed to train the intelligence and form the character. To put the point in the crudest way, the average man sees that the diffusion of a knowledge of languages, literature, and history does not seem to promise an increase of riches to the nation or to the persons who possess that knowledge in a high degree, while he sees, or thinks he sees, that from a knowledge of chemistry or electricity such an increase may be expected both to the concaunity and to the persons engaged in the industries dependent on those sciences. Two other arguments have weighed with persons whose mental attitude is more reflective and their force must be admitted. Languages—not merely the ancient languages, but languages in general-have been too often badly taught, and the learning of them has therefore been found repulsive by most pupils. The results have accordingly been disappointing and out of proportion to the time and labor spent."

Professor Murray, reported by the London Times, shows quite an abject terror of the future, fearing that there may be "a

period like that which occurred during the Spanish domination in Italy," or the Napoleonic régime in West Germany when the situation, summed up in the words "simplification, democratization, and starvation," showed "two good principles murdered by a third." All the experts had their say during the "Education Week," says The Morning Post, editorially, save "the largest

"LA MYSTERIEUSE,"

Regarded by Nadelman, the Polish sculptor, as "the flower of his achievement." It is an odd contrast to the top-hatted gentleman before which the sculptor stands in the picture opposite.

and most important class of experts—the boys of England still at school." It goes on to point out that "the iron of a new age, which is sweeping away the pretty, pretentious 'ies' and 'isms' of a long period of peace and plenty, has already entered into the soul of Young England." For,

"It is a keener, harder, less sentimental generation which is growing up in our midst—a generation which sees the lean years coming, knows it must fight hard for a livelihood, and is even now clearing its mind for action. We do believe that the average intelligent schoolboy, the modern Tom Brown in fact, is a better judge of the larger issues of education than any of last week's star speakers. Let us, then, look at their messages through the eyes of this indigestible young patriot. A patriot he is indeed, the he never labels himself with the word. Let his elders, if they will, point to their patriotic buttons; he is content to be in the school training-corps and know that his kiddy brother is a Scout, and leave it at that.

"'Tom Brown' saw the necessity of making all teaching scientific, but his common sense forbade an unlimited increase in the output of science specialists until there was room for them. All

very well mugging up stinks (chemistry) if you could be sure of a billet at some works. But you couldn't be sure of it unless England bucked up and kept out German dyes and drugs and things. So, unlike nearly all the Education Week orators, he concludes that all educational reform, to be effective, must be part of a national policy. Not given much to words, he does not put it like that. But when it comes to deeds, he would know how to act nationally."

The day following, "Tom Brown" and "H. East" wrote to The Morning Post to say it was "rather fun" reading their ideas about education reform, and they offer a few more:

"Of course, we know we've got to buck up about education after the war. It does set a fellow thinking to go home for the hols and eat margarine instead of butter, and find relations forgetting tips and all the rest of it. It makes him begin to suspect that money's running out fast and that it will be his business. when he grows up, to make things right again. And we two really don't see why you should not work at things at school which will be really useful later on. They say Greek and Latin are the best subjects for training the mind. But it's a funny thing that nearly everybody who says that has been brought up on Greek and Latin himself. It makes a fellow a hit suspicious. Some masters—specially masters that want everybody to win Balliols and glorify the old school-seem to think that there's something wrong about the character of a chap that can't or won't mop up classics like a pig with his feet in the trough. Jones Major once asked old S - had it ever struck him the old Greeks and Romans didn't learn dead people's languages. And you do meet decent fellows doing quite well and not regarded as lost sheep who couldn't decline 4, 4, 74 for nuts. All the same, most schools now have decent labs where anybody who wants to manufacture smells and blow himself up can do it quite nicely, thank you."

THE FEARFUL MODERN SONG

HE REVIVED INTEREST IN FOLK-SONGS may have a reason other than one found in themselves. We may fly to them for relief from our modern songs. At least a writer in the London Times suggests this when he says that "the modern song is a product of our civilization we do not contemplate with pride." The ideal song, as he sees it, "emanated from one mind and has gathered associations; it is partly in ruins, for it has been often edited, and it is ivy-grown, for many singers have caressed it." No new song can be so picturesque; instead, what have we?—

"A song is now no longer the creation of one mind. If it is a real song it contains things which can not be put on paper, and of which the composer alone has the secret. But he seldom sings it himself. He may, indeed, write it for a particular voice, but it is as a rule cast forth like a Sibyfline leaf for anyone to pick up; and this picking up has itself become an art which is recognized, with several unpleasant and even iniquitous concomitants, in the royalty system.

"Secondly, the singer must call in another mind, seldom the composer's, for his accompaniment. There are three chances, therefore, of the thing going wrong, for the singer may not be a musician, and either the composer or the accompanist may

not be a singer.

"Thirdly, in the good old days the tune was the thing; words were written to 'the Tin tune,' 'the Vermilion tune,' the tune of greensleeves. This procedure is now reversed, and a race of minor or minim poets has arisen who will, for the appropriate consideration, provide words empty of any content, and therefore fit for a musical setting.

"Fourthly, a song was in its original conception a spell (mantra, carmen), the property of the wizard who could wield it, and appropriation of this spell was punishable with rendetta. But now, 'My brother, good-morning: my sister, good-night,' is a sort of foot-rule which can be bought in a shop, and its possessors are judged by the accuracy of the work they turn out with it. Hence there has arisen a caste of highly paid pundits whose business is to judge of this accuracy and to see that 'my brother' is sung with conviction, 'my sister' with color, that 'good-morning' is articulate, and 'good-night' in tune.

"Lastly, a song lives some months in a trance on the publisher's shelf before the voice comes to wake it to life; and these

sheets, damp from the press, with three or four names and, as follows from a most paternity, no date on the cover, are to the ideal song about third cousin twice removed, and have a birth-rate of two hundred a year. Such as they are we must try to discriminate their merits."

THE UNHAPPY LOT OF VENICE

OVERS OF VENICE will wonder how fares this city of dreams exposed to the air-attacks of a neighboring enemy. We have heard of the damage done to the Scalzi Church and the destruction of a ceiling fresco by Tiepolo, representing the "Translation of the Holy House." This occurred on October 20, 1915, and was duly reported by us. But it gives a shock to learn from an authority like Horatio F. Brown, the English writer and biographer of John Addington Symonds, that Venice has been attacked from the air twenty-one times since May 24, 1915. There has been, he says, "a crescendo in the fercetty of the attack and the size of the bomb." Some attempts have been made at specific points, like the arsenal, the railway station, and the cotton-mill, but the height at which the airplanes fly makes the incidence of the bombs a matter of chance. So far none of the monumental palaces have been hit; many private houses have been wrecked, but the churches have been the worst sufferers, with such of their works of art as are not removable. Last August the city was furiously attacked in revenge for the fall of Gorizia. Incendiary bombs were used and many fires followed. We read in Mr. Brown's letter to the London Times:

"The roof of S. Maria Formosa, the Shrine of Palma's Sta. Barbara, was completely burned, except for a fragment over the north transept. The hombardment of the 9th was followed by another on the 10th, at 10 r.m., when the lantern of S. Pietro di Castello was struck and burned, and the cupola injured.

"On the 13th and 16th of the same month there were further attacks, during which a bomb fell outside the wall of the sacristy, near the foot of the Campanile of S. Francesco della Vigna. The bomb exploded in the ground, blow in the sacristy wall, cracked the foundations, and made a crater at least six feet deep and ten feet wide, now filled with water. These August attacks wrought the greatest havoe; but since then a midnight raid on September 11 sent a bomb through the southern clearstory wall of SS. Giovanni e Paolo; it crossed the church diagonally, exploded in the air, drove a hole in the northern clearstory wall, blew out all the glass in the church—Vivarini's great windows bad already been removed for safety—damaged Piazzetta's ceiling, representing S. Dominic in glory, and, by the violent displacement of the air, stript every scrap of plaster from the walls. On September 4, an incendiary bomb had fallen in the Piazza, only a few yards from the façade of S. Mareo.

"This progressive menace naturally roused great alarm for the safety of such monuments as the Ducal Palace and the Basilica. The design of the Ducal Palace, a lower and upper areade earrying a heavy block of masonry above, renders it peculiarly liable to fatal injury should an angle-column, or indeed any column, of the areade be blown in. The angles have now been completely encased and buttressed in brick, and the need to protect all the abundant and projecting sculpture has given rise to some engaging episodes in these protecting reenforcements. The Judgment angle is now a round tower, the Adam and Eve angle a square tower, with angle-brackets, the Neah angle a short, heavy tower, with sloping roof; each arch of the lower areade is supported by, and nearly filled in with, brickwork strengthened at the keystones by inner and outer buttresses; the lighter areade of the second floor is fortified by heavy balks of timber; in short, it looks as the the Dural Palace were trying to turn itself into some medieval castle, the great keep of the Este family at Ferrara, for example. The bronze horses from the façade of S. Mareo are stabled in the Atrium, and covered with sand-bags; so, too, are Alberghetti's and Niccolo de Conti's bronze well-heads in the courtyard. Upstairs the great balls are bare; not a picture on wall or ceiling. In order to protect the roof of the Palace from fire, the beams have been coated with a non-inflammable wash; sand is stored in abundance, and water-mains lead to the roof."

The Basilica is receiving no less anxious thought and care:

"THE BULL."

One of Nadelman's clever sculptures in bronze.

"The facade has already disappeared behind a huge screen of double balks of timber, filled in with innumerable sand-bags; the outer face of the screen is further protected against fire by slabs of eternite. Inside, the church, on sunless days, is almost pitch-dark; it takes some time before the eye can distinguish the huge piles of sand-bags that smother altar, ambo, pulpit, and font, the swaddled figures on the chancel-screen, the muffled columns that seem dwarfed and shrunken and misshapen, and

vaguely recall the proportions of some early Egyptian temple. The inner, shallow cupolas of brick earry the mosaies. It is proposed to spread a screen of thick cloth over their whole surface, at a distance of five inches or six inches, thus forming a cushion of air that, it is hoped, would lessen the impact of an explosion should a shell fall inside the church. Meantime, the windows of the cupolas have been removed. and, during a raid, windows and doors are all left open. But to prevent rain from entering the church, the windows have been filled with screens of rough, brownish stretched on iron frames hinged so as to fall outward. The effect on the interior is most When the sun surprizing. is shining the light coming through the cloth is of a soft, diffused yellow, a light brighter, perhaps, than the light transmitted through the alabaster

windows of such a church as St. Antimo, in Tuscany. This glowing light exactly hits the key of the mosaics, which catch it, reflect it, are illumined by it, till each cupola shimmers and gleams like an inverted saucer of molten gold. It is a revelation of the mosaics of San Marco; they have never been seen

like this before."

TRYING TO SAVE ENGLAND HER MASTERPIECES

UR ABSORBENT MILLIONAIRES with a taste for art find these joyous days. Not so much space is given to a lucky purchase by Mr. Frick or his confrires of an old master as in the piping days of peace, but they buy them for all that. And by the same token they seem to cause as many sleepless nights to the art-patriotic British citizen who, by the way, never owned a masterpiece, but feels himself a necessary guardian of those who do. The trustees of the National Gallery have been proposing a bill to enable them to sell off superfluous possessions and buy some works that are plainly too great to be lost to the nation, but whose owners find too unproductive a luxury in days of war-taxes. The effort "is denounced as monstrous and grotesque," says The Saturday Review, which puts a clear light on the situation:

"Without uncharitableness we may say that every owner of great pictures has his price, and, given tact and compliance, can easily avoid all fuss and outery when succumbing to temptation. Indeed, the last few weeks have shown that frail owners may be deflowered of capital pictures without a sound, and that we may wake any morning to find ourselves famously foiled, and the masterpieces safely in America. Time was when the Alnwick 'Bacchanal' was ear-marked as a picture indispensable for us. The other day, however, under cover of political excitement and the din of war, it was spirited across the ocean, to be followed hotly by the Denbigh group of Van Dycks. Next week, who knows what still more precious treasures, whose names we dare not whisper, will be passing through the New York customs? Another and more sinister fate, of course, might close over them; for, if rumor and probability are not misleading, a so-called neutral syndicate is hanging about the English market waiting to invest German war-profiters'

ill-omened money in commodities which would not benefit the Fatherland's exchequer."

Facing these enemies, armed by notes and not by guns, the trustees undertake what the Saturday Review writer finds a really sensible move only to meet enemies within their border who are classified as "professional obstructors" or "senti-

> mentalists whose real feeling of regret at what all admit to be regrettable unfits them to face facts." So-

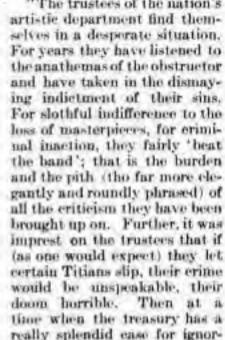

"The trustees of the nation's artistic department find themselves in a desperate situation. For years they have listened to the anathemas of the obstructor and have taken in the dismaying indictment of their sins. For slothful indifference to the loss of masterpieces, for criminal inaction, they fairly beat the band'; that is the burden and the pith (the far more elegantly and roundly phrased) of all the criticism they have been brought up on. Further, it was imprest on the trustees that if (as one would expect) they let certain Titians slip, their crime would be unspeakable, their doom horrible. Then at a time when the treasury has a really splendid case for ignoring art, and when war-objects,

profitable and otherwise, attract all the spare cash in the Kingcom. the entrance of these indispensable treasures into the market is threatened."

The reviewer sees but one remedy with any hope of effect, and that he is forced to call "a forlorn hope, a visionary's dream." Thus:

"Nothing but a sort of fanaticism, something akin to the sporting and indomitable resolution that drives men to the polar seas, will really help us. Material suggestions have been made: prohibition of export during the war, the imposition of an export duty on foreign sales, the institution of a stamp-duty on all sales, and, lastly, this now famous National Gallery Bill. Of these, only the first is a preventive suggestion; the others are reprisal or munitioning measures. As for an English version of the Italian Pacca Law, whereby owners would be forbidden to sell works of art and Shakespeare folios abroad. I am afraid that there is no earthly likelihood of the House of Lords letting that go through. Indeed, the very mention of vinculation has sharpened noble owners' wits so well that altho there is no chance of such a prohibitive law in England, they have already brought the art of swift and secret transaction to perfection. Export and stamp-duties would be, of course, quite ineffectual in preventing foreign sales, and the consolation of exacting toll for mortal losses would not be very comfortable. That leaves us with the National Gallery Bill, which in other important ways would give invaluable powers, and which in its ambition to equip the nation with the means of putting up a light for the departing treasures is admirable.

"There is, I fear, and if I may be pardoned for facing the situation without illusions, no hope but that forlorn hope hinted at above. If the country possesses a dozen patriots primed with the determination and the means to intercept the dozen or twenty masterpieces which should not leave our land, we can, as far as this menace is concerned, sleep easily. There are patriots enough, no doubt, and more than enough men with the needed money. But have they the enthusiasm, the imagination, and spare energy to drive them forth on an adventure of this sort? In peace-time they could not be found, we know; has war wakened the spirit and the vision that such men would possess? The event will show. But this is certain now. Only by men inspired with this enthusiasm and resolve, and fortified by belief in the rightness and the largeness of their mission, no less than by vast resources, would the needed initiative, mobility, and sustained keenness in pursuit be shown."

RELIGION-AND-SOCIAL-SERVICE

Coperigated by Uniterwood & Underwood, New York.

OUR ONLY SOLACE IN THE EVENT OF A NAVAL ENGAGEMENT.

This hospital-ship, the Solace, new does the work for our entire Navy. A second ship is commissioned, but forty such vessels followed the Entente fleet to Gallipoli, and "it was believed that every one would be needed."

OUR CRIPPLED NAVAL RED CROSS

10-DAY our Navy boasts one hospital-ship. When our Greater Navy is a reality we shall have but two. With an admonition to "Think it over, Americans!" the editor of The Red Cross Magazine (February) reminds us that "with but a few units of their fleet during the Gallipoli campaign, the Entente Allies had not one, two, ten, or a dozen hospital-ships-but forty." They were large ones at that; and "were all there because it was believed every one would be needed." The words are but the prelude to what Mr. William Harper Dean has to say of the relief conditions that would confront the Red Cross Society in the event of our Greater Navy giving battle. The magazine sounds, "with all its strength, the warning that proper war-relief preparedness for either the Army or the Navy is time-consuming, costly, and difficult even in tranquil, normal times, and a herculean, wellnigh impossible thing to accomplish when war has brought its confusion and chaos." Before allowing Mr. Dean to have his say, the editor goes on in a strain like this:

"The cost of equipment alone for one auxiliary hospital-ship would not be under \$200,000, and the work requires much time. One naval-base hospital in the piping days of peace could not be organized and completely equipped to care for so few as 500 men in several weeks' time. But sea-fights and land-battles do not wait for hospitals to be equipped. The quivering bodies of sorely wounded men are brought back in everlasting streams. Are they—our own boys—to die wretchedly under our eyes for lack of facilities and trained personnel to give them necessary expert attention? They can't be housed in barns; they can't be operated on by blacksmiths.

"Too many of our good people harbor a state of mind which would have more appropriately existed in the days when the beardless Captain Oliver Perry, with a handful of Rhode Island sailors and Kentucky riflemen for his seamen, was ordered to Lake Erie to build a fleet out of green timber, after cutting down the trees, 'and attack the enemy.' We can not wait to-day for the great crisis to come before devising ways and means to meet it. We are not living in an age when an Old Ironsides can destroy a Guerrière with a loss in killed and wounded

to our side of but fourteen men, nor can another battle of Santiago Harbor or of Manila Bay be fought with a negligible easualty list for us. The modern battle-ship carries approximately 1,200 men; and combat between these floating monsters with their incalculable destroying power is short, furious, deadly.

"Organized, completely equipped naval-base hospitals should dot our long and winding coast-lines, and civilian hospitals should be prepared and listed to serve as auxiliaries in case of emergency—to help save the lives of thousands of American lads who some day may be brought home mere shreds of humanity, Every scaport of the United States should, as a simple act of patriotism and humanitarianism, if not of local pride, take a hand in this laudable and most urgent movement to give aid and comfort to our Greater Navy which is to be. And Mr. Dean here tells you how you may best do this in an interesting article which is authoritative from beginning to end, and which every citizen owes it to himself and to his country to read."

One day—how soon none can tell—our great Navy may give battle; and "it will be a cataclysm of steel against steel," where the fittest survives. There will be bloodshed, for "the price of liberty always has been paid in blood." Then will come the "opportunity for one of the greatest humanitarian efforts in all the grim business called war: the efficient care of the ineffectives." Mr. Dean continues:

"We are, or rather we feel, quite certain that when America is threatened with invasion it will be our Greater Navy that will decide for us whether the struggle will be over in a few hours or rage on for cruel days and days until finally the alien is driven from our shores. Our seaconst is extensive. To a strong foe an attempt to force a landing at some point on our thousands of miles of shore-line would in all probability appeal as immensely logical.

"Our first line of defense, then, is our Navy. Preparedness in the Navy demands an adequate number of efficiently manned fighting units and a sufficient number of efficiently organized units for the care of ineffectives.

"During the recent campaign of the Entente Allies on the Gallipoli Peninsula there was published a statement to the effect that seventy British hospital-ships had been sighted in

DISPATCHING HIM TO THE NEAREST BASEROSPITAL.

But we lack "an adequate reserve corps of surgeons and nurses for marines here employed would be otherwise engaged.

the Mediterranean, fringing the fleet and daily bearing their cargoes of sick and wounded to base-hospital units. The British Admiralty, on scanning this report, issued a withering denial. It was absurd—seventy hospital-ships! The public should be more accurately informed. The Admiralty begged to state that there were but forty of these. Forty hospital-ships! And only a relatively small number of units of the Allied fleets operating in that particular zone. True, there were sanguinary engagements ashore that delivered their toll of wounded to these ships; but as grim indices of the inevitable mortality attending large-scale military and naval operations, this incident and others which could be cited from the war in Europe stand out with most compelling force.

"We strive, but after all it is a difficult matter for a people at peace to grasp the true significance of a war between two or more great Powers. Figures dull the brain. 'A regiment annihilated; forty vessels sunk.' What does it all mean? The elimination of so many fighting units from the field of

operations?

"No, it means more. It means more than death. It means mutilation and suffering beyond the power of tongue to tell; it means shattered limbs and shell-gouged trunks; it means blood pouring in streams from the living—the living! It means that for every dreadnought, every destroyer, of which our Greater Navy will boast, there must be patient, steady surgeons; sacrificing nurses; soft, clean things for the painwracked bodies of men who have served the guns of the Greater Navy and now must surrender to the skill of trained hands in order that they may live again.

"Whatever there is of preparedness against that day when our Greater Navy will give battle must be ready on the instant to serve. The stroke of that hour will not be heralded by a slow pealing of bells. It will come in a flash. The Navy must give battle—now! Little time to equip hospital-ships and coast hospital-units, no time to instruct surgeons and doctors who have followed their professions in strictly civilian life. While the casualties resulting from a clash between two great sea Powers could not possibly equal in number those that are the price of long-drawn battles between land forces, yet they will

be so sudden that the utmost in preparedness from a humanitarian standpoint must be on hand and waiting or it will be

"What have we done in this cause? To-day there is one hospital-ship afloat—the Solace. Another, recently provided for by Congress, will shortly be under way. Then we shall have two.

"I asked an American naval surgeon of high rank this question: How many hospital-ships would be required to serve the Greater Navy in event of its giving battle?

"'God only knows!' said he."

It would require several weeks of furious work to convert the most likely craft into a hospital-ship; the cost of providing medical equipment alone for a converted vessel would be in the neighborhood of \$200,000. Mr. Dean's informant added:

"Remember, a fleet's requirements are vastly different from those of an army. The fleet is isolated, so to speak. Whatever it requires in the way of facilities for earing for sick and wounded must be immediately available—part and parcel of the great joint unit itself.

"The fleet can not send a call to the rear for civilian volunteers to help in hospital work for those lying on the decks. It can not commandeer a public building here and there to care for its ineffectives as the line of battle changes. The fleet is a law unto itself, and the civilian who confuses its medical and surgical requirements with those of an army never can render it effective service."

A hospital-ship, it is emphasized, does not in any sense replace a base hospital in a coast town. On the other hand:

"The hospital-ship acts as a hospital-transport by which ineffectives are transferred to fixed base hospitals. The hospitalship is a fleet base-hospital, a unit capable of moving from base to base, as the fleet's position changes on the sea.

"When men are wounded or fall siek, their effectiveness for the time ends. They are ineffectives. They must be removed, both because it is the only humane thing to do and they have a right to expect this, and then because their presence in no

measure stimulates the morale of the effectives.

"What we need, then, are organized units for rendering medical and surgical aid to the men of our Greater Navy. There is a crying need of the Greater Navy for base-hospital units along our coasts. There is no telling what section of our coast the fleet will be called upon to defend. What then will that section offer to the men who are sent back sick and wounded?

"At this writing the Navy Department has asked the Red Cross to organize five base-hospital units—three on the Atlantic Coast and two on the Pacific. For south of Norfolk we have

not a one. They are under way.

"Every civilian hospital located within reasonable distance of a coast city to which a division of the fleet would return with its ineffectives should create in itself a potential, efficient auxiliary to the general scheme of medical and surgical prepared-

"The Red Cross is also deep in the task of organizing Emergency Detachments of Nurses which can be quickly mobilized and used to supplement the service of both the Army and Navy Nurse Corps. It is organizing Sanitary Training Detachments for the purpose of instructing men so that they may be able to serve efficiently in the Sanitary Service of the Army and Navy. These individuals are required to enroll in the Red Cross service for a period of two years. They are also asked to signify their willingness to enlist in the Medical Service of the Army or Navy in case of war, but are not required so to obligate themselves.

"The ery is for organized efficiency!"

If any would know how they can be of service, let them try to fit themselves into one of the categories here presented:

HOW YOU CAN HELP YOUR NAVY

ARE YOU A PRACTISING PHYSICIAN OR SURGEON?

Then you can join the Navy's Medical Reserve Curps, volumeering now to serve when your country needs you.

ARE YOU CONNECTED WITH A CIVILIAN HOSPITAL SIT-UATED ON OR NEAR THE COAST!

Then you can begin a movement to make your hospital available for the needs of the Navy in time of stress.

ARE YOU AN INTERN, ASSISTANT, OR OTHERWISE AN ACTIVE FACTOR IN THE PRACTISE OF MEDI-CINE OR SURGERY?

Then you can write to the Bureau of Medicine and Surgery. Navy Department, Washington, volunteering new your service in such capacity it time of war.

ARE YOU ONE OF THE MILLIONS WHO ARE NOT TRAINED IN THESE SPECIAL LINES:

Then you can help the Red Cross establish base hospitals on our cousts, equip bespital-ships, and in a hundred other ways strengthen the preparatiness of our Greater Navy

THE MOTION-PICTURE AS PEACEMAKER

If MOTJON-PICTURES had reached their present development half a century ago, so the president of one of our large film corporations is convinced, the world would not be at war to-day. That is, to quote the words of Mr. John R. Freuler, in the February World Court, "the educational influence involved would have been so valuable in general dissemination of international friendliness and understanding that war would have been unthinkable." But if the "movies" were too late to head off the present war, will they not help to prevent future ones? Mr. Freuler is inclined to think they will, "provided due liberty is permitted by governments for the proper development of this tremendously powerful instrument." As he writes:

"There appears excellent ground for the conviction that the rapidly growing universality of the motion-picture, through interchange of the best productions, their world-wide exhibition in cities, towns, villages, and hamlets, is rapidly bringing about a feeling of international fellowship such as has never hitherto been approached.

"In fact, I am impelled to the paraphrase, 'Let me make the

world's films-I care not who wages its wars."

"The power of the motion-picture should become infinitely greater than that of the press in composing international differ-

ences. The press of each country reflect its biased point of view, and therefore aggravate rather than ameliorate, . . . The principal trouble with the world has been a lack of neighborly feeling—an aloofness toward the family next door. It is the tendency of human nature to be suspicious of and antagonistic to the unknown—to attribute all sorts of evil practises to such as are, by racial or local custom, offenders against certain preconceived notions of correct human conduct.

"The work that is being done by the motion-picture is the very great work of breaking down false barriers, smashing imaginary embargoes—making neighbors of peoples immemorially at enmity—displaying them to each other on the screen and convincing each group, to its intense astonishment, that the other doesn't wear horns. This is the educational process which, carried to its proper extent, will abolish war.

"If it is the desire of the nations, as they all insist, to have the truth about thems-lves spread before the eyes of the world, what medium exists so ready to their hands as that of the

motion-picture?

"The motion-picture film attained its world-wide circulation just too late to be decisive in prevention of this war. I believe that it will, if sanely used, prove the deciding influence against wars for the future. That it has had a large influence in redirecting public opinion in all countries toward peaceful ideals can not be doubted."

THE SUNDAY EVENING "FORUM"

The "FORUM IDEA" has come to displace the former program for Sanday evening service, and The Northwatern Christian Advocate (Cincinnati) finds considerable to say in its favor. "It is the logical outworking of the spirit of democracy that must pervade the Church ere she measures up to her opportunity." Only one church in five, this journal finds, is able to maintain the old-fashioned program of sermon and hymn, repeating even in a more popular form the features of the morning service. "The regular sermon will not suffice as in other days, just as the old-time stereotyped conduct of the prayer-service meets with but slight response. The new day demands a new approach." Before dismissing the old form, this Methodist paper offers a hint as to the responsibility of the pastor himself for the diminishing evening attendance:

"That he is not altogether blameless is evident. Three pastors out of four will place the preponderance of thought and preparation upon the morning sermon when they know they will have their larger congregation and face their chief members. The pastor is not conspicuous for his isolation who says in substance, 'My evening audience will be made up chiefly of young people with a few of the faithful, and I need not go deeply into my theme or give much time in its development.' As a result he either extemporizes or presents some 'popular' subject in racy fashion.

"It has come about that in many churches no one thinks of going to church at the evening hour with the expectation of

receiving serious instruction in spiritual affairs."

The "forum" is declared to be "the product of the times, the democratic spirit of the day, as well as the modern concept of the Church in the different phases of community and national life." For—

"Subjects that formerly were all but tabued in the pulpit are now listened to eagerly when treated by professional men of wide information and positive thinking. The public schools, labor, amusements, the housing problem, public playgrounds, child welfare, socialism, military training of our youth—the list can grow indefinitely. Here are matters that Christianity may claim as her own. If the application of the teachings of Christ to these and all other vital issues of life does not produce a proper and healthful reaction, then Christianity fails at that points.

"The forum is quite practical in cities where professional men of large experience can be easily procured. More and more the layman is losing his abnormal dread of the pulpit, and his presence therein is looked upon as a delightful and profitable variation. If wisely managed by the pastor, and a true spirit and expression of honest search after truth are engendered, the good

effects therefrom may be far-reaching."

"FREELY YE HAVE RECEIVED, FREELY GIVE"

THE CLOUDS ARE CLEARING from the skies of Belgian Relief; Americans remain in charge of it: its administration will go forward with the same wonderful care and certainty as during the past long, sore months of hunger and want. In proof of it, Brand Whitlock's American flag still flies over the Relief Headquarters at Brussels; and Lord Ceeil says, for Great Britain and her blockade, "we will not place the slightest obstacle in the way" of Belgian Relief ships. There can be no reasonable doubt that the Belgian Children's Fund will accomplish the purpose of its donors, and will serve Belgium's future generations by conserving her childhood of to-day. The LITERARY DIGEST's wide-spread constituency recognizes this fact, and from all points of the compass come proofs of restored confidence and philanthropic spirit, in spite of the break between this country and Germany.

Small cities, or individuals in them and for them, are munificently pledging to care for the children of towns in Belgium with about the same population. Citizens of Franklin, Pa., which has but 10,000 inhabitants, under the leadership of Mr. George W. Feldman, acting in cooperation with local newspapers, have adopted Hongene, with \$15 children, assuming a responsibility of over \$9,700, and have shown their earnestness by already forwarding draft for \$5,000. Petersburg, Va., led by F. M. Martin, Superintendent of Schools, has adopted Zerkeghem's 300 children, with responsibility of \$3,600.

And look at Laneaster, Pa., which days ago, through C. B. Hollinger and The New Era, selected Sainte Cimi as its benefleiary, and has just made a third remittance, of \$1,000, making Laneaster's contribution up to this writing \$10,000 - with more coming! Tueson, Arizona, sends draft for \$2,613.50, largely from the novelist Harold Bell Wright, as first instalment of a popular contribution which will increase. What these towns have done and may do, other towns can do and will. Hats off to the Western spirit! Hats off, again, to the persistent liberality of the East, and to the newspaper push and spirit East and West!

Yes-and to the same spirit and push shown far on the south of us. For here is another evidence of these, coming from Nicaragua, in Central America-a check for \$500, with more promised. Bluefields sent this, and The American there helped on the work with a full-page insertion of The LITERARY Disest's original appeal, while an influential citizen led the movement.

One letter, remitting \$24.00, bravely says: "This represents a new suit which I thought I needed-the old one will do for another four or five months (it is my wedding suit, bought in 1910)."

NLY \$1.00 APIECE WOULD MEAN \$100,000,000 for the people of Belgium from the inhabitants of the United States. It is not a large per capita contribulion from this country. It can be made up easily in thousands of communities. The Mayor of Lake Forest, Ill., Hon. N. M. Lewis, proposed it to us, and asked if under existing conditions it would be safe for his town to proceed on that per capita basis. Under date of February 17 he wrote again as follows:

"Upon receiving your telegram yesterday morning I at once made definite arrangements to carry out the \$1.00 an inhabitant campaign in Lake Forest. The aldermen have entered into the plan enthusiastically, announcements are to be made in the churches to-morrow, and through the local papers, and the actual collection of funds carried out a week from Monday. I hope that we will turn over to you shortly thereafter \$4,107, which is the number of inhabitants in Lake Forest.

"I am also going to send out letters to the mayors of four hundred other small cities in the United States. With what attention you can call to this 'SMALL CITIES' MOVEMENT, I believe that a sum of money can be raised which will justify the effort.

It is a generous and wise movement, and reflects honor upon Lake Forest and its chief executive. Many unselfish and noteworthy suggestions come to us, which excite our admiration and call for acknowledgment in these columns, but which would unduly consume space. We must mainly leave methods and their application to individuals and localities; their impulse and inspiration may be recorded in particular cases, as common to American life and faith.

Signing himself "Yours for service to Humanity," after asking that his name be not used, a Pennsylvanian suggests "a program of real self-denial in the interest of the helpless innocent little ones in Belgium," for the Lenten season, and says:

"Here is my Lenten resolution: For the next two months I am going to give 50 per cent, of the gross receipts of my ness for Christ's little ones in Belgium. I will have to for some fondly anticipated summer pleasures in this resolve, but the little hardship that I will undergo is not to be compared to the sufferings of the unfortunate ones of Europe. I enclose money-order for \$15.80 as first payment. Others will follow.

"If I might make a suggestion," comments a Pennsylvania insurance agent who remits \$96, "it would be that in your next advertisement you request each individual who reads it and is interested to bring the matter to the attention of two or three friends who might not be readers of THE LITERARY DIGIST. Let his suggestion pass along the line.

Make all checks, money-orders, or other remittances payable to Belgian Children's Fund, make them as large as possible, and address all letters to Belgian Children's Fund, care of THE LITEBARY DIGEST, 354-360 Fourth Avenue, New York.

Contributions to THE BELGIAN CHILDREN'S FUND—Received from February 14 to February 20 inclusive.

\$5.000.00—From the Ultizens of Franklin, Pa, who, in her the leavership of George W. Feldman, acting in conqueration with the newspapers of the city, have adopted the town of Hingens with \$15 children, assuming a responsibility of over \$9,700.00 and have shown their earncotness by this remistance.

\$4,006,00 Prom the Citizens of Lancaster, Pa., through the fact; an haptring sum.

\$2,513.50—Sent by the "Tueson Cilizen" of Tueson Aris., \$2,000.00, contributed by Harold Rell Wright, the distinguished author, and \$213.50 by other citizens of Tueson. This is the beginning of the campaign by that enterprising paper.

The cause of cold is not COLD It is HEAT

DUNHAM Radiator Trap

This denice is one of the fundamentals of the DUNHAM VAPOR HEATING SYSTEM. Because it makes impossible the presence of water in radiators, it presents their pounding and knocking, reduces feel consumption, causes the radiator to heat evenly and quickly, eliminates the hissing air valve and sparting water.

COLDS are bred in your very home. The results of imperfect heating breed them. But where Dunham Vapor Heating is, there exists none of the unhealthy conditions that foster colds.

Instead, the air in every room is fresh and warm. An even, genial heat pervades the whole home. Radiators do not-cannot-knock or pound. Temperature is automatically kept at either one of two predetermined levels. And all with minimum attention and unusual coal economy.

A little more costly to buy than old-fashioned, faulty equipment, the Dunham Vapor Heating System is worth more-in both material value and service. A steam fitter can Dunhamize a new or an alreadybuilt home. Write for full information immediately. Ask for a free copy of our invaluable book, "The 3 H's."

(Continued on page 602)

S - V In tires on trucks, rubber gets the hardest punishment of its workaday use. Its load is a Moloch to grind and crunch and crush.

It must carry this burden and cushion it, too, without the use of air.

Resilience and resistance must be provided by a single unit.

This difficult requirement has led to the trial and test of thousands of compounds—rubber combined with toughening materials.

In the Goodyear S-V we believe we have the tire most successfully compounded to withstand the greatest punishment, last for more thousands of miles, while providing a more effective buffer between the road and the load.

Users, the country over, declare the S-V is a wonder tire, incomparably better in length of life and efficiency of service.

They report mileages up to 20,000 for country use and 40,000 on city streets.

They report tire costs reduced amazingly. They declare the S-V free from common truck tire troubles, such as peeling off in strips or tearing off the edge. They report extraordinary traction, which saves power and prevents dangerous skidding.

We know that they are right. Probably it will pay you to investigate these reports of S-V excellence.

The Goodyear Tire & Rubber Co., Akron, O.

Quality Without Extravagance

Six or Twelve Cylinder Models-like two railroad trains - both all-steel, modern, all-Pullman, running over the same roadbed, the same rails, under the same safety and efficiency.

THE National Twelve is an extra fare train with slight advantage in speed.

A difference in power is there, but not enough to affect the popularity of either. The Six is a highly developed, wonderfully quiet, flexible, smooth riding car of sumptuous accommodations.

The Twelve, if you want a greater volume of power and the fun of taking the "extra fare Pullman."

Equal in style - same wheel base - same wonderful new bodies - same endurance - same easy riding - both typical National quality - in fact, identical throughout with exception of the motors.

It is a Permanent Pleasure-

to spend the cost price of a National "Highway." After the first flush of having a new car delivered to your home, there are no after-regrets; no doubt about the wisdom of your choice; no wondering if you suffer in comparison to your motoring friends.

Mother and daughter cannot ask for more beauty, luxury or social prestige; the son cannot ask for more power, speed and thoroughbrededness; while for father who pays, it is endless satisfaction not to have over-spent. Even more important is the conviction that grows the longer he drives his National that it was cash-wisdom not to under-spend.

> Six Motor-300 cubic inches. 56 horsepower. Twelve Motor-370 cubic inches, 77 horsepower. Both cars 128-inch wheelbase

National Highway Sixes and Twelves will out-perform and outdemonstrate any other team of motors on the market today

REVIEWS OF NEW BOOKS

In deference to some hundreds of requests from subscribers in many parts of the country, we have subscribers in many parts of the country, we have decided to act as purchasing agents for any books reviewed in THE LITERARY DIGEST. Orders for such books will hereafter be promptly filled on receipt of the purchase price, with the postage added, when required. Orders should be addrest to Funk & Wagnalls Company, 354-360 Fourth Arenue, New York City.

THE AUTHOR OF "ROBINSON CRUSOE"

Trent, William P. Daniel Defoe: Bow to Know Him. With portrait. Pp. 329. Indianapolis: The Bobbs-Merrill Company, \$1.25 net. Postage.

If Defoe had never written the story of adventure that has given him world-wide, permanent fame he would probably be lost in the crowd of eighteenth-century writers. It is the immortal story of which he himself probably thought least that has given him a secure place among those whom the world estimates as its great writers. Comparatively few persons realize that the author of "Robinson Crusoe" was an important politician as well as an influential journalist; that he was, as the authority who writes this book asserts, one of the best known of all Englishmen during the reigns of William III., Anue, and George L. In addition, he was a historian, a biographer, a poet, an essayist, a political economist, a sociologist, a religious controversialist, a moralist, a topographer, and a writer on occult subjects. His latest biographer, well arquainted with this notable period, styles him a "Proteus both in literature and in affairs" and an "almost titanic genius."

Mr. Trent has written his interesting and instructive volume partly as a protest against this eclipse and effacement, by a single romance (however precious in itself), of a great and serious author's just fame. He expresses the hope that his little book may revive interest in the serious side of his hero's literary achievements. With this object in view, he has presented a very complete and realistic picture of one of the representatives of the period so favored by students of literary history. It is, of course, the age which the genius of Thackeray has stamped for us with such vividness-that of Swift, and Pope, and the rest -which forms the setting for the portrayal. In Defoe's day the pamphleteer held the important and influential rôle in public affairs which is now reserved for the journalist. And it was in that professionstrangely enough as it will appear to his readers of to-day—that the genial author of "Robinson Crusoe" shone at his brightest. He seems to have exercised in his time the intellectual and political sway that was to characterize the great editor or publicist of a later period. He became, in fact, an editor and publisher (in 1704) when his newspaper, The Review, appeared. The biographer has brought to light some interesting details of this pioneer in the fourth estate.

"For the most part each number consisted of four pages of two columns, distributed between an essay on some serious topic of the day, political, ecclesiastical, economic, and a lighter department, generally entitled, "Advice from the Scandalous Club,' in which a supposititious society discust various matters-frequently the editor's own affairs, or else the blunders committed by other journalists, or cases of matrimonial infelicity. Advertisements, chiefly of publications and quack medicines, filled a portion, rarely the whole, of the last page. The essay did not greatly exceed in length a leading editorial of to-day, and the total amount written by Defoe in a week—there is little indication of outside help—would not tax a prolific modern journalist. Fellow journalists waged war upon him; cultivated readers affected to despise him; Steele, Addison, and Swift, all of whom learned from him, gained far more applause from contemporaries and have been more honored by posterity; but in influence upon the evolution of journalism and in range of information and practical mental powers Defoe stands without a real rival among the editors of his time."

GENERAL GRANT'S CHIEF OF STAFF

Wilson, Major-General James Harrison. The Life of John A. Rawlins. With two portraits. Octavo, pp. xiii-514. New York: The Neale Publishing Company. \$3.00 net. Postage, 15 cents.

In writing this life of Grant's Chief of Staff and Secretary of War, General Wilson has made a notable contribution to the literature of the Civil War. The subject of the biography, Major-General John Aaron Rawlins, while ineligible for the first rank of military fame, was none the less an important figure in the great events of his time. His biographer, himself an experienced soldier and certainly an authority on the subject, speaks of him as the most remarkable man he met during the Civil War. "Altho he came from the plain people," as General Wilson expresses it. "and always held a subordinate position in the Army, it was his good fortune to exert a tremendous influence not only upon persons of high rank but upon events of trans-cendent importance." These are words of high praise, especially if the reader recalls that he who utters them knew intimately most of the chiefs of the Union armies-McClellan, Grant, Sherman, Sheridan, and the rest. The man to whom this tribute is paid by a brother officer, fifty years after the events described, never commanded troops in the field nor "became charged with the supreme control of great movements." Whatever he did, avers his biographer, was upon and through others, as aid, counselor, and Adjutant-General to General Grant, as Chief of Staff of the Army. and as Secretary of War. His association with Grant, both personally and officially, was of the most intimate nature, and this influence, always beneficent, had important results in molding that unequaled career.

The portrait of this distinguished soldier, who deliberately effaced himself the more effectively to further the fortunes of Grant, furnishes a unique and striking type of the American at his best, in the time "that tried men's souls." Early habituated to surroundings of poverty and hard work, he developed many of the traits that stamp Lincoln's early manhood. It was, as his biographer states, "an active, earnest, intense, and robust life" into which he was born in East Galena, also the birthplace of Grant. "The struggle for existence," writes General Wilson, "was sharp and discouraging: poverty and hardship were the lot which confronted this typical family, and the only consolation was that they were not worse off than their neighbors.' It is indeed a picture of Spartan simplicity which the biographer brings before us in his description of the milieu that was to produce the greatest soldier of the Civil War. The little community was practi-cally isolated; communication with the older States was by steamboat and the canvas-covered wagon; the implements of industry were the plow, the ax, and the spinning-wheel; the food of the people

Is this your family, having the time of their lives in one of those beautiful Overlands-something to look forward to every day of the year?

This is the life

There are two ways to live nowadays.

One way is the life that is daily chock full of healthy activity, wholesome fun and lots of fresh air.

This way is shown above,

This manner of living gives your family every modern opportunity to better health, better sport, a broader mentality and a more highly developed point of view.

To enjoy life on this basis-to get all there is to be had and all you should have; to look

forward to each day with a keener interest and anticipation; to miss nothing-get an

was mostly Indian corn and bacon, while their clothes were of homespun cloth. Church and school were "costly luxuries" that came later. A large family, early taught to labor in field and forest, was the poor man's greatest wealth. Charcoal-burning was the chief occupation. The monotony of life in the Illinois of that day must have been complete. It had one interruption, however, the Black Hawk War, in which the elder Rawlins took part as a transporter of supplies to the Government troops.

General Wilson's story of his hero's successful battle to lift himself out of the narrow and sordid environment into which he was born reads like a romance. It is, in fact, a romance, but one in the sphere of reality, a story quite as inspiring as that of Lincoln or Garfield, and enhanced to no small extent by the author's method of intertwining it with that of Grant. The personality of Grant, indeed, haunts the whole narrative. It is the author's deliberate conviction that Grant's career could not have been what it was without his adjutant's cooperation and beneficent influence. After the conclusion of the war, when Grant became President, the influence, luckily for the nation, was continued. As Secretary of War, General Rawlins was a tower of strength in Grant's Cabinet and Administration. He was the only member of the Cabinet who thoroughly understood the President. The others stood in awe of "the victorious and taciturn soldier," and were prone to overrate his capacity.

The political career of this distinguished soldier, as sketched by his friend and biographer, is quite as important and interesting as were his military achievements. He early became imprest with the importance of our relations with Cuba and openly championed a Cuban republic during the rebellion of 1868. Intensely American, he believed in the Monroe Doctrine and held that we, as chief of the American republies, should encourage and help those that were endangered by foreign aggression. "He sympathized with the desire and efforts of Ireland to throw off the British yoke." writes his biographer, "and looked hopefully to the peaceful acquisition of the newly confederated British colonies in North America. Nor should it be forgotten that these were the views of the President-elect (Grant), as well as of Rawlins and the Republican party, at the time they were uttered."

RECENT FICTION

Dodge, Henry Irring. Skinner's Dress Suit. Hustrated. Pp. 165. Boston and New York: Houghton Millin Company. \$1. Postage, 12 cents.

One would not suspect a sermon from a book with the above title, but, underneath, a laughable account of how "Dearie Skinner" covers up his failure to get a "raise" by lying to his wife and paying the raise out of his hard-earned bank-account with the terrible consequences of his rashness, become a sermon and a fine one on the text: "Any man who wears clothes like a door-mat will let you make a doormat of him." On the strength of that "raise" Honey insisted that Dearie buy a dress suit, and then the fun and complications begin, because dress suits presuppose attendant luxuries, and in living up to its demands, Skinner ceased to be a "cage man" and became one of the firm. It is a book full of amusing situations, but there

GREAT REAR SPRING WATER
50c the case of six glass stoppered bottles

are many grains of common sense in all the fun. It shows very plainly that opportunity and self-respect often rest on the consciousness of being well-drest.

Dickson, Harris. The House of Luck. Pp. 452. Boston: Small, Maynard & Co. \$1.35. Postage. 12 centa.

We are all familiar with the Mississippi River gamblers, but this story is woven around a less familiar theme: the organization of gamblers and unprincipled adventurers, known as "speculators," of the "lower Mississippi of the thirties," whose leader planned a slave insurrection, a pillage of the entire South, and a flight to Mexico with all the booty. The "House of Luck," or the "Kangaroo," was the notorious meeting-place of these conspirators, and around this most of the story's action centers. Mr. Dickson claims that his narrative is "a faithful portrayal of burly-burly days through our great Southwest, in the days when laws were feeble and men were strong." The lovestory of Adrien de Valence and Cécile Kinlock is closely interwoven with the dramatic pursuit of the murderous gang. the foiling of their nefarious designs, and the recovery of the box of treasures which had been stolen from Adrien's father. Tragic and dramatic scenes, thrilling and intricate scenes, follow one another, growing more and more involved and brutal. The hero goes through some very dangerous experiences. There are almost ton many thrills. The story is a little too long-drawn-out, but the reader will follow with interest the complications furnished by the inconsequent appearance of the witless "Will of the Woods," who perceptibly influences the happy and satisfactory outcome.

London, Jack. The Turties of Tasman. Pp. 265. New York: The Macmillan Company. \$1.25. Postage, 12 cents.

Mr. London's new volume is a collection of eight short stories, which portray widely different characters and touch emotions from grave to gay. Mr. Loudon is at his best in tales of virile men and wild out-of-door life, especially the life of the extreme North and West. Readers will find something appealing in these stories. The title is taken from the first and is followed by "The Eternity of Forms," "Told in the Drooling Ward," "The Hobo and the Fairy," "The Prodigal Father," "The First Poet," "Finis," and "The End of the Story," "The Turtles of Tasman" is the most ambitious of all, and presents a psychological problem as to which is better; to stay at home, following convention, duty, and commercial gain, or to wander over the world acquiring a fund of adventurous memories and friends, but no fortune. Illustrative of this theme are presented two brothers. Mr. London makes the wanderer much more attractive than the man of conventions, but we wonder what would have happened if there had been no stay-athome brother from whom to borrow, and to whose home to come when all had failed. "The End of the Story" is also dramatic and subtle, while the "Prodigal Father" furnishes comedy and "Told in the Drooling Ward" gives fun of a pathetic kind.

Ward, Mrs. Humphry. Lady Connie. Pp. 434. New York: Hearst's International Library Company. \$1,50. Postage, 12 cents.

There is nothing new or startling in Mrs. Ward's new novel, either in plot or treatment, but there are that perfection of

DEPENDABLE SPARK PLUGS

All Overland and Willys-Knight cars are factory equipped with Champion Dependable Spark Plugs.

For no other plug meets the needs of these motors so efficiently-so unfailingly.

Champions are most carefully and scientifically built. Their construction is guided by the most exhaustive laboratory tests.

Champion porcelains are protected against the constant hammering of the cylinder explosions by patented asbestos cushioned copper gaskets. The extremes of heat and cold do not weaken or crack them.

The name "CHAMPION" is on the porcelain. Look for it.

CHAMPION SPARK PLUG COMPANY, TOLEDO, OHIO

TIMKEN BEARINGS

Metal and Mettle

The mettle of Timken Bearings has been tried and found true through years of usage at points of severest service in the majority of high-grade motor-cars.

The metal from which Timken Bearings are made has always been subjected to the most rigid tests to insure Timken quality.

The different processes of manufacture have also been supervised with the most thorough inspection—the world has been searched for the most accurate automatic machinery—machines designed by our own engineers have been used to make Timken Bearings still more perfect—and the steel tube from which the cups and cones are turned has been drawn in the Timken Tube Mill.

All of this has made possible a control over quality

that has resulted in the production of the finest bearings that money can buy for your motor-car.

But even this did not completely satisfy Timken standards.

In order to make this control of quality include the actual production of raw material the Timken Steel Mill has been built, and equipped with Heroult Electric Furnaces—the most modern and efficient method of making Timken quality steel—a steel of extraordinary refinement.

Timken Bearings have always been known for their finer mettle—and now the use of a finer metal has added a still greater perfection.

In view of the long life and mileage expected of motor-cars today this standard of quality, even though it does cost more, must be considered as the one dependable assurance of efficient motorcar service.

THE TIMKEN ROLLER BEARING COMPANY
Canton, Ohio

technique and completeness of detail which make her books so satisfactory to read. Whether or not her characters are lovable, they seem a vital part of the story and move in and out of its pages with convincing smoothness. It is a simple plot of love, jealousy, and final regeneration, but the episodes, experiences, and dramatic situations are handled with skill. When Lady Constance Bledlow came to her uncle's house in Oxford to spend a year, she found misunderstandings which she did not attempt to dispel, not being especially drawn to her aunt or her cousins Alice or Nora, but, by virtue of her personality and wealth, she had the masculine world at her feet and soon made friends with Nora. Among her adorers were Otto Radowitz, a Polish musician, and the arrogant but fascinating Douglas Falloden. When, in a fit of jealousy, Falloden joins drunken students who are "ragging" Otto, the young Pole's hand is hopelessly injured and the story becomes serious and tragic, The joint responsibility for the terrible accident and the attempt on all sides to alleviate the young musician's suffering. both mental and physical, bring out all the latent goodness and strength in Falloden. The overhanging clouds are finally driven away. It is too bad that Nora Hooper does not figure more prominently in the story, she is such an honest, staneh, and lovable character, as she fights to pay the family debts and keep their honor unsullied. Mrs. Ward has drawn a clear picture of university life.

Martin, George Madden. Emmy Lou's Road to Grace. Pp. 305. New York and London: D. Appleton & Co. \$1.30. Pestage, 12 cents.

Emmy Lou was originally created by Mrs. Martin to illustrate the child, as affected by a prevailing stupidity in public schools. The new Emmy Lou, supposed to be the same kind of little girl, illustrates the bewilderment of a small child under the influence of parents, relatives, and teachers, and her failure to grasp the connection between ethics and facts, the ideal and the real. The book is interesting, sometimes humorous, sometimes pathetic as Emmy Lou struggles to understand why "Christianity" excludes from the Sundayschool, little black "sister" and neighbor "Israel." There are a series of chapters in which different phases of Emmy Lou's development are chronicled. Each is mildly amusing and really seriously significant. If we may venture to criticize, we should say that Mrs. Martin's points are too subtle and intellectual, even psychical, to make this a child's book. The problems are too simple to appeal to the general reader, the teachers and parents might be awakened to a reasonable recognition of the limited power of the child mind.

Tagore, Rabindranath. The Hungry Stones and Other Stories. Pp. 271. Translated from the original Bengali. New York: The Macmillan Company. \$1.25. Postage, 10 cents.

Strange that from countless styles of short stories, all good, some will stand out, whose fascination is indescribable and whose methods are subtle but absolutely convincing. Such are the stories of Rabindranath Tagore, the mystic Indian philosopher, and these stories, of which "Victory" alone is his own translation, touch our hearts, stimulate our intellects, and excite our sympathies. He is especially delightful in his understanding and portrayal of children in "Cabuliwallah,"

"The Home-coming," and "My Lord, the Baby." Then there is the wonderful love-story. "Renunciation"; the mysterious spiritual influence in "Hungry Stones"; the satire of "The Kingdom of Cards"; the personification of conscience and repentance in "The Devotee," and the psychological question in "Living or Dead." The translations are all good, but Tagore's own version of "Victory" is exquisite in its diction, its imagery, its poesy, and its human comprehensiveness, in fact, all the tales are manifestations of the author's idealism. and belief in the simplicity of the universe. "Ah! How we all love to be deluded! We have a secret dread of being thought ignorant, and we end by being ignorant after all, only we have done it in a long and roundabout way."

OTHER BOOKS WORTH WHILE

Van Vechten, Carl. Music and Bad Manners. Pp. 243. New York: Alfred A. Knopf. \$1.50. Postage, 12 cents.

Mr. Van Veehten is well known in the musical and literary worlds, and, while "elever," he is just and sound in his eritical verdiets. He inspires students and entertains general readers by amusing comments on the vagaries of great musicians. First in the book comes the title story, then "Music for the Movies," "Spain and Music," "Wagner's Ideals," "The Bridge Burners," "A New Principle in Music," and "Leo Ornstein." The author has not hesitated to criticize adversely either an artist or an organization, and dwells on the bad taste of ecrtain performers and their ill-chosen habits, He is as frank in condemning Geraldine Farrar as Vladimir de Pachman. His theory about the development of music appropriate to and especially for the "movies" is unique. His knowledge of the Spanish influence in music is extensive, and his despair at trivial and inadequate efforts to realize Wagner's ideals for the stage is quite honest. There are many elever suggestions one can cull from a careful study of the book.

Cousins, Frank and Riley, Phil. M. The Woodcarver of Salem. Pp. 168. Boston; Little, Brown & Co. 17.50. Postage, 16 cents.

For thirty years Mr. Cousins has been making a photographic record of fine old houses which typified the history and architecture of his native city, Salem. Five years ago it was suggested that Mr. Riley, who is the architectural editor of Country Life in America, should write the text of a book devoted to the life and work of Samuel McIntire, the "master craftsman of the third period of Colonial architeeture." This book is the result. It attempts to make a true estimate of MeIntire's achievements and, by "impartial criticism," "to interpret its value and significance in modern home-building." It appears as a limited edition, earefully and elaborately prepared. Salem, next to the oldest settlement in Massachusetts, attained eivie and commercial importance because of its seacoast situation, but "the wheel of progress turned and Salem now lives chiefly in the glory of its illustrious past, reminders of which are to be seen on all the principal streets." Ship-builders and carvers of the period of maritime supremacy turned their intelligence and ingenuity to home-building with great success. Doorways and porehes, mantels, stairways, interior and exterior decoration, as elaborated by Mr. Melatire and his

Spring field, etc.

Turns In Its Own Length!

GETTING in and out of the tight places, negotiating narrow roads no conventional truck can negotiate—that is but one of the many exclusive features of the

100%WATSON Tractortruck

To turn completely around without backing the Watson Tractortruck requires a 31 - foot circle. This wonderful flexibility and ease of control cuts down hauling time, labor and operating expense to the minimum.

There is no heavy hauling problem the Watson Tractortruck cannot solve. It is constructed 100° in the Watson Wagon Company's own great plant-the world's largest Dump Wagon factory.

Watson Features :

Turns in its own length without backing.
Undercut bottom dump.
Gravity not power does the dumping.
60 of load carried on size litres.

Sub-frame carries weight of power plant, tank and seat when truck is empty.
Utmost flexibility; various types of trailers can be used with

same tractor.
Minimum gasoline consumption.
Lowest upkeep cost.
Greatest tire service.

There are more large capacity Watson Trailers in daily use behind gasoline tractors than any other make.

Walson Wagons-like Watson Tractortrucks-are built for maximum endurance under the most strenuous continuous usage. Will not stall on the dump. Strongest Dump Wagons on the market, weigh from 200 to 400 pounds less than other wagons of equal capacity. They have been standard for many years.

"It's a Watson!"—the absolute final word in Tractortruck, Trailer and Dump Wagon superefficiency.

Tarbell, Ida M. New Ideals in Business. An Account of Their Practise and Their Effects upon Men and Profits. Pp. 349. New York: The Macmillan Company. \$1.75. Postage, 12 cents.

Will ideals in business pay? This book answers that question. Its affirmative evidence is convincing. Such evidence Miss Tarbell found in four years of personal observation at industrial centers, studying "a silent revolution," as she terms it, in the relations of employer and employed, in the producing methods whereby capital seeks to better itself and assure greater results through the capitalization of manhood. Her pages are good reading for any pessimist. They show how scientific organization may protect labor, conserve life, lessen hours of toil, and increase profits. They contradict many old false notions-as, for instance: "There never was a more foundationless tradition," says Miss Tarbell in her chapter on "Experiments in Justice," "than that workingmen and -women do not respond to efforts to make the conditions under which they labor more wholesome, decent, and just." She looks as much, perhaps, to the effects of new ideals upon the employer as to their effects on the employed, for she says they "are making a new man of the employer. He is discovering not only that his business may be handled in a scientific way, which hitherto he has denied, but that husiness so handled is far more interesting, as it is far more profitable."

Brann, W. C. A Collection of the Writings of W. C. Brann, In two volumes. With hiegraphy by J. D. Shaw. Each vol. pp. 464. Waco, Texas, Pers. Brothers. The two volumes, in cloth, \$3.50, delivered.

The author of these "Writings" (now before the public for many years, and a new printing of which has recently appeared liked to be known as "Brann the Iconoelast," and such he is pronounced at the head of every page of the twin volumes. Of himself he says, on page 178 of Vol. I, in an address on "Beauty and the Beast," delivered before the Ladies' Reading Club of San Antonio: "I have been frequently called an iconoclast, and, bad as the title is popularly supposed to be, I trust it is not altogether undeserved. I have striven to break foolish idols and shatter false ideals. to burl unclean gods from their pedestals in the public pantheon. A work of destruction is not, I admit, of a high order. Anybody may destroy; it requires genius to build up." He started a periodical, Brann's Iconoclast, twice-the second time at Waco in 1894 and made it finally a financial success. He struck at everything, in its columns, until an assassin shot him down. "The wizard of words," he was declared by Elbert Hubbard, who spoke of his life's end as "fitting and poetic-a life that was ever at white heat, a life that burnt its way through the years, leaving behind a blazed trail-but one strewn with wreckage."

Ranous, Dora Knowlton. Good English in Good Form. Cloth, pp. 248. New York: Sturges & Walton. \$1 net. Postage, 10 cents.

The purpose of this little book is to guide those who have to study by themselves the delicate art of writing good English. It contains many valuable suggestions, but the proportions are spoiled by the overelaboration of some sections and the sketchy character of others. Nearly one-half of the book is filled with materials for a study of words derived

just as readily and moved to any desired new location. Weatherproof, fireproof, time-proof. Wonderfully durable. Whateverthe read-garage, booth, boat-brone, office, storchouse, whast, estuare, bore, bareful, or factory, there's an Edwards Stort Building for the purpose, Write today for descriptive burnsters and prices.

The Edwards Manufacturing Company 1887 87 Eagleston Ave. Concinnati, Ohio from Latin and Greek. While handy for those interested, this overshadows other important matters—especially since it contains such negligible words as "android," "otaeoustic," "cachexy," 'epispas-tic," and since also the extensive use of Latin and Greek derivatives tends to a heavy and somewhat pompons style. The test of a word's meaning is never its derivation-which may, of course, be a elue-but always its usage by contemporary writers whose work receives wide critical approval. One wishes that the sections on "words and phrases to be avoided" and on the use of reference books had been much enlarged. The discriminations in the former are excellent and worth careful attention. One section is devoted to forms of correspondence and others to paragraphing, punctuation, proof-reading, illustrating, and other matters of importance to authors.

Kerfoot, J. R. How to Read. Pp. 297. Boston and New York: Houghton Mifflin Company. \$1.25. Postage, 10 cents.

Mr. Kerfoot, the literary critic of Life, has given us a brilliant dissertation on how we read and how we ought to read. Each thought is followed out to its logical end through varied ramifications and modifications. It is all interesting, but we wish he had made some of his statements with more directness and fewer explanations. He calls attention to the necessity for alertness, "mental movies," and "idea distillery"; says reading is only an application of facts and experiences in our own consciousness, and says we read always either to get away from ourselves or to find ourselves. "Reading is a form of living," he claims, and if living ceases to be an adventure and becomes a habit, reading will, naturally, follow suit. It would be difficult to give the reader au adequate idea of the spirit in which Mr. Kerfoot has analyzed and discust his subject. "How to Read a Novel," will be the most generally practical help to the lay reader.

Escuwein, J. Berg. Writing for the Magazines. Pp. 276. Springfield, Mass.: The Home Correspondence School. \$1.50 pet. Postage, 12 cents.

If, as stated, "the population of the United States consists of one hundred millions, most of whom seem to be ambitious to write," the reason for this book is clear. It tells about all that can be told about writing for print, the marketing of manuscripts, editorial service, etc. It is one of "The Writer's Library."

Shelton, William H. The Jumel Manaion. Pp. 257, Illustrated, Boston and New York: Houghton Mifflin Company. \$10. Postage, 18 cents.

The author of this exhaustive volume is the curator of the famous Jumel or Morris house, now preserved as a historical museum by the Daughters of the American Revolution. To write the book, he has examined a countless number of manuscripts, letters, and records, and as a result has produced a thorough history of one of the best known historical landmarks of Manhattan, a house known for its association with Washington, General Clioton, of the British Army, and with the story of a woman about whom the truth was stranger than fiction. Mr. Shelton endeavors to correct many unauthentic and mysterious tales about the house itself, and especially the fantastic stories which are current about Madame Jumel, whose disordered mind in later years was responsible for many of the wild statements that have

Has Your Community a Good Roads Program?

MOST municipal engineers in the large centers have what they call a "Road Program"; that is, the plan for all the streets and roadways within their jurisdiction covering from three to five years or more in the future.

Green Lake, Wis Caratrasted with "Tarvia X," percetos then method, in 1913. Note emost h, dust

In the smaller cities and towns such a paving program is occasionally prepared by outside consulting experts.

They come in and make scientific studies of the traffic on various streets—the grades, the kind of materials that are available, etc.

Then they lay out a complete scheme calculated to keep the road department working for many years ahead towards a well-defined objective of a perfectly paved town.

More frequently, however, no program is followed and roads are built and maintained by rather loose and costly methods.

Every town, no matter how small, ought to have a definite road program.

Every county ought also to have one.

Roads should not be built in a patch-work, haphazard fashion, for the only result of such a policy is stretches of good roads interspersed with stretches of bad roads.

As a chain is no stronger than its weakest link,

so a road is only as passable as its poorest parter

Therefore, alternating good and bad roads are a costly abomination to all who travel over them and all who pay taxes for their construction and maintenance.

Our Service Department has persuaded many towns to work out a systematic road policy; because we have been able to demonstrate that great sums of money can be saved by so doing.

A system of tarviated macadam—that is to say, macadam that has been bonded with Tarvia to preserve the surface and make it automobile-proof—is an almost indispensable part of every Good-Roads Program today.

Tarvia made are not only low in their first cost, but exceedingly low in maintenance cost.

Once a town or city adopts the policy of building Tarvia roads it rarely goes backward, but the mileage is increased from year to year.

The result of such a policy is a town where the roads are dustless and clean, the property values advancing, the road tax low and the taxpayers enthusiastic believers in and boosters of Tarvia.

There are several grades of Tarvia and a dozen methods of using the product.

If you are at all interested we should be glad to mail you an illustrated booklet showing Tarvia roads all over the country that are giving the maximum of service and satisfaction at a minimum cost.

Winnipeg Sydney, N. S. Vancouver

been made about the place, its guests, and its varied career. The house was built in 1765 by Gen. Roger Morris, of the British Army, and was later used as Washington's headquarters. The author gives a complete account of Madame Jumel, who, as Betsy Bowen, began life in Providence, R. I., among squalid surroundings, became the mistress of Stephen Jumel, a French merchant in New York, and succeeded in foreing him to marry her and bestow on her his large fortune. The account of her life and varied experiences in this country and abroad, her marriage to Aaron Burr when she was fifty-eight and he seventyeight, her gradual mental decay, and theatrically dramatic existence even, to days of madness and dissolution at the age of ninety, make racy reading. There is much that is pathetic and incomprehensible in the legal bickerings which followed her death.

Hamel, Frank. Human Animals. Pp. 295. New York: Frederick A. Stokes Company, \$2.10. Postage, 14 cents.

This is a serious and comprehensively exhaustive work dealing with old superstitions, beliefs, and traditionary legends concerning the transmigration of soulsthe human soul in the animal body or animals appearing as humans. The ceremonial dances of various countries, such as the "Hopi snake-dance," are recalled and described, the legends of werwolf and witches, fairy-tales of swan-maidens and transformed knights, and especially mythological romantic tales such as "Circe and the Swine," "Leda and the Swan," which deal with "human animals." The seeker after facts about animal metamorphosis will find this a helpful means of clearing up an obscure branch of occult science. Hypnotism and thought-suggestion have played an important part in many mysterious manifestations. "Even the wildest superstition enshrines something of reality. and a stratum of truth underlies most wide-spread beliefs."

Montgomery, Robert H. Income-Tax Procedure. 1917. Pp. 471. New York: The Rotald Press Company. \$2.50, Postage, 16 ments.

Not a history, not a treatise, not a digest, this book aims to answer a multitude of questions about the income-tax law which are annually asked. Its answers are all clear, and can be easily understood. On what kinds of income a man should pay tax, what incomes are taxable and what are not, what deductions he may properly claim, collection of tax at the source, judiciaries, inequalities and defects, corporation taxes, etc.-all these, and more, are lucidly set forth by an expert accountant who is also a lawyer that has made a thorough study of this whole income-tax matter, and who has had able assistance. It seems probable that the taxation of incomes will continue for a long period; and until it ceases, or the law authorizing it is better understood, this work must be indispensable in the preparation of returns and to save needless overpayments. Its advice definite and down to date.

McPherson, Logan Grant. How the World Makes Its Living. Pp. 435. New York: The Century Company. \$2 net. Postage, 12 cents.

Its publishers speak of this work as "a simple and intelligible exposition of the economic life of society." So simple indeed is it that it is largely elemental, and therefore quite intelligible. In it the sometime student of economics will find

little new to his thinking, despite the fact that it does present clearly the development and meaning of Utility, Property, Value, Capital, Interest, Wages, Prices, and Profits, outlines the functions of Insurance and Speculation, and shows the cause and effect of crises and panies. It states, also, how acquisition has been modified, and by what influences, and indicates how and why benefits must be reciprocal. Mr. McPherson has written much on economics, finance, and transportation; has held responsible railroad relations, and has been a lecturer at Johns Hopkins University; has written several important books on transportation and freight-rates in this country and in Europe; and after four years of service as director of the Bureau of Railway Economies, which he established in Washington, retired to write this book. Its closing chapters teach the necessity for brotherhood and peace as these must be taught to assure general productiveness and make acquisition widely beneficent.

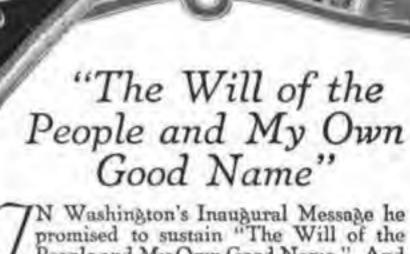

Wilstach, Frank J. A Dictionary of Similes. Pp. 488. Boston: Little, Brown & Co. 8vo, cioth. \$2.50 net; half leather, \$3 pet. Postage, 18 cents.

Mr. Frank J. Wilstach is to be congratulated upon having made a valuable contribution to English literature in his "Dictionary of Similes," Such a book as this will undoubtedly find favor with writers of all classes and speakers of all kinds, from the pulpit orator to the platform politician. In the 488 pages before us there are nearly 15,000 similes - a veritable cade mecum on the subject-which are bound to be suggestive to the men and women for whom the work is designed. The arrangement of the book is practical: the authorship of the similes is indicated; but, alas, that the author should have overlooked the desirable feature of stating when or where the similes which he cites were used or may be found. Take, for instance, the famous lines from Dryden-

"Errors, like straws, upon the surface flow;
He who would search for pearls must dive below."

Some reader may wish to know where to find this simile. It seems hardly fair to require him to consult a book of practical quotations to learn that they occur in the prolog to Dryden's play, "All for Love; or, The World Well Lost," written in 1678. This is the only defect in this otherwise useful compilation. The value of locating literary extracts can not be overestimated in an age when nine-tenths of the people require to be "shown." There has been recently going around the press a claim that Wyclif and Hereford were the fathers of the expression, "Government of the people, by the people, and for the people," used by Theodore Parker in 1850 and by Abraham Lincoln in his famous Gettysburg Address, November 19, 1863. One authority who attributes the quotation to Wyelif and Hereford's preface to their translation of the Bible has quite overlooked the fact that the word government did not come into the language until two hundred years after the translation referred to was made.

On the jacket of this work is a quotation from George Moore which is likely to provoke a smile from any one familiar with this author's works; it suggests that Moore himself has been hard up to it when searching for similes. He says: "It is hard to find a simile when one is seeking for one." Imagine George Moore searching for a simile!

IN Washington's Inaugural Message he promised to sustain "The Will of the People and My Own Good Name." And so it is in the world of business. Commercial prestige can successfully be built only on the standard of quality and personal integrity.

By fulfilling the "will of the people," by meeting all their demands for Most Miles per Dollar, Mr. Firestone has built an organization which stands for leadership in the tire world.

Firestone Tires fulfill every demand for safety, easy riding and economy. And as assurance that this quality shall continue, you have the might of a powerful organization and the personal responsibility of the Firestone name. Your dealer and the nearest Firestone Branch unite to give you the maximum of prompt, economical service.

Westinghouse STARTING, LIGHTING BRIGHTION EQUIPMENT

Where Minutes Mean Money

Down comes the load, box after box, and the whole truck trembles.

Then off over cobbles and car tracks, with each bump sending a shock to every part.

Yet under countless thousands of such blows, the electrical equipment—starting motor and generator—must preserve the nice adjustment essential to an unfailing quick start and bright steady lights.

For truck service, though imposing the severest strains, makes the least allowance for failure. To the truck owner minutes mean money, and he applies to truck performance the hard and last preasure of the cost shret

It is noteworthy, therefore, that Westinghouse is used as regular or standard extra equipment on a dozen well-known makes of motor trucks and is supplied by others at the buyer's option.

The same high quality that makes Westinghouse Equipment the choice of these truck builders has caused more than forty pleasure car manufacturers to adopt it though it costs more.

Sectional Double Wall \$ 108

WRITE for illustrated Catalog of Scotlumber Camps, Boat Houses. Garages and Contractors Houses. Above price is for 10 x 12 house, without porch. Built in units, on the sectional book-case idea. Expands with your needs. Any two-men can erect it equickly, easily. Readily taken down, moved and set up any number, id times without injury. Double walls and for space between insure protection from heat and outside walls smoothly celled with matched lumber. Altroctive, confortable, complete. Particle, fut look personnel.

SCOTT LUMBER CO. Box 25, Norwich, N. Y. Estab. 1853

CURRENT POETRY

ENUINE emotion, exprest without r elaborate artifice, is the distinguishing charm of Ruth Guthrie Harding's "A Lark Went Singing" Minneapolis, Edmund D. Brooks). Perhaps the most interesting poem in the book is "At the Old Ladies' Home." The poet treats an unusual subject with such restraint, and yet such imaginative power, that what with less deft and sympathetic handling would be merely a tour-de-force, becomes a sincere and noble utterance. rich in romance are artfully introduced in the first part of the poem, and the intensely personal appeal of the climax is most effective.

AT THE OLD LADIES' HOME

BY RUTH GUTHERE HARDING

There in a row of chairs upon the porch I saw them, women alien from the world, Set in a niche to watch the world go by; A few, born saints, , , but some had outworn sin;

Sisters at last from having done with life,
Here Joan of Arc. grown past her soldier-dream,
And Marianne, spared her Herod's wrath.
Forgetting Herod, goodped for an hour:
While calm Francesca, once knowing Paolo's love,
Sat knitting peaceful in the noonday sun,
And Nicolette, with Aucassin long gone,
Made painful writing with a wrinkled hand.

"Ab, let me die," I prayed, "before the glow shall leave my body, and before my tears shall buy me patience; take me while I feel The fure-of-things that blesses with its hurt— Dear God, give me not age!" (For I would keep You in my heart of hearts . . , for whose sad eyes These lines are set, O Dearest . . , to the last.)

Just then among the many faces there, I glimpsed a face most delicate and pale, And very lovely with that wistfulness In which the shadows of long sorrows lie; Meeting my look, she smiled, and, with that smile, Somehow the liliam by the iron fence, The plumed grass brushing low across the path, Brought back to me an afternoon in May And a sweet garden where I sometimes played When I fared forth in gingham phafore: I saw another idead so many years, Her name I could not in that hour recall): Old she had been as ashes in a jar She kept upon a high, old-fashioned chest In an old-fashioned room in her still house . Now I remembered with what passionate warmth A check had once been prest against my check, What frail and trembling arms had lifted me To touch that silvery dust within the jur.

Perhaps it is God's will I shall grow old
And none may read beneath my quietness.
Gardens in May, or any memory
Of you! And yet for very shame to-night
I change my prayer, and ask for strength to give.

In the following lines we find the author in a lighter mood. She has made a beautiful picture, tender, yet not sentimental.

> THE CALL TO A SCOT BY RUTE GUTHER HARDING

There came an ancient man and slow Who piped his way along our street— How could the neighbors' children know That to her ears 'twas passing sweet?

With smilesothey spoke the ragged kilt.
And jeergh the pipes, in mirthful file;
But, strangely moved she heard the lift
That railied Carrick and Argyle.

A stroller playing in the street, Half-hearted, weary, out of placeBut his old measure stirred her feet. My baby with the Gaelic face:

She squared her shoulders as she stood.

To watch the piper 'round the turn.

Nor dreamed what heat within her blood.

Was Robert Bruce and Bannockhum!

Aviation has been the theme of much excellent verse, and it has inspired several poems likely to endure. From "The Last Line and Other Poems" (London, T. Fisher Unwin, Ltd.) we quote the following composition, not because it is high poetry it is marred by many trite and awkward phrases), but because it is, for the most part, so admirably realistic that the reader can not escape the feeling that he is listening to a recital of actual experience.

THE FIRST FLIGHT

BY E. VINE HALL

"I will try the first flight at my own hazard."

Johnson's "Rasselas."

At the breaking of the day.
Loosed from land we start away.
With unbesitating leap
Launebed upon the tideless deep.
And dizzy spaces of the air;
Sailing on an ocean bare
Of breakers, yet disturbed and crossed
With crazy currents, whereon tossed.
E'en the stoutest aircraft reels,
E'en the bravest earthmen feels
The impotence of wing and wire,
Of strut and stay, as ever higher
To circumnavigate the blast
He soars, and deeps each mile his last.

So at my hazard I essay
To pierce the liquid light of day:
Swiftly upon the sky we creep.
Surely on our voyage eweep.
Up the pure unbroken height
Denizened by cloud and light
Only, and no living thing
Save ourselves upon the wing.
How my heart with rapture fills.
And with exultation thrills!

Borne with wild, unfettered pace.
On a strange, resistless race.
To no port that eye can see.
Through the desolate country,
The unpopulated plains.
Where primeval silence reigns.
Of mid-air. At first with fear
I beheld the pilot steer
Upwards, till my soul was wrought.
Kapt as one is rapt in thought.
Out of space and out of time.
Unto altitudes sublime,
Where the sight falls, and one wes
Spiritual mysteries.

Here upon our dazzled eyes, We might see the towers rise Of the city of the saints; Here, where nothing earthly taints, Nothing unsubstantial seems Of man's visionary dreams. Souls might hither fly and fare, Spirits haunt this upper air.

Aht but how shall I sustain To breathe the lower air again? After the rapture and the race. How resume a mortal's place? After the height the dusty day. After heaven the common way?

We are inclined to doubt the soundness of the poet's judgment in these lines, which we take from Mr. Gilbert Thomas's "Birds of Passage" (Chapman & Hall). True, there was no world-war when the

"The first twenty-five miles we climbed to an elevation of 6700 feet, or an altitude of about a mile and a quarter. The road over which we traveled was covered with sharp granite and quartz boulders.

"Our car was equipped with three different brands of tires, two being brand new and two that had run less than a thousand miles. In addition to this, we carried two extra tires. In climbing over the steep ridges, sometimes at a grade of 25%, we completely stripped the rubber off the rear tires, with the exception of your QUAKER, which stood the trip hoth ways without any apparent wear and without change. On the opposite rear wheel we changed tires three times and wore them out completely. Your QUAKER has run since then 1800 miles and is still in good condition. We are today ordering three additional QUAKERS to fully equip the car. You sure have converted us."

Adjustment Guarantee 5000 Miles

Have a face-to-face talk with your local Quaker Tire dealer. Then, you will surely want to try a Quaker.

If there is no dealer near you, write direct to the Factory Order Office. Your order will be filled at regular prices and charges will be prepaid within certain territory. Anyhow, write for a copy of "5000 Plus." It tells things you ought to know about tires.

grandfather clock was made, but human nature was no less selfish then than it is to-day, and probably no fonder of home. Nevertheless, the poem is charming: its dignity and mellowness suggest the poetry of Oliver Goldsmith.

TO A GRANDFATHER CLOCK

BY GILBERT THOMAS

When through the darkness of a winter's day
I watch the firelight flashing on thy face;
Or when a moonbram, on its merry way.
Illuminates thy form with mellow grace;
What voices from the long-forgotten years.
Call down the opened corridors of time;
What springs and fountains of unbidden tears.
Are loosened by thy slow and stately chime!

O lone survivor of a former age
When life ran gently as a tranquil stream;
Before the fever of our fretful rage
Durkened its golden and unsuilied gleam;
Our hearts are weary of the greed and guile,
The shoutings of the crowd that never cease;
Oh, charm us back—oh, charm us back awhile
Unto the long-departed days of peace!—

Unto the days of purer love and joys,
Of beauty unusurped by low desire;
Ere yet man quitted for a world of noise.
The cloistered quiet of the settle-fire.
Or left his cherished flower-beds, to fight
For selfish ends which, gained, dissolve in foam;
But found for consolation and delight.
The simple hospitality of home.

Here is another sample of Mr. Thomas's slight but genuine talent—a street seene illumined by the poet's sympathy and imagination. In reading such verses as this, we understand how it was that Mr. Thomas won John Masefield's commendation.

THE TOY-SHOP

BY GILBERT THOMAS

Lean, ragged, yet their eyes after—
Their raw and freezing noses prest
Against the gleaming window, drest
To meet a pampered child's desire—
In the bleak night two urchins stand,
And lo, they are in Fairy-land!

Itank upon rank the people flee.

Like leaves before the keen-edged wind;
But they, but they, with hands entwined,
Care not, for through the glass they see
Of wealth and wonder such a blaze
That their hearts kindle as they gaze.

Majestic craisers they behold,

Sweeping triumphant o'er the seas;
Aeroplanes swaying on the breeze;
Horses at pasture on the wold;

Carts on their round with morning milk,
And maldens all arrayed in silk!

Lank, look! cries one, that engine there
Is driven by steam; and instantly
They both are journey-bound to see
Some far dream city's masic fair.
By town and hamlet, hill and mead.
Their train roars on with lightning speed.

And see, the other cries, that forth
And on their ears the bugles blow:
Regiments of redecats come and go.
And guns discharge a flerce report.
The walls are won, and lost—and then
Within a moment won again.

Rank upon rank the people fice.

Like leaves before the keen-edged wind—
Are their souls dead, their senses blind.

Well clad, they pass dejectedly

Where two lean, ragged urchins stand

Gazing far into Fairy-land!

SOIL FOODS FOR MAXIMUM CROPS

This year, when intensive culture is being given so much attention and is so necessary, the question of fertilizers has added importance. Correct and adequate feeding of the soil is a necessity for obtaining maximum crops.

SOURCES OF PLANT AND SOIL NOURISHMENT

All growing plants derive their nourishment from two sources, the air and the soil. The first cannot be regulated by man, but substances in the soil. from which plants derive food, may be supplied.

Four chemical elements are necessary to successful plant nourishment—nitrogen, phosphoric acid, potash, lime.

The chief chemical enemy to plant growth is scidity. A sour soil means a sterile soil. The most accurate way to determine soil deficiencies is by analysis. Such an examination may be made by any amateur with the litmus paper test, or more accurately by the expert in the laboratory.

Two physical aspects of the soil must be also correct—its texture and condition. Clays and heavy loams must be made friable. Loose sandy soils must be given bulk to enable them to hold moisture.

Humus, the essential element of soil fertility, must be present in all soils, or growth will be deficient.

VARIETIES OF SOIL FOODS

Having determined in what particular elements your sail is deficient, the problem is to select fertilizers which will contribute these elements and in addition generally stimulate plant growth.

Barnyard manure, thoroughly rotted, is a contributor of humus and moisture, an undenstured, nutritious sail food. But well-aged barnyard manure is difficult to get, especially in suburban communities. "Green" manure is full of weed seeds and lacking in qualities held by the rotted.

There are now on the market a number of bumus-supplying preparations consisting of dried sheep and stable manures which are wholesome soil foods, inexpensive, and unobjectionable. Every owner of a garden or an estate should investigate these and order supplies for early application.

There are also chemically compounded fertilizers made up for special or general purposes, accompanied by printed analyses.

You may also purchase nitrogen-gathering bacteria with which to inoculate seeds of the clovers and legumes.

Lime is the great sweetener of acid soils and pulverizer of caky soils. Bone meal is a most valuable all round fertilizer.

Hardwood ashes and soot from chimneys, fireplaces and stoves are excellent foods for the soil. Sifted coal ashes soften heavy soils.

A compost pile, made of leaves, ashes, barnyard manure, rubbish, etc., allowed to age, is invaluable.

THE STUDY OF THE SOIL

Only the briefest outline of this broad subject can be given in this short chat. The response of nature to those who give the soil care and nourishment is one of the marvels of horticulture. Those who would study this subject will find such books as the following suggestive:

"Cyclopedia of Agriculture," Bailey (\$20.00), and "Grops and Methods of Soil Improvement." Aggee (\$1.25), published by the Macmillan Company, N. Y.; "Soil Management," King (\$1.50), "Fertilisers and Crops," Van Dyke (\$2.50), and "Soils," Hilgard (\$4.00), published by Orange Judd Company, N. Y.

PERSONAL GLIMPSES

PASSING THE WHITE FEATHER

In Great Britain they are all on the warpath for "slackers," the young men
who could go to the front if they would,
but prefer to stay away. They called them
cowards at first, until some one with a
facile mind replied that he feared he would
not have the courage to stay at home and
live according to his pacifistic ideas. That
seemed to take some of the sting out of the
verbal lashings given to the slackers. So
now they have a new plan; they pin on the
white feather.

It is a bad thing to get the white feather; nothing that can be said goes as deeply as the pinning of that badge of cravenhood upon the lapel. Yet sometimes enthusiastic feather-pinners are liable to go wrong. Enthusiasm can be carried to fanaticism with little trouble. The Milwaukee Free Press tells a very human tale of how a girl made the error of her life in pinning the feather on a supposed slacker at the watering-place, Brighton. The observation is made:

You can't always tell from where you sit.

There's the case of Miss Somebody, down at Brighton. She sat on the beach in one-piece bathing-suit holding court to a cluster of gray-clad Tommies from

the big military hospital.

Francis William Sankey limped down the beach and sat down alone on the sand. Drest in "civvies," without even a badge to show he had offered himself to fight, Sankey looked the part of the stacker. At least that's how he looked from where Miss Somebody sat. But you never can tell. She detests slackers, whether they're conscientious objectors or men who evade service through technicalities.

"Excuse me a moment," said the girl to her circle of war-invalids. "I'm going

to decorate the gentleman."

She scurried up to the bathing-machine and took a white feather out of her hat. Then she walked over to Sankey.

"You look rather nice," said Miss Somebody, "but you'd look better in khaki." With that she stuck the white feather in his lapel.

Sankey rose painfully to his feet. The erowd gave him a roar, the girl laughed derisively, and the Tommies backed her up.

"I was tongue-tied," said Sankey later.
"I didn't know what to do. Every time
I opened my mouth they only roared
louder. At last I asked them to give
me a chance.

"They did, and you should have seen them melt away. The white-feather girl disappeared first, but she didn't apologize. That's what makes me sore."

And yet here is the man's record—a series of services to his King which might be a source of pride to any man:

Gunner in the Royal Field Artillery, he fought at La Bassée, Givenchy, "Plug Street," Festubert, Ypres, three times; Neuve Chapelle, Dickebusch, Kemmel, and Hill Sixty.

A Whole Row at a Time

To be assured of a better garden this year, plant with Pakro Seedtape—not because of what we claim it to be, but because of what others have proved it to be.

Pakro Seedtape consists of seeds selected with the utmost care by experts from the very best of prize winning strains; they are put in a thin paper tape, spaced exactly the correct distance apart. No thinning out is necessary. Stunted, slow growing plants, due to overcrowding in planting the seeds, are avoided. The paper absorbs and holds the moisture, and thus produces a quicker and higher percentage of germination. It is more economical because only a sufficient number of seeds are planted with loose seeds there is a great deal of waste. Since you can plant a whole row at once, there is a great saving of time and labor.

You have the assurance of thousands who have tried it that you will have a more successful garden this year than ever before if you use Pakro Seedtape. Here are some of these thousands of experiences:

"All the Seedtape planted did exceptionally well. The plants made a splendid appearance and the stand was expecially good."—E. J. Kyle, Dean of the Agricultural College of Texas.

"I never had a better garden with an experience of 35 years." -L. C. Arensberg, M. D., East Millsboro, Pa.

"Have had remarkable experience in planting Pakro Seedtape. They garminated in an exceptionally quick way and the plants appeared above the ground in absolutely regular order, not one missing in the several rows. I am a Horticulturist and Rancher of some little experience." F. A. Koenig, South Paris, Maine.

"We obtained a remarkable crop from our planting of Pakro seedtape." Jos. Keenan, Casenovia, N. Y.

Pakro Seedtape comes in 30 varieties of Vegetables, and 18 varieties of Flowers, and by carefully following the directions printed on each box, your garden will prove a delight and a surprise. Get some from your dealer today. Seed for beautifully illustrated catalog today.

And in addition to all that, he had been sent back to England, wounded, four times. We learn moreover:

After his twenty-second trip to the operating-table the Army discharged him on pension.

"I volunteered on the third day of the war," said the gunner. "In a few weeks I was in France.

"I was shot in the left hand and knee at La Bassée, hit in the back by a piece of shrapnel at Kemmel, gassed and hit in the forehead by shrapnel, and shot in the hip at Ypres, and also knocked over twice by 'Jack Johnsons' at Ypres. The last time I lay for dead twenty-four hours, bleeding from the back of my head and my left arm.

"Four times they sent me home, and after it all I get the white feather from a girl who won't even make munitions."

Sankey's left hand is useless and he limps from his hip wounds. At the base of his skull there's a silver plate, and in various parts of his patched-up body 124 stitches have been taken. One doctor told him he couldn't be killed, and Sankey, on a pension of \$6.25 a week, believes it.

AMERICANS IN THE ALLIED ARMY

N the heart of the Franco-British Army on the Western front is a large body of troops recruited from the great Dominion lying to our northward. But they are not all Canadians. Among them are thousands of Americans who entered the service of the Allies from the very beginning of the war, and who have already engrafted themselves into the army as naturally as if they had come from Piccadilly itself. Without knowing it, perhaps, they are repaying the debt of fifty years ago, when 20,000 or more Canadians fought under the Stars and Stripes. Lord Northeliffe, writing in a series of copyrighted letters to the New York Evening Sun, pays a great tribute to these Americans in the Allied Army and their influence upon the European soldiers. It is only another of the revolutions in warfare produced by the United States, he remarks, speaking of the American share of soldier-life, Of these other revolutions, he continues:

The first and most important was the peroplane, invented by the Wrights; the second is the machine gun.

The third revolution is one I would hardly believe had I not had ocular demonstration. It is the conversion of the British Tommy to faith in park and beans instead of the beef on which he has fought since the time of the Norman conquest of England.

These Americans in the British Army with whom I have just spent a day are a part of the topsylurvydom in which we are living, and when I saw them marching back from the trenches to such tunes as "My Country, "Tis of Thee" and "The Star-Spangled Banner," with less classical and more modern ragtime music, it was wonderful.

I propose telling you what the Ameriean soldiers in the British and French armies are doing, where they come from, how they live, and why the Germans are

particularly bitter toward them and say that these splendid Americans were hired by the Allies. From the German point of view the pay of Americans who are fighting against Prussianism is doubtless princely. It amounts to exactly a dollar and a quarter a day. I leave people in the United States to judge whether that would be the sort of remuneration calculated to draw American university graduates, some with considerable private fortunes, business men, real-estate men, clerks, lumbermen, engineers, across the Atlantic.

The falsehood is one of the bits of German boomerang propaganda with which neutrals are becoming acquainted.

The Americans now serving were enlisted in divers ways. Some went directly to Great Britain to enter the ranks at the outbreak of hostilities, some, who were residents or travelers in Europe, allied themselves with French or British residents, forming small corps of their own. There were some who came over later, adds the author, and went in for flying. The sporting side of airplaning has proved a great drawing card. Then, too, it is the sort of thing, which, among many who were not personally touched by the moral side of the conflict, would be considered "smart." We read, furthermore:

Early in the war, during the Battle of the Marne, I was billeted with a number of our dispatch-riders and was much surprized to find the particular company with which I was spending the night were almost entirely from the United States.

It is almost impossible to estimate the number of Americans in these two armies, but including those engaged in the noble work of the Ambulance Corps in Paris, and its numerous automobiles and convoys, it has been estimated at quite a sufficient number to have made the American language, American music, and Boston baked beans familiar.

A great feature of the war on the Western front at the moment is the day- and night-raids. This dash and desperate form of individual fighting is encouraged by the British leader, Sir Douglas Haig, and it is in this that the Canadians and the British who have considerable forces of Americans with them are adepts.

Each one of these raids is a miniature battle, and it was in studying this form of warfare that I had the pleasure of seeing Americans who are serving with a Canadian regiment reviewed by a general on their return from the firing-line for rest and a festal dinner.

By a curious coincidence, the setting of the scene was that of a thousand such in American and Canadian lumber-camps -even down to the log house. We were just out of shell range of the German guns, the the British artillery was talking all the time. As the men came down the hillside through tall pine-trees, it did not take long for one who has visited most of the States of the Union to detect, despite the mud and fatigue, from which of the world's continents they came. They were in high spirits. Released from the cramped tension of always shelled and waterlogged trenches, they came tumbling over each other like schoolboys. All are in pleasant and happy relations with their Canadian and British officers -which make for good fighting and do not derogate from strict discipline.

The Welch Grape Juice Company, Westfield, NY

They were paraded for a moment or two for inspection, and as company after company formed into line I could not but admire the quickness—encumbered as they were with all sorts of equipment and an extra suit of caked mud—with which they came to attention and "eyes right."

If I had any doubt as to the home of these stalwart fighters for freedom it would have been settled by the steady movement of their jaws, betokening a habit which is rapidly spreading among the English and French, and which is said by the doctors to be quite a useful relaxation when under the fire of trench mortars and mine-werfers.

Before each company was dismissed I was allowed to make them a short speech and to mix and mingle with them as freely as I chose. I had brought with me newspaper clippings from a German source, in which it was said that the Americans complained of their treatment. I had only to read it to the first group to have it hotly denied.

"We are having a perfectly corking time despite the mud," voiced a Californian with a tall figure and a voice as resonant as Roosevelt's. "You'll not find a grouch in the whole outfit except that we had not expected to have to learn mudswimming and that we don't see enough home newspapers."

"As for that," replied another, "I don't want to see mine. The folks sent it along at first, but I stopt it, for it gave only Fritzy's side of the case."

I find lack of home newspapers to be a general complaint, and any American who sympathizes with these fine boys fighting out here might do worse than mail a newspaper every week—preferably one not giving the German side. Such newspapers should be addrest "American Soldiers, care Commanding Officer, Royal Canadian Regiment, British Expeditionary Force, in France."

I should say that chewing-gum, magazines, woolen comforts, tobacco, cigarets, and any portable and preservable little luxuries would be welcomed—the there is no lack of anything except, as I have said, of home papers.

These American boys are proud, and rightly proud, of the deeds of their own American men and officers. 'In the midst of this vast army—the British Army in France has now been publicly stated to exceed 2,000,000 men-they occupy an anomalous if a proud position. Among the heroic dead there is no greater story than that of a gallant officer, for twelve years in the American cavalry, who joined in the great Canadian attack on the Regina trench-named after the Canadian town of Regina. Tho not engaged in that particular operation, he could not resist the temptation to dash over the parapet with the ery of "Come on, boys!" Terribly wounded he endeavored to struggle forward against the Germans, but was carried back and then killed by shell-fire.

He was one of the many Americans whose daredeviltry has endeared them to their Canadian and British associates.

A blue-eyed American from Wisconsin, with, I should say, Swedish blood in his veins, said, "Our people at home do not seem to realize that talking peace-terms with the Germans still in France means a German victory. The home-folks do not know what we know. In the matter of a fight the Prussians, brave as they are, are down and out."

EVERYBODY knows that charcoal is exceptionally good for the stomach. Smith Brothers' Cough Drops are absolutely pure and contain just enough charcoal to sweeten the stomach. Put a drop in your mouth at bedtime to loosen the phlegm.

The Personal Element

By employing just the right personal note that establishes cordial relations between man and man, he shows you how to boost sales, to collect difficult accounts, to create enthusiasm in your employees, to obtain credit when you need it, and to give an impetus to your business in all its branches.

How to Cut Out Waste Effort

He teaches you how to be practical, how to avoid dissipating your energies, how to make people do things without question, how to systematize your orders and shipments, your correspondence, and your collections, and how to make every dollar and every minute count for success. His book is packed with plans that save and hints that help.

Persuasion That Pulls

He makes clear the psychology of salesmanship, in person or by mail, and shows you how in put the punch into your talks and the pull into your letters. He analyzes the art of advertising and tells you how in each case to present the appeal that will impel people to buy your goods.

How to Produce Sure Results

He tells you how to handle yourself, your force, and your customers, so as to produce hig results, gives you the basic principles that command surcess, and shows you how these may be applied, step by step, to your Individual needs. He has put the whole science of modern business into this one book, which is a complete course in itself.

FUNK & WAGNALLS COMPANY, 354-360 Fourth Ave., New York

IN OLD NEW HAMPSHIRE

EVERY day, somewhere close to eleven o'clock in the morning, a train sweeps in through a valley in the mountain region of New Hampshire with a thin, drawn-out whistle that sends the "creeps" up the spines of the passengers. It is a mournful signal, and it recchoes back and forth between the hills until the last fragment is lost in the ravines and rocky shelves. To the traveler it is like the wail of an exhausted banshee about to breathe her last amid lonely scenes, but to one little old woman it is only a sign of coming joy.

For it means that a new slice of the outer 'world is coming to her, to keep her active old mind in touch with the doings of men. Just how this happens is detailed by the Boston Herald, one of whose special writers visited the old lady in Wentworth, N. H. It is when the train reaches a curve two miles below Wentworth that the whistle blows, and, according to the account:

At the sound of the whistle a wrinkled, white-haired old lady drops what she is about inside her peak-roofed little house and bustles out into her front yard to receive the bundle of newspapers and magazines which for the last fourteen years has been dropt daily into her open arms as the train sped past.

Just when Conductor Mann discovered that Aunty White, who lives in the peakroofed house, had literary tastes is beyond the recollection of either of them. Some kindly instinct prompted him to begin collecting the magazines and papers which are left in the train and throwing them off to the cheery-looking old lady whom he usually saw bending over a wash-tub in the shadow of the vines which serecu her back porch. For years there was no other exchange of greetings between them than a wave of the hand and the morning offering of papers, but between them the kindly old conductor and the hard-working old lady have brought a large share of interest and pleasure to the little community thereabouts.

For the eleemosynary work does not stop with Conductor Mann's share of it. Along about half-past seven every evening Miss Wealthy, up the road about a quarter of a mile, decides that a pan of her remarkably fine apples should be taken down to Aunty White, and Maria Tuck, who lives farther down by the bridge, is reminded that "Aunty'd like them two brown eggs Betsy laid yisterday," and dons her shawl to carry their down.

By the time that Aunty White has adjusted her spectacles in front of eyes that are remarkably bright and twinkling despite her eighty-one summers, and she has turned up the wick of her kerosenelamp preparatory to reading the day's happenings, the little group in her spotless "settin'-room" usually numbers about five. She reads aloud and they comment on every bit of the happenings from soup to nuts.

"We're real int'rusted in the war," declared Aunty White briskly, "but, law sakes, I can't pronounce none o' them furrin names no more'n 's if they was Greek. They wasn't in no geography we ever studied when I was a girl,

Known-Quality Foods

THE Morris Supreme Test idea has met with wonderful acceptance. Thinking housewives everywhere were quick to see what this final insurance of purity and quality represented. From Maine to California they are buying Morris Tested Foods, knowing that they are finer, better—and absolutely uniform.

You have a new palate-joy in store if you have never eaten Morris Supreme Ham. Every one is a choice selection—the meat of a young Government-inspected porker—smoked and cured just right. Have a whole ham on hand always. Be sure that it's Supreme.

And you will find the same top notch Morris quality in Supreme Bacon. The first slice, hissing in the pan, arouses big breakfast appetites.

Just the right amount of lean and of fat. Flavory, nourishing—always digestible.

The Lard for family use is Whiteleaf Brand—100 per cent pure. Unequaled for delicious pastry.

Marigold Oleomargarine is the nation's standard. Contains only ingredients of known purity—a genuine pure food—always the same.

Remember, these foods all meet the Morris Supreme Test—your unvarying protection.

Write for the new Morris Cook Book, "The Supreme Test," with scores of different recipes from choice soups to dainty desserts.

White Houses Are Beautiful When White

THE popularity of the white house which has been going forward by leaps and bounds, has fully come into its own since a material was found that makes it permanently white, stainless, and waterproof.

MEDUSA WHITE-CEMENT

is science's answer to the white house problem. Here is a material that combines Medusa White Cement with Medusa integral Waterproofing.

For exterior finish on concrete, hollow tile or metal lath its use insures a permanent marble-white finish that will not stain or discolor and is absolutely water and damp proof. Medusa has the unqualified endorsement of the country's leading architects and contractors.

The illustrations show the use of Medusa White Cement for the Residence of John C. Reid, Wheeling, W. Va.; C. W. Bates, Architect; Wm. C. Baughman, Contractor; and a Concrete Terrace on the J. B. Duke Estate, Somerville, N. J.; Buckenham & Miller, Architects; Richards & Gaston, Engineering Contractors.

Write for illustrated booklets "The Medusa White House" and "Medusa Waterproofing." They contain valuable information for the architect, contractor and home builder. They show the artistic effects that can be obtained with a pure white, waterproofed cement like Medusa. Write today.

Make Your Concrete Water-proof When You Build.

Religion and Reason

Believer and doubter alike will find intensely interest-ing discussion of such subjects as: In what way and how far is the Bible inspired of God? In what way was M an created and how long has he lived on this earth? Was Jesus Christ born of a wirgin, or was he the

They Conflict? natural son of a human Did our Lord rise from the dead with the same body that was laid in the tomb

of Joseph of Arimathea?

And other questions in the new book, "RATIONAL ORTHODOXY," by a well known thinker who signs himself "A Member of the New York Presbytery."

Funk & Wagnatis Company Tey Agree?

"Wasn't it turrible about them Dennisons, too? I never slept a wink the night I heard they was lost.

"Did that Mis' Warren ever get back her jewels that was stolen? To think of her losin' the presents her husband gave her before they was married. I felt real sorry for her, poor thing!"

The visitor continues with an account of how all this rapid-are of comment was launched as she was calling on the old lady. They were sitting in the old-fashioned kitchen, for all the world like two characters out of the famous Wallace Nutting prints. Sunshine was sifting in through the window-panes, a hum of a boiling kettle was in the air, the crackling of the stovewood was as a brittle obligato to the talking, and-what thrilled the visitor's urban senses the most—a spiced aroma of fresh fruit-stewing arose from the stove in the corner. The narrator exclaims heartily:

Now, Aunty could receive the President in that kitchen with the utmost propriety, and I would wager the experience would be enjoyable for him.

It certainly puts the modern scientifieally planned kitchens, aseptic, efficient, and uninteresting, to the blush. seem built to convey the impression that there are favored classes who subsist exelusively from the delicatessen and the eorner restaurant and possess a kitchen for the sole purpose of having its stainless irreproachability photographed for the magazines.

In Aunty White's kitchen last summer's tomatoes were ripening behind the tiny panes of the windows, ruddy apples were heaped high in a pan on the table ready to be pared for pies, and somewhere a steaming loaf of gingerbread, hot from the oven, mingled its spicy fragrance with that of the pickles. There were florid geraniums blossoming every bit as lustily in their shiny tin cans on the window-sill as tho rooted in expensive wicker boxes. The tea-kettle steamed, the fire in the cracked old stove roared merrily, and a striped cat, which was performing the morning ablutions of her large and frolicsome family of kittens in the depths of a cushioned rocker. added a throaty bass solo to the genial hum and bustle of the room.

But Aunty White was the cheeriest, liveliest thing in all the place.

"Yes, I work hard," she said happily.
"It's a real joy to have yer eyesight and hearin' and to be able to work. Everybody's good to me. I get six washings to do at the village every week." The magnanimity of the public in supplying her with washings was greatly to their eredit, she seemed to feel. "And usually they bring it one way, and that helps, for I used to be some spryer when I was on earth the first time." She laughed heartily. for Aunty White enjoys her little jokes as well as any one.

"We have some real nice times, tho. Last week there was a spellin'-match to the Grange, and I spelled every one of 'em down, normal-school teachers and all, even the minister. Yes, sir, I was the last one left standin', and I didn't half try, neither." Her delight in her achievement was as naive as a child's.

"Law sakes, here I bin talking for fifteen minutes without my teeth." Her feet fairly twinkled as she sped into the little bedroom to procure the "teeth."

She emerged wearing a string of gold beads also, and a quaint old breastpin, showing that Aunty White was not too old to appreciate fully the prize for which Eve sold her freehold in Paradise. Her figure is as erect as a girl's, her blue eyes are gay and full of merriment. I began to feel positively decrepit beside such energy and bacchanalian spirits.

Aunty White has evidently had to find most of the sunshine of her eighty-one years for herself, but she is certainly sugar-cured in the gospel of love and patience, as any who are ill, or in trouble, or fallen from grace in the little community know. She has held the hands of the dying and helped usher in most of the little souls which have arrived there during the past twenty-five years.

"My boy was took when he was only twenty," said the old lady, "just a little after my husband. He was the happiest dispositioned, lovin'est boy. I say nobody can't sit down and mourn about the past

tho, because yer won't enjoy the present

none if you do."

This piece of philosophy seemed to remind her of the Civil-War times, for that was evidently the "past" she had in mind to mourn. The mention of her son brought her back to the days of his childhood, and as she gave a striking account of the hard days of the conflict, the years seemed to drop from her, we read, and she scarcely seemed to be the octogenarian she really was. The grand old survivor of America's early women called up more than one reminiscence, among which we read:

"I can remember the winter the war broke out. If folks could remember clear as I can what war was like there wouldn't be so much talk about it, I guess. Well, we was pretty poor that winter, but we took little John and moved way over in the woods on the other side of North Dorchester mountain to a log cabin. I tacked up sheets over the logs so 'twas real clean, and we kept a barrel of flour and pork down through a trap-door in the floor.

"Twas the worst winter I ever remember. The big trees used to blow down in the woods all around, and once one fell right across the eaves of the cabin. And once there was a blizzard that lasted three days, and we wuz buried clear up over the tops

of the windows in the snow.

"Long in the spring I remember little John's shoes wore out. There wa'n't no shoemaker in those parts and I took the top off an old pair and half-soled 'em myself. We kept warm and fed somehow till spring and we was real happy." Some memory brought a suspicious glitter of tears to Aunty White's blue eyes. She brightened immediately, however.

"Somebody sent me them 'gloxinies' there in the window. I wa'n't sure which end to set 'em when I got the plants, but they come up and they're blossoming fine. Everybody is good to me. Mr. Mann's been a good friend for years. Them papers helps us all out a sight up here during the winter. Sometimes I read pieces that are funny to the Grange meetin's, and then the magazines have some fine stories.

"We can't hardly wait sometimes ter see who the heroine's goin' ter marry, and then I stop and make 'em all guess.

so the furnace man slammed the iron door and was off for home without noticing that the door had bounced open. The babies were asleep upstairs. Soon all the lights were out. A hot coal dropped. Then a little spurt of grey smoke spiraled from some papers on the floor. Later came a tiny tongue of flame which crawled away doubtfully-and went out. Then another stronger. Suddenly there was a mass of flames—then the near-by barrels burst into a blaze, Like lightning the fire spread. It reached

the walls - flared fiercely for a while - licked up greedily - faltered died down-went out. The walls and floors were of

TCO:HOLLOW:TILE

Next morning down came the man whose whole heart was wrapped up in the family which had slept unsuspecting over destruction. And when he saw that blackened cellar, he blessed the name of the architect who had advised fireproof Natco Hollow Tile.

Although Natco is the modern material used in many great sky scrapers, it has notable features which fit it exactly for all atructures, even the least expensive. It is vermin-proof, dampproof, fireproof. Cooler in summer - warmer in winter - thanks to its air blankets. It lends itsell to beautiful construction - and it is sale-sale-safe.

A Natco wall is built solid and strong of a single thickness of large, hollow tile, whose surfaces are scored on the outside to take a decorative stucco finish, and on the inside to hold wall plaster-permanently and well, without cracking. It costs less than brick or concrete, and a little more than flimsy and dangerous frame construction—but the additional expense is more than paid back in a few years by saving

in upkeep and insurance.

· Call on the Natco service for advice in building which will save you time and money. It is free to architects, engineers—and to you. The interesting 32-page book, "Figeproof Houses," will be sent on receipt of ten cents to cover possage. There is every reason for your building right — for protection and economy — when you build at all.

National Fireproofing Company

502 Federal Street Pittaburgh, Pa.

This is a Nation Hollow Tile, of the type used for residence wall construction. These big units mean quick and strong construction and everlassing select against fire. Note the sir cells which make the Natio wall temperature and damp proof, and the patented devetail soming on the surface for a strong mechanical bond with decorative muside staces and made planer. No modding or lath is required. There is a National for every building purpose, from smallest rendence to largest skytersper. It is the most mod um building material made.

Holstein Cows' Milk Best for Old People and Invalids

If the telestrown will, easy of parameters and tree in testly building procedure for random, conveniencement and that younge, has been proved been by every tem. It impure the easy withinty of the reason? Black and White "cattle. The very small fas globule and perfect character of the other solids in Holstelo cown," milk render it more easily digested that saik from any other breed of care. If therein milk roots no more than others and the toronact cardical authorities endowe it as the most efficient in himse feeding where the child cannot be named by its mather. Don't longing that the pellow wills in of better quality for it is not. Ask your cultiman to those one of we will try to add your Send for our broatlet. "The Story of Helszein Milk."

Holstein-Friesian Association of America F. L. HOUGHTON, Soly 25-L. American Building, Brattlebore, Vermont

It's funny how they all end with a marriage. Maria says she read once in a book that marriage was a safe harbor, and that she thinks the writer likes ter leave 'em there at the close, but I said most generally in the stories 'twas any old port in a case of storm. Most everybody around here gits married plain when the time comes tho, and we all like ter have a wedding in the story ter read about the fancy fixin's. Once it took four pages ter describe the bride's weddin' outfit." She sighed reminiscently. "That wuz a good story."

It's social service on a small scale, but there is no more kindly bit of charity performed in all the world than the daily bit of interest and happiness which a whitehaired old conductor and a cheery-hearted old lady are helping to bring to the lives of the dwellers in this isolated little com-

munity among the hills.

"I hope I won't never be called on ter live after I can't work no longer, that's all I ask," said Aunty White, as I left her, but it is certainly true that the work of cheery, helpful souls like hers is never finished in a world that so sorely needs them.

I left her singing happily in a cracked soprano as she stirred the fragrant brown kettle of fruit, and the song was the good old Methodist camp-meeting query, "Will there be any stars, any stars in my crown?" It seems extremely likely to me that Conductor Mann and Aunty White will receive halos liberally besprinkled with stars or whatever other symbol of reward is accorded the faithful and kindly of this earth.

THE CLUBBY WAR IN THE BALKANS

T'S quite a neighborly sort of affair, I the war in the Balkans, at least as far as the Servians and Bulgarians are concerned. No idealistic image of Fritz and Gaston swapping pipes of tobacco across barbed-wire entanglements can compare with the actual realization of the entente existing between the troops of the two Balkan nations. When the trenches are close together, as they often are, especially when the scene of the fighting is in a narrow place, Herbert Corey, writing in a copyrighted letter to the New York Globe. tells us that there is an almost continuous correspondence going on between the men on each side. There is, moreover, a kind of understanding about gun-fire, and neither side, it is said, will fire, as a rule, before breakfast. It is a very elubby affair, much like the fraternity existing between the players of two rival football teams. We read:

Each side knows the other side through some centuries of fighting and trading. The individual knows the idiosyncrasies of the individual on the other side and respects them—and sometimes takes advantage of them. One rarely bears gunfire before breakfast, for example. That sort of thing is bad for the digestion. Each side takes its siesta at noon and knows perfectly well that during that siesta the other side is making use of the informal truce. Neither side destroys the Macedonian villages. I have ridden through scores of towns in which not a tile is out of

place. Yet most of these villages were held by the Bulgarians before they were driven back and the inhabitants are beyond question friendly to the Bulgarians to-day. Only one town showed signs of punishment. Part of it had been burned when its comitjadis fired on troops.

"It became very annoying," said the lieutenant in command of a trench section on Vetternik. "The Bulgarians fired on our dinner-pails,"

There is no outrage which quite compares with that for the soldier. The peculiarity of the Servian is that he never asks the other side to let up. He just fights harder. So that for a time the Bulgarians were treated to a hot mess of bombs and rifle-firing, with occasional butt and bayonet interruptions, at the mealhour. This wearied the Hulgarian soul. The cook corvée would come along with its clinking cans and its savory odors of paprika soup, and immediately the Servians would get so busy that all thought of eating was out of the question. One could stand for that for a time, but when it became apparent that the Servian was specializing on meal-hour war the Bulgarian ealled quits.

"Let up on this," he said in complaining fashion one day. "My gosh, almighty, man"—or whatever may be the Balkan equivalent for that—"have a heart. We haven't had a stew in four days that wasn't as cold as Pharaoh."

"All right," said the Servian, "only you let up, too."

So that nowadays the two sides fight industriously all night long, take a rest at breakfast-time, fight some more, and when the elatter of the cook's pans is heard, the fighting automatically ceases. There is no need to remind the other fellow of the agreement. The fragrance of hot coffee and the adorable outgiving of konpos dispose each man to tender peace. It is only after good digestion has sufficiently waited upon appetite that the lighting begins again.

And then a new chummy spirit came into being among the ranks on both sides when somebody in the Servian Army discovered the deep truth that a live Bulgarian was just as good as a dead one, provided he was in the right place. Obviously then, the right and proper thing to do was to invite him to come over and surrender, in the most hospitable manner possible. Wherefore, as we are told:

The word was passed along the line, and all the Servians began writing affectionate notes inviting the Bulgarians to cross the line. As the trench-lines are in many places only a few meters apart, and as the neighborly fighting-men have long been in the habit of exchanging books and newspapers, it was not difficult to get the invitations in the hands of the potential guests.

"Yah," said the Bulgarians, incredulously. The Servian has no respect for the ethical quality of the Bulgarian. He insists the man has no comprehension of honor. "Yah," said the Bulgarians. "You want to get us over there and kill us."

"Fools," said the Servians, indignantly.

"Do we look like men who would do that sort of thing? Here—we'll show you."

Whereupon they rounded up a recent catch of Bulgarian prisoners from this

Sectional Bookcases

(Style Book, in Colors, Mailed Free)

will give your library the atmosphere of refined and substantial elegance-at a price that is less than you would expect.

By taking advantage of their one and two section sizes they can

be utilized also as seats under windows; there are special sections to go in and around corners, and can be placed in many spaces in which big, solid bookcases cannot go.

They were given hist prize at the Panama-Pacific Exposition. You can be safe in selecting them, as highest quality is assured.

Write for our free new Style Book in colors, showing landsomely builded dust-proof Colonial, Mission, Clawfoot, etc., designs in mahogany and oak. Also "In an Emperor's Den," something interesting. Dealers everywhere.

The Gunn Furniture Co.

1810 Broadway

Grand Rapids, Mich.

section of the front and photographed them, and passed the photographs into the other lines. I have seen these photographs. They show large bodies of Bulgarians lolling about on the grass with the air of guests at a lawn-party, rather inelined to be amused by the new entertainment. They are fat and comfortably drest. A prisoner's life is assuredly one to be envied by a man who must sit in the unsanitated trench the Bulgarian affects, to be posted at by Servians.

"But what do they say about it?" insisted the cynical Bulgarians, want to know how they like it?"

Whereupon, the situation was outlined to the Bulgarian prisoners, and those obliging young men immediately sat themselves down and began to write notes to their particular friends on the other side. The translations I have read were couched in the most glowing terms. The inside of the Servian lines was described as flowing with milk and honey, and the prisoners asserted they were thoroughly enjoying themselves. Now and then a stubborn Bulgarian would refuse to ask a friend to desert, but would express a wish to send news of himself to his home. Whereupon the Servian, who is distinctly a good fellow, told him to go to it. The across-the-lines post is now in full operation. Every day a small mess of Bulgarians trickles into the Servian lines.

Of course, all this, as we are told, gets on the nerves of the Bulgarian officers. It is very annoying to have a lot of men to command, and then find some one, who ought to be making life miserable for them, seeking to lure them away. The officers attempted to put a stop to the traffic of notes, but as they are usually stationed at some distance behind the trenches, activity as censor is well-nigh impossible. Mr. Corey remarks:

Even when the officer sees a note fall in the trench, the man who picks it up is apt to read it before he turns it in. The orders are strict that deserters shall be shot as they leave the trench, but, even so, ingenious soldiers find a way to escape in safety. The other day one Bulgarian found himself in a short length of trench with four companions.

"Let us stack our rifles here," said he, pointing to a convenient place. "Then you can sit down and smoke these eigarets

while I stand guard." When the four eigaret-smokers heard the clatter they looked up, but the accommodating comrade was then on his way out of the trench, his arms filled with

walked calmly over to the Servians. They were amazed that he was not shot at by the men in the trench he had abandoned. "You see," said he, "it is this way. I

five rifles. In one instance a deserter

represent the other men. If I all right, they will come in, too."

There have been persistent stories that the Bulgarians take no Servian prisoners. That is an exaggeration, of course, and I have been unable to find out how much truth there is in the tales that the Servians are very frequently killed when they give themselves up. I am more inclined to think that the Servians are killed before they give themselves up, for the men of this Army do not surrender easily.

HINTS FOR CABLEGRAM-WRITERS

THE first thing we all learn about a cablegram is that it costs its length in platinum wire. Then we perceive that all the important firms have printed on their letter-heads a curious combination of letters—reminding one strangely of a Pullman car—called a cable-address. So we gather, since we have all learned to apply the Montessori system and see things for ourselves, that you have to condense your cablegrams, and often turn them into code. The New York Sun takes a humorous turn out of this in a recent editorial counsel to its readers about sending cablegrams in war-time—and particularly to Russia. It would seem that we may do most anything without risk in other countries, but in Russia one needs have constant guidance to avoid being elapped into prison. This would appear from the recent actions of the Russian war-censor, of whom the Sun says:

The Department of Commerce has received from the Russian war-censor five rules for those Americans who send cablegrams. All exporters to the Museovites, whether they send munitions or machinesfor counting caviar, will do well to assimilate the instructions;

"Make your messages absolutely-clear, so that a perfect stranger can make sense of them."

As perfect strangers abound everywhere and, in fact, make up a large part of the earth's population, be careful. O. Henry had a hero who foiled a South-American censor by sending a telegram in slang, but manifestly this will never do for the Russian eable. "Kick in, or nix on the stuff," will not reach the Russian from whom you wish advance payment.

"Do not use too many figures in comparison with the amount of text. A cipher story can be told in figures."

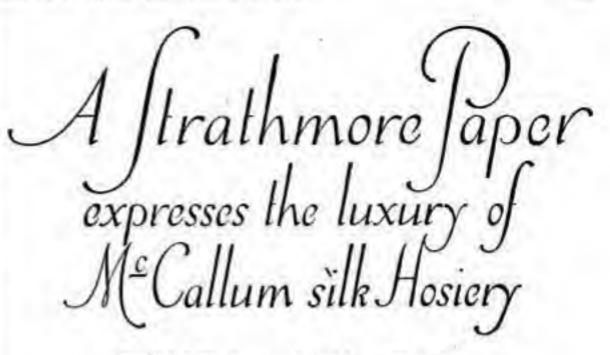

To cable "Ship 2,987,642 sables, 14,-444,982 otters, and 98,745,932 arctic foxes," would be to court suspicion. The censor, looking in his book on the fur census, would know that there are not so many arctic foxes and he would see at once that your telegram meant "Now is the time to blow up Vladivostok." Cut down your orders when the numbers are suspiciously large or frequent.

"Do not be laconic. Short messages sound very mysterious to the censor. Spend a little more money and make the story complete."

This rule will have the unreserved approval of stockholders in cable companies. Be chatty if necessary. An "Off agin, on agin, gone agin, Finnigan" cablegram might produce brainstorms in the Czar's secret-service bureau.

"Do not use highly technical terms, i.e., words not generally known or which can not be readily found in the dictionary."

If you are making up an order for a Russian house and want to know whether it wants the dimethylanilin mixed with methylanthraquinone or prefers a compound containing a dash of nitrotoluolene-diamin, put it in words of one syllable. Better still, after making over the query into its simplest form, have your stenographer translate it into Russian.

THAT dainty booklet, "You Just Know She Wears Them," published by the McCallum Hosiery Company, is printed on Strathmore Quality Papers.

There is something about the soft, exquisite texture of these Strathmore Papers that is in keeping with the femininity of silk hose and the luxuriousness of McCallum Silk Hose.

McCallum found the papers that say his say.

"Paper Does Express" is the name of a graphic demonstration of Strathmore Expressiveness. "Selective Mailings" is another Strathmore publication with an important message to advertisers, great and small. Both booklets are free upon request. Strathmore Paper Co., Mittineague, Mass., U. S. A.

Strathmore Quality Papers

"You have a Printer who knows"

THE WORKERS OF THE WORLD

Profit or loss in business is largely a question of bookkeeping. You are not "making money" unless there is more money coming in than there is going out. And the bookkeeper cannot keep at top-notch mental and physical condition unless he eats food that replenishes the daily waste of tissue and energy.

Shredded Wheat

is the favorite food of men and women whose employment calls for long continued mental concentration with little physical exercise. It is more easily digested and is a better-balanced ration than meat or starchy vegetables. It supplies the maximum of nutriment with the least tax upon the eliminating organs. For breakfast or lunch eat one or two Biscuits with hot milk and a little cream. Delicious with baked apples, sliced bananas or other fruits.

Made only by

The Shredded Wheat Company Niagara Falls, N. Y.

SPICE OF LIFE

The Wrong Line. HE-" Each hour I spend with you is like a pearl to me."

SHE-" Aw, quit stringing me,"-Jester.

Necessity.—Hr.—" People are saying you married me for my money."

SHE—" Well, I had to give them some reason."—Chicago Herold.

Well Combined.—" Do their lives blend

"Very. She has the gray matter, and he has the long green." - The Lamb.

Particular.—BOARDING-HOUSE MISTRESS.

"What part of the chicken do you wish?"

FRESHMAN—" Some of the meat, please."

—Pelican.

Slight Error.—" What is the price of this embroidered skirt?"

"Madam will find the skirts on the next table—that which she has is the new cape collar!"—Chicago Herald.

Egotism,—UNLUCKY MOTORIST (having killed the lady's pet puppy)—" Madam, I will replace the animal,"

Indianant Owner-" Sir, you flatter yourself,"-London Opinion.

Bringing Trouble,-" That fellow certainly is a dub,"

" For why? "

"I told him I bossed my wife, and he went and told my wife." - The Lumb.

Not Her Job.—He was a young subaltern. One evening the Sister had just finished making him comfortable for the night, and before going off duty asked: "Is there anything I can do for you before I leave?"

Dear little Two Stars replied: 'Well, yes! I should like very much to be kissed good-night."

Sister rustled to the door. "Just wait till I call the orderly," she said. "He does all the rough work here."—Landon Opinion.

His Plan.—An Irishman who was rather too fond of strong drink was asked by the parish priest:

"My son, how do you expect to get into Heaven?"

The Irishman replied:

"Shure, and that's aisy! When I get to the gates of Heaven I'll open the door and shut the door, and open the door and shut the door, an' keep on doing that till St. Peter gets impatient and says, 'For goodness' sake, Mike, either come in or stay out!"—Tit-Bits.

A Recipe.—An Irishman who is noted for his wit went into a public-house the other day and called for a glass of beer. The tumbler was not full enough for Pat's satisfaction, so he quietly asked the publican how many barrels of beer he sold in a week.

"Ten," replied the publican.

"I think," replied Pat, " if yer stand me a pint I could put yez on a plan to sell eleven barrels a week."

"Agreed," said the landlord, handing him a pint. "How now am I to do it?"

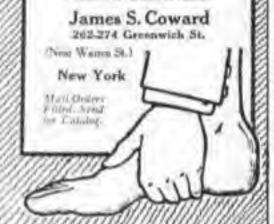

Pat, taking a big drink at his new pint,
"Always fill your glasses,"—Tit-Bits,

Candor.-Fiance-" And will Bobby be sorry when I marry his sister? "

Bobby-" Yes, I will, 'cause I like you." Boston Transcript.

Watchful Waking .- PATIENT-" What would you recommend for somnambulism?

Doctor-" Well, as a last resort, you might try insomnia."-Indianapolis Star.

Precaution.- "You make your heroines singularly unattractive, old chap."

"Well, I don't like to do it, and I presume it hurts my vogue. But my wife is a trifle jealous and -you know-safety first." -Louisville Courier-Journal.

Broke Even,-" While I was watching the ticker some of my stock went up twenty points."

"Then you made a lot of money?"

" No. I came out about even. You see, my wife was at the milliner's at the same time."-The Lamb.

Effective.-PA-" At last I've found a way to make that young scamp of ours stop winking his eyes."

Ma-" Really?"

PA-" Yes; I'll show him the article in this science magazine where it says that every time we wink we give the eye a bath."-Buffalo Express,

New Disguise.- "I was preparing to shave a chap the other afternoon," says a head barber. "I had trimmed his bair, and from such talk as I had bad with him I judged him to be an easy-going, unexcitable sort of fellow. But suddenly his manner changed. Out of the corner of his eye he had seen a man enter whose appearance upset him.

"Hurry, George!" he muttered to me. " Lather to the eyes-quick, quick! Here

comes my tailor!"-Tit-Bits,

Unfair .- The employer of a Polish servant maid who has learned to speak English was telling of her experiences with the telephone. After its use was explained to her she was eager to answer every call. One day a ring came and she jumped to the instrument.

" Hello I" came from the receiver.

"Hello!" answered the girl, flushed with pride at being able to give the proper answer.

"Who is this?" continued the voice.

"I don't know!" exclaimed the maid. "I can't see you."-Philadelphia Public Ledger.

One on His Honor.-A police magistrate in Cleveland was disposing of cases at the rate of about two a minute, with great exactness and dignity, being judge, jury, and attorney, all in one.

"Then you are sure you recognize this linen coat as the one stolen from you?" he said to a complainant.

"Yes, your Honor."

"How do you know it is yours?"

"You can see that it is of a peculiar make, your Honor," replied the witness. "That is the way I know it."

" Are you aware, sir," shouted the justice, turning to a closet back of him and producing a similar coat, "that there are others like it?"

"Indeed I am," replied the witness, still more placidly. "I had two stolen."— Case and Comment.

Architect, Jos. Law, Erin, F. Street Find on Hobson Board

NOW the Stucco Building is Preferred

Stucco is admittedly an artistic and attractive exterior finish. And now it can be made lasting and economical. Bishopric Board makes it possible, How? By applying principles that ages of actual use in building construction have proven the most efficient.

First, your stacco mixture must be right. This is important but easily accomplished if correct instructions are followed—our catalog contains full information about mixing stucco.

Now apply it properly on a background of Bishopric Board. Note how it is anchored to the background! Those dovetailed joints between the lash clinch the stucco-it can't let gut And nails through every lath hold the Bishopric Board firmly and securely to the building. There is no breaking away and sagging, causing the stucen to crack and chip off.

The lath in Bishopric Board are thoroughly

creasured and imbedded in Asphalt Mastic on a background of beavy fibre board, making a fire-resisting combination that is proof against vermin, changes in temperature and moisture. Bishopric Board is the one background that insulates the building and makes it warmer in winter and cooler in summer.

Finally, Bishopric Board, under the severest scientific tests and in actual use, has proved its supencirity.

CURRENT EVENTS

EUROPEAN WAR

WESTERN FRONT

February 15.—London states that British trench-raids in the West have netted a gain of three-quarters of a mile along a six-mile front since the beginning of the new year.

February 16.—Four lines of French trenches, on a front of a mile and a half, and a half-mile deep, are taken by the Germans near the Butte du Mesnil, in Champaigne. The Crown Prince's army takes 858 prisoners in the operation. A big offensive is believed to be near at hand.

February 17.—The British strike the German lines on both sides of the Ancre, and achieve an advance of half a mile on a two-mile front. A number of prisoners are brought in.

February 18.—After a desperate battle in the Miraumont region, the British succeed in repelling three German attacks on recently won ground. Heavy losses are reported from both sides. The number of prisoners taken the day before is announced as 773 German officers and privates.

February 19.—Verdun is the scene of another artillery-duel as the French guns shatter the German fortifications at Damloup, near Fort Vaux. Many Allied raids are reported from Armentières, Messines, and Souchez.

February 20.—A British attack in the vicinity of Messines is unsuccessful, says Berlin, and a few prisoners are taken by the Teutons. On the other hand, the British report damaging German defenses near Armentières and Ypres, as well as near Hill 304 in the Verdun sector.

EASTERN PRONT

February 15.—In Galicia, east of Lemberg, the Russians thwart a German move to blow up a number of trenches. The mines, which were in readiness, were seized by the Russians and the occupants taken prisoners.

February 17.—Fighting on the Roumanian front is resumed in an indecisive battle in the Karpathians, near the Trotus Valley

Valley.

February 18.—Russian troops capture a hill near Tergu Ocna at bayonet point without firing a shot, says London, reporting the day's events in the East. A number of prisoners are also taken.

February 20.—Konitza, near the Albanian border in western Greece, is occupied by two Italian battalions, since the Greek authorities move southward to Janina.

GENERAL

February 15.—Word is received at Rio de Janeiro concerning a sea-fight in which the British cruiser Amethyst met three German raiders. After a short fight the raiders withdrew damaged. The action is said to have taken place about 125 miles off Fernando de Noronha.

The day's losses in the German U-boat campaign are set at 6 boats, of a total

tonnage of 7,042.

The Italian troops operating in Macedonia win back Hill 1050, northeast of Monastir. It was lost to the Teutons a few days before.

February 16.—Great Britain announces a newly mined zone off the coast of Germany. Holland, and Denmark, and warns ships to avoid that territory as dangerous. The exit to the Atlantic of German U-boats is blocked by the spreading of mines here.

Seven more ships are sunk by German U-boats, bringing the tonnage loss for

the day up to 9,536.

Talaat-Bey, the new Turkish Grand Vizier, announces in an address that the Turks are ready to fight to the last man to retain Constantinople. A large loan from Germany is reported to have been floated by the Porte.

February 17.—Only three ships are reported sunk to-day by U-boats, with a total

tonnage loss of 6,469.

The British tighten their hold on Kutel-Amara by taking more fortifications on the Tigris, with 2,000 prisoners, and much war-material. The fall of Kut is believed to be near.

February 18.—A tonnage loss of 12,000 tons is reported for the day, altho only three ships are sunk. One of them was the large British liner Worcestershire.

It is unofficially announced at Berlin that one submarine in the North Sea sank three cruisers and a transport of an aggregate of 51,800 tons in a single day.

Casualties in the German Army since the first of January are totaled at 77,534 troops, exclusive of Colonials. Since the beginning of the war the German losses have been 4,087,692 killed, wounded, and missing, according to English compilation from official German lists.

The Greek legation at Washington hears that due to the Allies' blockade many Greeks are starving, and a number of deaths from lack of food are reported from the various provinces. The population, it is said, are forced to live on grass and herbs, and epidemics are rapidly spreading throughout the country.

February 19.—The British attack the Turkish troops at Sannaiyat, and occupy two lines on a frontage of 300 yards and 540 yards respectively, on the left bank of the Tigris. The Turks launch two counter-attacks and ultimately drive the enemy back to their original positions.

Geneva hears that the German Zeppelinraids on London have been discontinued as unprofitable, as was done some time ago in the case of Paris.

The day's losses due to U-boats total seven ships, of a gross tonnage of 16.196.

New war-measures are reported passed by the Indian and Australian governments prohibiting the departure of women or children for Europe under any circumstances whatever.

February 20.—The British War Office takes possession of all the leather in the United Kingdom, as well as seizing all unsold stocks of raw jute.

The exploit of a Russian submarine, operating in the Black Sea, and sinking nine vessels, is reported from London.

The number of ships sunk by U-boats during the day is announced as but four, with an aggregate tonnage of 1,729. The grand total of tonnage losses since February 1 amounts to 252,621 tons, vested in 128 boats.

The British take a Turkish garrison at a post near Bir el Hassana, on the Sinai peninsula.

February 21.—London announces that the port of Plymouth has been closed to neutral vessels.

THE TEUTON-AMERICAN IMBROGLIO

February 15.—The arrival of former Ambassador Gerard is announced from Paris, with the added news that he will start for home as soon as arrangements can be made.

Minister Whitlock notifies the Administration that the American flag was not ordered down in Brussels, but that the German authorities merely "requested" its removal from the Legation.

Berlin reports the liberation of the American seamen who were brought in by the

steamer Yarrowdale. The American Government had sent repeated demands for this action.

February 16.-London avers that Americans have been told to leave Austria, but Washington denies the report, and makes every effort to avert a break with the Dual Empire.

February 17.—Capt. Charles A. Polack, of the German-Lloyd liner Kronprinzessin Cecilie, admits that the vessel was disabled by her crew under secret orders, when all were in the custody of a United States marshal. The order was received from Hoboken on January 31, before the German-American rupture.

Sceretary Lansing informs Swiss Minister Paul Ritter, in charge of German affairs, that it can not indorse the supplement to the treaties of 1799-1828 as proposed by the German authorities. An unfair advantage to Germany in the event of war is given as the reason.

February 18.—The entrance to New York harbor is reported closed by a steel protection net to be in use during the night and so arranged that no ships may pass during the dark period. The barrier is located in the Narrows. A similar net protects the harbor at Norfolk, Va.

Warning from the German Government reaches Washington to the effect that arming of American merchantmen will be regarded as a warlike move at Berlin. The German aim is construed to be a general tie-up of American shipping.

February 20.—Ambassador Penfield is reported to have delivered to the authorities at Vienna a request for a restatement of Austria's position on the U-boat question, with special emphasis on whether the Ancona pledges are to be kept or not.

It is unofficially said that the Austro-Hungarian Government is one with Germany on the submarine question, and will carry out her unlimited warfare in the Mediterranean.

FOREIGN

AFFAIRS IN CUBA

February 15.—Several vessels of the Cuban Navy escape from Santiago and remain loyal to the Administration. Hope is entertained in Havana that the rebels may soon be driven out, as battling is reported in progress between the factions in the Province of Camaguey.

February 16.—The Cuban rebels are twice beaten by the Government troops at Hoyo Colorado, near Hayana. rebels are now said to be in retreat, after several have been killed. Four American war-ships are reported to be on the way to the island to aid restoring order and protect American interests,

February 17.—Havana announces a series of unimportant engagements between the rebels and the loyalists, with the general effect of quieting the uprising in a measure,

February 18.—The American mine-layer San Francisco arrives at Santiago de Cuba. An agreement with the Military Governor is made by the Commander not to permit Menocal vessels to enter harbor, providing that it is not mined or blockaded by a sunken ship.

February 19.-An American note is sent to the President of Cuba to the effect that the Administration will support the legally constituted government under General Menocal, that the insurrecta government will not be tolerated, and that the rebels will be held responsible for property damages due to fighting or rioting.

GENERAL

February 16.—Octave Mirabeau, the noted French author, dies in Paris, aged 67.

The death of Mme. Rodin, one-mouth bride of the sculptor, is also reported from the French capital.

February 18.—Col. Benjamin Puente, War Minister of Peru, submits his resignation to the President of that republic. No reason is published.

Emile Carolus - Duran, noted French painter and member of the Institute,

dies in Paris, aged 78.

February 20.—Berlin reports that 1,500 persons were killed and more than 3,000 injured in a munitions-factory explosion at Archangel, Russia. The damage is set at 50,000,000 rubles.

DOMESTIC

February 15.—By a vote of 10 to 24 the Ohio Senate kills the move to reconsider the recently passed suffrage bill. The measure is reported in the hands of the Governor for signature,

Three men, later identified as the American cowboys recently captured at Hachita, N. M., by Mexican raiders, are found dead and mutilated on the Mexican side of the border a few miles away from the

scene of the raid.

The first legislative move as a result of the border mobilization dissatisfaction is reported from New Mexico as the State Senate receives a bill to abolish the National Guard in that State. The Guard is characterized as a "failure.

February 16.-The chief railways in the United States vote an embargo to relieve the car-shortage and traffic-congestion in the East because of the curtailment of shippings due to the German

submarine campaign,

The tie-up in the New York Postmaster situation is broken as President Wilson sends to Congress the name of Thomas G. Patten for the appointment. The suggestion is said to have caused widespread approval among New York busi-ness men and members of Tammany Hall.

The construction of another Government wireless plant to link the United States with Tutuila, Samoa, by way of Honoluln is reported completed. Both plants are now in connection with the wireless

at San Diego, Cal.

The annual Post-Office Appropriation Bill passes the House. It is reported to be of aid to the prohibition movement, since it probibits sending liquor or publications carrying liquor advertisements into "dry" States.

February 17.—The rush to obtain citizenship papers establishes a record as more than 50,000 applications are entered in a single day. The German-American situation is considered the cause.

Coincident with the opening of the Ameriean Embassy in Mexico, the remainder of the National Guard now at the border is ordered home. The movement of 53,000 militiamen is to begin in two days, and will occupy two weeks for completion.

February 19.-The antialien land bill, recently killed in the Idaho State Legislature on advices from Washington, is reintroduced for consideration.

Major-General Frederick Funston, commander of the Southern part of the United States Army and famous as the captor of Aguinaldo, dies suddenly of heart-disease, at San Antonio, Texas. He was fifty-one,

Governor Lister, of Washington, signs the State "bone-dry" bill, which, unless referred by petition to the 1918 election, becomes effective early in June of this year.

The House votes to continue temporarily the present rule in the Danish West Indies, and to appropriate \$25,000,000 to pay Denmark for the islands.

INVESTMENTS - AND - FINANCE

THE AFTER-THE-WAR OUTLOOK

CONOMISTS still discuss, with vary-L ing degrees of pessimism or optimism, the condition of trade and general finance in this country, as well as in Europe, after the war. A notable recent expression of views came from Mr. F. C. Schwedtman of the National City Bank of New York, who contended for an optimistic outlook. What has been known as the "war after the war," he declares, will be "not so much an economie war between countries as a war within countries themselves against waste, extravagance, obsolete methods, class prejudices, and economic ignorance." A war of that kind will be waged in every country, our own included, the objects against which it will be directed being outworn educational theories, waste in the most precious of national resources, which is men and women, against waste in distribution. national and individual extravagance, and neglect of the farm. In this country the loss will not be in more money, of which we have not been drained, but in things far more valuable than money, such as cattle, hides, wool, steel, oil, copper, and other kinds of our real national wealth. Mr. Schwedtman declared that the cattle now available for food in this country amount to 20 per cent. fewer than they were in 1907, and that the number of sheep has declined 10 per cent. Meanwhile, the population has increased 18 per cent. We can not blind ourselves to the fact that we now have, and shall continue for some time to have, less food, less shelter, and less protection from the cold than we had before the war.

During this coming period, when the productive forces of the world are to undergo readjustment to meet the new conditions after peace returns, we shall find that selfdenial and finer kinds of economy, heretofore despised by us, will have to become the rule rather than the exception. Mr. Schwedtman does not believe that competition between this country and Europe after the war will become the bitter struggle which some writers have predicted it would be, but rather that we shall have this sharp war within ourselves and have it just because we shall emerge from the present war handicapped by extremely high wages and high costs of production, accontuated by habits of national extravagance.

As for the condition of Europe, Mr. Schwedtman believes that, on the whole, the productive power of the belligerent countries will be greater than it was before, altho they will all have to struggle under great burdens of taxation. The idea set forth in some quarters that the producing power of Europe will be prostrated by the war, because of the waste of human life. the destruction of property in war-zones, the colossal debts, and the neglect during the war of all industries except munitions and army transportation, he does not accept. Should the war last until August of this year, about 4,000,000 men will have been killed or hopelessly disabled, but in the belligerent countries at the same time there was a gain in population averaging annually about 5,000,000, of whom onehalf were males, which means that in three years the male population has increased by more than 6,000,000, so that there was a

gain of at least 1,000,000 more in manpower for industry than these countries had when the war began. Furthermore, to these figures must be added the stoppage in those countries of normal immigration to foreign countries, the return of former immigrants to their native lands, the remarkable success that has attended the use of women in occupations formerly pursued only by men, and the tremendous stimulus given to the invention of labor-saving machinery, to improved methods, and to higher organization. Mr. Schwedtman believes from these figures that the outlook is for an increase rather than a decrease in the producing power of the belligerent countries. He notes that it has already been asserted with some emphasis that since the war began the industrial efficiency of Russia and Italy has actually been doubled.

RUSSIA DEVELOPING HER TRANS-PORTATION METHODS

Professor N. Kouznetzoff, now stationed in this country as a special trade representative of Russia, recently discust with a writer in The Journal of Commerce Russia's need for better systems of communication and the steps she is taking to secure them. It appears that activities are already going forward to secure an extension of Russian railways and the improvement of roads and water-routes for transportation. Out of these conditions many opportunities have arisen for American industries to secure sales of material needed in Russia and which Russia herself can not produce while living under war-conditions. Following are points in the statement made by Professor Kouznetzoff:

"The Russian Empire extends over a territory of about 400,000 square miles, nearly one-sixth of the earth's territory. The territory of the United States, with its colonies, takes up only 177,000 square miles, something only half the Russian territory. The Russia has a population of about 180,-000,000, its system of communication is still much undeveloped. Until very lately little attention was paid to this question. The present war proved conclusively how essential and important it is for Russia to have more improved and more convenient systems of communication.

"The first railroad in Russia was constructed in 1838, between Petrograd and Pavlovsk, a distance of about 965 miles. During the latter half of the 19th century over 2,500 miles were built at the average of about 93 miles a year. Between 1896 and 1900 construction reached its highest development, a length of about 10,000 miles. In 1914 there were 46,000 miles of railroads. Nearly 33,000 are in possession of the Russian Government and the rest are private property. The United States in comparison with Russia possesses a net of railroads ten times longer, while Russia is almost twice as large. Among the intended new constructions, some of them deserve particular attention, namely the following:

Ina	rticular attention, namely ti	te fol	lowi	ng:
1	Moscow-Shterowkt	About	700	Miles
2	Ktorkof-Penes-Inea.	4	600	44

"In order to complete this plan the Russian Government will appropriate about

EVERY PIECE A QUALITY PIECE IN THE 6-30 CHALMERS

Chalmers puts Quality Materials and Quality Workmanship into every piece of the Chalmers cars. Therein lies the difference between the Chalmers and other cars in its class.

Consider, for example, some of the hidden moving parts of the motor—the crank-shaft, connecting rods and pistons. They are made of extraordinary materials with extraordinary care and thoroughness.

ONE PIECE CRANK-SHAFT

The crank-shaft is drop forged from heat treated carbon steel in a single piece. Balancing weights are integral with the shaft. The shaft is 2½ inches in diameter. Sturdy, but not excessively heavy. Rigid. Dense. Strong. It is balanced while rotating at a fast rate of speed, on a unique machine. This helps you to understand why the Chalmers motor is so smooth.

CONNECTING RODS-STRONG, LIGHT

The six connecting rods are designed to secure rigidity and lightness. They are made of a special carbon steel. Are unusually strong and dependable. They are built to withstand greater stress than some connecting rods weighing almost twice as much.

LIGHT WEIGHT PISTONS

Chalmers pistons are of Lynite. A

light and tough metal just about onethird the weight of cast iron.

POWER AND ECONOMY

The 6-30 motor, with light weight parts, turns up great power. Every ounce of it is delivered to the rear wheels. There is ample reserve for any emergency.

This means something besides wonderful performance. It means economy of fuel and long life.

Chalmers sacrifices nothing to attain extraordinary speed, and extraordinary power. It is built on the idea of being a well-rounded automobile. Here are a few of its features:

Axle strength. Frame sturdiness.
Engine simplicity. Gears cut well.
Body strength. Painting skill.
Handling ease. Car comfort.

Starting system dependable.

500,000,000 rubles yearly for three years, and has raised the price of railroad tickets. To bring this plan to completion considerable capital and an immense amount of supplies will be necessary. It would be very hard to get these from Russian factories at present, as they have to be pro-duced in immense quantities and in a very short time. American capital will find an opportunity for investment in this direc-

"The length of the water routes in Russia is about 180,000 miles, of which only about 60,000 miles are navigable for general purposes. The rest can be used only for shipments of lumber. The best water communications are in the provinces of Archangel, Vologda, Perm, and Olonetz. Notwithstanding the fine conditions for the development of a commercial fleet in Russia, the latest statistics show that this fleet consisted of 3,700 vessels of 783,000 registered tons. Of this number only 1,044 were steamers and the rest sailing-vessels and motor-bonts.

"Simultaneously with the development of railroads in Russia the Government has planned a long program of development of water transportation, which, until the present, has been entirely neglected. The objects to be attained are defined as follows: 1. The creation of exits into seas by water routes. 2. Our cheaper freights, such as lumber, anthracite, and grains, must be brought to the ports of exportation without reloading. As a result of this develop-ing problem another arises—the connection of artificial irrigation and the various river systems. Our main river, the Volga, flows into a closed sea, and therefore it is necessary to give her an outlet toward the north (which has been done), and also to give an outlet toward the south into the Black Sea. In a similar manner it is necessary to give an outlet toward the west to our Siberian rivers, at least as far as the White Sea. 3. The third problem is to provide a systematic betterment and the opening of new navigable rivers for the transportation of freight, such as grain. lumber, and, especially, coal. It is of special importance to transport coal from the Don basin into the western parts of the country by way of the Dnieper, and to the north to the Baltic Sea and the Ural; but in view of the expected rise in the freight charges it will be necessary to replace part with English coal after the war. Harbors and docks will be constructed in twenty localities. The completion of this work will require about one billion rubles.

"The territory of European Russia has only about 25,000 miles of roads. The development of the automobile industry has proved how essential more highways are for Russia. The present war has proved how the undeveloped system disturbs regular communication. In the Russian system of road-making the work is given to contractors, each of whom superintends a certain specialty. Here is another field for American enterprise. Structural committees will have to be organized on a large scale. By applying to Russian labor modern American devices great development and lucrative business will be secured. The following supplies will be needed: Tracks, locomotives, cars, pumps and supplies for water-stations, various lathes for new railroad factories, various machines for earthwork, road-rollers, and many other articles, which naturally will be bought from America.'

WHAT OUR WAR-LOANS COST DURING THE CIVIL WAR

A writer in The Wall Street Journal presents data to show that the prices which England and France are now paying for money are not exorbitant. At the opening of the Civil War our national credit found itself reduced to a 12 per cent. basis. At one time, owing to the depreciation in our currency, the actual cost of money was equal to 15% per cent. Two of the greatest loans made by the North were at 6 per cent. and 7.3 per cent. Following are parts of this writer's article:

"Many people are inclined to look upon the rates of interest which Great Britain and France are now paying for borrowed money as the rates of a bankrupt. But they forget that these are war-times, when the ordinary standards of credit must be disregarded. They also forget that the United States Government had to 'pay through the nose' for its loans during the Civil War. In fact, compared with the rates of interest in those days, the 5 per cent. and 6 per cent., which it is now costing both England and France, are conservative. It is of interest at this time to recall what it cost the United States Government to finance the War of the Rebellion. At the opening of the Civil War, the United States Treasury was depleted and the national credit reduced to a 12 per cent. basis. In 1860, failing to place a 6 per cent, loan, the Government borrowed on one-year treasury notes at from 6 to 12 per cent, discount; while in 1861, the Secretary of the Treasury sold a small amount of twenty-year 6s at 9½ per cent.

"The great popular loan at the beginning of the Civil War was the 6 per cent 5-20-year loan of 1862. This loan was placed directly with the people through one general agent and 2,850 sub-agents. There were \$514,771,600 of this loan placed at par in currency. The other great war-loan was the 7,30 per cent. three-year loan issued in 1864 and 1865, of which \$829,-992,500 were sold at par in currency. The Civil-War loans (with the exception of the 6s of 1861, \$18,415,000 of which were sold at an average price of \$9.03 per cent.) were all placed at par in currency, but commissions ranging from ½ per cent, to 1 per cent, were allowed to the bankers distributing the bonds.

"However, it is worth noting that while

"However, it is worth noting that while the average interest nominally paid by the Government on its bonds during the warperiod was almost exactly 6 per cent., the fact that payment was received in currency made the rate of interest actually paid much higher. The average gold value of United States notes in 1862 was 88.03 per cent., resulting in an actual interest-rate for that year of about 6% per cent. In 1863 the value of a currency dollar fell to 68.9 per cent., consequently the interest-rate rose to about 8% per cent. In 1864 the Government's credit reached low-water mark in an average market value in gold for its notes of 49.2 per cent., resulting in an actual interest-rate of about 12 per cent. At one time during the year the gold value of the notes was only 38.7 per cent. At this valuation the interest-basis was about 15% per cent. In 1865 the notes averaged 63.6 per cent. In value, bringing the interest-rate down to about 9% per cent. In the three following years the currency dollar was worth around 72 per cent. in gold, making the interest-basis about 8% per cent."

THE ELECTRIFICATION OF THE ST. PAUL ROAD

The success which has already attended the electrification of the St. Paul road in its far-Western parts has led to a decision by the company to extend the system through the Cascade Mountains to the Pacific Coast. For at least five years the management of the road has had electrification under consideration. Operations

Does Your Tooth-Paste Prevent Gum Decay?

OW many think of gumtreatment as necessary to prevent tooth-decay?

How many know that uncared for gums always cause Pyorrhea (Riggs' Disease) or know that this condition comes to four out of five people who are over forty?

In Pyorrhea tissue-shrinkage sets in. The gums recede. They expose the unenameled part of the tooth. Decay is almost certain - and this too at the spot where it is most destructive and most disfiguring. Also the teeth become loosened and the shape of the mouth changed by receding gums.

Forhan's, used at tooth-brush time, stands in double-guard over teeth and gums. If the gums are tender or bleeding Forhan's will give prompt relief. Gums become hardier and wholesomer. Teeth become healthier and the moch-loosening process ceases. They become scientifically and naturally polished.

No ordinary tooth-paste duplicates the Service of Forhan's, whose tang is pleasant and antiseptic.

If gum-shrinkage has already set in, start using Forhan's and consult a dentist immediately for special treatment.

In 30c and 50c tubes in United States.

Simple little

are already carried on by the new system over a certain part of the line and have shown that for Western railroads electricity is the most practical of powers. A writer in The Wall Street Journal believes it is not a far-fetched statement to say that all railroads eventually will come to use electricity, at least those whose lines are able to avail themselves of water-power. This writer says further on the subject: "To say that an electric locomotive will haul over a mountain-grade 30 per cent. more trainload, at a cost approximately 40 per cent. less than a steam locomotive, and that it is guaranteed to perform this unprecedented feat at sixteen miles an hour, as against nine miles for heavy freight-trains under steam, often with two locomotives to pull and one to push, means that the singletrack road increases its facilities to a doubletrack standard in the matter of speed, weight, and length of train, to say nothing of enormous sayings in the cost of operation." He then quotes C. A. Goodnow, assistant to the president of the St. Paul:

"The outstanding feature of the success of our electrification is the case with which heavy freight-trains are handled on the mountain-grades. Five trains of about sixty-two cars each are moved daily each way across the mountains by the big electric engines, and estimates are that four hours are saved by each train on each 100 miles. Recently, Louis W. Hill, president of the Great Northern, and J. M. Hannaford, president of the Northern Pacific, took a trip over 339 miles of our electrified line, and they were greatly interested in the sight of electric engines hauling heavy freight-trains up the steep mountain-grades at a speed of fifteen miles an hour or better, where formerly three or four steam-engines strained and puffed to move small trains at half the

speed. "The railroad presidents were even more interested in the success of regenerative braking. They saw the heavy trains coast down the grades at an even speed without jarring, or jolling, or grinding of brakes. There is no delay while brake-shoes are cooled or replaced or draw-bars repaired. Then, too, electricity is generated and turned back into the wires for use, for under the regenerative braking system the motors of the engines are reversed and turned into generators which make use of the great force of the trains going down grade. The comfort and the case of the regenerative braking is especially noticeable on the passenger-trains. The engine which hauled Mr. Hill and Mr. Hannaford took them 339 miles without a stop for overhauling, coaling, or watering, on which hours would have been spent on a steamengine on a similar trip. We have had no trouble in maintaining schedules over our electrified lines this winter, for cold weather helps rather than hinders electric engines, which also buck through snow-drifts which stall steam-engines. The time we save on the mountain divisions has helped insure delivery of freight and passengers on time. Electrification, with its increased comforts has brought a marked growth in our business. The ease of operation, the timesaving, and other advantages already brought out have led the management to take up the extension of electrification. It is hoped that soon the difficulties of the Cascade Mountains will be solved as have been those of the other ranges. Power can be developed in the Cascades just as it has been in the Rockies. Engineers are now at work on other problems of the improvement. It is a big undertaking, but the St. Paul system hopes to push it to completion soon."

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"E. H. D.," Auburn Mo.—" Please answer the following: (1) Did the United States pay tribute to Algeria until 1830, when the French began their enoquest of Algeria? (2) What is the meaning of the word Boche, sometimes Beache, used by the French to signify a tierman, and is it a French until [1]. word? (3) Is a hydroplane used in air? Is a hydroacropiane ever correctly called a hydro-plane? (4) Is that prominent German general named Hindenberg or Hindenburg?

(1) No. In 1795 the United States refused to pay further subsidies. In 1815 they defeated the Algerines and dictated terms to them. See the "New International Encyclopedia," vol. I. p. 405 (1914). (2) The word bosche has been traced as from two sources; (a) from German Burnels, fellow or lad; (b) from Burnels, the act of shooting with a ride. Carlyle, in his account of the Battle of Prague, says that Prince Henry of Prussia brartened his men with "Bürsche, this way!" (3) A hydroplane is not used in the air as is a hydroneroplane, and a hydroneroplane is not correctly called a hydroplane. The hydroplane is a gliding bout, driven at great speed so that its how is frequently out of the water while its stern is submerged. Practically, it may be described as skimming over the surface of the water, and does not rise out of it, as does a hydroaeroplane, which, rising from the water, floats through the air at such altitude as its motive power and supporting planes will permit. (4) The correct spelling of the name of the general you have in mind is Hindenburg.

"K. O. C.," Java, S. D .- The word cuff is a French word and is always correctly spelled with an accented "e".

"R. B. H." Grand Rapids. Mich.—"(1) Is it permissible to use appropriating in the sense of exasperating? (2) Is courty permitted, as 'exasperating? (2) Is courty permitted, as permissible in the sense of Sibe come on for a visit? And the use of on in such expressions as 'Come on up'. 'Come on in'? (4) Is the use of had had' good English, as in 'The good times she had had'? (5) Is 'actual fact' a redundancy?"

(1) The dictionary marks the word opprerating in the sense which you mention as "colloquial," which means that it is permissible in conversation. but not in writing. (2) Such use of the word ceverty is archaic and colloquial. (3) "Came in" is better than "came on." "On" should be omitted in such expressions as "come on up," etc. (4) "Had had" is correct, but it would be wise to avoid it when possible, for repetition of the same sound does not commend itself to the ear. (5) Many a so-called "fact" having been characterized "a lie and a half," there is now room for the phrase "actual fact." but the form is in general condemned.

"H. R. M. "Hamilton, Fla.—"In the War of the Roses in England, one side used the emblem of the white rose and the other the red rose. A long time ago, somewhere I read the legend that as this long war ended, a rose was found that was both white and red. The house of York and Lancaster did intermarry at the close of the War of the Roses, but I would like to verify, if possible this pretty little story of the red and white rose. Is there any foundation of fact upon which to base it, or is it just an invented tale?"

Please refer to Shakespeare's I. Henry VI., act 2.

"Plant. Let him that is a true-horn gentle-

merset. Let him that is no coward no flatterer.

But dare maintain the part of the truth. Pluck a red rose from off this thorn with me.

Warwick plucked a white rose and loined the Yerkists. Suffolk plucked a red one and joined the Lancastrians. There is a legend that when the Wars of the Roses reased by the marriage of Henry VII. to Elizabeth of York, a rese-bush in the grounds of a certain monastery in Wiltshire. which had been bearing both red and white roses, now bloomed with petals of mingled red and white.

See Brewer's "Historic Note-Book," Green's "History of the English People," Collier's "British Empire," and Sidney Low's "Dictionary of English History."

Bay State Comuni Cruck-Filler is the first-aid treatment to wally that crack. It is easily applied and not detectable. A can in the house is as necessary

Swords and Plowshares By ERNEST CROSBY Ringing Lyrics Against War

By a Strong Singer whose music was dedicated to Peace. This is a good time for those to read him who agree with him—and those who do not.

12mo, Cloth: \$1.00 postpaid. FUNK & WAGNALLS COMPANY, New York, N.Y. "N. K.," New York, N. Y.—"I have a calendar on which the word Menotomy appears under an Indian flaure. Has this anything to do with the months" If not, can you give me any informa-

Menotomy is the old Indian name for Arlington, a town in Massachusetts. In addition to the fact that it is a suburb of Cambridge, it is the name given by Cyrns E. Dallin, the sculptor, to the bronze statue which he designed and which has been placed in that town. The picture on the calcutiar was made from a photograph of the statue.

"E. H. R.," Fort Madison, Iowa.-"The word canapé is French for sofa. It is used in cookery to designate a slice of bread fried in butter and used as a support, or "sofa." that is, a serving base for sturgeon, caviar, anchovies, or other relish.

"P. M. R.," Dover, N. J.-The hattle of Marathon was fought by the Greeks against the Persians. The battle was fought on the plain of Marathon, p.c. 490, and the Greeks defeated Datis and Artaphernes, the generals of King Darius. Callimachus and Miltiades, the Greek commanders, drove the Persians into the sea all along the line and they left 6,400 Persian dead as against 192 Athenians.

"M. F. H.," New York.—"Somewhere in Ruskin's writings he made use of the expression 'peace and prosperity.' Can you tell me in what work this phrase appears?"

The LEXICOGRAPHER fails to find the phrase referred to in Bartlett's "Familiar Quotations," Walsh's "Encyclopedia of Prose and Poetical Quotations," Stoken's "Encyclopedia of Pamiliar Quotations," edited by Treffry, and Wilstach's "Dictionary of Similes." In Hoyt's "Cyclopedia of Practical Quotations" (p. 471, col. 1), however, he finds the following, from Ruskin's "The Eagle's Nest," lecture ix—"People are always expecting to get peace in heaven; but you know whatever pears they get there will be ready-made. Whatever making of peace they can be blest for, must be on the earth here." This is the only quotation on peace to be found in the reference-books. There is, however, an address which was delivered in England by John Rusida shortly after the Civil War (1865) in which the following passage occurs. Perhaps this is what is referred to:

is referred to:

"As peace is established . . . the arts decline. They reach an unparalleled pitch of costliness, but lose their life, culist themselves at last on the side of luxury and various corruption, and among wholly tranquil nations wither utterly away. . The common notion that peace and the virtues of civil life flourish together. I found wholly untenable. I eace and the rices of civil life only flourish together. We talk of prace and tearning, and of peace and plenty, and of peace and tearning, and of peace and plenty, and of peace and civilization; but I found that those were not the words which the Muse of History coupled together, that on her ligs the words were peace and sensuality, peace and selfishness, peace and corruption, peace and death. I found, in brief, that all great nations learned their truth of word and strength of thought in wae; that they were nourished in war and wasted by peace; trained by war and betrayed by peace; trained by war and betrayed by peace—in a word, that they were born in war and expired in peace" (Journ Ruskin, The Crown of Wild Olive: War).

"J. T. M.," Hickory, N. C.—"Does one inch

"J. T. M.," Hickory, N. C.—"Does 'one inch of rainfall' mean one inch according to our neasure of length, or is it some other neasurement?"

The inch used in measuring rainfall is the ordinary measure of length.

"E. H." Stanberry, Mo.—"Which church has the largest membership in the United States, Methodist or Presbyterian?"

According to the latest statistics, there are in the United States, 7,472,108 Methodists and 2:104,030 Presbyterians,

"E. I..." New York, N. Y.—"Stevenson writes, 'An old oak that has been growing where he stands since before the Reformation, taller than many spires, more stately than the greater part of mountains, and yet a living thing, liable to sickness and death, like you and me.' Should not this last be you and II. not this last be you and I?

"Like you and me" is correct, the preposition "to" being understood before "me."

"A. B.," Pittsburg, Pa.—"Which is correct, the word mask or mai, when used to describe the pasteleoard form placed on a picture in order to make it lead artistle?" make it look artistic?

The word mat is the one to use: for a "mat." in picture-framing, is a plate or card of thick paper, pasteboard, etc., either white, tinted, or gilded, in which a picture is displayed, and which surrounds the picture as a border or frame. generally under glass; a passe-partout. The word mask is not correctly used in this sense.

Help Us Focus the Condemning Light of Public Opinion on THE SLIP-SHOD DRIVER—The Greatest Enemy of Motoring

The slip-shod driver is one who leaves tire chains in the locker when careful drivers put them on their wheels. Driving with chainless tires over wet-slippery-skiddy streets he gambles with the lives and property of everyone in his path.

Only two things can reach the slip-shod driver—fear of the law and the mightier power of public opinion. So, we ask you to help us arouse and concentrate a public opinion that will compel the slip-shod driver to use intelligence and judgment that will safeguard all of us against all preventable accidents.

Concentrate your light of condemna- skiddy streets.

tion on every driver who cuts corners; who does not signal when stopping or turning; who does not give a warning signal of his approach; who exceeds a safe speed limit; who does not inspect his brakes and steering gear; and who does not stop to put on tire chains at the first indication of wet-slippery-skiddy streets.

TORPEDOED BY A GERMAN SUBMARINE, WITHOUT WARNING, ON FEBRUARY 25.

Thirteen persons, among them two American women, died when the Laconia was sent down in the night, 150 miles from the Irish coast.

IMMINENCE OF WAR WITH GERMANY

HAT COURSE is this nation to take in the face of Germany's torpedoing of the Laconia, the paralysis of our overseas commerce by her U-boat threats, and the revelation of her amazing plot to embroil us with Mexico and Japan? That of "armed neutrality," says President Wilson; a course which would permit us "to supply our merchant ships with defensive arms" and "to employ any other instrumentalities or methods that may be necessary and adequate to protect our ships and our people in their legitimate and general pursuits on the seas." It is "America's time to strike," exclaims the Richmond Times-Dispatch. "Declare war," urges the pro-Ally New York Tribune, which sees no other "honorable and sensible way to end this humiliating condition." American citizens traveling on the Laconia, it reminds us, "have been murdered under exactly the same conditions as those under which American citizens were murdered nearly two years ago on the Lusitania and the Arabic," and "Mr. Wilson has said many times that he would not tolerate any more such murders." "It would be ruinous to try to go to war a little and not much," declares Colonel Roosevelt, who points out that "a light must be won by hitting," and therefore, "if we go to war with Germany we must strike hard with the most formidable expeditionary force that can be raised. If we prepare our strength to the very utmost at the very outset, and subordinate everything else to this one end, we shall absolutely assure our safety and we shall immeasurably shorten the war."

"Germany is already waging war against us-cruel, relentless war-and we can do nothing less than defend and protect ourselves," affirms Col. Henry Watterson, editor of the Louisville Courier-Journal. When she announced her campaign of "unrestricted" submarine warfare on January 31, says the Philadelphia North American, "Germany declared war against the United States, and since that date this country has been subject to every hostile activity of which Germany at the moment is capable." The uncovering of Germany's efforts to incite Mexico to war with the United States, with New Mexico, Texas, and Arizona as bait, moves the Galveston News to remark that now "even the pacifists must see the folly of half-measures." Even Mr. Hearst's New York American now concedes that "the hours are short, the days are few, in which we may make ready for our defense." On the other hand, we still find in some sections of the press the view exprest that our Government, and not Germany's, is to blame for the present crisis. Thus an Illinois paper, quoted in The Congressional Record, scolds the Administration for its failure to sever diplomatic relations with England as well as Germany, and points out that we could bring this worldwar to a close by stopping shipments of ammunition to the Entente Allies and by putting an embargo on the exportation of foodstuffs. And Mr. Amos Pinchot, a pacifist leader, is quoted as saying:

"In my opinion the public will not be much imprest with the Zimmermann disclosure. Dr. Zimmermann's proposal to

TERMS: \$3 a year, in advance: three months, \$1: single cops, 10 cents; postage to Canada, \$5 cents a year; other foreign postage, \$2.00 a year. BACK NUMBERS, not over three months old, 25 cents each; over three months old, \$1.00 such. SEMIANNUAL INDEXES, issued in January and July, will be sent free to subscribers who apply for them. RECEIPT of payment is shown in about two weeks by date on address-label; subscription including the month named. CAUTION: If date is not properly extended after each payment, notify publishers promptly. Instructions for RENEWAL, DISCONTINUANCE, or CHANGE OF ADDRESS should be sent fire weeks before the date they are to go into effect. Both old and new addresses must always be given. DISCONTINUANCE; We find that many of our subscribers prefer not to have their subscriptions in-

terrupted and their files broken in case they fail to remit before expiration. Notwithstanding this, it is not assumed that continuous service is desired; still, subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. PRESENTATION COPIES: Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

"THE PRESENT OF THE SEAS."

MISS ELIZABETH HOY.

— Kirby in the New York World.

Mrs. Hoy and her daughter died of exposure in an open boat after the torpedoing of the Laconia. Austin H. Hoy, in a telegram to the President, offers his services to his country for the averaging of his mother and sister. "foully mardered on the high seas," He says in part: "As an American citizen outraged, as an American some and brother becaved. I call upon my Government to preserve its citizens' self-respect

turn Mexico and Japan against us in case of war is as fantastic as it is discreditable. If it represents official Germany, it shows that official Germany is distinctly up against it and has cracked under the strain. The United States should not be drawn into war on account of the Zimmermann memorandum."

and save others of my countrymen from the grief I now feel."

By slow and reluctant steps the United States Government has approached the brink. When President Wilson told Congress on February 3 that he had severed diplomatic relations with Germany he exprest confidence at the same time that the German authorities, despite their threat, would not be guilty of "actual overt acts" against American ships and American lives. Later, two American vessels, the Housestonic and the Lyman M. Law, were sunk, but the conditions of these sinkings apparently did not place them in the category of overt acts. But on February 26, almost at the moment that he again stood before Congress asking authority to arm our merchant ships for defense "if occasion should arise," word reached us that a German submarine had torpedoed the big Cunard passenger-liner Laconia at night without warning and without provision for the safety of the passengers or erew. Of those on board, thirteen perished, among them two American women. The Laconia was sunk in the war-zone off the Irish coast, in rough weather. She carried seventy-five passengers and a valuable earge, but no ammunition or explosives. Here, editorial writers and Washington correspondents agree, was an actual overt act. But public opinion in Germany, according to a Berlin dispatch, seems to be "reconciled completely to any eventuality" that may result.

The President told Congress on February 26 that, diplomatic protests having failed, "there may be no recourse but to armed neutrality, which we shall know how to maintain and for which there is abundant American precedent." He went on to say in part:

"I am not now proposing or contemplating war or any steps that need lead to it. I merely request that you will accord me by your own vote and definite bestowal the means and the authority to safeguard in practice the right of a great people who are at peace and who are desirous of exercising none but the rights of peace to follow the pursuit of peace in quietness and good-will—rights recognized time out of mind by all the civilized nations of the world. No course of my choosing or of theirs will lead to war. War can come only by the wilful acts and aggressions of others.

"I request that you will authorize me to supply our merchant ships with defensive arms should that become necessary and with the means of using them, and to employ any other instrumentalities or methods that may be necessary and adequate to protect our ships and our people in their legitimate and general pursuits on the seas."

Armed neutrality seems to find much favor with the American public, altho here and there a voice is raised in criticism. As the New York Herald reminds us, "the oldest known right in the world is the right of self-defense," and the Pittsburg Dispatch argues that the adoption of armed neutrality, being a purely defensive act, need not lead to war. "We are merely going to provide our merchantmen with the means to defend themselves or with protection against lawless attack, precisely as we should do if our ships of trade found it necessary to pass through some part of the sea infested by pirates," explains the New York Times. The President's proposal, says Henry Weismann, president of the German-American Alliance, "is a warning to Germany that unless the present method of warfare is ended, war is caused by her own desire." While armed neutrality does not necessarily mean a state of war, says the Springfield Union, "it may easily lead to that eventuality." The Brooklyn Eagle also sees us "moving toward war," and the Brooklyn Times "can see no end to the road President Wilson has taken other than a state of recognized war with the German Imperial Government." To the Newark Star-Eagle "the President's particular kind of armed neutrality" seems to be "simply another word for preparation for war he has come to believe inevitable." This view finds echo in the French and British press. Thus the Paris Temps remarks that "the measures for protection asked of Congress constitute a new step which brings the United States to the verge of war," and a cable dispatch to the New York Tribune summarizes the opinion of the London press as follows:

"The President's address is considered here to mean the bringing of the United States into the war or the withdrawal of the German submarine policy.

"Germany's efforts to make the seas another Belgium has drawn a protest from America which will help the Entente cause in many ways and prove a boomerang for the Kaiser and his people."

In Washington, according to C. W. Gilbert, of the New York Tribune, "armed neutrality" is interpreted as "nothing more than armed watchful waiting." Mr. Gilbert goes on to say:

"'Armed neutrality' will normally be succeeded by 'acts of war,' 'acts of war' by a 'state of war' and 'a state of war' by war itself. 'Drifting into war' is the figure of speech most constantly used in Washington to describe what is happening to this country. It is on all lips. Even members of the Administration use it—to state a fact, not to criticize a policy. Fault-finders alter it into being 'dragged into war' or being 'kicked into war' by Germany. But a satirist revised it after listening to the debate in the House to-day by saying Congress was for 'crawling into war.'

The voices of those pacifists who were calling upon the President not to insist too strongly on the recognition of American rights on the seas and of those American friends of Germany who were echoing the Chancellor's complaint that our Government had been unfair and "brusk" in its severance of diplomatic relations, were abruptly silenced on February 28 by the Associated Press's publication of the following amazing document, dated Berlin, January 19, 1917, addrest through Count von Bernstorff to German Minister von Eckhardt in Mexico City, and signed by the German Foreign Minister, Dr. Alfred F. M. Zimmermann:

"On the 1st of February we intend to begin submarine warfare unrestricted. In spite of this, it is our intention to endeavor

to keep neutral the United States of America.

"If this attempt is not successful, we propose an alliance on the following basis with Mexico: That we shall make war together and together make peace. We shall give general financial support, and it is understood that Mexico is to reconquer the lost territory in New Mexico, Texas, and Arizona. The details are left to you for settlement.

"You are instructed to inform the President of Mexico of the above in the greatest confidence as soon as it is certain

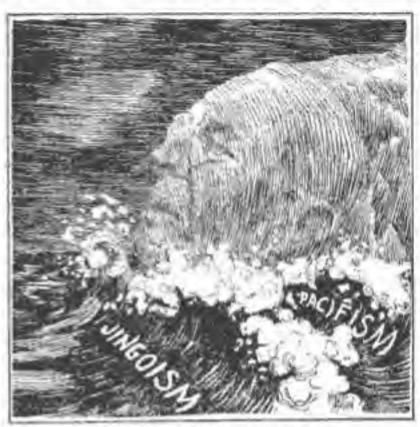

ACTIONS SPEAK LOUDER THAN WORDS.

—Sykes in the Philadelphia Evening Ledger.

that there will be an outbreak of war with the United States, and suggest that the President of Mexico, on his own initiative, should communicate with Japan, suggesting adherence at once to this plan; at the same time, offer to mediate between Germany and Japan. "Please call to the attention of the President of Mexico that the employment of ruthless submarine warfare now promises to compel England to make peace in a few months."

The authenticity of this note was confirmed by the White House and the State Department, and its publication was hailed by Washington correspondents as evidence that the Adminis-

German insults and aggression." "Even the agents and sympathizers of Germany in this country must now be convinced that their efforts to restrain and fetter the President must have all the consequences, if not the purpose, of disloyalty," exclaims the Dallas News, published in one of the States to be "reconquered" by Mexico, and it goes on to say:

"Germany has offended against us unpardonably. It has murdered our citizens, it has employed conspirators to violate our neutrality, it has made dynamite an agency to effect what its persuasions and threats could not accomplish, it has conspired against us while professing sentiments of respect and friendship, it has corrupted our citizens into its service, and in doing these things heaped upon us indignities which a self-respecting nation can no longer endure. It is a situation which calls for the employment of thorough and bold measures,"

This revelation of Prussian militarism "writhing in the slime of intrigue," remarks the El Paso Times, "is Germany's answer to the pacifists in this country who claim to be American":

"It ought to be interesting reading to those who want a war-referendum—to those who doubt the sincerity of the Administration when it asks for authority to use the armed forces of the country to meet possible eventualities. This ought, moreover, to be thoughtfully scanned by those who believe we have no use for military training in America—who believe that the gentle art of persuasion by word of mouth can turn the tide of caronge away from our shores."

And in another Texas paper, the San Antonio Light, we read:

"The people of Texas view with complacency the coldblooded proposition by Germany that the State should become Mexican territory provided Mexico joins Germany and Japan in a war against the United States. They have no fear that such a thing will happen to them. They know that even tho left entirely to their own resources, they will be able to avoid compulsory Mexican citizenship. It is conceivable that enormous Japanese and German armies advancing through Mexico might, for a time, occupy Texas, but Mexico would gain no population thereby. It can be asserted with quiet modesty and simple truth that when Texas had been overrun such Texans as were still living would be beyond or on the border fighting their way home."

A MONTH OF "RUTHLESS" U-BOAT WAR

E STAKE EVERYTHING," said the German Chancellor in offering unrestricted submarine warfare as Germany's answer to her enemies' challenge to fight to the end. In view of such declarations, interpreted by many in this country and England to mean that the new campaign is Germany's last resource, the results of the first month of the campaign are well worth noting as an indication of probable success or failure. If successful, say some observers, the German U-boats may next appear off our own coast. One million tons a month was looked for as the "wreckerop" of Germany's submarine harvesters, the Chicago Evening Post remembers, and it joins with other observers in pointing out that the estimates far exceeded the actual returns for the first month of "unrestricted" warfare. True, February is a short month, but this is not held to justify the 40 per cent. discrepancy our editors find. The first month of the ruthless under-water campaign ended, reckons the New York Journal of Commerce, quoting figures slightly in advance of those printed in other dailies on March I, with a total of 187 ships, aggregating 479,087 tons, lost, as follows: British, 115; American, 2; other neutrals, 48; other belligerents, 20; not identified, 2. The New York Times prints this table of losses for the past five months:

	EN	TENTE-	NEUTRAL			
October November December	Ships 140 152 125	7005 366,500 230,000 235,000	Ships 72 68 37	\$7,000 \$2,000 60,000		
January February	170	336,000	54	97,496		

While this attrition is serious, comments the Chicago daily just quoted, "it is not serious enough to achieve the original intent of Germany—the paralysis of Great Britain before her West front offensive begins." Using British Admiralty figures, the New York Evening Post calculates that the daily average of U-boat "frightfulness" was 17,000 tons last month as against 12,500 in December. Against such a drain The Evening Post does not think that England can cope indefinitely, but if the process of British collapse should be prolonged "public opinion in Germany will have to be prepared for another disenchantment." To the Louisville Post the fact that Great Britain imported more cereals during the first ten days of February, 1917, than during the corresponding days of 1916 or 1915, means that the submarine campaign is probably a failure.

But when we turn to the utterances of German officials, we find a supreme confidence in the success of their submarine campaign. Vice-Admiral Capelle, present head of the German Navy, told the leaders of the Reichstag on February 14 that the results achieved had "surpassed expectations." He declared it "very satisfactory"; that there was "no reason to reckon with the loss of even one U-boat since the beginning of the unrestricted submarine war." And he continued, as quoted in the London dispatches: "There is practically no shipping in the North Sea. Neutral shipping is clearly as good as stopt." The Philadelphia Record quotes a German Foreign Office official's remark that "our aim i to destroy tonnage, not buman life; and every ton of shipping that we can compel to tie up in port is as good as sent to the bottom of the sea."

Even in London, if we may believe a dispatch to the New York Son, the late February lull in submarine operations is discounted by the belief that the new U-boats will not reach their highest efficiency until some time this month.

But the very seriousness of the submatine menace would seem to be rousing Britain to mighty efforts to cope with it. The pessimistic strain in the recent speech of the British Premier, quoted on another page, has been widely commented on by our press. But the Boston News Bureau points out that Britain's threefold answer to the threat is also outlined in that speech. Britain replies through "the Navy, the shipyards, the sweeping away of needless burdens on tonnage." No more ships are to be wasted in importing luxuries into Britain, and merchant ships are to be built more rapidly than ever before to make up for those sunk. As for the Navy's part-"Admiral Jellicoe and those who have been with him are not dissatisfied with what has been done," Lord Curzon tells the House of Lords: "they are not dissatisfied with the number of German submarines that will never return to their own shores." Fresh testimony, both to the gravity of the threat and the activity of the defense, is borne by Mr. F. H. Simonds, of the New York Tribune, who returned from England on the Finland last week. He found the new submarine campaign "everywhere recognized in Great Britain as the most serious challenge the Empire has known since Trafalgar, if not since the days of the Spanish Armada itself." On the other hand, Mr. Simonds learned that "in the first fifteen days of the new German submarine campaign the toll taken by the British fleet was twenty-five."

OUR FELLOW CITIZENS IN PORTO RICO

T HAS TAKEN nearly twenty years for the Constitution to follow the flag to Porto Rico; and during these years the people of the island, living under a government "intended to be merely a temporary expedient," have been left in what the New York Herald calls "the anomalous position of being attached to a republic but enjoying no form of citizenship." Congress now gives them citizenship and a large measure of self-government. For the first general election under the new law, present qualifications for voting shall apply. Thereafter, according to the summaries in the Washington dispatches, voters shall be citizens of the United States, not under twentyone years of age, having such qualifications as may be prescribed by the legislature, providing only that no property tests may be imposed. The executive is to consist of a Governor

appointed by the President of the United States, and a council appointed partly by the President and partly by the Governor. There is to be a legislature of two branches, which is to elect a commissioner to Congress; its laws are subject to the approval of Congress and to the veto of the President. The law establishing this government provides for island-wide prohibition, subject to a referendum of the voters. All residents of Porto Rico may become citizens of the United States. As the Springfield Republican notes, United States citizenship is not compulsory.

"but the great majority may be expected to declare themsolves citizens, especially since the franchise after a year is to be restricted to those who choose American citizenship."

While the measure of freedom thus provided "is not that of Cuba, which is an independent republic bound to the United States by certain engagements, the liberty of the people and incentives to intelligent self-government will be ample," says the Baltimore American. The Porto-Ricans, as the Chicago Herald puts it, "have been given home rule. Congress surely could do no more."

But the Boston Transcript thinks that the privileges we are granting to the Porto-Ricans "are of a grudging nature"-

"We do not give Porto Rico the full status of a Territory, tho we have given that status to Hawaii, which is principally inhabited by Chinese and Japanese. . . . The people are in leading-strings. The island's representative at Washington is not a delegate in Congress, but a resident commissioner to Congress. In this respect the treatment of Porto Rico by the United States is much worse than its treatment by Spain, for Porto-Rican deputies were seated in the Spanish Cortes at Madrid on the same terms with other deputies.

"As colonial rulers we are somewhat untrusting, somewhat grudging of our political benefits. We have, however, compensated the Porto-Ricans by allowing them much better economic advantages than they had from Spain. The island was plundered and bled economically under Spanish rule. We do not plunder or bleed it. The Porto-Rieans have the benefit of their own taxes, and their trade and production have been enormously stimulated under the American connection."

The Porto Rico law is looked upon by the New York Evening Post and other papers as "a fit supplement to that passed last year granting a larger degree of self-government to the Philippines." The New York World would note, however, that the two Governmental schemes differ widely in purpose:

"In the Philippines we . . . gradually widen self-government in proparation for complete home rule. But Porto Rico is to remain part of the United States."

SUFFRAGE DRIVE ON EASTERN FRONT

Y WINNING INDIANA the woman-suffrage workers have opened up a great stretch of territory in the Middle West, reaching from the Mississippi to the Alleghenies, and to the boundaries of such conservative Eastern commonwealths as Pennsylvania and New York. The number of womansuffrage States is increased by this accession to fifteen, easing 135 out of 531 votes in the Electoral College, and, as the Providence Journal notes, with a population of twenty-five millions, one-quarter of the national total. Indiana's action following that of Illinois and Ohio, respectively the third and fourth States in population in rank, seems to the Providence paper highly "significant of the times." Woman suffrage, similarly comments the Nashville Tennessenn, "has made its entry into the East with a rush. Other States will adopt it in short order."

> And active campaigns are befrage constitutional amendment

> The Hindenburgs of the suffrage movement seem to have discovered that the drive on the Eastern front requires different tactics from those which succeed od in the Far West. In Indian ... as in Illinois, Ohio, and Nort.

ing carried on among voters and legislators in half a dozen States to try to insure the verification of such predictions. Suffragists are particularly pleased with the success of their forty-years' effort to persuade the legislature of Maine to submit an equal-sufto the voters.

the States in black still limit the elective franchise to males. Dakota, the legislature acted to give women such an extension of the franchise as would not require an amendment to the Constitution. The advantages and the faults of this method were set forth in our issue of February 24. The Indiana law, which received the Governor's signature on February 28, provides that every woman who is a citizen of the United States, of the age of twenty-one or upward, having the residence qualifications now governing male voters, shall be allowed to vote for Presidential electors, delegates to a constitutional convention, certain specified State and county officials, all town and city officials, school officers, "and for all other elective officers not provided for in the Constitution of Indiana"; women may vote in primary elections, and upon the ratification of a new Constitution, the they may not vote upon constitutional amendments.

Thus "Indiana women get justice," remarks the Indianapolis Times. All who have witnessed the increased interest in public affairs displayed by women during the last fifteen or twenty years will admit that "woman suffrage in Indiana was inevitable," The News declares, continuing:

"In late years every legislature has considered the step, and each time it has been postponed by a bewildered and gradually weakening opposition. Successive failures of the bill have been marked by indications that the opposition felt the power of the suffrage arguments."

The Star, of the same city, a consistent and vigorous supporter of the equal-suffrage movement, utters "a few words of caution and sober responsibility":

"In the first place, both friends and foes of suffrage must be admonished that its effects are easy to overestimate. The most eareful observation of conditions in States already using the votes of women tends to discount both the hopes of its supposed beneficiaries and the dread anticipations of its foes. No millennium has followed it, neither has it wrecked the home nor put chivalry in the diseard.

"In the second place, those timorous souls are wrong that

SHOWING THE SUFFRAGE WEDGE POINTING EASTWARD. Full suffrage States are white; partial woman suffrage by legislative enactment obtains in North Dakota, Illinois, Indiana, and Ohio:

view this reform as a mere revolt of unsexed and strident-voiced agitators to get some petty victory over the 'tyrant man.' Upon any such basis as this, suffrage could never have won."

The law giving women partial suffrage in Ohio, which was briefly discust in our issue of two weeks since, was signed by Governor Cox on February 21. Its opponents, however, so The Suffragist (Washington) notes,

"Are already circulating an initiative petition for forcing a State referendum on the question. A majority of the voters in the State would then decide whether the bill passed by the Assembly shall stand. The bill is framed to go into effect in 1920,"

TO MAKE US SPY-PROOF AND BOMB-PROOF

THE STRIKING STATEMENT that 100,000 spies are at large in this country would incline the average reader to think somebody is "seeing things," remarks the Minneapolis Tribane, if it had not been made in the United States Senate by Senator Overman, of North Carolina, during the discussion of the drastic bill "to define and punish espionage." The bill passed the Senate by a vote of 60 to 10, and, according to Washington dispatches, is designed to make this country spyproof and bomb-proof. The Tribune attaches particular importance to Senator Overman's estimate because he is chairman of the important Judiciary Committee and because he has kept in close touch with the Department of Justice, which drafted the bill, and this Department in turn is presumed to have based its demands on "credible reports from secretservice men." This journal goes on to say that 100,000 spies means one spy for every 1,000 of our total population, and that ratio, if borne out in Minneapolis, would give the city 360 spies, Senator Overman did not go into detail as to the nations these spies are serving, and The Tribune wonders whether they are "mostly secret agents of Germany, or do Japan, Mexico, and the Allied belligerents figure impressively in the personnel?" Until now the only apparent reason for the Allies to have spies here would be to watch for "sinister movements on the part of Teuton 'sleuths,'" but German plotters have been "at work here almost since the war began," a fact established in court trials and in acknowledgments made outside of courts.

The press remind us of the many apparently incendiary fires and explosions in munition-plants that have occurred especially since about the second year of the war. Also, it is recalled that a couple of months ago Mr. Franz Bopp, German Consul-General at San Francisco, and four consular employees were convicted on charges of plotting to destroy munition-plants in the United States and Canada and to blow up military trains, railwaybridges, and steamships carrying supplies to the Entente Allies. A New York World dispatch of the date of February 21 informs us that New Britain, Conn., was then declared under martial law because of a succession of small explosions and the starting of at least twenty fires within two hours and a half, all of which were declared by the authorities to have been plainly of an incendiary origin. Then press reports advise us that the German Embassy at Washington was really a sort of headquarters for all the German missions in Central and South America, and that former Ambassador von Bernstorff left in this country a fund of \$2,000,000 which, it is rumored, is to be devoted to various purposes, one being propaganda in the interests of Germany.

The Washington Erening Star calls attention to the arrest of two men in New York charged with plotting to spy out military secrets in England and smuggle them to Germany at the very moment that the Senate was considering the bill to strengthen the hands of the Government in dealing with espionage. This case does not affect United States interests, we are told, but it illustrates the spy danger vividly. It would seem, from a

comparison of dates, that after the arrest of you lgel, of the German Embassy staff, The Star goes on to say, the scheme was hatched whereby an agent in New York sent spies to England to collect facts about the British military plan. Their discoveries were communicated to Germany either through Holland by tourists, who on Dutch territory met agents from Berlin, or by letters to America, the contents of which were subsequently dispatched to Berlin by means as yet undisclosed. The writing was in all cases invisible on blank pages of what appeared to be ordinary correspondence paper, and this journal points out that it took the American secret service several months to run down the plot and locate the chief agents in America.

Protective measures of the Government may prove in some way onerous, remarks the Philadelphia North American, one of the journals that indorse the Espionage Bill, but they are necessary and will not hurt loyal citizens or "law-abiding aliens." Our peril is real, we are told, as we have learned during "thirty months of ceaseless agitation and intermittent disturbances, ranging from foreign intrigue disguised as pacifism to open violence and terrorism." The North American sums up the bill, which has fourteen chapters dealing with as many subjects, as follows:

"1. Unlawful intrusion upon or approach to any vessel, fort, railroad, camp, navy-yard, or 'other place connected with the national defense or under control of the United States,' for the purpose of obtaining information, or any attempt unlawfully to collect or dispose of it \$10,000 fine or two years' imprisonment.

"Attempted delivery to a foreign Government of such information-twenty years' imprisonment, or, in time of war, life

imprisonment.

"Spreading false information in time of war to interfere with military or naval operations—fine and life imprisonment.

"Harboring of a spy-fine and imprisonment.

"2. False swearing to influence the conduct of a foreign Goverament or to defeat any measure of the Government of the United States in any foreign controversy-\$5,000 fine or five

"3. Impersonation of duly accredited foreign officials—same

penalty.

"4. Fraud in obtaining or using passports-\$2,000 fine or five years.

"a. Fraudulent use or counterfeiting of any Government seal

or commission-\$5,000 fine or ten years.

"6. Conspiracy to injure or destroy property in any foreign country with which the United States is at peace-\$10,000 fine or two years.

"7. Inspiring or taking part in any military or naval enterprise

against such a country-\$3,000 fine or three years.

"8. Attempted escape of interned persons—arrest and confinement. Aiding in such escape-\$1,000 fine or one year. "9. Authorizing the President to order seizure of arms and

munitions of war about to be exported or used in violation of

the neutrality and the laws of the United States.

"10. Empowering the President to arrest vessels attempting to depart on errands of assistance to belligerent vessels in violation of American neutrality. Penalty for convicted offenders against these provisions, \$10,000 fine or five years.

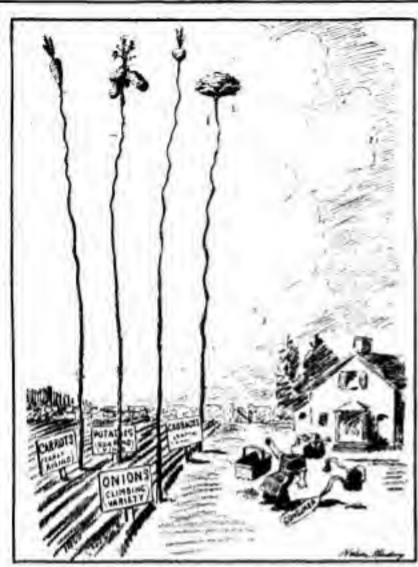

"II. Authorizing the Secretary of the Treasury, under proclamation of the President, to regulate the conduct of all vessels in American ports in case of war or disturbance of international relations, actual or threatened. Penalty for wilful destruction or injury of any vessel, domestic or foreign, in an American port or territorial waters, \$10,000 fine or two years.

"12. Punishing wilful injury or attempted injury to any vessel engaged in foreign commerce by \$10,000 fine or ten years.

"13. Requiring sworn statements, in addition to customary manifests and clearances, by masters of vessels sailing during a war in which the United States is neutral.

"14. Providing for the issuance of search-warrants and the seizure and detention of property thereunder."

Among adverse critics of the bill, we find the New York Erening Post, which says it strikes "a grave blow at freedom of speech and the press." It far outdoes the censorship bill of the General Staff, we are told, for it "deliberately specifies a prisonterm of three years for the crime of unintentionally circu ating

HOW THE CARTOONISTS ACCOUNT FOR HIGH PRICES.

information of value to the enemy." No other statute does The Evening Post recall which thus "penalizes what may be an accident, or due to a misunderstanding, or to a perfectly innocent action," and it asks whether there could be "anything less American and more like what we are apt to characterize as "Prussianism"?" We read then:

"More than that, Section 3 of the bill, as drawn, provides a fine of \$10,000, imprisonment for life, or for any period not less than thirty years, for any one who shall convey any false information calculated to cause . . . disaffection or interference with the operation or success of the military or naval forces. Of course, what is aimed at is treachery; but under this section it might easily be possible to suppress all editorial discussion of campaigns and practically to shut off all public meetings. The authority to judge what is a false report calculated to cause disaffection will presumably have to rely on military testimony. One can not easily imagine what would have occurred had such a statute been in existence during the Civil War days."

A Washington correspondent of this journal informs us that

the only organization actively opposing the "hysteria" of Congress is the American Union Against Militarism, which sent a letter to every member of the House of Representatives, reading in part as follows:

"A statute as sweeping as this would have outlawed the activities of the Anti-Imperialist League during the Spanish War. It could have been used summarily against the newspapers which exposed the 'embalmed beef' scandal. It would make unlawful such criticism as that which has resulted in a change in the British Cabinet. It could be used as a net to gather in all who criticized the management of the war by the military authorities. Anything, in short, which might be construed as causing disaffection in the Army or Navy, or as hampering the military authorities, may be punished by life imprisonment—and by a fine of \$10,000.

"Surely it is in the power of Congress to frame a bill which will afford adequate protection against spying, without denying to innocent citizens the common privilege of democracy."

It is desirable, of course, to enact whatever additional legislation may be considered necessary, observes the Chicago Tribune, to punish spies, conspirators, or other malefactors caught giving aid to an enemy in case we go to war, yet in our circumstances it is even more important not to get wrought up over this unpleasant incident of war. There is a good deal of nonsense about espionage current, according to this journal, and a great deal of foolish anxiety, of stupid injustice, and even of still more stupid violence to innocent people that may be avoided by realizing that public agencies are best able to take care of whatever espionage or other mischief is on foot, and The Tribune thinks that—

"A good many worthy citizens need a cold douche of common sense to restore them to a healthy state of mind. A German bartender overhearing an argument on the war will hear nothing for which he would be given a pension by the Imperial German Government even if he could transmit his information to Berlin. The portly gentlemen at the next table are not necessarily emissaries of a foreign foe because they are consuming Hungarian goulash. The barber who interrogates you upon your opinion of Wilson, or inquires if it is your expert opinion that Mr. Pugh's Disturber VI. could get away with the U-53 is not necessarily waiting to pass your opinion by roundabout means to Admiral von Tirpitz."

FOREIGN - COMMENT

A SUBMARINE-TRAP IN OPERATION.

A trawier opening the great steel net that guards Kirkwall Harbor from submarines and torpesioes, in order to let out a vessel bound for New York. This photograph was made by a woman passenger whose camera escaped the vigilant eye of the British officials.

THE SUBMARINE THAT ALARMS BRITAIN

House of the plight in which the United Kingdom finds herself, owing to the constant destruction of her shipping by the German submarines. Mr. Lloyd George told Parliament that the nation must immediately enter upon a course of rigid economy in food or else face the prospect of actual want before many weeks are over. The Premier cophasized the fact that England had not only to supply ships for her own needs, but also to furnish maritime assistance to both France and Italy, an aid that was becoming increasingly difficult, owing to the success that had attended the efforts of the German submarine commanders. The view of Mr. Lloyd George upon the submarine question may be described as one of distinctly chastened optimism. Speaking in the House of Commons, he said:

"If we take drastic measures we can cope with the submarine menace, but if the nation is not prepared to accept drastic measures for dealing with the menace, disaster is before us.

"The Government is hopeful of finding means of dealing with the submarine, but we should be guilty of folly if we rested tranquilly upon the expectation of realization of that hope. We have to deal ruthlessly and promptly with the tonnage problem by measures which impose great sacrifices upon the country."

Some observers think that Mr. Lloyd George assumed a tone of greater gravity than the circumstances warrant in order to shake what has been described as the "sluggish complacency" of the British people. Indeed, the London Daily Chronicle says it in so many words. Describing the impression made upon Parliament, it remarks:

"Some members think the Prime Minister drew too dark a picture of the existing situation, but there has been so much complacent optimism in this country about the war that a corrective was necessary. Lloyd George is right in refusing to mask the realities, for you do not get rid of them by covering them with a gauze of words and pretenses."

It is an undoubted fact, however, that Germany's new submarine campaign has presented to the Entente a nut that they find unexpectedly hard to crack. It appears that this undersea attack is being waged by a new type of submarine so heavily armored that the three-inch guns with which the mosquito fleet and the merchant ships are armed are no longer effective, and that six-inch guns, which would prove an adequate defense, are too heavy both for the light submarine-chasers and for the

decks of the smaller merchant vessels. In the Paris Revue de Deux Mondes, Rear-Admiral Degouy, of the French Navy, one of the leading naval experts of Europe, tells us about the new German submarines. He writes:

"I shall speak now of the 2,000-ton submarine, which has certainly been put in service, probably at the same time as the commercial submarine Deutschland, whose tonnage is no less. Judging from the characteristics which are attributed to this new craft, it will readily be seen that we have here a deep-sea cruiser most acceptable for operating along the Allies' lines of communication with America.

"Here are these characteristics: Length, 85 meters over all; four Diesel motors of 7,000 horse-power; speed of 22 knots (14 when submerged); ability to cover 6,500 sea-miles on the surface (in other words, twice the distance across the Atlantic); capacity for fresh water and provisions enough to last six or eight weeks; armament consisting of 8 torpedo-tubes for sixteen 55-millimeter torpedoes, 50 automatic mines, 4 medium-sized guns (perhaps of 150 millimeters, perhaps of 120), adapted for firing against aircraft; upper bridge lightly armored; two boats; fifty men in the crew, together with five officers, including two mechanicians."

Against submarines of this type, the Admiral tells us, the nets and other antisubmarine devices now used by the Allies are almost useless. He asks:

"Well, then, once again-what is to be done?

"Something new! We Allies, too, must create new things, we who were such excellent inventors in former days. We must do something new and not be satisfied with developing and bettering old methods.

"I am not aware what the Admiralties of the Allied countries are planning. Will they confine themselves to increasing the number of their light vessels, multiplying their hydroplanes, perfecting bombs, nets, rakes, etc.? Such things, of course, are useful; unfortunately, however, they are inadequate. They were inadequate even in the phase of the war that is drawing to an end—experience has proved that. They will be even more inadequate in the phase that will soon begin against the new German submarines, more efficient for offensive and defensive purposes than the submarines of 1914."

MENACED HOLLAND

A BLOW IN THE FACE" was given by Germany to Holland, says the Amsterdam Telegraaf, when U-boats attacked a flotilla of seven of the finest and newest ships in the Dutch mercantile marine which had sailed from Falmouth for Rotterdam under an agreement with the German

THE CASE OF THE CA

ROLLAND'S POSITION.

-De Amsterdammer

Government by which the Dutch authorities had received "reasonable assurance of safety." Indignation in the Netherlands is deep, and there is an uneasy feeling in the press that this act was "deliberately provocative" on the part of Germany. Just how intense is the mortification of the Dutch people can be seen from the comments made by influential organs in Amsterdam. For example, the Handelsblad writes:

"The unrestricted submarine warfare has been opened with such complete disregard of the rights and interests of the Dutch people that every one must come to the same conclusion, namely, that no nation could be thus treated unless it was regarded as of no importance or as incapable of having its indignation aroused by anything. Certainly Germany would not treat the United States thus. Every one feels that the torpedoing of American vessels under similar circumstances would be absolutely impossible. We even believe that such an act would have been impossible against any country which had shown itself unwilling to approve or excuse this submarine warfare."

The Telegroof, an anti-German paper, remarks:

"This destruction of an entire flotilla of Dutch ships is certainly the greatest humiliation which any neutral nation has had to endure in the course of this war. The Dutch Government once more has overestimated the German sense of justice and honor. We confess ourselves unable to understand how the honor of our nation can be maintained longer by mere protests."

Observers in the camp of the Entente believe that Germany is endeavoring to embroil the Netherlands in the war because the little nation possesses assets of incalculable value to the German Empire. For instance, they comment on the fact that Holland holds the mouths of that great commercial waterway which the Fatherland affectionately terms "the German Rhine." So, too, the mouth of the Scheldt being in Dutch hands effectively deprives the conquerors of Antwerp of the full advantage of Belgium's greatest port. At the present moment, say these Allied commentators, Holland's most valuable asset is her food. The Amsterdam correspondent of the London Daily Chronicle discusses the reflex action of Germany's shortage on Holland. He says:

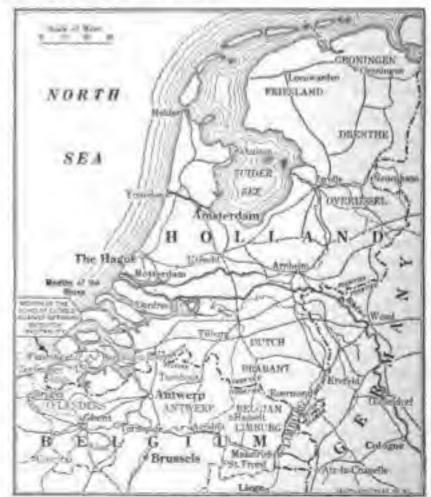

> "The situation, indeed, is, in the deepest sense of the word, desperate. Every item of information reaching Holland on Germany's situation increases anxiety here, for it is being asked how long Germany can continue in her present state, knowing that in Holland there is plenty, and even luxury. Moreover, much of this smoldering and occasional bursting into fame of hunger and desperation is actually taking place at points which can almost be seen from Dutch territory. Indeed, there is growing up here the opinion that Germany is really seeking an occasion to break with Holland in order to take whatever chance there may be of getting food by some sudden descent."

> For months past the Dutch papers have remarked upon the gradual concentration of troops upon the German side of the border, both in Germany proper and in Belgium, and have anxiously inquired what it portended. The London Graphic believes that Holland would be powerless to resist invasion and discusses the possibility in some detail. We learn that—

> "The people of the province of Overipsel are alarmed because forty thousand troops with much artillery have been concentrated near Neuenhaus, in close proximity to their borders. This is a point where the Dutch Army would be incapable of offering any serious resistance. A German inroad here would be an easy task. But what would be the object of such an inroad? Zwolle lies less than thirty miles from the German frontier, and Zwolle is the junction for the two main railways from the south, one from Utrecht and the other from Arnhem:

"The possession of Zwolle by the Germans would cut off and isolate the three northeastern provinces-

Drente, Groningen, and Friesland—from the rest of the country; and it is no secret that, in the military sense, the whole of that region is undefended. But, on the other hand, Groningen and Friesland are two of the most productive provinces of the Netherlands, renowned among all parts of Europe for their cattle and their corn."

HOW GERMANY ENCIRCLES HOLLAND.

GERMANY'S "FORBEARANCE" TO AMERICA

"SUBCONSCIOUSLY PRO - BRITISH" is the attitude attributed to the President by some of the Swedish-American papers, and the Activist attitude of the military and aristocratic circles in Sweden finds an unexpected reflection in the Swedish farmers of the Middle West, who seem to have distinct sympathy with the struggle that Germany

is making against the ring of enemies that surround her. One of the organs that voices the opinions of the Swedish-Americans, the Des Moines I and Posten, considers that Germany has been surprizingly considerate and forbearing with America, a country, says the Posten, which Germany can consider entirely negligible as far as any power of naval or military offensive is concerned. It thus expresses its views on the conflict between Berlin and Washington:

"As a first-class Power, the greatest military Power in the world, and also a land fighting for its economic existence against an enemy ten times as numerous, let us say at once that Germany has shown the United States a surprizing consideration and a forbearing patience which is hard to understand.

"The reason can not be fear
of the American Army or Navy.
The former was not able to do
anything of consequence in Mexico, and what could the latter
do where the combined fleets
of England, France, Italy, and
Russia came to naught? The
American fleet could as little
harm Germany as a fleet of our
ancient Vikings."

The Posten regrets that citizens of German and also Swedish descent should be embarrassed by the insistence of

Washington upon a right which, in the opinion of this Des Moines organ, could be surrendered with little or no loss. It says:

"We have in this country millions of splendid people of German descent. Before the war they were—with the Scandinavians—admittedly the best immigrants coming to America. They were perfectly loyal, hard-working, industrious, and good tempered; they had helped to defend the country; they had helped to build the country; they were citizens of which any country had all reasons to be proud. But since 1914 their position has been very unpleasant; they have been doubted; they have been accused, belied, embarrassed, and insulted. In a state of war they should have been the first to suffer.

"The only possible claim the United States has on Germany is the demand that Americans be allowed to go wherever they please, to travel in the war-zone, without being shot or drowned.

"A submarine can not see whether one or more Americans are aboard an English ammunition—or provision-ship. The vessel is torpedoed, and Americans, like other humans, are drowned. America is the only country which claims for its citizens this right. Sweden, which all through the war has preserved a real neutrality, declared at its beginning that those citizens who went aboard British ammunition-ships did so at their own risk. But America stands ready to go to war over the life of a negro muleteer. But down in Mexico we are not nearly so particular. We know that American lives have for years been in constant danger. But Americans who went down

there, said Washington, did so at their own risk. And they have indeed done so!"

Friction with Germany would have been avoided, thinks the Posten, had the Teutonic and Scandinavian citizens been better represented in the councils of the nation:

"The ruling classes of this country are of British descent, and they look up to England as to their motherland. They pay no attention to what Americans of other nationalities think. Germany is their enemy, because Germany is the enemy of

Copyrighted by Cuderwood & Underwood, New York.

AFTER THE IVERNIA WAS SUNK.

One of the small boats which was swamped by the heavy seas running. Men are seen in the water swimming about. They truly are in the face of death, if ever men were. The Jerraig a Cunard liner of 14,000 tons, a transport in the British service, was torpedoed by a submarine in the Mediterranean while carrying a number of troops. One hundred and fifty-three men, including thirty-three members of the crew, perished. The last man to leave the ship was Captain Turner, who commanded the ill-fated Lusitania when she was also torpedoed. The vessel was sunk on January 1. A trawier effected the rescue of those who were saved. On this occasion no American lives were lost.

England. If people of other nationalities should dare to object, they are silenced with the accusation that they are not good Americans.

"The President, whose ancestors were Englishmen, has since the beginning of the war done all he could to help England. . . . Several members of the Cabinet are Americanized British. Mr. Lansing is a known German hater. Germans and Scandinavians have nothing whatever to say in regard to the foreign policy of this country, and that accounts for its trend."

DIPLOMATIC RUPTURES—Discussing the break between Washington and Berlin, the English papers say that such a step is usually a prelude to war, but they are careful to note the exceptions to this rule. The Westminster Gazette remarks:

"Students of history have been busy recalling occasions when a break in diplomatic relations did not result in war. One of the most notable examples of recent years took place in 1848, when Spain dismissed our Minister at Madrid for alleged improper interference in the internal politics of the Peninsula. We at once informed the Spanish Minister in London that if he remained in London it could not be as representative of the Queen of Spain, and he accordingly went home. For the following two years, all but two months, diplomatic relations between Spain and ourselves were in suspense; but no war came of it."

NEW MOVES ON THE WESTERN FRONT

THE FALL OF KUT-EL-AMARA, on February 24, turned the eyes of the world away from the Western front, but this shift of vision was only momentary, for the voluntary retreat of the German forces on the Ancre, which began on February 25, has once more focused attention on the expected scene of the titanic struggle of the war. This retreat, the greatest since the Marne, has puzzled the military critics, for some regard it as a clever move on the part of the German Gen-

eral Staff to upset eareful preparations made
by the British for an offensive which they were
on the point of launching. Others again take
the view that this move
betokens a Teutonic resort to "open warfare."
This seems to be the
opinion of the man on
the spot, for a dispatch
from the British Headquarters in France runs:

"The German retirement, coming so closely on the heels of the beginning of unrestricted submarine war, forms one of the most interesting phases in the progress of the great war. The Germans gave the first intimation of the approach of their retirement when they evacuated Grandcourt.

"This was evidence of new German tactics, for throughout all the bitter fighting of 1916 they never yielded an inch of ground until they were driven out at the point of the bayonet.

The backward movement begun at Grandcourt now becomes the greatest retreat of this front since the battle of the Marne. These events have sent a thrill through the entire British Army, a thrill which seems to forecast the end of the 'stationary' warfare."

The military critic of the London Observer believes that the day of German offensives on the Western line are gone and that Field-Marshal von Hindenburg has ordered that defensive tactics rule on the entire front. The possibility of a rush into France through northern Switzerland is discust and dismissed, and the writer proceeds:

"I hold that an enemy invasion of Swiss territory may safely be ruled out; and that whatever offensive or offensives he may be preparing to launch between the Channel and the Jura ridge will be short-lived, and designed to anticipate and disorganize our own. In brief, they will be manifestations rather of a very active defensive than of a new offensive strategy Locally, through the aid of some mechanical or chemical novelty, they may achieve slight, but passing, territorial gains. But, in view of the continuous density of the Allied front, in both men and guns, they should fail utterly to upset our own arrangements, whether aimed at Nivelle's potential jumping-off boards, such as the sectors nearest to the Rhine, in Upper Alsace and Lorraine, or at the French lines nearest to Paris, including the Franco-British liaison on the Somme-always a favorite point of thrust with Hindenburg! The comparative strengths of the opponents being what they are, it was almost a platitude for Mr. Lloyd George to exclaim, on his return from Rome, that 'defeat was impossible!' Defeat, in the field, has long been impossible.

"The question before us now is how to insure that the enemy, in his turn, will not be able to avoid defeat in the field, that strictly military defeat which it is essential that he should suffer before he is allowed to lay down his arms under the stress of bankruptcy or famine."

The idea that Germany will adopt the defensive in anticipation of violent attacks by the Anglo-French forces is strengthened by the views exprest in the German press. For instance, the Frankfurter Zeitung says:

"Heavy will be the burden of the fight when the storm-clouds

which are gathering on our Western front break. The English have taken over only about seven and one-half miles of the French front, which now begins at Mont St. Quentin, one and one-quarter miles north of Péronne. That is an indication that on their front the English will not adopt a purely defensive attitude. The feeling of the leading English circles is now like that of a gambler who puts everything on one card. The English by their utter rejection of the German peace-offer have put the prestige of their World-Empire into the front line of battle. To go back is at the present time much more difficult than acceptance of the peace-offer would have been.

"The sober conviction that all signs indicate the desire of the Entente to end the war this year with an incomparably mighty effort will call forth from our people the utmost

our people the utmost effort of will. There are no boastful phrases and there is no underestimation of the enemy, but there is a feeling composed of clear consciousness of the seriousness of the situation and an equally clear consciousness of our own strength."

The retreat on the Ancre is, perhaps, one of the results of what Major Moraht described in the Berliner Tageblatt as "necessary regrouping." It does, however, seem certain that it is not due to any desire to avoid a conflict in that region, for all Germany is certain that the German troops can not be vanquished by any combination the Allies can bring against them. The Frankfurter Zeitung, continuing its discussion, remarks:

"Even if their mutual sacrifices were incessant, the Allies could not rid themselves of the strategic disadvantage that British and French armies can operate with their main forces only in the Western theater of war. For the battles on the Eastern front the millions of the Western Powers do not count. They can hold German armies in France; by dint of unexampled losses they can regain small strips of territory, . . . but they are shut out entirely from the decisive battles in the East.

"In other words, the war thus far has established one incontrovertible fact: it is impossible to defeat us on land if we are well led and employ the strength of our four united armies carefully—and we are doing both of these things now! . . . We do not doubt that it will be possible for England and France to begin a new gigantic battle in the West. We do not doubt that many of our enemies still believe that this can enforce victory and peace for the Entente on its terms, but we are permeated by the firm conviction that the real factors which have turned the war in our favor are anchored so firmly in the bloody soil of the battle-fields that no armies in the world can tear them up."

CATCHING A TORPEDO.

With the German ruthless submarine war continuing in its destructive work, the guarding of the British coast by effective means has aroused renewed interest. Heavy steel nets have been laid at the entrance of all harbors, and some even extend farther out. The photograph graphically shows how the nets save ships: a German tempedo stopped by the net. Its propeller caught in the meshwork, and one of the British motor patrol-boats or submarino-chasers ready to remove the torpedo.

SCIENCE - AND - INVENTION

PUTTING THE CRIPPLE ON THE PAY-ROLL

THE PROBLEM of putting thousands of crippled soldiers to work, after the war is over, has already been attacked in Europe. In a paper presented in January before the Economic Psychology Association by Drs. Frank and Lillian Gilbreth, the authors point out that there are two

ways of solving it. In one, employed abroad by Dr. Jules Amar, which they term the "European method," the cripple is adapted to the machine or device that he is to use; in the other, the "American method," the cripple is regarded as the fixt element, and the device or method is adapted to the individual who is to use it. It is but natural, say the authors, that the first method should be used abroad, where many of the labor-saving devices in use come from America, or some other foreign country, and can not easily be adapted. It is as natural that our methods should be in use here, where the devices are more easily changed to suit individual workers by the original makers of the machines. As

an example of the two methods, the authors take the case of a cripple to be trained to be a typist. Our quotations are from a copy of their paper furnished us by the Drs. Gilbreth. They say:

"The Amar method is demonstrated plainly by the illustration herein included, furnished us through the courtesy of Professor Amar himself. The other method we will describe in some detail, hoping to arouse still further cooperation in this work in this country. Professor Amar's illustration shows a one-armed man operating the typewriter. We shall illustrate the same subject and device as attacked by the other method, but considering the cripple as the fixt element. In considering any type of activity to which it is proposed to introduce the cripple, we first analyze this activity from the motion-study stand-

point, in order to find exactly what motions are required to perform the activity, and in what way these motions may be available, or remaining, capable members of the cripple's working anatomy, or eliminated by altering the device or machine itself.

"Through a careful examination of the motions of many of the world's most expert typists, we found many interesting facts not generally known; for example, that the time required by the usual commercial typist to take out a finished sheet of paper and insert another, in a position exactly level, in the typewriter was about ten seconds. The time required to do this same work by Miss Hortense Stellnitz, the recent winner of the International Amateur Championship, is less than three seconds, while Miss Anna Gold, who won the National Amateur Championship, requires still less time, . . .

"At this point we found, however, a device that handled the paper in such a manner that all motions of inserting and taking out were eliminated from the ordinary work of the typist,' . . . By means of this device, the one-armed soldier or industrial cripple can remove his paper and be ready with the new sheet inserted in place in two seconds.

"Another example of the use of an existing device to facilitate the work of typing for a cripple is that of the double bank of

Using the remarkable artificial hand, invented by Dr. Amar, to run an ordinary hypewriter.

THE MACHINE ADAPTED TO THE CRIPPLE.

This machine may be operated by a legless, one-armed, one-eyed, deaf, stiff-backed cripple. It has a single keyboard. The shift key may be operated by finger, foot, or knee, or may be locked down to write only capitals. Paper enough for a month is fed in by the rolls fastened above. This typewriter is also an adding and subtracting machine. At the right is a fantom picture made by double exposure, showing the total range of motion necessary to operate the machine, the lines on the background being four inches apart.

keys such as exist in the Smith-Premier typewriter, and the use of a machine having all capitals and a single bank of keys, as with the Remington or Monarch. By this means the motions of the shift key are entirely dispensed with and a legless one-handed typist is enabled to equal the output of many of the commercial typists who are using but two of their ten fingers to-day; and a cripple with but a single finger can earn a living. We have also found dictating machines of use in decreasing the number of variables against which the typist works. When provided with a dictating machine, a typewriter requiring no shift-key action and with the rolls of paper properly attached, a one-handed willing worker can compete successfully with the average stenographer typist with the old equipment, and perhaps, in some cases, be able to earn more money than before being crippled."

The writers report that they have so far found manufacturers of devices more than willing to adapt their work to the requirements of the maimed and crippled. They hope to arouse still putting the cripple again on the pay-roll, with a consequent economic gain to the world.

"This work will undoubtedly be done. Individual histories and improvements will come from each man and woman interesting himself or herself, to observe, record, and pass on data describing actual histories of cases where cripples have become successful. It is this active, interested, practical cooperation that is needed—and is needed now."

BRAIN-TESTS OF ANIMALS

Pigs are still brighter, and the large ages show decided signs of thought. These findings have been ascertained by Robert M. Yerkes, of the psychological laboratory of Harvard University, who put the animals through certain brain-tests. The results were related by him to the National Academy of

Sciences, at Washington, on October 20 last, and are printed in its Proceedings (Baltimore, November). The competitive examinations were conducted on what is known as the "puzzle-box" plan, devised by Dr. E. L. Thorndike and improved by Mr. Yerkes for his present purpose. A series of practical problems is put before the animal and the quick and complete solution of them depends upon identional processes. Writes Mr. Yerkes:

"The apparatus consists of twelve, or, in some forms, nine identical reactionmechanisms, of which any number may be used for a given experimental observation. In the type of apparatus originally used for human subjects, these mechanisms are simple keys; in that which has been used for lower animals, they are boxes arranged side by side, each with an entrance-door at one end and an exit-door at the other, which may be raised or lowered at need by the experimenter through the use of a system of weighted cords. Under the exit-door of each box is a receptacle in which some form of reward for correct reaction may be concealed until the door of the appropriate box is raised by the experimenter.

"It is the task of the subject to select

from any group of these boxes whose entrance-doors are raised that one in which the reward (food, for example) is to be presented. The experimenter in advance defines the correct box for any group of boxes which may be used as that which bears a certain definite spatial or numerical relation to the other members of its group. Definitions which have actually been employed (problems presented) are the following: (1) the first box at the left end of the group (as faced by the subject); (2) the second box from the right end of the group; (3) alternately, the box at the left end and the box at the right end of the group; (4) the middle box of the group.

"The boxes are presented in varying groups in accordance with a prearranged plan. The subject is punished by confinement in the box selected every time it makes an incorrect choice and is then allowed to choose again, and so on until it finally selects that box which is by definition the correct one. It is then rewarded with food and permitted to pass through the box and return to the starting-point, where it awaits opportunity to respond to a new group."

All the animal candidates succeeded in solving Problem 1—
the crows in 50 to 100 trials, rats in 170 to 350, pigs in 50 or
less, and monkeys and apes in 70 to 290. The crows and rats
failed with all the other problems; the pigs solved the two next,
but failed with the fourth; the monkeys succeeded with No. 2,
but not the large ape. This looks, at first sight, as if the pigs
had worthily maintained the tradition of the "learned pig"
who played cards at the old-time fairs; and as if our nearer

THIS LITTLE PIG SHOWED SENSE

By learning after some fifty trials in which box his food would be concealed.

further cooperation in the makers and users of devices, that they may "think in terms of cripples" as well as of the usual types of users, during the inventive, manufacturing, and using periods. We read, in conclusion:

"Given your individual cripple, study his motion possibilities carefully, then use or adapt every device available or procurable. When you have done this, still more can be done by fitting your cripple to your best existing device. Those who have read the record of the marvelous work being done abroad, and of the increased number of minutes of happiness that are resulting among these cripples who are enabled to become interested, productive members of the community through this work, can appreciate the need of cooperating, here in this country, and of thus reducing the amount of work that must be done there to a minimum, for while we hope the wars will cease, the knowledge will be useful for industrial workers forever.

"While waiting for the slow progress of inventing methods and devices to be modified and adapted to the need of cripples, it is hoped that some society will cause to be collected as many as possible of the histories of cases where cripples have become able to cope successfully with their handicaps. Such data should be compiled, properly classified, cross-indexed, and incorporated in a series of books, copies of which should be put in every large library in the world. The book would eventually pay for its cost of compilation and distribution. Such a series of books would not only cheer and encourage many a discouraged cripple, but would also be a contributing cause toward actually

AFTER THINKING IT OVER, THIS APE DECIDED THAT BY STACKING THE BOXES HE COULD GET THE SUSPENDED FOOD.

relatives, the anthropoids, were backward in intelligence. The reasons that induce Mr. Yerkes to conclude that the orangutan, or large ape, showed superior mental powers are these;

"The orang-utan (Julius) reacted uniquely. . . . At the very outset he developed a definite habit of response which, as it happened, was inadequate for the solution of the problem, but yielded constantly 60 per cent. of correct first choices. The habit or reactive tendency was that of choosing each time the box nearest to the starting-point. Julius continued to use this method without variation for eight successive days. Then a break occurred, but after a few days he settled back into the old rut. At the end of 230 trials, it was decided to try to destroy the ape's unprofitable habit. This attempt was made by using as correct boxes only those to the left of the middle box of the series. The nearest box, in such case, was never the correct box. Consequently, this modification of method greatly increased, as the curve of errors shows, the number of mistakes.

"For a few days after this change was made, no improvement in reaction appeared. On May 10, in a series of ten trials, seven were incorrect, but the following day and thereafter only correct choices appeared. Thus, suddenly and without warn-

ing, the ape solved his relational problem.

"Is this the result of ideation? If not, what happened between the poor performance on May 10 and the perfect series on May 11? Because of varied results obtained in other experiments with this ape, I suspect that ideational processes developed."

Mr. Yerkes's high opinions of the ape's mental ability were increased by additional tests, including the stacking of boxes to reach a suspended banana, the use of a pole to obtain food, and that of a stick to pull food into the cage. Here the ape succeeded, tho in the box-stacking problem some instruction was necessary. The monkeys failed in every case. Says Mr. Yerkes:

"The general conclusions which may be deduced from this limited experimental study of two monkeys and an orang-utan are that the ape exhibits various forms of ideational behavior, whereas the reactive tendencies of monkeys are inferior in type and involve less adequate adaptation to factors remote in space or time. I suspect, from data now available, that both monkeys and apes experience ideas, and I believe that it will shortly be possible to offer convincing evidence of the functioning of representative processes in their behavior."

DOCTORING THE STREETS

NSTEAD OF HAVING TO FLUSH OUT our respiratory passages with antiseptics to cure grip, it would be better, thinks an editorial writer in Engineering and Contracting (Chicago, February 7) to do the work a little earlier and to perform it on the streets instead of on our own mucous membranes. The object is to kill germs, and it is rather better to kill them before than after they obtain a lodgment in the human organism. The editor advises engineers to adopt all available methods of propaganda against the "dust nuisance," promising them the same measure of success that they have already obtained in eliminating water-borne diseases, such as typhoid, by furnishing towns with a rational water-supply. No same city would think of going back to the old era of wells and cesspools, in more or less free connection. Perhaps we shall one day cure also our present dusty streets. Says the writer:

"Dwellers in American cities owe to civil engineers a debt that they never can repay—a debt for a service that is rarely thought of now that it has been rendered. We refer to the practical elimination of typhoid fever in all cities that have installed filtration and water-treatment plants. Not only were these plants designed by engineers, but engineers, personally and through engineering journals, were the educators who taught the public that it could be protected against typhoid.

"The editor recalls some of his own educational work twentyfive years ago when he moved to a small city where a typhoid
epidemic was in progress. He found that, aside from physicians, no one in the city seemed to know the cause of typhoid
and the steps to be taken to prevent it. The doctors were
strangely silent, so the epidemic had spread and was still spreading, for nearly every family used water from shallow wells.
A new water-works plant had just been built, and its source
of supply, a lake, was free from possibility of contamination.
The owner of the water-works did not know the cause of typhoid,
but he was quick to spread the knowledge when the writer told
him the cause. The epidemic was brought under control as
rapidly as people ceased using well water and took their supply
from the lake.

"Civil engineers all over the country were similarly instrumental in spreading the knowledge that pure water is readily

Digitized by Google

obtainable and that when it is obtained typhoid decreases enormously. It is well for city engineers to remember this bit of sanitary history, and to adopt every means of assisting with propaganda against the 'dust nuisance.' Read any metropolitan paper on Sunday and note the tabulated causes of deaths during the preceding week. Diseases of the respiratory organs lead all the rest. To a city engineer the significance of this fact should be apparent. 'Grip,' 'colds' in general, pneumonia, tuberculosis, and all the respiratory diseases have their origin in germs. These germs, for the most part, come from expectorated matter that falls upon streets, there to dry and be blown about with the dust that every gust of wind or automobile sends upon its deadly journey."

The preventives, we are assured, are as evident and as easy of application as were those that have almost eliminated typhoid. First, people should be taught the danger of spitting except into a handkerchief or other place designed for the purpose. Secondly, the streets should be washed frequently. To quote again;

"To apply water effectively in cleaning pavements, it is essential that the surface be smooth and well crowned. This condition is not perfectly fulfilled in 10 per cent. of the streets in America, at a safe guess, and it is not even approximately fulfilled in 30 per cent, of the streets. In brief, more than two-thirds of the streets in Americancities need resurfacing if a marked reduction in respiratory diseases is to be effected. This does not mean, of course, that every city is in need of any such overhauling, but it does mean that the average city needs it, and it needs it hadly.

"It seems to us that it is the duty of all civil engineers, and of city engineers in particular, to lose no opportunity to spread the gospel of clean streets, and therefore of better pavements. It is peculiarly their duty to lead in political movements that will result in changes of city ordinances respecting assessments for street improvements. The antiquated abutting property

method of assessment is sufficient in itself to block progress, and there are many other legal obstacles of like nature. But the greatest obstacle of all is public ignorance of the cause and prevention of respiratory diseases."

SAVING DAYLIGHT AND ELECTRICITY

HE SO-CALLED "SAVING" OF DAYLIGHT, to be effected by setting clocks forward at an appropriate time of year, seems to be gaining in favor in this country, altho most scientific men still agree in condemning it. It has seemed to work well in Europe, and a bill to introduce it here was before Congress. As the aim of the plan is to throw all the activities of the day into the daylight period, instead of prolonging them to an hour when artificial light is necessary, it might be supposed that the electric-light and gas companies would be interested in the consequent reduction of their receipts. In a recent electric-light convention, this aspect of the matter was thoroughly discust, and it is the subject of an editorial in The Electrical World (New York, February 10), from which we make the following excerpts:

"Looking at the proposition in perfectly cold blood, its effect on the lighting industry does not seem likely to be great, except perhaps in some strictly local manifestations. If the plan should be put through to take effect, for example, from May 1 to October 1, it is dealing with a part of the year in which the lighting load of central stations is relatively small, and of this load only a portion is likely to be affected. The results would be chiefly manifest in a diminution of the residence lighting, itself rarely in a considerable percentage of the output, and even here the load would probably be cut by only a very modest amount, the loss of which ought to be easily recouped by additions to the appliance and miscellaneous service."

A striking feature of the discussion, the writer says, was that no one questioned the desirability of the movement, but only the particular way in which it should be applied. Some enthusiasts were anxious to have the change carried throughout the year. Of this The Electrical World goes on to say;

"Obviously, a very little experience with going to work while the street lights were still burning of necessity would affect an automatic cure of this perfervid desire for early rising. Our country extends over so wide an area north and south that any change of clocks must be made rather cautiously to avoid overdoing it along the northern border. The soundest argument advanced was the extra time given for recreation by the artificially lengthened day, which probably accounts for the active cooperation on behalf of some of the labor interests. Another argument advanced based on the probable lessening of eye-strain by the change seems quite unwarranted by the facts, since within the months in which daylight saving could be carried out without losing as much at one end of the day as one could gain at the other, the amount of work done by artificial light is very small, and the only period within which the use of the eyes would be greatly reduced either in business or pleasure would be after the clocks were put back to their normal place.

"It will be difficult in a country governed as is our own to get a consensus of opinion to enforce the change. After the present time-belt system was formally adopted, largely by the influence of the railroads, it took some years to make the change of the clocks anything like universal, and indeed some places even now rejoice themselves in two or three kinds of time after the lapse of more than thirty years. Of course, legislation for the change in all matters with which the United States Government has to do, including interstate railways, would practically push the system into use if backed up, as seems to be the ease, by local enthusiasm. Yet it might be a long time before it became universal. It must be borne in mind that the conditions in this country are quite different from those in the European countries which initiated the change, and that conclusions drawn from its effects noted during the last summer are disturbed by the entrance of many factors which have nothing to do with the case. That the clocks can be set forward and backward without any particular difficulty as regards public convenience seems, however, to be well demonstrated."

THE LAND OF MAKESHIFTS

THE OLD RULE, "Accept no substitutes," has been turned topsyturvy in Germany by the fortunes of war. In its place the German of to-day, be he manufacturer or consumer, cries, "My kingdom for a substitute." Without her extraordinary ability to find "something just as good" when a standard product fails—whether foodstuffs, metal, or textile—Germany would long ago have succumbed to industrial starvation. This is emphasized by the author of an article in The Scientific American (New York, February 17), in which Germany is given the title that stands at the head of this column. The first field, the writer tells us, in which this kind of ingenuity was called into play in Germany was that of the metal industries. There the problem, the serious, was rendered easier by the inexhaustible coal and iron deposits both in her own territory and in the occupied regions of France. To quote his words in substance:

"Wherever it was possible to make steel do the work of some other material, wherever it seemed that experiment and research might develop a modified steel to meet the requirements of some special situation, there was the assurance that the steel was to be had, and for an indefinite period.

"And it has turned out that the number of rôles which steel can be made to fill is surprizingly large. It is plain enough that it can be used in place of other metals wherever neither electrical conductivity nor some special physical property not to be given to steel is demanded. A far less obvious fact is that it can be substituted for rubber wherever the latter is ordinarily employed for the sake of its elasticity alone, without regard to texture or compressibility. To mention one instance out of many, an automobile tire of steel wire is in active competition with other substitutes for the rubber tire. And in addition there are many instances where economy may be effected by the substitution of steel for hard woods, ivory, composition substances containing rubber or other unobtainable materials, and various other components.

"Another metal which is doing very well in new uses is zinc.

Of this, Germany has an ample supply; and her engineers have found that when steel is not a satisfactory substitute for copper,

brass, bronze, and tin-the metals which Germany produces not at all or in insufficient quantities-zinc is frequently acceptable."

In addition to actual substitution, the Germans, with their genius for chemical research, may have worked out new ways

of producing certain substances. So far as known, they have yet been unable to make india-rubber synthetically, but it appears that in the reduction of aluminum they have put the dream of the metallurgist upon a working basis. To quote further:

"Aluminum is one of the very commonest of elements; but it never occurs in the free state. For a hundred years after its first discovery it defied all efforts to isolate it. For eighty years more it baffled all attempts at reduction upon a commercial scale. It was not until the dawn of the twentieth century that the development of electrolytic methods made this possible—and even then, only for the simple oxid. The compound oxid of aluminum and silicon, perhaps better designated as a desilicate, which forms the major constituent of all the common clays, and consequently presents, with its 20 per cent, aluminum content, a potential source of the metal of far greater value than the oxid, has always resisted this treatment. The recent news from Germany that means had been found to prepare aluminum from ordinary clay can mean but one thing. Under the sharp lash of necessity imposed by the cutting off of their supplies of bauxite (the conventional aluminum ore) from France, the Germans have solved the problem, and are now in possession of a source for an unlimited amount of aluminum, a substitute metal of extreme value.

"In passing to the textile industries, erippled by the cutting off of their customary supplies of cotton and wool, we find that the procedure by means of which substitutes are evolved is rather different from that in the metal trades. It is here not so much a matter of adopting existing materials to new uses as of finding new materials. The Germans have brought out a great variety of modified paper pulps which can be worked into coarse thread and cloth for the manufacture of sacks and bags, aprons, and other rough working garments, rope, string, etc. The lowly nettle is the source of a very satisfactory 'cotton-batting,' as well as of thread and yarn; and every variety of weed, and especially of the larger water-reeds, is being subjected to a severe catechism as to the justification for its existence.

"Of the food situation in Germany we refrain from speaking here. Reports from different sources show wide divergence. Substitutes must figure upon the German menu; but what they are, and how extensive is their use, are questions which, perhaps, even the average German is unable to answer to-day. We know that potato-flour has been used very generally in place of the regular grains. We are led to suppose that conditions in the potato districts may, before long, force a falling back upon barley as an even less satisfactory meal. But to what extent the Germans have been able to evolve, from the materials at hand, effective substitutes for tea, coffee, sugar, chocolate, the thousand and one items which appear in the normal diet and which are not to be had in beleaguered Germany, we do not know and can not know until after the war.

"The tale might go on almost without end. Thousands of chemists and machinists are experimenting with substitutes for the ordinary lubricating oils and greases. As many motorists are trying out every manner of eccentric distillate in the effort to hit upon a successful substitute for gasoline. Synthetic saltpeter is being produced for military and agricultural purposes on such a scale that Chile has probably lost one of her best customers for good. The chemists have found or are still seeking acceptable substitutes for the \$300,000,000 worth of mineral oils (including the petroleum mentioned above), which Germany imported in 1913.

"It goes without saying that the German people are tremen-

dously alive to the significance of this whole substitute tendency. So great is the public interest that an exhibition of substitute materials has been opened at the Zoological Gardens in Berlin. The exhibition is to remain open during the war, and is being continually enlarged. All visitors are required to sign a

declaration that they will divulge nothing relating to the goods exhibited, using the knowledge gained only for the benefit of their own businesses."

VANISHING WILD CREATURES—More than twenty-five species of American birds and animals have become extinct within the memory of persons now alive, according to Louis Agassiz Fuertes, speaking before a Farmers' Week audience at Cornell University. Says a press bulletin of the New York State College of Agriculture (Ithaca, February 16):

"Mr. Fuertes, who is widely known as a naturalist and as a painter of birds and mammals, showed the extent to which the extermination of wild life has gone, mainly through the wantonness of the American people. Further, he pointed a warning finger toward these species which seem likely to be the next to go, saying that the animals which live in the open are sure to pass out first, while those of the forests have a better chance to survive. Among those he named as having been utterly destroyed during the past seventy-five years are the passenger-pigeon, the last specimen of which recently died in the Cincinnati Zoological Museum; the great auk, the Labrador duck, the Carolina parakeet, the Eskimo curlew, a number of the macaws of the West Indies. Men now alive remember when the passengerpigeons literally darkened the skies in their annual migrations up and down the Eastern States. The American buffalo, or bison, he regards as extinct in so far as its wild life is concerned; and he counts the prong-horned antelope as one of those plains inhabitants which is sure to go in the near future. The extinction of the wood duck, he says, is seriously threatened. This is a tree-nesting species, and reputed to be the most beautiful of the many American species of wild duck. The woodcock also is in danger, with many other shore birds that once were plentiful, even the well-known killdeer ployer, or killdee, being on the list of doubtful survivors. To save the remnants of our wild life, Mr. Fuertes advocates wide-spread educational measures, the full support of the Federal migratory bird law, the establishment of game and bird refuges, and a whole-hearted public opinion to back up the protective measures now upon the statute-books."

LETTERS - AND - ART

KING ALFONSO'S ARTISTIC COURTESY

TEW YORK'S REAL ART-SENSATIONS have been mainly furnished by the Hispanic Museum. For it is surely a sensational thing to take the town by storm more than once and send people flocking in crowds to a distant point in the upper part of the city to look at pictures. They

copies from Teniers and other Dutch and Flemish painters, representing typical weaves of the Spanish royal manufactories, from their establishment by King Philip V. down to later days. Of course, the main popular delight is derived from the Procaceini cartoons of *Don Quixote*, woven by Don Jacob Vandergoten's sons, in blues, browns, vermilions, with almost the detail

of paintings.

"One, depicting 'the adventure with the Biscayan' (Part I, Chap. IX) gives an exceedingly clear representation of the rueful knight, 'spare-bodied, of meager visage, making him rather of the Moorish type of Spaniard. He has said to the lady in the coach: 'Your beauteous ladyship may now dispose of your person as pleaseth you best, for the pride of your ravishers lies humbled in the dust, overthrown by my invincible arm.' Their squire is prone and bleeding and they are beseeching the mistaken knight to spare the life of their sole protector.

shows the "Another knight carried, wounded, on Sancho's ass after the adventure with the Yanguerians (Part I, Chap. V), in which he sought to chastise twenty graziers and drovers because they had belabored Rocinante, his mount, for paying his respects to the mares, who received him with their heels and teeth." Sancho has lifted the battered knight upon Dopple, the ass, tied Rocinante to its tail, and led them, now slower, now faster, toward the place where the high road might lie. In this the featured figure is Sancho Panza.

"Sancho, 'being tossed in a blanket' (Part I, Chap. XVII), makes a sprightly tapestry. In the inn which he had mistaken for an enchanted castle, refusing on that account to pay his score,

'as poor Sancho's ill luck would have it, there were cloth-makers and needle-makers, all merry, good-humored, frolicsome fellows.' These are pictured out in the yard, with a blanket from the landlord's bed, tossing him aloft and diverting themselves with him 'as with a dog at Shrovetide'—his master futilely raging beyond the wall, and the landlord's daughter watching with pity from the window till it is over, and Sancho goes forth 'satisfied that he had paid nothing, the at the expense of his usual pledge, namely, his back."

Besides the tapestries are Goya's cartoons for others, designed for the bedroom of the Princess of Asturias, woven in the 1700's, and for other bedrooms in the Palace of El Pardo. They include: "Tossing the Nincompoop in a Blanket," "Blind Man's Buff," "The Pitcher Maids," "The Promenade," "The Hamseller," "The Pienic," etc., cheerful and picturesque street scenes of

Copyrighted, 1917, by the Himanic Sciency of Assertion.

A TAPESTRY DESIGNED BY THE SPANISH PAINTER, GOYA.

Woven in 1775 under the direction of Vandergoten for the palace of El Pardo.

went a few years ago to look at eanvases by Sorolla; lately they have been going to look at tapestries loaned by the King of Spain. The crowds were not only New-Yorkers, perhaps not mainly so, for it is not local pride which boasts but the Boston Transcript that points to the elements in the procession coming from Boston, Providence, New Orleans, San Diego, San Francisco. The King's courtesy, we are told, "is in recognition of the Hispanic Society's interest in advancing knowledge of the Spanish beginnings of this country." Many of the tapestries were woven before the American Revolution, and they "remain gay in color, even sparkling, altho the fabric shows signs of the tooth of time." Summarizing:

"The twenty-four tapestries include ten pictures by Goya, six scenes from Procaccini's 'History of Don Quixote,' and eight eighteenth-century Spain. "The novelty of these old tapestries, as compared with those of the French and Flemings," adds the writer, "is therefore in their vivacity of subject and glowing dyes—as bright as the made yesterday."

SHAW AT ARMAGEDDON

F REPORTS BE TRUE of the prodigious personal unpopularity achieved by Bernard Shaw since the war began, some may wonder how he comes to trust himself in the warzone. But there he actually has been, or else Mr. H. M. Tomlinson, of the London Daily News, saw and talked to a spook. Courage of more than one sort it must have taken, for the

fighting men are not wholly bereft of literature, and surely had been told that Mr. Shaw's neutrality had been called pro-German. Physical courage he also showed when he refused to wear the soldier's helmet in a region where German shells were likely to break in plentiful numbers, saying: "If they do me in, then there is no gratitude in this world." The incongruity of Shaw in the warzone was startling even to a hardened correspondent who recovered from his surprize to congratulate himself that he had caught the secop:

"When, a day or two since, I saw a tall and alert figure in khaki, with beard and mustache terribly reminiscent, overlooking with disfavor what affairs of war happened to be about him at the moment (to be precise, his army chauffeur was kneeling in the snow trying to persuade a frozen radiator), I wondered whether the war was beginning to affect my mind. You never

"For a moment I mused on a memory of the past. I

saw the apparition of a mocker whose manner of proving from the platform above that we were deficients used not to be altogether disheartening. When I came to, that figure was still contemplating the back of an A.S.C. man, and still seemed, in the logical idiocy of a dream which persisted, to be G. B. Shaw, It even admitted to me it was, in a perfectly natural way. Such things happen in war and dreams. Nobody ever believes you, but they are true,

"I offered another and a better car; and through just such an accident it comes about that I am the chronicler of a historic episode in the war. I was not at Mons; but I was present when Shaw looked first on Armageddon.

The war-correspondent avows he had grown used to the sound of "Jack Johnsons," but "the naked soul of Tomlinson" found this was no preparation for replying to a "pleasant voice," asking: "Tell me, what proportion of the war-correspondents are not such fools as they pretend to be?" Tomlinson admits he was "caught right outside his dugout." He could only murmur a faint hope that "some day most of us might be able to justify ourselves before humanity." Whereupon, one gets-Bernard Shaw's idea of the date of this final settlement:

"'I hope humanity won't be too hard on you. At least I

am glad to find it believed that the problem of modern war at last may be brought before the right and only tribunal."

"When do you think that will be?"

"My own view is that it may not be for thirty years,' said the still unbelievable portent, arranging its beard with a perfect disregard for mere time, even amid the urgent anxieties of war. You see, war creates its own resources. The resources grow less on both sides, and each combatant improvises with what he can get. If these are pretty well balanced you can foresee the result if you have the courage to look at it. Each side must contime to strive for victory to prevent the other side getting it."

'I felt for my gas-helmet, but as I was getting it out the car passed through a harrier leading to a foreboding town. I feebly told Shaw that usually the Bocke put some stuff into this

place each day, and to get his tin hat ready.

Digitalisad. Wit. By the Branch Secure.

SANCHO PANZA TOSSED IN A BLANKET.

This episode from "Don Quivote." depicted in tapestry woven by the suns of Don Jacob Vandergoten after cartom by Proraccini, shows what happened to Southe for not paying his bill at the inn.

> "He pushed the metal hat aside, 'No,' said be; 'if they do me in, then there is no gratitude in this world."

> "It was a quiet day, speaking in strictly scientific comparison. That town is not a pretty place, and the British guns were making the usual unimpressive sounds of a normal day's hammering. Still, you never know when the one designed by the fates for you is coming, and so I remarked nothing of the comparative quietude, but kept my hand on the wood which is the handle of my stick.

> "Shaw also said little, apparently because he thought little of the spectacle. That is not my business, but his. He strode along, stopping now and then to look at a fantastic wreek. As regards one modern church there, he thought it was no great loss; maybe it looked now even more picturesque. But of another building, in a worse state of ruin, he admitted frankly that that was a total and irreparable loss, and that Wigan could have been better spared."

> Not once, we are assured, did be remark the noise of guns with any interest. Once he was heard to nurmur, "What awful fools we are!" When he got back among the young officers he resumed his familiar manner, and to say that they were pleased to see him there does less than justice to the hospitality of various chance messes:

"The boys laughed aloud. Shaw became luminous through the youthfulness of his gray beard. Youth understood him well. 'And what,' said an elder solemnly to Shaw, as he refused baked meat and a whisky, 'do you think about peace?'

"'What the nations of Europe really want,' smiled that mocker, whose serious purpose it is not always easy to fathom, putting down his biscuit and cheese to touch off lightly the counter-mine, 'what they want is an early and dishonorable peace.'

"Youth with its military crosses leaned back in its chairs, and its laughter rolled down the ruined corridors of the descrited town."

LODGE'S SPIRITUALISTIC BOOK ASSAILED

THE CAUSE OF SCIENCE and the reputation of great English seats of learning-in one particular case, the Birmingham University-are not aided much by such books as Sir Oliver Lodge's "Raymond." This, it must be said, is a view taken by "An Enquirer," and differs widely from many serious "views" exprest by the lay and religious press in England over this same book, which is the record of alleged spirit communications from the son of the noted scientist, fallen in the war. "Enquirer" puts it bluntly in saying that Sir Oliver "professes to have held communication with the dead on no better evidence than the chatter of a medium and the tilting of a table." The influence of the book in England, we are told, is making money for the mediums. Charlatanry never had so fine a chance, and charlatanry is not losing its chance, either. "To extort money from the credulity of the bereaved, to raise false hopes-at a price-in the minds and hearts of those who have lost husbands, sons, and brothersthese are not heroic enterprises, and the world will be a better, happier place when they are resolutely supprest by law." This condemnation by the writer in The Daily Mail (London) extends as well to those who employ the mediums, and he recommends the imposition upon them of an equal penalty. The book, which we treated in a previous issue from the angle of religious faith, is dealt with by "Enquirer" in these unsparing terms:

"At the very outset of an attempt to protect the foolish and sanguine from the greed and cunning of those who pretend to hold converse with the other world, we are hindered by certain men of science, who assert, with all the authority that clings to their names, that they are themselves in communication, through profest mediums, with the dead. Sir Oliver Lodge's 'Raymond,' for instance, is of the worst possible example. The author is an eminent professor of physics, the head of a great modern university, and he speaks with all the prestige of his learning and position. Yet it is impossible to read his account of his talks with his dead son without discovering him as easily credulous as the sad creatures who fall a willing prey to the soothsayers and fortune-tellers who abound in our midst.

"He makes no doubt of his belief. He presents 'a historical record of the communications and messages received from or about his son since his death.' He is content to register with perfect solemnity the words rapt out by the tilting table at which he and his medium sit. He uses all the customary jargon with the gravity of faith. 'Feda' and 'the Moonstone' are in his eyes serious personages. 'The control,' he writes, 'or second personality which speaks during the trance, appears to be more closely in touch with what is popularly spoken of as the next world than with customary human existence, and accordingly is able to get messages through from the deceased.' He accepts the 'tests' which are offered him as simply as did Mr. Sludge's [Browning's] victim:

'Tests? Didn't the creature tell
Its nurse's name and say it lived six years.
And rode a rocking-horse? Enough of tests!
Sludge never could learn that!

He could not, eh?
You compliment him, Could not? Speak for yourself.

"As he employs several methods, so he employs several mediums. One of them, Mrs. Leonard by name, admits that the war has marvelously increased her practise. When Sir Oliver 'spoke to her about not baving too many sittings and straining her power,' she pleaded 'that there are so many people who want help now that she declined all those who came only for commercial or fortune-telling motives, but she felt bound to help those who are distrest by the war.' And she helped Sir Oliver Lodge with the greatest assiduity. For the most part the messages which she and the others transmit are of small interest "

Various former members of the Psychical Research Society appear in Sir Oliver's books, and "Enquirer" feels a sense of injury over one in particular. The late F. W. H. Myers is referred to as "the gentleman who wrote poetry," at which appellation, it is suggested, his "spirit must be gratified." Another of those who have been of great value to Raymond Lodge "over there" is a Mr. Peters, whose familiar is known under the name of "Moonstone." The "Enquirer's" reactions from the book exhibit his skeptical attitude:

"Indeed, it is Moonstone, Mr. Peters's familiar, who gives Sir Oliver the greatest encouragement. This 'control' goes so far as to declare that 'not only is the partition so thin that you can hear the operators on the other side, but a big hole has been made.' And under Moonstone's auspices Raymond himself exclaims: 'Good God! how father will be able to speak out! Much firmer than he has ever done, because it will touch our bearts.'

"The we may be surprized that 'Good God!' is permitted as an expletive in the next world, we are obliged to confess that Moonstone is an engaging and argumentative spirit. But it is Feda, the 'control' of Mrs. Leonard, who affords us the most precisely detailed information, and if we refuse to read the future in Feda's words, then it is our own fault. We gather, then, that the new arrivals in the next world are asked to don white robes. They don't like it at first, but they soon get used to them. Nor do their bodies change, except that if a man loses a limb in battle he is 'all right when he gets there.' So Raymond Lodge, speaking through Feda, assures us. Moreover, if bodies are burned by accident, and they know about it on the other side, they detach the spirit first. 'What we call a spirit-doctor,' says Raymond Lodge, 'comes round and helps,' But he speaks a word of warning to those who deliberately prefer to be cremated. 'We have terrible trouble sometimes,' be confesses, 'over people who are eremated too soon; they shouldn't be. It is a terrible thing. It has worried me. People are so careless. . . . They shouldn't be eremated for seven days.'

"A vast deal of news is given to us through Feda, whose talk, Sir Oliver admits, is 'at least humorous.' It is indeed. "There are men here," Raymond tells his father, 'and there are women here.' There is also Curly, the dog. 'There don't seem to be any children born here. But there's a feeling of love between men and women here which is of a different quality to that between two men and two women.' Some want to eat and some don't, and whatever they ask for is cheerfully supplied. Even whisky-and-soda is not unknown. 'A chap came over here the other day who would have a cigar. "That's finished them," he thought. But it hadn't finished them at all. Instantly they manufactured a thing that looked like a cigar out of essences and ethers and gases, and when the chap began to smoke it he didn't think much of it. He had four altogether, and that quite cured him of the habit.

"And that is not all. There are streets and houses and bricks and granite, and a reformatory — 'not hell exactly '—for those who have 'nasty ideas and vices.' Moreover, it is a true democracy over there, and there is no other rank, except that which virtue confers. Nor do the parsons go highest first, 'It isn't what you have profest, it's what you've done. If you . . have tried to do as much as you could, and led a decent life, and have left alone things you don't understand, that's all that's required of you.' And much more to the like purpose, Neither Feda nor Moonstone can be called original. They are content to dish up again the old superstitions, to hazard the old guesses, and it is difficult to believe that their 'humorous talk' can bring comfort to any human soul. But I have quoted enough to give your readers something of the impression produced by Sir Oliver Lodge's book. Is it balderdash or is it science? Is it worthy the head of a great university? These are questions which await an answer. But of one thing there is no doubt. Sir Oliver Lodge professes to have held communication with the dead on no better evidence than the chatter of mediums and the tilting of a table."

BELGIUM'S CLANDESTINE JOURNALISM

THE GERMAN FAILURE to suppress Belgian newspapers published under their very noses is one of the humorous features of the great world-tragedy. Libra Belge (Brussels) is not the only newspaper that flourishes in spite of German censorship in the beleaguered country. The

Paris Temps gives quite a list of them, and doubtless their publishing offices are fully as mysterious and bizarre as the "automobile cellar" announced by the most famous one. "The rapidity with which news circulates secretly throughout the invaded regions is certainly a disconcerting phenomenon," says the Temps, whose account is translated for the New York Sun. Without doubt, thinks the French commentator, "this is one of the essential factors to maintain the admirable morale of the Belgians," for it is the press that "maintains communication with the outside world and destroys the effects of Prussian falsehoods indefatigably repeated." If the people sometimes despair, the press never does, we are told; and while entertaining "hope and confidence" it carries "at certain hours the necessary messages which no voice would dare proclaim." These little newspapers "have decreed the failure of Prussian terrorism, because they summarize for the whole people in all the country their inflexible will not to die." We have told of the paper called Free Belgium (Libre Belge). which hides its lair so successfully that even the German promise of reward of one hundred thousand francs to informers has failed to trace it. "The success of Free Belgium has started other newspapers, edited by no one knows who, printed none can say

where, eirculated by men unknown." Among this number-

"There is published in opprest Belgium The Weekly Review of the French Press. It is now in its fifty-seventh number, and reproduces for the attention of the Belgians the principal articles from the periodicals and reviews of Paris. Then there is Motus, that has the character of a satirical sheet with phrases of lashing irony, at times cruel. Again there is Patric, that competes with Free Belgium and offers a perilous luxury in reproducing the designs of Louis Raemackers, notably the famous 'Route to Calais,' which portrays the bodies of Prussian soldiers floating in the inundated districts of the Yser.

"How do these newspapers live? How do they obtain their copy and print it, draw the designs, procure the paper-supply necessary for their circulation, recruit the agents to serve their subscribers? There is here suggested a series of problems infinitely complex when you consider that the Prussians have at their disposal thousands of spies, each house under surveillance and no one going from one town to another without special authorization of the Kommandatur. Nevertheless, all this work is accomplished regularly by hundreds of patriots risking each week prison and deportation in consecrating themselves to their tasks. This is one way they have of fighting in a land of which the Prussians pretend to be the absolute masters.

"Later, when it shall be possible to disclose all and to recite

the adventures of clandestine journalism in the occupied regions of Belgium, it will constitute one of the most curious chapters in the history of this war. The Prussians themselves will be astonished at the simplicity of the game that they have permitted to be played, and they will then understand perhaps that the organization,' and the most perfect, according to 'Kultur,' is powerless when it does not take into consideration the spirit, the character, and the traditions of a people."

The fighting spirit of Belgium, its tenacity, its audacity in conception, and prudence in execution, admirably prepare it for enterprises of this kind. We read:

"The Prussians do not understand the Belgian temperament, yet they do not themselves doubt the meetings, the assistance, and the accomplices that one is sure always to find in Flanders to undertake the most improbable task when it becomes necessary to make game of the constabulary.

"There does not enter or leave Belgium one letter not under control of the Teutonie censor. Only in Brussels, Antwerp, and Liege they know correctly within four or five days what is being said in the newspapers of Paris. A copy of Free Belgium published in June, 1916, reproduced entirely the speech of Mr. Briand from Le Temps of May 19, 1916. Not for one moment. since the beginning of the occupation by the Prussians have the principal newspapers of France ceased to circulate in Belgium. A system is organized that assures for forty to sixty cents a day the

"Another form of subscription is more curious and more expensive. Each day the subscriber receives two or three type-written sheets containing a resume of the news and reproducing the essential passages of the articles from newspapers of Paris and London that have just arrived. What is the organization that conducts this enterprise? No one knows, not even the Belgians themselves know. They read and reread the sheets, fix the details in their memory, then they are carefully burned. When the Prussians wish to report events falsely the opprest have to smile, for the reason that they all know to the smallest village behind the front the truth.

"Baron von Bissing, Governor-General, finds each week the Libre Belge, in his mail, whence no one seems to know, and without doubt after the war he will be the sole possessor of a complete series of the journal which mocks at the German Emperor in midst of the Prussian terror and in spite of the censors calls a spade a spade, Bethmann-Hollweg a liar, and William II, a knave."

RELIGION-AND-SOCIAL-SERVICE

A WESLEVAN MAN INSIDE THE TEUTON CINES.

Tentonic thoroughness has some to the aid of MacNaughter's effects, at that his prison camp-work is one of the best organized in the war-name.

WESLEYAN'S RELIEF-WORK IN WARRING COUNTRIES

OLLEGE MEN have found an ample field for volunteerservice in the European countries. Their work has been mainly humanitarian, the some have been with the combatant lines. Harvard and Yale and Princeton number long lists from their rosters in service as ambulance-drivers; but Wesleyan University, in Middletown, Conn., has had a larger number of men in the Y. M. C. A. work among warprisoners than any other American college. Furthermore, so Mr. Carl F. Price writes in The Wesleyon Alumnus, "no college yielded financial assistance to this work so promptly or (up to the present writing) so generously as did Wesleyan in her gift of over \$5,000." The story of the work of Wesleyan's men in the field can not yet be adequately told, because, "in the first place, their own lips are sealed by the Governments by whose grace they are permitted to serve humanity." Nor could they, if they tried, ever "measure the far-reaching effect of the magnifieent work they are doing." The foremost of the Wesleyan group is Archibald C. Harte, '92, who is field-general of the work of the International Young Men's Christian Association among the war-prisoners "on both sides of the long, tortuous line of trenches that divides Europe into two hostile camps." Almost no other man on the European map has his entrée into the households of European monarchs. "He travels in all countries freely because he has the confidence of all."

"This has made him in a certain sense the international interpreter of the whole situation, and thereby to a degree he has been able to create a working basis for cooperation, not only between belligerent nationalities but also between Roman Catholic, Greek Orthodox, and the most pictistic types of

Evangelical Churches, These Churches, because of their national and international intimacies, have been unable to do the work that the Young Men's Christian Association under Dr. Harte's strong, diplomatic leadership is permitted to undertake.

"The Y. M. C. A. has sixty-one men working among prisoners in the war-countries. The one man in each country where the Y. M. C. A. is operating who is in charge of the work there reports directly to Dr. John R. Mott, in New York. But Dr. Harte moves among them all, advising, cheering, and also securing governmental favor for this great humanitarian work.

"Through the Y. M. C. A. there have come into the almost despairing lives of these prisoners American charitable enterprise and freshness of thought and sympathy. At first the Y. M. C. A. workers are only indifferently tolerated, but before long they are welcomed. Huts are erected for the prisoners and by the prisoners. Educational work is started among them. Many of these prisoners are students or faculty members of the universities. Thus, among the prisoners themselves are often found the most efficient teachers for classes in manual work, vocational training, and academic courses, from grammar and arithmetic all the way up to philosophy and theology. Religious services are held. Every possible encouragement is given them to 'buck up,' as it was exprest by one of the Y. M. C. A. workers. Thus in the name of Christ their lives are cheered and in some degree at least their sufferings are alleviated.

"Dr. Harte first made his headquarters with the World's Committee of the Young Men's Christian Association in Geneva, Switzerland. His central office now is in Copenhagen, Denmark, tho, like the nomadic bird, the huma, he is on the wing most of the time. In October, after a brief furlough in this country, devoted to arousing a greater interest among Americans in this work, he returned to Denmark and is now 'somewhere in France,' or 'somewhere in Germany,' or elsewhere west or north or east of Suez,"

or Suez.

Another Wesleyan man, Robert F. Leonard, surrendered the prospect of taking his baccalaureate degree with honors in 1916 to go to Siberia, and is now in Krasnoyarsk, near the European frontier-line, working in the great war-prison there. Here are educational classrooms and a library, besides well-equipped rooms

for tailoring, shoemaking, carpetmaking, and the handieraft school. There are 652 students engaged on twenty-five different subjects. Still another Wesleyan alumnus, Edgar MacNaughten, '04, is the Senior Secretary for the War-Prisoners' Aid of the Y. M. C. A. in Austria and Hungary.

David Garriek used to say that the eloquent Methodist preacher Whitefield could make one weep just by pronouncing the word "Mesopotamia"; another Methodist, William G. Chanter, writes from the land itself a letter that may have something of the same effect:

"It wasn't till August 16 that I arrived here, but I was at work the next day in charge of a tea-garden where hot, tired, and thirsty Tommies could rest, read papers, listen to a graphophone, and drink tea or pop. Before the week was out (the 16th was Wednesday) new experiences had accumulated. Making Arab coolies work, building a brick foundation for a steel water-tank, loading native boats with stores and machinery by quite inefficient manpower, were only a few of them.

"Any or all of these things may be a part of the day's work for the Army Y. M. C. A. Secretary in Mesopotamia. And after a day replete with such varied activity he may have a lecture to give, a prayer-meeting to lead, or a concert to manage. On Sundays he has from one to three services in his charge.

"This week I have turned over the tea-garden to others and am going to Amara, about eight miles farther up the river, to work in the hospitals. Distribution of comforts, the provision of entertainment by phonograph and cinematograph, and, above all, definite personal work with individuals give any man who is among the sick and wounded seven full days' work in the week.

"Conditions here are far from ideal. The commonest facilities for work are often entirely lacking. The climate makes attacks of fever or dysentery a fairly regular thing with most of us. Creeping things abound in incredible numbers and flying things of the insect tribe rival them for multitude. Fortunately, the heat is abating, but in August and September it was terrific. But for all that, there are great satisfactions in the work. There is the joy of winning the confidence of a dispirited and homesick lad and sending him away with a smile on his face and new courage in his heart. There is the joy of preaching the gospel to a crowd of men who, in the shadow of a world calamity, listen with a new seriousness. These are worth while."

Wesleyan has sent one man to France in the American Ambulance Service, Donald M. Walden, '16, and the story of how he gained the war-cross is thus given in *The Wesleyan Alumnus*:

"On July 4, 1915—fitting date for American bravery—the Germans made by daylight a surprize attack at Pont-à-Mousson in a place known as the death-hole. In that onslaught they won back in a few hours what the French had taken six months

to gain. The rain of shells from the German artillery was making frightful destruction in the French ranks. In the midst of the battle, word was sent to the rear, appealing for an ambulance to carry back from the first trenches two officers and two doctors, who had been badly wounded. Volunteers were called for, who would risk their lives to take an ambulance to the first trenches

and back again. Walden and one other promptly offered their services and soon began the race with death. Six times their ambulance was struck by shells and once a shell struck beneath the seat on which Walden was sitting as he was driving the car. In the confusion and roar of the battle they suddenly discovered that they were almost upon the first line of the German trenches. Never did a car make a quicker, sharper turn. A hundred yards from where they turned they came upon the desired trench and found their four wounded men, who were tenderly lifted into the ambulance and hurried back to the rear to receive the necessary medical attention that saved all four "Not long afterward, six Americans were decorated with the French war-cross for bravery and fidelity to duty, the first Americans to be so honored; and among them was Donald Walden and his companion on this wild ride." He went to Europe with the Har-

He went to Europe with the Harvard Corps in January, 1915, we are told, being stationed where the heavy fighting taxed the capacity of the American Ambulance Corps to the limit. "We have been unable to secure from him the story of his brave act, which won the warcross; but from other sources, thoroughly reliable, the story has come."

MORTALITY AMONG THEO-LOGIANS—Depletion in the ranks of the Catholic elergy in Germany through losses on the battle-field have been particularly large. The Catholic Tribune (Dubuque, Iowa) gives the first bill of particulars that have come under our notice. The situation in Germany, it thinks, finds its parallel-in the rest of the warring countries, especially in France, where thousands of priests are in the bat-

tle-line and hundreds have been killed. We read:

"I WAS IN PRISON AND YE VISITED ME."

Rev. Archibald Harte, who travels freely in all European countries "because he has the confidence of all."

"Before the war the Archdiocese of Cologne had 450 students of theology, now there are 90; Paderborn had 250 as compared with 24; Treves, 230, now 70; Rottenburg, from 30 to 40, now 6. For the Bavarian dioceses and archdioceses the same proportion obtains: Augsburg, 140 to 15; Bamberg, 47 to 29; Eichstätt, 87 to 21, among these being 5 Bulgarians; Munich, 97 to 8; Freising, 174 to 29; Passau, 80 to 8; Ratisbon, 185 to 18; Speyer, 65 to 4; and Würzburg, 90 to 6. The few who remain have nearly all been dismissed from military service on account of sickness or serious wounds. Of the theologians from Bavarian dioceses 128 have been killed at the front.

"These figures convey a gloomy message, as most of the German dioceses were short of priests before the war. Moreover, the upper classes of the schools from which the seminaries usually receive their candidates have been almost done away with by the war. For instance, the Seminary of Rottenburg will not have any ordinations to the priesthood in 1918, as there is no fourth class in the Catholic theological department of the high school in Tübingen."

THE CHURCH'S HAND IN OUR FOREIGN RELATIONS

If CHURCH AND STATE are forever separated by decree of the Constitution, there is no reason why they should not come together in friendly interchange of ideas. Especially may such association be effective where the Church from its large missionary experience may give advice to the State concerning international relations. Last September a group of

forty or fifty churchmen, composed of elergymen, laymen, bishops, and missionaries, met in New York in response to the invitation of the World's Alliance and the Federal Council of the Churches, for a day's discussion of what steps might be taken to further the friendly relations between the United States and the Orient. There was a hope that some legislation might be recommended, since it was borne in mind that President Roosevelt had said in his annual message of December, 1906, that "one of the greatest embarrassments attending the performance of our international obligations is the fact that the statutes of the United States are entirely inadequate." Various resolutions were agreed upon and a committee appointed to present them to the President of the United States. On January 24, he met this Committee, consisting of Bishop Earl Cranston, Dr. C. S. MacFarland, Dr. Sidney L. Gulick, Dr. Wallace Radeliffe, Dr. H. K. Carroll, and Dr. Frederick Lynch. The last-named writes this in The Christian Work (New York):

"As interviews with the President are not expected to be reported except as he gives them to the press, it is not possible to give his words here.

"But the delegation not only called upon the President; they had an interview with the Foreign Relations Committee of the Senate at 10 a.m. This had been scheduled as a short interview for the presentation of the resolutions. But the Foreign Relations Committee became so interested in asking questions that they kept us until we had to start for the White House, and then, by unanimous vote, they asked us to come back to the Capitol at 2 r.s. We went back, and had two hours more of informal discussion. It was one of the most interesting days I ever spent, and it would not be right to close this letter without leaving testimony to the masterly way in which Dr. Sidney L. Gulick answered the score of ques-

tions the Senators asked him about the Orient. They recognized that at last they had come upon a man who really knew and who had ideas and they seized upon the occasion to seek light upon questions in which they were really interested. While the discussion centered mostly about the Oriental question, the fact that the President's noble address to the Senate had just been delivered caused the conversation occasionally to turn to international problems in general, and here again the Senators seemed interested to know the mind of the Churches upon these things."

The resolution which empowered the committee to treat with the President upon considerations bearing upon the need of reaching an early and honorable adjustment of American relations with Japan and China states that—

"This committee be instructed to ask the President to recommend to Congress the creation of a commission of not less than five members, whose duty it shall be to study the entire problem of the relations of America with Japan and China; and further to recommend to Congress that it invite the Government of China and the Government of Japan each to appoint a similar commission. And if such commissions should be appointed it is the opinion of this Conference that the American commission should meet the commissions of China and Japan in their respective countries."

There was also a resolution embodying a declaration of the friendship and good-will of America toward Japan:

"Whereas. There is more or less apprehension in Japan that the United States harbors imperialistic ambitions in the Orient inimical to her legitimate

interests and welfare, and

"Whereas, There is more or less apprehension in America that Japan has designs upon the territory of the United States, and

"Whereas, The existence of such fears tends to chill the historic friendship of these two countries, and

"Whereas, There is abundant reason for believing that neither country has any designs whatever upon the other and that the real welfare of each can best be attained by clearly avowed policies of mutual good-will and cooperation, with definite effort to overcome suspicions and banish fears; therefore

"Resolved, That this Quadrennial Meeting of the Federal Council of the Churches of Christ in America herewith declares on behalf of its constituency that the United States seeks no advantage or opportunity in the Orient harmful to those lands, nor will it be partner with any nation or any undertaking that seeks selfish advantage regardless of the rights and welfare of their peoples.

"Resolved, That this Quadrennial Meeting of the Federal Council of the Churches of Christ in America commend to all Americans and to the peoples of other lands as the ideal and fundamental principle guiding the United States in her international relations these noble words of President Wilson:

"We must prove ourselves their friends and champions upon terms of equality and bonor. We can not be friends upon any other terms than upon the terms of equality. We can not be friends at all except upon the terms of honor, and we must show ourselves friends by comprehending their interest, whether it squares with our interest or not. It is a very perilous thing to determine the foreign policy of a nation in the terms of material interest."

"The Federal Council of the Church of Christ in America hereby expresses its condemnation of this misuse of the press, and urges upon all editors, reporters, and pullishers their incomparable opportunity in promoting good-will between ourselves and other nations, founded upon correct information, sympathetic understanding, and

universal human brotherhood.'

A WESLEYAN AMBULANCE-DRIVER.

Donald M. Walden, one of the first six Americans to receive decorations of the war-cross.

> The committee further embodied in a formal statement certain considerations regarding the treaty rights of aliens, and the importance of prompt legislation by Congress providing for their adequate protection. The statement sets forth that—

> "The personal and property rights of aliens have been repeatedly violated, and, as a result, the friendly relations existing between the United States and foreign countries have been jeopardized.

> "In all these eases the Federal Government has acknowledged its responsibility by paying indemnities, but it has not been able either to give protection in case of threatened danger or of prosecution of those who committed the crimes, owing to lack of legislation authorizing the Federal authorities to take the needful actions. In support of this statement . . . President Harrison, just after the Matia case at New Orleans in 1891, said:

> "'It would, I believe, be entirely competent for Congress to make offenses against the treaty rights of foreigners domiviled in the United States cognizable in the Federal courts."

A SAFE OCEAN-LANE FOR BELGIAN RELIEF SHIPS

ND OVER THIRTY THOUSAND DOLLARS MORE contributed to the Belgian Children's Fund! These are the leading facts which mark the week of Tur. LITERARY DIGEST'S report ending February 27. Its contributions speak eloquently for themselves, in the fine list of Acknowledgments beginning below. Assurance that ships bearing Belgian supplies are to be accorded "safe conduct" across the Atlantic came on the 24th inst. from American headquarters of the Commission for Relief in Belgium. On that date Mr. Herbert C. Hoover made the following announcement:

"The Commission has effected an arrangement with the British Government on one side and the German Government on the other by which an acceptable lane for Relief Commission ships between North American ports and Rotterdam has been agreed upon. The Commission expects to dispatch during the course of the next few days the sixteen steamers already loaded or loading in American ports, and has made such arrangements for its supplies as will prevent any delay in loading and dispatching the twenty-three further steamers now en raide or chartered for the Commission.

"The Commission desires to point out, aside from the broad principle of humanity involved in the dependence of the Belgian people upon food-supplies in America, that inasmuch as the commodities shipped to Belgium consist of those foodsupplies of which there is an exportable surplus in the United States, it does not in any way infringe upon the necessities of the American people,"

In face of the fact thus heralded, THE LITERARY DIRECT may well repeat, with added emphasis, what it said last week: "There can be no reasonable doubt that the Belgian Children's Fund will accomplish the purpose of its donors." Back of that purpose is a spirit that makes it sacred. Reading but a few letters of remittance to this Fund affords wonderful glimpses into the heart of humanity. From one mountain town in Colorado an attorney writes:

"My wife and I are just completing the building of a little home, and the thought has come to me that I would not be lit to enter it should I do nothing for those homeless little ones. I will try to aid further later on."

Asking that it be credited only to the village of Upland, Pa., a lady tells most interestingly how a part of the remittance was made up in small contributions solicited, and says:

"Each one asked was glad to give-\$7.75 was collected quickly. This morning the principal of the village school sent \$6.20. A young girl with shining eyes brought it, and she said, 'Look what we children have given!' Each child gave two cents. A kind friend is matching every unit the village gives, so I have the happiness of sending a check to you for \$24.00. The second one is on the way."

A lady, remitting from a Mississippi town, says: "We are going to put up a box here in town, and paste your appeal over it, so that all here may know the terrible need and have the privilege of sharing in the relief."

CONTRIBUTIONS are increasing. TOMMUNITY Where some influential citizen takes the lead it is easy to make sure a good remittance. At Amherst, in Massachusetts, Professor Sears, of the State Agricultural College there, has led out for the care of over two hundred children in one Belgian town, requiring from twenty-five hundred to twenty-six hundred dollars. Lancaster, Pa., keeps increasing its noble benevolence; and its namesake in Ohio now proposes liberal things.

Just here comes in a letter from that far State "where rolls the Oregon," enclosing \$60.00, collected by Mrs. Annie Reed of the farmers around Myrtle Point. "She lives out in the country," writes the merchant who made the remittance for her, "and the farmers are far apart and the roads are bad, but she traveled afoot from house to house and visited about thirty families. That is practical Christianity." Indeed it is, All honor to Mrs. Reed, and her "far-apart" neighbors.

The Four Thousand-Dollar contribution listed below came from big-hearted Southern gentlemen, who intimated that more may be forthcoming and who said, "Keep the Fund going while the war lasts."

Remitting handsomely for himself and a national bank of his eity, a California gentleman says he has referred our appeal to two societies, "and they are plauning benefits from which returns will follow."

"Because our Jackie has bright red cheeks," one father writes-"because he is full of life and is everything one could want a man-child to be-your appeal seemed to us imperative. But not having participated in any war-profits, and having some difficulty in making ends meet, we had to borrow it from the lad's college fund. We don't begrudge a nickel of it. Mighty sorry the boy's education fund wasn't any bigger."

"I think my meals will taste better if I know there is one less

child to suffer hunger," writes a New York mother,

"Pread your appeal in last week's number and started a collection. Doctors, guests, and my children responded," and \$36.00 came as the result. A splendid example.

"Am glad to send you \$12.00 begged from door to door through Michigan snowdrifts," writes a friend from the Upper Peninsula, where drifts grow big.

"Our boastings and our seant charities are both shameful,"

comments an Oregon farmer, enclosing \$120.00,

Writing from Connecticut, a lady says: "To-night a father, on going to his home, read your appeal for the Belgian children. A little son of seven years said: 'I have \$5 in the bank; you may send two.' 'But,' said the father, 'I thought you were going to buy a coaster with that.' 'Yes,' said the little lad, 'but I can carn some more before spring.' When this was told me I said: 'Well, if that boy can give \$2.00 I can give \$12.00."

"My wife and sons are joining in this contribution from their own savings-account with pleasure," writes a Montana banker. and feel as I do that any money entrusted to your hands will reach in its entirety the people for whose benefit it is intended." The total he sends is \$536.

First aides to the physician

What do the doctors say?

It means something when a physician places his endorsement on a

food product.

Franco-American Broths owe their popularity largely to physicians. The purity, the quality, the safety (sterilization) of these broths have so impressed the medical profession that they are in great demand for the sick dietary and the young (well or sick).

Franco-American Broths for Invalids and Children

In every detail of ingredients and preparation these broths are such as appeal to those with "the scientific standard." The meats are selected with the utmost care—they are the best the market affords. They are prepared and cooked in kitchens famed for scrupu-lous cleanliness. The rich lous cleanliness. meat juices are clarified to sparkling purity and only slightly seasoned. The delicate blend pleases the most captious appetite and stimulates digestion.

You Cannot Miss the Difference

Your motoring takes on a different character, with Goodyear Cords beneath you.

There is a lift and spirit in the behavior of your car uncommonly lively.

There is a saving in gasoline and power that pays you a consistent benefit.

There is a comfort under all conditions of travel, unfailingly buoyant and secure.

There is an increase in carspeed at no increase in engineeffort.

There is an absence of road vibration that adds life to every car part.

There is a reduction in tire expenditure materially significant.

There is a difference, in all ways, that you cannot miss.

Goodyear Cord Tires are

strong and supple both—and they present the full range of advantages to be expected from this unusual combination.

They are built up of thousands of light, pliant cords, densely strong, established in the tire structure layer upon layer, without interweave.

Each of these cords, and each layer, is cradled in a resilient bed of quick rubber—each cord and each layer is free to yield and recover under impact, without contact or friction.

The multiplied cords combine to a strength affording the maximum of endurance, security, long life and mileage.

The manner of their construction realizes a flexibility affording unexampled spring, vigor, comfort and economy.

Goodyear Cord Tires should be on your car. Not to have them there, is to forego a degree of car-pleasure and tire-efficiency not to be approximated otherwise.

Not to have them there is to disregard the broadest forward step accomplished in tiremaking in a decade.

They are the supreme product of the experience, resources and abilities of the Company producing the preferred tire of this hemisphere.

Their quality makes them higher-priced—and better.

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

The Good year Tire & Rubber Co. Akron, Ohio

GOODITEAR CORD TIRES

Elliott Fisher Bookkeeping Machine

Modern Delivery—Modern Bookkeeping

Lowney advertises, "Now you can wire Lowney's." This illustrates their progressiveness. The same progressive spirit is shown in their Bookkeeping Department where Elliott-Fisher Bookkeeping Machines have been introduced. Now accuracy, speed and prompt figures make their bookkeeping as efficient as their delivery system. Mr. H. H. Greene, Assistant Treasurer, tells how it was done:

"When we originally installed Elliott-Fisher Bookkeeping Machines, it was with the idea that we could economically improve our accounting system. After using Elliott-Fisher method for more than a year, we are very glad to be able to say that we are satisfied with our investment.

"We keep our Sales, Purchase and Expense Ledgers on Elliott-Fisher. We consider it most valuable to us in keeping our Sales Ledgers. It enables us to get our statements out promptly on the first day of the month, owing to the fact that the statement is posted daily at the same operation that the Ledger is posted. Therefore, there is nothing to do at the end of the month but mail the statement. Our books are kept in perpetual balance."

Overtime and end-of-the-month congestion have become a thing of the past in the Bookkeeping Department of this great confectionery concern. Your bookkeeping methods may be open to improvement. It will cost you nothing to learn how Elliott-Fisher Bookkeeping Machines will help you. Telephone the local Elliott-Fisher Office or write to Elliott-Fisher Co., 332 Elliott Parkway, Harrisburg, Pa.

Promptness.-" Then," said the young man with a tragic air, as he was leaving the room, "this is your final decision?"

" It is, Mr. Carrots," replied the young

Then," he replied, his voice betraying an unnatural calmness, "there is but one thing more to add."

" Yes? " she questioned, sweetly. " It is this shall I return those white satin suspenders by mail, or will you have them now? "-Harper's Magazine.

WARNING!

BEWARE OF SUBSCRIPTION SWINDLERS!

Swindlers are at work throughout the country soliciting subscriptions for popular periodicals. We urge that no money be paid to strangers even the they exhibit printed matter apparently authorizing them to represent us, and especially when they offer ent rates or a bonus. LITERARY DIGES, mailing list showing dates of expiration of subscriptions is never given out to any one for collection of renewals. Better send subscriptions direct. or postpone giving your order until you can make inquiry. If you have reason to suspeet that the members of your community are being swindled, notify your chief of police or sheriff, and the publishers, and arrange another interview with the agent at which you can take such action jointly as may seem proper.

FUNK & WAGNALLS COMPANY, 354-360 Fourth Avenue, New York City.

CURRENT POETRY

OF late years, Mr. William Watson has been making poetry a criticism of art rather than a criticism of life. Many of the poems in "Retrogression" (John Lane Company) seem to be versifications of passages in his "Peneraft: a Plea for the Older Ways," But the versification is deftly done; it glows now and then with the magic of "Wordsworth's Grave" and the "Ode in May." The first fourteen lines of "Nature's Way" are merely rimed prose. But the rest is poetry. The striking contrast between the two parts of the poem makes one regret that nowadays Mr. Watson gives so much attention to the faults of his contemporaries and so little to the splendors of nature.

NATURE'S WAY

BY WILLIAM WATEON

"Faultily faultiess," may be ill "Carefully careless" is worse still I bought one day a book of rime-One long, flerce flout at tune and time. Stagged and jagged by intent. As if each time were earthquake-rent; Leagues on seismal leagues of it Not unheroically writ. By one of whom I had been told That he, in scorn of canons old, Pedantic laws effete and dead. Went fearless to the pure well-head ... Of song's most ancient legislature-Art's uncorrupted mother, Nature. Nature! whose lapidary seas Labor a pebble without vase. Till they unto perfection being That miracle of polishing: Who never negligently yet Fashioned an April violet. Nor would forgive, did June disclose Unceremoniously the rose: Who makes the toudstook in the grass The carven ivory surpass. So guiltless of a facit or slip Is its victorious workmanship. Who suffers us pure form to see in a dead leaf's anatomy And pondering long where gerealy sleep The unravished secrets of the deep, flids the all-courted pearl express Her final thought on flawlerentree; But visibly aches when doomed to bring Some incheate amorphous thing. Loathed by its very mother for The unfinish she doth most alshor. Into a world her curious wit. Would fain have shaped all-exquisite As the acorn-cup's simplicity, Or the Moon's patience with the sen. Or the superb, the golden grief Of each October for each leaf, Phrased in a rhetoric that excel-Isaiah's and Ezeklel's.

These lines are fanciful and rich in music.

It is a eleverly done tour de farce.

TO A VIOLONCELLO

BY WILLIAM WATSON

Weil, O 'Cello, love I all thy mellow Deeps of golden sound! Tell, O 'Cello, tell me where thy fellow May on earth be found! Or, if such be past our finding here, In what sphere

That brooks no galling bound, Far beyond the light wherein thou dwellest, What immortal, what celestial 'Cellist

hat immortal, what celestial 'Cellist Wields the bow that bids the world go round?

"Sea and Bay" (John Lane Company) is Mr. Charles Wharton Stork's ambitious attempt to put into poetry a story of New England life. He tells his story well, in verse that is vigorous and appropriate.

197 Different Lines of Business Have Proved These Methods Right

197 different lines of business have responded to Commercial Duplicator magic. Yours will do the same. The methods are always simple; they work right in with what you are doing and save time and labor.

No rewriting by hand or machine, no carbon manifolding—that is the secret of Commercial Duplicator magic—that plus matchless speed in duplicating.

No other machine in all the world—no other method can give you from 5 to 100 copies as quickly and cheaply. Speed with easy operation makes a bright boy and a Commercial Duplicator accomplish more than a dozen typists, and the work is accurate; it needs no checking.

Get these facts about what the Commercial Duplicator is doing to others—what it will do for you. Check the coupon. Mail today.

and varies the blank verse of the narrative with occasional lyries. That which we quote below is magnificently pictorial.

A PAINTER IN NEW ENGLAND

BY CHARLES WHARTON STORK

Did you ever note the beauty of the soft New England grasses.

All the ochres, reds, and browns?

And the flowers: the purple asters and the goldenrod's rich masses.

With the cardinal's flaming gowns,

Dots of blood against the tangle of the reedy, lone morases.

Where the nodding cattails rustle under every wind that masses.

Ah! what reticent depth of color,

Growing brighter, growing duller, As a smile of simlight broadens or a brow of storm-cloud frowns!

Have you read the blazoned glory of the sunset's revelations.

Glowing scarlet streaked with gold:

Have you seen the sky-towers crumbling in stupendous conflagrations.

Passing gorgeous to behold?

While the cast is hing with tapestries in doveserene gradations,

And the naked vault of heaven is filled with rosy undulations?

Where in all the world resplendent

Or the poet's mind transcendent

Can such miracles be rivaled, form so grand or has so bold?

Have you watched the dreamy progress of a gray New England schooner

Drifting seaward with the tide.

Darkly down a lane of radiance, dawn-lit gold o silvery lunar,

Ribbon-narrow or ocean-wide?

Such a boat in such a background I will paint you ten times sooner

Than a lily-perfect yacht with drooping topsail and ballooner.

No, for me the old-time vessel

In a landlocked bay to nestle

Till the light wind flaps her staysall and the light wave laps her side.

Have you shrunk before the grimness of the rugged longshore ledges

Where the ground-swell surf rolls in

Round the battlemented coast-line with its walls and bastion wedges?

Hark! the cave-responded dia,

As a breaker smites the granite with the strength of glant sledges.

And a swaying fringe of foam enfolds the ranpart's dripping edges.

Lovely lands across the ocean

Thrill the heart with quick emotion,

But the shore of staid New England holds a rapture hard to win.

From a recent issue of Current History the New York Times's monthly magazine, we take this poem, not without historical importance. Printed with a cartoon on a large poster, it is said to have turned the Australian women's vote, defeating compulsory military service in the recent referendum.

THE BLOOD VOTE

BY W. R. WINSPEAR

"Why is your face so white, Mother? Why do you choke for breath?

"Oh. I have dreamt in the night, my son, That I doomed a man to death."

"Why do you hide your hand, Mother? And crouch above it in dread?"

"It beareth a dreadful brand, my son; With the dead man's blood 'tis red.

"I hear his widow cry in the night. I hear his children weep. And always within my sight, O God! The dead man's blood doth leap.

- "They put the dagger into my grasp, It seemed but a pencil then. I did not know it was a fiend a-gasp For the priceless blood of men.
- "They gave me the ballot-paper,
 The grim death-warrant of doom,
 And I smugly sentenced the man to death
 In that dreadful little room.
- "I put it inside the Box of Blood.

 Nor thought of the man I'd slain.

 Till at midnight came like a whetming flood

 God's word—and the Brand of Cain.
- "O little son! O my little son!

 Pray God for your Mother's soul.

 That the scarlet stain may be white again
 In God's great Judgment-Roil."

Miss Angela Morgan is a poet most radiantly alive; she writes with a fiery enthusiasm which warms the heart of her readers. Perhaps that enthusiasm wanes somewhat in the last eleven lines of this poem, which we quote from "Utterance and Other Poems" (Baker Taylor Company), but the earlier lines are vivid and beautiful.

O, LITTLE WINDOW

BY ANGELA MORGAN

O. little window where the sun comes through. How many times I've lived and loved with you! I used to take you all my hopes and fears. My child's temptations and my maiden's tears. How soft your curtains were against my face—I seemed to feel her love within the lace. My mother made them with her own dear hand Hefere she passed into that other land. How patiently you heard my every yow Could you have told me then what I know now. O. little window!

O, little window where the storm beats wild, How many times I feared you as a child! How many times I ran to hide my head Beneath the cover of my little bed, Until at last I sobbed myself to sleep, Praying that God my frightened soul would keep. I fear you now no more, for I am grown. Terror and tears and tempest have I known, Yet fearlessly have breasted every wave, Knowing that God my trusting soul would save O, little window!

O, little window where the vines grow sweet.
How many times we've listened for his feet,
ust you and I when all the world was white
With moon and magic on a summer night.
How foolishly we feared, when he was late,
Until we heard his dear voice at the gate—
Dh, he was wonderful, my prince of men! . . .
We've watched and waited many times since then—
That fatal night I would have been his bride,
That night my heart broke and my lover died—
O, little window!

O, little window where love comes again,
To pay for all my bitterness and pain,
To bind the bruises and to heal the stings.
And bring faith back to me on strengthened
wings . . .

Not the dear love my ardent youth had lost, But strong and true and worthy of the cost; How many miracles your dawns have seen. How many tragedies that might have been— The time God came to me and made me blest. The night I held my first-born to my breast, O, little window!

O, little window where I kneel to pray.

How oft you've helped me conquer through the day.

Given me strength to grapple with my wo,
Taught me to bravely stand and face my foe.
Shown me the path when I was blinded quite,
Changed me from serf to master in a night,
Lifted my face to meet the morning sun.
My sorrow vanquished and my battle won.
How shall I ever know so dear a friend,
My faithful comforter unto the end—
O, little window!

George Westinghouse-the Man

Most Americans know that George Westinghouse invented the air-brake, the most important railway safety device ever known.

Fow, however, realize how great were his other contributions to our present civilization.

He stands a dominant beare at the parting of the ways between the age of steam and the greater age of electricity.

He, more than any other man, viewed the coming era as a whole and not merely in part. Therefore his life-work more than that of any other one man, helped to solve the three great problems in the electrification of a world.

First, the economical government of electric carries.

Second, its tar transmission and wide dis-

Third, its otherwar and recommical application to not.

The considered its every aspect to relation to participation plants, control actions, tortwo and

stomoship lines, intentlacturing industry and household convenience.

Time, it was in also who true formened the power of Nagara.

It was be who effected sale and economic discribation of manual gas-

is was he who developed and made practical the Parsons steam torbine for electric generation and who also perfected reduction gears by which its terrific velocity can be safely yoked to the propeller shalls of vessels.

The developed the transformer patents be which the abortusing current came into general use to effect water and more remonical distribution of electric energy.

He ememoraged and aided Nicola Tesla in perfecting the induction motor which today does only a large share of the world's work.

He greatly advanced the electrification of steam vallways, increased the safety and improved the operation of street and interurban ince, perfected the comarkable automatic coupling system on the New York subway and designed complete electric switch and signal systems.

Whoever you are and wherever you live, you experience every day some civilizing influence that flows from his tables.

Westinghouse

Westinghouse—the Institution

Of all the achievements of George Westinghouse there was none in which he took greater pride than in this institution which bears his name.

He started without any capital save his ability; he lived to be the head of an organization employing \$200,000,000 of capital and 50,000 men and women.

He defended and maintained this institution against the most bitter, determined and persistent attempts to crush it. And to the lasting benefit of his countrymen he was successful.

The work be began continues. The organization be founded in family and permanently catablished as an international institution.

Westinghouse engineering ability. Westinghouse house invention and rewarch, Westinghouse thorough workmandtip are even greater factors in the electrical world than when he lived

Westinghouse products are of course, subject to the limitations of all devices constructed by

then not id material elements. They are subject its continuous iles elements, largeovement and variation.

But they have both into them, something of the ideals and principles of the institution, and alone are

To keep always in advance of electrical development,

To thever and build any and every lond of apparetos that will reduce the cost of generating and distributing current for the people's use.

To build other types of electrical apparatus that make efficient and economic use of currynt to every possible application to human activity.

To surround these products with every mannfacturing safeguard of good quality and durability, to follow them in the with exper-

These principles have hade up a world-wallbusiness which designs, manufactures and distributes over postoral separate items, inclinding exerciting from electric lacomortives, gigantogenerators and motors to the electric wars than makes home life less laborious and the invried small supplies and parts used by the practical electricism.

Intelligent Smokers don't apologize to themselves

"I want to be known as a modern man, and abreast of a modern age. So I keep fit—and I find health, fun, profit—in business, in pleasure, in life.

"I smoke intelligently, too. I smoke more moderate cigars—that please my palate, yet leave my efficiency at par!

"I puff happily, in fact, my ROBERT BURNS. Never does he fuddle, never does he dull or blunt my edge. For all his fragrance, his sheer smokesatisfaction, he leaves me as he finds me—fit.

"And he gives me, too, the feeling that I've done well. For I'm smoking as today we're working and playing-right."

There's no mystery about the ROBERT BURNS "efficiency Quality" of "fine palate appeal that won't fuddie". The blend and the curing explain it. Its Havana filler gives it fine flavor. Our own special curing gives that Havana rare mildness. The neutral Sumatra wrapper helps that mildness.

The result? A fully satisfying, ripe cigar, easy and pleasant in its effects.

And a cigar which—moving forward with the times—is better than ever today.

Have you tried one lately?

Remember that Little Bobbie is a pocket edition of ROBERT BURNS himself. Price 5c straight

PERSONAL GLIMPSES

HE SNARED AGUINALDO

I T happened in the spring of 1901, and the Administration at Washington had grown tired of the Philippine problem as a question of organizing a colony, when the machinations of native revolutionists added a new unpleasantness to the tangle. Cuba had presented small difficulty. Not so with their dusky cousins, the Filipinos. No sooner were the Spaniards dislodged than the islanders determined that the Americans should follow suit. Rebellion, guerrilla fighting, espionage, and rioting broke out in all corners of the island, and Aguinaldo, the native leader, was the soul of the action.

So the Administration sent Frederick Function out to bring in the quarry. Ho was to smare the lion—and, being Fred Function, he did it. According to the New York Evening Post, he won an advance in rank by the exploit. He did not go into the wilderness with any flourish of trumpets, or play of red fire; there was not even a gun-shot, but he brought in the captive. The Post tells how it was done in an absorbing article reflecting the life of the soldier who recently died at the border. We read:

Funston first caught a messenger from Aguinaldo's headquarters who was carrying messages to the various insurgent chiefs. Learning the nature of the communications, Funston conceived the plan of equipping a number of native troops who would pass themselves off as rebel reinforcements, several Americans going along, ostensibly as prisoners. The expedition embarked on a gunboat and landed near Baler. For six days the expedition marched over exceedingly difficult country. Word was sent to Aguinaldo for food, a ruse that worked with great success, for it allayed his suspicion. The party later on was received by Aguinaldo on the Palanan River, and after a lively fight the Filipino and his party were captured. Of the capture General Funston in his report said:

"The Maccabebes started up into the town and we heard a few shots, followed by scattered firing. We hastily crossed the river, and, running up into the town, found that the Maccabebes were somewhat demoralized and firing wildly in every direction. They were got under control with some difficulty. Aguinaldo's guard of about fifty armed and neatly uniformed men had been drawn up to receive the reinforcements, and on being fired into, broke and ran, a few of them returning the fire as they r created. Aguinaldo, with his officers, nad waited in his quarters. Placido and Segovia entered the house to report the arrival, and, after a short conversation, Segovia stept outside the house and ordered the Maccabebes, who had just come up from the river-bank, to open fire on the insurgents, who were standing in line at a distance of about fifty yards. The Maccabebes were so excited and nervous that their fire was very ineffective. But two of the insurgents were killed, the remainder in

"I Didn't Know a Debit from a Credit

> But Burrough's Direct-to-Ledger Posting Made Me a Proficient Bookkeeper in Less than One Month"

> > -Miss Swan, Ledger-Poster for The Cleveland Hardware Co

"When I started to work here I knew absolutely nothing about bookkeeping; and I had never seen a Burroughs Bookkeeping Machine, let alone operate one. Yet in less than a month I was doing, single-handed, all of our sales-ledger posting and statement work which used to take the time of two bookkeepers.

"It seems impossible, doesn't it? But it wasn't at all difficult. From the very first the work has been easy for me and actually a pleasure.

The Burroughs Does the Work for Me

"I press the date key down only once to date all the work to be done that day. Then I put the ledger leaf into the carriage of the machine, read the duplicate invoice, depress a few keys, touch the operating bar and the machine does the rest.

"I never have to enter ciphers because the machine does that automatically. Even the carriage tabulates automatically, causing the old balance, date, folio, debit or credit and new balance to be printed in the proper columns. When I post a debit the machine adds, and when I post a credit the machine subtracts. The Burroughs also computes the new balance, which prints in the new balance column as I depress the balance key and touch the operating bar.

I Know the Machine's Figuring is Correct

"It's wonderfully easy, and best of all I know the machine's figures are correct. For three months my trial balance has 'come out' at the first addition, which isn't surprising because my daily balance slip checks up each day's entries on the day they are made, instead of leaving it to the end of the month.

Daily Accuracy Makes Trial Balance Easy

"Our ledgers now are correct, neat and legible, whereas formerly entries were made in three or four different handwritings. Two or three people used to work on the trial balance and very often worked overtime. Now I am able to do it alone and it is only the work of a few minutes.

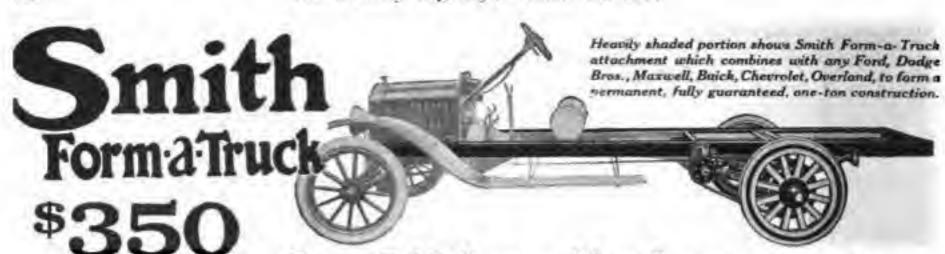

"Our machine-made statements are on time to the minute," and we know they are correct, because they are made out after the books are closed—we couldn't wait till they were closed in pen-and-ink posting days."

Versatility of Burroughs Machines

Besides posting ledgers and making statements. The Cleveland Hardware Company is putting Burroughs Machines to many other important uses in every department where figure work is handled.

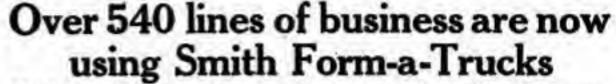

To learn more about this installation and how you can apply one of the 98 Burroughs models to your work, write to the nearest of the 170 offices maintained by the Burroughs Adding Machine Company in the United States and Canada. Your telephone book or your banker will supply the address.

13,500 now in use. The biggest production ever attained in motor truck industry. One Smith Form - a - Truck every four minutes.

With production already at the point of one Smith Forma-Truck every four minutes-materials for 30,000 Smith Form-a-Trucks in our warehouse-a new, huge factory being rushed to completion to double the present tremendous output-Smith Form-a-Truck stands alone in the motor truck industry in ability to make immediate delivery, in any numbers, anywhere.

Big corporations with national distribution are purchasing in fleet orders running as high as several hundred at a time, distributing in large numbers to branch houses and making shipments direct from the Smith Form-a-Truck factory. And deliveries are being made without the slightest delay-without a single hitch.

A completely equipped transportation engineering department is ready to analyze your hauling and delivery problems - to specify your delivery requirements and show just how and where you can save money and increase the working efficiency of your delivery or hauling department. Smith Form-a-Truck attachments can now be used with Ford, Dodge Bros., Maxwell, Buick, Chevrolet or Overland power plants.

Choice of 9 ft, to 12 ft, loading platforms enables you to use any type of body which will best suit your requirements,

In Smith Form-a-Truck, combined with any of the power plants with which it can be used, you get real truck construction, covered by the same guarantee that covers any motor truck you can buy.

Smith Form a Truck does not convert a pleasure car. It merely utilizes proved power plants for truck service. You cannot buy motors more adapted to the work done by motor trucks than those

their flight throwing away eighteen rifles and a thousand rounds of ammunition.

"As soon as Segovia had given the order he ran back into the house and opened fire on the officers surrounding Aguinaldo. He wounded Villa and Alhambra. The latter jumped out of the house into the river, and was not seen again. Villa, on being wounded, surrendered, as did also Santiago Barcelona, Aguinaldo's treasurer. The five remaining officers escaped from the house and swam the river. Placido seized Aguinaldo and told him that he was a prisoner of the Americans. At this juncture the Americans arrived on the scene and gave their attention to getting the Maccabebes under control and proteeting the prisoners from them. One Maecabebe was slightly wounded by a gunshot in the forehead.'

For his work, Funston was appointed by the President a brigadier-general in the regular Army on April 1, 1901, when he was only thirty-six years old.

But this was not the only military feather in his khaki hat. He was on duty in San Francisco at the time of the great earthquake, in 1906, and rendered excellent service during that calamity. We are told:

On the morning of the disaster General Function marched the troops into San Francisco for the purpose of aiding the Police and Fire Departments. He knew that he was acting without warrant of law, but he said that the Constitution and laws were not framed for the purpose of dealing with conditions arising from earthquakes and big conflagrations.

The efficient work of the Army during the terrible three days and nights of fire made an impression on the people. There were undoubtedly a number of officers in the Army who would have acted as promptly, energetically, and efficiently as Funston did, but that fact detracted in no measure from the credit he received. He was there and he rose to the occasion.

Few army men have had such an adventurous career as General Funston. He gained his rank of brigadier-general in the regular Army by actually doing the things that are supposed to belong to fletion. He eaptured Agninaldo after the United States authorities had long despaired of getting possession of the Filipino leader. He was the officer who crossed the Rio Grande River, with a small force behind him, and at the end of a long rope. in the face of a galling fire from the enemy. With this rope he worked rafts as ferries that carried Gen. Arthur MacArthur's brigade across the stream, so that it could thrash the natives at Calumpit and drive them into the mountains. The latter deed was officially recorded as one of the daring enterprises of the war in the archipelago. It was Funston's second attempt to cross the river. This and the capture of Aguinaldo caused President McKinley to appoint him a brigadiergeneral in the regular Army. Before that he was a brigadier-general of volunteers. He was without military experience except that gained by bushwhacking with the Cuban insurgents. He admitted on one occasion that he was without the radiments of military training. As a scout there was no disposition in any quarter to question his brilliant ability, remarkable energy; and courage.

Going back to his earlier eareer, in the

Spanish-American War, The Post draws attention to the fact that he entered Cuban affairs as a filibuster with a commission from General Gomez, soon becoming second in command of artillery under the famous Cornell ex-halfback, Dana Osgood. We are reminded:

At Guimaro, in October, 1896, where his ehief was killed, he distinguished himself by bravery, and took command. At the head of his artillerymen and with a dynamite bomb in his hand he charged the Spanish works in the assault which terminated in their surrender. At Bayamo he beeame a eavalry officer temporarily, because there was more for eavairy than for artiflery to do there. He was shot three times, but such was his endurance and physique that he was ready for more fighting in a short time. At Las Tunas he managed the Cuban dynamite guns which wrought such havoe among the Spanish troops, and was again wounded. At the same time his horse was shot and fell upon him, badly injuring his hips. Wounded as he was, he hobbled to beadquarters on learning that fifty prisoners, guerrillas who had fought on the Spanish side, were to be executed, and begged for their lives. The petition was refused.

Enraged at the barbarity of the Cubans, Funston swore that he would never strike another blow in a cause that permitted such an outrage, and thereupon resigned his commission, having fought in twentytwo battles. With a letter from General Garcia ordering transportation to this country for him, he went to the coast and fell in with a number of Spaniards. As it didn't seem advisable to be found with papers signed by Garcia upon him, Funston ate the letter. It gave him indigestion, which, added to the malaria and the effects of his wounds, left him in a very bad condition when he landed in this city. For three weeks he was in a New York hospital, and when he came out he weighed

but ninety pounds.

Shortly after he had recovered his normal health and energy the war with Spain was begun, and he offered his services. An opportunity was given to him to go on General Miles's staff, but he chose rather to accept the appointment offered him by Governor Leedy, of Kansas, to compand the Twentieth Volunteer Infantry of that State, after he had failed of recognition in his project to raise a regiment of rough riders. It was a great disappointment to him that his regiment did not get to Cuba, but his chance came later, when they were ordered to the Philippines. In the fighting before Malolos, in the spring of 1901, he found himself with part of his command on one side of the muddy Marilao River and a force of Filipinos on the other side. The enemy had a good position and were galling our troops by their constant fire. Calling for volunteers who could swim, Colonel Funston selected twenty men, told them to follow him, and, holding his revolver up, swam the stream. The men put their guns on logs and followed, pushing the logs. On the other side the little force charged and captured eighty Filipinos. Funston was the first man to enter Malolos after the capture.

For his gallantry in crossing the Rio Grande, he received a medal of honor. That was presented "for most distinguished gallantry in action at Rio Grande de la

"Now I've got the mental punch!"

"Now I've got the intellectual wallop that knocks the kinks out of business problems. There's no more fog on my wits. I can think—and think big. And it's all because I cut out the heavy black cigars and switched to Girards!"

Girard Cigar Cigar Never pets on your nerves

It's a full-flavored, soul-satisfying Havana that never impairs your health or your efficiency.

> Why don't you switch to Girards? Puff for puff you can't beat them for pure pleasure.

All the delights of rich, aromatic, shade - grown Havana, mellowed by age and blended with care—and no penalty to pay for your pleasure.

That's why the Girard is the national cigar, sold and smoked the country over; that's why doctors recommend it; that's why you ought to switch to Girards today!

The nearest Girard dealer will tell you that this remarkable cigar is all that we claim for it. If your own dealer doesn't sell Girards ask him to get them for you. He can do so with little trouble and no financial risk.

14 sizes 10c and up

Why not switch to Girards today!

Dealersa word with you

If you are not handling Girards, there is a big business waiting for you in this unusual cigar. Drop us a line today.

Your floors—are they worthy of your home?

Well-kept floors are an essential part of the beautiful home. They provide the right setting for fine rugs and furniture, and give an air of taste and refinement.

Good varnish is the most beautiful finish a floor can have—rich, lustrous, and sanitary. Its smooth surface repels dust and dirt and is easily kept clean with a moist cloth or mop.

But be sure of good varnish. Poor varnish may look nearly as well in the beginning, but it doesn't last; it must be continually replaced.

Murphy Transparent Floor Varnish

"the varnish that lasts longest"

reveals the delicate grain and beauty of the wood and covers it with a strong protective coating that resists moisture, the wear of passing feet, and the friction of heavy furniture.

Besides this, Murphy Varnish has the one greatest virtue of fine varnish—length of life. It lasts, and lasts, and lasts. It saves money because it requires so little care and doesn't have to be replaced frequently.

Your painter or dealer can supply Murphy Transparent Floor Varnish or other Murphy finishes that protect and beautify wood surfaces.

Dougall Varnish Co., Ltd., Montreal, Canadian Associate

Pampanga, Luzon, P. I., April 27, 1899, in crossing the river on a raft and by his skill and daring enabling the general commanding to carry the enemy's intrenched position on the north bank of the river and drive him with great loss from the important strategic position of Calumpit, while serving as colonel, Twentieth Kansas Volunteer Infantry."

A few days following that exploit he was appointed a brigadier-general of volunteers. For some years the story went the rounds of the newspapers that General Funston did not swim the Bag-Bag River, because of the fact that he could not swim, and that the feat was performed by private soldiers. In 1904, to clear the matter up, General Funston gave out the

following version:

"A body of four thousand or more Filipinos, who were on the far side of the Rio Grande, had been harassing the American forces. On April 26, 1899, General Funston, accompanied by a skirmishing party, swam the Bag-Bag, a small stream about one hundred feet wide, which is a tributary to the Rio Grande. This act has been confused with and magnified into the swimming of the Rio Grande the following day, April 27, by two soldiers from the Kansas regiment, which preceded the routing of the four thousand Filipinos by forty-five American soldiers. soldiers carried a line with them with which they drew across a heavier one. To the latter a raft was fastened and drawn When forty-five soldiers and General Funston had been ferried over, the detachment routed the Filipinos."

Naturally enough, it seemed only a matter of course that when the American forces went to Vera Cruz during the trouble with Huerta, General Funston should have been given the command. He seemed a man made for such exploits, where true ability and the knowledge of when it was necessary and wise to break the rules was demanded. Of his work at the Mexican port, we are told by the New York Tribunc:

His administration of affairs in Vera Cruz, where he carried out the President's order with firm hand, simply holding the city when every influence about him was centered upon forcing the American Army into actual fighting with the Mexicans, was another notable service.

The American troops had been in possession of Vera Cruz only a few days when one of the Mexican generals sent in a message saying, in most polite terms, that he was unable to longer restrain his troops, and that they were about to advance and drive the Americans into the sea.

"If you can't hold your troops back, I can," was the laconic message Funston

sent back.

When Vera Cruz was occupied, Major-General Wood, Chief of Staff, selected Funston for the field command. Every Army officer expected that when Funston landed in Vera Cruz he would "start something."

But when Funston relieved the Navy of possession of the city he learned that President Wilson's orders were that there was to be no aggressive movement; that the Army was to watch and wait.

The pressure on the little commander can only be realized by those who were with him in Vera Cruz in those crucial hours. Thousands of Americans thronged the city and urged that the Army move on; enthusiasm for "finishing the job" was high among the younger officers. The outposts were insulted, even fired upon; American troops were kidnaped by the Mexicans, one soldier was killed and burned; the camps were raided.

Every provocation to put a fighting man to action was given, but Funston never forgot his orders, whatever his own emotions might have been. He held down the situation, and President Wilson made him a major-general.

And then at the border, where he ended his long and useful career, we find him still inspiring in his men all the affection and respect that would have been his portion had he served anywhere. And it was hard to run things smoothly along the Rio Grande, what with newspaper correspondents, and discontented citizens, and jingoes, and crafty Mexicans—and the policy of the Administration at Washington. Yet, says the New York Times, the "little gay," as he was so often called, held things in line where many a giant might have failed. We read in the account:

Among the 150,000 men who were under the command of General Funston along more than 2,000 miles of treacherous border country, and among the countless army of "gun-toting" border Texans who bowed to his command with just as much obedience as if he had had complete control of them, the department commander was never known as General Funston except in a formal way. He was known among them, as he was fittle taller than the army-height limitation of five feet four inches, as "the little man," or "the little guy."

The note of affection in the way soldiers and Texans used that name contrasted sharply with the sobriquet given him by Mexicans who feared him because of his bold methods. They called him "chiquito

Altho the General had asked Governor Ferguson when the series of raids first began to keep the Texas Rangers from the river outposts, "the little man" was admired beyond measure by the men of that organization.

Perhaps the only English correspondent who thought the border trouble important enough to command his attention met a Ranger captain in the Miller Hotel in Brownsville and immediately sought to find the attitude of the Ranger force toward the commander of the border Army.

"A remarkable person, this General Funston, they say," ventured the correspondent, "somewhat like Napoleon, small and of much the same vigor and boldness."

"Napoleon, hell!" said the Ranger captain. "France never had no general like 'our little man.' He ain't like nobody and there ain't nobody like him. Give 'chiquito diablo' fifty Rangers and send him after Villa, and he'd get something. But when they do send him after this Villa they'd better send along a chaplain and an undertaker."

Whenever there was any trouble between the civil authorities and the soldiers along the border the Texans never thought of going to the commanding general of the district.

"Send it up to 'the little man' right away." was the advice taken when there

GRATON & KNIGHT

Graton & Knight Leather Beltings are uniform—

Because Graton & Knight are the largest belt makers, because we purchase and tan 285,000 hides a year, because our brands are selected and graded to the highest degree of uniformity from this enormous supply of raw material.

Uniformity is the most important factor in belting quality. A belt, like a chain, is no better than its poorest piece.

Only a big firm like Graton & Knight could establish and maintain an equal degree of uniformity in its belting.

And Graton & Keight are the largest leather belt makers in America.

This minute control of uniformity is possible only because of our large supply of leather tanned by us for belting use. A smaller supply would prove a constant temptation to put dissimilar pieces of leather into the same belt.

Graton & Knight bides are tanned in the Criston & Knight Tannery, especially for belting purposes, by processes perfected in 53 years of belting tanuage. It would be impossible for us to maintain equal uniformity if we used several different tannages.

Finally, Graton & Knight use belies, simulders and other parts of bides not suited for belting in their by-products there is no temptation to include these in Graton & Knight Belting.

This is why toration & Knight can make a complete and standardized series of leather belting; and maintain so high and so fixed a degree of uniformity in each brand.

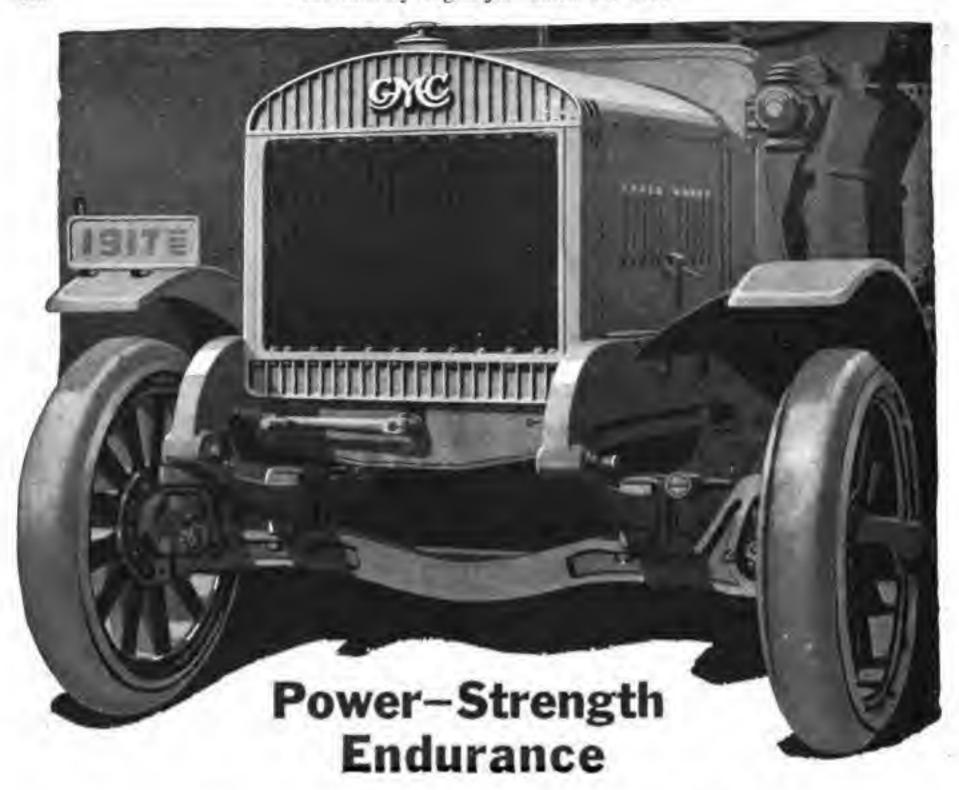

It is why Graton & Knight First Quality means first quality—absolutely free from any mixture of seconds, shoulders, or worst-

Write today for the Graton & Knight Belting Brak-or have the nearest Graton & Knight representative call on you.

Abundant reserve power—ample strength—great endurance—these are the features that have put GMC Trucks in the front ranks of the world's motor trucks.

Power and to spare—for the hard pull up steep grades—thru sand, mud and snow.

Strength in abundance—to carry the rated load with absolute safety under all road conditions—with surplus strength for emergencies. Each part is built with a factor of safety that assures long life and defers replacement.

Endurance beyond the ordinary—built to stand the hard service motor trucks in daily use must withstand to be profitable—they give years of consistent, dependable service at reasonable operating and maintenance cost.

GMC Trucks are built in all practical sizes— 1/4 to 5 ton capacity. Six sizes in all—each size better suited than all the rest for a certain class of work.

See the GMC dealer in your locality, or writeTRUCK HEADQUARTERSdirect.

was any trouble. And the commanding General of the Department, altho he had the intricate affairs of an army of 150,000 men to manage, and was forced every day to rearrange his lines and dispose troops differently, never neglected to mediate in all disputes between citizens and soldiers.

That famous order designating newspaper reporters as "pests" was not issued because Chicago newspaper men had sent in "fake" stories of a fight with Mexicans on the very outskirts of San Antonio, according to committees from the border towns who went to complain to the General about the way reporters were writing about the seourges of rattlesnakes and tarantulas and about \$1 shaves and \$2 ham and eggs. It was sent out because one man had sent in a column of matter to a New York newspaper about the "rapacity" of a soda-water dealer in reducing the size of a five-cent stein of root beer.

"That's the limit," said General Funston, himself an old newspaper man.

"Any man who thinks he's a war-correspondent and who wastes telegraph-tolls and expensive white paper in writing about root beer is a pest. I'll do some writing myself." And he dietated the order.

We learn, moreover, that the little General was widely noted for his frank way of talking to correspondents. We are told that when General Scott said that he had remained up all night, waiting to hear that General Pershing was attacked, General Funston remarked:

"I stayed up all night, too; not one night, but many. I called for soldiers and I got only men, thousands and thousands of them, but not armies. They had to be put into brigades, and divisions, and regiments one day, and unserambled and put together on paper the next day as a new batch came in. They had to be fed, and clothed, and equipped, and trained, and some of them had to be petted, but we didn't do much of that. I didn't stay up to bear the news; I stayed up with a tremendous job of getting armies down where something would happen to them, or, with luck, where something would happen to the other side."

The Times appends an amusing anecdote relating to Funston's small stature, about which he was not at all sensitive. It is said that—

When he met one newspaper correspondent who was far below his stature and far below the regulation Army size, "the little man" smiled, drew himself up to his full height of five feet four, and said:

"Well, well, you're the first man I've met down here who was smaller than I, and I'll bet \$2 I can lick you, even if you are regulation size."

When the correspondent asked if the General had the \$2 in his pocket "the little man" laughed and said:

"Yes, yes, of course. But let's sit down and talk it over first. That's sometimes the best thing to do when you can get a man who can understand you. Try to talk him out of it or tire him out by talking to him and then lick him. But when you get a man who refuses to understand, punch him on the nose fast and hard."

STABILITY is the keynote of Federal Tire construction. The exclusive Double-Cable-Base construction (four heavy, twisted steel cables built into the base of each tire) holds the tire firmly to the rim against severest service strains. It is an additional strength and safety feature which removes the causes of most tire trouble.

Federal Tires in white Rugged and black Traffik nonskid treads are recommended and sold by leading dealers everywhere.

THE FEDERAL RUBBER COMPANY (of Illinois)

Factory: Cudahy, Wis.

Mirs. of Federal Automobile Tires, Tubes and Sundries, Motorcycle, Bicycle and Carriage Tires, Rubber Heels, Fibre Soles, Horse Shoe Pads, Rubber Matting and Mechanical Rubber Goods.

The Superior Quality of Sparton Products is Recognized

No more conclusive evidence of this fact is needed than the verdict of 42 leading motor car makers who, after exhaustive competitive tests, selected Sparton Motorhorns as standard equipment.

Sparton Motorhorns are used by these high grade cars because they prove more efficient and more reliable than any other hom.

Packard Chalmers Winton Stutz Kissel Mercer Peerless Hudson White Marmon Cole Jordan Briscoe Haynes Pathfinder Owen Magnetic Jackson Marion-Handley National And 22 others

Prices \$3 to \$15

That Sparton products are accepted as standards of quality finds further demonstration in the marked success of the new Sparton Gasoline Vacuum System.

On all types of motors under the severest conditions this new Sparton Product has proved itself the most efficient device of its kind yet produced.

Sparton Radiators and Radiator Fans have convincingly demonstrated their superior worth on the great majority of America's high grade motor cars.

A DEFIANT LITTLE TOWN

TEW YORK STATE is noted for being the preserver of many of the old classic town-names of Greece and Latium-for we have Rome, Troy, Utica. Ithaca-any number of cities named for settlements long celebrated in ancient history and literature. And doubtless the inhabitants of these places feel the same pride in the names of their home-towns as that felt by those who lived and breathed in the original namesakes. One might even go so far as to say that those who call Troy, N. Y., their home feel that in every way their town is by far superior to the older city famous in the "Iliad"-at least, this is true in a Western town which boasts a name made famous by another community. The place in question is the little town of Oakland, Kansas. This locality has borne the name for many years, and now, at the behest of the greater and more prosperous Oakland, Cal., it has been presented with the request to change its name to avoid confusion. Oakland, Kan., is furious. It will not change its name, it says. It had the name for thirty years; in its youth the name sheltered it, and Oakland will protect it now.

In the New York Sun the story is told of the request of the Californians, with an editorial defense of the Kansas people. And now the Gotham paper says:

The Sun's defense of the little Oaklands against the rich and overgrown California Oakland, which schemes to rob them of their common name and birthright, is bearing fruit.

F. A. Brigham, mayor of the Kansas Oakland, thus addresses the presumptuous, grasping Oakland town of California:

"None of the present officials of Oakland, Kan., is inclined to accept your proposal of 'favorable hotel and transportation accommodations' as a price or consideration for selling the name of our municipality to your city.

"Your communications have been duly submitted to the city council of this city and they unanimously have authorized me to say that your modest request appears simply an exhibit of excessive egotism or gall on your part.

"This city has been known as Oakland for about thirty years. Of the California city most of the people at that time here had never heard."

Spoken and typewritten as a worthy representative of "bleeding Kansas." What else than such a declaration could have been expected from such a State?

But The Sun never feared for the Kansas Oakland. It was some of the others, the spiritless, cringing little Oaklands, that it felt were in peril. The danger is not past; the scheme, as an earlier correspondent said, is "well planned and monstrous," and The Sun again calls upon the friends of the weak and the enemies of monopoly to be on their guard.

And it would seem that those Pacific Coast towns, the newer and sometimes larger than their Eastern brothers of the same name, have a way of feeling their right to the sole possession of an established name. We recently had the spectacle of Salem, Ore., one of whose citizens communicated with the Mayor of Salem, Mass., requesting the latter city to change its name. The New York Erening World remarks editorially of this:

Gently but firmly refusing to change the name of Salem, Mass., at the request of Salem, Ore., which wants to be able to "advertise itself without confusion," the Mayor of the Massachusetts city writes to the manager of the Western town's

Commercial Club:

"I have heard of Salem, Ore, When your little community reaches a population of 50,000 and a valuation placing it in the same class as small Eastern cities -in short, when it reaches the size your manager's nerve has already reached-we will advise you to change your name, for there might be some confusion in having the same, and you surely wouldn't ask the venerable mother of all the Salems to change her name, even at the request of an enterprising and hustling youngster."

What's got into these Pacific Coast and river places? A little while ago Oakland. Cal., asked all other Oaklands in the country to kindly forget that name masmuch as Oakland, Cal., preferred to be the only Oakland! Eastern cities have set no such example of impudence. Has anybody heard New London, Conn., announcing that it proposed to leave off the "New," and would therefore be glad if all British towns would take the hint? Has anybody ever heard complaints from Paris, Me., that there were getting to be too many Parises, or have the citizens of Rome, N. Y., shown resentment at the frequent confusions they find in reading history?

Somebody should go out and talk to

these brash Pacific hamlets.

BACK FROM THE SOUTH POLE

THE first survivors of the recent ill-fated Shackleton expedition to the south pole have lately reached London, and their impressions on being launched into the midst of a great country at war, after more than two years of absence in a land where no news penetrated and time stood still, have been sufficiently startling to be reprinted in many an English paper. From the Manchester Guardian are culled a few notes from an interview with George Marston, one of these survivors. To him, reaching London after such an absence, he world seemed to have gone mad; humanity seemed turned topsyturvy. He sketches in his first impressions on reaching England with a masterly effectiveness, as he remarks:

At last we are steaming up the Thanes -not, as we had dreamed of doing, in our own vessel, bringing back the fruits of two years' endeavor, but in a huge iron ship crammed with frozen meat, a minute contribution to the appetite of a nation.

We sail in a world of darkness and silence, past spots where we know busy towns exist. We are challenged, examined, and passed by pugmacious, self-confident small craft. We enter docks in silence and darkness, and overhead the beams of search-lights make ever-changing patterns of light.

When you have brushed your teeth-

Your mouth-toilette is only one-half complete. The other, and more important half, is

To clean the mouth-

To clean the mouth thoroughly to keep it in such a healthy condition that disease germs cannot thrive in it-use

Dioxogen

Consider This Certain and Positive Proof of Saxon "Six" Supremacy

Let us dispense with fine phrases and seek facts.

For facts alone form a stable basis upon which to adjudge motor car values.

First of all turn your attention to the Saxon "Six" motor.

Compare it with the car of less than six cylinders that stands highest in your estimation.

Though that "less-than-six" may be developed to the full limit of its possibilities you still will find lapses between its power impulses.

These lapses you know produce the vibration and friction that are the bane of motor life. And they exert considerable injurious effect upon the parts, too.

Gear-shifting becomes more and more frequently a necessity. Acceleration slows up and pulling power lessens. Finally we see them revealed in growing repair and replacement bills. And shortly the car has reached the end of its usefulness long before it should.

On the other hand, the Saxon motor, with its six cylinders, develops a continuous flow of power. Vibration has been reduced to the minimum. Uniform torque, the ambition of all motor designers, is attained.

Take for example a certain well-known car of less than six cylinders, tested under the same prevailing conditions as Saxon "Six."

At a speed of 20 miles per hour, the Saxon "Six" motor developed 98% more impulses per minute than did the "less-than-six."

This 98% greater percentage of impulses is vitally significant.

And its significance is concretely expressed in the fact that when this "lessthan-six" and Saxon "Six" were tested for acceleration, Saxon "Six" revealed 22% faster pick-up.

Nor is it in acceleration alone that this smoother power-flow gives the advantage to Saxon "Six."

In every phase of performance Saxon "Six" must be considered supreme among cars costing less than \$1200.

Under the most drastic and gruelling conditions of public and private tests it has earned top place.

Probably you may never feel the inclination or necessity to call upon Saxon "Six" to the full limit of its speed and power.

Nevertheless it is re-assuring to know that should the time come you have the extra speed and power at your command.

On the other hand, you will probably delight many times a day in the pick-up of Saxon Six and in its greater flexibility, which relieves you of gear-shifting to an amazing extent.

Saxon "Six" is \$865; "Six"

SAXON "SIX"

A BIG TOURING CAR FOR 5 PEOPLE

SAXON MOTOR CAR CORPORATION, DETROIT

Two years ago we had left home to follow the white trail of the frozen south, to add our tiny efforts to the work which began with life on earth and is still unfinished. We left London when the declaration of war by England was imminent. On leaving our last port of call in South Georgia, we heard of Belgium's fall, of the invaders' sweep on Paris, and of their final check. The Battle of the Marne had been fought. And there for us the curtain fell.

The white lands of the south elaimed us, but nature brought our plans to nought. With our ship crusht, our gear scattered, we eventually reached land in our boats with a minute supply of food, there to lie in wet discomfort for four and a half months. Getting into touch once more with the outer world, our senses were stunned by the amazing facts we were called upon to accept. To us the world seemed mad, and we its only saue members.

While news of the daily happenings of the war was being carried to all corners of the earth by every means known to science or by the efforts of the humble runners of the outposts of civilization, we were perhaps the only human beings who were in total iguorance of the happenings of those two years. We had lived the life of primitive man, battling with nature for existence.

Politics and the innumerable small worries of civilization were for us a thing of the past. The fact that nations were fighting for their very existence was a mere shadowy thought. Our struggle with nature had readjusted our minds to the narrow outlook of our forefathers. While civilization had been led step by step to accept as natural every-day occurrences the events of the most bitter war in the world's history, our speculations had

Everything seemed new and unworldly to them, he continues. Even the advertising pages of the newspapers, as familiar as their own breakfast-plates at home, seemed to come from another time and elime. While they suggested at first glance nothing which might have occurred to break the even placidity of every-day life, nevertheless, it was a life not of the kind to which they remembered themselves as being formerly accustomed. He adds:

From the gloomy tale of the pessimist to the jaunty tale of the fatuous optimist; from the terrible array of facts and figures to the irrepressible humor from the very trenches themselves-all appeared somehow inconsistent. And during our unavoidably slow return many were the eager inquiries we made of chance acquaintances from home and many were the conflicting reports we received.

Perhaps not until entering the London docks in silence and darkness-fascinated by the search-lights as they swept neross the sky, peering behind every little cloud for lurking danger-did we realize that war was a reality, that the very clouds themselves must now be regarded as a possible

The depth of the change in the life of London dawned on us gradually. Day by day small, unfamiliar incidents multiplied until we felt strangers in our own home. By day the streets present more or less their old aspect, but the stream of traffic is thinned and the discarded hansoms and

four-wheelers have come back. Women have got the chance to show what they can do and nobly they have responded. We are filled with admiration for their obvious

The armed guards on our railways and docks; the warnings to the public in railway-carriages; the convalescent soldiers in the street; the search-lights which scan the sky; and the cheerful way in which dark, clear nights are spoken of as "good Zep weather"-all combine to overpower the home-comer with strangeness. The cheerful willingness of the people to bear greater and greater burdens, to sacrifice, one after another, treasured privileges, is wonderful when viewed from our perspective. The stress of the past two years is, we feel, responsible for the air of increased consideration everywhere in evidence. People seem now to have a bond of friendship arising from a common cause.

"TORPEDOED WITHOUT WARNING"

WHAT happens when a great liner, on her maiden voyage, hits an iceberg and sinks in half an hour was learned by the public when the Titanic went down, in 1912, and the details were received in unparalleled horror. Now, what happens when a liner, bound for a British port and loaded with contraband, is torpedoed without warning has become known through the tales of survivors of the steamer Laconia, recently submarined off the Irish coast. How the yessel slowly settled, how the passengers were hastily bundled into open hoats, where they floated for hours so exposed to the weather that three of them are known to have died, is the burthen of all narratives received after the life-boats began to make land.

Particularly heartrending are two instances retold by survivors concerning the deaths of three passengers who succumbed to exposure in open boats. Mrs. Mary Hoy and her daughter, of Chicago, were in their rooms in light apparel when the steamer was hit, but rushed immediately to the deek. The life-boat in which they were put soon became half filled with iev water, and shock proved too much for the elder woman. In the New York Tribune the account continues in the words of a survivor:

"Mrs. Hoy died in the arms of her daughter. Her body slipt off into the sea out of her daughter's weakened arms. The heart-broken daughter succumbed a few minutes afterward, and her body fell over the side of the boat as we were tossed by the huge waves.

"In icy water up to her knees for two hours, the daughter all the time bravely supported her aged mother, uttering words of encouragement to her. From the start both were violently seasiek, which, coupled

with the cold and exposure, gradually wore down their strength. They were brave

"The first to die in our boat was W. Irvine Robinson, of Toronto. After his body had been consigned to the sea we tossed about for an hour, getting more

That Yearning for the Right Pipe Tobacco

When you see a man fill his pipe from a tin or package of unfamiliar color or design, do you wonder if he has found the right tobacco?

Are you convinced that some men enjoy their pipes more than you do yours?

Are you willing to believe that there is a tobacco on the market that you might like better than the kind you bought last time?

You haven't "tried them all," you know, Unless you are in the tobacco business, you probably couldn't guess within a thousand of the number of brands of tobacco manufactured in America.

So there's a big chance that you are still yearning for the pipe tobacco that is just what you like.

Maybe it's Edgeworth.

MICH SERVE

PLUG SLICE

We don't know, but we will make it possible for you to find out, by sending you a sample free, if you will just signify that you are willing to try it.

> Your name and address en a post card, together wish the name and address of a tobacco store you sometimes patronize, will bring you a generous sam-ple of Edgeworth Smoking Tobacco, free and post-paid. Edgeworth is put

up in Plug Slice and Ready-Rubbed. The form-they are the same tobacco. Edgeworth is

worked up from the properly aged tobacco leaf, put through a drying and "ordering" proc-

ess and under enormous pressure made into flat cakes or plugs. These plugs are then placed under keen, thin blades that slice them into oblong slices. In this form they are sold as Plug Slice. Edgeworth Plug Slice comes to you wrapped in gold foil, in flat blue tins, and the one-to-a-pipeful slices are prepared for the pipe by rubbing the slice in the hand until it is broken into small bits,

Edgeworth Ready-Rubbed is ready for the pipe rubbed up in special machines before packing.

You may sample either the Plug Slice or the Ready-Rubbed, and if you wish to try both, we will send both, free and postpaid.

If you have never tried Edgeworth, you will never have a more (avorable opportunity.

When we start to describe its mellowness, or its flavors, our words have a more or less empty sound and we prefer simply to invite you to try it.

The retail prices of Edgeworth Ready-Rubbed are 10c for pocket size tin, 25c and 50c, for large tins, \$1.00 for humidor tin. Edgeworth Plug Slice is 15c, 25c, 50c and \$1.00. It is on sale practically everywhere. Mailed prepaid where no dealer can supply.

If you will accept the proffer of the samples, write to Larus & Brother Co., 5 South 21st Street, Richmond, Va.

To Retail Tobacco Merchants—If your jobber cannot supply Edgeworth, Larus & Brother Co. will gladly send you a one or two dozen carton of any size of the Plug Slice or Ready-Rubbed by prepaid parcel post at cam: price you would pay jobber.

Everybody's Flower Garden

Desis with toses, lawns, carnations, pinks, severt pear, dabiliar, shrubs, insert friends and peats, etc., and bundred's of other things. Profusely illustrated with designs, diagrams, and half-times 151 pages, cloth, 75c net; by mail, 85c.

FUNK & WAGNALLS COMPANY, 354 Fourth Avenue, New York

FUNE & WACHALLS COMPANY, 154-300 Funch Avenue, New York

and more water until the gunwales were almost level with the sea.

"Then Mr. Ivatt, who was not physically strong, succumbed in the arms of his fiancée, who was close beside him, trying in vain to keep him warm by throwing her wealth of hair about his neck. Even after he died she refused to give him up, and altho the additional weight made the situation more dangerous for us all we yielded to her pitiful pleading and allowed her to keep the body. It was taken aboard the rescuing patrol, from which it was buried. The burial aboard the patrol, at which I officiated, was a solemn and memorable ceremony.

"The Hoys were the next to pass away after Mr. Ivatt. Then a fireman died, and later two others of the crew who were too thinly clad to resist exposure. Altogether we were in the boat ten hours. We were rescued in the middle of the morning."

The Laconia was torpedoed at about ten thirty in the evening, after a search-light had suddenly been flashed on her stern by the roving submarine, apparently for the purpose of identifying the vessel. In the New York Times a vividly pictorial account is given of the scenes which attended the sinking, and we read:

The last dinner of the voyage was over and some of the women had already turned in and were actually in bed. In the smoke-room men were playing auction bridge. Half a dozen children were romping in the saloon. The Lacenia was showing no lights and keeping a sharp lookout.

Immediately following a glimpse of uninterrupted moonlight at about 9:15 o'clock the first torpedo crashed into the liner, hitting her well aft. There was no sign of the attacker and nobody even saw the shark-fin wake of the torpedo on its journey. The ship shivered under the blow, Everybody felt it and knew what had happened, but there was not the slightest panie on board.

Captain Irvine instantly ordered the turning on of every light in the ship, and in half a dozen seconds the vessel was ablaze with electricity. The familiar boatdrill, practised zealously every day by all on board, was repeated all over again as if it were a drill and no more. All the boats, fully equipped and provisioned, were swung out. As the ship began to settle down, the women and children were taken off first, and the rest of the passengers followed.

A quarter of an hour after the ship had been struck she had listed heavily to starboard. Then, as the water-tight bulkheads on the port side began to fill, she slowly righted herself and lay on an even keel once more.

The Laconia was sinking, but so slowly that the murderous U-boat, watching near by, bobbed up again close alongside and let fly another torpedo. Far amidships it crashed into the engine-room, and that was the end of the Laconia.

The Rev. Joseph Waring, of New York, was in an officer's stateroom when the vessel was hit, and realizing the peril in which they were, he rushed at once to put on a lifepreserver. After adjusting it, he proceeded to the deck. We read then in his words:

"I went to Lifeboat 9, which was the

boat allotted to me during boat - drill. There was some confusion owing to a number of electric lights having been extinguished by the explosion, but on the whole the passengers were calm and collected. When the men passengers were getting into the boat they were told not to, as there were women standing by. The women and their friend, a young man, were got into the boat at once. I and others followed them. The boat was then lowered away, but the tackles jammed and left it hanging at a very dangerous angle. Dr. Kennedy cut the rope and it went safely into the water. A similar difficulty arose in Lifeboat 7. It was in danger of fouling our boat. Dr. Kennedy again saved the situation by swinging a rope aside, and Life-boat 7 was launched safely."

Father Waring added that one accident occurred by which a boat got smashed in and some of those in her must have been severely injured or killed. The night was very dark, which rendered it difficult for him to see what was taking place all around him, but he did see the ship struck by a second torpedo, which soon made it apparent that the Lacenia had no chance of floating, and she disappeared stern first. The boats kept pretty well together, but some fell in with patrol-boats before others.

Sewell H. Gregory, an English saloonpassenger, said that altho darkness had set in when the ship was struck, perfect order

was maintained aboard.

"I was in the lounge at the time," he said, "and with many other passengers made my way to the hoat-deek. When the torpedo struck the ship she took a list to starboard, then righted herself, and all the boats were got out. The officers were splendid. When the boats were clear of the ship we heard the explosion of a second torpedo. I distinctly saw the vessel list over. Almost half an hour clapsed between the first and second explosions, It was the second that settled the fate of the Laconia, and she sank by the head. After being in the boat for six hours we were picked up by a patrol-boat."

Mrs. Mills, of Toronto, who was a saloon-passenger, said her experience was a terrible one, but the way the officers and crew behaved was most admirable. At Mrs. Mills's remark, a man present said: "Yes, and take it from me none aboard were more splendid than the ladies. They set an example to all of us." Mrs. Mills laughingly commented: "The ladies were good. We were all in the dining-room and knew instantly what had happened." They had had boat-drills aboard several times and

knew perfectly well what to do.

From another passenger, J. F. Fotheringham, of Sydney, Australia, we learn:

"I happened to be in the smoke-room at the time playing eards with a few friends. I immediately went on deck and was taken by an officer to a boat in which were twenty-one others. The boat was let down too quickly, and I called out to those aboard, but they continued to lower us down rapidly, with the result that the side of our boat came in contact with the Laconia, and four or five feet of our little craft was broken in.

"When we reached the water the seacame in over the gunwale, but I got an oar and pushed off about six feet. We were then able to use the oars, but we were full of water. All the other life-boats were able to use their lights, but, tho we tried several

The New Oliver Nine How We Will Save American **Business Millions of Dollars** The New Plans of The Oliver Typewriter Company

This is a proposal to sell new Oliver Typewriters for half what they used to cost. New machines of our latest model-Oliver Nine. That without altering the value one penny. All by ending a monstrous selling cost. If that interests you, we claim a few minutes' attention.

spent for salaries, traveling expenses, and

commissions to an army of salesmen and

Thousands of dollars have been spent in

Our new plan now saves all this useless

waste and brings the typewriter business

maintaining expensive branch houses and

show rooms in many cities.

down to a rock bottom basis.

WE now propose to revolutionize the typewriter business.

This is the time when American indostries must prepare for the end of the war. New economic adjustments are inevitable.

So we announce here what The Oliver Typewriter Company proposes to do.

Henceforth there will be no expensive sales force of 15,000 salesmen and agents. No high office rents in 50 cities. No idle stocks.

PRICES CUT IN TWO

By eliminating these terrific and mounting expenses, we will reduce the price of the Oliver Nine from the standard level of \$100 to \$49.

This means that you will save \$51 per machine. This plan, were it to become universal, would save all who buy typewriters over \$100,000,000 a year.

This is not philanthropy on our part. While our plan saves you much, it also saves for us.

There is nothing more wasteful in the whole realm of business than our old ways of selling typewriters. Who wants to continue them? Wouldn't you rather pocket 50 per cent for yourself?

THE SITUATION

On each Oliver Typewriter for which the user paid \$100, more than half has been

of efficiency. The Oliver Typewriter Company is more

presperous today than ever before - the present Oliver Nine is the most popular model ever made. So we propose to make this change at the height of our success.

Our new plan, we know, will win. People are prepared for new economic adjustments.

It beralds a standard typewriter at a price never before possible.

WHO CAN RESIST?

Now note this fact carefully. We offer the very same Oliver Nine - the latest model - brand new - full standard equipment - for \$19, the exact one which was \$100 until this advertisement. Oliver Typewriter is fully guaranteed.

This is the first time in history that a new, standard \$100 typewriter has been offered for \$49. We do not offer a substitute machine -cheaper, different, or rebuilt. Only new Oliver Nines, direct from the factory to you.

You may have one of these Oliver Nines for inspection without paying a cent. You decide in the privacy of your office or your home. There will be no forceful salesman - working for a commission - to influence you.

Then you may take advantage of our monthly payment plan amounting to 10 cents a day.

NEW CONDITIONS

Up to now it has cost manufacturers a great deal to educate people to universal typewriting. But that period is past. Large, expensive sales forces are no longer needed.

The time has come when everybody may use a typewriter-not merely experts.

The growth of the Oliver business and the greater use of typewriters give us the opportunity to revolt from old methods.

BUSINESS MUST HEED

You have read of after-war industrial conditions. You have probably read the warnings of such men as Judge Gary of the U. S. Steel Corporation and President Vanderlip of the National City Bank, that American business must reach new planes

Thousands will welcome this announcement.

WHAT DO YOU SAY?

Now, we ask you, is the old sales plan necessary? Must we turn over to salesmen more than half of what you pay? Must we continue, at your cost, all of the unnecessary expenses? Or would you rather have us save \$51 and give the whole saving Do Soul

Read all of the details on the opposite page. Then order an Oliver Nine for free trial or send for our startling book, entitled "The High Cost of Typewriters - The Reason and The Remedy." Mail the composi-

Famous the World Over

Was \$100-Now \$49

A \$2,000,000 Guarantee That This .\$49 Typewriter Was \$100 The Sales Policy Alone Is Changed—Not the Machine

The Oliver Nine—the latest and best model—will be sent direct from the factory to you upon approval. Five days' free trial. No money down—no C. O. D. No salesmen to influence you. Be your own salesman and save \$51. Over a year to pay. Mail the coupon now.

THE Oliver Typewriter Company gives this guarantee; the Oliver Nine we now sell direct is the exact machine —our latest and best model—which until this advertisement was \$100.

This announcement deals only with a change in sales policy.

The Oliver Typewriter Company is at the height of its success. With its huge financial resources it has determined to place the typewriter industry on a different basis. This, you admit, is in harmony with the economic trend of the times.

For \$49, whether you buy one Oliver Nine or one hundred, you receive the exact machine which was \$100, fully guaranteed.

THE LATEST MODEL

This Oliver Nine is a twenty-year development. It is the finest, the costliest, the most successful model that we have ever built.

More than that, it is the best typewriter, in fifty ways, that anybody ever turned out. If any typewriter in the world is worth \$100, it is this Oliver Nine.

It is the same commercial machine purchased by the United States Steel Corporation, the Standard Oil Company, the National City Bank of New York, Montgomery Ward & Co., the National Biscuit Company, the Pennsylvania Railroad and other leading businesses. Over 600,000 are in daily use,

SIMPLIFIED SELLING

Our new plan is extremely simple. It is in accord with the tendency of the times.

It makes it possible for the consumer to deal direct with the producer.

You may order from this advertisement by using the coupon below.

We don't ask a penny down on deposit-

When the typewriter arrives, put it to every test—use it as you would your own. If you decide to keep it, you have more than a year to pay for it. Our terms are \$3.00 per month.

Or if you wish additional information, write us or send your address on this coupon for our proposition in detail. We immediately mail you our de luxe catalog and all information which you would otherwise obtain from a typewriter salesman.

10 CENTS A DAY

In making our terms of \$3.00 a month the equivalent of 10 cents a day—we make it possible for everyone to own a typewriter. To own it for 50 per cent less than any other standard machine.

To the Big User

This announcement is of particular value to you. Big users will save hundreds and thousands of dollars. An absolutely new Model 9 Oliver Typewriter, fully guaranteed, at a list price of \$49, presents an opportunity unparalleled in the history of the industry. To save 50 per cent is certainly interesting to any business man, especially when the value remains unaltered. You know the Oliver. This present Model 9 is operated by any stenographer or typist, including touch operators.

We suggest to purchasing agents or buyers whose concerns use typewriters in quantity to get in touch with us immediately. Write today for further particulars relating to large users.

This Coupon Is Worth \$51

Regardless of price, do not spend one cent upon any typewriter—whether new, second hand or rebuilt—do not even rent a machine until you have investigated thoroughly our proposition.

Remember, we offer here one of the most durable, one of the greatest, one of the most successful typewriters ever built. If anyone ever builds a better, it will be Oliver.

WHY PAY \$100?

Why now pay the extra tax of \$51 when you may obtain a brand new Oliver Nine a world favorite—for \$49?

As a user, why not revolt? Just as we have revolted from frenzied competition.

Cut out the frills and order direct from this advertisement.

Or send for our remarkable book entitled, "The High Cost of Typewriters— The Reason and The Remedy." You will not be placed under the slightest obligation.

Send today for your Oliver Nine or for further facts — many of which can't be printed here. Check the coupon below and mail today.

MONROE REFRIGERATOR COMPANY LOCKLAND, ONIO

times, we were not able to use ours. At times the sea washed over us almost up to our chests. Every wave pitched us about. It was a horrible experience.

Six persons died in our boat and one member of the crew threw himself over the side, owing to the awful tortures we were enduring. Three of the dead were women. A negro, after showing signs of distress, died within an hour. We had to throw the body overboard to lighten the weight of the boat. The same thing occurred when the others died. But this presented another difficulty. In the boat there were two large water-tight compartments, fore and aft, and four small ones in the center. Owing to the damage to our craft at the start, those in the center, with no weight now to keep them down, were forced up, and the water rushed in on us.

"There was a French lady in the boat whose name I think was Siklosi. She was crossing to appear at the Ambassador Theater in London. She was a plucky little lady, but how she went through what she did is marvelous. Her cousin, I think he was, who was with us in the boat, died from exposure, but she did not believe he was dead, and got me to place an oar between the seats on which we stretched him. I knew he was dead, but had not the heart to throw him overboard.

"During the night we saw a ship's light in quite near to us. We shouted with all our might, but it was of no use. At dawn we saw a vessel far off from us. We shouted again and again, and then I got an our and tied a white garment to it. They sent up a rocket to signal they had seen us. We could not have lasted another half hour. We had been almost eight hours in the boat.

"The submarine gave not the slightest warning. Her first torpedo struck us behind the engine-room. Just after we got away from the ship they fired another.

Dr. F. Dunstan Sargent, a missionary on the way to assume duties as a chaplain in France, adds to the details of the disaster, recounting:

"There were four women, including Mrs. Hoy and her daughter, who both died from exposure, and had to be thrown overboard in order to lighten the weight in the boat. It was very sad and hurt us terribly, but there was nothing else to do if those in the boat were to be saved.

"Our trouble began when we selected the boat we did. We had been told by the officers that if the ship listed we were to go in the boats on the side toward which the list was. We did not notice any list in the Laconia, and when we were being sent down we found the side of our boat was being erushed against the vessel's side. I shouted out to those on deck, but they did not hear me. Not that there was any confusion aboard, but the noise was deafening, and it was impossible to hear anything. When we were about six feet from the water the men at the ropes stopt lowering us, and we shouted to them to let us down. A man at the fore davit suddenly let go, so our boat plunged into the water by the head, with our stern six feet in the air. We were nearly thrown into the water. We again called out to the man at the other davit to lower away, and he did so.

"The oars were tied up and I freed some of them by cutting the ropes with a penknife, but we then found it impossible to use them, as the hoat was full of water.

THE STANDARD DICTIONARY IS needed in story me where education and culture are truly refermed.

How Long Will You Live?

This is a supremely important question, the answer to which depends, in the main, on your manner of living.

HOW TO LIVE

by Professor Irving Fisher and Eugene Lyman Fisk, M.D., of the Life Extension Institute, with a foreword by William Howard Taft, points out the way to rational living along modern scientific lines. It is a great book that will add years to your life if faithfully followed. Boy it and study it, and your days will be long in the land.

Dr. A. T. McCormack, Secretary of the State Board of Health of Kentucky, HAS JUST BOUGHT TWELVE COPIES.

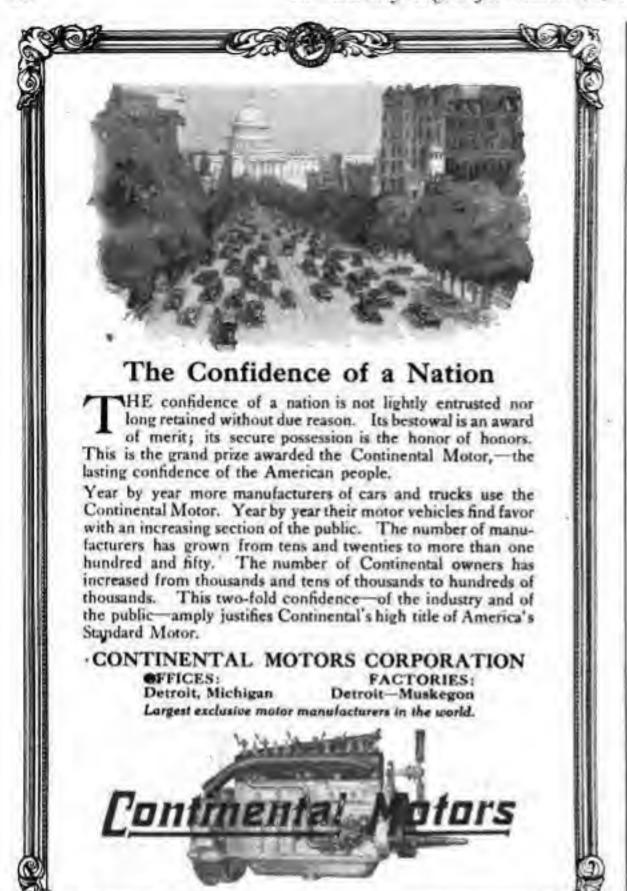

In giving his order he writes: "Will you be kind enough to send twelve copies of your new book, "How to Live," one to each member of the Board?

Every man and roman in the United States who desires to be healthy and to live long, should be familiar with its contents." Here is an expert's advice. Can YOU afford to ignore it?

I saw that the position was most dangerons and that we ran great risk of being swept down by the Laconia, so gave orders to the men to push off from the side of the vessel. We got clear and then we became separated from the other boats. To add to our difficulty, the man with the electric torch was swept overboard during the night. so we were left without light.

"During the night I saw some of the other boats and thought of swimming toward one of them, but I had seen one of our men swept overboard. He was a fine swimmer, but the sea took him away as if he were cork. The waves continually broke in on us. Seven persons died in our boat. It was a frightful experience for the women, and they were absolutely demoralized with fear, and little wonder, considering our dreadful position. I am firmly of the belief that we could not have kept affoat another twenty-five minutes."

Father Sargent's feet and hands are considerably swollen from the exposure.

We also learn of a thrilling nocturnal colloquy with an officer of the submarine, after the vessel was on her way down and the fragile boats were scattered over the waves. The Times relates:

All the boats were well out of range of the maelstrom as she went down. Round about in the flickering moonlight the little fleet of life-boats lay rocking on the swell, their passengers watching her last struggles. every soul silent and tense with emotion.

Boat 15 was standing by with women passengers of the second class on board and a full complement of sixty persons all told. Suddenly, right under her bows, rose the submarine once more, as a long eloak of cloud trailed across the moon and darkened the sea.

"We could only see the beast dimly." said one of the women, "but it was a huge, black shape, dwarfing us and drenching us as it rose. We could make out two guns on board, and big guns they were, too.

"Standing by, on the platform by the periscope, were two or three men, and one of them, who said he was commander, spoke to us in a very soft voice. His English was quite good, but guttural.

"What is the name of your ship, her tonnage and her cargo?" he said.

"Somebody near me said: 'Don't tell the murderer anything; let's just sing "Rule, Britannia," at him and defy him to do his worst.' But the steward in charge of the boat wisely said: 'No, we had better not do that. We are entirely in his hands, and the best thing to do is to answer his questions.' Then he sang out:

"'I want to tell you first that we have got women and children on board, in case you're thinking of sending us down as well as our ship.

"The commander of the submarine then said: 'What's become of your captain and where is he? I want him, Is he on board that boat?

"Somebody replied that the captain of the British ship was doing his duty in the place where a British captain would always be found. To this the submarine commander could find no suitable reply. and after other questions he had asked had been answered he said no more beyoud informing the crew of one boat that a vessel would be on the scene to pick them up.

"'Good-night,' said he, and then he

You'll know what Hot Water Service really is when you get a RUUD

Can you imagine anything that would add more to the convenience of your home than to have all the piping hot water you wanted ready whenever you turned any hot-water fancet?

The Ruud Automatic Gas Water Heater gives you service of exactly that sort.

The Ruud goes in the basement, or some other convenient place, and operates enrively by the opening and closing of your hot-water faucers. Every bit of bother is done away with.

So for as you are concerned, you simply turn on any hot-water faucet in the houseat any time- and hot water gushes forth until you turn the faucet off again.

AUTOMATIC GAS WATER HEATER

"Hot Water All Over the House"

The Road is really same in its operation. The flow of water when you open a laurer automatically hirst on the gas in the heater. The gas ignibes from a tiny polor light and innually hears the water as a passes through a copper hearing cod. The water ramon get too hot, for a temperature regulator in the heater keeps the gas supply down to how what is needed. Turning off the water thats off the go - antil you want but water spain.

Thus, the Kurd hours gas only when you are deaving hot water, and then only strongs to hear the exact quartity you me - no more or less. Yet it gives you continued but water service without the expense or brundle of keeping a fire gring all the time. The Road is the efficient, the economical way of supplying ever-reals not water to every home where gas is available;

FROM CIGARS TO THE OPERA

'HIS may sound like the synopsis of events after dinner in some metropolitan home, but it really represents the greater part of the lives of two famous public figures. There seems to be some strange affinity between the production of eigars and the production of opera. Two of the greatest operatic impresarios America has known started their business eareers in tobacco-factories. There was Osear Hammerstein, who came to this country as a youth and found his first employment, if tradition be eredited, in a eigar-maker's in New York. Then, after a spectacular career as a theatrical manager, he invented a cigar-making machine that made him rich, and with the proceeds he became the first successful producer of highclass opera without a coterio of backers to stand the shock of failure.

His speecesor, necording to the St. Louis Past Dispatch, is Max Rabinoff, who has put the Boston National Grand Opera Company on firm feet, carried a troups of stars through the country, produced novelties, and cleared expenses withal, And Rabinoff, too, started, when he first came to America, in a Western eigar-factory. He came from Russia as a child, cager for a musical career, but lacking the necessary connections for introductions and the necessary money for study. To-day, the still under forty, he stands on the record of having brought grand opera to scores of cities which had never known it before. We are told:

Facts rush in where fletion fears to

Max Rabinoff came to America when he was but thirteen years of age. He had studied three years in a Moscow gymnasium. His father was a criminal-court attorney and hoped that his son would be content to follow him. But the heart of Max was set upon America and opportunity. He wasn't exactly sure in detail just what he wanted to do; but he wanted to "do things," and America, he was sure, was the place where things are done. He had a passion for music, but that could wait. It was America first for Max.

They told him America was full of immigrants who came here with high hopes and were working like slaves for a bare living. He knew it was true. For two years he read everything he could find about America. Then he decided that he would rather work like a slave in a free country than to have things easy in a country where his hands were tied.

Tobacco-stripping was his first job when he finally landed in northwest Chicago. It lasted only three weeks, but before then Max had registered in night-school. Then he met a compatriot in the upholstery

LEWIS MANUFACTURING COMPANY Dept. 377 Jours Bear House Bay City, Mich. business who asked him to come over to the factory and learn mattress-making. He went. He joined the Knights of Labor. Soon he was getting a man's wages. In a few years he was making forty dollars a week. Then he quit his job.

So far he had paralleled the lives of a good many other successful immigrants. But if he hadn't been wise enough to be foolish at this particular stage the world would never have heard of Max Rabinoff. He quit his job in order to enter the University of Illinois. He had saved almost forty dollars a week for a definite purpose. To take a musical course? By no means. Young Rabinoff wanted with the greatest yearning to become a great musician. But he wasn't in a hurry about becoming a musical graduate. He studied analytical chemistry. He studied music hard, wherever he had the chance. But he studied America harder yet. And one of the worst things about aspiring musicians in America, he discovered, is their habit of starving to death. Analytical chemists don't have to do that. Mattress-makers don't, either; but that was different. One can't study music in a mattress-factory.

During vacation Max made love to the piano, studying harmony and counterpoint under Hans Van Schiller. He had no piano of his own, so he went to the Chicago warerooms of a big Western piano company. He said he wanted to practise—said it in the Rabinoff way, the way in which he had told his father he wanted to come to America. There was no turning

him away.

"Who is making that good music?" asked the head of the piano firm, as he happened into the warerooms. He was told about the unusual Russian boy, and sent for him. He learned to his surprize that Max was not a down-and-out genius.

"I have money in the bank," Max informed him with a happy laugh. "And when that's gone I'll get some more. But I don't want to leave this artistic atmosphere until I have to."

"How would you like to do some collecting for us?"

This, we learn, seemed to be his chance. While he had previously been getting forty dollars a week at an uncongenial position, he was now earning eight dollars a week, with atmosphere. Atmosphere meant a great deal to him, and Rabinoff was willing to chance it. He realized that sporting blood was not always a heritage of the Briton, or his cousin, the American. The account continues:

As he advanced to the position of piano salesman his income grew astonishingly. So did the atmosphere. One day he sold two pianos, and before the week was out he had sold six. In a few months his sales in the Jewish and Polish districts of Chicago astonished the management. They gave him a free hand. He became the "high" salesman of the concern. The record he made still stands.

The fairy's wand was evidently getting in its work, and young Rabmoff meanwhile followed his original plan. Whenever he saw several good openings ahead, he took them all. In this case, at least, art did not make war upon common sense. Music didn't interfere with business, and business was giving music its glorious chance.

He induced the company to establish

foreign branches, and he was selected to install them. He now knew English, Russian, Polish, Bohemian, German, French, and Lithuanian. He seldom discovered a person with whom he could not converse. He became head of the foreign trade department and of the advertising department. As these two jobs were hardly enough to keep him busy, he established a mail-order department.

More important still, Max Rabinoff took charge of many of the musical recitals conducted under the auspices of the firm. It was here that the real meaning of the fairy's words first became clear. He had heard them whispered in his ear since childhood, but not until now did he

understand.

"I am going to be a manager," he said.

And he quit his job again.

He started by giving Chicago a remarkable series of Sunday concerts in the Auditorium. He introduced, for the first time in Western America, some of the world's most brilliant stars. Luisa Tetrazzini was one. There were many others. Chicago musicians gasped, but the public did not respond at once with the enthusiasm for which Rabinoff had hoped. Instead of becoming discouraged, he went to work on a still higger idea to give Chicago its own permanent grand opera company. It is not generally known that it was Max Rabinoff who first brought the project to the attention of the foremost citizens of Chicago.

It is not generally known that he secured pledges for a guaranty fund and negotiated the deal which brought Oscar Hammerstein to Cook County in 1909. But these are the facts. Rabinoff stept aside from the post of managing director of the Chicago Opera Company at its formation because he felt that he needed more experience. He stept aside and went to Paris. There he saw the incomparable Anna Pavlowa and Mikail Mordkin. After Otto H. Kahn had made it possible for them to come to America, Rabinoff became their managing director. He has directed all the subsequent American tours of Paylowa and her Ballet Russe.

When the Republic of Mexico, in the last days of the Diaz Administration, wanted to celebrate its centennial with a season of superlative opera, Rabinoff became the man of the hour. Rather, he was the man of forty-eight hours. On July 12 he asked for two days to decide whether he could put on a season of opera, opening September 2,

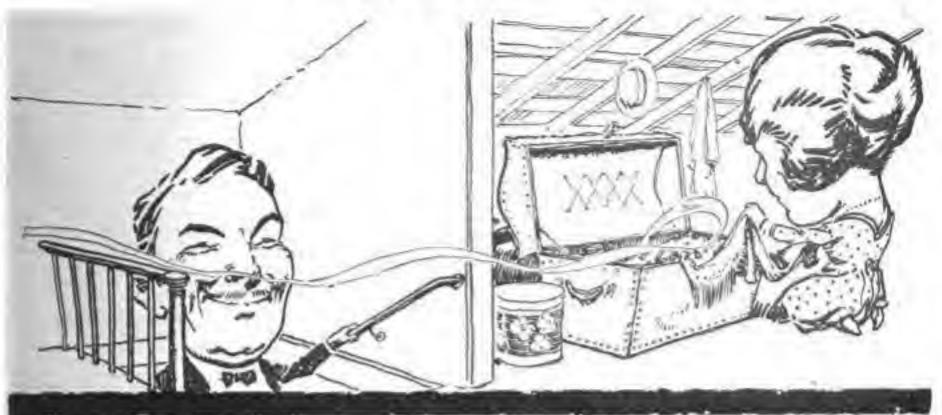

In that forty-eight bours he covered the world with his cables. Then he answered yes. The scenery and costumes of the Metropolitan Opera Company were secured. The staff of the same company was engaged. Two steamers were chartered, one for the effects and one for the company. Rehearsals were held en route. A great theater was remodeled. The season opened on September 2, according to promise. In twenty-three days, twenty-six performances of seventeen different operas were given—performances of the highest quality.

Last of all, Rabinoff brought together the forces of the old Boston Opera Company, purchased all its physical property, and combined the organization with the Pavlowa Ballet Russe. The first tour was the longest grand opera tour on record. But even that has yielded in importance to the second-year tour of the great traveling opera company.

BANDITS IN MANCHURIA

WHEN the Russo-Japanese War broke out in 1904, the greater part of the world knew of Manchuria as a vague, indefinite quarter of the earth peopled with mixed Chinese and Russian settlers, with a slight leaven of Japanese—just enough to create friction. Then, later on, from the war-dispatches and from the camera, we learned much about the country, its people and ways, so that, if the war did nothing else, it taught the world a little of what lay across there in that corner of unknown Asia.

But all the dispatches and figurents of the war-correspondents could afford no such picture of the great peninsula as Mrs. Alice Tisdale gives in a recent issue of The Atlantic Monthly, in her narration of experiences traveling about through the three northern Manchurian provinces. With her husband, whose work took him into the inland, she saw the greater part of the province, its strange ways, its problems, and the weight of circumstances under which it labored. Manchuria in 1916 is little better off than Manchuria in 1904. It has progressed very slowly, in spite of the tremendous rise in its trade, and the influx of visitors after the world awakened to its possibilities when the war closed.

We are introduced to this strange land by way of the author's quarters, in her bushand's office. She writes:

I am sitting in the quaint little office of our company in Harbin, the last important city in China before one steps over into Siberia. Personally, I should find it hard to think of facts and figures in an office which has for its outlook a curved tile roof, with curious gargoyles and dragons holding on to the ridge-pole. It all tempts my fancy away to fairies, goblins, and such folk.

To-morrow we leave them behind, for we are going to start for one of the real outposts of the world—even of Manchuria, which is an outpost itself.

From Harbin we go a day's journey up the Sungari River to Hulan, where we drop all outside communications; then, by native eart, we travel due north to Peilintzu, and on to Hailun over the great northern plain of Manchuria.

There is more than one experience to be met with on this journey, but Mrs. Tisdale prefers to dwell at length on the bandits. For, unlike most of the world which is frequented by travelers and business agents, this country possesses a redoubtable corps of freebooters, unexcelled by like products from any other nation. As the author puts it:

In the early fall in Manchuria, the natives undergo a sort of magic change from farmer to bandit. It seems something of a psychological somersault—one day a plodding farmer, the next a highwayman. After the tail kuoliang, or giant millet, is cut, and escape is not so easy over the bare plains, another

FINE TREES

YOU who love trees for their beauty will want the new ornamental tree and shrub book published by the Andorra Nurseries.

"Suggestions for Effective Planting" tells what trees are best adapted for each garden and landscape purpose. To read it is like discussing with an experienced gardener what your place needs. The book is free. Send your request to Box 190,

clap of the hands and, lo, a peaceful farmer once more! It is not only the farmer who plays this exciting game; many another staid member of the community has his little fling. Some even combine their rôles, differentiating according to the seasons. With the Oriental's disregard for conditions, a man is often bandit, merchant, and magistrate all at once.

The bandits are almost as old as the country itself. Long ago they disguised themselves with red beards, in consequence of which they have been called hung-hu-tzu—red-beards—ever since. Once they were orderly, trustworthy souls, taking only their "just toll," insuring ships, and carts, and men, and robbing only those who were too penurious, or possibly too independent, to pay the exemption fee.

After extensive preparations, principally confined, it must be admitted, to cutting the portable baggage to a minimum, they organized the cavaleade for departure. Food in limited quantities was carried, for there are few places anywhere in China where the farmers are not hospitable to the extent of being willing to sell some of their produce at a good price, and, as Mrs. Tisdale notes, no matter how far afield you may wander, you never get beyond the territory of the teacup. Tea is always to be had. She takes up the narrative again:

We left Harbin this morning on a little stern-wheel paddle-boat. To-night we are in Hulan. The boat harbored all sorts and conditions of men: Russian peasants, Chinese frontiersmen, strange, nomadic people, all journeying away from the confines of civilization. All day the boat, with its strange mixed load, paddled toward Hulanho. The banks, high as our heads, shut us in to the speculation of the erouehing men, who filled every crack and erevice without regard to comfort. Those Russians-were they, perhaps, escaped exiles? Those squatting Chinese, silent and enigmatie-were they, any of them. members of the brigand bands that infested the region? Those nomads-like us, did they feel a restless spirit within, calling them to new country? Never had my fellow man seemed more interesting, more unfathomable. Why were we all there, and whither were we going? The inscrutable faces of the oriental throng gave back no answer; neither did the inscrutable, deep-blue sky full of marvelously white Manchurian clouds. Each man's secret remained his own, but the splendid sun shone over us all as we pushed slowly up the shallow river between the high banks.

Further along, they took to the roadway, with the horses, and followed the trail through numerous scattered villages where travelers, save on business, were a rarity. The villages, we learn, were much the same, each a sleepy little place filled with loafing farmers from the near-by fields, or busy women washing their clothes in the public watering-places. Every wayside shrine held a smoking pot of incense to betoken the extra enthusiastic worship of the gods at harvest-time. The tale continues:

At last, the morning with its simple

scenes had slipt away, and we stopt to eat at the side of the way. It was the usual inn-one long room with the two kangs, or brick platforms, running parallel down the longer sides, and the rafters blackened with the smoke from the braziers. It was cool and empty just then, so we sat cross-legged on one of the kangs, eating our tiffin of coffee and eggs from the low kang table, polished and black with the feastings of travelers unnumbered. As our "boy" came and went, lifting the bamboo curtain at the door, we caught glimpses of the heated, glimmering air of noon. Over the inn court there was now no bustle of leave-taking; everything drowsed in the noonday. Stretching ourselves on the matting on the kang. in untutored simplicity, we, too, slept. We wake at last, feeling the hard brick beneath us. It was mid-afternoon!

"Boy! boy!" we called, tumbling off the kang. (When in trouble in China, always call the boy.) "You no belong proper boy. You have sleepee. Plenty piecie hung-hu-tzu kill two gentlemen. night-time no have catchee place sleep,' (When you wish to vent your anger in China, vent it on the boy; that is partially why you have him-to be the scapegoat.) In answer to our wrath, the boy sat up sleepily. We hustled him, we hustled the carters. We were thoroughly aware now of the danger, for the inns are far apart in this region of Manchuria. But with all our hustling no one else hustled. In due course of time-according to the oriental mindthe mules were barnessed, the baggage in place, and we drove leisurely forth, our fellows stoically calm, we impatient.

It was on the fifth day, after a succession of journeys, and a series of semisleepless nights at the rude inns, that they had their first tidings of bandits. It was necessary to take special precautions about escorts, and, before starting, they assured themselves that the guard was, if not trusty, at least brave, if they should be attacked by a band of outlaws who were not favored by the escorting cavaliers. Accordingly, as we learn:

Promptly on time the next morning, our escort appeared riding bravely up the street, their rifles over their shoulders. They were literally covered with bandoleers -one had two bundred rounds, the other a hundred and fifty. Thus we started prepared for battle, but the day passed without event, in the same quiet as the previous days. We were not safe yet. We should have reached Hailun that night, but a rain, the evening before, had softened the roads, which were no more than paths through the fields, until our heavy wheels sank deep into the sticky mud, turning more slowly than ever. We strained our eves into the gathering dusk for some sign of Hailun, but in vain. Had we known it, Hailun was many li away. Altho Chinese carters have been over a road innumerable times, they can scarcely ever tell how near you are to your stopping-place. They will say you are ten li away, but at the end of the ten li they will tell youwithout seeing the incongruity of it-that your destination is still not ten, but twenty li farther on! Why should you wish to know? they evidently wonder; it will not get you there my sooner. Just plod on and on, and by and by, if Fate wills it, you will be there. That is all there is to it. Why discuss it?

As we drove farther and farther in the dim September twilight, the mere physical needs, food and shelter, became the most important things on earth. Hailun was, to us, but a mirage of bodily comfort, forever in the distance.

Coming at length to the conclusion that they could not reach Hailun before the next day, the entire party sought refuge once again at one of the ever-present inns. Rest was welcome, and the next day saw relaxed precautions as they started out. Across a stream by a rude, shaky ferry-boat, as they dignified the old scow that carried them, and then up into the hills they went. Up to the very crest, and at last, as it is put, they felt that they had inherited the earth, for it lay supine before them. But then—

Suddenly, from the quiet road ahead, a cloud of dust arose. As we strained our eyes to see, there came riding out of it three or four men. Each man was pulling after him by leading-straps a number of animals—that much we could see.

"Heavenly mud!" cried my husband, shading his eyes with his hand, "they're riding hell for leather. Something's up!"

Now we were near enough to understand their shouts:

"Hung-hu-tru lai — Hung-hu-tru lai!"
(The red-beards are coming! The red-beards are coming!) "They are fighting—ten li off—at an inn—they are chasing us—to get our horses—Hung-hu-tru lai—

"For God's sake, hurry!" cried my husband, fairly lifting me on to the high-shaft of the cart and jumping after me—we had all been walking. The carters jumped to their places, simultaneously making their long whips whistle and crack in the air. Down they came on the mules' backs. The carts sprang forward with a terrific bounce. The escort were urging their horses and loading their rifles. "Have your revolver ready!" my husband shouted to me, as he slipt his own out of his belt.

It was a wild ride! Across the fields! Through the kaoliang! Over the beans! Behind and among us the frightened bearers of the news, their horses and their mules! On, on, over the furrows, plunged our clumsy train, the earts rocking until it seemed they must tip over. All around us the terrified men yelled savagely, and the whips hissed and whizzed. Behind, steadily getting nearer, a cloud of brown dust!

Nearer came the cloud of dust. We knew the full meaning of it. With painful vividness there flashed through my mind something they had told us in Harbin of a traveler in this country who had left his fellows one day to give his horse water, or for some other reason, only to be found later stript of all his possessions, beaten, half-naked, and near to death by the roadside.

Naturally enough, flight was the immediate thought of the entire cavalcade. They could not be sure of fighting off the bandits, but they could make the next inn if they hurried. But as a matter of fact,

Be Good to Your Books

that's what counts. Be it in a pleasure car, a truck or a tractor, the Buda Motor pours forth power, runs sweet, takes what comes to it, the hard or the easy, without complaint, and - keeps on doing it year after year.

The high tribute you pay to your Budais to be aware of its existence only through its instant, willing, smooth response to every command, every emergency. The repair man seldom sees it, and considers it "hopelessly" well built.

And it is, for the Buda Company has been known for high standards for 36 long years. Address Harvey (a suburb of Chicago), Illinois.

THE BUDA COMPANY HARVEY (Charter) ILLINOIS

STANDARD DICTIONARY superstill quickly been pinio to the man of woman who incominates,

they compromised on invading the house of a near-by farm, and quartering themselves with the tenants. They galloped up to the farmhouse and pounded vigorously on the door. The cloud of dust drew nearer. All seemed silent within. What if there should be no one within-or, worse, if they should be denied admission and safety. The hammering was redoubled, every one pounding in a frenzy. The author writes:

Would they, oh, would they, let us in? Already the brown cloud was resolving into a mass of men, furiously riding! Still they delayed within. Then we could hear the farmer-family talking - they thought we were the handits! Precious moments were passing. Bullets were now going "phut!" in the dirt around us. Hope was all but gone when, through a loophole some one within spied us the foreigners! Then they knew and opened their gates! Horses, mules, menwe all whirled into the court, swept on by the overwhelming instinct to live. The great doors swung to behind us, the heavy wooden bars clattered into place. We were safe!

We had little notion how long we should have to stay with the farmer and his family. The remainder of the bandits who had followed the horse-owners would probably not attack us behind high walls unless they were reinforced. Perhaps we might go on in the morning, but there was no certainty of it; all depended on the bandits, for we dared not go on, with an escort of two, until that band of a hundred was accounted for.

My husband paced the court, his eyes full of light. "This business is surely an exciting one," he exclaimed half anxiously, half exultantly.

No siege was attempted that night, and gray dawn found the soldier of the last watch asleep by the loophole. We hoped that the Red-Beards had decided that it was better not to molest us. After much discussion, we concluded that we would wait until noon and then, if there were no sign of the bandits, we would risk going on.

At noon we started forth, with one soldier ahead and one behind the earts. I sat inside our vehicle with my revolver loaded, watching the way ahead, while my husband, in order to see above the rounded top of the cart, stood on the narrow space in front, where he usually sat, and watched for sudden attacks from the rear. The road was descried; no one else dared make the attempt to push forward. Evidently the historic Red-Beards were still about.

But by and by, when the tension was getting well-nigh unbearable, for me at least, we began meeting earts coming from Hailun. At any rate, traffic was being resumed.

"Greetings of the road," we called out in Chinese; "what of the hung-hu-tzu?"

"Soldiers have gone out, eaught some, and shot them," was the laconic answer.

We rode on until we could see distinetly, in the fading evening light, the low mad dwellings of Hailan. Crowds of people were standing on the housetops. Coming through a field of knolinna, in the twilight silence, we saw, hanging from the branches of a tall tree, the bloody heads of the bandits.

How To Become A Master of Shorthand—it will be sent with full particulars of the Rose Course without putting you under expense or obligation of any kind. Fill out the Coupon printed below and mail it now.

Gentlemen:—Without obligation of any kind, please send me the booklet "How To Become a Master of Shorthand," and particulars of the Rose Shorthand Course. D. 3-10-17

F. R. HANNA

F. R. Hanna, Expert Shorthand Reporter of Washington and New York.

The most comprehensive, the clearest and the most practical presentation of the principles of shorthand ever published. The teaching from the very start of the identical outlines used in the most advanced writing, together with an easy and natural method of imparting a knowledge of the principles of phrase-writing, make the lessons a veritable goldmine for the ambitions student.

D. P. HIGGINS

D. P. Higgins, Official Reporter, First Division County Court, Milwaukee, Wis.

"The system taught is unexcelled and there is no one better equipped to track the subject than Mr. Rose. The gratitude which all his 'boys' feel for him is richly deserved."

A.G. McNAUGHT

A. G. McNaught, Expert Court Reporter, Helena, Montana,

"What knowledge of expert shorthand I possess I owe to your teachings and compilations. I have more than trebled my income by means of my knowledge of expert shorthand."

FUNK & WAGNALLS COMPANY, 354-360 Fourth Avenue, NEW YORK

THE SPICE OF LIFE

As She Saw It.—En. (in auto)—"This controls the brake. It is put on very quickly in case of an emergency."

Co-ED-"I see, something like a ki-

meno." -Orange Peel.

Preparedness.—Subbubs—" My neighbor has a big dog that we are all afraid of. What would you advise?"

What would you advise?"
"Get a bigger one. Five dollars, please."—Boston Transcript.

Bad Business.—Dear-and-dumb Beggar.—" Do you think it looks like rain, Bill?"

BLIND BEGGAR—"I dasn't look up to see
—here comes one o' my best customers!"—
Puck.

From Experience.—OBSERVER—"I noticed you got up and gave that lady your seat in the street-car the other day."

OBSERVED—" Since childhood I have respected a woman with a strap in her hand."—Punch Bowl.

Prophecy.—Applicant—" Is there an opening here for a live-wire, hustling college man?"

Office Boy-" Naw, but there's goin' to be if I don't git me salary raised by ter-morrow night,"—Life.

No Choice.—Rowland Hill, when some persons entered his chapel to avoid the rain that was falling, quietly observed, "Many persons are to be blamed for making their religion a cloak, but I do not think those are much better who make it an umbrella."—Christian Register.

Labor Omnia Vincit.—The prodigal son had just sneaked in the back way, between two days.

"Owing to the greediness of the beef trust," explained the old man, "we are entirely out of fatted calf, but here's a canopener. Get busy,"—Indianapolis Star.

Conclusive.—The doctrine of purgatory was once disputed between the Bishop of Waterford and Father O'Leary. It is not likely that the former was convinced by the arguments of the latter, who, however, closed it very neatly by telling the bishop, "Your lordship may go farther and fare worse."—Christian Register.

Stale News.—RAILWAY ATTENDANT (to man smoking)—" You can't smoke."

THE SMOKER—" So my friends say."
RAILWAY ATTENDANT—" But you musn't smoke."

THE SMOKER-" So my doctor says."

RAILWAY ATTENDANT — "Well, you sha'n't smoke."

THE SMOKER—" So my wife says."—
Puck.

His Needs.—"My brother bought a motor here last week," said an angry man to the salesman that stept up to greet him. "and he said if anything broke you would supply him with new parts."

"Certainly," said the salesman. "What

does he want?"

"He wants two deltoid muscles, a couple of kneecaps, one elbow, and about half a yard of cuticle," said the man, "and he wants them at once."—Christian Register.

All Too Human .- "Why is your wife looking so happy?"

"She's got something to worry about

again."-Puck.

He Knew .- WILLIE WILLIS-" What are

pieces of artillery, pa?"

PAPA WILLIS-"I think they must be the kind that the girl next door plays on the piano."-New York Times.

As Nowadays .- " What did the old man say when you asked him if you could marry his daughter?"

" Asked me if I could support him in the same style she did."-Raltimore American.

Solemn Truth.-Mrs. Jones-"I met Johnny Fuller to-day. He says I am getting fat.

JONES-" It's natural he should say so." MRS. JONES-" Why?"

JONES-" You were looking Fuller in the face."-Tit-Bits.

The Day After .- Jack-" Who is that fine-looking girl that just bowed to you?"

Tom (gloomily)-"Oh, that is my sister." JACK-" Why, old chap, I wasn't aware that you had a sister."

Tox-" Well, I wasn't aware of it myself until last night."-Indianapolis Star.

The Draft in the Range,-American people have a very high appreciation of the humor of Englishmen, and have been specially tickled by a story Colonel Cody used to tell. He said that some years age an Englishman who had never been in the West before was his guest. They were riding through a Rocky-Mountain canon one day, when suddenly a tremendous gust of wind came swooping down upon them and actually carried the Englishman clean off the wagon-seat. After he had been picked up, he combed the sand and gravel out of his whiskers and said:

"I say! I think you overdo ventilation in this country!"—Tit-Bits.

Why Not?

If a female duke is a duchess, Would a female spook be a spuchess? And if a male goose is a gander, Then would a male moose be a mander?

If the plural of child is children, Would the plural of wild be wildren? If a number of cows are cattle, Would a number of bows be battle?

If a man who makes plays is a playwright, Would a man who makes hay be a haywright?

If a person who fails is a failure, Would a person who quails be a quailure?

If the apple you bite is bitten, Would the battle you fight be fitten? And if a young cat is a kitten, Then would a young rat be a ritten?

If a person who spends is a spendthrift, Would a person who lends be a lendthrift? If drinking too much makes a drunkard, Would thinking too much make a thunkard?

But why pile on the confusion? Still I'd like to ask in conclusion: If a chap from New York's a New-Yorker, Would a fellow from Cork be a corker?

Practical Books for Practical People

Here are live, up-to-date books that will teach you how to do a hundred and one useful things, to save outlay by being your own workman, and to provide interesting and worth-while occupation for your leisure hours. Each book is by a recognized authority in his line.

Furniture Reposition. Estate of view for a deflect cabinet makes, who explains his methods of reposing all lambs of juristicity. With many limited of Charlesons. By mail, 56 course.

Researc Corporary. As illustrated important of delignated supportant for all acts of reach believing for bose, favor, sort gueten. Valuable slike so the corporary, gurdener, or armiteur. By base, 24 conts.

Busket Work. Disstrated disso-tions for exacting all kinds of knobsts, author ghates, tables, etc. Simple serie with few tools on articles anally solable. By mail 36 cents.

Ter Making. A pountial golds in the making of salable tops enabling the handy was to reals by the de-mand are now supplied to Europe. By mail, 56 cents.

Signs, Tickets and Posters, book of instructions for the o book of instructions for the eigh-writer, emblucing every firtall of the work fulls and clearly for the benefit of the beginner. By coall, \$3 cents.

CURRENT EVENTS

THE EUROPEAN WAR

WESTERN PRONT

February 21.—British troops continue raids on the Teutons' trenches, seizing a section north of Gueudecourt, while much damage is reported done to German defenses near Ypres and Armentières. This is the first anniversary of the stupendous drive at Verdun.

February 23.-Additional British victories in the Somme sector are reported. including a gain of a strong position south of Petit Miraumont, with thirty prisoners. After hard fighting the British also take a trench north of Gueudecourt and northwest of Le Transloy. Artillery duels of increasing severity are reported from Lorraine, Alsace, and Champaigne.

February 24.—The German line gives way on both sides of the Ancre, before the British artillery, so that Allied troops enter Petit Miraumont, advancing on a mile front on the south side of the stream. An advance near Serre is also announced.

February 25.—In a fog the Teutons ef-feet what is said to be the greatest retirement on the Western front in two years, as they yield about three miles in the Anere sector to the Allies, including the towns of Petit Miraumont, Pys. and Serre, together with the famous Butte de Warlencourt, which has seen some of the bloodiest fighting of the war.

February 26.—London announces that the Germans are still falling back on the Ancre, giving up to the British nearly twenty-five square miles of ground. Warlencourt-Eaucourt is occupied by the Allied forces, and the British are announced to be at Le Barque, only two miles from Bapaume.

February 27.—London states that the British are continuing their gain on the Anere, occupying Ligny, southwest of Bapaumo, as well as taking the western and northern defenses of Puisieux from the Germans.

February 28.—The British troops reach Bapaume Ridge, a mile from the town, Gommecourt, Thilloy, and Puisieux-au-Mont are also taken by the Allies.

EASTERN PRONT

February 22.—It is reported from Saloniki that numbers of Allied soldiers are arriving daily, as troops are apparently being massed for a Servian drive under General Sarrail. A total of about 350,000 men is said now to be in Macedonia.

On the Roumanian front the Teutons take the offensive against the Russians, raiding trenches in the Karpathians, near Dorna Watra, where they are stopt by heavy Russian gun-fire. In Galicia, near Zlochoff, 250 Russian prisoners are taken by storming detachments.

The British organize an attack on Teuton trenches between the Vardar and Lake Doiran, on the Macedonian front, but are repelled, and prevented from digging themselves in by a rain of handgrenades.

February 23.-The Teuton forces enter Russian positions in Galicia, near Zvyzyn, foreing out the Allied troops and blowing up four mine-shafts before they are ultimately dislodged by a counter-attack.

February 26.—Another Russian attempt to force a way through the passes in the Karpathians fails as the Germans block the way from Mount Ploska to Mount Pantyr. Twenty-six prisoners are reported taken in the Jablonica Pass, near Jabloniea Village.

Why Not Ride?

The statements in this advertisement referring to performances of Hudson Super-Sixes in certified trials and in competition are approved as to facts Richard Kennerdell Chairman Cordent Board American Automobile Association

The Long-Life Record HUDSON SUPER-SIX

Will Hold First Place Forever We Believe

One year of the Super-Six seems to mark it the permanent leading type. Many other sensations had their day and departed. But the Super-Six gains prestige every month. And it comes too close to a perfect motor to ever be far excelled.

For your own sake, don't get a wrong conception of the Hudson Super-Six.

It is a Six, but not like other Sixes. This basic invention, controlled by our patents, added 80 per cent to our six-type efficiency.

It does, in a better, simpler way, what we attempted in our Eights and Twelves. For we built those types for testing as did others when the seeming trend was that way.

This Problem Solved

The Super-Six gets its wondrous power, speed and endurance by minimizing friction.

That's what every type attempted. That's why men once thought that V-types would supersede the Six. Vibration causes friction, and friction causes wear. And the type which brings vibration lowest will hold first place forever, just as now.

The Super-Six is that type. Every block test proves it. And a hundred road records confirm it. It now holds every worth-while record of endurance and speed for a stock car.

Another Possible Error

Some men still tell Hudson dealers that our records show qualities not wanted. They cannot use such speed, such power. "And other cars are good-enough hill-climbers."

But you must presume we know that.

We have not increased our motor size. We are using a small, light Six—exactly the size we used before this invention. And a size now very common.

The Super-Six principle gets from that size all of this extra efficiency. It does it by saving friction. Would you have less speed, less power in a motor, because of more friction and wear?

To Double Endurance

The Super-Six was invented to double endurance. That it makes the car a recordbreaker is simply incidental.

The records we value most are long distance records. Under sanction of the Contest Board of the American Automobile Association the Super-Six broke the 24-hour stock chassis record by 328 miles. And in the famous non-stock Pike's Peak Hill Climb, sanctioned by the Contest Board of the American Automobile Association, a Super-Six Special made the best time through endurance.

A Super-Six Touring Car twice broke the Transcontinental record in one continuous 7,000-mile round trip. All Super-Six speed records have been made because of endurance.

It Offers You This

It offers you a car which, by a hundred records, is the most capable car in the world.

It offers you endurance, far beyond any previous attainment.

It offers you pride of ownership—the feeling that you rule the road. The knowledge that yours is the greatest car in performance that's built.

It offers you beauty and luxury which make the car look its supremacy.

It offers you, in our latest models, a wonderful gasoline saver.

Will you want a car which offers less when you buy a car to keep?

February 28.—The Germans retake most of the peaks in the Bukowina which were lost to the Russians earlier in the year, and hold heights along the Vale Putna highroad. They also take more than 1,300 prisoners, eleven machine guns, and nine mine-throwers.

AGAINST THE TURKS

February 23.-Two Turkish trenches are taken by the British forces operating along the Tigris near Sannaiyat, says London, in the day's report.

February 25.—The British cross the Tigris and take four lines of Turkish trenches near Sannaiyat in the face of six un-successful counter-attacks. The crossing was effected near the Shumran bend by a bridge built in nine hours under continual gun-fire. The prisoners taken total about 550 men and officers, with five machine guns.

February 26.—Kut-el-Amara falls before the British advance, opening again the road to Bagdad. London reports that the Turkish garrison of the city fortress is in flight, pursued by the British cavalry, and that more than 2,000 prisoners have been taken, with many guns and war-material.

February 27.—After taking Kut-el-Amara, the British press on and meet the Turks in battle about fifteen miles northwest of the captured town. The total number of prisoners taken in the recent action is described in reports as being several thousand.

The Russians repulse the Turkish forces in the Caucasus front, near Smorgon, sitho the Mussulmans made use of a gas attack in the German fashion, according to dispatches from Petrograd.

February 28.—The fleeing Turkish Army in Mesopotamia is reported bemmed in by the British, 30 miles from Kut-el-Amara, with further retreat practically cut off by the Tigris.

February 21 .- Sir Edward Carson, First Lord of the Admiralty, announces in Parliament that the British tonnage losses due to German U-boats during the past three months have been: December, 118 ships, 223,000 tons; January, 91 ships, 198,000 tons; Feb-ruary, 134 ships, 304,000 tons.

The day's loss of ships because of the Teutonic U-boat campaign is announced

at ten ships, 23,390 tons.

February 22.—Eight ships is the day's toll in the submarine campaign, with a total tonnage loss of 17,290 tons. Two neutral vessels are among the victims.

London states that as a result of a conference between the Colonial Min-ister and representatives from the Japanese Government, it is definitely decided to retain all the captured German colonies. Australia and New Zealand refuse to relinquish the Pacific colonies, Japan may keep Kiaochow, while the African possessions are expected to be divided between Great

Britain, France, Belgium, and Portugal. Thirty-two Bavarian and Prussian sol-diers are reported killed and 200 wounded at Beverloo, Belgium, as the result of a fight in the ranks between factions, according to a report from Maestricht, Holland.

February 23.—Premier Lloyd George an-nounces a list of restricted imports, wherein the importation of a number of commodities is prohibited. The list includes about fifty items, among them, agricultural machinery, raw fruits, wines, books, periodicals, wet and dry hides, lumber, cotton hosiery, and lace.

The marine loss for the day is set at thirteen ships, of an aggregate tonnage of 26,100 tons. An American clergy-

GUARANTEED 4000 MILES

man, a missionary to China, is killed on one of the vessels, the French steamer Athos, torpedoed in the Mediterranean Sea.

February 24.—Nine ships are sunk by submarines in the day's U-boat activity, with a tonnage loss of 24,741 tons. Seven Dutch vessels which left Falmouth with a German "reasonable assurance of safety," are reported torpedoed almost immediately after they left the harbor. Three were sunk and four badly damaged. The Dutch Government and people are reported aroused to the highest pitch by what is characterized as the "greatest humiliation to which a neutral could be subjected."

The Nichi-nichi at Tokyo announces that an unknown raider is abroad in the Indian Ocean and has sunk two British steamers southwest of Colombo.

February 25.—During the day but three ships are sunk by submarines, with a total loss of 8,209 tons.

Definite assurance is given by the Allies that the blockade of Greece will be lifted when King Constantine replies satisfactorily to the demands of the Entente.

Word is sent by Berlin to the Chinese Government at Peking to the effect that the German authorities would regret a break with China, and will take every means practical to secure China a voice in the peace-conference, if friendly relations are maintained.

The Bishop of London proposes to close all but eight of the churches in the "City" so that the clergy may be free to go to the front.

February 26.—Six more ships are sunk by U-boats, with a loss of 24,522 tons. Among these is the Cunard liner Laconia (18,000 tons), the largest vessel to be sunk in the campaign. Three Americans are believed to have lost their lives.

Berlin states that since the beginning of the war, the Central Powers have destroyed 4,998,500 tons of neutral and enemy shipping. These figures are said to be exclusive of the presentmonth's losses.

February 27.—The day's losses due to the U-boat campaign are set at five ships, with an aggregate tonnage of 11,502.

February 28.—No reports are received of ships sunk by *U*-boats during the day, but London announces that the total of ships lost since the beginning of the month reaches 183, with a combined tonnage loss of 400,432.

The German authorities offer to lend seven ships to the Dutch to replace the seven ships recently sunk, on condition that Holland purchase them at the close of the war.

FOREIGN

February 21.—Havana reports that the Cuban rebels are expected to attack Camaguey, as forces under Colonel Pujol cross from Santa Clara and make ready for battle.

February 22. — The hitherto supprest news of an explosion in the Dresden arsenal on Christmas day reaches London. It is stated that more than a thousand of the 30,000 women and children workers were killed in what is called the worst disaster since the beginning of the war.

February 27.—The Cuban rebels are defeated for the third time in as many days as the Government forces move a step nearer their goal, Santiago de Cuba. An amnesty is offered the rebels with ten days in which to give up their arms.

Name Address have the Government take over the liners of the American line, and convert them into cruisers of the United States

February 23.-Sailings of the American line boats are postponed indefinitely as the Secretary of the Navy had failed to supply guns and gunners for the protection of the liners.

February 25.—Altho he has lost some of his official prerogatives as a diplomat, Brand Whitlock, American Minister to Belgium, will remain in that country in a personal and semiofficial capacity, says a report from the German authorities at Brussels.

February 26.—Proclaiming himself still the friend of peace, President Wilson asks Congress in an address for authority to arm outgoing American merchantmen, as well as to employ other means of protecting American lives and property.

February 27.—After repeated announce-ments of the release of the Yarrowdale seamen, and subsequent denials, Berlin announces that the release can not be earried out at present, as demanded by the United States, due to an epidemie of contagion in the camp where the seamen in question are being detained. The American citizens are described as alive and well, and the hope is added that the run of the disease may be short. Washington views the announcement as a pretext for delaying action on the American note.

The first step toward granting the President the power he desires in arming merchantmen is taken by the Senate as the Committee on Foreign Relations reports a bill permitting the arming of vessels and supplying them with necessary ammunition,

Former Ambassador Gerard reaches Corunna, Spain, and prepares to sail for America, altho it is rumored that he has received a warning from Berlin that a sailing would be dangerous. The warning is not taken seriously.

The President, after conference with Secretary Lansing, makes it clear that he regards the sinking of the Laconia as the "overt act" for which he has been waiting. He will take immediate action, of a sort not yet made public.

February 28.—Washington hears that Germany suggested to Mexico and Japan an alliance by which war was to be made on the United States if it did not remain neutral. Mexico was to have induced Japan to leave its allies, and as a further reward, was to have German aid to regain southwestern United States and share in the ultimate peaceconference. Documentary proof of such plans is said to be in the hands of the President.

It is rumored in Washington that the Pro-German activities of Dr. Paul Ritter, Swiss Minister to the United States, may bring from the Administration a request for his recall.

DOMESTIC -

February 20.—Distress following the general food-shortage causes a series of small riots in New York, in one of which disturbances 300 women of the East Side storm the City Hall with

The National Espionage Bill, combining the features of fourteen other neutrality bills, passes the Senate by a vote of 60 to 10.

Bills conferring American citizenship upon the Porto-Ricans, and providing for the purchase and government of the erstwhile Danish West Indies, pass the Senate.

Governor Cox of Ohio signs the Reynolds Bill giving the women of the State the right to vote for Presidential electors.

The Kansas "bone-dry" law passes the Senate and goes to the Governor for agnature.

Minnesota's House of Representatives passes a bill to grant full suffrage to women by constitutional amendment. If passed by the Senate the amendment will be submitted at the elections of November, 1918.

A favorable committee report on woman suffrage is presented in the lower house of the New Hampshire legislature. The Senate recently defeated a similar

The Vermont House of Representatives defeats a bill to grant women Presidential suffrage.

February 22.—The Iowa Senate passes a bill making the place of delivery of liquor the place of sale. The bill now goes to the House.

The woman-suffrage bill passes the lower branch of the Indiana legislature and goes to Governor Goodrien for signature. It will grant women the right to vote for President and practically all State officers except the Governor and Secretary of State.

Woman-suffrage advocates in Maine win a forty-year fight to have the question submitted to a popular vote, as the Senate, with the House, agrees to call a special election on September 10 to vote on the measure.

Food-riots are reported from various quarters of New York. Many are arrested and given warnings by the court. In Philadelphia many disorderly seenes occur, and several are injured in meat-riots and attacks on persons who persist in buying at boycotted shops.

Vindication of all Government officials mentioned in connection with the alleged peace-note "leak" is voted unanimously by the House Rules Com-

February 23.—The universal military service plan as prepared for Congress is made public at Washington. It calls for eleven months' training for all youths of nineteen years, who are liable to call to the colors until they reach the age of thirty-two. It is said that this measure will provide 500,000 soldiers in a single year, increasing the supply to about 4,000,000 men with a year's intensive training.

February 24.—Another food-riot takes place in New York as more than a thousand men, women, and children organize an onslaught on the Waldorf-Astoria Hotel expecting to gain the at-tention of Governor Whitman, supposed to be staying there. Traffle is blocked and numerous arrests follow.

February 27.—Twenty-one lives are lost in a wreck on the Pennsylvania Railroad, near Altoona, Pa., as a fast passenger-train is telescoped by a freight going in the same direction.

February 28.—Prohibition wins a victory in Congress as the amendment making the District of Columbia "dry," having passed the Senate, passes the House by a vote of 273 to 137. Considerable assurance is also exprest that the Reed amendment to the postal bill, prohibit-ing transportation of liquors into "dry" territory, will pass.

Captain Jack Crawford, widely known as the "poet-scout," dies in Woodhaven, N. Y., aged sixty-nine

THE UNPROFITABLE SIDE OF OUR GREAT MUNITIONS-CONTRACTS

FACTS are slowly coming to light to show that the early promises of large profits from our war-contracts will by no means be fully realized. A large factor has been the rising cost of labor and material of which small note was taken when the contracts were placed. As remarked by a writer in The Financial World, these were "either ignored until it was too late, or were given only perfunctory attention." Several unfortunate contracting firms and corporations are named by this writer. One of them, engaged in the manufacture of explosives. has actually been brought to "a crisis" because of its hasty embarkation in warmunitions "without sufficient capital resources, with disregard of the future condition of labor and of the costs of raw material," the consequence being that the promises of big profits either have disappeared completely or have become extremely small. One of the largest of all concerns engaged in making munitions and which was believed to be making as much as \$300 annually a share for its shareholders recently was compelled to sell \$50,000,000 in notes in order to earry its work along until its contracts were completed. Another company, from which great returns were expected, has thus far reported no earnings at all from its warcontracts. Several others, which have received large contracts and have been paid enormous sums in the bonds of foreign countries, are well known in financial circles to have had their cash bank balances decreased while their paper obligations have increased.

Another vital and depressing phase of the munitions situation has been brought to light by Earle Buckingham in The American Machinist. Mr. Buckingham deals with the subject as a mechanical engineer and from much personal observation of conditions in factories since the war-contracts were entered into. In the making of munitions our manufacturing methods, after more than fifty years of development along lines different from those of Europe, have been brought for the first time into close comparison with the methods of Europe on identical manufactured articles, and the result has been disastrous as to our efficiency. In this country little work of the class called "interchangeable" has ever been turned out in factories. To this Mr. Buckingham largely attributes many serious mistakes that have been made by our manufacturers in executing their munitions-contracts. The errors disclosed are such that we must profit by radical changes in our shoppractise, "provided we ever expect to do a world-wide business." As matters now stand we are "far from being prepared to hold our own in the march of mechanical progress."

The reason for radical differences between American and European manufacturing methods Mr. Buckingham sets down as due to differences in conditions. European states, being more thickly settled, have developed mechanically along intensive lines, keen competition making it obli-

gatory in manufacturing to produce goods of superior merit, while here, with a fastgrowing country and a demand for manufactured products greater than could be met, quantity in production rather than quality and accuracy has prevailed. In Europe demand was more nearly fixt, production was more nearly constant, the labor supply not only sufficient, but more dependable, and hence quality and accuracy were more carefully considered and more constantly developed. This country has acquired a great reputation as an industrial nation, but that reputation has rested mainly on the largeness of our production and on our ingenuity in increasing it. Industrial progress in Europe has meant the refinement of existing methods and improvements in accuracy and quality, whereas with us it has meant the speeding up of production and the creation of new devices. Following are other interesting points in Mr. Buckingham's article:

"At the outset it seemed as if this country, with its great productive organizations, would most conclusively prove the superiority of its manufacturing methods. A glance at the records of the Wall-Street markets as these orders were placed will show how great that expectation was. Work was started with a rush. New plants were built and equipped almost overnight. Then the technical representatives of the various foreign Governments arrived to supervise and inspect the work. Soon it became apparent that everything was not going so smoothly as it should. Months passed, and few if any shipments were made. Many plants had not even started to deliver their goods when the contracted time for completion had arrived. German sympathizers were accused of all sorts of preposterous plots to interfere with the work. The foreign inspectors were charged with being incapable, arbitrary, and ignorant, thus holding back the contracts. The manager of a large factory engaged in this business told me in all seriousness that he was firmly convinced that the foreign inspectors were determined not to return to their own country until the war was over, and were deliberately holding back the work so as to make it possible for them to stay in this country. A thousand and one excuses were given, all equally wide of the mark, as to why the work was not produced.

can give here only the briefest outline of the fundamental requirements of interchangeable manufacturing. It would take a much longer paper than this to even sketch the elementary principles of any one of the main heads, which may be named as follows—the model, the tolerances, the gages, the specifications, the manufacturing equipment, the actual production, the inspection, and the assembling, All the work preliminary to the actual production requires the services of highly skilled men and the expenditure of much time and thought. It would take, at the least, five years of strict training to educate a workman to be capable of performing any part of this preliminary work in a satisfactory manner. There is no short cut that will develop the necessary skill in a shorter time. It takes from three months to three years of careful instruction to train a man to perform any of the many

productive operations. "Very little of this class of work is produced in the United States. Only a

lew plants establish a model. Their gages are their standards of measurement. Many places do not even keep apart a set of master gages for standards. The various measuring-instruments and the personal skill of the mechanics making or inspecting the working-gages form these standards. Complete specifications are a great rarity in American practise. The memories of their older employees serve this purpose. Some organizations do not even have a distinct inspection-department. The machine-operator is furnished with gages or is supposed to have measuring-tools of his own, and gives the product all the inspection that it receives. In some cases, where the desired standards are not high, it is possible to combine some of these various functions and obtain passable results, but at the best it is a doubtful economy.

"The production of small arms and of ammunition for field-artillery is the most exacting type of interchangeable manufacturing. The allowable limits of error in both the dimensions and the functioning of the finished product are very small. To facilitate the rapid production of the am-munition in particular, in many cases the orders for the several different parts of the round were divided among a large number of establishments. In some instances several of these units were to be assembled at the loading-plant before they would be salpped to the front. In other cases the units would not be assembled into the completed round until the shell was needed in the gun on the firing-line. As far as possible all parts containing any detonating charges were kept separate from those containing the explosive charges, for the sake of safety in transportation. All parts that are to be assembled on the field must be absolutely

interchangeable. "At the very outset of this work an extremely serious mistake was made. The American manufacturers either assumed that the requisite degree of quality and accuracy was not high, or else they were led to this belief by those who placed the contracts. At all events, this belief was universal among the contractors, and they at once made their plans for a huge production, paying little attention to either the accuracy or the quality of the product. In almost no case did they attempt to improve upon these points, any more than they usually did on their own regular work; while in most cases they considered it as rough work, 'just to be fired out of a cannon,' and did not give these factors even as much consideration as they gave their own product. This was done, too, in spite of the fact that the specifications that formed a part of the contracts stated

very definitely what was required.

As far as I am aware, not a single plant engaged in the manufacture of the fieldgun ammunition attempted to develop a model to be used as a standard. Very likely, if one had been furnished, it would have ornamented the directors' room as a souvenir. The manufacturers of the small arms were usually furnished with models, but in few cases were they so used as to derive the maximum benefit.

I know of one contractor who had over a million finished parts rejected because they failed to pass the firing test. Upon investigation, it was found that the specifications for the raw material had been entirely disregarded. I know of another ease where a plant had fifty thousand shells. rejected because the instructions in regard to the heat treatment of these parts were not followed. The manufacturers were continually arguing that this requirement and that were not essential, that they would not affect the operation of the finished product; and yet, when they disregarded these factors, the parts invariably failed to meet the prescribed firing test. The American manufacturers felt badly used because they were required to live up to the specifications. This is the greatest

complaint that they can make against the actions of the European inspectors.

"Practically none of the plants manufacturing the small arms was able to assemble the component parts without fitting them to one another. This made them no longer interchangeable and destroyed half their value as a military weapon. At one plant the foreign inspector, before accepting a large lot of rifles, disassembled some half-dozen guns, mixed the parts together, and then tried to reassemble them. He could not do it. It was necessary to pick out the parts that had been fitted to one another before it was possible to do this. The whole lot was returned for correction, much to the chagrin of the manufacturer. One of the Russian en-gineers remarked to me; 'It is the strangest thing to me that when I started to come to this great industrial nation I expected to learn many things. But to my surprize I find that I must act as instructor in

every plant I visit.'
"The representatives and the inspectors who have been sent here by the several foreign Governments will undoubtedly be considered as authorities on American manufacture on their return to their own eountries. The reports they will earry home will unfortunately be far from complimentary. If this country is to have any chance of competition with the European industries in their own markets it will be necessary for us to meet their conditions. In order to meet their conditions 'American practise' must undergo some radical changes. With the cruder types of manufacture, such as automobile trucks, locomotives, motor-cycles, railroadears, agricultural machinery, etc., the American plants have done far better. But where the work required any great degree of accuracy, uniformity, and quality, our record has been a flat failure.

"The American objective is to produce goods; produce them in-quantities and produce them cheaply. Every other consideration is subordinated to production. Craftsmen are few and far between here because we have no place for them in our scheme of production. A craftsman, to my idea, is a man who takes pride in the work and skill of his hands and head; who feels that each result of his labor is a monument to himself; a man whose enthusiasm and consciousness of power prevent him from doing any work but his very best. No man can do justice to his own capabilities unless he is interested in,

and proud of, the results of his labor.
"The way is long and the time is short.
If we do not profit by our mistakes, those world-markets' now glittering so dazzlingly before our eyes will be ours only so long as nobody else is in a position to supply them

and no longer.

THE SUDDEN DECLINE IN FOOD-PRICES

By the end of February a marked reaction had set in against the high prices for food, especially for fruit and vegetables, that had prevailed for a few weeks in many parts of the country. At the height f the distress, onions had been quoted at \$15 per hundred pounds, cabbage at \$160 a ton, string-beans at \$12 a basket, and potatoes at \$11 a barrel. Stated in percentages, potatoes in Chicago rose 400 per cent. above the price in February, 1916, and cabbages, 1,550 per cent. While \$3 per bushel was a common price for potatoes in some large centers of production, there was a county in Maine where as much as \$6 per bushel was paid. In all parts of the country the price of potators was high. Following is a table of high and low prices for vegetables and fruits this year and last, as compiled by the Bureau of Weights and Measures, of New York City. The quotations are wholesale prices that were paid at large markets and on piers:

These prices were largely due to lack of transportation facilities, complicated and increased by weather conditions, For example, there were 30,000,000 bushels of grain in Chicago elevators awaiting shipment. Elevators tributary to Chicago held from 50,000,000 to 75,000,000 bushels more which could not be moved for lack of ears.

The slump in prices that came late in February was to some extent due to relief in the transportation system, but more perhaps to a boycott among housekeepers which had set in. This boycott had reached such an acute stage that, even when vegetables in quantities arrived and freight-yards were choked with them and with other foods, including poultry, wholesalers were confronted with an alarming lack of buyers. Retailers declared to them that the boycott had become so thorough as to have eliminated the demand for these articles among their eustomers. Potatoes in that week dropt to \$10 and \$9 a barrel and onions to as low as \$8. Before the end of the week eggs, butter, lamb, and veal shared in the general decline. Live chickens sold at wholesale at 18 cents a pound, and at retail at about 22 cents, a drop of 3 cents from the previous week. Fresh eggs came down 4 and 5 cents wholesale. Butter dropt 12 to 1 cent a pound, lamb and veal from 15 to 3 cents a pound, Following are other items in the situation thus created, as outlined in the New York Evening Sun:

"The wholesale markets are being glutted with food that retail merchants will not buy. Food speculators are now facing a falling market instead of the

Is Your Battery Holding Its Own?

YOUR car battles its way today through the grip of Winter's worst storm.

A few short months and the blazing heat of Summer's sun brings new conditions. Roads, speeds, traffic and many other causes are constantly tearing down or building up the storage battery of your car.

Whether your battery endures these conditions unfailingly, depends not only on the kind of battery, but also on the service behind it.

If your battery is "supervised by Prest-O-Lite Service" you may avoid the greater part of battery trouble — without this supervision your battery may be seriously handicapped. Any battery, no matter how good, may easily be ruined by neglect.

No matter what conditions you encounter—no matter where you may be—you'll find Prest-O-Lite Service waiting to keep your battery in good condition and insure your satisfaction.

There are special Prest-O-Lite Service Stations in cities and towns in all parts of this country—backed up by the great chain of Prest-O-Lite factory branches in principal cities—insuring prompt, direct factory service.

When you need a new battery, remember—there is a Prest-O-Late buttery of correct size for your car, and it will give you superior service and satisfaction.

"Which Trust Company Shall I Appoint?"

IT must be clear by this time to most thinking persons that the trust company offers many advantages over the individual as executor and trustee under will.

The question for you to decide is "Which trust company shall I appoint?" Certainly you cannot do better than to appoint this Company.

Our booklet, "Let's Choose Executors and Talk of Wills," contains much valuable information for will makers.

BANKERS TRUST COMPANY

steadily rising market they had expected. Many of the speculators are uneasy; some of them are on the verge of panic. Seventy-three car-loads of chickens in railroad-yards here to-day, most of them unsold. Shippers became alarmed when informed that there was no market for the poultry. Advices that 130 more car-loads were due to arrive before the end of the week made the situation more serious.

"Quantities of potatoes and onions piled up, as there was little demand for them. The steamship Ascura has unloaded about 9,600,000 pounds of Spanish onions. Other eargoes of onions are headed for this port. Considerable shipments of potatoes were

received from Maine.

"Coincident with the announcement by the Mayor's Food Supply Committee of of its campaign to popularize rice, quotations at the Southern mills showed an advance of 25 points, and at mills on the coast there was an advance of 15 points over Saturday's prices. An advance of 25 points equals one-quarter of a cent a pound. The advance did not make itself felt in the local markets, but it was predicted that a further advance would send the price of rice up here.

"Evidence grew to-day that the East-Side women did not take kindly to the suggestion of George W. Perkins, chairman of the Mayor's Committee, that they substitute rice for potatoes. In vigorous speeches in Rutgers Square they declared that they 'were not Chinese' and wouldn't eat rice. They said they wanted the things they were accustomed to eat and

they wanted those cheap."

MODERATE GAINS IN BUILDING RETURNS

In some parts of the country unofficial reports have indicated severe restraint on building operations in consequence of the rising cost of labor and materials. The whole country, however, according to official data so far as they have been received, shows for the year 1916 moderate gains, these gains being more moderate at the end of the year than in the early part, while returns for January, 1917, were still more moderate. From 158 cities reports received for Bradstreet's issue of February 17 showed in January a gain in permits of 5.8 per cent. and in expenditures of 4.1 per cent over January a year ago. These gains, compared with gains in expenditures of 5 per cent. in December and 3.6 per cent. in November. Three groups of cities showed declines. These were New England, Middle, and Northwestern cities, the gains to offset them being made in the other groups. Following is Bradstreet's summary of January permits and expenditures in the 158 American and 11 Canadian cities, with comparisons made with the figures for last

No.	No. of Permits 1917			Year Values

Total U. S 158 Canada	14,918 365	Married Street, or other control	1 5.8 1 31.7	1 4 1

Of the large cities, New York showed a decline of 20.9 per cent. in expenditures from January a year ago; Boston, a decline of 12.2 per cent.; Cleveland, 13.1; Chicago, 40.7; Milwaukee, 87.7. Large cities which made gains were Philadelphia with 15.3 per cent., Detroit with 62.8, Toledo with 84.2, St. Louis with 338 per cent., Hartford with 578 per cent., Washington with 77 per cent., San Francisco with 71.2, and Los Angeles with 180.

Following are details as to many of the 158 cities included in the totals:

Keep your protecting arm about them—even when you're sick!

WHILE you are well and strong they lay their troubles and their joys in your hands. But a fearful day may come when you're sick, when an attack of pneumonia or rheumatism may lay you low, and then —what will you have to give them?

Those loving faces hold a plea to you to

D ÆTNA-IZE

Guard against the day when you will be ill and your income stopped. It costs so little—it means so much to protect yourself. The little money you spend for so Ætna Disability Polley, covering both accident and elckness, makes no difference to you now, but it will make a tremendous difference to you if the bad day should come.

It costs only \$60 a year if you are in a "Preferred" occupation and under 51 years of age, and brings you:

\$25 a week up to \$2 weeks while you are ill. \$25 a week for 100 weeks—nearly two years if you lose the sight of both eyes by disease, or the use of both hands or feet or one hand and one foot by paralysis. Also payment of hospital charges, up to \$12.50 per week, for ten weeks, or for a surgical operation.

\$30 a week as long as you are disabled by a railway, steamship or burning building accident. \$25 a week if disabled by an ordinary socident. If you are killed in an accident, or lose two limbs or both eyes. Attna will pay from \$5,000 to \$15,000, depending on the character of the accident and on the number of years you have carried the insurance. Half as much for loss of one hand, foot or eye.

Send this coupon today, and then whatever misfortune comes you will be ready for it.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, so decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary

Readers will please bear in mind that no notice will be taken of anonymous communications.

"I. G. M.," Milwauker. Wis.—"(1) Is the common expression 'most unique' correct? (2) What do you know about pellagra? Is the cause known and is there a cure?"

(I) A thing is unique when it is the only one of its kind; therefore, such an expression as 'most unique" is incorrect. (2) The cause of pellagra is uncertain and is still the subject of scientific inquiry. It is curable by long and patient treatment. "The New International Encylcopedia" (vol. 18, 1016) says: "Cases are treated variously according as one theory or another is held regarding the origin. In general, improvement in hygicalc surroundings, baths and douches, and a tiberal diet, especially of fresh milk, eggs, legumes, and fresh, lean meat, with the exclusion of all corn products, are valuable. Special attention should be paid to the drinking water, seeing that excess of colloidal silica is overcome with calcium carbonate. The disease appears in two forms. The chronic form is characterized by symmetrical crythema, appearing usually in the spring, and associated with etomatitis, diarrisea, gastric disturbances, and general malnutrition followed by profound nervous and mental disturbances, such as headache, backache, spasnis, and paralysis, melancholia, and suicidal mania. As summer advances, the symptoms usually disappear, but recur with the following spring in a more pronounced and enduring form. The acute or fulminating variety of pellagra, and called by Lombroso the typhoid form, runs a course of from three weeks to three months and invariably ends fatally. . . . The transfusion of healthy blood into the veins of peliagrins has been tried with some measure of success."

"H. R. S." Philadelphia, Pa.—"Kindly give me a correct definition of the words mean or cerr-age. What is the difference between mean and derrage? Can't you also have a 'mean average,' and when can that be used?"

Accrage connotes the mean amount, number, or quantity, the quotient of any sum divided by the number of its terms. Also, any general mean estimate or quantity, ordinary rank, degree, or amount. The word mean designates the middle point, stage, or state-that is, the average-

between two extremes; the intermediate in quality, position, or degree. In meteorology the average mean is the average of the means for corresponding periods during a term of years. One may speak of or have a "mean average" only when one's average is mean; that is, low, poor, moderate, mediocre, or middling.

"E. S. M.," Egypt, Pa.—"What method could you suggest in order that one might pronounce words beginning with the letter 'v' correctly and not as the they began with the letter 'w, as for example, among Pennsylvania Germans, we frequently hear riolets pronounced wielets, sice, wice, and so on, the w sound being given to the 'v'?" to the 'v'

There is but one method of correcting the ldiosyncrasy specified, and that is to concentrate on the words mispronounced and determine to pronounce them correctly. A hundred years ago in London the native not only corrupted words, as when he spoke of rulgularity, in analogy with "popularity" and "singularity," instead of "vulgarity," but frequently mispronounced them. Pegge, in his "Anecdotes of the English Language" (1803), noted the displacement of r by w and w by c. Then the people spoke of weal (veal) and wineger (vinegar), and the "citizen of credit and renown" called to his man-servant: "Villiam, I vant my vig." And Villiam, being to the manner bred, would inquire, "Vitch vig. str?" and he told, in a tone of surprise-"Vy, the vite vig to the vooden vig-box, vitch I vore last Vensday at the Westry.'

"J. C. B." Macomb. Ill.—"Kindly tell me where I can find the Latin inscription: 'Si monu-mentum requiris, circumspice'?"

The inscription. "Si monumentum requiris, circumspice," is over the tomb of Sir Christopher. Wren on the wall of St. Paul's Cathedral, London. In English it means: "If you seek a monument, look around." It is not taken from any Latin author. The point of the inscription is that St. Paul's Cathedral having been built by Wren stands as his monument.

"M. A. M.," Milwaukee, Wis.—"(1) Please give me the pronunciation and definition of Garganium. (2) What is the meaning of rooky."

(1) Gargantuan is pronounced (par-gan'llu-anthe first a as in art, the second a as in fat, in as eu in feud, and the third a as a in final. Tho word is derived from the hero of Rabelais's satire "Cargantua." a giant of great longevity and phenomenal appetite. Hence, "Gargantuan" means "moustrous; gigantic." (2) Rookie is soldiers' slang for a raw recruit. The origin of this meaning has been attributed to the name "rookery." given, in former military slang, to the quarters occupied by subalterns in barracks. New Hotten "Slang Dictionary" (1860).

March of Farm Tractor Progress Encompasses the Globe

The rapid introduction of the farm tractor is not limited to the United States or Canada. Over the whole world the American-built tractor is making its way. Interesting contributions to this subject are being received by the Government from its representatives abroad.

ENGLAND WANTS 2,000 AMERICAN TRACTORS

Announcement is just made by Sir Arthur Lee, Director-General of Food Production, that the British Government will fill the shortage of farm labor by importing 2,000 farm tractors which will be worked night and day by a civilian army of plowers.

DEMONSTRATIONS OF FARM TRACTORS IN THE LOIRE

From France, Vice-Consul Davis B. Levis, at St. Etienne, reports that "Keeping pace with farm-tractor trials and demonstrations in the United States, the Services Agricoles of the Department of the Loire will shortly begin a series of similar events to exemplify the new 'mechanical culture,' as the employment of gasoline-propelled farm implements is termed in France. The Prefet of the Department has called the attention of the farming population to these demonstrations, advising that they will have the cooperation of the highest civil, military, scientific, and mechanical authorities of the region, and earnestly appealing for attendance and investigation.

"The Paris, Lyons & Mediterranean Railway, which has adopted a policy of assistance to agricultural advancement along its lines, has been a keen observer of, and greatly interested in, experiments with farm tractors.

"Believing that the quickest action making for wider introduction will come from farmers themselves, the company has now granted a subsidy or refund of 10 per cent, of the purchase price of tractor and plow combined, up to the value of 10,000 francs (about \$1,930), to syndicates or associations of farmers buying outfits before January 1, 1918."

SCOTCH TESTS OF MOTOR TRACTORS

Consul Rufus Fleming, at Edinburgh, reports: "The possibilities of the motor tractor on farms in Scotland have been demonstrated in Midlothian, Forfar, Elgin, Ayr, and other counties during the past few months. These exhibition tests, which have been encouraged by the Board of Agriculture for Scotland, the Highland Agricultural Society, and the agricultural colleges, have been uniformly satisfactory in plowing. Under fair conditions a 24-horse-power machine operated by two men turned over three furrows 10 inches wide and 7 inches deep at the rate of an acre or more an hour. When used to drive threshing-mills, crushers, cutters, etc., and for haulage purposes, also, the tractors have made an excellent record.

"An American tractor recently gave a good account of itself by cutting three clean furrows with a Dux plow, 7 to 7½ inches deep. On this occasion members of the Board of Agriculture and many influential farmers were present, and the opinion was generally expressed that tractors must play a great part in the future of Scotch agriculture."

DROUGHT MAY OPEN ARGENTINE TRACTOR MARKET

On the vast ranches of the Argentine there are immense possibilities for American tractors. U. S. Commercial Agent Frank H. von Motz, of Buenos Aires, recently stated that: "Until about two months ago the crop outlook was very encouraging and this gave importers reason to expect that the season would

be highly satisfactory for them (importers of farm machinery). The prolonged drought has upset all earlier calculations; and while there is still time for the eorn to be saved through plenty of rain, the loss caused in the small grain districts is irreparable, for this season at least. If the dry weather should continue throughout the summer, a natural market for tractors and power plows ought to develop, as by the time the plowing season (January to June) arrives the ground will be so hard and the work animals so weak through insufficient nourishment that farmers will have to resort to power plowing."

AMERICAN TRACTORS IN SOUTH AFRICA

Consul E. A. Wakefield, of Port Elizabeth, Cape Province, reports that: "A demonstration of tractor plowing was given near Port Elizabeth before a representative body of farmers of this vicinity. The tractor was of American manufacture, and the demonstration, which was supervised by an American, was deemed very satisfactory, although conditions were not particularly favorable. Moldboard and disk plows and disk harrows were used with good results. The general opinion, as expressed by the farmers present, seemed strongly in favor of the small tractor for South African general farm purposes."

A practical demonstration of plowing by modern methods was recently given in the rich farming district of Caledon, Cape Province, by the representatives of a New York distributing firm," says Vice-Consul Chas. H. Heisler, of Cape Town. "The tractor exhibited at Caledon, the first to be shown in South Africa, was sold on the day of the demonstration. Several more tractors are, however, on their way to this country for demonstration purposes in the eastern section of the Cape Province, Natal, and the Transvaal."

CHINA WELCOMES THE AMERICAN FARM TRACTOR

Consul General Thomas Sammons, of Shanghai, China, reported recently that the Sanda Cultivation & Pasturage Company, which has headquarters at Shanghai, purchased in 1915 a large-type American tractor and a complete outfit of plows, etc. Last spring 600 acres were plowed and seeded to wheat. The company was so pleased with the first tractor that it has placed an order for four more complete medium sized tractors with outfits, and in addition has ordered grain-harvesting self-binders and threshing-machines. The company expects to have 3,000 acres plowed and seeded in wheat for 1917.

RUSSIA BUYS AMERICAN TRACTORS

"A dispatch from Petrograd," says The Implement and Tractor Trade Journal, "states that a representative of the Ministry of Agriculture, addressing an agricultural congress, announced that during the current year 300 tractor engines had been bought abroad for Russia. Before the war such machines were hardly known in the empire."

Further information relating to Russian tractor requirements is contained in a consular report as follows: "There is an opening in western Siberia for a small tractor burning kerosene or crude oil. The few machines disposed of among the larger landowners have been principally of German or American manufacture. A kerosene tractor of 14 to 20 horse-power is required which would be capable of pulling a three or four furrow gang plow and which could be delivered at Omsk for between 4,000 and 5,000 rubles (\$2,060 and

The Russian-American Journal of Commerce (January) says: "The tractors ordered by the Russian Department of Agriculture in the spring of 1916 have only recently arrived via Vladivostok. Notwithstanding the fact that the tractors arrived after considerable delay and can be utilized only in the coming spring, they have already been eagerly bought up by different landowners. The tractors are sold to the farmers on easy terms; the payments have to be made on three instalments in the course of two years. The success of the trial has led the department to order 100 tractors, which are expected in April. They will consist of two types of tractors; large ones of 60 horse-power and small ones of 8—10 horse-power."

GROWING USE OF FARM TRACTORS IN CUBA

"There is a growing demand in Cuba for both light and heavy farm tractors," says Consul H. M. Wolcott, detailed as vice-consul. Havana, "and it is believed that many will be sold here this year. Some of the larger sugar estates already have tractors in operation. These are heavy machines, as a rule, of the higher horse-power, and are used for plowing and preparing the land for the planting of cane and other crops. Only the highest grade machines are suitable for work in Cuba.

grade machines are suitable for work in Cuba.

"It is believed that the greatest opportunity for the sale of tractors in Cuba will be with the large sugar estates, although a few of the lower-priced machines are in use on the general farms, and it is likely that there will be a demand for more as the advantages of tractors are more generally demonstrated. Prices of mules and oxen are at present very high in this country, and the prospects seem to indicate a continued advance in the cost of these animals. There is also a growing appreciation among agriculturists of the necessity for deeper and better plowing of the lands for all crops."

WHAT AMERICAN FARM TRACTOR EXPORTERS MUST LEARN

American tractor manufacturers have a great outlet for their products abroad, but they must learn that the exports must be backed by proper introductory service. This is illustrated by an unfortunate experience in Brazil, reported by U. S. Commercial Agent Frank H. von Motz as follows:

"At the invitation of a Rio de Janeiro importing firm I recently went to Campos, in the sugar zone of the State of Rio de Janeiro, to witness the working of an American tractor and plow which this company was sending there for demonstration. The trial went far enough to show me wherein the manufacturer of the tractor had failed to do his part. In the first place, the tractor was a new line for this firm to carry, yet the only instructions furnished with machine were printed in English. As neither the mechanic nor anyone connected with the demonstration was acquainted with that language, it was necessary for me to translate the instructions in order that the work might proceed.

"In the second place, no extra spark plugs were sent. The mechanic had never seen a tractor before, and when the motor would not fire the first time he was certain that there was something wrong with the magneto and wanted to take it apart and adjust it. I advised against this, and by going over the en-gine carefully I discovered that the porcelains of one of the spark plugs had been cracked and that it would not fire the motor under a load. As it is hard to find spark plugs here outside the cities, especially those with American threads, an effort was made to adjust the broken part; but when the tractor with only one cylinder firing, got stuck twice in the mud the uselessness of further dallying became apparent and a new spark plug was obtained, but only after a great deal of trouble. With the new spark plug in place and the carburetor adjusted the tractor started off without any difficulty."

FARM TRACTOR DEPARTMENT, THE LITERARY DIGEST.

Resinol Soap not only is exceptionally cleansing and refreshing, but its regular use reduces the tendency to blotches, relieves clogged, irritated pores, and gives Nature the chance she needs to make red, rough skins white and soft again.

Bathe your face for several minutes with Resinol Soap and warm water, working the creamy lather into the skin gently with the finger-tips. Then wash off with more Resinol Soap and warm water. Finish with a dash of clear, cold water to close the pores.

Do this once or twice a day, and you will be delighted to see how quickly it soothes and cleanses the pores, and makes the complexion clearer, fresher and more velvety. The healing, restoring influence that makes this possible is the Resinol which this soap contains, and which physicians prescribe, in Resinol Ointment, for the care of skin affections. If the skin is in really bad condition through neglect or improper treatment, Resinol Soap should at first be aided by a little Resinol Ointment.

Used for the shampoo, Resinol Soap helps to keep the hair rich, glossy and free from dandruff, while its extreme purity, its freedom from harsh, drying alkali, and its gentle medication adapt it peculiarly to the care of a baby's delicate skin.

Resinol Soap is not artificially colored, its rich brown being entirely due to the Resinol medication it contains. Sold by all druggists and dealers in toilet goods. For a sample cake, free, with a trial box of Resinol Ointment, write to Dept. 20-F. Resinol Chem. Co., Baltimore, Md.

HOW ZIMMERMANN UNITED THE UNITED STATES

that American sentiment, hitherto divided, "is now solidly behind the President" as a result of the German offer of alliance to Mexico and Japan, and a survey of the daily

press confirms the accuracy of his judgment. Thus, as the Manchester Union points out, the Zimmermann note, so "frankly admitted by its author," is proving a blessing, for, besides having "shaken us together" and erystallized the demand for military preparedness, "it has opened the way for constructive negotiations with Japan, it has brought South America to full realization of the nature and extent of the imperialistic dream that is struggling to become a reality, and it has placed Mr. Carranza in a position where he must know that a false step now would array the whole of the Western world against him." Nothing, the Springfield Republican remarks,

"could solidify the American people like the threat of a hostile enterprise which aimed at the dismemberment of the country." Across the continent the Los Angeles Teihune declares that, "in the presence of the situation we now confront, all differences are extinguished, all racial prejudices obliterated, and the men and women of America unitedly support the President in the pride

VEN COUNT ZU REVENTLOW discerns from Berlin Wisconsin, a State claiming many citizens of German birth. and whose senior Senator at Washington led the filibuster so fatal to the Armed Ship Bill, the Oshkosh Northwestern asserts: "Pacifists, critics, and carpors have been turned into real

Americans overnight, and patriotism has been fanned into a flame of fervent loyalty." In still another section, The Arkaneas Gazette, of Little Rock, finds the whole situation simplified by the publication of the Zimmermann note, which-

"Should result in a falling off of German sympathizers in the United States that may amount to total elimination. It would seem to leave the pacifists nothing to stand on. It should put into the proper category those German-language newspapers in this country that have been disloyal. It should awaken the slothful and complacent American who does not believe in war-insurance because it might require him to pay more taxes or might require him or his son to do his bonest 'hitch' as a soldier under the flag which pro-

AN OMINOUS NOTE IN THE INAUGURAL PARADE

Not since the first inauguration of Abraham Lincoln, Washington correspondents report, have so many precautions been taken to guard the life of an incoming President. Thirty-two Secret Service men surrounded Mr. Wilson's carriage. Troopers of the Second Cavalry formed a bollow square about him, and sharpabooters were stationed on the roofs along his line of march.

> teets him, and his family, and his property. It should and probably will give us the kind of preparedness we so urgently need."

German-American editors were at first inclined to doubt the authenticity of the Zimmermann note. It seemed incredible. Amerika, of St. Louis, had "no hesitation in declaring it a and strength of their common devotion to their country." In forgery." A statement prepared by the editor of Viereck's Weekly

(New York), formerly *The Fatherland*, was full of such phrases as "obviously faked," "brazen forgery," "impudent hoax," and "ludicrous." According to the pro-German Milwaukee *Free Press*, the published letter was one "which even schoolboy seuse should suspect of spuriousness." Whether genuine or not,

-Kirby in the New York World.

"such negotiations would only be natural," in the Newark Freie Zeitung's opinion, "and a common-sense step on the part of Germany." The Minneapolis Volkszeitung found the words "plot" and "conspiracy" inappropriate "for a 'possible' agreement for protective purposes." On the other hand, the Illinois Stants Zeitung declared that if the Zimmermann note were authentic, "then Germany has committed an act of unfriend-liness toward our country." And, in the face of such a fact, observed the St. Louis Times, an English paper representing German-Americans, "heartstrings are one thing, and loyalty to the flag is another." In this situation, said Dr. A. Siebert, a leading German efficient of St. Louis, "we must forget our sympathy, which we will do."

In fact, the declarations of loyalty convince the New York Journal of Commerce that most Americans of German origin are anxious "to have it clearly understood that they will stand by their adopted country and its free institutions." The majority of them, the Sioux City Tribune is confident, "will not hesitate when they plainly perceive that their individual interests are as much at stake as those of other citizens." In an editorial headed "German-American Eyes Opened," the Minneapolis Journal thus discust the effect of the Zimmermann disclosures;

"Americans of German birth are astounded at this proof that their native land contemplates attack on their adopted country. They begin to see that the Prussian war-lords, in pursuance of their dream of world-dominion, have not played fair with the German-Americans, but have tried to use them as mere pawns in the great game of conquest. . . . Now they are filled with resentment to learn of the calculated treachery of that Imperial Government whose cause they had been led to esponse."

The Milwaukee Journal observed similarly:

"In the United States are many people of German birth or German blood, of whom a very few are disloyal, but among whom many have honestly believed it consistent with their loyalty to America to seek to serve the cause of Germany. They have not believed that the Fatherland with which they have sympathized in its struggle and which they have sought to aid was capable of plotting deliberately to devote them to destruction.

"In the Mississippi Valley, which by the plan of invasion Germany proposed to Mexico would be invaded, are millions of Americans in whose veins flows German blood. But the German plan made no more reckoning of them than of any other Americans. In Texas, against which Germany hoped to bring all the force of half-civilized Mexico, are many Americans of German blood. But their Fatherland recked not of this. In California are very many Americans of German blood. But, against California, the German Government hoped to launch all the force of Japan, a people of another race which the German Kaiser had declared a peril to civilization."

In view of these revelations, the New York Herald asks of German-Americans the question, "Under which flag?" The once pro-German New York Evening Mail puts the same question in the form of the command, "Choose You This Day Whom You Shall Serve," and proceeds:

"The Zimmermann note has taught a terrible lesson to German-Americans, and one that they will never forget.

"It has taught them what an ominous conflict of interests might arise between the country in which they were born and the country to which they owe allegiance.

"They have learned that every country looks out for its own interests, and its own interests alone.

"They have learned that the country of their dreams, of their eradle-songs and childhood, proposes a plan to strike us at our weakest point, to turn loose the bandits of Mexico and the hordes of the East, and continue fighting with them until we are forced to cede to Mexico the States of New Mexico, Arizona, and Texas—and to Japan we know not how much more.

"Therewith German-Americans learn the last wholesome lesson that need be taught them."

Senator Sherman, of Illinois, who thinks there have been "as many people of pro-German sympathy in the United States as pro-Ally," predicts that the publication of the German intrigues will "create a revulsion in sentiment and lose for Germany the many friends she had throughout the great Middle West." The Sacramento Boe, after pointing out that besides German sympathizers of German descent there are "hundreds of thousands of Americans whose sympathics always go to whoever appears to be the under dog," declares:

"To-day that sympathy should be completely wiped out by the exposure of Germany's treacherous enmity, underhanded,

Digitigated by the Tribune Association.

WHAT ARE WE GOING TO BO ABOUT IT?

- Darling in the New York Tribune

nasty intriguing against a peaceful country that has stood with patience unsurpassed the constant succession of serious acts bordering on hostility from that nation."

But, besides German-Americans and pro-German Americans, there are Americans who have kept neutral in thought and speech, holding the scales balanced evenly between Entente and

Harding in the Brooklyn Eagle.

D international Film Service. New York. FRITE KOLD.

INVOLVED IN "TREASONS, STRATAGEMS, AND SPOILS."

The cheerful pair at the left were arrested in New York as lenders in a conspiracy to strike at Great Britain by fementing sedition in India; they are believed to be in German pay. Kelb, German reservist and expert bomb-maker, is pictured at the right among the explosive devices which filled his Hoboken room. He has been arrested and is being questioned about recent munitions-explosions in New Jersey.

Central Alliance, finding about the same proportion of good and bad on either side, and hoping for a peace without decided victory for either. Such was practically the position of the Omaha World-Herald. But, it declared after the news of the attempted German-Mexican-Japanese alliance,

"There can be no neutrality in the heart of any patriotic American when the issue shifts from Germany against Great Britain to Germany against the United States. . . . The German Government stands willing to turn loose upon the United States-our own country-the hordes of alien and inferior civilizations unless we accept and how to its ukases upon the high seas. It has tried to do it, the it has failed and, we hope and believe, will continue to fail. The failure does not blot out the will and intent. It can not blind us to the danger that lies in the cold and calculating hostility thus revealed. However absurd the plan to permit Mexico to absorb Texas—as if Texas could ever be ruled by the Mexicans!—the brain that conceived the thought and sought to execute it is no friend of the United States. After all that has happened, and in the light of things as they are, for Germany now to achieve victory would mean a frightful danger to this Republic."

Peace-loving Socialists may not have had a change of heart, but some of them see that the exposed German plans contemplate the invasion of United States territory, and the Socialist Milwaukee Leader emphatically asserts that "an invasion of the United States by any force or power whatsoever would find a united nation—the American Socialists as a very valuable fighting unit." There are more facts yet to be told about German plottings, the Boston Journal hears, and, it thinks, "by the time the fighting point is reached, even the pacifist worm will be ready to turn at the exposé of German diplomatic practise." The admission from Berlin of the genuineness of the Zimmermann note comes as a hard blow to pacifists, for whom the Detroit Times speaks as follows:

"Regretful as the case may be, it looks like war for this country of ours, with only one thing left to praise God for, and that, if a war comes, that it was not of our own making......

"And, should that point be reached, Mr. Jingo, if you are there in the thick of the fray, we want you to take notice of the fellow fighting at your side—we want you to take notice of just how hard and how well a pacifist can fight when there is no longer a chance for peace."

Besides unifying the people of this country, the Zimmermann note, in the opinion of many editors, has done an important work of enlightenment. In this illuminating glare, the
Detroit Free Press remarks, our people get "a vivid glimpse of
America's situation internationally." Let us be grateful to
Zimmermann, says the New York Tribune, for "he has contributed largely to our knowledge and understanding of the
German method and the German idea. His is the most illuminating revelation since the Lusitania massacre," Unwittingly,
the German statesmen responsible in this case performed what
the New York Journal of Commerce calls "a service of lasting
value to the cause of humanity in the revelation they were
making of German perfidy and mendacity—of the impossibility
of any civilized Power living on terms of amity with such a
Government as theirs."

But what is there in the abortive Japanese-Mexican conspiracy, the New York World asks, that was "not perfectly in keeping with the reputation established by its authors throughout the world?" Nothing, perhaps, replies the Buffalo Express, but "the imagination too dull to be imprest by the sufferings of Belgium or to grasp the picture of dying women and children from the Lusitania and the Laconia can understand what it would mean to have hordes of Mexicans under German officers sweeping into Texas, New Mexico, and Arizona." Or, as the St. Paul Pioneer Press puts it, "we can understand the British and French attitude toward the blow at Belgium more clearly now that Germany has attempted to make a Belgium out of Mexico." We can also understand, says the New Orleans Times-Picayane, "why Entente spokesmen have declared that

Appartubated, 1917, by the Prets Publishing Company

WHAT SHALL THE HARVING BE!

-Cassel in the New York Erroray World.

there can be no peace by negotiation with the Berlin Government as it is constituted at present."

Germany's plan to involve us in war with Japan is declared "equivalent to an act of war" by the Minneapolis Technic. The New York Commercial calls the German Foreign Secretary's admission of the authenticity of the note "a slap in the face and a challenge to combat." Germany has long been waging war upon us, say the Indianapolis Times and the Atlanta Journal, while the Cleveland Plain Dealer adds: "There is neither virtue nor dignity in a nation which, being warred against for two years, still refuses the gage of battle." The Philadelphia Public Ledger and the Norfolk Virginian Pilot call upon our Government to take up Germany's challenge. The only proper reply to the Zimmermann disclosures is a declaration of war, in the opinion of the Syracuse Post-Standard. Our attitude from now on, the Boston Globe insists, "must be that if Germany wants war with us she shall have it." Peace with Germany is "not peace but shame," cries the New York World. The issue is "Barbarism versus Civilization," according to a New York Globe editorial, and "the German Government is not a government, but a disease." The Tampa Tribuse calls for "nothing less than a positive and definite declaration of our alinement with the Allies in final crushing of the Kaiser and his kind," The New York Tribune is confident that

"A time is coming when we shall cease to talk about peace and recognize what the French recognize, namely, that the only thing that remains for this generation of man is to go to the trenches and kill Germans until the German surrenders his barbaric fury or sinks under the weight of a united and overwhelming condition of civilized men and nations."

These editors, and many who do not call for immediate war against Germany, use the activity of Germany against us as a new argument for greater naval and military preparedness, and the advantages of a system of universal military training are set forth by editorial writers in almost every State of the Union.

The German note, bearing Foreign Secretary Zimmermann's name, proposing an alliance with Mexico and Japan, and suggesting the Mexican conquest of Texas, New Mexico, and Arizona, was-reprinted entire in our last issue. In response to the United States Senate's request for information, Secretary Lansing issued an official report, stating that the note was authentic, but declaring that it would be "incompatible with the public interests" to give out any more information regarding it.

Dr. Zimmermann, according to Amsterdam dispatches via London, defends his act before the German Reichstag as "a natural and justified precaution," about which people in America are not "justified in being excited." An interview sent out by the official Overseas News Agency quotes the Foreign Secretary as saying that such a plan as he proposed "would mean nothing but that we would use means universally admitted in war, in case the United States declared war." Dr. Zimmermann is said to have found further justification for the German course in the fact that "the United States last year suggested to other American republics common action against Germany and her allies."

"The half has not been told" regarding the ramifications of German plots against this country, the Washington correspondents have been told by officials of the Federal Department of Justice. Since the publication of the Zimmermann letter, a number of arrests have been made, and "German spy" news has been conspicuous on the front pages of the papers. Long lists of German activities, said to have been uncovered by the United States, have appeared; we take the following brief summary from the New York Morning Telegraph:

- "Alliance between Germany, Mexico, and Japan against United States.
- "Scheme to stir up Central- and South-American republics against the United States.

"The Cuban revolution.

- "Plots to blow up munition-plants, East and West:
- "Plots to cripple American and other ships earrying articles of contraband.
 - "The food riots;
 - "Peace and antimilitaristic propaganda by some societies,
 - "Peace and antimilitaristic propaganda by certain individuals.

 "Sending American newspaper men as I'-boat spics to En-
- "Sending American newspaper men as I'-boat spics to England, Holland, Denmark, and Canada.

"Plot to foment rebellion in India.

MAD BOO! -Chaple in the St. Louis Republic.

"Plot to stir up revolution and resistance to military service in Ireland.

"The agitating of strikes in industrial plants engaged in the manufacture of munitions or contraband for export.

"General espionage of all military and naval plans and operations by the United States."

THE LAST SENATORIAL FILIBUSTER

RAITOROUS MOTIVES are charged by both sides in the controversy raging over the action of the little group of Senators who, in the President's words, "rendered the great Government of the United States helpless and contemptible" by filibustering to death the Armed Neu-

OUR LAND GOING NURMEMERLE.

-Harding in the Brooklyn Eagle.

trality Bill which passed the House by a vote of 403 to 13 and had the support of an overwhelming majority in the Senate. Those who regard Germany's actual and avowed attitude toward our citizens on the high seas as one of virtual warfare see in these filibusterers men who, in the very moment of attack, have snatched a weapon of defense from the hand of their Government. Those, on the other hand, who regard armed neutrality as an invitation to war rather than a defense against it, and who consider no price too high if it buys peace, do not hesitate to explain the point of view of those who differ with them by dark allusions to British gold, a subsidized press, and the greed of the munition-makers.

The filibustering Senators, avers the Boston Transcript, "flirted with treason" and "sided with Germany against the United States" when they "tried to hamstring the President in his effort to defend the nation against foreign attack." "They will be fortunate if their names do not go down into history bracketed with that of Benedict Arnold," thinks the New York Herald, while the Philadelphia Record characterizes them as "imitators" of that famous traitor. "No matter what excuses they give, no matter what technicalities they urge, the unanswerable fact remains that they sided against their country on a tremendous issue, and in an hour of inexpressible importance." says the Baltimore Sun. Or, as the Memphis Commercial Appeal expresses it, "the American Republic was betrayed in the Senate of the United States in the dying hours of the Sixtyfourth Congress." "If Germany seizes this opportunity to renew her propaganda in this country, in Cuba, and in Mexico, we can not blame her," remarks the St. Louis Republic, since members of our Senate "gave her the invitation." Their tacties "fall little, if any, short of moral treason," declares the New York World; and the Providence Journal predicts that this will be the judgment of the American people as well. "It is not a pleasant reflection that these Senators represent States where the German population is very large," remarks the Jamestown (N. Y.) Post, which regards them as "pro-Germans rather than

pacifists." Colonel Watterson's Louisville Courier-Journal consigns them to an "eternity of execration," and the Chicago Herald sees them "damned to everlasting fame,"

These vigorous phrases give some idea of the wave of anger that swept the country and aroused the majority of the Senators themselves to vote a change in the Senate rules to make such tactics in the face of a great international crisis impossible. Many State legislatures passed resolutions of ondemnation similar in intention to that of the Kentucky Senate which denounced the filibusterers as "disloyal, traitorous, and cowardly." At a patriotic mass-meeting held in New York under the auspices of the American Rights League the Rev. Dr. Lyman Abbott was greeted with roars of approval when he called the filibustering Senators "Germany's allies," and went on to say: "Germany has made and is making war upon America, and her allies in the United States Senate have violated the unwritten law of all honorable assemblages. They have violated their trust to their country and have done their best to deprive us of our rightful protection." "Traitors! Hang them!" shouted men in the audience. Even in the United States Senate, convened in extra session to confirm appointments and adopt a closure rule, the suggestion of treason was voiced by Senator Walsh, of Montana, when he said:

"It is not inconceivable that the obstructionists—filibusterers—may be actuated by traitorous sentiments. The Revolution had its Arnold. I trust that I offend no sensibilities in referring to the fact that in 1861 ten or more members of this body were expelled for treason. A Vice-President of the United States, who for four years presided over the Senate, was indicted and tried for treason, and a Senator, charged with him with this capital offense, escaped expulsion by but one vote. The Senate had already at that early day expelled one of its members for perfidious negotiations with the enemies of his country.

"We are all sworn to bear true faith and allegiance to the United States, a needless oath unless it be that some of us may, conceivably, require the aid of beaven to keep us true. What say you, shall the Senate make a rule under which it may be held at bay by treachery until a foreign foe shall have prevailed upon a supine nation?"

Whatever may have been the motives of the filibusterers, their action evokes much enthusiasm in the German press. Thus the

-Orr in the Chicago Daily Tribune.

Frankfurter Zeitung hails them as "fine Americans who remain uncontaminated by Wilson's blind devotion to England"; and it bestows upon Senator Stone and Senator La Follette special commendation for frustrating President Wilson's plan "to wrest from Congress privileges vested in it by the Constitution." After reading the President's second inaugural, in which he again declares for armed neutrality, the Berlin Lokal-Anzeiger, the official organ of the German Government, comments as follows:

"The President reveals himself the most unrighteous and dishonorable man who has yet stood at the head of a great state. And when he states that there is nothing that can alter his thoughts or his intentions, a million voices shout back across the Atlantic: 'No threat of armed ships, no declaration of war, will again open up our blockade zones to American commerce!"

In his inaugural, the President said:

"We have been obliged to arm ourselves to make good our claim to a certain minimum of right and of freedom of action. We stand firm in armed neutrality, since it seems that in no other way we can demonstrate what it is we insist upon and can not forego. We may even be drawn on by circumstances, not by our own purpose or desire, to a more active assertion of our rights as we see them and a more immediate association with the great struggle itself."

Turning again to the Senate filibuster against the Armed Neutrality Bill, we find it viewed somewhat more sympathetically by the various pacifist organizations than by the general public. Thus the Emergency Peace Federation sent the filibusterers this message of praise and encouragement:

"The Federation desires to express its grateful recognition of the courage and devotion with which you have served the cause of peace and democracy. We believe you represent a vast, tho unknown, number of Americans whose earnest desire it is that this country should not be drawn into war, directly or indirectly."

Mr. Bryan, who has repeatedly charged that "we have a warelement in this country who are doing all in their power to manufacture war-sentiment," gave out the following explanation of the filibuster:

"So far as I have seen expressions from the Senators, nearly all of those who voted against authorizing the arming of ships did so for the purpose of compelling an extra session of Congress or because they objected to the phraseology of the bill. Since the President has power to call a special session of Congress at any time and ask for legislation he desires, the jingo press will find it difficult to convince the public that there is anything treasonable in the desire to have Congress in session."

Since American Socialists officially opposed our severance of diplomatic relations with Germany, it is probable that they also oppose the arming of our merchantmen. In a speech delivered in New York last week, Eugene V. Debs, three times the Presidential candidate of the Socialist party, said in part:

"I refuse to go to war for any capitalist government on the face of this earth. I'd rather be lined up against a granite wall and shot for treason to Wall Street than live as a traitor to America.

"If the workers are true to themselves, they will unite in the event of war and declare a general strike that will paralyze the industry of the country."

Two concrete benefits, remarks the Boston News Bureau, have emerged from the welter of emotions stirred up by "one of the most reprehensible filibusters ever recorded in the history of any civilized country." These are the adoption of a closure rule by the new Senate, and "the increased emphasis put upon the necessity for an extra session of Congress at an early date, whatever the technical or partizan difficulties involved." On March 8 the Senate, by a vote of 76 to 3, surrendered its privilege of unlimited debate, which it has defended against all assaults for more than a hundred years, and adopted a closure rule whereby, on vote of two-thirds of the members, debate can be limited to a maximum of ninety-six hours, or one hour for each Senator. This reform was asked for by the President when the eleven Senatorial opponents of the Armed Neutrality Bill thwarted the will of an overwhelming majority of their colleagues in both Houses. The President's demand found a virtually unanimous echo in the press. Altho Senate filibusters may have sometimes served a useful purpose, remarks the San Francisco Chronicle, they were fundamentally wrong, and the possible abuses intolerable. Says the New York World:

"By adopting the closure rule, the United States Senate has at last freed itself from the shackles that bound it hand and foot. It is now a representative body with power to act and vote as it may decide for itself, no longer subject to the tyranny which it permitted a handful of obstructionists to exercise,"

And in the New York Times we read:

"A month ago this greased slipping of closure through the Senate would not have been possible. The House adopted it twenty-seven years ago after bitter and violent opposition, and it became a leading political issue in the elections. The Senate, despite numerous attempts to introduce closure, has sted-fastly refused to hear of it, and has taken pride in its unlimited freedom of debate. That a single incident, like the filibuster of last week, suffices to change the Senate's view, at a place where it seemed most strongly rooted, is cloquent of the way in which that body has been stirred by the nation's peril.

"Senator Pomerene said the rule proposed was not drastic enough, and it is not drastic enough to enable an Administration or a majority party to ride roughshod over the right of the minority; but it is just drastic enough to prevent the nation's will, when clearly ascertained, from being annulled by the hard obstinacy, or the malevolence, or the disloyalty of 'a little group of wilful men.' It is enough to make impossible that appalling picture, painted by Senator Walsh, of war actually beginning while 'a small coterie of Senators spell each other on the floor until the enemy thunders at the gates of our cities and the Republic has had its death-blow.' A month, a fortnight ago, such a picture would have seemed wildly impossible anyhow; now, with the Senate's rules as they were, every man knows that it was not even improbable, for we see that there are no limits to the self-deception of those 'honest but misguided peace-at-any-price men' whom Senator Walsh described."

The three Senators who voted against the closure rule are La Follette, of Wisconsin; Gronna, of North Dakota, and Sherman, of Illinois.

A majority of the eleven men accused by President Wilson of maneuvering to make their Government "helpless and contemptible" in the face of a foreign menace have protested that they had no actual part in the filibuster. Several of them explain that while they were opposed to granting the President the power to arm merebant ships and would have voted against it, they gave the filibuster no active support. Others state that they were not opposed to the Armed Neutrality Bill in principle, but thought that in the form in which it came before the Senate it conferred upon the President vague and dangerous powers. The fact remains, however, that when the Sixty-fourth Congress went out of existence by Constitutional limitation on March 4, after a continuous session of twenty-six hours, every effort to bring the bill to a vote had been thwarted by an organized filibuster apparently led by Senator La Follette. When the purpose of these men became unmistakable, a manifesto was circulated stating that a majority of the Senate favored the Armed Neutrality Bill, and "would pass it if a vote could be obtained." This was signed by 76 Senators. Says the New York Sun:

"The eleven who beyond doubting gave support, moral or otherwise, to the filibuster and who also refused to sign the manifesto were these:

"Democrats: Stone, of Missouri; O'Gorman, of New York; Kirby, of Arkansas; Lane, of Oregon, and Vardaman, of Mississippi. Republicans: La Follette, of Wisconsin; Norris, of Nebraska; Cummins, of Iowa; Gronna, of North Dakota; Clapp, of Minnesota, and Works, of California."

Defending Senator La Follette's course as leader of the filibuster, the Milwaukee Free Press says:

"Senator La Follette is not only representing the people of his State—he is representing 90 per cent. of the whole American people—in his stand against the progress of the war-juggernaut in the United States Congress.

"This requires courage, real courage, a courage far greater than the Senator has ever displayed in any of his former battles; for it means the sacrifice of any national political aspirations he may possess. His stand is one of genuine patriotic service, scarcely equaled since the days of Lincoln."

ARMING SHIPS TO DEFY THE "U"-BOATS

'AR "WITHIN A MONTH" is predicted by former Secretary of State Wickersham as a result of arming our merchant ships against the submarine, ordered by President Wilson on Friday of last week. On the same day he summoned Congress to meet on April 16. "Thrilling events may follow shortly," expects the Cleveland Leader, for "any day may witness a fight to the death between a German submarine and an American ship earrying guns supplied by the United States Navy and manned by naval gunners," and "Germany would doubtless declare war." Germany's comment is supplied by Foreign Secretary Zimmermann, who declares that "we are determined to carry through the submarine war to the end," and "have spoken our last word, and the decision is in President Wilson's hands." Ex-Secretary Wickersham's prediction appeared in the New York Evening Sun of March 5, when he said, in support of the President's right to arm merchant ships without the consent of Congress:

"There is every precedent to support my opinion that the President is fully empowered to act single-handed in taking whatever steps are required for national defense on land or sea until the next session of Congress, with which, of course, rests the sole right to declare war,

"It is plainly written that the will of Congress was tremendously in favor of supporting the President, and there is no question of his ample power to act. He was simply prudent in taking the matter before Congress, because eventually if an attack comes upon our ships it will be a cause for war. And I look for war to come within a month."

Approval of the President's decision includes even the American Peace Society, whose Executive Committee adopted the following resolution, reported in the Washington dispatches:

"We, the members of the Executive Committee of the American Peace Society, recognize with deep appreciation the efforts of President Wilson to avoid war, and at the same time to protect the honor of the nation and the rights and lives of our citizens. We wish to assure him of our hearty support in his determination to secure recognition of the claims of justice and humanity."

The President's act "will cause a thrill of patriotic enthusiasm throughout the land," says the Philadelphia Public Ledger. He "has done right and acted wisely," thinks the Utica Press; and the Albany Knickerbocker Press believes his action "well considered and thoroughly justified." The Boston Herald hopes there will be "no further faltering," while the Springfield Republican puts the case in these words:

"Either the United States must stay on the seas or get off the seas; if it is to stay on the seas further delay in arming merchantmen can scarcely be tolerated."

Our position appears to the Richmond Times-Dispatch to be this:

"We do not challenge Germany; we do not declare war on Germany; we do not invite a combat; we merely register our refusal to recognize the preposterous claims Germany has made. The nation realizes it has come at last to the parting of the ways. The issue is with Germany. Peace and war are in her grasp, and she must choose."

The legal aspects of the matter are outlined as follows by the Washington correspondent of the New York Times:

"In arriving at the decision that he had legal authority to furnish armament to merchantmen, President Wilson was guided by the advice of both Secretary Lansing and Attorney-General Gregory. Mr. Lansing had had no doubt from the first of the President's power to take means for the defense of American ships and American lives on the seas. Others thought, however, that a law enacted in 1819 prohibited the President from permitting any merchant vessel of American register to use force against the ships of a nation with which the United States was not actually and officially at war. This law specified that armed merchant vessels should not use their guns against national vessels of a Government with which the United States was in amity.

"Secretary Lansing held that this statute had been enacted with particular reference to protection against pirates, and that it had no application whatever to the present situation. It could not properly be construed, he contended, to apply to the use of arms by an American merchant vessel to protect itself against the unlawful attack of a German submarine."

PROHIBITION'S GREATEST STRIDE

THE LONGEST STEP of the Prohibition movement in the history of the nation is the enactment of the "bonedry" law by Congress, remarks the Cleveland Plain Dealer, for it means the absolute exclusion of intoxicants for beverage purposes from States which forbid the sale of liquor,

EYEN THE LITTLE THAT HE HATH SHALL BE TAKEN AWAY.

—Cesare in the New York Evening Post.

no matter what their existing "dry" laws may provide. The Detroit Journal points out that the law destroys the trade of saloons in wet territory which live by filling bottles of dwellers in Prohibition States, it eripples the mail-order business of wholesale liquor-houses, and cuts down the revenue of express companies. It is noted, moreover, that protest against the law is "strangely meek," and the probable reason is that the law has come "like a blast of lightning out of the sky and rendered the army of the 'wets' almost voiceless." Washington dispatches inform us that the law was enacted as an amendment to the Post-Office Appropriation Bill and that it will affect at least fourteen "dry" States which do not prohibit the importation of certain quantities of liquor for personal use. Another provision forbids the postal delivery of any publication or correspondence bearing liquor advertising in States that themselves forbid such advertising within their borders. Prohibition's increasing impetus is apparent not only in this legislation, various observers tell us, but also in the "bone-dry" enactments of such States as Kansas and Tennessee, and the action of Congress in marking the District of Columbia in among the arid

Washington is "dry," but not "bone dry," and, as the New York Evening Post and other dailies explain, the justification of the distinction lies in the presence of the diplomatic corps of foreign nations at the capital which makes proper the permission to import liquor for personal use. Congress could not reasonably go further than it has, this journal adds, for in the District there are reasons why a certain class distinction must be made, altho one of the chief objections to the "rather hypocritical half-wet, half-dry character" of some Prohibition States was that in them the "rich imposed comparative abstinence on the poor, while keeping themselves well supplied by shipments." One sure effect of the law, we hear from sundry journals, including the Cleveland Leader, will be a "thorough test of the honesty of purpose of the supporters of State statutes and constitutional amendments which have not explicitly outlawed the shipping of intoxicants into territory thus made "dry," and we read:

"Now these States will have to vote themselves 'wet' again if their citizens who have had money enough and clubs enough to keep well supplied with liquor, hitherto, are to go on in their old self-indulgence. It will soon become impossible for them to stay 'dry' on paper.

"All such tests of sincerity serve a good purpose because shams in government are so closely connected with frauds and many forms of injustice. Laws ought to mean all that they say, and still more should the spirit and the letter of changes deliberately made in the constitution of a State be given full effect."

In some quarters the opinion is exprest that in thus legislating for the Prohibition States Congress is guilty of what the Springfield Republican terms extreme "interference in home rule by the Federal Government." Yet this interference, we are told, is only a foretaste of what nation-wide Prohibition would be in case Prohibition for the whole nation should ever be established. For experimental purposes the Federal "bone-dry" law should be welcomed, The Republican believes, in the expectation that a critical test of the Prohibition States would be helpful in reaching a conclusion as to the practicability of Constitutional Prohibition for the United States as a whole. How tremendous the importation of intoxicants into "dry" States has been may be judged from the statement that if the new law destroys this traffic the internal revenues of the United States Government will be diminished by nearly \$100,000,000, and this journal proceeds:

"The liquor interests are apparently jubilant over this development—a fact that compels more careful scratiny of the situation. Senator Reed, of Missouri, who introduced the 'bonedry' amendment, has never been known as a friend of Prohibition. There was opposition also to the amendment from some Prohibition champions who acknowledged that they feared it would cause a popular reaction in some Prohibition States and make more difficult the future conquest of 'wet' territory. The liquor interests entertain strong hopes that such drastic legislation will bring on a revolt.

"It is very possible that the liquor interests will be disappointed in the reaction hoped for. The Federal interdict
against interstate shipments for personal use may tend to check
the advance of Prohibition into the 'wet' States, but the 'bonedry' movement was already strong in Prohibition territory, and
it seems to reflect a strengthening popular sentiment in support
of Prohibition that really prohibits."

Approval of the Reed amendment from the New York State Wholesale Liquor Dealers' Association is voiced in the press by Mr. Arthur L. Strasser, its counsel, who is quoted as saying:

"The amendment will serve a very useful purpose in defining the real issue involved in the Prohibition question. Prohibition is not an issue between the trade on the one hand and the Prohibitionists on the other; the issue really lies between the 80 per cent, of the people of this country who drink and the small minority of Prohibitionists. Just so long as a voter in a so-called 'dry' State could vote 'dry' and continue to drink as he pleased, the voter as a consumer had no real interest in the Prohibition question.

"The dilemma presented to the Prohibition forces by 'bonedry' legislation is one which they will not relish. If 'bone-dry' legislation is enforced, the people of the States will demand the repeal of State-wide Prohibition laws. If it is not enforced, the insincerity of those who wish statutory Prohibition, but not real Prohibition, will be made patent to every one."

The New York Evening San says that it is so unusual to find the two sides of the liquor question in accord that it suspects one side or the other of being "sadly taken in or else of feigning descitfully in the present case," Possibly the liquor-dealers are only pretending to enjoy the prospect of being cut off, at least temporarily, from trade with the fourteen "virtuous but thirsty" States, this journal reflects; possibly Prohibition interests do not welcome so warmly as they might the prospect of having the "convert" States "actually shut off from all rum-supply possibly both possibilities are true."

TOPICS IN BRIEF

A STEEN gun is more effective than a stern note. — Wall Street Jearnal.

What the Cubaos want to do is to cabe more case and less cain. — Besten

Transcript.

Our mails are held up by the British and sent down by the Germans.— Brooklyn Eagle.

Boycorring necessities having proved effective, why not try it on luxuries?—Wall Street Journal.

Of course, whatever happens, there will be the usual extra sessions of Colonel House,—New York Sun.

The beligerents in Europe have about quit fighting and are waiting for each other to starve.—Florida Times-Union.

Burrish are taking over not only part of the French line, but part of the German line in their alsent-minded way.—Wall Street Journal.

Oven in Germany they have a novel method of settling strikes. As soon as the strikers walk out they are sent to the front.—Washington

Brittin calls the Ancre retreat a "voluntary withdrawal for special reasons," and no doubt Haig can stand being called a "special reason."—
Wall Street Journal.

It is strange that Herr Zimmermann did not try to revive the Southern Confederacy, as a part of his pian of a war against the United States.— St. Louis Globe Democrat.

The Japanese-Mexican plot was not an act of war against the United States, the Germans insist, adding that whoever revealed it committed treason, -Philadelphia North American.

Are not the Germans, who have been seeking alliance with the Japanese, the conscientious custodians of civilization who for years have been warning us of the "yellow peril"?—New York Sun.

THE news that they had the parcels-post system in full swing in ancient Babylon has suggested the thought that some of the magnificent temples of antiquity were really the pork of the period in the form of post-offices.—San Francisco Chronicie.

The Germans are overt actful; Mr. Wilson is over tactful.—New York Sun.

"SMALL potatoes" has crased to be a phrase of depreciation.—Wall Street Journal.

At these signs of patriotism are extremely anneying to the pacifists.—
Philadelphia North American.

With a suggestive similarity between the words "potato" and "potentate!"—Atlanta Constitution.

INTERNATIONAL law may not be easy to define, but anybody can recognize an international outlaw.— Telesto Blade.

It appears that we are not the only nation that has been doing a little watchful waiting in Mexico.—New York Sun.

THE warring countries may get little comfort from the situation, but at least they know who are their food-dictators.—Neicark News.

THERE are more red stripes than white in the American flag, a fact that the Senatorial twelve do not swen to know.—New York World

WHY not Insist on a referendum in Germany, too, before there can be any declaration of war between the two countries?—Rochester Democrat and Chronicle.

LLOYD GEORGE is cutting Britain's imports in order to beat the Germans, and the Kaiser is cutting Britain's imports in order to beat the British.—Charleston News and Courier.

Texas, Arizona, and New Mexico will remember how the Kaiser paid Turkey with Egypt, Greece with Cyprus. Italy with the Trentino, and Sweden with Finland.—Wall Street Journal.

"STAUVE Europe and feed America!" is the slogan of the food embargoists. Why not cut off the supply of grain from America's distilleries, and feed both America and Europe?—Philadelphia North American.

THE Council of National Defense has asked Americans to show consideration for allens. This is sensible and proper. Perhaps now some ranguantmons allen will counsel his fellows to show consideration for Americans.—New York Sun.

ELEPHANTINE DIPLOMACY

AN ELEPHANT ON A TIGHT ROPE is not less clumsy than German diplomacy," is the verdict of one of the Allied press on Dr. Zimmermann's offer of an alliance to Japan and Mexico in case America should be at war with Germany. Mexico's reward being the states of Texas, Arizona, and New Mexico. While part of the German press consider that the diplomats in the Wilhelmstrasse have acted in a "legitimate and patriotic" manner, as the Berlin Lokal Anxiger phrases it, the rest of the world is frankly shocked at what the Amsterdam Nieuws can den Dag calls the "amazing cynicism" of Germany's offer to Mexico, and, in neutral countries especially, the press denounce the German Foreign Office in terms of no little severity. For example, the Rotterdam Maasbode writes:

"This trick of the black magic of secret diplomacy beats anything hitherto seen. Now that the cards are on the table the German game, instead of being grandiose, appears merely grotesque. The diplomatic trump-card is beaten and its player loses the game."

The Basel Nachrichten comments, a little maliciously, on the way that the Fatherland has left its German-American sympathizers in the lurch. It remarks:

"The German Foreign Office isn't any more Machiavellian than other diplomatic groups, so one does not need to look at a thing from a moral standpoint. More important than the ethical side will be the political consequences. Above all things, German-Americans have been terribly compromised by their old Fatherland. They have in their propaganda always been able to point out that the Entente has been letting loose the colored people of the world against the whites, and now Germany, in a trice, is willing to good the Mexican bands and the legions of Japan against the United States. Henceforth there will be no more pro-German propaganda in America."

The Swiss organ seems to have diagnosed the situation with some accuracy, for we find Mr. Bernard Ridder writing in the New-Yorker Staats-Zeitung, somewhat sorrowfully:

"We who have sought in this country to balance sentiment, and to render less acute a situation created by those who have lauded the cause of the Allies to the skies and dragged the name of Germany through the mud of their senseless vilification, have done so only in the thought and confidence that Germany still honored 'the heirloom of Frederick the Great'—America's friendship and friendship for America.

"Viewed from any angle, Dr. Zimmermann's instructions to the German Minister in Mexico constitute a mistake so grave that it renders the situation almost hopeless."

While German-American sentiment thus condemns Dr. Zimmermann's move as a "mistake," the semiofficial Kölnische Zeitung thinks that the Foreign Minister acted with great foresight and gave America a salutary warning. It says:

"As the German Minister to Mexico had definite instructions not to take steps before being certain that the United States had declared war, the venomous accusations may be disposed of by referring to the words just previously uttered by the Chancellor concerning the traditional friendly relations with the American nation.

"It is self-evident that we must defend our lives against a people which declares war on us, whatever the past may have been. We believe that the publication of our proposal to Mexico has had a salutary effect on the American people, who will not realize that Germany does not let herself be bullied, and that if the United States proceeds to overt hostilities we mean to fight with every means in our power."

London comments especially upon the curious failure of the German Foreign Office to understand the psychology of non-German peoples. The Pall Mall Gazette remarks:

"The German plan to induce Japan to play their game is a fair measure of German inability to understand the temperament of nations whose word is their bond and whose allegiance is not to be bought or sold. Foreign Secretary Zimmermann's letter was like a cold plunge to Americans who imagined that distance could keep them safe from entanglements of European politics, They now realize Germany had wires laid and mines dug under the very feet of their Republic, and had been long preparing to take the utmost advantage of American unpreparedness."

The Globe has a vitriolie paragraph which runs:

"Whenever Germany attempts a delicate maneuver in diplomacy she irresistibly suggests the elephant who tried to hatch hens' eggs, for clumsier performances it is impossible to imagine. Of the Mexican-Japanese intrigue the Germans made about as big a mess as possible. The Japanese are a proud, chivalrous people, and they are not likely to forget the compliment paid them by coupling the Mikado with Carranza. At one stroke Chancellor von Bethmann-Hollweg has irreparably offended the pride of the Japanese, has convinced the whole American people that Germany is their enemy, and has inflicted upon his own people ineffaceable disgrace."

In non-official Germany itself the news of the Japano-Mexican overtures has been received with somewhat mixed emotions.

Count Ernst zu Reventlow, the apostle of submarine ruthlessness, does not in this instance approve of extreme measures, and thus delivers himself in the Berlin Deutsche Tageszeitung:

"The offer to Mexico is wholly incomprehensible in view of Mexican conditions and the further fact that an allied Mexico held out no more promise than the one which would have exploited automatically a German-American war. The offer of such an alliance would seem to rest largely upon a lack of intimate nequaintance with Mexican affairs and American relations. Those desiring a policy permitting a return of the United States to normal relations after the war can not help deploring the German-alliance plan from this point of view alone. Mexico is a frontier neighbor of the United States, and the German offer will not be forgotten so soon."

Dr. Zimmermann dealt with the subject in the Reichstag in reply to the only objection voiced, which came from a Socialist Deputy. The Foreign Secretary said:

"That Germany looked about for Allies in the event of an outbreak of war with America is natural and justified foresight. I am not sorry that through its publication in America it became known in Japan. . . . How the Americans came into possession of the text of this dispatch which went to America in special secret code we do not know. That these instructions should have fallen into American hands is a misfortune, but that does not alter the fact that the step was necessary for our patriotic interests. Least of all are they in America justified in being excited about our action. It would be erroneous to suppose that the step made a particularly deep impression abroad. It is regarded as what it is—justifiable defensive action in the event of war."

The Berlin Lokal Anzeiger enthusiastically supports Dr. Zimmermann, and says:

"Americans have not the slightest reason to be provoked at our intentions. Without treachery, which brought the German offer to the knowledge of the United States Government, the Mexican Government would not have learned of it until after the United States had declared war on us. It is well known that President Wilson attempted to incite not only one but every neutral State to break off diplomatic relations with us. . . . He has now no right to complain when we, too, are seeking allies who might possibly help to thwart the step he aims to undertake against us."

The views of the Clerical Center party, as reflected by the Kölnische Volkszeitung, run:

"We can not deny that the betrayal of our offer to Mexico is certainly unpleasant for us and renders our relations with the United States more difficult. We do not, of course, mean to say we should censure the making of this offer to Mexico. In fact, we consider the attacks made upon us by the American and Entente press in this respect simply silly."

THE FUTURE OF THE HOHENZOLLERNS—The German papers laugh at the views exprest in the Allied countries that the end of the Hohenzollern dynasty is at hand. The Hamburger Fremdenblatt discusses the question and says:

"In order to humiliate Germany, our enemies would like to bring down and to shatter the position of her ruling house. They desire to persuade the Germans that the want produced by the war is the fault of the Kaiser, and that the danger of the return of times so grave can only be removed by the disappearance of the House of Hohenzollern. They eynically exploit the differences of opinion which there have often been-we do not deny it-between Kaiser and people, and they want to undermine the peculiar relationship of trust in which lies our strength. The Englishman claims the part of executioner which he played one hundred years ago at St. Helena. But our Kaiser can not be torn from his people. He is no hero of fortune set upon the throne by superhuman genius in the storms of revolution. His House and he are deep-rooted in the spirit of the German people. The exile into which it is desired to drive our Kaiser would be shared by the whole German people. Even a defeated Germany could not be deceived about its Kaiser or separated from him."

To imagine the disappearance of the Hohenzollerns would have been less-majesté before the war, but to-day quite a number of organs discuss the possibility, the all of them agree that such an eventuality is unthinkable. The Berlin Kreuzzeitung remarks:

THE LIMIT.

-Evening News (London).

"Our enemies see in the collapse of the Hohenzollern dynasty a guaranty of German impotence. . . . It can be a matter of indifference to us whether in London a King George and in Rome a Victor Emanuel 'rules.' Our Kaisertum is not a mere symbol, but is and shall remain the expression of our power as a state."

PART OF THE DECLARATION OF INDEPENDENCE OF ABAMA'S NEW KINGDOM.

THE HEJAZ KINGDOM

HE SPIRITUAL FOCUS of the Moslem world is the Holy City of Mekka, and the innermost shrine of that sacred place contains the Kaaba, that great black stone toward which every son of Islam turns when he offers his devotions. When Turkish troops were indiscreet enough to bombard this "symbol of the unity of God," things immediately

happened in Southern Arabia and the Grand Sherif of Mekka, El Hussain ibn Ali, lineal descendant of the Prophet himself, immediately threw off allegiance to the Sultan of Turkey and proclaimed the independence of Arabia. The Arabic papers tell us that this step is fraught with a significance that may easily escape the reader, but they say that the formation of the Kingdom of Hejaz, with the Grand Sherif as its King, together with its recognition by all the Allied Powers, has a twofold importance. First, from the political point of view, it means the resurrection of an Arab state and the independence of the Arab nation. after centuries of subordination to the Turks. Next, from the religious point of view, it possibly, if not probably, means a new orientation for the 200,000,000 souls professing the Islamic faith. Such being the importance of the movement, it is interesting to know something of the land and people who are concerned in it. From a long, historical, and descriptive article published in the Cairo Arabic monthly, Al Hilal, we quote:

"The Hejaz is the birthplace of Islam; in it are found its two most sacred cities, Medina and Mekka, toward which millions of people direct their faces in their daily prayers. Its population is not exactly ascertained, but is estimated at 1,500,000, of which 250,000 are city-dwellers, while the rest lead a nomadic life.

"There are four important cities in the Hejaz: Mekka, which gave birth to the prophet, has 150,000 inhabitants; Jidda, the port of Mekka, is the most important port of the country; Medina, the city to which the Prophet fled (this event, the Hegira, marks the beginning of the Islamic era); and Yanbo' El Bahr, the port of Medina.

"The Arabs have always been known for their love of independence, and have time and again caused trouble to the Turkish Government. They are renowned for hospitality, generosity, and chivalry.

"As for the Sherif himself, he is about sixty-two years old, medium-sized, white-bearded, with white round face, large eyes,

and big head. He is well educated and knows, besides the Arabic language, Turkish and Persian, both of which he speaks and writes. Moreover, he speaks English, French, and Russian, all of which he studied while in Constantinople. He is the first Sherif who has such a wide knowledge of foreign languages."

In an interview granted to a Mohammedan writer and published in the Cairo Mokattamm, the Sherif claims that the Turkish Government, under the direction of the "Unionists," or Young Turks, tried more than once to sow disunion among the Arab leaders. He said:

"When it was made clear to the Unionists that they had no hope of success in their attempts to sow disunion between myself and the Imam Yehia and the Idrissi (two of the most noted leaders of Arabia), they tried another plot which, had it been successful, would have exterminated the inhabitants of the Holy Lands. But thank God for his merey and providence, the plot failed. They had sent to Jidda some messengers to sow seeds of misunderstanding among the Arab tribes. They convinced the Emir of the Beni-Harb tribes to declare a johad, a boly war, on me, promising him many promises (as they did before with the Imam Yehia and Idrissi), and to cut all communication between Mekka and Jidda on the one hand and Medina on the other."

But the Sherif sent his son to fight the Emir and his followers. The Emir met his fate on the battle-field, with the result that both parties combined to fight the Turks. The Sherif continued:

"Such, my son, is an example of the policy pursued by the Unionists, which

THE KING OF HEJAZ.

El Hussaln Ibn All, first King of Hejaz and Hereditary Custodian of the Holy Cities of Mekka and Medina. a direct descendant of Mohammed. history will record with shame. In the Arabic tribes they have no other purpose than to fish in troubled water and to accomplish their vile purposes in the Holy Lands in the name of the Islamic Government under their authority and leadership."

In addition to being a linguist, the new King of Hejaz seems to be a very progressive old gentleman, for his first act after ascending the throne was to establish a newspaper. In this Semiofficial organ, the Mekka Al Kibla, we read:

"The interdependence of countries and their intercourse are founded on material and moral interests, and we owe it to the grace of God that he has made the interests of our Allies dependent on the existence of a free Moslem state in the Near East, which they will uphold and defend against aggressors.

"It is well known that both the English and French have been deeply concerned for the last two centuries in the maintenance of the Ottoman Empire. More than once they prevented its collapse. In spite of this and of the material and moral help extended by these two countries to Turkey, the Turkish Government has turned its sympathies toward Germany."

The Cairo Ahram says that the Sultans of Turkey have "proved themselves undeserving of the privilege of holding the Califate," or headship of the Moslem world, and comments on the possibility of the Califate returning to Arabia.

SPAIN AS THE MEDIATOR

A SPIRITED CONTEST for the honors of the peacemaker has been waged, says the Paris Gaulais, between President Wilson and King Alfonso XIII, of Spain, and in the opinion of the Paris organ the President lost his

chance by his "eagerness to force the pace." Howover that may be, there is no doubt that all sections of the Spanish people desire to see King Alfonso presiding at a peace-conference to be held at Madrid. While the Spanish Premier is naturally preeluded from any utterance on the point, the leader of the opposition in the Spanish Parliament is under no such disability, and Schor Dato, the ex-Premier and leader of the Conservative party, has seized the opportunity of a banquet in his honor to voice the unmistakable desire of the nation.

SPANISH TYPES.

The difference between a Non-interventionist and a pro-German.

— Esquella de la Terratea (Barcelona).

As reported by the Madrid Imparcial, Señor Dato remarked:

"With regard to our foreign policy our course is clear: to maintain our neutrality inviolate. Thanks to it, and to his own noble action, the prestige of our beloved Sovereign, King Alfonso XIII., the highest and most supreme incarnation of the Spanish Fatherland, has greatly increased abroad. Our ancient and noble country, the founder in her time of new nations, of whom history has so many glorious pages to record, is entitled by her ancient lineage to be heard at the supreme moment by all the nations of the world. And if one day, scorer or later—may it be not far remote—it pleases God that the great pre-tige of our King shall make him a messenger of peace and happiness for the whole of humanity, who knows but that it may be his august hand that shall wave the white flag between the conflicting nations?"

The London Times comments on the Conservative leader's utterance in no very cordial spirit, and does not seem altogether anxious that the coming peace should go down to history as the Peace of Madrid. It says: "That Spain should play a chief part in the eventual settlement, and that the Peace Conference should be held in Madrid, is an ambition very dear to the nearts of Spaniards. There is an uneasy feeling that the part played by the country hitherto, however expedient from the material point of view, has not been entirely up to the standard of its traditions, and that the success which the Government has had in keeping friends with both sides will not necessarily entitle it to the gratitude of either side when the war is over. A Peace Conference at Madrid presided over by the King of Spain would do away with all cause of self-reproach on this score. Strict neutrality would be vindicated in the eyes of posterity, appearing not as a mere selfish and time-serving policy, as some represent it to-day, but in its true light as the means of bringing the priceless boom of peace to suffering mankind."

The somewhat cavalier reception accorded by Spain to President Wilson's peace-note was due to jealousy, says The Times, which proceeds:

"The very strength of this desire to play a part in ending the war impelled Count Romanones to answer President Wilson's note in the way he did. Resentment at the President's sudden initiative, which looked like an attempt to steal a march upon the rest of the neutral world, unwillingness to play the part of a brilliant second to the United States, the risk of offending England and France to no purpose, and even of receiving a public rebuff such as that which Switzerland received—all these considerations were present to the minds of Spanish statesmen when they drafted the reply that has become famous.

"I'erhaps more than all, they welcomed the chance of taking up a position that would confer upon them the initiative on a more propitious occasion. To-day nobody doubts that they were right. The Germanophil and Clerical press, which was at first beside itself with rage at Spain's contribution to the failure of the Wilson overtures, speedily recovered its equanimity.

To refuse the lead of President Wilson, they discovered, was not after all a very dreadful thing, especially as the Germans themselves did not appear to welcome it."

The German view of Spain's future mediation is sent to the Madrid A. B. C., a paper of Clerical and pro-German sympathics, by its Berlin correspondent, who writes:

"Here it is thought that. President Wilson has disqualified himself from intervening and playing the part of orbitrator on a later and perhaps decisive occasion, and that the authority of Spain has inereased. Wilson having failed, the figure of Don

Alfonso XIII. looms larger before us, and upon it all eyes are fixt against the day in which all the belligerents will be disposed to listen to words of reconciliation. Besides, in Germany it is thought that in a European conflict the neutrals of Europe are more entitled than those of other continents to talk of peace, and most entitled of all a monarch enjoying all the prestige conferred by history and tradition, by the qualities of the nation over which be rules, its lineage, and its attitude toward the conflict. If we look for such a monarch our eyes naturally fall upon Alfonso XIII."

The correspondent of the A. B. C. then proceeds to quote a "high German diplomatic personage" whose views run:

"The false step made by President Wilson has imprest Germany with a feeling that Spain alone has the authority to intervene at the right moment, and that Madrid is the most appropriate capital for the conferences, which not only have to make peace, but also to change present theories of international polities and to shape a new Law of Nations. Madrid is destined to be the cradle of a new era of European civilization."

SCIENCE - AND - INVENTION

ARE THE RAILROADS READY FOR WAR?

SHOULD THIS COUNTRY GO TO WAR, just what part could the railroads play? How much could they help, and what would hinder them? Are they in shape to do what would be required of them? The writer of a leading editorial in The Traffic World (Washington, February 10)

thinks not. Statements to the contrary by the roads themselves he characterizes as "bunk." They are not even taking care of present requirements satisfactorily, he says. What would they do if they were suddenly called on to move a million troops or so, with their munitions and supplies? How long did it take 150,000 militiamen to get to the Texas border? At the same rate, when would the supposed million (not yet in existence, by the way) get to the Atlantic scaboard? The writer advises the roads to get down to business, confess their shortcomings, and prepare themselves for possibilities. He says:

"In considering the possibility of war with Germany, the railroads, as well as everybody else. must look the situation in the face. They must not attempt to fool even themselves. We have had too much of that sort of thing. The pacific Mr. Bryan and others of his ilk have told us, first, that we could not, with any sort of proper administration, become involved in this conflict; and secondly, that if we should become involved there need be no degree of preparation nor any fear of consequences, for a million men would spring to arms overnight to quell the country's foes. And so they would. But they would have no arms to spring to nor would they know what to do

with them if they had them. So such chatter, noble and patriotic as it may sound to the ears of the thoughtless, is idle. Equally idle and misleading is the kind of talk we are bearing from the railroads with the prospect of war.

"We can handle any movements of troops or war-materials without further arrangements,' says one. 'The Government will get anything it wants from us; we are not making special arrangements because we are prepared,' says another. 'We are ready to move anything that is offered,' says a third. 'We can handle anything that is given us,' says a fourth, and so on.

"Are we, then, to believe that all the car-shortage and congestion and embargo situations of the last few months have been myths or that the railroads have suddenly found a sovereign cure for all these ills and actually stand ready to perform any task that is required of them in this possible emergency? Neither, of course. The railroads are simply indulging in a little of what is vulgarly known as 'bunk.' They may be as ready as they can get, and they may have done all that it is possible for them to do, but they are not adequately prepared, nevertheless. They are not even taking care of present-day requirements satisfactorily. No one doubts their patriotism, but patriotism does not consist in stoutly asseverating that one is stoutly

armed when he hasn't even a club. It consists in casting about to get the club as well as in being willing to use it. Now is a good time for the railroads to set a good example to the rest of the country by a little straight talk. We need to be aroused from the dream that war works miracles and that a cry from the American eagle and a sight of the red-white-and-blue frightens

the world.

"In the event of war with Germany it is believed the General Staff of the Army would early recommend the taking over of practically all the main railroads in the country, at least to the extent of requiring their managers to obey instructions from the Secretary of War, The President has power to use them for military purposes, and even if he had not, it would not take more flun three days for Congress to pass any one of half a dozen bills now pending providing for such taking."

When the War Department takes charge of the railroads, according to the writer, the published tariffs and the orders of the Interstate Commerce Commission become mere scraps of paper whenever either fail to meet the views of those in charge, Ordinary shippers become less than clothing-store dummies. Some incompetent quartermaster may pile up equipment even worse than it is now congested in the East. The snarls he will make may be in process of unwinding thirty or forty years bence, but there will be no way to stop their creation. Further:

"Owing to strict censorship very little is known about the success or failure of military management in Great Britain. In Germany the railroads always

bave been adjuncts to the military establishment, Germany's position in the center of Europe, with Russia on the east, Austria on the southeast, France on the west, and England on the other side of the barrier states, making it necessary, in the eyes of her governing classes, to be always prepared to defend a frontier menaced by possible foes operating on land on three sides. The success of military management in that part of the world must be assumed so long as German armies are fighting on foreign soil.

"But Germany has put a transportation man, Mr. Ballin, of the Hamburg-American line, in charge of the transport, so the assumption that military management in that country has been a success must be tempered by that fact.

"In the Spanish-American War the military authorities decided to send their expedition to Cuba from Tampa. They piled cars into that part of the country, apparently without stopping to inquire about the capacity of the terminal tracks. The result was a condition something like that at the north Atlantic ports when the manufacturers of ammunition and munitions sent all their products to the ports where the banks of the purchasers were located, without much thought as to what effect would be produced.

"In the event of war with Germany, it is believed, the shipment

HE WILL HELP US MAKE READY FOR WAR.

Since Daniel Willard, president of the Baltimore & Ohio Rallroad, is chairman of the Advisory Commission to the Council of National Defense, the Government and the railroads may cooperate in case of hostilities to better advantage than the writer of the accompanying article fears. If we go to war, Mr. Willard's position may be analogous to that of a Minister of Munitions and Transportation. of supplies to the Eastern ports will be reduced considerably, because it will be necessary for the United States to accumulate supplies for its own use in the event the Entente allies should make peace with Germany without consulting the United States, thereby leaving this country to fight single-handed. At present, so far as known, there is no understanding between the Entente and the United States. In other words, while the United States may make common cause with the Entente, it is not yet a member of that group of belligerents.

"If this country becomes a member of that alliance, theo, it is believed, there will be no change in the currents of transportation, which, so far as iron and steel are concerned, have been reversed. There will be no need for any change because the United States would then be a party to an agreement in which her interests would be identical with those of other members of the group, and her part in the joint enterprise, it is conjectured, would be the supplying of military goods in the largest possible quantities, not for distribution among Americans, but for use by those on the firing-line. That is the part this country has been playing in the world tragedy, but with her prospective allies standing in the position of purchasers of her war-materials. America's participation in the war as an independent belligerent would make it necessary for her to create stores of war-materials on all coasts to be prepared for any eventuality.

"American consular officers in the Far East for more than a year have been convinced that Japan is chaffing under the bonds that the her in the Anglo-Japanese alliance, and that if she dared she would enter into an alliance with Germany on the theory that victory for a Nippo-German alliance would give her a free hand in the Orient, whereas an Anglo-Japanese alliance victory will mean no improvement of her position, because the fruits of such a success would have to be shared with Britain and Russia. Attack by Japan during a war between Germany and the United States is one of the possibilities that will have to be considered, and consideration of such a possibility would make it necessary to have military stores on the Pacific. That would decrease shipments to the East and start some of the current toward the West.

"There are so many other possibilities in the way of effects on the transportation of the country that their mere enumeration, without elaboration or even statement of one reason for a particular possibility, would make a long preachment."

CHEESIFIED EGGS

HOSE WHO SAY that the Chinese and other Orientals are fond of decayed eggs are incorrect, we are told by a writer in The Journal of the American Medical Association (Chicago, February 10). The eggs in question are in no sense decayed, but have undergone a change somewhat comparable to that which alters the eard of milk into cheese, "Pidan" is what this cheesified egg-substance is called. Says the writer:

"Food-conservation is not a novelty which has come into vogue with the introduction of cold-storage plants or chemical preservatives. All sorts of procedures for desiceating, smoking, pickling, and otherwise handling perishable foods have been known almost from time immemorial. Edible products are often saved from spoiling by being converted into new forms of foodmaterials, as cheese is prepared from milk or eatsup from tomatoes. The Chinese and other Oriental peoples preserve eggs in an analogous manner by making an altered product out of them. This food-material, known as pidan, has recently received an extensive examination in the laboratory of food chemistry of the Department of Home Economics at the University of Chicago. Pidan is made on a factory scale from ducks' eggs. The latter are kept in an infusion of black tea. lime, salt, and wood ashes-obviously an alkalin solution-for nearly half a year, much as eggs are preserved in solutions of sodium silicate in this country. They are then drained and coated with rice hulls, whereupon they are ready for the market. The taste of the pidau is characteristic and the odor markedly ammoniacal. There is a tendency for uninformed persons to class such products unreservedly with what are commonly termed rotten eggs. This may not be justifiable. Pidan has no odor of hydrogen sulfid, and, we are assured, does not closely resemble so-called decomposed eggs. Noteworthy chemical changes do, however, attend the long storage process in the formation of pidan. The Chicago investigators state that water in large quantities has been transferred from the white to the yolk, and water has been lost from the white to the outside. The ash and the alkalinity of ash have increased in a way similar to that of other eggs preserved in alkali. The ether extract has decreased and its acidity is high. . . . From these changes the conclusion is drawn that decomposition of the egg protein and the phospholipoids has taken place. The production of pidan from the fresh eggs is probably brought about through the agency of the alkali, bacteria, and enzymes. Like cheese, the product is eaten without being cooked."

GARLIC FLAVOR IN MILK

HOW TO ERADICATE from our pastures the wild onion, which causes the objectionable "garlicky" flavor in milk, when the cows eat it, is discust in The Weekly News Letter of the United States Department of Agriculture (Washington, February 14). The loss to dairy farmers caused by this plant is very considerable. Milk dealers refuse to accept milk with the garlie flavor, and if the product is marketed direct to the consumer a loss of trade results. The Department of Agriculture warns dairymen that they will do well to study this condition, which may result in serious financial loss. The writer goes on to say:

"Many pastures are so badly infested with wild onion or garlie that the milk is tainted if the cows are allowed to remain in the pastures until milking time. The dairyman should eradicate the pest, if possible; but in the meantine some measures should be adopted to prevent losses from tainted milk.

"The Dairy Division of the United States Department of Agriculture has conducted some experiments at the Beltsville (Md.) farm in order to determine the length of time that must clapse between the feeding of wild onion and milking time. In some of the feeding tests one-half pound, in others one pound, of wild-onion tops were fed at different lengths of time before wilking. It was found that increasing the length of time between feeding and milking decreased the unpleasant odor and flavor. There was only a faint onion flavor in the milk drawn from cows four hours after feeding, and even this almost disappeared when the milk had stood for four hours. In all cases the cream was more noticeably affected than the skim-milk; in some cases there was no taint whatever in the latter.

"The results of these feeding trials show that the dairyman should keep his cows from pastures badly infested with wild onion for at least four hours before milking in order to avoid onion-flavored milk. This may not be a safe rule, however, if any of the cows should eat more than a pound of the onion tops. The Department suggests that every farmer with onion-infested pastures should test the question for bimself and determine how long it is safe to allow the cows in the pasture before policing.

"The wild onion matures in midsummer. Each plant at that time has at its base a large, soft-shelled bulb and several smaller, hard-shelled bulbs. The soft-shelled bulb germinates in the fall, and by the following spring the new plant has begun to form new bulbs. Most of the hard-shelled bulbs, however, remain dormant until the following spring. There is, therefore, an overlapping of generations, which accounts for the remarkable persistence of the wild onion. To eradicate this weed from a piece of land, it is necessary to take this fact into consideration.

"If a posture is badly infested all that can be done to eradicate the pest is to plow up and follow the cultivation method. If a pasture is not so full of it as to warrant such a radical course, each clump of the onion may be attacked. . . . Unless the entire root system is dug out, however, the plant will return. In place of this method it is sometimes practicable to use a chemical plant poison, such as crude carbolic acid.

"It is also necessary to use wheat for seed that is free of the wild-onion bulblets. Many millmen will be interested in knowing that this Department has worked out a method of separating the onion bulblets from wheat on a commercial scale."

Courses of "The Scientific American," New York.

LAUNCHING THE SMALL BUAY.

TESTING & FIFTY-PASSENGER BUSY

TYPES OF THE DOUGHNUT-LIKE LIFE-BOAT.

A DOUGHNUT-SHAPED LIFE-BOAT

HE DIETETIC NOTION that many lives have been destroyed by doughnuts, vulgarly called "sinkers," is now offset by the expectation that many other lives will be saved from sinking by life-boats built on the doughnut pattern. The new invention that may foil the deadly efforts of the U-boat hails from Germany and is described in The Scientific American (New York, February 24). Says this paper:

"European inventors at the present time have their faces turned toward devices for destroying lives and property; but

for all that they are still capable of moving in the opposite direction. It is in this con-nection that one Herr Meyer, of Berlin, has worked out the collapsible life-boat which we illustrate. When folded up, this eraft is easily carried in an ordinary knapsack; and it can be unpacked, inflated, and placed in the water in two to three minutes. In its essential lines this boat, as the illustration shows, is an inflated rubber torus with the central space occupied by a wooden platform. It is two yards long and a yard wide; and altho its total weight when folded and packed is but fifteen pounds, its carrying capacity is estimated at 660 pounds. Moreover, since the surplus pressure in the rubber tube is only one-third atmosphere, the air, in case of injury, escapes with extreme slowness, giving ample time to close any ordinary hole with a stopper. The passengers may move the boat along either with the aid of oars or by paddling with the hands. In case of an excessive load there is no danger of tilting: the boat, by reason of the vacuum beneath its floor, sucks fast to the water and can only sink in deeper, maintaining its true level. Along the outer rim are a number of loops to which floating persons may eling without materially reducing the carrying capacity of the boat itself. Launching is the simplest thing in the world; the boat is merely flung overboard, and its symmetric construction makes it a matter of indifference which surface it settles upon. In addition, the inventor is now at work upon a boat of much larger dimensions, which is being tested out with great success. This model weighs 220 pounds, and is designed to carry a load of 22,000 pounds. Twenty feet long by ten feet wide, it will accommodate fifty passengers inhoard and one hundred more perched upon the rubber tube."

OUR FOOD-SUPPLY

It is gratifying to know that the production of foodstuffs in the United States is keeping pace with the increase in population. We are not yet in a position to be starved out by anybody; in fact, the yield per capita has notably increased in the case of several important items, and has decreased only with meat and dairy products. Says an editorial writer in The Journal of the American Medical Association (Chicago, February 17):

"The bodily welfare of man is dependent in large degree on

a satisfactory solution of the problems of food, clothing, and shelter. With the rapid growth of population the need of suitable nutrients increases at a corresponding rate. Economic foresight accordingly leads the critical observer of the increasing number of persons who demand sustenance to inquire whether the sources of supply continue to be adequate and whether they are likely to keep pace with the demands of the expanding nation in the years to come. Prophecies of impending crises have been made from time to time by serious-minded scientists and economists. One writer, basing his view on the contention that wheat is the most sustaining food-grain of the Caucasian race, has ventured the belief that if prophecies based on population statistics are trustworthy, the crisis will be on us before the end of the century. It must be remem-bered, however, that the acreage devoted to agriculture is still expanding and that conservation processes as well as other factors, such as improved transportation facilities and changing customs in diet, are helping to improve the outlook. New food possibilities are frequently being brought within the range of present needs. In 1900 the population of the United States was 76 millions; now it is estimated at over 100 millions-a growth of 33 per cent. The latest report of the Secretary of Agriculture gives some indication of the extent to which the supply of a variety of food-products has kept pace with the growing demand occasioned by this increment of population. The total production of most items on the foodsupply lists, such as poultry, fish, cereals, potatoes, citrus-fruits, and orchard fruits, during the sixteen years in which 26 millions of persons were added to the numbers to be fed, shows no diminution per capita. The

THE SMALL COLLAPSIBLE BOAT MAY EASILY BE CARRIED IN A ENAPSACE.

sugar production is the only one showing a significant increase. Most and dairy products constitute 37 per cent. of the average diet, fish 2 per cent., cereals 31 per cent., Irish and sweet potatoes 13 per cent., and other vegetables 8 per cent. It is notable that, notwithstanding the rapid increase in population, the production per capita of the commodities indicated, with the exception of meats and dairy products, has remained approximately the same or has increased."

HOW TO BE TOO CLEAN

XCESSIVE GODLINESS may be a contradiction in terms; but cleanliness, which we are told is the next thing, may apparently be carried too far—at any rate, when it is sought with the aid of soap. In an editorial article on "The Abuse of Soap," The Medical Record (New York, February 3), while commending the civilized man's prejudice

against dirt as healthful in the main, warns us against allowing it "to become a fetish." After all, the writer says, washing the person is rather an esthetic virtue than one conducing to health, and can easily be abused. Those who pride themselves on the amount of washing to which they subject their bodies, and regard with distrust those who do not seek sanitary salvation to the same degree, may just possibly be overdoing it. To quote from the editorial:

"In the Liverpool Medical and Chirurgical Journal, Dr. Frank Barendt writes on the abuse of soap, and demonstrates the fact that even the best of soaps can be abused. The alkali may chip and furrow the epidermis and produce slight scaliness over the prominences of the face and hands, the regions of the body the most washed. According to

this authority, furfuraceous [scurvy] patches on the faces of children are frequent, and it is these patches, due to abuse of soap, which are apt to become inoculated with microorganisms. . . . With regard to the abuse of soap in hospitals, it is pointed out that nurses often use too much soap on their patients, especially when these are confined in bed. The secretion of the skin is sluggish, and the excessive removal of the natural grease leaves the skin rough and branny. Again, before surgeons adopted gloves for operations, they were washing their hands with soap almost constantly, and these suffered accordingly. Also, some surgeons, it is stated, are given to be too vigorous in the use of soap and water to the site of operation. Pruritus is not infrequently brought about by a too zealous use of soap. The delicate skin of new-born babes is sometimes irritated by the zeal of the norse in rubbing not wisely, but too well, with soap and water, . . . It is notorious that frictional eczemas are invariably aggravated by soap and water."

Turning from destructive to constructive criticism, the writer proceeds:

"In order to derive the greatest benefit from soap, in the first instance, discrimination in choosing the article must be employed. Barendt says that the best type of toilet soap undoubtedly is represented by a combination of oleate and stearate of sodium. When a harmless soap has been selected, it should be used with discretion, that is, not too frequently nor too energetically, and especially should care be exercised when using it on other people, on patients in hospitals, sick persons, and children. There are soaps of which we should beware on account of their composition, and, as said before, we should beware of using any soap excessively and with too great vigor,"

THE PASSING OF THE LONGHORN

UR APPRECIATION of the value of vanishing animal races always comes a little too late. While we are lamenting the extinction of this or that beast or bird, we do nothing to prevent some other from following in the same path, and later we awake to the fact that there is still another missing species. Then we lament again. Thus, while we have been regretting our criminal neglect in allowing the buffalo to be killed off, we have been losing the Texas longhorn, which within thirty years covered with its millions the Western prairies from Canada to Mexico. To-day a lone specimen of this variety is a curiosity in the heart of the range where once it flourished in full glory. Says Will C. Barnes in The Breeder's Gazette:

"In the early days of the range stock business, Western eattle were all longhorns, whose progenitors undoubtedly crossed the

> Rio Grande from Mexico and spread over the Texas ranges, much as their small but equally active successor, the boll-weevil, followed them many years later. Nowhere were these longhorned, long-legged, narrow-hipped specimens of Bas taurus more numerous or of broader stretch of horn than in Texas and Oklahoma. Yet. so searce have they now become that a few years ago the supervisor of the Wiehita National Forest in Oklahoma, noticing among the cattle grazing on his forest a white steer with unusually long horns. decided that the animal would be quite as much of a curio to the visitors as the buffaloes which were also grazing in that forest. The white steer was purchased with the supervisor's own funds, and is being allowed to graze in peace and comfort, with a view to seeing just how much longer and handsomer his horns will grow. He is young and thrifty, and undoubtedly has many years

A TEXAS LONGHOUN STEEK

of life before him, and his headgear will save him from the slaughter-house because of the well-known fact that his breed grows lean and gaunt with age, and by the time his horns have reached maturity he will, in the language of the stock-yards, be classed as a 'hat-rack,' and his careass be practically worthless,

"So here on the ranges, where his forefathers once grazed by the hundreds of thousands, this lone relie of the past is to-day a genuine object of curiosity, and has been 'kodaked' so often that, according to the statements of the forest officers, whenover he sees a camera being opened up he immediately strikes an attitude and poses himself for the benefit of the photographer,"

The buffalo and the wild turkey, after going perilously near the line of annihilation, are now increasing slowly in numbers, owing to the efforts of game-preservers and of the Federal authorities. Is the longhorn alone to go? Says Mr. Barnes:

"In a private park in England is a herd of longhorn cattle, an English breed which would have been totally extinct ere this but for the foresight and enthusiasm of a British nobleman who secured several specimens and carefully preserved them merely as a matter of public interest. This breed was at one time the principal beef breed in England, but somebody developed a new class of cattle with short horns instead of the long appendages. of the old type, and to-day they have taken their place in public esteem. One wonders if in, say, a century more we shall be preserving specimens of to-day's shorthorns which shall have been displaced by the polled cattle, of which we now have a fairly representative type in many of the best-known breeds. The polled types, once bearing horns, have been built up within comparatively recent years through a system of selection and mating of naturally polled specimens or 'sports,' as they are called, which seem to crop out in almost every breed of horned

"As for the American longhorn, why should not somebody do for it what the Englishman did for its English namesake, and preserve it and its long, tapering headgear for future generations of Americans to admire and kodak? Certainly there is nothing in all our Western history, with the possible exception of the red man himself, round which more romance has been woven than the 'Texas longhorns.'

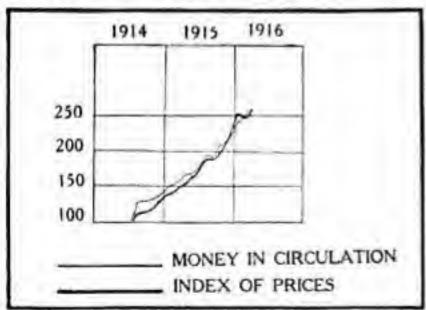

THE CAUSE OF HIGH PRICES

RICES HAVE "SKY-ROCKETED" during the past few months at a speed never equaled since the Civil War. In Europe the uprush has been at even a swifter rate than our own, and the upward-sweeping costs have reached higher levels. In an article contributed to The Financier (New York, February 17), Prof. Irving Fisher, of Yale, tells us that by April last prices in Russia had risen since the war began by 165 per cent.; in Germany, 111 per cent.; in France, 87 per cent.; in England, 66 per cent., and even in neutral Sweden, 46 per cent. The price-level in the United States had at that time risen only 19 per cent., but it is now 40 per cent. more than before the war. Undoubtedly European prices have continued their much steeper ascent. He goes on:

"The price-level depends on certain fundamental factors: the quantity of money, the superstructure of eredit built on this money foundation, the velocities of circulation of the money and the credit, and the quantity of goods brought to market.

"These are the only proximate causes, Myriads of other causes -war, tariffs, antitrust laws, trusts, trade-unions, gold discoveries, rapid transportation, shortened hours, advertising, waste of natural resources, etc., may affect the high cost of living, either upward or downward, but as I have shown elsewhere, these causes are anterior to, and act only through, money, credit, velocities, or goods.

"To the question, which of these fundamental factors is, or are, responsible for the sudden uprising of prices in the last few months, I would reply that the chief causes both abroad and at home are (1) growing searcity of goods and (2) growing abundance of money. Apparently, the more important of these two is, even in Europe, the growing abundance of money. To put it in a nutshell, the whole world is now suffering acutely from war-inflation. In belligerent countries this inflation has been chiefly in the form of paper-money issues, while in neutral countries it has been chiefly in the form of gold imports. The gold flowing to neutral countries, like Sweden and the United States, is gold displaced by paper money in belligerent countries

PRICES GO UP AS MONEY COMES IN IN SWEDEN.

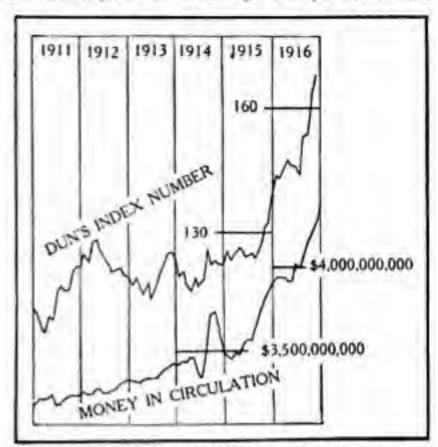

and attracted to neutrals because the beligerents could not

export other goods than gold.

"Professor Cassel has shown that, in Russia, the money in circulation and an index-number of prices worked out by him have fluctuated together, month by month, in close parallelism. His chart in the Journal of the (British) Royal Economic Society shows this very clearly indeed.

"I have constructed corresponding curves in this country, one tracing the quantity of money in circulation (i.e., the money

in the United States outside of the United States Treasury), and the other, Dun's Index-Number of prices. These also show a striking parallelism, especially after the war began, when inflation became the dominant factor. We can, in fact, trace the close resemblance between the two curves almost point by point and can see almost the exact time-lag between the monetary cause and the price effect. This lag is usually between two and

PRICES GO UP AS MONEY COMES IN IN THIS COUNTRY.

three months. That is, within two or three months after gold enters the country, the price level and the cost of living in the United States will rise as a consequence. On this basis we may roughly forecast a probable further rise of prices in the immediate future, for our money in circulation is still increasing.

"Rankers should take an especial interest in the causation so plainly illustrated in these two sets of curves, altho as yet there is almost no realization in this country that we are suffering from a gold deluge. It is significant that Sweden has already taken a radical and epoch-making step toward protecting herself from the flood of gold, namely, by stopping its importation, through refusal of the State Bank to accept it in payment for its notes at the former legal rate.

"If there were space I would discuss the problem of the superstructure of credit and the importance of avoiding, by keeping up the rates of bank discount, its too rapid growth. Otherwise the rise of prices will be apt to end in a disastrous

"At the close of the war there will undoubtedly be a great revival of interest in the problem of money and monetary standards. This will be due to the paper money predicaments abroad and the gold predicament here."

The secretary of the National Confectioners' Association writes us to deny the allegations of Professor Hodgdon, of Newark, N. J., who claims to have found coal-tar dyes, lampblack, shellac, and carpenter's glue in various candies, and copper in French peas. He says:

"The colors used by manufacturers of food-products are certified by the United States Government, and are eight in number, and none others are used in food-products. They are absolutely pure and contain no harmful ingredients whatsoever. The lieorice candy to which Professor Hodgdon refers is colored with carbon dust, which is nothing more nor less than pure carbon, considered as pure and wholesome as any other foodproduct and prescribed by physicians in eases of indigestion and stomach trouble as highly beneficial. His statement that the doll's hair was glued on with carpenter's glue obtained from 'all-day suckers' demonstrates how ignorant the Professor is of even the names and kinds of well-known candies. All-day suckers are what we call hard-boiled candies and contain nothing but sugar, corn sirup, and flavor."

Professor Hodgdon replies that the experiments were made by students in his laboratory three years ago.

LETTERS - AND - ART

WILL POLAND SAVE HER ART?

POLAND WAS ALMOST THE LAST of the European nations to come forth into the hierarchy of art. Her culture is indeed very ancient, but she did not develop a national art before the middle of the nineteenth century. The Polish kings and nobles loved art and received foreign artists of fame with open arms. To this day the old Polish towns of Guesen,

Posen, and Krakow harbor medieval and Renaissance masterpieces; but the country's own achievements were a rustic product "rooted in the soil of the fatherland with its sturdy farmers as its main cultivators." The case of Poland as an art-producer is treated in a special number of the war-series of L'Art et l'Artiste (Paris), and one of the contributors, C. de Danilowicz, gives a hint of explanation of the situation in quoting the words of the great Polish poet, Borodzinski, that "Poland has been for centuries the wall behind which Europe has built up its civilization, sheltered against the invasions of the Tatars." Occupied with continuous warfare, and finally overwhelmed with the inner dissolution of the commonwealth, the muses had no chance. In the fifteenth and sixteenth centuries Gothic and Italian art fought for supremacy. The Renaissance spirit finally triumphed over the Teutonie; but not without a struggle, for the rich

merehants of Krakow were nearly all Germans, and King Casimir himself, whose wife was an Austrian archduchess, surrounded himself with German artists. "There was no exaggeration in the dictum that the capital of the Polish kings of the sixteenth century resembled rather a suburb of Nuremberg than a center of Slavie culture." When King Sigismund I, in 1578 married a Milanese princess the tide of art-influence began to flow from Italy. There was, however, a national art maintaining itself in the hearts of the people:

"While the Polish warriors fought the battles of freedom on all the battle-fields of Europe, the farmer and artizan, the woman and maiden, created and nurtured the artistic sense of the people through the loving care with which they built their houses, manufactured and embellished their modest household furniture, their implements of labor, their quaint national costumes. We can now trace the genealogy of art to prehistoric man and in many regards rustic art is related to the naive artistic efforts of our far-distant ancestors.

"Most developed is the artistic instinct among the mountaineers of the Tatra, a range of the Karpathians, and the farm-houses of Zakopane served our modern artists as models in villabuilding. Of a peculiar ethnographic interest is the door ornament representing the rising sun. Sometimes the paschal lamb is represented. The central piece of the artistic house-furniture is the heavy table, often bearing the date of its completion. The table, as a kind of house-altar, plays a great part in the folk-lore of this mountain people. Not only every piece of crockery, every fork, spoon, and knife bears exquisite ornaments, but also the very trunks, containing the linen and costumes of the family and occupying a cozy corner of the room, are richly painted.

"Curiously enough, and pointing to a common basis of human art, we find the same motives in the rustic art of France, but while here the invasion of modern industry has arrested the development, the conservative Polish farmers of the Karpathians held to the traditions of the past with a kind of religionational fanaticism.

"Polish architects modeled their villas in the beautifully

situated watering-place of Zakopane after the artistically constructed farmhouses. Sculptors and engravers went to the same native art-school and the gold- and silversmiths drew likewise their inspiration from the products of popular art. Even the famous porcelain factory of Sèvres produced, at the occasion of the Paris Exhibition of 1900, a Tatra service according to the model furnished by Stanislas Witkiewicz."

So good is the native Polish art that the writer suggests to the French toy-merchants and manufacturers to replace the cheap Nuremberg products by the more artistic Polish models, which, curiously enough, remind us often of the Japanese dolls. We obtain, at the same time, the historically interesting bit of information that it was none other than the great French statesman and financier, Jean Baptiste Colbert (1619-1683), who introduced the German toy into France.

Of great artistic interest, too, so we are assured, are the old wooden churches—often dating as far back as the eleventh and twelfth centuries—and the beautiful town houses of the Polish burghers. We further learn of an institution which should arrest the attention of all lovers of art—the establishment of art-schools in the country, in the midst of the wild scenes of nature. They start in Poland with the village school. But—

"What will remain of all this rustic Polish art when the present war will be over? Old castles and beautiful farm-houses, cathedrals, and village churches, have been razed and burned without pity. Fortunately, a few ethnographical museums still survive and thus a restoration of the national art will be facilitated. The Polish people did not forget its national songs and dances, its national tongue; neither will it forsake its indigenous art."

Polish painters from the beginning of the fifteenth century copied foreign models; but the first genuine Polish art that was not peasant was inspired, curiously enough, by a Frenchman, a pupil of Watteau, named Jean-Pierre Norblin de la Gourdaine, who came to Poland in 1771.

"Norblin abandoned the allegorical, sentimental art of Versailles, fixing his attention on the living world that surrounded him. He was most attracted by the life in the streets of Warsaw with its manifold and beautiful national costumes, its numerous racial types representing both the Orient and the Occident; Tatars, Cossacks, Jews, Armenians, Russians, Poles, Ruthenians, and Germans. But more yet was be drawn to the farm. He became the painter par excellence of the life of peasant and artizan. He was the model for the great genre-painters who won fame at a later epoch: Michalowski, Juliusz Kossak, Malezewski, Chelmonski, and Tetmayer.

"When the sad years of 1794 and 1795 came, when Warsaw was wallowing in blood and its palaces and churches were in flames, Norblin created his famous scenes which to this day are regarded by the nation as its most precious artistic treasures. Married with a Polish woman, becoming himself a Pole in his heart of hearts, he left in 1804 for Paris, where he died February 23, 1830. It was he who freed Polish art of its foreign models."

Another writer, Jean Styka, takes up the story of the modern Polish school of painting and sculpture:

"After the national poets, Mickiewicz, Krasinski, and Slowacki, the heroes of Polish music, Chopin and Moniuszko, the creator of the Polish opera, had prepared the ground, in the wake of the revolution of 1831, the muse of painting appeared on the seene

thirty years later, i.e., after the second revolution of 1863. Arthur Grottger, 1837-1867, opens the march with his brilliant 'Warsaw in 1861.' His cycles, 'Varsovia,' 'Polonia,' 'Lituania,' represent as many chapters of the Polish martyrology. His 'Valley of Tears,' exhibited in 1867 at Paris, is one of his master-pieces. He occupies in the history of Polish painting a situation analogous to that occupied by Chopin in the history of Polish music.

"Grottger's contemporary, the great Jan Matejko (1838-1893) made his first bow at the Paris Salon, in 1864, with his

'Sermon of Skarga,' which at the time caused a sensation among the French artists. Matejko became the historical painter of Poland par excellence: 'Rejtan,' 'The Union of Lublin,' 'Stephen Batory at Pskov,' 'Albrecht of Brandenburg, Prince of Prussia, Swearing on His Knees the Oath of Fealty to King Sigismund of Poland,' 'The Battle of Grünwald,' and 'Sobieski's Triumphal Entry into Vienna,' are the names of a few of his masterpieces.

"Less genial than Matejko, less poetic than Grottger, but great artists nevertheless, were the painters of Polish rural life, the above-mentioned Juliusz Kossak, a pupil of Horace Vernet, and his son, Afbert Kossak, Juliusz was also a talented painter of the military life. To his school belongs Brandt, who carned his fame through his Cossack paintings.

"Krakow became, in the second half of the nineteenth century, the center of Polish art. Rodakovski, who is best known through his portrait of his mother and that of a cardinal, became the successor of Matejko in the directorship of Krakow's Academy of Fine Arts."

Jean Styka, himself a painter of great merit ("Golgotha," "Polonia," "Bem at Siedmigorod," "Noro's Rome"), concludes

his sketch with the hope that with the resurrection of his fatherland Polish art will inaugurate a new and glorious period. Chopin's "Funeral March" and Grottger's "Valley of Tears" will then be followed by masterpieces glorifying the beauties of justice, freedom, and peace.

CHURCH OF NOTRE DAME, WARSAW.

Type of the Polish national architecture that has suffered so much destruction during the war.

DRAMATIC IMMORALITY DENIED AND AFFIRMED

THE PREVALENCE OF SEX as a dramatic motif was recently declared by Father Thomas Burke to be so wide-spread in our theaters as to be, in fact, almost universal. In his article we quoted from the February Theatre Magazine he charged that hardly a play is free from the atmos-

"CARITAS."

A painting by Wyspianski, a modern of great distinction who has also executed some remarkable treasures in the Church of the Franciscans in Krakow.

phere of sex—"not the legitimate appeal or office that this strongest of human instincts has in the drama, but the appeal of last, of the excitement of the merely animal passion." In the March number of the same magazine, Mr. George Broadhurst, the playwright, utters a categorical denial of this charge. In fact, he calls it "a slander as foreign to the truth as any that has ever been uttered against the stage since it first came into being." In support he names the plays now running in the leading theaters of the city, and declares they are "about the cleanest set of plays" he has seen in New York during his connection of twenty years with the stage. The "big majority of them," he claims, "do not touch on the sex question in any way or manner." Furthermore—

"I claim that not 5 per cent. of them have 'the appeal of lust, of the excitement of the merely animal passion.' Father Burke claims that there is hardly a play free from it, and, mark you, those are his exact words.

"Hardly a play free from the appeal of lust, indeed! What of 'Good Gracious, Annabelle,' 'The Yellow Jacket,' 'Captain Kidd, Jr.,' 'Turn to the Right,' 'Little Lady in Blue,' 'The Music Master,' 'A Kiss for Cinderella,' 'Old Lady 31,' 'In for the Night,' 'The 13th Chair,' 'Nothing But the Truth,' 'Shirley Kaye,' 'Her Husband's Wife,' 'Come Out of the Kitchen,' and 'The Lodger'? I ask you, Father Burke, is there even a hint of lust in any one of them?

"I have given a list of plays current in New York, and Father Burke has stated that there is hardly one of them free from 'the appeal of lust, of the excitement of merely animal passion.' I now challenge Father Burke to prove his claim by naming the plays to which he has reference or I call on him to write to The Theatre and acknowledge that his claim is unfounded."

Father Burke is quoted as saying that "the public is sound at heart," and that "the great success of clean plays is the best proof of this, and the further proof is that as a rule the indecent play has not a very long run." All of which Mr. Broadhurst confirms as "the simple truth." He adds:

"To us who live by the theater it is axiomatic. Cleanliness in plays makes for success and indecency in the end spells ruin. Name the really big successes, the plays that have made the large fortunes for their owners, and you will find that not one of them is based on the appeal of lust. Every theatrical manager of experience knows this, and yet Father Burke would have us believe that, in spite of this knowledge, nearly every play they produce has this appeal of lust, the very thing which kills the chance of success and which absolutely destroys the possibility of tremendous returns. Could anything possibly be more absurd?

"We now come to the most astounding, the most slanderous charge in Father Burke's entire article; we come to his attack on the authors and the producers of plays. He writes, in so many words: 'Nevertheless, it is true that the license of indecency is extending wider and wider. The indecent suggestion is deliberately introduced into plays that of themselves give no reason for such introduction.' So that its full significance may be realized, so that the charge Father Burke makes against managers and authors may be clearly understood, I wish to repeat the latter sentence: 'The indecent suggestion is deliberately introduced into plays that of themselves give no reason for such introduction.'"

Mr. Broadhurst also denies this charge, and asks his clerical opponent to present the facts upon which the charge is based. His defiance is uttered in the face of what he calls Father Burke's method of generalities, while his own argument is by specific instances. By a curious coincidence, Mr. Heywood Broun, of the New York Tribune, makes almost as sweeping a charge as Father Burke, and is led thereto by a letter of protest coming from a woman who objected to his review of a play called "Lilac Time." Mr. Broun, it must be said, lays the major blame upon women playwrights:

"It is our belief that sex is overstrest in the drama of to-day. We want to do our bit in the fight against this condition in our own way. William Winter carried on the warfare with great vigor. While it is true that we like many plays which enraged Mr. Winter, we feel that in a small degree we are keeping up a traditional Tribune fight. Mr. Winter's method of attack was a violent one. He raged against the early problem-plays, and the language of his fury was so vehement that it shocked many sensitive folk.

"It is not possible for us to pursue that method. It is easier for us to laugh at plays we don't like than to call them names. It is our belief that what Robert Benebley calls 'sex insomnia' will be cured when people refuse to take sex as seriously as they do now. In other words, the point at which blood boils must be raised. Sex plays will always be popular with producers so long as they shock people. They will decline in favor when they merely bore them. So much for our purpose.

"It most certainly is our conviction that sex consciousness exists to a greater degree in women writers than in men. There was and is a course in dramatic composition at Harvard University called English 47, and a parallel course in Radeliffe. The professor who taught both classes assured us that his Radeliffe pupils were much more proficient dramatists, but he hesitated to read their plays to us lest we should be shocked. Later he did read some Radeliffe plays and we were shocked. We all ran a bit to sex subjects in those days, but where we ran Radeliffe sprinted. There are a good many reasons why woman is more inclined to translate every problem into terms of sex than man. Some are connomic and perhaps transitory, but the fact that being a mother is so much more serious business than being a father must have a good deal to do with it.

"Any adequate attempt to show the effect of woman's sex consciousness on modern writing would require more space than we can beg. We do not intend to imply that it is always a vicious tendency. Margaret Mayo, for instance, devises delightful farces in which sex is invariably the theme. On the deplorable side, there are Elinor Glyn and Victoria Cross.

"Perhaps the point may best be exprest in contrasting the manner in which George Ade and Rida Johnson Young interpreted college life for the theater. Ade built the plot of his 'College Widow' on a football game. Miss Young swung the story of 'Brown of Harvard' on a suspected seduction. We also happen to have seen recently 'Hush!' 'His Bridal Night,' 'The Guilty Man,' and 'Upstairs and Down.' All these plays, by women authors, rest solely on sex. Two of them happen to be entertaining plays, but that does not affect the issue."

WHERE "AMERICA" CAME FROM

HE UNIVERSAL NATIONAL ANTHEM—"America" - seems in the same plight as the great classics that we like to have on the shelves, and leave mainly to stay there. For patriotic purposes other than the most solemn we use the "Star-Spangled Banner," while for sheer nerve-tingling stimulus "Dixio" beats either. "America," which in England is known as "God Save the King," has also its alternate in "Rule, Britannia," and recent English papers have reported that a series of English films lately exhibited in Russia were always accompanied with the music of "Rule, Britannia," because the air of "God Save the King" is also that of the German national anthem. The melody is usually ascribed to Henry Carey (1742); it has been popular in France since 1775 and national in Denmark, Germany, and Prussia. Various versions of the way in which the air came to Henry Carey have been put forth; but the latest account of the origin is given by the folklorist, Mr. J. A. Fuller-Maitland, who thinks it was first a seventeenth - century "round." Mr. Fuller - Maitland's suggestions are condensed for The Daily Telegraph (London) by Robin H. Legge, who writes:

"Mr. Maitland puts forward a new theory, or the germ of a theory, as to the origin of the tune in question. . . 'Quite lately,' says this writer, 'while helping to prepare the catches of Henry Purcell for publication by the Purcell Society, I came across the following, which appears on Page 76 of a MS. in the British Museum (Add. MSS. 19.759), a collection of songs, etc., which was in the possession of one Charles Campelman on June 9, 1681.' I regret that I can not reproduce here the musical quotation Mr. Maitland cites, so I must perforce go into an explanation. Mr. Maitland, be it understood, claims no finality for his discovery, but nevertheless it is undoubtedly interesting.

"The MS. quoted from is headed 'A Catch for Four Voices.'
Mr. Maitland points out, however, that it is obviously for three
voices, not four, and is a round rather than a catch. Its verse

partly runs thus:

Since the Duke is returned, we'll damn all the Whiggs, And let them be hanged for Politick Priggs.

"To this charming sentiment the second voice replies:

Make room for the men that never deny'd To "God save the King and Duke," they replied.

"We need not worry ourselves about the political allusions, save that the date, as Mr. Maitland says, is pretty nearly fixed by the owner's inscription, and that the 'Duke' was the Duke of York who returned from virtual exile in 1680. The whole point, small or large, as you may take it, is that in the fifth complete bar of the music, where the second voice has the words 'God Save the King,' the words are given in quotation-marks as if referring to some toast which at the time was perfectly well understood and perfectly familiar to those who sang the round and to those who heard it. Now, the notes to which the identical words are sung are exactly identical with the notes with which our national anthem opens. Of course this may or may not be entirely fortuitous. But Mr. Maitland is careful to point out how very great are the odds against a fortuitous combination."

An objection to the theory is found in the suggestion that "if this be a genuine quotation from what at the time was a well-known patriotic song, it is odd that no other trace of the existence of the tune as that of 'God Save the King' can be found in musical or general literature." But—

"Curiously enough, the most ardent champion of the theory that Henry Carey was the author of the anthem was a German, none other than Friedrich Chrysander.

"Personally, I like to feel that I agree with Mr. Maitland when he says that he likes 'to fancy that the song got itself composed, as we say, during the period of the Commonwealth, when it would be obviously dangerous to write it down, and that it may have become so popular with the discredited Royalists that when the Restoration came it was not held to be necessary to write it, since it would be in every one's mouth."

ENGLAND ADMONISHED IN OUR FAVOR

A DISTINCTLY CHANGED TONE toward American affairs has been taken by the English newspapers since the war began. There may have been criticism, but that tone of "certain condescension" noted by Lowell and perpetuated up almost to the day of hostilities has largely passed away. Yet one of their men of letters, William Archer, ad-

monishes his countrymen to still further understanding, if not sympathy. After pointing out that in the past "all active political relations between Great Britain and America have been hostile relations," he finds the most he can say about "the reciprocal feeling of the majority of both peoples has been a sort of vaguely critical and suspicious kindliness." He is well aware that that "certain condescension" could be offset by the feelings inspired by "certain classes in America that cherished old rancors against England," and these, he thinks, have been "not a little encouraged by the general tone of common-school education." He does not overlook the probable fact, either, that "pro-Ally sympathies are centered rather upon France and Belgium than upon England." Whatever happens he does not expect that we are all at once going to "fall on each other's neck and swear eternal friendship." But "a great new fact," he declares, has come into existence. "In the most momentous erisis in the history of the world the whole English-speaking race is at last standing shoulder to shoulder,"

and "never again can it be said that 'all active political relations between Great Britain and America have been hostile relations.'" He proceeds in *The Westminster Gazette* (London) with a direct address to his fellow countrymen:

"It is up to us—why should we not talk American?—to make the best of this new situation. Hitherto—take us all round we have been culpably and stupidly inappreciative of America. The time has been, no doubt, when there was a great deal of rawness in American life, which lent itself to caricature, and when, on the other hand, many Americans displayed at once great self-assertiveness and morbid resentfulness of our criticism. But the Civil War may fairly be said to have made an end to all that—or at least the beginning of an end. Since then half a century has passed, and now we have not the smallest rational excuse for earelessness or captiousness in our judgments of America."

Indeed, Mr. Archer comes over to us with a bound, and asserts that "to any one with a spark of imagination the United States is the most fascinating country in the world." Because our "past is romantie," our "present marvelous," and our "future inconecivable,"

"Let me give one instance of the romance of the past that

elings to so many places in America. I will not speak of Lexington or Concord; I will not speak of Mount Vernon or Charleston; I will speak of the place in all America which most people in England, perhaps, think of as the very antithesis of romance - I mean Pittsburg. It is called 'hell with the lid off,' and I don't say it does not merit that term of endearment; but to stand on the big bluff over against the city and look down upon the confluence of the Allegheny and the Monongahela (most beautiful words!) is to experience a strange and complex emotion. For the two rivers (each as great as the Rhine or the Rhône) unite to form the magnificent Ohio. And the Ohio rolls on into the still mightier Mississippi; and down these gigantic waterways the first French adventurers paddled thousands of leagues through the boundless sinister wilderness; and Martin Chuzzlewit and Mark Tapley sought the city of Eden; and Huckleberry Finn and Jim went drifting through an Odyssey, which I, for one, believe to be as surely immortal as any story in this world. A few miles up the Monongahela is the spot where General Braddock, with George Washington and George Warrington in his train, fell into the fatal ambush. And there, at the very tip of the tongue of land.

FOR LIBERTY!

This painting by the Polish artist, Jean Styka, bears a quotation from the "Litany of the Pilgrim." by Adam Mickiewicz:

Par le sang de sous les soldats morts dans le guerre pour la foi et la liberté Déliverez-nous, Seigneur!

[By the blood of all heroes fallen in battle for faith and freedom, Good Lord, deliver us.]

between the two rivers, nestling in the shadow of the sky-scrapers like a beehive under St. Peter's, is the little octagonal blockhouse pierced for musketry, which was once Fort Duquesne, and after that Fort Pitt, and from which the city takes its name. Of the titanic, lurid picturesqueness of the scene I shall not attempt to speak. I have merely tried to suggest a few of the historic and literary associations which cluster around the spot itself, and the vast river system to which it is, as it were, the northeastern gateway."

Mr. Archer admonishes his countrymen to realize the enormous advantage they possess in the "community of language, of historical and intellectual traditions, and of political and moral ideals, with this nation of marvelous achievements and still more marvelous potentialities."

RELIGION-AND-SOCIAL-SERVICE

HEALTH EXHIBIT USED BY DR. PETER IN HIS NATIONAL CAMPAIGN IN CHINA.

Among them is a dial which counts the number of deaths from tuberculosis in the world, one every eight seconds. Another is a bell that tolls the deaths in Chica from consumption, one every 37 seconds.

PUTTING CHINA'S QUACK DOCTORS TO FLIGHT

HINA'S HEALTH CONSCIENCE has been dormant so many years that extraordinary measures are needed to awaken it. This is a work that Dr. W. W. Peter is doing under the auspices of the Y. M. C. A., and to him it looks better than lending money with American bankers to build railroads in China, or buying and selling goods in Chinese treaty ports along with American merchants. For two thousand years the chief sources of information for China on matters of health have been the quacks with horn spectacles; now the people, from mandarins down to coolies, hear the news gladly. The Council on Public Health represents the China Medical Missionary Association, the National Medical Association of China, and the Young Men's Christian Association. The health crusader that heads this organization is Dr. W. W. Peter, who tells the people throughout the Middle Kingdom "how flies kill people, how filth in houses and streets is as dangerous as poison, how the 'coughing sickness' (tuberculosis) can be avoided, relieved, and controlled, how plague can be prevented, and other vitally interesting things about public and private health." The means employed to scare China into health are set forth by Mr. Charles M. Steele, in The Christian Herald (New York), who tells how Dr. Peter has conducted "health campaigns" in fifteen of the leading cities of China in the last year and a half.

"Between 175,000 and 200,000 people have attended the meetings and seen the exhibits. Officials have become deeply interested in the work and are glad to lend their influence and active support to it. Leading men and organizations throughout the country are now sending to the Council on Public Health invitations to conduct campaigns in their cities and towns. In Peking, where 18,000 people attended forty-six meetings last May, there was a Public Health Campaign Committee organ-

ized under the auspices of the Ministry of the Interior. At one of the Nanking meetings for women, the governor's wife, Mrs. Feng Kuo Chang, spoke for half an hour. It is an unprecedented thing in China for a woman to address a public meeting.

"During the health campaign meetings are held daily for a week. Admission is by ticket, which can be obtained from the police or through some other agency for distribution. Every morning and afternoon the people are invited to inspect an elaborate health exhibit, prepared by the lecture department of the Young Men's Christian Association, and set up in some large building. This health exhibit covers 680 linear feet of wall space—an eighth of a mile. There are about fifty sections, including placards, signs, diagrams, pictures, and mechanical devices. The mechanical devices used are exceedingly ingenious and effective. One of them is a model of a Chinese house, Out of it comes the figure of a man, who walks across his front yard and then falls into a coffin, whose lids open to receive him. The lids then close and the coffin disappears below the ground. This happens every eight seconds. Placards in Chinese and English explain that some one in the world dies of tuberculosis every eight seconds, and point the moral, 'You can help stop this unnecessary procession to the grave.' This is a new idea. The Chinese, reading the placard, ask 'How?' and the instructor

"Another mechanical exhibit consists of a bell which rings every thirty-seven seconds. A sign announces that every time this bell rings some one has died from tuberculosis in China. Still another and very startling mechanical display consists of a dial with a revolving hand pointing to numbers around the circumference. A bright light is fixt right over the dial, and the placard reads: 'This counter was started when the conference opened, and has been counting the number of deaths from tuberculosis in the world over since.'

"After seeing the health exhibit, which always attracts great interest, the people are invited into a large auditorium to hear and see a demonstrated lecture on 'Some Relations between National Health and National Strength.' In the demonstrations human subjects are used, students acting parts to illustrate the points under discussion. Electrical and mechanical appliances are also freely used."

Dr. Peter says that mentioning "National Strength" in the title and discussing it in the lecture always wins immediate attention. National strength, he says, is a thought that appeals

to the Chinese. They know they are a weak nation among the Powers of the world, and they are eager to learn anything that will help to bring them from a position of weakness to one of strength.

"One day of the week's campaign is reserved for women. On this day the health exhibit is explained as usual, but the lecture is entirely different.

"The subject is 'The Care of Your Baby.' This lecture is demonstrated also. A real baby on the platform with different kinds of clothes, a bath-tub, various kinds of foods, appliances for artificial feeding, nurses, and - more important than all - the mother of the baby herself, make the lecture of an hour and a half seem only thirty minutes long. The baby lecture is generally delivered by some local woman doctor, and has often assumed the form of a real play.

"In the evening the exhibit and lectures just described give way to stereopticon talks on such subjects as these: 'Sanitation of a Chinese City,' 'Flies Kill People,' 'Tuberculosis, 'Infectious Diseases.' These lectures are delivered both by Dr. Peter and by local physicians, native or foreign, who have been educated in America or Europe.

So great are the crowds for the evening meetings that generally it is necessary to secure three or four extra halls in different parts of the city and hold several meetings at the same hour."

The tangible results have been very considerable. These have been recognized by an American firm of patent-medicine venders who issued a pamphlet on "Hygiene and Sanitation," and ended by informing the readers that the way to secure them was by buying Dr. So-and-so's pills in large quantities. But material results are:

"In Hangehow, the campaign paved the way for a smallpox vaccination crusade. In Kaifeng, where the meetings were held in a large theater turned over to the committee, a Public Health Society was formed, having as its leaders the eight Government physicians, who had the responsibility of earing for the health of many thousands of soldiers. In another city, the campaign was followed by a 'clean-up week.' In Chang-Sha, Hunan Province, where thirty-six meetings were attended by 30,000 people, the results of the campaign are now taking form in a \$20,000 hospital for tuberculosis and contagious diseases, creeted by public subscription.

"At Hangehow, in the gloomy halls of a Buddhist monastery, about three hundred Buddhist monks, some of them already sufferers from the dread 'coughing sickness,' listened to a lanternslide talk and heard for the first time in their lives the teachings of modern science and the uses of air, light, soap, and water.

"At Weibuei, Hunan Province, an amusing incident occurred during the campaign. Following the lecture, in which the dangers of the fly had been emphasized, some Chinese ladies were being shown the health exhibit. One of the pictures showed a common house-fly magnified many times. On seeing it, one of the ladies exclaimed, 'Is that the kind of flies they have over in America? No wonder Dr. Peter talks about the danger. If we had such big flies here in China, we would have to be careful of them, too.'

Dr. Peter wrote to the author a letter in which he exprest the hope that some day "public health education in China will

> be as attractive to Chinese and foreigners as Dr. Grenfell's work in Labrador is to all reading people at the present time." "We are now in the first stage of a pouring-in process," he says. "China is just acquiring a stomach for these so-called Western ideas."

> A CALL TO LABOR TO FIGHT THE SALOON-An

> antisaloon fellowship among workingmen is in process of organization, the chief agent being the well-known social worker, Rev. Charles Stelzle. Members of labor bodies of every name are called to rally to the standard, for it is found that the power of the saloon has fixt itself smost firmly there. "Any movement of this sort," says The Watchman-Examiner (New York), "must surely commend itself to the judgment and the sympathy of many laborunionists-who have looked with apprehension upon the present trend of things." The reasons, both biological and practical, are thus set forth:

"If any man on earth has reason to fear and hate the saloon it is the man usually called the laboring man-the man whose skill of hand or strength of arm must win a livelihood for himself and for those dependent upon him for support. The margin between a comfortable subsistence and actual want is with him so narrow that he must be careful lest, by impairing the quality or lessening the quantity of his work output, it be lost entirely, and his family be brought to suffering. Least of all men can the laboring man afford to be on friendly terms with the saloon, and yet, most of all men is he made subject to its temptations, and likely to be enthralled by its power. The liquor interests have always made, and are always making, strenuous and persistent efforts to draw the laboring classes into their toils, with a success that is all too great. Organized labor has been the object of special attack, and while the liquor question has thus far been barred from the conventions of the American Federation of Labor, according to a statement recently made by Rev. Charles Stelzle, social- and reform-worker, liquor men now practically control every central labor union in America,

"If this statement is true, and Mr. Stelzle is a man used to handling figures and compiling statistics, and is not accustomed to speaking without authority, it reveals a terrible condition of affairs. There is nothing in such a situation on which to base any prophecies of peace between capital and labor, growing out of a better understanding of each by the other. This is the very last thing that the saloon wants, the one thing that it can not afford to permit. It thrives on troubles. It fattens on fightings. It grows rich on riotings. With the saloon as the determining factor in the workingman's side of the industrial problem, there is nothing to look forward to but increased misunderstandings, multiplied disturbances, bitter hatreds, and revolution."

THE WORLD'S DEATH-WALK EXHIBIT.

Every eight seconds a man emerges from the house crosses the yard. and falls into a coffin that sinks into the earth. It makes the Chinese spectators gasp to see thus proved the ravages of the white plague.

AMERICA TO WATCH OVER ISRAEL

MERICA AS A SUZERAIN POWER over Palestine is one of the prospective results of Armageddon. The entrance of America into the struggle, therefore, would mean much to the Jews, for, as Mr. Norman Hapgood points out, "it influences their prospects in more than one country and changes the whole aspect of affairs in Palestine itself." They are not seeking for themselves a separate and sovereign nation. "What they need is a land in which their people can live and be free to carry out the development of the customs, language, and institutions of the Hebrew race, so that, as the Jews in other countries become more closely adapted to the lands in which they live, they will not feel that they are sacrifleing the identity of their race." In addition to this they desire "a home, a center for Jewish interests, a clearing-house for the needs and achievements of the Jews everywhere, that, after three thousand years of dispersal, they may have the standing among other people that comes from a separate national identity. Absolute independence they have never wished, feeling that indeed it would be dangerous, but rather they seek a practical independence under the protection of a strong Power."

England, which looked upon herself as the probable Power to effect these ends for the Jews, now discusses transferring the duty to this equatry. She sees that she would thus do away with any possible disagreement with France over the disposal of the vilayet of Syria, and also remove a cause of disagreement with Turkey. In the New York Evening Post, Mr. Hapgood writes from England on this theme a letter that is quoted extensively in Jewish papers. England's problem with the Turk is put in this way:

"Only after a complete defeat would the Turk consent to surrendering Palestine to the protection of a Power which has been his enemy in the present crisis. The Turk has been on the whole a good friend of the Jews. He has no such prejudice against them as exists in Christian countries. His lack of interest in industry and education has given the Jews a chance to work out their business institutions and their national schools, two of the principal aims in Zionism. But the reasons are more profound than that. The Turk is accustomed to nations within nations. The government of an Oriental is not founded on the same ground-plan as that of a Western Power. As long as subordinate people keep the peace and pay prompt tribute, they are left alone to work out their own salvation. The Turkish idea of law and order does not depend upon localities, but upon groups of people, different laws being applied to different nationalities living in the same place. One of the secrets of the British success in dealing with Orientals is that she has learned this lesson. When the war broke out, the Jews were given their choice of becoming citizens or leaving peacefully. As to be let alone is what the Jews wanted, the Turks have on the whole treated them remarkably well. It will be far better for the Jews already in Palestine if the transfer from Turkish rule can be made to a neutral nation, or at least one not too directly connected with the campaign in the East. The protection of Germany is opposed by the Jews themselves because of her tendency to impress her institutions, especially trade and education, upon those under her control. And a German protectorate over Palestine would strengthen the control of the Corridor so dreaded by the Allies.

"If the new Jewish state could be made to include Mesopotamia it would be a great protection to British interests. It would serve as a buffer state between the Bagdad Kailway and the Suez Canal. Germany, Russia, or any country bent on aggrandizement would hesitate to force America into a future war by crossing a country under her nominal control.

"Mesopotamia fringes the western frontier of Persia between the Tigris and the Euphrates, thereby controlling the whole of the Bagdad Railway line and protecting India. England has a close interest in that part of Syria lying south of Damaseus, since control of that region is necessary to protect the Suez Canal. France has a traditional interest in northern Syria. Milyukov, the Russian liberal leader, has recently declared that France has a right to Code-syria. He also stated that the future of Palestine lay either in French control or in an international agreement. He said that England's share of the Near East after the war would be Egypt, Arabia, and Mesopotamia, basing part of this contention on the premise that it is England's influence which has supported the recent nationalistic movement which has arisen among the Arabs. The Russians, however, like others, probably exaggerate the various little nationalistic movements that have broken out since the war began in various parts of the world. The Italian imperialists are interested in that part of Asia Minor which lies north of Adalia in the direction of Smyrna. The Turks are thus reduced to their ethnological frontiers."

In the event of a Jewish state, the holy places of Palestine would not be included, but would be placed under international or American control. The Holy Sepulcher and the Mosque of Omar would be such places. For—

"Palestine is the Holy Land to all people, to Christians and Moslems, to Catholics and Protestants. Whatever is done, there must be a setting aside of all places holy to others. The Russians make pilgrimages to the Holy Sepulcher, the Crusades were fought for it. Jerusalem stands second to Mekka in the Moslem mind. But the Oriental recognizes extra-territorial rights, governments within governments, and the Jew is essentially Oriental in temperament. He is the natural link between the East and the West, interpreting one to the other and protecting the sacred places of all."

The future of the Jews in countries where they are now persecuted is one of the tough problems to be confronted, as "feeling on all national questions is harder than when the war began." We read:

"The position of the Jews in all countries of the world will be improved if America can be brought to accept a protectorate over Palestine. America is better situated to conduct diplomatic negotiations for a Jewish commonwealth than any other Power, because we are not the rivals of any other Power in the Near East. That is why our Government has been able to overcome so many Oriental diplomatic difficulties during the war. . . . The Jews have no desire for too much state power, as they see only danger in it, but they wish freedom to develop."

"INFIDEL MISSIONS" NOT SO POTENT-The "campaign for the destruction of Christianity" described here a few weeks ago in a quotation from The Missiamery Review of the World is not so extensive as it was represented to be, the editor of The Truth Seeker (New York) is "sorry to say." This leading journalistic representative of the Freethought movement points out a few inaccuracies and exaggerations which he discovered in the facts collected by Mr. John N. Wolf and reported by The Missionary Review. He remarks for one thing that while "our methods may be crude," they "do not include such impoliteness as calling Thomas Paine 'Tom.'" Then the Sunday-schools where boys and girls "are taught that the Bible is not true" are presumably, according to The Truth Seeker, "Socialist or those of the Ferrer Association, where religion is generally ignored." After paying a tribute to Mr. Wolf for "stating the facts as he sees them, and for saying how they are to be met without prescribing arrest and imprisonment, or even the 'closed fist' for the Freethought advocates," this writer goes on to cite one reason for the comparative ineffectiveness of "infidel missions":

"The treatment the Freethought speakers are getting just now amounts to police persecution.

"Some day this whole matter will have to be cleared up, and some sort of decision reached as to whether Freethinkers and other idealists are at liberty to exercise the same rights on the street that are enjoyed by all their opponents.

"Meanwhile it will be seen that with the handicap imposed by the authorities the activities of the Infidels are not so extensive as The Missionary Review and Mr. Wolf would have their readers believe. The writers have exaggerated the facts, we suspect, with the purpose of inducing the faithful to loosen up and contribute more liberally to the missionary fund."

CURRENT POETRY

THE notable dramatic poem to which we give the place of honor this week is taken from an interesting group in the February Bookman. Under the title. "The Masque of Poets," The Bookman is printing month by month contributions by certain American poets, among whom are named Amy Lowell, Josephine Preston Peabody, Edwin Arlington Robinson, Bliss Carman, Arthur Davison Ficke, Harriet Monroe, and George Sterling. The contributions are published anonymously, and readers are invited to write the editor of The Bookman their guesses as to the authorship of them. "The Return of Jeanne d'Are' would do honor to any American poet of our day. It is imaginative and strong and well constructed. It will be a difficult task to keep the other poems in the Bookman's series up to the standard set by this contribution.

THE RETURN OF JEANNE D'ARC

JEANNE D'ARC

Why do the vales of Paradise
Turn very France before my eyes,
With linked rivers, chain on chain,
Cool Mouse and amber-sandaled Aisno,
Angelic Oise screnely fleet,
And wayward Rhône on winged feet?
There gleams the Loire through lace of trees.
Shod as of old with silences.
And there with Paris at its breast,
The white Seine lies along the west,
How wistful!

Nay, my serious Scine.
Will nothing make thee smile again?
Has any gargoyle peering down
From Notro Dame with hostile frown
Invaded thy still dreams at night?
Dost thou lament the lost delight
Of years long gone?

I wonder why
Proud Paris vells her from the sky
In twillight vesture like a nun?
I wonder, what has heaven done?
The lights are dead, the land is gray.
Like ghosts the pale roads drift away
Into the North! Oh, I would see
What years have wrought in Domremy.
And how great Reims above the town
Lifts praying lands! I must go down
Among my people, I must know
What makes my heart remember so.
And why the voices cry so near,
The human voices that I hear!

THE MEN OF FRANCE

Now Mary lend thre out of heaven For dear defense of rivers seven. And shapered gateways of the North! Angel of France, oh, lead as forth!

JEANNE D'ARC

They are invaded! They have need Of my heart's faith! Yea, I will lead. But can they follow when I go Unseen and vague as winds that blow? Yet shepherd winds control the day, To make the poplars lean one way. To ruffle rivers into gold. Herd home the clouds into far fold. And tirelessly evoke the shy Wild iris latent in the sky! Can my wing'd spirit so persuade Their hearts to follow unafraid?

THE MEN OF FRANCE

Now Michael gird thee with his sword.

To thrust aside the alien horde,

To bend and break and hur! them farth!

Come thou and lead us to the North!

JEANNE D'ARC

Soldiers, my great gray horse long gone To graze the meadows of the dawn, Has thriven on clear asphodel,

Till you shall learn, he travels well. And victory is still his stride. You see me not, but oh. I ride For France, and mark her starry goal, The faith and freedom of the soul! Do you but follow and give car To heavenly voices that I hear, Till past the black besieging din And whistling menace shrill and thin, Emerge some silvery interval Of vanished bells that call and call Forsaken save of sun and stars, With portals blurred by brutal scars. With towers torn and windows gone. Tis mighty Reims that cries you on! The heaven and earth be withering. Her ruined bells shall sob and sing: The earth and heaven be blank and bare. You shall behold her standing there With wounded arms uplifted high For men of France who fight and die!

THE MEN OF FRANCE

Now Heaven help thee understand. The peril come upon our land! Now God fingles our little worth. And grant three memory of earth!

JEANNE D'ABC

I do remember everything
I had fregutten; how the king
For all my pleading, still deinyed,
But God's own angels gave me ald.
There was a Chinon nightingale
That sang all night, "You will not fail!"
And there were always saintly trees
And dim old flowery villages.
And rain-pricked pools like fretted shields.
And sunny hills, and mellow fields.
Oh, there was France! So now she lies
Appealing-sweet before my eyes.
Her wide flush rivers for delight,
Her spires and poplars to invite
The eyes and thoughts toward hence!

I fight beside you once again,
As these brief conturies ago,
Each man of you a man I know!
In Paradise I have not seen
Faces more stedfast and serene,
Let them not tear the temple down
That holds the soul of Rosen town,
Nor crush the lilies Amiens wears.
Nor those fair vines along the stairs
Of Chartres, where some hand unknown
Lured leaf and fruit from silver stone.
This sunward hour of deepening dawn
Brings glory of your comrades gone,
And Reima's lost bells are ringing!

THE MES OF PRANCE

Hark!
It is her soice! Jeanne d'Arel Jeanne d'Arel

Here is one of Mr. Stork's lyrical interludes, quoted from "Sea and Bay" (John Lane Company). Its music is deep and strong. The idea of the last stanza is somewhat vague—perhaps it suffers from too much condensation.

SEA SONG

BY CHARLES WHARTON STORE

I have lest myself to thy will, O Sea!
To the urge of thy tidal sway;
My soul to thy lure of mystery.
My check to thy lashing spray.
For there's never a man whose blood runs.

But would quaff the wine of the brimming storm.

As the prodigal lends have I lent to thee, For a day or a year and a day.

And what if the tale be quickly told
And the voyage be wild and brief?

I can face thy fury with courage bold
And never a whine of grief,
The peril-fanged is thy grisly track,
The ship goes out that never comes back.
And the sailor's whitened bones are rolled.

In the surge of the whitening recf.

Shapes the Day

The day is often made "sumy" or "gray" by the morning cup.

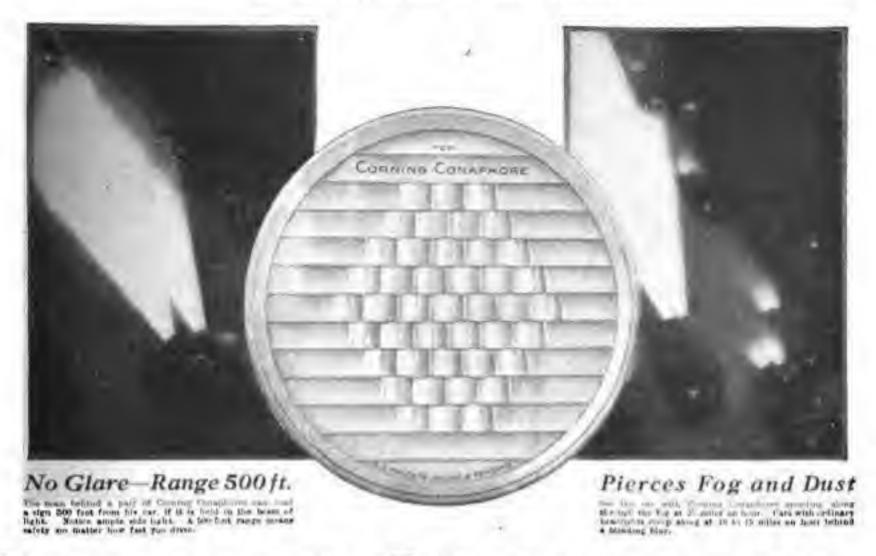

Some people choose coffee, and find there frequently follows some physical annoyance that casts a shadow over the day. Others use IN-STANT POSTUM and find the day's brightness remains undimmed by physical discomfort, There's a good reason.

Instant Postum

is free from drugs and other harmful ingredients, and being made from cereals, contains only true nourishment. It is convenient and economical, has delightful flavor and always promotes health.

U

"There's a Reason"

CORNING CONAPHORE

Sets new headlighting standard

OTORISTS have long felt the need for a scientific headlight. They want a headlight with long range and strong side light, but no glare.

States and cities have emphasized the need for such a headlight by passing strict "anti-glare" laws in an effort to make night driving safe. During 1917, laws requiring the use of a scientific headlight will be in force everywhere.

Ordinary Headlight Dangerous

The ordinary headlight is not satisfactory. It has a bulb to give the light and a reflector la reflect the light, but nothing to control the direction of the rays. The glass merely keeps out dirt and water.

Such headlights are dangerous. They dazzle approaching motorists and pedestrians. The driver has to dim constantly. Tilting lamps downward may reduce the glare, but it greatly decreases the range.

Function of the Conaphore

The headlight problem has been scientifically olved by adding to the bulb and reflector a third part, the Corning Conaphore.

The Corning Conaphore is a scientific head-

light glass which directs the rays of light from the bulb and reflector, so that the Isram will have long range, ample side light, will not glare and will pierce fog and dust. Tests shown on this page prove the efficiency of the Corning Conaphore.

Scientifically Correct

The Corning Comphore is made by the Corning Glass Works, Corning, N. Y., the largest manufacturers of technical glass in the world. This company makes practically all the signal glass used on American railroads. The fact that the Corning Conaphore was designed in the laboratories of the Corning Glass Works is the best guarantee that it is scientifically correct.

Five Major Advantages First Four Exclusive

- 1. Gives headlight range of 500 feet when a standard bulb of 21 candle power or more is properly focused.
- 2. Cuts out all the glare yet uses all the light. thus complying with all city and state "no-glare" laws.
- 3. Penetrates fog. dust, or smoke, so you can easily drive 25 miles an hour under adverse weather conditions.
- 4. Has strong side light which illuminates the roadside; the Noviol Beam m stand out so you can distinguish bushes and

5. Never clogs with dust or mud in summer, or with ice or snow in winter, and is easily put on any car.

Made in Two Kinds of Glass

Corning Conaphores are made of clear glass as well as Noviol Glass. Clear glass Conaphores are equally efficient in giving long range and eliminating glare, but lack the added advantages possessed by the Noviol Glass of eliminating "back-glare" and penetrating fog or dust. We strongly recommend the Noviol.

Easy to Install

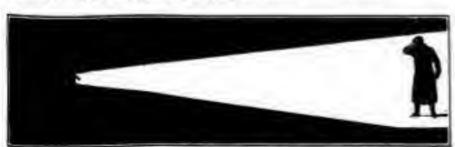

You will find the Corning Comphere easy to in-stail. Simply take out the glass new in your head-light and put the Comphere in its place. Sizes are made to fit all cars. In ordering give name, model and year of your car, and diameter of your present headlight glass. All progressive dealers now sell Corning Compheres. Put a pair on your car today. If your dealer cannot supply you, write us.

Belts Determine Dividends

In the quest for efficiency it is the obvious that is most often overlooked.

This is as conspicuous in the efficient transmission of power with belts, as a great railroad genius made it evident in the efficient transportation of freight.

In the haste and hurry of our national development railroad executives long overlooked the obvious truth that there were such things as unnecessary curves and reducible grades—both dividend-devouring wasters of power.

But the genius came and saw the obvious demanded action—had curves straightened and grades leveled and the stocks of his railroad rose hundreds of points.

Had he been a manufacturer, he would have attacked power-wasting belts.

For ordinary transmission belts are profit-squandering wasters of power long unperceived because too obvious,

For engine and machine power-producer and power-user —depend for their final efficiency on the BELT.

The Belt is the connecting link in the production chain. It determines inevitably the efficiency of that chain.

That is only another way of saying that belts determine dividends.

Because executives are now beginning to recognize this obvious connection between power-transmission and profits, the use of Blue Streak Belts is increasing enormously in every industry.

They are built to conserve power in transmission—and in scores of plants in every industry the cost records kept show that they do conserve it.

And they also give you longer service per dollar of cost.

The demands of safety for employes as well as the need for conserving power everywhere recommend the use of Goodyearite. The durability and heat-resisting qualities of this asbestos sheet packing prevent the dangerous and costly blow-outs chargeable to gaskets of inferior material.

The Goodyear Tire & Rubber Company, Akron, Ohio

The shores recede, the great sails fill.

The lee rail bisses under,

As we double the cape of Lighthouse Hill Where sea and harbor sunder. Then here's to a season of glad unrest! With an anchor of hope on the scaman's

Till I claim once more from thy savage will A soul that is fraught with wonder.

Miss Evelyn Underhill is a student of mysticism who writes best when she avoids her favorite subject. In her "Theophanies: a Book of Verses" (a "theophany" is "an appearance of God") recently published by E. P. Dutton & Co., the poems on spiritual themes are not convincing, but "Any Englishwoman," altho it is a slight thing for so great a tragedy to inspire, seems to be as sincere as it is imaginative and well phrased.

ANY ENGLISHWOMAN

BY EVELYN UNDERSHILL

England's in flower.
On every tree speared canopies unfold,
And sacred beauty crowns the lowliest weeds
Lifting their eager faces from the mold:
Even in this bour

The unrelented pressure of the spring
Thrusts out new lovely life, unfaltering—
Toward what deeds?
What dreadful blossoming?

Als, the red spines upon the curving briar,
They tear the beart
Great with desiro
And sick with sleepless pain
For one that comes not again.
There's horror in the fragrance of the air.
Torment in this intolerable art.
White petals on the pear!

Yet, peering there,
I see beyond the rapture of the young green
And passing of pale fire

The glutten Death, who smiles upon the scene.

Last night there was a sudden wind that blew My joyful branches through. Yesterday a rich biossom on the spray. To-day All the sweet promise of life is vanished away: Yes, of its ardent petals just a few

White on the ground
I found;
Rucy them quick—I must not see them decay.

And coming of the clear

Still days of autumn to redeem our grief.

For them the colored bough, the public sheaf:

But I shall see

The petals that fell too soon from the blossoming tree,

And the stain

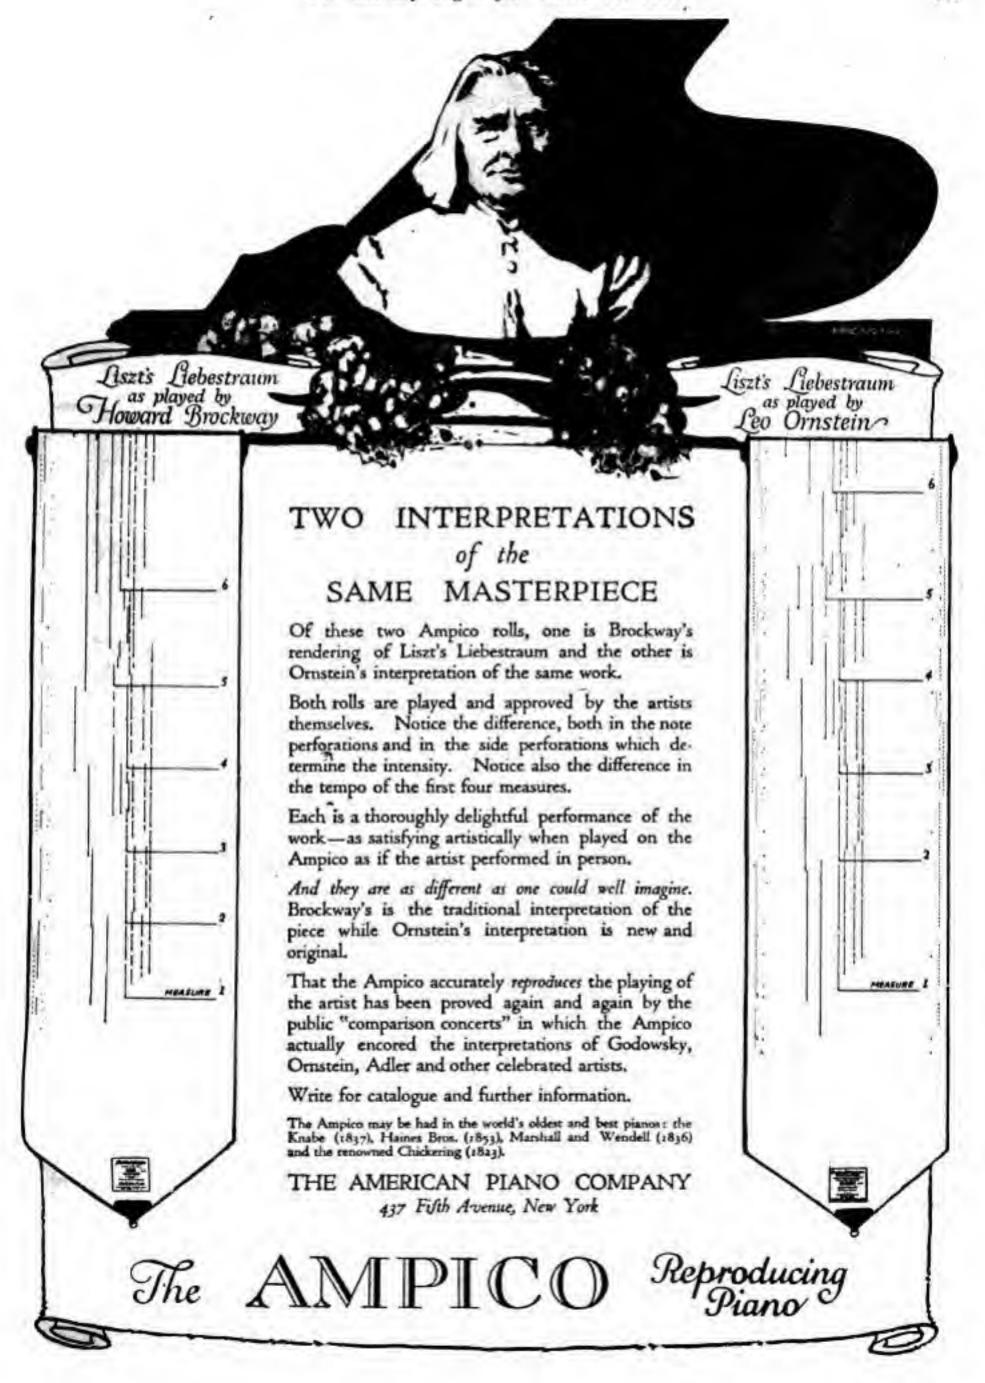

There on the path, where they rest in the sorrowful rain.

These thoughtful and tender lines we take from The Catholic World. The last stanza is a compelling climax to a poem of strong emotional appeal. It is difficult, in a poem on this often-sung theme, to avoid sentimentality and excess of emotion, but Mr. Walsh's artistic restraint has stood him in good stead.

QUIS DESIDERIO

BY THOMAS WALSE

Dark and vast are Thine outer walls,
O King of Light!
Weary the desert; the parched wind crawls
Toward the pools of night.
Over Thy close there is music stealing.
Is it Thy revel, Lord, or the calls
Of my childhood's dreaming? Is it the pealing
Of angel spires, the fever's blight?

This story has not been told before -

What you don't know about chocolates

When is a Chocolate Cream properly fresh?

THAT seems easy enough to answer, doesn't it? You would probably say, "When it's just been made," meaning perhaps, "when it melts in your mouth," and tastes delicious!

Strictly "fresh" chocolate creams, as a matter of fact, do not taste like that at all. Ripe chocolate creams do. Chocolates are like fruits. Time is required to ripen and to bring them to just the right condition for eating—to make them delicious and healthful. This will be clearer when we tell you—

How Chocolate Creams are made

In the Lowney factories most chocolate cream centers are fashioned in molds. The molds of various shapes and sizes are impressed in cornstarch. The cream is poured into these molds and pieces of nuts and fruits are added.

These centers soon become firm. They are then turned out, brushed and cleaned with air to remove the starch. Now they are ready for the dipping table.

The chocolate dipper takes the centers, dips them into warm melted chocolate and fashions different styles of decorations on the tops. Sometimes the centers are dipped by an ingenious machine, known as the "Enrober," which flows melted chocolate completely over them.

The chocolate coat becomes firm in about fifteen minutes. Now it is certainly a "fresh" chocolate.

But, bite into it, and see if you like this strictly "fresh" chocolate!

You don't; and there's a very good reason why you don't.

What newly-made Chocolate Creams really taste like

As you bite into this newlymade chocolate you get first a rather sweet buttery taste. That's because the cocoa butter—which is the natural vegetable oil of the cocoa beans—is all in the outside coating, (A). You taste it unblended with cream or flavoring.

Cross section of a Chocolate Cream

Then there is a crusty taste. It's there because the melted cream hardens slightly where it comes in contact with the starch mold, (B). But, as the center ripens this crust entirely disappears.

Finally, you get a taste all flavor and cream, no chocolate at all. It is as though you were eating chocolate and cream separately. The flavors are not blended the chocolates are not ripened.

Nut and fruit chocolates, containing no cream, need no ripening, but even chocolates like nugatines, caramels and taffies are improved by ripening.

NOW when most chocolates are ripened these natural changes take place:

First, the cocoa butter is evenly absorbed through the hard outside coating.

Second, the cream center gradually ripens and softens. As it softens it completely absorbs the

outside crust, and the soft ripened cream extends clear to the chocolate coating.

Finally, when this occurs, you have a ripened chocolate—delicious to the taste. Its flavors are perfectly biended. The perfect chocolate cream, therefore, is not fresh, but ripe.

How old should Chocolates be?

Someone is sure to ask that question, and it is a hard one to answer. As a matter of fact, chocolates kept at the correct temperature remain in perfect condition many months.

The eating age of your chocolates is not so much a question of age as of the temperature at which they have been kept. In fact, the chocolate makers' chief concern is to keep chocolates from being injured by uneven temperature.

What heat does to Chocolates

The direct rays of the sun or extreme heat of any kind will coax the cocoa butter to the surface of the coating. When the coating cools again it has a gray misty look.

Chocolates thus affected are not injured if eaten at once, but will deteriorate rapidly. Little air chan-

CLOUDLAND

nels are made where the cocoabutter comes to the surface. The air goes into the center, the flavor escapes and the center becomes dry and tasteless. Dampness is also very injurious to chocolates.

Protecting Chocolates against harmful temperatures

It is for this reason that every modern safeguard is employed by The Walter M. Lowney Company to keep their chocolates at an even temperature.

Our shipments to distant points go in refrigerator cars, and our many distributing centers have cooled rooms. Then, too, each year more and more druggists and candy dealers in co-operation with us are using refrigerator showcases.

Distributing Chocolates in perfect condition from Boston to the Philippines

Now you will more readily understand how it is possible for Lowney Chocolates,

manufactured in Boston, to be delivered all over the United States just right to eat.

You may be surprised to learn that we are making large shipments of chocolates to such tropical countries as the Philippines, Porto Rico, and to China, a country with a very trying climate.

Another protection

With all the Lowney precautions in packing and shipping, you have very little chance of getting an imperfect box. To protect you against such a mischance, however, we put a guarantee slip in each box and authorize our agents everywhere to make this guarantee good.

HIS we believe to be fair dealing in Chocolates. The Medal of Honor package illustrated, is a particularly choice assortment to commemorate the gold medal won at the last exposition -the third world exposition, by the way, to give its unqualified endorsement to Lowney's Chocolates.

THE WALTER M. LOWNEY CO. Makers of Chocolates, Goroa and Chocolate BOSTON CHICAGO MONTREAL

Possibly you would like to make chocolates at home." This is good fun and sometimes the chocolates are good. We aren't jealous. In fact, we like to have you try it, as you will better appreciate our efforts.

DIRECTIONS CHOCOLATES AT HOME FOR MAKING

Fur Making Centers

Chocolate cream centers are made of cream, called fondant." To make fundant, use one-quarter teaspoonful cream of tartar and one-third of a cuput but water to two cups sugar. If corn syrup is used, make the foodant as follows: One-half cup corn syrup, one-quarter temperature countries.

tartar, one-and-one-half cups rugar, one-third cap but water.
Boil without stirring until it threads. As it cools, beat until creamy. Keep cool and dry, until needed.

Flavoring should be added by working as much of the extract as is desired directly into the fordant. Mold fordant by band in the desired shapes and sizes for dipping.

If fruit or nuts are used, make a small hall by rolling out a little piece of the foundant; place the nuts or fruit on the sides, and press together.

sides, and press together.

For Dipping Centers

Melt a portion of Lowney's Home Sweet Chocolase* in a small double botler. Break the chocolase in small pieces and

stir while melting. Keep the checolate mass hot but do not allow it to bad. Do not add water to the chocolate.

After the checolate is thoroughly melted, allow it to cool to about 6.º Fabresbeit before starting to dip the centers. e a common table fork, or better, shape a wire similar to a button book with a loop end, and use that-

Drug the center into the chocolate, taking care to immerse it. Lift out with the fork, shake off surplus exiting, and place on waxed paper or oil cloth, by semply turning the fork.

When the centers are dipped, set in a cool place. If chocolates are placed in the refrigerator, keep them carefully covered to prevent sweating.

If you wish to dip the chocolates by hand, pour the melted chocolate on a clean moiding board, keep the chocolate rubbed smooth with the hand, and dip centers as above. using fingers instead of a fork.

There is a degree of motor car performance beyond which improvement is at present unpurchasable. That degree is enjoyed to the peak by the owner of a National Highway Twelve. In fluidity of operation, in percussive instancy of pick-up, in sustained and imperious command of every motoring situation, this car caps the effort of the industry for combined obedience and power. Its form and its appointment are of an excellence to match its prowess. Its price falls fair between extravagance and unwise thrift.

ine poerce \$2150

Its counterpart in style, in general structure, in well-powered elegance, is the National Highway Six. An able car-silent, pliant, proficient; perhaps a shade less active than the Twelve. Appreciably less in cost, a car notable in any company, and not to be approximated in quality or efficiency in its price field.

NATIONAL MOTOR CAR & VEHICLE CORPORATION INDIANAPOLIS

Seventeenth Successful Year

Some rose immortal there must bloom By fountains clear,

That waves of such ineffable perfume Should reach me here!

Cool on my brows I feel their sprinkle, Here in the dust of my outer gloom

Where the stars themselves seem drops that twinkle

In truant spray o'er the sky wastes sheer.

Their hyssop melts through my soul. Perchance She scatters there

Some old love-sign, some token-she whose glance Makes consecrate and rare

Life's dawns and twilight-whose worn hands Imploring

Are constant raised 'mid all 'Thy joys' expanse For me remembered still in her adoring, She of the silvered, even-parted hair!

Hugh J. Hughes is the name signed to poems we find frequently in Farm, Stock, and Home, a paper published in Minneapolis. They are worthy of notice because of their music and power, and because they actually seem to be expressions of the mind and soul of the fertile farm-lands of the West. Many poets write about the West, but this poet writes about the West with authority; he knows that about which he writes, and he is passionately sincere.

THE WINNERS, SINGING

By HUGH J. HUGHES

Our women have been loyal, so we men have trod the marges

Of many a distant shoreland by many a chiming sea.

Where the forman broke before us, left his speardent on our targes,

And behind him lands and waters and the wealth of soil and tree.

Because that they were loyal we set aside our

And through the demon-guarded deep we came to fairer lands;

And there we made for them a place within the feeble clearings.

And prayed to half-remembered gods by lifting

Our women have been loyal, so for them we threw our arches

Across the evil rivers and chained them fast and will:

And built the city wall and gate and ceased our endless marches

And found the pleasant valleys that our servant

Our women have been loyal beyond all praise or

So, bit by bit; so, man by man, we struggled lest we fall;

And found at last a country and a city and a dwelling:

And, best of all, a woman's hands to turn the dipping scale.

Our women have been loyal, and, because that they were loyal,

We built the Law that shelters us, the Creed that scourges wrong;

Both the pleasant little cottage and the rowered balls and royal,

And because such were our women came the deathless gift of song.

Our women have been loyal! So the fruitful

land and pleasant, The songs of seed and harvest-time, and peace-

envisaged years; The love of little children and the toil of king

and peasant, And laughter of such happiness that sometimes

Builds city of 75,000

There is a busy town in the Middle West that has been described as being literally intoxicated with an all-pervading prosperity.

In a short time its population has increased from 13,000 to 75,000. It boasts of 182 men who have made fortunes from \$100,000 to \$6,000,000.

This boom—this city and fortune building—is the work of one man. Yet, big as this work is, it is only one phase of this man's gigantic enterprises.

Today, he is master of several industries representing an organization of \$175,000,000, employing 36,500 men.

This man started in a humble way as an employe in a lumber mill. At twenty-one he said he had mastered the business and was ready for something else.

A cigar factory required bolstering. He gave it new life.

The town water-works were in a bad way. He put them on a sound basis.

Later he organized a carriage company. Then a motor company. In ten years he was a multimillionaire and was building fortunes for other men.

He knew the underlying principles of business success

Some men will tell you his success was due to a series of "lucky breaks." Others will say he is one of the men who get all the opportunities.

But the fact is, this man started at scratch—he was born with nothing more than most of us are born with.

It was an unusual mastery of big business laws and principles which gave him his advantage—and this grasp of business principles is within the reach of all who have the determination to learn.

The laws of business success do not vary

This man had to master the laws of business before he could become a success. His text book of business knowledge was the experience of others and the facts of his own daily experience. He was able to crystallize these experiences into working principles.

The knowledge he finally gained in this way was the same knowledge that has stood behind every big business success. It is the same knowledge that, when acquired, needs only the personal qualities of determination and energy, to make success sure for anyone. The difference was in the method of learning. Unlike this man most of us need to have these principles crystallized and set down in writing before we can absorb them.

It is this business knowledge, this crystallized experience of thousands of America's most successful men, that the Alexander Hamilton Institute is giving to more than 50,000 business men today.

Based on the actual experience of thousands of successful business men

The Institute collects, classifies and transmits to you thru the Modern Business Course and Service, the best thought and practice in modern business. It will give you a thoro and sound training in the fundamental principles underlying all departments of business—it will give you a knowledge that could otherwise be obtained only by years of bitter

The kind of men enrolled

Presidents of hig corporations are often enrolled for this Course and Service along with ambitious young men in their employ. Among the 50,000 subscribers are such men as H. C. Osborn, President, American Multigraph Sales Co.; Melville W. Mix, President of the Dodge Mfg. Co.; Geo. M. Verity, President of the American Rolling Mills; William H. Ingersoff, Marketing Manager of the biggest watch company in the world; N. A. Hewkins, General Sales Manager of the Ford Motor Company, and scores of others equally prominent.

In the Standard Oil Co., 242 men are enrolled in the Alexander Hamilton Institute; in the U. S. Steel Corporation, 450; in the National Cash Register Co., 194; in the General Electric Co., 282; in the Pennsylvania Railroad, 87; and so on down the list of the biggest concerns in America.

Advisory Council

Business and educational authority of the highest standing are represented in the Advisory Council of the Institute. This Advisory Council includes Frank A. Vanderlip, President of the National City Bank of New York; Judge B. H. Gary, bead of the U. S. Steel Corporation; John Hays Hammond, the eminent engineer; Jeremish W. Jenks, the statistician and economist, and Joseph French Johnson, Dean of the New York University School of Commerce.

"Forging Ahead in Business"

A careful reading of this 135-page book, "Forging Ahead in Business," a copy of which we will send you free, will repay you many times over. It will help measure what you know, what you don't know, and what you should know to make success sure. This Course and Service will fit you to grasp the opportunities that are bound to come to those who are prepared.

The ARISTOCRAT OF BUILDING MATERIALS

Within your reach? YES!

The very same stone that has been used for many years in the finest buildings, both public and private, in every state in the Union—a natural stone so remarkable that if you are about to build or are interested in building, you should *certainly* know *all* about it. The U.S. Government is one of the biggest users of this "Aristocrat of Building Materials." Yet it is even more reasonable in price than artificial materials.

You are familiar with buildings built of Indiana Limestone, but probably do not know it by name. It probably never occurred to you that this beautiful material is quarried in such quantities that the price is within your easy reach.

You do know that nothing in the world gives the impression of dignity, costliness, refinement and beauty like natural stone, the genuine handiwork of nature, and we want you to know about Indiana Limestone, "The Aristocratof Building Materials," to hold a piece in your hand, and to decide for yourself about the new building. (See FREE OFFER below).

FOR THE NEW

YES—of course. A list of the finest Indiana Limestone homes reads like a society blue-book. Indiana Limestone is a badge of distinguished taste, whether for cottage or mansion. The best architects use it also for the trimmings of brick houses and for porches even on wooden houses.

YES—for the very finest apartments use Indiana Limestone from sidewalk to roof, or one story Limestone and the rest brick. Natural Indiana Limestone trim, porches and doorways, add the final touch of elegance to the brick apartment, and in renting "class pays cash."

YES—where is the wonderful product of nature more appropriate than in a church? What is more certain to express the high function of the edifice than Indiana Limestone? Let us send a sample and book to each of the committee, pastor or others interested,

YES—the greatest architects have used millions of cubic feet in a host of the great buildings in America—for example, the Grand Central Terminal (N.Y.), and business, hotel, bank and public buildings, great and small—EVERYWHERE! By no means fail to investigate Indiana Limestone.

FREE—Handsome paperweight of Indiana Limestone showing several finishes with a handsomely illustrated interesting booklet

INDIANA LIMESTONE QUARRYMEN'S ASS'N P. O. BOX 213 BEDFORD, IND.

IRELAND'S MEN OF THE WEST

Y OU may not believe in the fairies of the Emerald Isle, tho it is said that if you were born there you would scarcely be a skeptic, but you must believe in the kings there at this very day unless you would doubt the word of so veracious a chronicler as Shane Leslie. He is telling of his roamings on the wild west coast, "next parishes to Greenland and Labrador," whose people are so strikingly dramatized in the plays of the late John Synge. The shores are inhabited by septs, we read in Ireland (New York), which preserve a clannish allegiance to one another, but the islands are ruled by kings. There is a King of Tory and a King of Innismurray, and the last time our informant was passing the latter island there was a war of succession in progress as to whether the crown was vested in the Herrity family or with the Walters. We read then:

He is a bold official who dares claim taxes or revenue from these islanders, and a lucky priest who can collect his tithes. These men can generally depend on rough weather to keep revenue-officers at a distance. When one lands, their goods and cattle are secreted and the poteen buried under the seaweed. It is little care to them whether they are disfranchised of their vote or not. They need a strong brew of poteen to keep them warm under the spray of the ocean, and no tax will they pay any King of England for it. It is the sea alone that demands and takes toll of them. Their lives are spent with a gruesome fear of the salt water perpetually upon them. It is said that a Tory Islander is seldom drowned, for the sea has taught him too much eaution. The present Bishop of Raphoe, in whose jurisdiction most of these islanders lie, told me that the owner of the only saloon on Tory bad recently surrendered it for the glory of God and the good of his fellow islanders. However, the temperance campaign can not be said to be too popular on some of the other islands. One of these island kings came to the mainland and was horrified to hear that "a mad doctor," as he called his bishop, was bent on suppressing the liquor which to him was cheer to the heart and raiment to his chest. Not long afterward the bishop was sailing past the island when his local majesty hailed the ship with "Who comes?"

"The Most Reverend and Illustrious Dr. O'Donnell, Lord Bishop of Raphoe," was the answer. "Can he take a drop?" was the next question. The answer was in the negative. "Then he may pass on," was the royal reply. And he did.

But these kings are no more immune to poverty than other kings are to death, for we are told that to the visitor's eye the predominant note is poverty from Tory Island to Aran. Men live precariously and hardily in this stern region. There are no railways to bring coal and they rely for fuel on the mountain-bogs, and all the turf gathered has to be transported in woven creels on donkey-back. Mr. Leslie goes on to say:

There are few shops, save an occasional shanty, whose windows appear to be visited

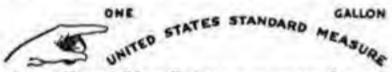

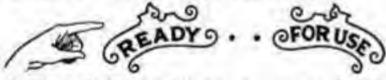

"This Old Fashioned Label Tells The Story of Paint Quality"

Every Word a Guarantee.

It's a good old label, crowded full of words, but every word is big with meaning. Look for it always when you buy paint. It stands for proven quality.

Lucas Tinted Gloss Paints are guaranteed measure. When you buy a gallon of Lucas Paint you get a gallon — full measure and more. There could no more be skimping of quantity in Lucas Paint than skimping of quality.

No long, tedious mixing is necessary—Lucas Paint is guaranteed ready for use. No individual could prepare a paint so accurately proportioned; so thoroughly ground and mixed; so carefully tested for quality of materials and uniformity of shade.

As oil is the life of paint, purest linseed oil is of the utmost importance in good paint making. All the oil in Lucas Tinted Gloss Paint is laboratory tested. The guaranteed oil in Lucas Paint is a big factor in insuring the lasting quality of the finished product.

Your dealer will be glad to show you Lucas color cards; or write us for booklet, "Save Money On Paint" and X-Ray Demonstrator showing color schemes obtainable with Lucas Paint.

GLOSS PAINT

"Tint" tells the story of Lucas supremacy in the manufacture of dry colors; of this company's ability to produce shades which no one else can duplicate because of facilities which no one else possesses; and "Gloss" is the guarantee of the paint gloss—a further indication of the use of purest inseed oil, the gloss-producing ingredient of paint.

This is a guarantee of the shade. In addition to showing the paint number and shade name as indicated on color card, the color chip is repeated on the can, to absolutely insure the user's getting the shade selected.

Aname known for 68 years in the paint world. All the experience of this long period; all the improvements made during this time in formula and manufacture; all the quality standards so long maintained are represented by this name—the final guarantee of good point.

Office 115 JOHN LUCAS&CO., INC. Philadelphia

by commercial travelers about as often as leap-year. Perhaps this is a good thing, for the people spin and make their own clothing and they know better than any manufactory how to temper it to meet the wind. It takes a thick coat and a stout heart to stand upon those outlying rocks in a winter's gale. The bread is also homemade and the total absence of cheap foods and patent preserves shows itself in the strong and vital faces of the people. They are a hardy race, these "mountainy" men, for they must war with the elements for their living. The legislation has made their hearthstones and walls secure from eviction, no law can bind the wind and the great gales that often rip the straw roofs from over their heads. Only heavy stones slung with ropes keep any roof over them at all. "Seollops," they are called, and their proverb runs, "to lay by seollops for the windy day!"

The birds and animals in these districts are all supposed to understand Irish. I have collected some carious pieces of birdlore among Gaelie speakers. For instance, the croak of the raven has different meanings. When he sees a layman approach he calls out bacagh! When it is a priest he calls out gradh! (love), and when the wolves are coming he calls out warningly, coin! (hounds). The children say the crows understand Irish but not English, and that if you want to frighten them away from the eorn all you have to say (in Irish, of course) is, "May the Pooka eatch the last!" One delicious interpretation concerns the barn-yard cock. His cry at morning to the Gaelic world is no meaningless cock-a-doodie-doo! He is supposed to announce the Resurrection not only of the sun but of Christ-"Mac an over stan"-"the Son of the Virgin is safe!"

They are a reverent folk living very close to nature. . . . To see them standing in their homespuns, dyed with dyes out of the lichens, is to see something indigenous and racy of the soil. They make their own boats or currachs out of hide fixt to a wooden skeleton. On these they bob over the waves that would submerge heavier craft. Every now and again the newspaper reader hears of some daring rescue from shipwreck carried out in the teeth of a storm by these same fishermen. When it is added that they did the deed in canoes he believes it is a misprint and passes on.

They are a race who see no movies and read no comic papers. They have to rely on themselves for amusement, which is no bad thing, either. They gather on the rocks in summer weather and practise rowing regattas. At other times they indulge in the aristocratic sport of horseracing. Mounting their hardy children on rough-coated garrans, they watch them up and down the long sandy shore with an interest and a knowledge of the sport that is seldom attained on a real racetrack. They follow the racing as the the reputation of whole families and townlands depended on the winner. The the race is likely to be won by the boy who has spurs over those who have only bare heels to propel their mounts, there is a scrupulous love of fair play. I remember watching a race in which five ponies came tearing in, but as each claimed a foul over the one in front, the last one was adjudicated the winner. As it is written, the last shall be first.

The sense of right and wrong of these people, Mr. Leslie tells us, is primitive,

Setting a Pace for Production

One idle machine is costlier than a hundred that keep on working.

The factory superintendent knows this. To him uninterrupted production is vital.

So he demands equipment that will obviate shut-downs due to faulty performance.

He specifies Robbins & Myers Motors for their utter dependability year in and year out. To him every Robbins & Myers installation is a veritable production guarantee.

He knows that whatever the size, whether 1/40 or 25 horsepower, or whatever the circuit—direct or alternating current, there is the very Robbins & Myers Motor for the purpose.

He knows that makers of the best motor driven equipment from vacuum cleaners for the home to drill-presses for the machine shop, equip their product with Robbins & Myers Motors because of the high operating efficiency they insure.

If you are a user of electrical power, a manufacturer of motor driven equipment or a dealer, write for prices and facts regarding Robbins & Myers service.

The Robbins & Myers Company, Springfield, Ohio

Robbins & Myers Motors

Dependability

Automatic protection is essential wherever carelessness or neglect can result in danger or loss. Boilers have safety valves. Factories, sprinkler systems. Railroads, block signals.

And on the more modern automobile the Automatic Switch protects the battery against draininge by cutting off the flow of current-automatically-when the motor stops, should the driver forget or neglect to do so. No automatic protertive mechanism is any more depend-

The device about above marks this switch and identifies Connecticut Automatic Ignition. This is "The Decice of Liftcioncy."

CONNECTICUT PROPERTY COMPANY

based on the bonor of primitive folk. The corruptions of civilization have never pierced the "sure shield that the Gaeli: tongue affords them," and Gaelie song and story help to lighten the burden of their hard life. We read:

From the cradle to the grave they are accompanied by the mysterious melodies of their race, and at the last, when their bodies are laid out for burial, the keening is raised over them with a sound that no music or mourning could reproduce. I remember going into a little cabin near Cloghanealy in Donegal, where I was told the women of the house had a traditional keen in their own family. As a great favor this weird chant was raised for me. It is considered unlucky to keen without a corpse, and I was haunted for days by the cry I had heard. It seemed something hardly human, something akin to the sobbing of the shipwrecked on the rocks or to a nation's soul crying out of the darkness.

WHAT THE PAPER-FAMINE BRINGS

ARTOONISTS have fallen in love with the idea of a paper-famine. They have snapt up the chance to portray Algernon sending Mehitabel a love-letter written on the bosom of a dress-shirt; they picture old man Moneybags dispatching a huge order on a slab taken from the façade of his mansion on the Avenue, and there is more than humor to this. The paper-famine has hit many publishers hard, and one of them, at least, has risen superior to conditions, and brought out a newspaper on wood-on shingles. course, as might be guessed, the astuto publisher is a woman, and we read in the San Antonio Light an editorial eulogy of her business methods and acumen, in which it is noted:

The country, generally, has been made aware of the great advance in the cost of white paper, and of the difficulty in obtaining it even at the higher price, which is beyond anything that any American now living has ever known. The public, however, does not know the expedients to which some people have been driven because of the difficulty in getting paper, and the price which it brings in the market.

It has remained for the publisher of The Cowlitz County Advocate, of Castle Rock. Washington, to really show what the present cost of white paper actually means to the publisher.

The publisher of this paper is a lady, named Mabel McClane Brown. She is, judging by her paper, an ardent advocate of a high protective tariff on lumber. She says that the present tariff has driven all the lumber-trade of the United States into the hands of Canada, and that it will remain there until the situation is remedied by the enactment of a new tariff law.

She has found the price of lumber so reduced by the present tariff, and the price of paper so advanced by the war and other eauses, that it has become cheaper for her to get out her paper on shingles, and that is what she has done. It is said that she used 100,000 shingles in getting out her single edition, and saved much money thereby.

An Unusual Advertisement-

Addressed to Men of All Vocations from the Master Workman to the Head of the Business

You never before heard of a razor and blade manufacturer urging you to buy fewer razor blades.

You and all men who shave safely, know that in order to get a smooth, clean, satisfactory shave you must have a good blade holder (a safety razor), good blades and the means of keeping those blades in good shaving condition.

The Penn Safety Razor for the purpose for which it is intended—holding a blade for shaving—in simplicity, durability, workmanship and finish, is the last and best word in safety razor construction.

The Penn Razor brings the blade to your face at the correct shaving angle—your arm is in a perfectly natural position. The razor is easy to clean, sanitary—nothing to get out of order.

Penn Blades are real blades—laboratory blades—real pieces of curlery—too good to throw away. Each Penn Blade ground, honed and tested—ready for shaving.

Box

Triple

Penn Safety Razor. Complete with 5 Blades that Shave, \$1.66

Pean Blades are ground so they will stand stropping—so they can be used over and over again, permitting you to obtain many comfortable, satisfactory shaves from each blade.

Penn Blades are made to be stropped, so we arge and recommend that you strop your blade each time before using it. Every man who knows anything about a razor, knows that the best razor and razor blade made will give more clean, pleasant shaves if that blade is stropped just before using.

To assure correct honing and stropping we have created the Penn Honing Strop, a small, compact cushion strop, possessing exactly the right qualities for keeping good blades in good condition. With this strop comes a Stropping Hamile for holding the blade. This Handle is simple, durable and yet accorrately gauged so that it will hold the blade on the Honing Strop at the correct stropping angle.

Satisfaction or Money Back

The Perm Razer. Blades and Stropping Outle coconstanteed to give satisfaction, or your meanlack. We guarantee it to you and to the dealer. If not satisfactory, practs to the dealer. He gives you your money back and we pay him.

WELL PAST ITS \$300,000 MARK, AND STILL GROWING

N SPITE OF NATIONAL SUSPENSE, marking these reeent days, the Belgian Children's Fund has grown splendidly, has gone past its \$300,000 mark, and promises are cheering that its growth will munificently continue. In many schools in many towns teachers and students are actively and systematically at work on behalf of hungry Belgian boys and girls.

In the enterprising city of Petersburg, Va., Supt. Martin, of the public schools, was inspired by an idea that the 20,000,000 school children of this country could alone care for all needy Belgian children if allowed to do so. He reasoned clearly that they could do this, without any strain upon them, under a system of small per capita weekly contributions well maintained. The Board of Education agreed that the rule forbidding collections from the pupils might be wisely suspended for this purpose. Zerkeghem's 300 children were adopted, to be eared for by the children of Petersburg; and already they have remitted \$220 on the pledge of \$3,600. Suppose every city and town of America should follow this fine example, and that every Board of Education should suspend its rule against collections to assist in meeting Belgium's awful need. Five cents a week from each scholar would provide all the support for which Belgian children appeal,

Mrs. Arthur K. Davis, of the Southern College, at Petersburg, remits \$339, raised, she says, in the "powder" towns of City Point and Hopewell, ten miles from Petersburg, by the ladies there, after "talks" by herself and readings from THE LETERARY Drogst. "The ladies went immediately to work," one of them wrote to Mrs. Davis, "and that accounts for our great success."

Bluefields, Nicaragua, adds \$250 to her contribution, and in the letter enclosing it Mr. R. Fransen refers to "far off Corinto, on the Pacific," to which he had sent some appeals, and from which place he had received a telegram saying \$100 had been gathered there, through the kind efforts of the French Consul.

Under leadership of Prof. W. W. Douglass, of the College faculty, Urbana, Ill., has selected the Belgian town of Muyera, with 575 children, and assumes the obligation (over \$6,000) to care for the children there. "As teacher of History and Civies," says a letter from Gilbert, Minn., "I am inspired by a LITERARY DIGEST Class. The class envied those whose names were curolled for so good a cause, and got busy. The class is not very large, but will mail you a check for \$60 within the next two weeks." And this letter enclosed \$24, obtained in a local lodge, "to invest in two shares of Belgian Kiddies Unlimited, dividends instantaneous." Mrs. N. J. Brown, of Maine, writes that she already has obtained nearly \$2,500, and is to make it much more.

NEVERAL RELIEF SHIPS have left this port of New York, since our report of one week ago, laden with Belgian supplies, and others will soon follow. Through different agencies, scattered across the country, generous Relief contributions are coming in to the Relief Commission's American headquarters; but the amount required can be made up only as every man, every woman, every boy, and every girl GIVES TO HIS OR HER UTTERMOST, and without further delay.

Through Mr. George W. Feldman, so ably leading there, the citizens of Franklin, Pa., have added \$2,000 to their former splendid sum of \$5,000; upon their "pledge of \$9,780 for the 815 children of Hingeor," and Mr. Feldman says: "We really expect to send you above \$10,000. The churches, public schools, and citizens generally are very much interested in the Fund." Philadelphia, beautifully generous before, adds another individual remittance of \$600.

"I am a poor working girl," says the writer of a letter from Schenectady, N. Y., "and \$6 is all I can squeeze from my budget at this time; but you can not know how gladly I send it to you. It is my new spring bonnet, and I shall wear it with greater pleasure and pride than many of my neighbors wear theirs.

An admirable example for other towns and their schools to follow has been set by Duluth, Minn. Writing from there, Mrs. J. L. Washburn, Chairman Industrial Branch A. R. C., encloses \$100, and says:

"At my request the Superintendent had the pathetic story which appeared in your January 6 issue put in the hands of each teacher, who told the children what a little self-denial on their part might do. This contribution comes from only six of the schools. There will be more later, I am sure."

From the little town of Waldo, in Arkansas, with only a few hundred population, comes a remittance of \$220.75, contributed by thirty-one persons, well showing what small communities ean do when some one of influence determines that something should be done. In this case a noble woman led out the bepevolent impulses, and more than matched what others gave.

Southern schools have been responding nobly. From "Woodrow Wilson Junior High," at Tampa, Fla., comes a remittance of \$25.55, and the principal, Robert W. Ray, writes thus:

"The appeal of Tue Droger met a ready response in the hearts of children of this school. Some of them walked long distances to school, in order to save the car-fare to apply to the Relief Fund. Some denied themselves of cream and other luxuries, while a few deprived themselves of the five-cent lunch served at the school in order to save the amount with which to express their sympathy for the cause of humanity."

FIRESTONE TRUCK TIRES

NOTICE the Firestone Giant Truck Tires under the trailer in above picture. These are the tires that are doing the big work under difficulties everywhere. In this case 42x12 inch Giant Tires have carried this tremendous load through soft, marshy places. A task which dual equipment could not have done.

From the northern forests to the Mexican border, in cities from coast to coast, this tire, exclusively Firestone, is demonstrating its many advantages over ordinary types.

Greater traction, smoother riding, more protection for truck and comfort for driver, extra wear. Call in the Firestone man. He is unprejudiced. He has a type of tire for every load, road and condition of service.

DNTPANK

The answer to all the problems of Heating and Ventilation

Furnace installed in your -attends to it perfectly, home, you can afford to forget scientifically and automatall about Ventilation; for the

With a FRONTRANK Steel FRONTRANK attends to that ically.

Ventilation is automatically insured

Pure air, taken from out doors and warmed to any temperature desired, is automatically fed into the rooms, warming and ventilating them at one and the same operation.

The extremely important matter of maintaining the proper degree of humidity in the heated air is automatically attended to by the ample water pan with which the **FRONT RANK** Steel Furnace is provided.

The FRONT RANK Steel Furnace automatically expels the foul air which tends to gather in rooms where people stay. It replaces this foul air with a constant stream of properly warmed and moistened pure air, thus keeping the air in the rooms constantly pure, comfortable and healthful.

Never-Failing, automatic Ventilation is quite as essential in a furnace as the best heating qualities. The FRONT DANK Steel Furnace furnishes both.

Sectional view-Front

ANK is "Fool Proof"

The FRONT RANK Steel Furnace is simply and strongly builtdoesn't get out of order-is easily cleaned-burns any kind of fuel, and is very economical because it has the longest fire-travel of any furnace made. It has no direct draft to warp and buckle. It, utilizes the full heat value generated before passing the gases and soot to the flue. It is gas tight and soot proof.

The FRONT DANK Steel Furnace is, in all respects, absolutely "foolproof." It responds instantly to proper regulation; yet is so built that the unskilled operator can not get into trouble by mishandling it.

Write for full particulars, mentioning size and number of rooms in your house.

TRADE MARK

Some Boys Get

In homes that serve Puffed Wheat and Rice, boys carry the grains at play. Sometimes they are simply salted—sometimes doused with melted butter. these bubble-like grains, toasted, flavory, crisp and flaky, form real food confections.

Those Boys Say This:

Boys with Puffed Grains always treat other boys. And they say something

"Why, we have Puffed Grains every day in our house. I get a dish every

"I get them sometimes for supper, in a bowl of milk. Sister uses them in candy

making. And I get them like this after school.
"Sometimes it is Puffed Wheat, sometimes Puffed Rice, and sometimes it is Corn Puffs. But one is as good as another."

Children who get Puffed Grains talk about them. And children who don't, ensy

For these are the foods that taste like nuts. That are airy and thin and flimsy. And that seem like confections served by the dishful,

Children who don't get Poffed Grains get nothing else that's like them. There is no other way to make whole grains into such inviting morsels.

> Puffed Wheat

Puffed Rice

and Corn Puffs Each 15c Except in Far West

The purpose of puffing, by Prof. Anderson's process, is to make whole grains wholly digestible. By terrific heat and shooting from guns, every food cell is exploded.

What cooking does in a partial way, this process does completely. Thus every

element is made available, and every atom feeds.

People need whole-grain foods. But they need them so the whole grain will digest. Puffed Wheat and Rice supply them. So every dainty tidbit forms a perfect food. Let children eat all they will.

Now comes a fire extinguisher that you know will always work—the one extinguisher whose readiness you can inspect at a glance. For the Nu-Ex Fire-Killer is the only extinguisher with indicators (gauges). And these can never lie.

But these patented features are not the only superior advantages of the Nu-Ex. For the Nu-Ex is simplest in operation, easiest of control, surest of aim.

Note These Important Features

Visible gauge tells quantity of contents.
Visible gauge tells quantity of air pressure.
Simplest action. Turn the valve, point the

nozzle—out goes the fire.

Requires no pumping (pumping destroys

Shoots a straight, steady stream 30 feet.

Easily refilled after being used on fire.

Light in weight; can be handled by a child.

No complicated parts to get out of order.

Maybe hung on wall or placed on floor, table, shelf. Not affected by age; years can't diminish its strength. Absolutely leak-proof.

Nuexolene liquid is fatal to fire, but harmless to all else.

The Nu-Ex Fire-Killer embodies a combination of simple scientific principles and modern ideas. Compare it with others. The Nu-Ex is completely guaranteed. Ask your dealer to demonstrate it to you or write us if he doesn't handle it.

Write for free book, "Banishing the Fire Peril." It tells all about fire prevention and the Nu-Ex Fire-Killer. Tomorrow may be too late. Fill in the coupon, mail it to us now.

NU-EX FIRE APPLIANCE CO. COLUMBUS, OHIO

PERSONAL GLIMPSES

"HELLO, CENTRAL!"

WITTY, if unveracious, gentleman once remarked that if you sat in a certain prominent New York hotel for half an hour, you would see half the famous personages in America pass through the corridor before your gaze. Which was perhaps merely an adroit advertisement for the Blank Hotel. But if you really desire to see humanity, not only personages, but the rank and file of all sorts of men, you have only, according to an observant writer in The Transmitter, to take your place beside the public-call switchboard in the railway station of any city. Within a short time more varieties of men and women will pass your ken than you can find in any five-foot shelf of "humaninterest" literature, and you will perhaps have learned many new details, and have a new insight into human ways, which was never yours previously. Here is the run of description of such a series of scenes, taken at the switchboard in a railway terminal of one American city. We read;

It is 10:10 a.m. when you drop into the corner of a big comfortable seat right in front of and about two yards from the telephone-operator. There's only one customer in sight and there's nothing exceptionally exciting about him; he might be anything from an insurance solicitor to a clerk in a grocery-store.

As he goes in one booth a young man steps out of another. This second chap is apparently much better fed. At any rate, he has a moon-face, the roundness of which is accentuated by an immense pair of tortoise-shell glasses. Somehow or other you feel sorry for him.

A train arrives and six or seven people come over and place calls. You are too far away to hear the numbers, but you take it for granted they are local calls, telling expectant friends and relatives of the arrival of the calling ones.

The make-up of the little group in front of the switchboard is constantly changing. One minute it consists of five business men (at least, you suppose they are business men), a woman, and a girl. A couple of minutes later the group consists of a gray-haired man and his wife, two college boys, a woman in black, and

an old gentleman with a cane.

A couple of young ladies add themselves to the group. If you weren't such an old-fashioned fellow, you would probably describe them by a word usually used in designating a certain kind of fowl. Anyway, you give them a casual up and down. Both wear circus shoes the tall girl green and the shorter sister white and black. The one with the red coat goes in the booth and comes out almost immediately. Then they both hurry away, out of your life forever.

You sigh and turn your attention from youth to age. A prosperous-looking lady who'll never see fifty again and who is all diked out in furs and an embroidered coat is giving a number. Beside her, but not with her, is another lady of about the same age, in plain black coat and no furs. The plain one turns the pages of the tele-

phone directory gingerly, one at a time, just as one does the pages of the family album.

After turning about ten pages, she borrows the operator's pencil and writes something, evidently an address, on a piece of
paper. She places this in her bag, returns
the pencil, and walks away. Pretty soon
a colored woman pilots an old lady in a
long black coat over to the operator.
They hold a whispered consultation and
the old lady passes on.

And next, the observer is treated to a poignant and impressing study in contrasts. A young woman swings by with a gay, youthful stride, bent perhaps on a shopping tour, perhaps only to meet the most wonderful man in the world outside the eandy-shop. She is just near enough to enable one to eateh the melody she is humming. We are sure it is the young man she is going to meet, for the tune is one of the latest barbarisms from a musical show, one of those things which go under the name of Hawaiian. And now for the contrast—in the words of the narrative:

A tall, rather angular woman seated on a bench near by, who reminds you of an unforgotten and unforgiven school-teacher, breaks down and sobs.

You are not sure whether it's the music or the weather that moves her, but you wish you could help her. While you are pondering on the Best way to do it without attracting too much attention to yourself, she manages to control her emotions.

About this time the operator notices you sitting there watching everybody who calls. She probably thinks you're some kind of inspector or perhaps a detective and gives you a cold stare. You don't mind that, however, and look her in the eye with your best I-guess-this-is-a-free-country expression.

A man in a hurry rushes in and slams his suitease down, lays his hat on the counter, and gives his number to the operator all at the same time. You speculate on how many suiteases have been slammed down on that identical spot since the telephone station has been there, and the answer you arrive at is one hundred thousand.

The gentleman in a hurry talks in a lend voice and with the booth-door open, but his talk is on presaic business subjects and you are not particularly interested. You'd lots rather the girl with the red coat had left the booth-door open—but that's something else again.

Still they come. A capable-looking young woman in sensible serge, a sporty-looking individual in checks, a harmless-looking kid of about eighteen who doesn't seem to know there's a shortage in dyes, and a priest who is evidently a stranger in town, for he carries a copy of the Philadelphia Ledger,

An elderly couple approach the counter and consult the directory together, overlooking the fact that one person can find numbers in a directory more quickly than two. He then escorts her to the door of the booth and stands guard while she talks.

A woman whose face is her protection pushes a mild-mannered man away from the directory he is consulting, and then asks him if he's through. He's for peace

Why Jones Bought An Indian Motocycle

SUNDAYS and holidays were long days for Jones. After he had read the papers, time hung heavily on his hands. His chief diversion was sitting on the front porch and watching happy, outdoor-loving boys, men, and elderly gentlemen spin down the road on Indian Powerpluses, Light Twins, and Bicycles.

A lot of machines went by—most of 'em red. Seemed like everybody rode Indians. Why shouldn't be be an Indian rider, top, and put in his Sundays and holidays as a real man should? Acting on the idea, Jones bought a 1917

Endian Motocycle With Powerplus Motor

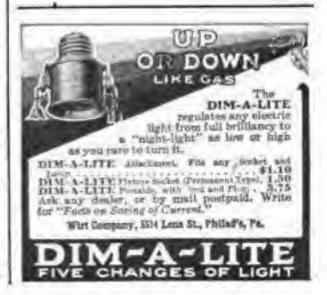

There's a 1917 Indian for everybody-young or old. For advanced motorcyclists, the Big Twin with Powerplus Motor with its matchless power, speed, cleanliness, quietness, comfort, stamina, and mechanical simplicity. For those desirous of modified speed and power, but Indian soundness of construction, the easily controlled Light Twin with Four Cycle Opposed Motor. For Hicycle enthusiasts, the Electrically Equipped Indian Bicycle with its Indian Motocycle streamline effect-and ten other 1917 model Bicy cles from \$26 to \$45. Take those short spins and long tours you've longed to take. Spend your spare hours outdoors, under the blue sky, in the health-giving, blood-making open. The Indian way is the quickest, most comfortable, surest, easiest, most economical, highest quality way. Over 16 consecutive years of engineering thought and initiative behind whatever Indian model you buy,

Send for 1917 Indian Catalog, specifying the model you're most interested in

THE STANDARD DICTIONARY is needed in every

The Fruits of Understanding

Throughout the vast area of this country prevails a common tongue. The whole of Europe hardly exceeds our territory, yet Europe has more than a score of nationalities and many different languages.

In the United States the telephone, as exemplified by Bell System, renders a matchless service in its mastery of distance and in encouraging the use of a universal language. This accomplishment is in spite of the great influx of population from every country in the world.

In Europe the independent countries, separated by barriers of language, and lacking efficient telephone service, suffer from inadequate facilities for intercommunication.

We now talk from the Atlantic Coast to the Pacific, and eliminate more than three thousand miles. In Europe, contending with a babel of voices and unrelated telephone systems, a bare quarter of that distance has been bridged with difficulty.

The ideal of the Bell System has been day by day to extend its service in the interest of all telephone users. Its efforts have resulted in providing the facilities to unite cities and rural districts in true American democracy.

at any price and says yes. Besides, there are other telephone directories.

If this modern Essay on Man continues, you have a mind to try the experiment to greater length. You depart now, after explaining to the operator who you are and what you are doing loafing around the switchboard. She will no longer eye you with suspicion on your next visit. The following day, if you saunter in and take the old seat again, you will see, perchance:

A gentleman who is quite bald is sitting in a chair outside the railing waiting, just waiting. From his subsequent conversation with the operator you learn that he has called the post-office in Bingville and the postmaster has sent across the road to get somebody to the telephone.

You conclude that the somebody must have been taking a bath when the summons came, or that the boy took a tarnation long time to cross that road, for the bald gentleman continues to wait. The operator keeps persistently on the trail of Bingville, but the only report she gets is, "They've sent across the road for the party."

At last they get him. "Bingville in No. 2," sings out the operator, and there is a note of triumph in her voice. The bald gentleman makes a dash for No. 2 booth as if he fears the party will have flown

before he can get there.

Just as you are wondering where in thunder is Bingville and why anybody could possibly want to talk with anybody in such an apparently dead town, in walks a tall, eadaverous individual with a face like a professional mourner and a stride like an undertaker. Not a word does he say—just parades over to the directory on the counter, turns a few pages, takes a look, and stalks majestically out. You are glad he is gone—he makes you think of lighted candles and the odor of lilies.

Then your Bingville man comes out of the booth and places a call for some other place of which you have never heard, and after a couple of minutes the operator tells him: "Can't get 'em; receiver is off the hook." Here's a pretty state of affairs—somebody's carelessness has put a whole line out of service, and of course all the subscribers on that line will lay the blame on the telephone company,

The ealler consults a slip of paper in his hands and says to the operator; "Well, try 4-11-44 Kioko, and that will be the last." While the operator is getting the connection, you engage him in coversation and learn that he is a salesman for flour and that he has just received a tip that the price of flour has heavenly aspirations and he is calling up his customers and giving them a chance to buy while the buying is good.

In the meantime, a middle-aged man, who might be described as slightly under the influence, sails in. He places a call for a bank in a town about forty miles away and asks that the charges be reversed. Word comes back that the distant party

declines to accept the charges.

The slightly influenced individual is apparently shocked and grieved. "Refused! Refused!" he mutters. "And I've got \$97 in that bank." He has all the indications of a man who has lost all of his friends and some of his relatives,

Valspar Makes Another Record!

It withstands 36 hours of live steam

UMAN ingenuity never devised a more severe and conclusive varnish test, but it all happened accidentally in the office of one of the largest public service corporations in New York City.

A cold snap came one Saturday. At noon orders were given to turn on the steam heat. This was complied with, but one little detail was overlooked-to close an open valve on a radiator.

So all through Saturday night, all day Sunday, and until business time on Monday morning, live steam filled the room.

When Monday morning arrived the doors had swelled so much that only with difficulty was an entrance forced.

A Scene of Wreckage

When the steam was finally turned off and the clerks entered the room, a scene of wreckage met their eyes.

The varnish on the doors and woodwork was literally boiled away. The wall-paper was hanging off in sheets. In fact, everything at first sight seemed utterly ruined.

One startling fact soon Became evident namely, that the furniture was absolutely unharmed.

An investigation developed that the reason for this phenomenon was, the desks and furniture had all been varnished with Valepar.

The Inspector's Letter

The Inspector of Equipment for this corporation wrote us an enthusiastic letter, from which we quote.

"The steam destroyed the paper on the walls, the varnish on the woodwork, and swelled the doors so that it was impossible upon. But the furniture, which was finished with Valspar, came through the 36 hours steaming without a spot, nor did it warp or swell in the slightest degree.

Most paint dealers carry Valspar. If you cannot get it, write direct to us.

VALENTINE & COMPANY

Copyright, 1917, by Valentine & Company

"I am having all of our special furniture, such as counters, tables, etc., finished with Val-spar, as I believe that this is absolutely the best varnish made."

This test demonstrates again that Valspar is absolutely waterproof. It won't turn white in water, and it is adapted for every varnish purpose in homes, offices and industrial buildings of all kinds,

Valepar, for example, is unequaled-

For your front door or piazza-rain and snow won't spot it.

For your front hall wet feet and dripping umbrellas can't harm it a bit.

For your kitchen and pantry-because scapy-water splashings do no damage, and you can wash it freely and sterilize places where your food is pre-

For all your furniture because Valspar is spot-proof and waterproof.

For all your floors because Valspar does not scratch white and you can wash it frequently.

For your bathroom—because it makes a finish as waterproof as tile and far less

Special Offer

Test Valspay in your home, in your own way, under the severest conditions you can devise. To make it easy, we will supply a sample can for 20c. in stamps, enough to make a real test. Fill in this coupon. Send

VALENTINE & COMPANY 462 Fourth Ave., N. Y.

Please send me 4-ounce can of Valspar, for which I enclose 20c, in stamps.

The Greatest Hotels and the Humblest Homes Use

Alabastine

The Most Beautiful Wall Tint

Builders of new homes and you who are redecorating your present homes, use the one wall tint that has demonstrated its superiority in millions of homes the world over, in 35 years' constant use—i. e., Alabastine.

Much of the beautiful in American home life is due to Alabas; tine—the most beautiful wall tint.

Much of the gorgeous decorations in the palatial hotels, magnificent libraries and clubs is due to Alabastine.

And much of the serenely quiet and restful in stately churches and sanitary hospitals is due to this same wonderful wall tint, viz., Alabastine.

There is no more universally used wall decoration than Alabastine—millions of painters and decorators and houseowners apply it every year—its soft, velvety colors make it supremely valuable for new homes and old—great churches, hotels and schools.

Alabastine

The Most Beautiful Wall Tint

Next to its wonderful quality is its ease of preparation and application.

A five-pound package of Alabastine is mixed with two quarts of cold water, stir it for a minute and Alabastine is ready to apply. Any individual or new shade or tint can be produced by combining tints of Alabastine.

With reasonable care on the right surface (we will tell you how to get that, painters and house-holders), Alabastine can be applied with an ordinary wall brush.

The ease of its preparation and its application is another cause of its immense popularity.

Mixed in One Minute with cold water. Ready to apply immediately.

Look for the red cross and circle on the purhaps of Alahastane you buy. Alahastine is sold by most druggests, hardware and paint stores energichere.

THE REPORT OF THE PROPERTY OF

and as he sadly makes his way out you feel that the bank is probably the best place for that \$97.

A couple of days later you have occasion to take a little trip by rail, and while you're waiting for the train you hang around the telephone-booth and watch the people come and go.

Just as you arrive at the little railing which surrounds the switchboard and operator, a colored man, dark brown, conspicuous in a boiled shirt and a natty little bow tie, steps out of one of the booths. "Big night to-night," you think, as the dark Adonis passes down the waiting-room.

The next in line is a thin man, who doesn't look any too healthy. You are not surprized when you hear him eall up a doctor. Then comes along a subdued-looking man who looks as the he might be some woman's husband. He leaves the door open while he talks and you hear him tell somebody that he has "waited for two trains." Now you are quite sure that he is some woman's husband.

The next woman leaves the door of the booth open, and "Oh, you'll know me all right—I'm all in black" floats out. Then you hear the porter calling out the places where your train stops, and with a "See you some more" to the operator, you make tracks for the train.

FAMOUS BY ACCIDENT

WHEN a man has made his position in the world as a great writer, he is too often inclined to frame a series of rules for struggling aspirants, beginning with, "Practise long hours daily; write, write, write." He says nothing about that refuge and excuse of all failures (just as it is the credit of many successes)—chance, or luck, Yet, remarks the New York Sun, there are few professions into which luck enters more strongly.

It recalls from the early literary days of America how one man leapt into fame. A publication in a scaboard city held a short-story contest, and on the day that the judges assembled to select the winner, they found to their dismay that there were thousands of manuscripts entered, piled high on the table before them. It is recounted how one impatient gentleman plunged a hand into the mass, drew forth a manuscript, saying, "Let's give this the prize and go to lunch!" The manuscript was awarded the prize and published. It was "Manuscript Found in a Bottle," by an obscure young man named Edgar Allan Poe. Apart from this instance, The Sun states a number of others where fate laid a wreath upon an author's brow. We are told:

An interesting phase of those who belong to our so-called literary world of the past and present generation is that few of them started in life with the thought of becoming professional writers. They were trained for other professions or business careers, and it was by chance that they discovered their abilities to write a readable tale.

There are those, too, who fairly blundered into literature and awoke to find themselves famous overnight. A striking

"Complete Satisfaction"

"Now that our factory in Hartford has been completed, I wish, in behalf of the S. K. F. Ball Bearing Company, to express complete satisfaction and appreciation of the excellent and thorough manner in which the Stone & Webster Engineering Corporation has carried out this work." Secretary and Treasurer.

Our business as designing and constructing engineers is to put your building development on an income earning basis in the shortest possible time consistent with correct design and substantial construction.

Before you build send for "Building Construction," en illustrated book showing some types of buildings erected by Stone & Webster Engineering Corporation.

The refrigerating qualities of the WHITE MOUNTAIN cannot be surpassed. The famous MAINE Duplez Ice Grate insures a continuous circulation of Pure, Cold, Dry Air. The greatest Ice Saver known. The greatest Food Preserver made. Send for our beautiful catalogues and booklets

SAVED FROM 1

Our new car caught fire on a deserted road. 500 miles from home. 20 miles from a garage. The night was black.

I grabbed Pyrene and had the fire out in 30 seconds.

What a plight we'd have been in without Pyrene! A new \$2000 car reduced to scrap iron. Our baggage, burned. Our tour spoiled. Our lives endangered.

Forced to walk miles on a dark lonely road.

Anyone takes a big risk who drives a car without Pyrene.

Saves 15 per cent on auto insurance cost.

Saves money as well as life.

Pyrene Manufacturing Co. New York

RE CALAMITY!

Fire may invade your home, any hour of day or night. Burn the happy nest to the ground. Destroy, plunder and kill.

The risk is terrible. The man who puts off getting Pyrene for his home, even for a day, invites calamity.

The woman who lets her busy husband forget to buyPyrene shares with him an awful responsibility.

The best protection is several Pyrenes. One in the upstairs hall to protect the family while sleeping.

One in the kitchen. One in the basement near the furnace.

\$8.00, bracket included. Sold by hardware and automobile accessory dealers everywhere.

> Every Appliance for Fire Protection

Proved Best by U. S. Tests

After the most rigid tests McCray Refrigerators were selected for use in the U. S. Pure Food Testing Laboratories at Washington.

In selecting a refrigerator for your own use, you can safely be guided by the judgment of the U. S. refrigeration experts.

Sanitary Refrigerators

The McCray System insures a constant circulation of cold, dry, purified air through every food compartment, which refrigerates perfectly. Germs, bacteria and microbes cannot live in this cold, dry, constantly circulating air.

The interior lining is of snowwhite, opal glass - stain and acid proof spotlessly clean and sanitary. There are no cracks, crevices or hard to get at' corners. The sanitary metal bar shelves are removable and the whole interior can easily be kept sweet and clean.

instance of this was Edward Eggleston, a successful novelist of a generation ago, who figuratively fell down the stairs into an income of \$10,000 a year, 'Giving up the life of a Western circuit-rider, he came to New York to become the editor of Hearth and Home. A regular writer of that periodical failed on one occasion to forward a story, and Mr. Eggleston volunteered to "fill in." He wrote his experiences as a wandering Methodist minister in Indiana. The story struck a popular chord and his readers wanted more. To supply the demand, he wrote "The Circuit-rider," "The Hoosier Schoolmaster," and other popular stories that are still on the book-shelves.

Marion Crawford owed his success to a chance remark of an uncle. Returning from India down-hearted and discouraged over the failure of his efforts to establish a newspaper there, his uncle asked why he didn't write his adventures in the East. "Mr. Isaacs" was the result, which was followed by a long list of popular books.

Even Bret Harte's first success could be attributed to chance. He was editor of The Overland Monthly, and, like Mr. Eggleston, filled in for a delinquent contributor. His story was "The Luck of Roaring Camp."

The success of the beloved Frank Stockton, on the other hand, was the result of painstaking effort and hard work. He was a wood-engraver and illustrated stories written by his wife, and it required a long struggle before he got his charming stories before the public. So was Elizabeth Stuart Phelps's efforts in producing "Clates Ajar." It took her two years to write the story and two more years to find a publisher.

Joel Chandler Harris, of "Uncle Remus" fame, said it was purely an accident that he became a writer. Born and reared in the South, he had heard from plantation "uncles" and "aunties" the myths and stories he later made such good use of, He became aware of the value of the material he had unconsciously absorbed only when he read an article in the old Lippincott's on negro folk-lore,

The same element of chance holds good with our present-day writers, and practically all of them have been diverted from the paths of their chosen life-work. It was never intended, for instance, by those who had them in charge when they were youngsters that Thomas Nelson Page or John Kendrick Bangs should write novels or humorous stuff. They had been trained for the law and the Supreme Court was their natural goal. Neither was it intended that Richard Washburn Child, James Hopper, John Luther Long, or Owen Wister should be novelists. Some sort of a Federal judgeship was the least expected of them, as they also were intended for the law. Arthur Train was a former assistant district attorney in New York City.

The world of art may possibly have lost a modern Michelangelo in Robert The novel - reading world, Chambers. however, gained an interesting storyteller when he gave up his art-studies after several years in Paris. Maria Thompson Daviess was also imbued with the ambition to become a painter at one

Jack London, before he reached the goal of one of the most popular writers of the day, combined the efforts of half a dozen men in various kinds of work,

ranging all the way from a tramp to a sea - captain. Mary Roberts Rinehart was to be a nurse and gained her intimate knowledge of hospital work in the Pittsburg School for Nurses. Louise Closser Hale had histrionic aspirations, and her familiarity with stage-life is due to the fact that she was an actress before she became a writer.

It was the wish of James Huneker's parents that he should become a priest and he was educated for one, but instead he became a teacher of the piano and was for ten years connected with the National Conservatory of Music of New York. Margaret Cameron imagined she would devote her life to music before she began

to write.

It is not necessarily surprizing, but of every given profession former or present school-teachers predominate among the popular writers of to-day. Among those who have deserted their former work for the more congenial and profitable work of writing are James Lane Allen, who was a public school-teacher and later a professor of Latin in a small college. Parker Fillmore was a Government teacher in the Philippines. Frances Hodgson Burnett was a country school-teacher on a small salary when she began writing stories, and rumor has it that the stamps with which her first contributions were sent away were bought with money obtained from picking berries. She found a timely and valued friend in Charles J. Peterson, of Philadelphia, who paid her liberally for her writing and gave her a chance to get before the public.

Alice Hegan Rice was a teacher in the public schools in Louisville, Ky., when she came into fortune and fame overnight through "Mrs. Wiggs of the Cabbage Patch." Kate Douglas Wiggin spent several years trying to establish the first kindergarten school on the Pacific coast before she began to write her charming stories. Eleanor Hoyt Brainerd spent several years as a teacher in the Cincinnati Wesleyan College and later taught in a New York school for girls before she thought of "Belinda." Alice Brown was a country school-teacher, and Katherine Fullerton Gerould taught in Bryn Mawr, while Eleanor Hallowell Abbott was a member of the faculty of the South

Framingham Normal School.

And then, again, there was Miss Maude Radford Warren, the short-story writer, She was teaching, according to the account, in Chicago University, and while down-town, happened to lose her purse. With only twenty-five cents in her possession, and a hunger entirely out of proportion to it, she essayed one of the shabby little restaurants near by, in order to get a meal, and still have car-fare home. She found a very different crowd there from the one that she had seen in the places where she usually ate. It was not the growd of the great hotel, nor of the University dining clubs, but a mass of men far different. She came home thoughtful, and the result was her first story, appearing in The Saturday Evening Post, "The Wearing of the Green." Furthermore, we learn:

William Dean Howells is the dean of newspaper men who have given up the

Coal Chutes

Garbage Receivers-Package Receivers

Make your home really well equipped with these modern building specialties. Designed to protect the good looks of your home and grounds from the careless coal man—to provide for the most sanitary method of garbage disposal and for the safest and cleanest delivery of milk and packages.

Majestic Building Specialties

Majestic Coal Chute keeps your house, lawns and grounds clean, because every piece of coal falls into the hin. The door locks open automatically, protecting the building above the opening, just where the damage always occurs. When closed it is an excellent window for the basement. Absolutely burglar-proof. Easily installed in old buildings or built into new ones.

Majestic Underground Garbage Receiver protects the health of your family because it keeps your garbage boried. Sanitary, emits no odors and keeps the contents safe from dogs, vermin and flies. Always convenient, never unsightly.

Majestic Package Receiver is placed in the kitchen wall for receiving milk bottles and packages from the outside, insuring them against their and keeping them clean and in sanitary condition.

TOOK back over American history and see how in every generation—from the → Pilgrim Fathers at Plymouth Rock down to your own grandfather and father—the American boy has been trained to handle a gun and shoot straight.

It's a natural instinct in every American boy, inherited from many generations of hardy, keeneyed ancestors, to want a gun-to know how to use it properly and to excel in marksmanship.

Every boy should have this training—with the best and safest gun made for boys, the Daisy Air Rifle. Millions of American men learned their first lessons in concentration, self-control and love of manly, out-door sport from the Daisy. For over 27 years it has been recognized as the favorite rifle of the American boy, and today, in its latest models, keeps pace with the highest art and science of modern rifle design,

The Daisy Pump Gun, in the hands of the upper boy in the picture, is a 50-shot repeater, with the same modern pump action found in the highest type of modern sporting rifle.

The Military Daisy, also a 50-shot repeater, follows the latest military lines, with carrying strap and removable bayonet.

Both guns are finished in blued steel, with turned walnut stock, and sell at all dealers for -

50c to \$2.50 Other Daisy Models,

If your dealer cannot supply you, any Daisy model will be sent direct from factory on receipt of price. Send for descriptive circular.

hurly-burly of their youthful days and gone in for the quieter life and more lucrative form of writing. Mr. Howells's first effort outside of his editorial writing on a small Ohio daily newspaper was a campaign life of Lincoln, and so well did he perform his task that the great President sent him to Venice as consul. Walter Prichard Eaton began as a reporter on the Boston Journal, and then came to New York and did dramatic work for The Sun and The Times. George Randolph Chester did his first writing as a reporter on the Detroit News, Samuel Hopkins Adams on The Sun, and Julian Street worked as a reporter on the New York Ecening Mail. Zona Gale did newspaper work in Milwankee and Eleanor Gates in San Franrisco. Elizabeth Jordan and Olivia Howard Dunbar were on the staff of the New York World, and Fannie Heaslip Lea was. until recently, a newspaper reporter.

Albert Bigelow Paine edited a department of St. Nicholas for ten years before he came out in the open, and Arthur Stanwood Pier before he arrived was for years an assistant editor of Youth's Companion. Juliet Wilbor Tompkins was for several years an associate editor of

Munsey's.

Owen Johnson dabbled in magazine work before his Yale stories came out. Josephine Dodge Daskam edited her class paper at Smith College, and began her magazine work soon after graduation. The lamented Jean Webster wrote extensively for newspapers before she left Vassar, but had hardly started on her promising career when death overtook her.

AMERICA'S VEST-POCKET ATHENS

T is an ancient saying that New York contains "more germs than Germany, more parasites than Paris, and more dubs than Dublin"; but all America. can not boast more Greeks than Athens. Athens has 160,000, America has 100,000. The Transcript, of Boston, a city sometimes called the Athens of America, brings the news that the neighboring town of Lowell has more than 10,000 of them. If Boston can not show an equal number, then the presence of so many of the real Hellenes in a neighboring city may prove a strong argument for crowning a new locality. Lowell's Greek population is estimated by the Hellenie paper of that city, the Ereena, and in further exposition of those claims, the Boston paper remarks:

Passing over the fact that comparatively few of our Hellenic residents may be described as Athenians in the literal sense being very largely Peloponnesians or from Saloniki and the north—the designation is not on the whole inappropriate. The scenes are such as one might find in the 'Odos 'Ermou, or in Syntagma or Omonia square. There is a free-andeasiness in some of the byways that would recall the chaste seclusion of the "Street of the Red Shoes"-as tourists term it-under the shadow of the Aeropohs. One misses the persistent hammering of the Street of the Coppersmiths, and no festoons of red slippers hang from the door-posts; but the coffee-houses are there in full blast, and dominoes click, the cry of "the kaphethes" is heard in the land, and

WHEN you buy a pair of shoes, turn them over and see what kind of soles they have. If the soles are Rinex, have the salesman wrap them up—you've got your money's worth.

Rinex is the wonderful new shoe-sole material. It is neither leather nor rubber, but a material which combines the advantages of both.

It is more durable and uniform than leather and as light in weight; it is as flexible as rubber—and waterproof.

Rinex was invented and perfected in the great laboratories of the world's greatest rubber company. Unlike leather, it comes in just one quality—the highest possible.

So, whether you pay \$4 for shoes, or \$8, the word "Rinex" on the sole guarantees that you are getting the best sole-material ever devised by man.

Rinex Soles are also being put on by the best shoerepairmen. Ask for them when you need new soles and see how much longer they last than leather and how much more comfortable they are.

the occasional trickle of melody from a tibble, or other rudimentary instrument, may be detected—not to say a quavering chorus of that indescribable kind one associates with the lilting Greek.

Seek a cool cellar and you will find stalwart Hellenes stirring great kettles of sirup destined soon to flower forth as "loukoumi," or spreading thin layers of pastry and honey to be vended as "baklard." "Khaled" you may buy as readily in Lowell as in Crete. The ruddy eggs of Eastertide know their season. your head behold the sign "Xenodocheion phageton kai ton hypnon" (Hotel of the to-eat and to-sleep), offering refreshment to wayfaring man-if you care to sample it. Ginearti and pilaft are not unknown. No lambs are roasted whole in curbstone ovens, but the appetite for them is doubtless there. The Greek community is largely sufficient unto itself, providing the things that are requisite and necessary as well for the body as for the soul.

Political activity is as much in evidence there as in Athens, too, we understand, and that, in the arget of the cultivated Boston periodical, is "going some." For, we learn:

An election is the breath of life to the local Hellene, with the advantage that it usually carries with it an aftermath of recounts and contests sufficient to satisfy the most fastidious. You will not hear English spoken in ten blocks-and scarcely ever will you see an English sign. Ten to one, Themistocles would find himself more at home there than would the Listener, or the Nomad. The kappheneion, the oinepooleron, the typographeion, the katastimata would be no mystery to him. Give us an Aeropolis with a ruined temple or two, a university, and an art museum simulating the classical in outward show, and mayhap a Houlé, wherein to hold volubly acidulous debate, and Lowell will make a fair modern Athens indeed.

The Greek keeps pretty much to himself. He emerges to engage in gainful toil—in the mills, perhaps, or as a vender of fruit, or an embellisher of shoes in quarters other than his own. But that done he retires at nightfall, either to his own colony, or to his little suburban farm, and becomes for a few hours once more a Greek, untouched by the changed conditions around him, chattering gaily in his wonted language-which untutored persons still refer to as "dead"-singing, dancing, sipping coffee and mastika, and sleeping in joyous juxtaposition with his entire family quite as at home. He prints his own newspapers, embellished with advertisements which he has some difficulty to spell-because his alphabet doesn't always fit. "Sodaphountain," "O'Soliban," "Khaiou"-this last you might not know was "Howe" unless you were toldwill serve as samples. How he gets around "Lowell" I don't remember—but probably he makes it "Louell," not having been blessed by the Almighty with any "w" in his font; for he persists in regarding the lower-case "w" as an "omega" and gives it that sound. Altogether he is a hospitable, a thrifty, yet a generous, soul. He puts his money in a bank-which he refers to as a "trapeze" to give his classic word its more familiar American form. When there is enough of it, he sends it home as a marriage portion for his sistersor else he goes back himself, only to weary of the homeland and return.

A National Movement for Schoolroom Cheerfulness

Compare the schoolroom of today with that of twenty years ago.

Note the privileges that the school children have which their parents in their school days never dreamed of having. Observe the improved sanitary conditions, lighting, housing, the difference in the textbooks and in every mode of teaching.

Here you have the evidence of this great national movement for schoolroom cheerfulness in which educators, school authorities, women's clubs and civic leagues and societies of every kind have joined.

Beaver Greenboard is a distinct contribution to this national movement for school cheerfulness. For Beaver Greenboard is green—a rich restful tone with splendid color value. No one thing can transform the schoolroom so quickly and so utterly as the introduction of this pleasant, attractive color into the schoolroom.

The advantage of green over black, from the standpoint of color, cannot be challenged. For the purpose of contrast with white or colored crayon it is equally effective. The restful effect on the eyes of teacher and pupils can be readily appreciated. The remaining questions as to durability and quality of writing surface are easily disposed of by demonstration.

Beaver Greenboard and Beaver Blackboard are produced by The Beaver Board Companies, originators of pure wood fibre wallboard. Here are the only composition blackboards which are built up throughout (base as well as surface) by a single manufacturer. Building a blackboard is no simple task. Permanency and durability are only secured through exact workmanship and painstaking care. Beaver Greenboard and Beaver Blackboard have behind them the same high standards of manufacture as the well-known Beaver Board. They are sold under a broad guarantee with the understanding that they will not crack, warp nor peel, will not become shiny with use and will provide continuously a satisfactory writing surface.

Beaver Greenboard and Beaver Blackboard have many advantages over slate, saide from that of price. With the high prices of slate, to say nothing of the much greater cost of freight and application, they become the logical blackboards for schoolroom use. Easily applied and (in case of temporary buildings) easily removed. Specially processed to prevent warping. Can be cleaned and kept in good condition as easily as slate.

Simply write your name and address at the bottom of this advertisement and send to the address below. Sample and literature will be sent you.

THE BRAINS OF THE NAVY

I E is a man of about sixty-two, and since he was seventeen years old he has been at work on one task-to have the American Navy ready for war. His name is William S. Benson. He is the ranking Admiral of the Navy, with the title of "Chief of Operations," a position which corresponds with that of the First Lord of the Admiralty. If the United States should go to war it would be his task to direct the naval campaign, to see that every ship from the super-dreadnought Arizona to the smallest converted launch of the "Mosquito fleet" was in its proper place. He would be the brains of the Navy, and if we may trust those who know him his plans for any eventuality are already laid.

Forty-five years ago, says the Kansas City Star,

Admiral Benson was appointed to the Naval Academy as a midshipman from Georgia. He was one of the first Southerners to enter the institution following the end of the Civil War. His first duty affect was as a junior officer of the old Hartford, then the flag-ship of the South Atlantic fleet. He was with the Hartford two years. Then he was transferred to the Essex of the same fleet. When he was detached from that ship and ordered home he already was considered an officer of great executive ability and unusual judgment.

For six months Benson was on duty at the Brooklyn Navy-Yard. He soon was ordered to sea a second time, and was on board the Yastic when that ship made its historic expedition for the relief of Major-General Adolphus Washington Greely, the polar-region explorer. On the return of the relief expedition Benson, then a captain, was again given shoreleave and assigned to duty under what was then known as the Navy Advisory Board.

Later he was ordered to the Naval Academy as an instructor. Subsequently, he served in the Washington Navy-Yard, with 'the Coast Survey, on several ships, and again at Annapolis as commandant of midshipmen. His most recent sea service was as captain of the super-dreadnought Utah and, temporarily, as the commander of the first division of the Atlantic fleet. He knows the war-ship game from top to bottom. During the '80's he inspected the material for the construction of the first modern fighting vessels, and has had a hand in the building of our Navy of to-day and the training of the men who man it.

He undertook his present responsibilities in the spring of 1915, when Congress established the office of "Chief of Operations." Admiral Benson's position is that of Chief of Staff for the Navy. He is entrusted with the operation of the fleet, and the preparation of plans for use in war. It is his duty to see and care for the needs of the service as a whole. Since his appointment in 1915 the Naval War College, the intelligence office, aeronauties, mining operations, and all tactical matters have been brought under his control. Admiral Benson was able to improve each of these without having the development of one interfere with that of another, and

A Heavy Machine-Shop in 30 Days

AUSTIN Standard No. 2, shown above and below, is one of three distinct types that you can occupy in 30 working-days after you place the order. It is admirably suited to heavy machine shop, foundry or erecting-shop uses. Daylight and ventilation are excellent.

As usually constructed, this building is 90 feet wide, with three 10-foot aisles; but because the I-beams are carried in stock uncut, the aisle-width may be less. The length may be any multiple of 20 feet. The building is a substantial structure which is giving satisfaction to many users.

Austin Standard Factory-Buildings include nine distinct types suited to many widely varying uses, and susceptible of many combinations. Austin service also includes the design, construction and equipment of individual buildings and complete plants. Write, phone or wire for particulars.

When you overhaul

in consequence Congress authorized him last year to issue orders within his jurisdiction in the name of the Secretary of the Navy. He is the "boss" of the Stars and Stripes affoat. The Star goes on:

In the bare room in the State, War, and Navy Building, at Washington, in an office just large enough to accommodate a flat-top desk and a few chairs, Admiral Benson works far into the night after his helpers have gone home. He undoubtedly already has taken to the Secretary of War the plans this nation will follow should Germany force us into war. Any plans followed would be submitted by Benson to the Secretary of War, who in turn would earry them to the President for his approval.

And when the day comes, if it does, Benson will give the word which will strip 40,000 men into fighting trim and set the machinery of our war-dogs to grinding. All the naval material resources of the country will be under his direction—naval reserves. yachts, power - boats, provision - houses, supply-houses, fighting vessels, munitionsmakers, tax-payers, banking-houses, inventors, laborers, and marines.

Is he the man to handle the job? Said a brother officer and former shipmate of Admiral Benson:

No matter what his personal feeling for me might be, there is no officer in the Navy whom I would fear more if I were on trial for an offense of which I was guilty, for nothing would make him swerve from what he conceived to be his duty."

MR. BRAND AND A "WAR OF RACES"

*ONSIDERABLE interest and more or C less criticism were aroused recently by an editorial written by Mr. Horace L. Brand in his Illinois Stuats-Zeitung in which he mentioned the possibility of a "war of races" in the United States. The editorial ran as follows:

Have the people of this country changed from a peace-loving nation to a belligerent

We do not think the people have altered their views. They do not want to be dragged into the European War. They do not want situations created from which war would be the only honorable escape. They do not want the President to decide the question of peace or war, for THAT is the prerogative of Congress.

Has President Wilson changed his views? We do not think that he has.

President Wilson is earnestly desirous of keeping this country at peace with all the world.

It can not be doubted that an overwhelming majority of our people stand behind the President in his efforts to keep this country at peace with all the world.

Perhaps a majority even approve of his efforts to end the European War,

But it is very doubtful, indeed, that a ma jority will indorse giving the German Ambassador his passports at the present time.

We will not now argue for Germany's cause or actions.

Let us consider America first, last, and all the time.

First - America's historic policy is opposed to entangling alliances. Americahas not approved a change in policy. The Senate of the United States refused to discuss the plan to change our timebonored course. In harmony with THAT

How Can Anyone Get Clean In Dirty Water?

American Bathing Habits Being Reformed

YOU and I and Mr. and Mrs. Everybody-Else would throw up our hands in holy horror at the idea of starting a bath in dirty water.

But finishing in dirty water is every bit as bad.

Yet that is exactly what happens every time you take a bath the old way-by filling a tub.

It means finishing in the same water you start with-water filled with impurities washed out of the pores; at least that's the case unless you take the trouble to empty the tub and do the job over again.

Proof of that is the film or scum of impurities which collects on top of the water after such a bath-no matter how often one bathes.

No wonder so many doctors are condemning the old way. And no wonder thinking people everywhere are turning to the modern and better way.

The Modern Way-Running Water

The time is fast coming when we'll hardly ever hear anyone speak of a bath.

Instead everybody will insist on a thesoer running water-a constant rinning process every drop from the first to the last absolutely fresh and clean. It's the great big step ahead in mindern hygiene.

Only \$7.50 to \$25

No excuse now for anyone sticking to the out-of-date way. No longer any big expense.

\$7.50 to \$25 for a Kenney Shower turns any bath tub into the equivalent of the finest builtin shower ever installed in any millionaire's

Four fine models to choose from. All handsome, substantial, all-metal fixtures that attach direct to the tub-an interchangeable connection for every style of faucet.

Shower turns on or off at a touch. Doesn't interfere with filling tub direct from fancet.

In every way a revolutionary improvement. The loss prices are simply due to ammortisnothing but employation has call the condown-

FITS ANY TUB

A Connection for Every Style of Fauser The \$7.50 and \$15 models are both very easily attached no tools needed nothing but your fingers. The other two models require a prombet.

policy, it is the duty of our Government to keep us out of the European holocaust. Millions of Americans are bound by bloodties to Europeans who are fighting. Were America to engage in the war on either side, the hearts of millions would be saddened by the knowledge that they must wage war against their kin.

The war of races would break out in our midst, passion aroused, and hatred engendered; internecine warfare would result, unless the causes that led to our entering the European War were so shocking, aggravated, and often repeated, that all peaceful procedure became futile, and THEN ONLY would the Government have a united nation supporting a war-policy.

We are a prosperous nation and a contented people at present.

The best interests of America lie in industries of peace. We are a rich nation. In years of peace we have grown strong and self-reliant. War would change all that. In this article it is needless to describe the

horrors of war; its economic waste; its far-reaching consequences.

Lastly, we are a just people. The United States never waged a war unless justice sanctioned. "Peace or war, as our interest, Guided by Justice, shall counsel," is the advice of the father of our country, George Washington. Let justice rule the decisions of our President and of our Congress. When JUSTICE demands it, America is prepared and willing to wage war with the support of a united nation.

"First, last, and all the time," America will jealously guard the lives of her people and her interests with justice dictating

her decisions.

A few days later Mr. Brand issued the following in a letter to the Chicago Tribune:

In the first place I want to say that I was born and raised in Chicago. It is therefore unnatural and impossible for me to have loyalty for any country except the United States of North America. I am accused of predicting or threatening a race-war if war breaks out between the United States and Germany. entirely false. I never predicted nor threatened a race-war. In fact, it is not my nature to threaten any way. Moreover, to make a threat one must have something with which to back it up. I have nothing with which to back up a threat that a race-war would break out in the United States. It would have been foolish to have made a threat, consequently I did not make any. Nor did I make a prediction. I exprest the fear that a racewar would break out unless the United States exhausted all peaceable means before entering into a war. It seems to me that it is very important to remember that my statement was not unqualified, but was decidedly a qualified statement.

Considering that the United States is a melting-pot of many nationalities, does it seem unreasonable to fear that trouble will break out among these many nationalities somewhere in case the United States gets into the European War without provocation having been sufficient to make the millions of citizens believe that all peaceful procedures have proven futile and that therefore the United States was forced into a war?

The above is the thought exprest in my editorial last Sunday.

Nowhere in my editorial did I mention German-Americans. In fact, the assump-

Quality slips the "unlimited" sign on P. A. smokes!

You know that's right on the hop-skip-jump! For, you can open up on Prince Albert tobacco like you hold five aces; and, smoke lick-a-tee-split without intermission! And, you close the session with your tongue right side up; with your taste-apparatus turned to new high-spot-delights, and, your Department of Satisfaction bubbling over with smokesunshine!

Prince Albert sure is the joyjenerator because it has the quality that can pass out such tobacco happiness! P. A. is made to do that; made to give men more tobacco enjoyment than they ever dreamed could be theirs; made to let all men smoke all they want without bite or parch or any kind of a comeback because bite and parch are cut out by our exclusive patented process!

PRINCE

VCE national A

ALBERT

puts such a spanking-keen-edge on your smokespecific that you are glad when the next fire up time comes, and, you have a lot of fun all-around-the-clock; and, you pal-it-up-with-P.A. like you were born and raised in the same little old house! For, your tobacco troubles take-to-the-tall-timbers when you adopt Prince Albert, which meets the favor of smokers of every civilized nation; men of all tastes and all walks of lite!

It is the universal tobacco—the quality-taste-satisfaction attandard! Slip a new cog in your wheel-of-content! Let Prince Albert's friendly flavor and fragrance and coolness blow into your smoke-spirit. Coupons or premiums have never been given as an inducement to smoke Prince Albert. We prefer to offer smokers quality!

Prince Albert is to be had sverywhere tobacco is sold.

Toans red buys, Sc; tidy red tins, 10c; hundsome pound and half-pound tin humidars—and—that elever, practical crystal-glass humidar with spange-maistaner to that heres the tubusca in such perfect condition.

tion that I was referring particularly to any one group of foreign-born citizens is a misstatement and any unprejudiced reader of my editorial last Sunday must concede

the truth of this assertion.

My papers have consistently fought for fair play for Germany and the cause of her allies. There are always two sides to every question. In order to arrive at a just decision the American people should know both sides to the European question. The whole truth concerning both groups of belligerents and their tacties should be known by our people if the historic fairness of Amerlea is to be maintained in its decision.

I am not upholding Germany against the United States. I never did so. Nor did my papers ever uphold Germany's cause against the best interests of the United States. Any assertions to that effect are based upon misunderstanding or

are wilfully false.

But when the discussion is as to whether Germany's cause or Great Britain's cause is the most just and right, then I am permitted to have the opinion that Germany's cause is more to the interest of the United States than is Great Britain's cause. If I am wrong in that contention then I have nevertheless done my country a good service by bringing to public notice the reasons why I think I am right.

LASSOING SUBMARINES

T'S too bad the Irish aren't sailors, for if the trawlers, the scaplanes, and the destroyers engaged in snaring the U-bouts were manned by the greatest conversationalists of the United Kingdom, America might learn how successful the submarine eampaign really is or isn't. For when the Celt has done something exciting and dangerous, such as bombing a submarine, he likes to share the excitement with his friends, while the Scot thinks that a brave action loses all merit if any one knows about it. And it is the dour Scotch-assisted by all races, but still primarily the Scotchwho are fighting the German submarine,

Officially, not a submarine has been The Admiralty announces from time to time that the "campaign against the U-boat is satisfactory," but it never tells how many have been sunk or eaptured, nor gives the name or the number of the boat eaught. There have been persistent rumors, for example, that the Deutschland has been captured, but who knows for certain whether she is in Kiel Harbor, chained in Portsmouth, or rusting in Davy Jones's locker" The Admiralty is as dumb as the Scotch.

It may be that Berlin has taken advantage of this retievnee to make the submarine campaign appear more effective than it is. The German Vice-Admiral, von Capelle, said lately in a speech affirming that the unrestricted submarine war had exceeded the most rosy expectations:

Altho a number of submarines, because of their large radius of action and their instructions, have not yet returned to their bases, I can already assure the committee that the results achieved have surpassed the expectations entertained by the Navy. It is very satisfactory that there is no reason to reekon with the loss of even one U-hoat since the beginning of the unrestricted submarine war. The defensive measures, about which such a fuss has been made by the British press and Parliament, have remained within normal limits, according to the reports of the L'-boats which have returned.

In fact, the Germans assert that the submarine is a weapon against which no defense is possible. With its aid they expect to stop importations of food and transfers of men into France, and force the French to conduct the war on the Western front unaided. As for England's antisubmarine campaign, Berlin reports in the New York Times.

Neutrals who have lately visited England say that over there all is confusion, and that it is an open secret that the Admiralty has no plan to meet the new danger. They say that notices have been posted in all the Government shops promising a rich reward for any invention likely to help ward off the U-boat danger. The English Covernment is said to look to a mysterious invention by Edison for salvation.

Submarine creas returning from the seems of operations are said to be exceedingly enthusiastic, asserting that new methods have at last given them a fair chance in their perilous "trade," as the English call this most dangerous of all forms of sea-fighting. Formerly a t-boat, if she was lucky, might find one victim among six or eight ships, the rest being inviolable according to the restrictions ruling "trade," I have heard of cases in which a submarine could not find one victim among thirty or more ships passing it successively. Now the gaon is worth

And now for a flat denial. England has chosen Alfred Noves to talk for the Scotch, and he remarks in the New York Tribune that, far from being able to intercept traffic in the Straits of Dover,

I am confident that it is because the Admiralty has driven the submarines from the home waters that Germany announced her intention to create a wider zone. We have 4,000 private yachts, whalers, and fishing-vessels, and 60,000 men in the antisubmarine fleet.

Every heat is armed with guns throwing 12- or 14-pound explosive shells, and has 1,000 yards of steel netting trailing behind. We have destroyed 200 submarines. All the home waters are mapped out to blocks and every block patrolled.

Four thousand ships and sixty thousand men! Nor is this all, for these figures include only the so-called patrol or trawler fleet gathered to proteet the English Channel and the waters around the British Isles. In addition to this, large fleets of mine-layers place mines in the entrances of German harbors, while the submarines are away, and prevent them from returning, There are numerous esquadrilles of zeroplanes, manned by the French; the constabulary constantly search the shores of the British Isles to ferret out the concealed submarine bases, and lately, at least, the

THE BATAVIA RUBBER CO. Factory at Batavia, New York

One man wondered if you had to use a cylinder for every letter you dictate. Certainly not-you start dictating on a fresh Dictaphone cylinder and dictate anywhere up to a dozen or fifteen letters, or whatever you wish, until the cylinder is full.

Then, after your typist transcribes the dictated matter, the cylinder is shaved, and it is all ready for more dictation. And you repeat this operation anywhere up to a hundred times. If you only dictate even twelve letters to a cylinderlength, a single cylinder holds 1200 letters. That makes the cost of Dictaphone cylinders less than the cost of stenographers' note-books and pencils.

skipper of every armed merchantman is, upon occasion, a submarine hunter. "Taking one consideration with another, the L'-boat's lot is not a happy one."

Two general methods are in vogue for "eliminating" submarines, reports the Detroit Free Press:

The French are given to "spearing" from aeroplanes. As nearly as may be learned, the operators fly at considerable height until they catch sight of a possible victim. Then they dive within range and endeavor to land a bomb where it will do the most good. The British commonly employ a less spectacular method. They trawl as they would for food-fish. If they net a submersible, they telegraph down by the Morse code to it to come up or be blown up. It is rather instructive to note how each nation employs the implements with which it is especially familiar. The French are beyond all other nations masters of the air; the British, of the seas.

The British naturally must have the most to show for their efforts because of their habit of taking submersibles "alive," but there are no statistics to prove which method of operation is actually the more productive.

But how is it possible to eatch a U-boat in a net? The commander of the submarine is fully aware of his danger, and will dive deeper, skirt around the net, or turn on the enemy with his torpedoes. As a matter of fact, writes Alfred Noyes, in the New York Times, the only opportunity for escape is to torpedo the trawler!—this largely because of the trawler's superior speed, and the shallowness of the water in the Straits. To quote Mr. Noyes again:

Many of the skippers of these trawlers and patrol-boats are Scotchmen. In fact, there are between 60,000 and 70,000 fishermen who already have been uniformed, trained, and practised, even in gunnery, for antisubmarine service. Many of them are Scotch, and all are seamen who range in age from the twenties to the three scores and tens. Yes, some of them are even as old as that, but they are the hardiest set of men I ever saw. I asked one old fellow how he stood the extreme cold, and he replied that he, like the rest, soaked his sea-boots and gloves in the water. Really, they believe the water is warmer than the air, and perhaps they are right.

It was one of these old chaps who told me how be had been "shooting his net"that's the term they use for dropping one of their nets into position. They throw off a heavy buoy to which one end of the net is made fast and then steam away. paying out the net as they go. When several are in a group all pay out their nets in this way and then each trawler takes up the buoy of the adjoining vessel so that the nets are stretched between the boats at intervals of 1,000 or 1,500 yards, depending upon the width of the net. The weighted nets sink to the bottom and the line of trawlers, by steaming ahead in unison, can sweep the sea behind them for whatever width they desire, the only necessity being that sufficient ships join the line to give this width. I once saw the nearer units of a line which, I was told, comprised sixty trawlers and stretched from

Hot Pace and Cooling Heels

OOLING Heels travels for Jones.

He's better known in outer offices than sanctum sanctorums.

Jones believes neither in advance advertising nor home-office follow-up. Hence buyers know Cooling Heels merely as 'a salesman for some-

body." Both he and his line are a nonentity.

Hot Pace travels for Smith.

He's better known in sanctum sanctorums than outer offices.

Buyers give him the glad hand, because they know when he is coming and what he has to sell. To them he is "Hot Pace, of Smith." Both he and his line are established.

Exaggerated? No!

Every salesman who has traveled with a Multigraph introduction and left behind him a Multigraph follow-up

knows the difference between the hot pace and the cooling heels-

The Multigraph Senior, electrically driven and completely equipped for high grade printing—with printer's ink, type or electrotypes; or for producing typewritten letters in quantities.

Prices, \$670 to \$720. Hand driven models, \$175 up. Easy Payments.

You can't buy a Multigraph unless you need it.

Knows how smooth the road to the man who is expecting you; how easy the order when he knows the line—

Knows the "open sesame" that goes with Multigraphed letters, folders, mailing cards before and after the call-

Knows how easy it is to set a hot pace on a Multigraph trail.

What pace do your men set on the trail of your business?

Have you Cooling Heels or Hot Paces representing you?

Think-act-mail the coupon!

Perhaps you've yet to strike the real stride in your business.

EN AL RESERVE ELLIPTING HE WILL LAST THE

the English shore to the Irish shore across the Irish Sea.

Well, this old chap had no more than got his net shot than he felt a jerk in it that threw him six points off his course. A submarine had become entangled in the net.

"How did you get rid of it?" I demanded. Said he: "I canna tell ye juist what happened, but it was what the A'miralty meant should happen when one o' these undersea lads gets entangled in our nets. And, mind ye, the nets are verra expensive."

The trawling service, says Mr. Noyes, is probably the most dangerous duty which a sailor can be called upon to perform, and even among this pieked group of reckless men the Scotch captains have a reputation for "dour deviltry." Some have no notion of what a deadly thing a submarine is. For instance, Noyes tells of a trawler in the Mediterranean which developed engine trouble and was forced to return to its base.

The trawler arrived minus the captain and two Scotchmen of the crew. The authorities demanded the reason, and still another Scotch fisherman volunteered the explanation:

"The captain and two men went off in the dingey with a couple o' rifles. They're blockading the Bulgars."

And so they were, said Mr. Noyes, keeping guard until their ship got back and apparently unconscious of anything unusual in their conduct. The U-boats, he added, have recently paid such respect to the trawlers that this attitude of mind was not strange, after all.

You see, in fair fight, a trawler has all the best of it, and the Germans have come to realize this. The boats are heavily timbered and they can well stand the kind of attack which a subsen-boat can deliver with its light guns, altho one shell from the trawler means the destruction of the U-boat if it lands fair. That is why you always hear of U-boats, tho they may summon a trawler by gun-fire to the aid of a doomed vessel's crew, always submerging before the rescuer arrives. And that is why we believe the arming of all merchantmen will defeat Germany's last move.

How submarines are located and captured is told by Capt. William S. Simms, the United States naval observer, in an article in the Philadelphia Public Ledger. The U-boat is forced to come to the surface at least once a day to fill her airtanks and recharge her storage batteries, for the gusoline-engines can not be used when submerged. Both these operations make a good deal of noise, which is often heard by a patrol near by. As soon as the submarine perceives she has been sighted, he says, she has got to submerge.

The commander of the patrol-boat sends out a wireless saying that at such and such a time-say 7:30 o'clock in the morning-the submarine was at a certain place. An hour later, allowing for its maximum submerged speed (not over twelve miles an hour), it can not be outside of a certain definite area, no matter in what direction it may have been running. By 9:30 it can not be outside of a certain larger area.

The commander of the patrol-flotilla

Farr's Specialties

This new edition contains 112 pages of test matter, with 30 full Hardy Plant page illustrations (13 in color). It is more complete and helpful than any of its pre-

decessors and is a text book that no reader of The Digest will wish to be without.

Some Special Features

The Iris section contains many of my own seedlings, including the Panama-Pacific Gold Medal Collection; also notable new introductions from Europe.

The Peonies include rare varieties which I have been unable to offer before owing to limited stock. The fortunate purchase in France of a noted collection of Tree Peonies enables me to offer a unique assortment of over 300 varieties.

Lemoine's complete collection of Lilaes, Philadelphus, and Deutzias, with many of the new Chinese Barberries, Cotoneasters, and other introduc-tions of Mr. W. H. Wilson, add to the value of this book.

If you are interested in gardening and would like a copy, it will be mailed to you on request.

AB Varderfey

deploys his boats accordingly. At the same time aeroplanes go out and look for signs of the submerged submarine. The latter, the under water, is not wholly hidden. A moving body of that size makes some disturbance at the surface. The surface waves are of a certain regularity, which is perceptibly disturbed by the submarine, even the she be as far as 150 feet below-that being about the limit of depth to which she could venture, lest the pressure of the water crush her.

The man in the aeroplane is able to overlook a very large expanse of seasurface. As soon as he perceives the "ripple" of a submarine he signals the nearest patrol-boat, and the latter proceeds to lower a net in front of the sub-The latter, of course, while under water, is blind. It does not know that it has been located; it does not know what is going on overhead, on the surface of the sea. It is groping its way through darkness by compass.

But the submarine, thus detected in its underwater travel, can be easily followed. The direction of its course is plainly seen. To drop a net in front of it is a simple performance. The undersea-boat pokes her nose into it—through one of the meshes—and is caught, like a fish in a gill-net. The business is just a kind of fishing.

Once the submarine is eaught in a net it has small hope of escape, for the nets used are of special construction, and even the latest U-boat models, which have shaped prows for net-cutting, are rarely able to break away. The Ledger continues:

The net used for the purpose is much like a fishing net; but it is made of pianowire instead of cord, and its meshes are about ten feet square. It is about three hundred yards long and a hundred feet deep, with floats to uphold the upper edge and leaden sinkers along the lower edge to maintain it in a vertical position, like a fence. The wire being so small (the very strong) and the meshes so large, a net of the size described can be rolled up into a bundle of no great bulk and readily stowed in the patrol-boat.

The net, when once the submarine encounters it, furnishes an elastic barrierincomparably more difficult to penetrate on that account. In fact, because it yields, it can not be penetrated. It yields, yet holds. Meanwhile, the floats on the surface attached to the net, show by their movement the struggles of the submarine to escape. If some of the floats sink it is manifest that the trapt boat is trying to get away by sinking and passing beneath the net. But such an effort rarely, if ever, succeeds.

The netted submarine may sulk and refuse to come to the surface. doesn't matter at all. If those on board prefer to die for lack of air, it is up to them to decide. But experience has proved that they invariably prefer to come up and surrender before their air-supply gives out. In their case, the captors are content to wait.

Mr. Noyes and Captain Simms both agree that arming merchant ships is an

COR more than twenty years KOKOMO T has led the way in the construction of bicycle tires. The first American bicycle tire to be known as a "studded tread" was a KOKOMO. The first bicycle tire using a motorcycle-weight woven fabric in its construction was a KOKOMO. We believe that the first bicycle tire using automobile-weight cord construction was a KOKOMO.

The name KOKOMO has, for years, stood for the highest possible quality in both workmanship and material. And no day goes without its definite effort to maintain this standard in every respect.

There are seven tires bearing the KOKOMO name each of the seven differing in style and price. There are various treads and colors. Among these seven tires you will we are confident, find one to meet your entire approval from every standpoint.

If you should choose the Kokomo OXFORD at \$2.50 you will get a generous \$2.50 worth of service. If EVERLASTER should be your choice you will receive full value in service, comfort and convenience. So with all KOKOMO Tires. For the price at which they are sold we believe there are no better tires made.

We ask you to try KOKOMO Bicycle Tires this Spring. The price of KOKOMO Tires has NOT been advanced - and will not be if we can avoid it.

efficient means of protection. Indeed, Mr. Noyes estimated that ninety-nine out of a hundred U-boat victims were unarmed. Sir Edward Carson reports that 78 per cent. of armed vessels escaped. basing his estimate on Admiralty figures.

THE TRUE AMERICAN SONG

WE have folk-music of the rat-a-tat-tat sort from Naples, the sort which makes the hearer want to spin until he drops; our savage breasts are soothed by the dum! diddy, te-dum of the Castilian songs, and we never care what sort of a lyric is fitted to the cadences. But what are the songs of America? Where is the American popular chantey? If we are the melting-pot of nations, then our music should have some of the characteristics of European songs, and as for the lyricperhaps the less said about the lyrie the better.

The Oakland Tribune has looked into this weighty subject with much acumen, and draws forth some amazing conclusions which are to be welcomed by all serious students of canto ragtimo, as it is probably called by the technicians. That journal discovers that America has four distinct types of songs-but read the account:

Every nation must express itself musieally. It is so written in the book and the Sunday supplements. Look at Hungary. Does, one not thrill and tingle when Czecht's "Cuxzquerimaskie Sonata" rubs its way off the long-locked violinist's instrument? Think of the folk-songs from Poland. The "Vodska Delight," for instance, rolling out on the quiet concert air, hiding snores and brandied breaths of American music-lovers.

So, in the very finest spirit, investigators have plunged into the subject for several days, and, after exhausting and exhaustive examination, see the coming of American music. In American music of to-day, we find four types: The Gaelie, the Negraie, the Hebraic, and the Hawaiie. All four are distinct in their separate selves but really not so far apart as one might believe at first glance. When the four shall have been merged into a oneness America shall have a national music.

Three thousand four hundred popular songs came under the scientists' ken during the two days' work. Out of this mass, they made four model melodies, taking the words most frequently used and the sentiments most frequently exprest. The first of the types, the Gaelic, follows:

I'LL BUY A LOT IN KERRY AND BUILD A PIGSTY THERE

It is thirty years ago that I left my Irish home For America, the land of gold and grub; Here I've eaten rich roast beef, with a silk hat on my dome.

And I bathe my lithe old body in a tub. But still my fancy turns and my heart for Erin burns.

I love the scent of three-leaved clovers green; Oh, in my touring-car, let me ride to Kerry far. Where the rush of sweat-shop maids is never seen.

Chorus

Ireland, home of sauerkraut, Lovely lakes, mountains high;

With colleens running about. I view them with a sigh. Shure your name is a caress Sweeter far nor watercress; In the valley of Kilkenny let me roam-m-m! You're the land of pig and spud, Erin, my home.

Then comes the Hebraic supersong. It took, we are told, some time to solve, for there were so many kinds and such a plethora of dialect that it required the services of a five-foot shelf of dictionaries to weed out the meaning of them all. But, at last, this is what the committee presents as the sum total of all the songs of the kind which the country has produced:

COME BACK TO OLD AARON

Oi, Yol, Rosic Rosenkrantz; Ol. Vol. G. O'Furrell Kohn! Oi. Yol. started in to dance Quytte high tone-all alone. In der parlor of her pa-Rosic sat undt cooked; Made some modile soup-ya. ya! Then at G. she looked.

Looks so good to me.

Churus

G. O'Farrell, vere's dot barrel Of Money? Mine hopey! Fader says you're a loafingk guy. Undt mine fader does not lie; I've a furning undermeat mine cliest Gol dut veddingk ring in der pucket of your vest? It's a voif; it's a bear; It's a howling Kosher lamb! Come undt rag dot vedding march up the aideslam-hung! Ob, G. O'Farrell-vedding apparel

Space forbids the reproduction of the Negroid song. It is too obvious to require repetition anyhow. Any one may pick up a thousand exactly like it at the nearest music-store. But the account goes on:

The last, but by no means least, of the four types, is the Hawaiie, only lately a favorite, but now the superessence of America's delight. It is called!

RICKI, HICKI FOR THAT RONOLULU COPT

In my San Francisco apartment, high above the city's hum.

I'm thinking-gently thinking of a monetary sum: It costs like sin to get there-to that sumy. honey shore

Where you never hear of debt there-or salaries. or of war.

But I'm going, yes, I'm going, when I get a hundred dellars;

Bet I'm going! With a tooth-brush and a daily change of collars.

Chorus

She said Hicki, Hickl for that Honolulu cop! Papa's got a warrant for your arrest, old top! You stole from him my affections, he swears you'll be in sections. When he gets that bolo-knife, please, please don't

stop! Wali, wicki, wicki, hula, nula hu, Run, please run, or pa will akulele you! Hear that Uke a-ringing out,

In old Hilo, many milo way from here-Oh. dear!

Watch that old volcano spout

NOTABLE HISTORICAL AND BIOGRAPHICAL WORKS

THREE HISTORIES OF THE GREAT WAR

Buchan, John. Nelson's History of the War. Vols. XIII-XIV, pp. 288-327. New York and London: Thomas Nelson & Sons. 50 cents per volume. Postage,

Has the mightiest of wars produced its adequate historian? Is there living in the world to-day an intelligence equipped for a task so formidable that its mere contemplation is enough to daze the ordinary student of history? These are questions which naturally suggest themselves to the reader who takes up the thirteenth and fourteenth volumes of John Buchan's monumental history of the war. An outline of this literary undertaking has already appeared in THE LITERARY DIGEST, wherein was given some hint of the excellent literary character of the work, as shown in the initial volumes. qualities are maintained and even enhanced in the latest volumes, thirteenth contains the story of events at sea in 1915, the winter's war in the air, the fall of Erzerum, and the first battle of Verdun. The fourteenth contains the full of Kut, the war in the eastern Mediterranean, the Russian operations in bulk of Germany's free strategic reserves.

In deference to some hundreds of requests from subscribers in many parts of the country, we he decided to act as purchasing agents for any books reviewed in THE LITERARY DIGUST. Orders for such books will bereafter be promptly filled on receipt of the purchase price, with the pastage added, when required. Orders should be addrest to Funk & Wagnolls Company, 354-360 Fourth Asenue, New York City.

Armenia, the British line in the West, the battle of Jutland, the Austrian attack in the Trentino, and the second battle of Verdun.

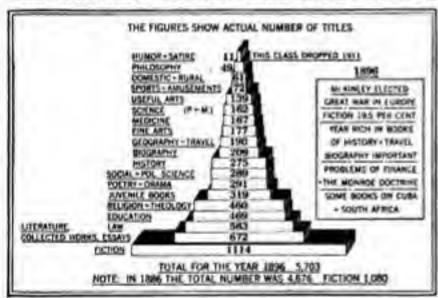

As the reader studies volume after volume of the masterly narrative, he sees unfolded, scene by scene, in ordered sequence, a series of events and episodes transcending in magnitude and grandiose features anything that he can recall in the history of war. The single battle of Verdun, in its two distinct phases, occupies about a volume of the series. It looms out of the tragic welter as the supreme epie of the war, the ineffable symbol of national valor and sacrifice. The historian calls it "by far the greatest single action fought in this campaign or any other."

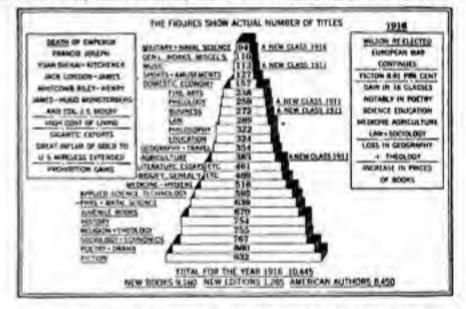

"It had sucked in and destroyed the

It had tided over the months of waiting while France's allies were completing their The scene was about to preparations. change from the shattered Verdun uplands to the green bills of Picardy, and the main battle was on the eve of transference from the Meuse to the Somme. Even as the weary and dusty fantassins scrambled over the débris of Thiaumont, a hundred miles to the northward on a broad front the infantry of France and Britain were waiting to cross their parapets. The citadel by the Meuse had been for Germany a will-o'-the wisp to lead her to folly and death. But as the weeks passed on it became for France also a watchword, an oriflamme to which all eyes could turn, a mystic symbol of her resolution. It was a sacred place and its wardenship was the test of her devotion. Mankind must have its shrines, and that thing for which much blood has been spilt becomes holy in our eyes. Over Verdun, as over Ypres, there will brood in history a strange aura, the effluence of the supreme sacrifice, the splendid resolution, the unyielding fortitude of the tens of thousands who died before her gates. Her little hills are consecrated forever by the immortal dead.

"' Heureux ceux qui sont morts sur un dernier haut lieu, Parmi tout l'appareil des grandes funérailles; Heureux ceux qui sont morts pour les cités charnelles, Car elles sont le corps de la cité de Dieu.'"

THE CHANGES OF TWENTY YEARS IN THE WORLD OF NEW BOOKS, CLASSIFIED, AND COMPARED 1916 WITH 1896

The above charts, which were prepared by Fred E. Woodward, of Washington, D. C., are intended to show at a glance not only the various classes or kinds of books published in the United States, but, by reason of the figures in each block, the actual number of books in each class. In order to show the growth of the various classes, Mr. Woodward has chosen the year 1896 (twenty years ago), and placed the same on the left of his chart for 1016.

During the year 1916, the total output of books in the United States was 10,445, or an average of 29 per day. Of this number, 9,160 were new books, and 1,285 were new editions of older books. American authors contributed 8,450 of this number. Fiction, with 932, occupies the largest space, but by a narrow margin only, as Poetry and the Drama, with 860, make a close second. Mr. Woodward's pyramid terminates with Military and Naval Science, and between these two, Fiction, with 932, and Military and Naval Science, 94, are grouped by him the remaining 22 sections or classes, each being marked with the actual number of entries during the year.

The year was one of growth, the number of books issued being 711 more than the number in 1915, which was 9.734. This growth was shared by 16 classes, while 7 declined in number. The largest growth was in Science, both Pure and Applied. Poetry and the Drama. Medicine.

Education, Law, and Juvenile books, while the losses were found in Geography and Travel. Religion, Philology, and Philosophy. Music made an increase of 50 per cent. (72 in 1915; 113 in

Glancing at the two charts, one at once becomes aware of the fact that, while twenty years ago Fiction was a large and important portion of the entire book production, it has not kept pace with the growth of population since that time, but that a large and steady growth is evident in more substantial classes of books. In 1896 out of a total of 5,703, Fiction had 1,114, or 19.5 per cent., while in 1916, out of a total of 10,455. Fiction records 932, or 8.91 per cent. A very low percentage of Fiction has prevalled for the past six years, averaging less than 10 per cent. That means to Mr. Woodward in plain words, that for the past six years, out of every one hundred books issued in the United States, at least ninety of them have been in classes other than Fiction.

Poetry and the Drama, with 291 in 1896, gave no promise of the wonderful increase which began in 1904 and culminated ten years later with 902 titles, dropping slightly to 860 in 1916, or only 72 entries less than Fiction. The remarkable growth of Ptetry and the Drama in recent years is a matter of common report in all circles. Sociology and Economics registered 289 in 1896 and have had a steady growth since that time.

recording 1,038 in 1914 and 767 in 1916. doubt the great European War has been a factor in cutting down the number of books in this class. History, with 275, Biography, with 209, and Geography, with 190, have all shown satisfactory gains, reaching 754, 469, and 354, respectively, in 1916. Science, with 162 in 1896, has moved ahead prodigiously, and 639 in 1916 is a fairly constant number, scarcely falling below 550 in the past seven years. Domestic Economy registered 61 in 1896 and 322 in 1916. To this latter number should be added 383 now classed under Agriculture, as at the earlier date both were called Domestic and Rural. Philosophy recorded 49 titles in 1896 and 322 in 1916. This class has shown a steady increase during the past seven years, the before that period the output was very small.

On the whole, Mr. Woodward finds the growth of the various classes has been fairly consistent with the increase of population, tho a decided but commendable decrease is to be noted in Fiction, it being less than 9 per cent, in 1916, when it was 19.5 per cent. twenty years ago. One new class, Military and Naval Science, was added In 1916, and 94 titles were recorded in the last four months of the year. In Great Britain this class came into existence in 1914, when 402 were recorded, the number being 467 in 1915 and 495

Buy A Detroit Jewel "Special" Gas Range, And Cook And Bake With Ease

Now every woman can own a labor saving Gas Range with the latest improvements and conveniences, at a reasonable price—Making the Detroit Jewel "Special" in vast quantities is the reason.

Over 30,000 of this model were placed in homes last year—conclusive proof of its extraordinary value and adaptability to every family requirement.

It is a gas range that is easy to operate because of the position of the oven and broiler—height and size of the cooking top. Each detail is planned correctly.

It is a gas range which bakes perfectly because the oven is constructed the Detroit Jewel patented way. The two oven burners regulate the heat to meet every requirement. The most wonderful baking results are obtained.

It is a range which is easy to clean because all the exposed steel and iron parts are finished in baked Ebonite—a finish which wipes clean with a cloth. No stove polish is required.

It is a beautiful and sanitary range, because it is equipped with white porcelain enamel door panels, burner tray, valve handles and broiler pan. Every woman wants a porcelain equipped range.

It is an economical and durable gas range because it possesses the patented and exclusive features which have established a world-wide reputation for Detroit Jewel gas ranges. Low gas bills are assured.

You take no risk in buying this range, because it is made by the Largest Stove Plant in the World—a concern which has specialized in the manufacture of gas ranges for the past 21 years. Over two million Detroit Jewel Gas Ranges have been sold.

See the Detroit Jewel Special Gas Range before buying. It is sold by over 2,000 gas companies and dealers. Watch for their announcements and window displays. Write us if you fail to locate a dealer.

You can secure this range with the oven at the right or left of the cooking top—with a heat-resisting Pyrex Glass oven door, or with a white porcelain splasher for the high shelf. A style to satisfy every buyer.

If you want to know more about this "extra value" gas range, mail the coupon. We will also mail a booklet which illustrates all the leading styles of Detroit Jewel Gas Ranges.

Detroit Stove Works-Makers of Over 100 Styles of Gas Ranges-Detroit

Scoffissue Towels

WHEN you shake the water off your hands and reach for a towel, what do you get? We experimented for years to satisfy you at that moment—to give you a perfect towel—to make you unconsciously feel—satisfied.

You want a clean, soft, absorbent, individual towel that dries the hands quickly and thoroughly and leaves the skin refreshed. These are a lot of virtues to expect in a towel—one that fills all of these requirements economically must be perfect indeed. Yet we have at last succeeded in meeting every one of these requirements in

Scot lissue lowels

These towels give the best service when used folded. To give them to you in this form the new ScotTissue Cabinet, here illustrated, has been perfected. A pull of the lever brings out one towel—pure white, invitingly clean, and folded—ready to make drippingwet hands dry and comfortable.

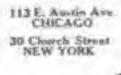

Every Scot Tissue Towel bears the special Scot Tissue trademark. Look for it. It's your guarantee of satisfaction.

For all public and semi-public washrooms Scot lissue is the logical, practical and most satisfactory Towel Service both for the user and owner. Heads of stores, office buildings, hotels, theatres, restaurants, factories, offices, schools and institutions should investigate Scot lissue and send for further interesting and valuable information.

The Story of the Great War. The Complete Historical Records of Events to Date. Illustrated with Drawings, Maps, and Photographs. Vois. 1-1X. Large octavo. New York: P. F. Collier & Sons. \$19 for the nine volumes

Some further suggestion of the volume of war-literature which is in store for the future is furnished by this important work, nine octavo volumes of which are now off the presses. It is the work of many hands, is profusely and graphically illustrated. Altho without a formal preface, the first volume in its entirety may be regarded as prefatory, a detail which may serve to give some idea of the magnitude and scope of the work. The opening volume has as frontispiece a portrait in color of Major-General Leonard Wood, U. S. A., who also introduces the work in an article on "What the War Means to America." Rear-Admiral Austin M. Knight, U. S. N., follows the commanding general of the Army in a timely paper on "Naval Lessons of the War." Next in order comes a much longer chapter, of fifty pages, by Frederick Palmer, the famous correspondent, on "The World's War," a remarkable summing up of the complicated strategy of the far-flung conflict, in which the writer draws freely upon the lessons of history as well as upon his great experience in reporting several wars. As the reader turns the last page of Mr. Palmer's exposition of the realities of modern war on a large scale, he comes upon a portrait new coming to be known throughout the world, that of Frank II. Simonds, the former editor of the New York Evening Sun, and now associate editor of The Tribune and author of "The Great War." "The Theaters of the War's Campaigns" is the subject of Mr. Simonds's characteristic contribution on the main military features of the conflict. Arthur Ruhl furnishes the article on "The War-Correspondent." The remaining half of the volume may be described as a sort of historical prolog to the vast drama of world-conflict to be unfolded in the eight succeeding volumes which up to date have been published.

In the ensuing volumes the general plan and the logical arrangement of the multiform features of the world-encireling military operations are well handled. In Volume V, for example, we find two chapters allotted to the important and critical battle of Neuve Chapelle. Next comes a description of the opening of the second battle of Ypres, of the campaign in the Artois region, the British forward movement, the now famous exploits which took place at La Bassée, the operations around Hooge, the campaign in Argonne and around Arras. Episodes for which immortality is freely claimed occur in this volume; for instance, the sinking of the Lusitania and the legendary exploits in a modern setting of the far-famed Emden. Volume IX contains an account of the mayal battle of Jutland, the great Russian offensive, the events of Kut-el-Amara, and the campaign in German Africa.

Boyle, Sir Arthur Conan. A History of the Great War. Vol. I: The British Campaign in France and Flanders, 1914. Octavo, pp. xio 349. New York: George H. Doran Company. \$2 net. Postage, 16 cents.

In this, the first volume of his "History of the Great War," Sir Arthur Conan Doyle maintains the general level of excellence found in his well-known writings. A natural born story-teller, it was well that his talents should be placed at the service of a theme which in literary and dramatic possibilities makes all others seem paltry in comparison. The novelist confines himself to the events of 1914 "ou

Two Notable Books of Great Present Interest

The National Crisis Discussed

"The kind of a book which every American who loves his Country should read."

Theodore Roosevelt

The War and Humanity James M. Beck

"I most earnestly hope that there will be a wide circulation of Mr. Beck's 'War and Humanity.' I believe that its circulation throughout the whole land would have a very real effect in educating public opinion as to the duty of America in this great world crisis. There must be thorough military and industrial preparedness in this country; there must be an aroused and quickened patriotism, and a stern determination to see that the rights of our country, and its citizens, are everywhere respected; and there must be a keen sense of international duty, and of the shamefulness of neglecting this duty. Such is the spirit Americans ought to possess, and this book of Mr. Beck's is a potent aid in the creation of such a spirit."-Theodore Roosevelt.

I "Marked by a singular directness and eloquence." Daily Mail.

9 "A volume that deserves the closest study. Mr. Beck has certainly done his part to arouse the American spirit, and his name will be honored for many a long day."-London Telegraph.

The Evidence in the Case

By JAMES M. BECK

"It seems to me in every respect a most able and admirable statement of the case. A masterly analysis of the diplomatic records. I have read it with great admira--ARTHUR JAMES BALFOUR, Formerly Prime Minister of England.

"The book is a masterly statement of the case for the Allies."-LORD ROSEBERY, Formerly Prime Minister of England.

"A lucid and convincing examination of the causes which led up to the present war. The impartial spirit and exact acrutiny it shows make it one of the most valuable of all the many contributions to the subject I have seen."-VISCOUNT BRYCE, Formerly Ambassador for Great Bettain to the United States.

ACCOUNTANT

The samples Asymptotic property of the samples of the sample of the samp

the British firing-line in France and Belgium." He announces that a second volume dealing with the events of 1915 will appear within a few months, and that it is his further intention to write a third volume, covering the current year, which "shall earry on this contemporary narrative of a tremendous episode." His history of the war is more than a mere narrative of the fighting and of the objective features of the mighty struggle. The political and philosophical import of the world-conflict is given prominence. The author, as he notes in a long preface, has from the first days of the war devoted his efforts to accumulating evidence from firsthand sources, and be has constructed his narrative from letters, diaries, and interviews from the hands or lips of men who have been soldiers in the armies the deeds of which he chronicles,

The chapter descriptive of England's entrance into the war, an act marked by the landing of the British Expeditionary Force in France under cover of the darkness, is a triking piece of writing, worthy of the author's best achievement in the dramatic vein. "Two canvas walls," he says, "converging into a funnel screened the approaches to Southampton dock. All beyond was darkness and mystery. Down this fatal funnel passed the flower of the youth of Britain, and their folk saw them no more." Sir Arthur Doyle has been accused of being an ultrapartizan, but the charge is hardly borne out in this his latest literary effort. His estimate of the German achievement is as remarkable as it is interesting:

"It would be foolish to deny the vast military achievement of Germany in the month of August [1914]. It reflects great eredit upon the bravery and energy of her troops, as well as upon the foresight of her organizers and the capacity of her leaders. The we are her enemies, our admiration would have been whole-hearted were it not for the brutalities which marked her advance in Poland, in Belgium, and in France. Consider that wonderful panorama of victory which was known all over the Fatherland as 'Die Grosse Zeit.' August 10 fell the great fortress of Liege, on the 22d the great fortress of Namur, early in September that of Maubeuge, while the smaller strongholds went down as if they were open cities. On August 10 was a considerable victory at Milhausen, on the 20th the Belgians were defeated at Tirlemont, on the same day Brussels was occupied. On the 22d the French central army of ten corps was defeated in a great battle near Charleroi, losing 20,000 men. On the left flank the Crown Prince's army won the battle of Longwy, taking 10,000 prisoners and many more guns. On August 24 the Duke of Wurttemburg won a battle in the Ardennes. . . Uhlans made their way to the shores of the Atlantic, spreading terror along the Channel coast. Finally, a great battle took place at Tannenberg, in East Prussia, in which the Russian invading army was almost completely destroyed. know where in history such a succession of victories is to be found, and our horror of the atrocities of Louvain, Aerschot, Dinard. and so many other places must not blind us to the superb military achievement."

OTHER BOOKS OF HISTORY AND BIOGRAPHY

Tod. Lieut.-Col. James. Annals and Antiquities of Rajast'han, or, the Central and Western Rajpoot States of India. Popular Edition, 2 vols. Restledge. London; E. P. Dutton, New York. 8vo. pp. axx. 541, xxxii 4817. 34 net. Postage, 20 cents.

This work, first published in 1829 and long out of print, is one of those monumental works so many of which have been produced by the official servants of the British

with clouds of smoke. It shows how the average office would look if the bad air in it were colored!

Is the air in your office fresh and pure? Do you really know—or do you just guess about it and say, "Yes, the air in my office must be fresh. Don't I open the windows wide twice a day; and don't I get a natural change of air through the pores of building materials, cracks, joints in floors, windows, doors?" Science says you are wrong by proving that "natural" means of ventilation fail miserably.

Sturtevant Ventilating Systems are paying dividends in thousands of offices, mills and factories by cutting down sick-leave; energizing fired faltering hands; increasing production; improving the spirit of employees.

There are very few wide-awake business men in the country to-day who would not install in their factories to-morrow a modern system of ventilation if they knew one-tenth of its benefits, advantages and economies.

Join the great army of renters who demand that the room in which they work or live he kept free from such invisible poison air as is shown in our picture. You can get such offices. You can get such factories. You can get such apartments. Once you live or work in one, you will give preference to the ventilated building every time.

B. N. MORRIS, Inc., 888 State St., Vearie, Me.

Empire. Lieut.-Col. Tod was for many years political agent of the British Government to the Western Rajpoot states, and he used diligently his opportunities to gather all material possible bearing on the history, antiquities, custom, religion, dynasties, and wars of the "Rajpoot States," i.e., the group of native states which, in his day, occupied Central India in the region 22"-30° north latitude and 69"-78° east longitude. The result was a work which speedily became a classic, and has long been a library desideratum inaccessible except for wealthy corporations that could snap up the occasional copy which came on the market at a high premium.

The pages are large and closely printed, and so make a work costly to reproduce. Indeed, the issue of the present popular edition at the low price placed upon it was possible only because the interest of a native prince (the Maharaja Rana of Jhalawar) was aroused so that he shared the expense

of republication.

The work itself is placed in interest alongside of those early works on India produced by such pioneers as Sir William Jones, Colebrooke, Wilkins, and Wilson. Later researches have indeed made known many of the limitations of Colonel Tod, have corrected many of his mistakes, and enlarged enormously his information. Nevertheless, no library which assumes to deal with Indian affairs can afford to be without the material help furnished by this painstaking collection of materials diseriminatingly gathered from very varied sources, and put together with fidelity to fact (as ascertainable by the author) and admirable skill. There are many supplementa of documents and charts, and also a map, which give added value.

Paton, David. Early Egyptian Records of Travel. Materials for a Historical Geography of Western Asia. Vola. I and H. Folio. Princeton: Princeton University Press, 1915, 17.50 telt per volume. Postage, 20 cents.

A work intended for laborers in an extremely specialized field, yet (as so often in such cases) available for a much larger body of students, is here half completed in the two volumes already issued. The purpose is to gather the geographical material found in the early records of Egypt and make it available toward the settlement of the historical geography of Western Asia. But the author has included within his plan not only a critical transliteration of the records, with note of variants, a translation of those records, but also lists of the scholarly discussions of the texts, with indication of the places where the texts are found or discust. The result is to make the volumes of first importance for specializing students, and valuable for all who are interested in Egyptology in even an indirect way.

In addition to the essential value of the work, its format is sumptuous. It is printed by photographic processes direct from typewritten characters which, tho small, are beautifully clear and sharp-cut. The paper used is Strathmore Japan bond, and each folio is printed across one side only of the leaf. Moreover, each folio is mounted on guards so that the fold of the paper interferes hardly at all with the text and at the same time does not tend to fall to pieces. The result is a set of volumes unique both in matter and form, a delight to the eye, and a cause for rejoicing to the student. To the book-lover whose pride is in a fine volume as well as to the student of the early Orient, these volumes will prove a choice possession.

The Cambridge History of English Literature. Vol. XIII, The Nineteenth Century, II. Large 8vo, pp. x-670. Cambridge, England: University Press; New York: G. P. Putnam's Sons. \$2,50. Postage, 16 centa.

Volume XIII of this history is now here. Along with Volume XII, it deals with the nineteenth century, covering Part I of the Victorian Age (Part II to be treated in Volume XIV). Chapter I on Carlyle is written by Prof. J. G. Robertson, and Chapter II on the Tennysons by Prof. Herbert J. C. Grierson. Sir Henry Jones writes of Robert Browning and Elizabeth Barrett Browning in Chapter III. Chapter IV is taken up with an appreciation of Matthew Arnold, Arthur Clough, and James Thomson by Prof. W. Lewis Jones. Then come the Rossettis, William Morris, and Swinburne in Chapter V. In Chapters VI and VII, George Saintsbury deals respectively with the Lesser Poets of the middle and later nineteenth century and with the Prosody of the nineteenth century. The nineteenth-century drama, Chapter VIII, embracing such names as Sheil, Maturin, Knowles, Marston, Taylor, Poole, and Gilbert, is done by Harold Child. In Chapter IX, A. Hamilton Thompson gives us Thackeray, and George Saintsbury, in Chapter X, Dickens, The Political and Social Novel-Disraeli, Charles Kingsley, Mrs. Gaskell. "George Eliot" is handled by Sir S. W. Ward in Chapter XI, and the Brontes in Chapter XII by Prof. S. S. Jack. In Chapter XIII, W. T. Young, M.S., covers the Lesser Novelists-Anthony Trollope, Charles Reade, Mrs. Oliphant, George Du Maurier, Blackmore, "Ouida," etc. and in Chapter XIV, George Meredith, Samuel Butler, and George Gissing.

With such names as Robertson, Grierson, Saintsbury, and Jack, it can be assumed that the present volume reaches the high level normal to this authoritative series.

American Biography, The National Cyclopedia of, Edited by Distinguished Biographers, Revised and Approved by the Most Eminent Historians, Scholars, and Statesmen of the Day. Vol. XV. Pp. 461; besides numerous portrait inserts. New York: James T. White & Co. Postage, 20 cents.

This cyclopedia of biography differs in important respects from other biographical works. It is not alphabetically arranged, for one thing; but the index compensates for this lack. Its biographics cover many fields of Amercan activity, and if one wishes to make a survey of any special field be can do so readily. Aviation, for instance, in the index, refers to six scattered pages and as many men, in this Volume XV, besides three pages on the Wright brothers in Volume XIV. The subjects treated embrace a host of distinguished men and women, many of whom have been recently much in the public eye. The portraits are a marked feature of this volume, both in number and in variety of style and superior excellence.

Campbell, James Havelock. McClellan: A Vindication of the Military Career of General George B. McClellan. Pp. 458. New York: The Neale Publishing Company. \$3. Postage, 16 cents.

"A Lawyer's Brief" is a further designation or description of this book. It is a "brief" for the defense, and as such it must assume that the plaintiff attorneys have been all wrong as to the facts in the case and as to the authorities cited. In his preface Mr. Campbell declares: "More has been written about this subject than about any other within the realm of war, except the campaigns of Napoleon; and a comparison of what has been written with

Save a day! When printers say "tomorrow" to your call for hurry-up forms, letters, price lists or bulletins, just tell your secretary to have them mimeographed-"right now" -five thousand in an hour! No waits for typesetting, cut making, "OK's," or pressesand probably you'll get a better looking job of printing. No overtime to pay for no promiscuous handling of confidential proofs. Independence! With the mimeograph, not only typewriting but longhand and line illustrations are immediately - flawlessly - duplicated, in your own office. It's easily operated by a typist - and the ways it will serve you are multifold. It makes office duplicating proof against printers' delays - and wonderfully economical. Write for booklet "L." A. B. Dick Company, Chicago - and New York.

the facts will show that never before was any subject so little understood by those who undertook to discuss it." This is a sweeping statement, of course, with which a large number of writers and experts will not agree.

The a lawyer (Dean of the Law in the University of Santa Clara, Cal.), Mr. Campbell assumes to write as might a general, frequently; and his analyses are often clear, strikingly effective, and persuasive. He does not hesitate to claim for General McClellan every quality as a great commander, and to throw upon others, from first to last, full blame for every delay in movement and every defeat in battle which McClellan suffered or permitted. "Had the Administration," he asserts, "given the same hearty and unlimited support to General McClellan that was given to General Grant, there can be no doubt that the Rebellion would have been crusht in 1862." Mainly he blames Mr. Stanton for the failure he thus condemns; and the accusations are terribly severe which this "lawyer's brief" brings against Mr. Lincoln's Secretary of War. Some of the charges made or implied against Mr. Lincoln are hardly less pointed.

It must be admitted that he cites high authorities in support of much that he says, as when he remarks: "Through the failure of the Government to support Mc-Clellan the war was prolonged for three years, and as the result, General Grant tells us, the Confederacy came within a hair's breadth of being successful." But the question may well be asked—Did General Grant say that the near-victory of the South really came "as the result" of such governmental "failure"? General Lee's opinion of McClellan as "By all odds the ablest Northern General of the War" is quoted with satisfaction and pride.

Alec-Tweedie, Mrs. My Table-Cloths. A Few Reminiscences. With Fifty Illustrations, including a Frontispiece in Color and Faculation Letters. Pp. 388. New York: George H. Dorna Company. \$7.50. Pustage, 12 cents.

For a quarter-century the friends of this author who sat at her table wrote their names upon the cloths which covered it, and she made their pencilings permanent. by "working" them over in solored cotton. "There are now hundreds of names sown broadcast upon them," she tells us, "ineluding those of some of the best known men and women in London during the last ten years of the nineteenth century and the first fifteen of the twentieth." Mrs. Alee-Tweedie has been rich in her friendships, even if she did become poor eight years after her marriage and have to labor as "a professional scribbler." She confesses, now, to sixteen volumes. In this one, which might well have been entitled, "Famous People Who Have Dined with Me," she gives not merely "a few" reminiscences, but a multitude of them, bright, sparkling, covering a marvelously wide knowledge of personages distinguished in literature, art, science, travel, politics, and the national service. Of each and all she writes in a manner delightfully chatty and familiar. Two of them, treated in Chapter II, are now much in the public eye-Marcont and Lloyd George; and of the latter she says:

"He is certainly a delightful companion, always interested in the person to whom he is talking, or thrilled by the audience he is addressing. . . . Few people realize that he is quite a small man, square and thick-set in stature. He gives the impression of

breadth. His face is broad, his shoulders and chest are broad, and as his eyes are generally smiling they broaden into a series of little crow's-feet, which always assume a particularly cheery, upward turn. His gray hair is perceptibly whitening, tho he is only fifty-three years of age (born 1863)."

And the further description of him is ample in details, of like appreciative character, as are many other glimpses of interesting people.

De Koven, Mrs. Reginald. The Counts of Gruyère. Pp. 138, Illustrated. New York: Duffield & Co. 42, Postage, 16 cents.

Many a traveler has spent a day in Switzerland, in quaintly picturesque Gruyère, a "little, castled city enthroned on a solitary hill," and has admired its flowerdocked windows, its slender belfry, the tall-clock tower, the terrace, and the eastle itself with its marvelous view "over the encircling valley and up to the nether heights of the Bernese Oberland," but few have realized the poetic history of the city and its counts during the days of the jousting court and the glittering days of chivalry now long past. The sovereign race of counts is gone, but there is a fascinating history of their lives, their vicissitudes and joys, pageants and tragedies, legendary poetry, and romantic history which Mrs. De Koven imparts to the reader with a wealth of imagination, delightful choice of expression, and authoritative knowledge which give a true understanding of the romanco of Switzerland's history as a whole and picture faithfully the Counts of Gruyere and the pathos, wit, and beauty of the city's incomparable past. The illustrations add greatly to the book.

Fels, Mary. Joseph Fels, His Life-Work. Cloth, Pp. 27L. Portrait. New York: B. W. Huebsch.

Joseph Fels was a unique character among American men of wealth. Let us hope that as time passes he will be less so. Nothing, indeed, could be more to his liking. The we are accustomed to the sight of men of great wealth establishing huge endowments for the advancement of science, of education, and of philanthropy, the man is rare who, critical of the social order in which he made his fortune, flings himself and his own into a passionate striving to secure for all men greater economic justice and wider economic opportunity. It is just that generous identification of himself with a cause that makes Mr. Fels worth knowing-without that there are very many American business men like himalert, shrewd, affable, kindly, at times swift in wrath and explosive in speech, at others very patient, always devoted to family and to friends. It is thus not surprizing that his biography is concerned little with the personality of the man and much with his cause and his work for it, Save for three brief chapters on his early life, his business, and his personality, Mrs. Fels has devoted the remaining dozen to the story of what was, indeed, Mr. Fels's life-work. Here are traced his experiments with farm colonies, his growing interest in and acceptance of the single-tax theory, and his active personal propaganda and generous gifts in its behalf. Few Americans are aware of the intensive work he did in England and of the share he had in the promotion of the Social Budget of 1909. One wishes that exactly his connection with that epoch-making event had been more fully treated. Indeed, one frequently loses sight of Mr. Fels behind the discussion of the economic and political principles for which he stood. In so far as that discussion represents—and no doubt it usually does—Mr. Fels' own thinking, it is appropriate, the giving the book a tractarian tinge at many points. Yet at that it is true to its subject and would, no doubt, be thoroughly approved by him.

ARCHITECTURE, GARDENING, AND THE HOME

Price, C. Matlack. The Practical Book of Architecture. Pp. 248, with 255 Illustrations. Philadelphia and London: J. B. Lippincott Company. 56. Postage, 18 cents.

This book aims at making architecture a part of any liberal education, instead of a technical subject. It is divided into two parts: Part I contains a practical guide to styles for the general reader. Part II gives a practical guido to building for any who are about to have erected for them houses in city or country, or buildings of public character. The first help is given in seven pages of illustrated architectural terminology, a welcome and illuminating addition to the value of the book and adding greatly to the reader's pleasure and understanding. Architecture is defined as a "perfect correlation of the three essentials of suitability, strength, and beauty." The author outlines the evolution of architecture, beginning with that of Egypt, "an architecture of sublime proportions, of massive forms, and simple lines"; then that of the Assyrians, who were "the pioneers in demonstrating the possibilities of brick as a building material"; of Greece, whose "architecture is fundamentally the basis of all modern architecture," and of Rome, Byzantium, and the Romanesque. It is surprizing how absorbed the reader becomes in this entertaining presentation of a so-called dry subject. The description of the Gothic and Renaissance styles reads like a story. "Gothie architecture," we are told, "exprest the ecclesiasticism of one period"; Renaissance architecture "the humanism of another " The reader gets unusual delight from the illustrations, which are mainly chosen from well-known buildings in hig cities, thereby making them more vital and understandable. The second part is just what it claims to be. Any one who ever hopes to have a home built for him would do well to read it carefully both for assistance and for protection. As a whole, this is an instructive and entertaining book.

Northend, Mary H. Garden Ornaments. Pp. 178. Illustrated. New York: Duffield & Co. \$2,56, Postage, 16 cents.

The name of this author earries with it a guaranty of comprehensive and exhaustive study, thorough grasp of her subject, and a charming presentation of the knowledge she has amassed and adapted to the garden novice as well as the enthusiast. All the devices used for beautifying gardens, such as pergolas, tea-houses, steppingstones, fountains, gateways, bird - baths, garden-seats, lily-ponds, and sun-dials, are described, illustrated, and considered from the standpoint of desirability, consistency, and proper placing, and, at the same time, the color scheme of the garden is indicated and plants and flowers suggested which are suitable for definite places and seasons. We are urged to make a careful distinction between the formal and informal garden and all the time we are lured and fascinated by the author's vivid word-pictures and her inspiring hints at possibilities,

PREPARED WAX

Johnson's Prepared Wax

Now Made in Liquid Form

so that it may be more easily polished. Johnson's Prepared Wax Liquid is thesame as our Paste form except that it is Liquid.

Johnson's Prepared Wax Liquid will prove a joy to the thousands of automobile owners who prefer a Wax Polish on their cars but are not inclined to spend the time or effort which Paste Wax requires.

Apply with Cloth, Brush or Spray

Johnson's Prepared Wax
Liquid is very easy to apply and polish—but very
little rubbing is necessary.
You can go over a good
sized car in half-an-hour.
It preserves the varnish
and protects it from the
weather, adding years to
its life and beauty. It covers up mars and scratches
— prevents checking —
sheds water and is absolutely dust-proof.

Tell your dealer that Johnson's Prepared Wax is now made in *Liquid* form and insist upon him securing it for you.

STOP-SQUEAK OIL

Johnson's Stop-Squeak Oil

Has the remarkable property of seeping rapidly between the spring leaves

and to the furthermost wearing points and it there becomes a heavybodied lubricant.

The irksome task of jacking up a car, prying apart the spring leaves and lubricating them is forever done away with. You, yourself, can now keep your springs thoroughly lubricated at all times. All you need is Johnson's Stop-Squeak Oil.

Make Your Car Ride Easily

Johnson's Stop-Squeak Oil is a simple remedy for hard riding cars. Instead of bumping over the road, you fairly float along if your springs are lubricated, so you have spring action. Johnson's Stop-Squeak Oil reduces the liability of spring breakage.

For Squeaks of All Kinds

Johnson's Stop-Squeak Oil will remove squeaks of all kinds—in springs, shackle bobs, body, fenders, top, etc.—Just locate the squeak and touch it with Johnson's Stop-Squeak Oil.

S. C. Johnson & Son Dept. LD. Racine, Wis.

CARBON REMOVER

Johnson's Carbon Remover

Cures 80% of Engine Trouble

That knocking in your engine—the difficulty you have climbing hills—poor acceleration—lack of power pre-ignition—noisy motor, are all caused by carbon.

Put New Life in Your Engine

with Johnson's Carbon Remover and it will run like it did the first 500 miles — quietly and full of "pep". No matter how choked up your motor may be, Johnson's Carbon Remover penetrares and softens the carbon. It then burns and powders and is blown out through the exhaust.

You Can Do It Yourself

Five minutes' time and no labor required. Simply lift the hood and pour on ounce of Johnson's Carbon Remover into each cylinder through the petcocks or spark plug openings. Allow it to remain there from two to twelve hours—then drive your car for 10 or 15 miles. You'll be surprised at the wonderful improvement.

Use It Every 1000 Miles

If you will use Johnson's Carbon Remover at regular intervals, giving carbon no chance to accumulate, you will automatically eliminate most valve trouble and your engine will always be at its highest efficiency.

The illustrations are beautiful. Any garden-lover or home-builder will be sure to get from the book suggestions and ideas which will inspire him to attempts and achievements in his own garden.

Camehl, Ada Walker. The Blue China Book. Pp. 309, with 200 Illustrations. New York; E. P. Dutton & Co. 45. Postage, 20 cents.

This book does not undertake to cover the entire field of blue china, but makes a special study of the wares known to collectors as "Staffordshire Historical Pottery," for the fact has been discovered "that this group of English pottery is not only a valuable record of American country-places and cities as they appeared a century ago, but it is, at the same time, a surprizingly complete history of the first three centuries of our national life." It is not a book that one can describe except to say that it is large, beautiful, comprehensive, and exhaustive. Even collectors may be astonished at the multiplicity of subjects and sketches which the English potter reproduced on his plates, pitchers, and platters. We find natural scenes, noted buildings, portraits of statesmen and warheroes, steamboats and railroads, the commemoration of epoch-making events, and tributes to the New World's great men and cities. Then there are some supplementary chapters on the White House collection of Presidential china and the correct stories of the "Willow Pattern," "Doctor Syntax," "Don Quixote," and "Wilkie" series. It is an interesting and edifying work, making us place a higher value on some of our own possessions and long for others which we lack.

Wood, Grace, and Burbank, Emily. The Art of Interior Decoration. Pp. 341. Bustrated. New York: Dodd, Mead & Co. \$2.50. Postage, 16 cents.

It would be difficult to find any one who has not, at some time, faced the problem of furnishing a home, or even one room, so as to get the best and most satisfactory results. The authors of this book have used the didactic method in offering clear and terse suggestions, aiming at clearness and brevity, and have urged all would-be decorators to observe the laws of harmony and simplicity, and to insist upon spaces, which, "like rests in music, have as much value as the objects in the room." By illustration and detailed description the furnisher is cautioned against the usual glaring faults and encouraged to consider the use of the room, the position as to light and heat, and especially whether one aims at comfort or formality. "One flower, carefully placed in a room, will have more real decorative value than dozens of costly roses in wrong vases against mottled, linedestroying backgrounds." In reference to textiles for draping and covering, ornaments, lamps, candlesticks and fixtures, pictures and frames, all points are carefully considered, but with this advice: "When in doubt, always err on the side of simplicity." We find the usual exposition of period furniture and its value, but the main principles accented throughout are: (1) Good Lines; (2) Correct Proportions; (3) Harmonious Color Scheme, and (4) Appropriateness. For all these, self-education is necessary by reading and by seeing beautiful furniture and furnishings.

Burnap, George. Parks, Their Design, Equipment, and Use. Pp. 328. Illustrated. Philadelphia and London: J. B. Lippincott Company. \$6. Postage, 29 cents.

Mr. Burnap, the landscape-architect of public buildings and grounds in Washington, D. C., has made radical changes in connection with small parks, his idea being "to make them striking as focal points of the street system and of interest to the residents of the neighborhood"; and, in order to discover the best things that can and should be done for all parks, he traveled widely in this country and abroad, so that parks that he praises as well as those he censures are illustrated by photographic reproductions. It is a book especially adapted for members of city park boards, to park superintendents, and to all landscape-architects, and any one interested in the beautification and healthfulness of municipalities. The points considered are practical and of real value toward enlightening the public "in whose interest all parks are created and whose support is indispensable to a realization of all park projects," It is a beautiful big book, profusely illustrated, and dealing intelligently and logically with park problems, the use and abuse of park effigies and monuments, and the proper disposition of flowers and sents.

Tryon, Lillian Hart. Speaking of Home. Pp. 263. Boston and New York: Houghton Mifflin Company. \$1. Postage, 10 cents.

These essays of a "contented woman" would go a long way toward making any woman contented if she could get the same satisfaction and delight out of homely domestic tasks. They are humorous and graphic descriptions of the daily tasks of housewifery, of constantly recurring events in every-day life. They call attention to the attractive side of unalluring duties and lay especial stress on the executive ability, brain-power, and tact necessary for successful home-building and directing. The style is brilliant. Hest of all, the author takes her reader back to vivid scenes of her own childhood, home experiences, and daily problems. The chapters on "Keeping House by Ear," "On Buying at the Door,"
"The Conservation of Shabbiness," and "Rag-bags and Relies" are especially fascinating. Now and then we are charmed by a brilliant characterization of personality or a critical saying that is illuminating as well as entertaining.

AS TO BERNARD SHAW

Burion, Richard. Bernard Shaw: The Man and the Mask. Pp. 305. New York: Henry Holt Company. \$1.50 net. Postage, 12 cents.

A recognized authority on the modern drama here presents a critical study, with wealth of detail, of Shaw, the dramatist. An analysis of his plays in chronological sequence is given, emphasis being laid on the dramatist's technique, as well as upon the teaching and literary quality of the work. Shaw's craft as "an artist of the theater" and his intellectual significance as publicist and philosopher are studied. His extraordinary vogue as a dramatic author is of course accentuated. Whatever one may think of this strange and fantastic apparition in current literature, it must be admitted that his vogue is imposing. Many books have been written about the man. Shaw, asserts his latest biographer, first suffered from the darkness of obscurity; now he suffers from "that excess of light offered by newspapers: which is darkness visible." If the mountebank still hides the man, Mr. Burton observes, he has himself largely to blame for it by putting "an antie disposition on." The present volume, therefore, essays to find "the man behind the mask, and to exhibit

Lightwhere you want it

Why put up with dim light—distant light—wrong angle—shadows? Here is a lamp that delivers light exactly where you want it.

"Stays put" anywhere. Clamps or stands wherever you want it. Adjusts light to any angle.

For Dressing: light from any angle, side, top or bottom.

For Shaving: light straight on the face, good as daylight.

For Reading (especially in bed): light over the left shoulder. Solid comfort.

For the Office: light directly on the desk instead of wall sockets.

For Travelling: light wherever you

are, whenever needed. Folds compactly. Weighs only 20 ounces.

Every home and office should have a Wallace Lamp—and keep it working. It certainly is a convenience and comfort.

Comes in brass, bronze and nickel with 8 feet of wire and plug ready to screw into any socket. Price, \$3.00—at department, hardware and electrical stores.

Factory: Danbury, Connecticut

the true lineaments of a forceful and serious satiric thinker, whose skill in dramaturgy places him with the ablest playwrights of his time." Readers who are interested in the recent evolution of the drama and in its foremost protagonist will find much that is entertaining and genuinely interesting in Mr. Burton's pages.

While the author has given up the larger pertion of his book to discussion of the plays, he has by no means neglected to describe the personality of his hero. A chapter is devoted to Shaw in his character of poet and mystic. Even as philosopher Le bulks large in his admiring biographer's view. He believes, we are here told, in the will to live of Schopenhauer, the will to power of Nietzsche, and the wish of Freud. But "he adds an altruistic aspiration in the service of others which is absent from their teaching."

HEATON, THE POSTAL REFORMER

Porter, Mrs. Adrian. The Life and Letters of Sir John Henniker Heaton, by His Daughter. With twenty Illustrations. Octavo, pp. vill-295. New York: John Lane Company. \$3 net. Pustage, 18 cents.

Sir John Henniker Heaton, England's great postal reformer, is not so well known is this country as are other Englishmen of distinction whose fame has transcended national limits. Yet his work was such as to deserve some notice in a country where captains of industry are rated so high. He was one of Britain's empire-builders, and was so well recognized as such by his countrymen that he earned from Lord Carzon this tribute, which his daughter in her hiography of her father uses as motto for the title-page: "In my opinion, the work of Sir John Henniker Heaton has done more to draw the Empire together than all the speeches of all the statesmen on both sides of the ocean."

The biography has been issued in sumpboos form and with many illustrations. Prepared "by loving hands," as the preface. notes, the book gains the attention of the American reader from the first, "A man of Kent," Sir John Henniker Heaton was born at Rochester, England, in 1848. He was the son of Lieut.-Col. John Heaton, of Lancashire, and was of "gentle birth," as the saying is. His daughter gives some incresting details of his early life. The happiest memories of her father's boyhood, she writes, were those of "the long summer hours he spent bathing in the Medway and. after a swim, lying on the banks reading and ne-reading his favorite books, 'The Pathfinder' and 'The Last of the Mohicans,' and dreaming the long, long dreams of boyhood." The future man of action, who was to attain to distinction in a practical domain, was hardly foreshadowed by the traits discernible in early youth. At the ago of ten, his daughter says, he knew by heart the whole of Pope's "Essay on Man," and could write page after page of Motley's "Rise of the Dutch Republic." At the age of sixteen, "adventure lit her stars for him," and he was free "to roam the world at his will." Australia beekoned to him, as it did to so many Englishmen bent upon adventure. There he found employment in the great sheep-stations, and there, as his daughter says, he built up the iron constitution for which he was noted. There be knew hardship, and it was during his solitary rides from one isolated station to another "that the seeds were sown of his future campaign in the cause of cheapening postal and telegraphic communication throughout the world."

The Best Magnet Hammer on the Market

Silver Medal Panama-Pacific Exposition

ARTHUR R. ROBERTSON, Sole Mfr. BOSTON, MASS. It was in the early '80s that Heaton, by that time a rich newspaper proprietor, returned definitely to England. Entering the House of Commons as Conservative Member for Canterbury, he began immediately to devote himself to what was to become, in the words of T. P. O'Connor, his iriend, "the master passion and almost sole purpose of his political life." The author has included in her book a chapter from the pen of the famous Irish parliamentarian and editor which throws abundant light upon Sir John's unique and altogether remarkable personality.

"Sir Henniker Heaton (writes Mr. O'Connor of his friend) did not effect in postal reform all he desired; but one great reform he did accomplish which entitles him to grateful and long-enduring memory. To him more than to any other human being is due the penny postal service between England and America—one, doubtless, of the many causes that have brought the peoples closer together." As to the personal traits and methods of the noted postal reformer, his friend continues:

"He was one of the great unseen powers in the House of Commons, because no man in it was so constant, so generous, and so agreeable a host.... At his table there was no distinction of party: Liberals. Tories, Irish Orangemen, Irish Nationalists, all were welcome, and all felt equally at home.... He was a great clubman, and was one of the founders of the Hath Club. He had strange fads about health, and one of them was a faith in the efficacy of the Turkish bath. He visited the Continent freely. In the winter he might be seen, tall, eager, ingenuous, perspiring at the tables in Monte Carlo, now and then shaking the building with that loud, resounding laugh which was so familiar to his friends."

OTHER BOOKS WORTH WHILE

Santayana, G. Egetism in German Philosophy.

8-1, pp. 171. London and Toronto: Dent & Sons.
piew York: Charles Scribner's Sons. \$1.50. Postage,
12 cents.

The former professor of philosophy at Harvard aims to describe "as an outsider," not claiming especial authority, "the aroma of German philosophy that has reached my (his) nostrila." He takes the position of an intelligent layman who formulates for himself the arguments of the case as he hears them, and expresses his opinion upon their strength, weakness, and value. "Egotism." he finds -- "subjectivity in thought and wilfulness in morals . . . is the soul of German philosophy." Egotism is not, however, unnatural, but "a genuine expression of the pathetic situation in which any animal finds itself upon earth . . . but . . . it is a thing to abstract from and to discount as far as possible." The fault or misfortune of Germany is that it "glorifies what is an inevitable impediment." So that German philosophy shared and justified . . . that spirit of uncompromising self-assertion . . . which the German nation is now reducing to action." "The great characteristic of German philosophy is that it is deliberately subjective and limits itself to the articulation of self-consciousness," calling itself idealism. So the book is a review of the leading thinkers in Germany since the Reformation, tracing the genesis, diffusion, and victory there of this subjective mode of thinking. The author shows how egotism has become bent into submission of self to a transcendental idea like that of the state, even at the cost of essential abandonment of a real Christianity and the readoption of a real heathenism. Professor Santayana's keen analysis will be anything but pleasing to the Germanic mind. His processes are orderly, and proceed cogently to the last chapter on "Egotism in Practise." Those who remember the cynical answers of Germans in 1914 to complaints of their barbarity will appreciate this:

"If we do not agree with (the egotist) we are not merely mistaken . . . we are false to ourselves and ignorant of our ideal significance. His ego gives us our place in the world. He informs us of what we mean, whatever we may say."

Is this not a clear etching of the German ipse dixit?

Hornbeck, Stanley K. Contemporary Politics in the Far East. Svo. pp. xii-466. New York: D. Appleton & Co. 1916. \$3. net. Postage, 16 cents.

For the present the reading public is too much concerned with what is going on in Europe to give much thought to China and Japan, but the time may not be far distant when these countries will occupy the center of the stage in the great worldwide movement now in process. When that time comes, books of this order will be consulted.

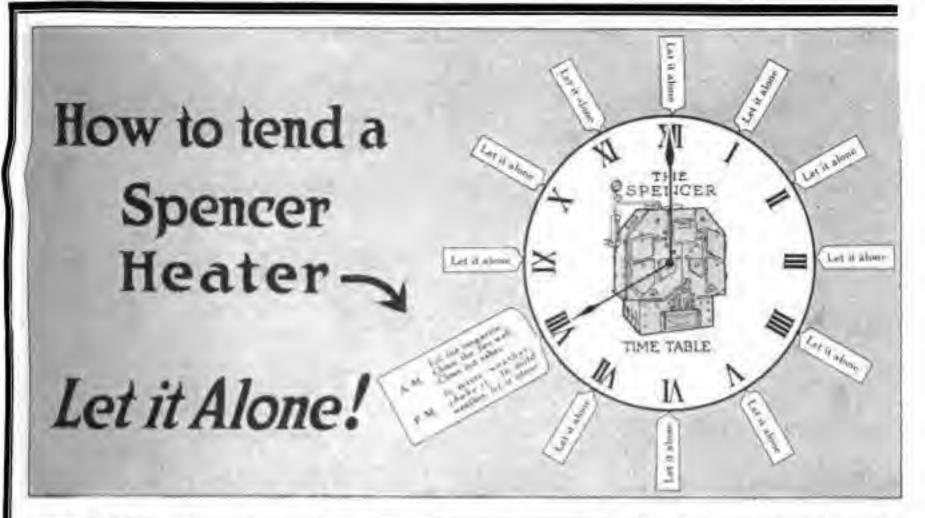

The claim is made by the author that of the scores of books written within the last twenty years on Japan and many on China "there is not one which has undertaken to give, within a single cover, a brief account of Chinese polities, of Japanese polities, and of some of the outstanding features of the international situation in the Far East. This the present book attempts to do." Within the covers of this carefully prepared volume there are brief historical sketches which are of much value in understanding the relations between the countries treated. The data furnished are valuable, and the interpretation of the situations, discust by one schooled in political science and who was for some time instructor in the Chekiang Provincial College and in the Fengtien (Mukden) Law College, gives more than ordinary weight to this production.

The Victor Book of the Opera. Camden: Victor Talking Machine Co. 560 pp.

This volume might in one sense be termed an operatic encyclopedia. It tells the story of 110 operas—practically every one known to the musical world. Proper pronunciations of the titles of the operas are given, together with a complete history showing composer, author of text, first production in the leading operatic centers of the world, and prominent singers who appeared in these productions. It describes the plot of each opera, in many cases giving the words of the more prominent solos. For those who would enjoy the opera without actually going to it, this book may be recommended.

Rational Orthodoxy: Essays on Mooted Questions. New York and London: Funk & Wagnalls Company. \$1.50 net. Postage, 12 cents.

No author's name appears on the titlepage of this unusual volume. "By a Member of the Presbytery of New York" gives the only clue to its authorship. Is he quite an orthodox member? will be asked by the reader after a few pages have been read. The question will find answer according as the reader accepts or denies the book's replies to certain other questions, which are fundamental—such as, "In what way and how far is the Bible inspired of God? In

THERE is only one heater built for steam, vapor or hot water that runs best when tended least.

It is the Spencer Super-Standard HEATER.

For real Automatic Action is one of the features that makes the Spencer super-standard. Because of that, it takes entire care of itself, except for two calls a day. (See diagram below).

In the morning, shake it, clean it, fill the magazine. In the evening, give it a slight shake, with no more coal unless the weather is very cold. Forget it for the rest of the day.

This Diagram shows the Magazine which feeds the coal all day, and the Sloping Grates which distribute the coal at even depth, herping it all ofire all the time, with no waste.

For the Spencer is made to stay alone all day. If tempted to poke it occasionally (as is necessary with all other boilers), Don't. A Spencer is like a thoroughbred horse, not to be worried.

Because of that automatic action, you don't need a special fireman. In a big building, the janitor or porter is enough, and he can do a full day's work on his other duties. In a residence, a few minutes in the morning and at night are all a Spencer needs, whether by man or maid.

The Spencer is so constructed that if the simple instructions we furnish are exactly followed, it will give the highest efficiency with the smallest attention.

But that automatic labor-saving action is only one of its superstandard points.

The OTHERS are:

the usual costly coal.

(1.) Saves Greatly in Coal Cost. The Spencer is especially built to burn a very small, low-priced coal, costing nor-mally from one-third to one-half less than the large domestic sizes required for the ordinary heater. It burns this small coal with perfect efficiency, and no more tons than the ordinary heater burns of

The low-priced coal usable in a Spencer may be No. 1 Buckwheat or Pea in the East; Semi-Anthracite or Lignite in the West; Buckwheat and Pea-Coke anywhere.

(2.) Pays for Itself Quickly. The Spencer in a few years pays its own entire cost by its large savings in coal bills.

(3.) Perfectly Even Heat. The exact automatic action produces an unvarying temperature, at the degree you want, day and night. No over-heat or shivering chill,

(4.) Adds to Property Value. A Spencer, for the above reasons, and because it doesn't break down makes a building better for selling or renting.

Write for the interesting Spencer Booklet describing the construction and giving the pictures. Take it to al Bank Building your architect and heating contracter for consultation.

THE AFROSHADE COMPANY Waukesha, Wic. 765 Oakhind St.,

what way was Man created and how long has he lived on the earth? Was Jesus Christ born of a virgin, or was he the natural son of a human father?"

Whoever the author may be, he soon persuades us that he can reason and he can write. In his reasoning he aims to avoid any appeal either to human or divine authority. He sees deity in Christ; he believes in the Triune God; and he argues against Darwinism and for Creationalismnot to mention other points discust by him. "Sound philosophy," he says, "is nothing else than rational good sense correctly analyzed and distinctly stated. False philosophy is always a departure from good sense"; and, therefore, he subjects Darwinism, and some other presentations, to severe tests of common sense.

As to Creation and the Creator, he insists that "we obtain a rational knowledge of our Creator by means of inferences founded on our own experience." And "belief in an intelligent author of the universe," he insists, "provides also for an understanding concerning the origin of man." Between "evolution by natural eauses and creation by the hand of God," he chooses promptly on his reasoning, and says: "There is no evidence that any creature has ever occupied an intermediate place between man and the ape, or that man has ever been less human than he is to-day."

Merrill, Samuel. The Moose Book. Facts and Stories from Northern Forests. Illustrated with Re-productions of Paintings, Drawings, and Photographs by Carl Rungius and others. Pp. 366. New York: E. P. Dutton & Co., 1916. \$3,50 net. Postage, 18 cents.

Through this handsome volume, so profusely illustrated, the moose comes to his own in literature. The entire field of his domain in America is covered, also that of his European kinsman, the elk. Known as "the grand prize in the lottery of Ameriean sportsmanship," the moose offers mag-nificent opportunity for outdoor study of life and nature, and this book about himhis history, his habits, his habitat, whatever pertains to him-is worthy his character and record. And, in spite of the zeal with which he is hunted, his numbers are said to increase.

Schaeffer, Henry, Ph.D. The Social Legislation of the Primitive Semites. Pp. 245. New Haven: Yale University Press. \$2.35 net. Postage, 12 centa,

This book, crowded with interesting information about the laws and customs of the ancient Orient, incidentally illustrates the importance of the study of comparative religion. The writer devotes much of his exposition to Arabian and Babylonian laws; and these, as he shows, shed a flood of light upon the cognate usages of the Hehrew people. Most of the subjects he selects for discussion are still of living interest, e.g., poor-laws, landownership, taxation, interest. He devotes a chapter, which we hope he may one day expand, to the social problem as viewed by the prophets. The book is a good illustration of a type of research which can never hope to be very popular, but which can never cease to be indispensable to those who really care for the past or for the origins and history of institutions,

Case, Clarence Marsh. The Banner of the White House. New York: Scribner's Sons. \$1 net. Postage, 10 cents.

This is a story which deals with the son of Horsa. The author, a teacher in Indiana, gives an excellent view of Saxon life and tries to show the beneficent influence of Christianity on the warlike peoples of ancient Britain. The book is full of pieturesqueness and excitement.

Caille 2-cycle motors have set new performance, endurance and economy records. There's a Caille to fit your boat.

"CAILLE ARISTOCRAT" — the masterpiece of over ten years of experience in the building of high grade marine engines. Ask about our Caille 4-14 four-cycle medium-duty marine motor.

Doesn't make any difference where you're planning to go this summer—you'll have a hundred per cent more fun if you're able to get out on lake or stream and breathe in the vigor, vim and vitality of the great outdoors.

The Caille 5-speed Master Motor makes your rowboat into a dependable, efficient motor-boat. You can get to the most distant fishing grounds, or skim around the lake amid cool breezes, without a thought of fatigue.

The exclusive Caille 5-speed feature has revolutionized the entire portable boat motor field and turned the thoughts of tens of thousands of people to the joys of motor-boating.

Easily attached—and a child can operate it. Let the wife and kids, away at an inland lake, have a Caille-equipped rowboat. They'll enjoy the summer twice as much.

Write for Master Motor Book today.

CAILLE Perfection Motors

For years Caille Perfection Inboard Motors have enjoyed world-wide dominance. They are made in sizes from 2 to 30 h. p.—1 to 4 cylinders, 2 cycle or 4 cycle.

And every type we build is the specialized, supreme result of years of experience.

Tell us about the type of motor you're interested in. We'll be glad to have one of our staff of experts go into the matter fully with you.

SPICE OF LIFE

Pork in Ruins .- Guide-" This is the Parthenon."

Tourist-" Gee, what a Congressman they must have had! "-Life.

Easy.-" Don't you find it hard these times to meet expenses? "

'Hard? Man alive! I meet expenses at every turn."-Boston Transcript.

No Amateur.-Junge-" Were you ever arrested before? "

RAGOLES-" Honest, now, Judge, do I look like I was a bud jest makin' me dayboo? "-Columbus Citizen.

Keeping Her Good,-" Father, dear, do you consider it sinful to be envious of

"Of course, I do, Helen. Extremely so," "Then I'm afraid I'll have to get a sealskin coat like Polly Gardner's."-Life.

Somebody Blundered.—" Get me a can of beer," were the first words spoken by Murphy when found, testified Brandt. lle was given a pail of water instead, and almost immediately after drinking it became unconscious. - Milwaukee Sentinel.

A Kentucky Incident.-Ting-a-ling-aling!

The Rev. George C. Abbitt took down the receiver and placed it to his ear.

"Is that the Dickel Liquor Company?"

a woman asked.

Mr. Abbitt recognized the voice as that of one of his parishioners.

"No," he replied in stern reproof; "it is your rector."

Was there a dull thud?

No.

"Indeed," said the lady, quick as a fash, "and pray what are you doing there? "-Hopkinsville New Era.

A Lesson in Grammar.-Grace's uncle met her on the street one spring day and asked her whether she was going out with a pienie party from her school.

"No," replied his eight-year-old niece,

"I ain't going."

"My dear," said the uncle, " you must bot say, 'I ain't going.' You must say, 'I am not going.' 'And he proceeded to give her a little lesson in grammar: " 'You are not going. He is not going. We are not going. You are not going. They are not going.' Now, can you say all that?"

"Sure I can," responded Grace quite heartily. "There ain't nobody going."-

Harper's Magazine.

Pork's Laureate,-Mr. Nicholas Longworth, who usually takes off the lid only in private from his comic gift, let that gift soar and bubble in the House the other day, notes the New York Times, which quotes his parody on "Punch, Brothers, Punch," as follows:

Dig. brothers, dig with glee; Dig to the bottom of the treasuree. Shovel out the shekels for the Kissimmee. Millions for nitrates on the Tennessee; The South is in the saddle, you bet, by gee! Dig to the bottom of the treasuree.

Dig. brothers, dig with glee; Why leave a nickel in the treasuree? Leave the accounting to William G., He can fake up a balance to a T. The voters are plunged in lethargee-Dig to the bottom of the treasures.

Unspoiled .- The lady who likes children was gushing over Helen, aged three.

"How old are you, darling?" she asked. "I isn't old," said Helen. "I'm nearly new."-New York Times.

The Right Spirit.-Host (at afternoon tea)-" May I introduce my friend, Mr. Cameron?

DEBUTANTE FROM THE WILDS-" Of course. What d'yer suppose I come for? "

Touchy .- GOLF PROFESSIONAL (giving a lesson)-"You know, sir, you lift your elbow too much to play golf properly.'

NEW MEMBER-" How dare you! I'll report you to the committee! I'm a lifelong teetotaler ! "-Tit-Bits.

Positive Proof .- " Bad luck that for poor old Bill," said Jinks the chauffeur. "He got fined for taking out his employer's car without permission."

" But how did the boss know he took it?" " Bill ran over him." - New York Times.

Explicit.—Country Lady-"I've been expecting a packet of medicine by post for a week, and haven't received it vet."

POST-OFFICE CLERK-"Yes, madam. Kindly fill in this form, and state the nature of your complaint."

LADY-" Well, if you must know, it's indigestion." -Tit-Bits.

Reducing the High Cost of Living .-The Congressman had received ten applications for pea-seed from one constituent. and when the eleventh came he wrote:

"I am sending you the seeds, but what in Heaven's name are you doing with so much pea-seed? Are you planting the whole State with peas?"

"No," came back the answer, " we are not planting them at all. We are using them for soup."-Harper's Magazine.

Ferro Concrete Building

A building of diversified uses and embodying unique features of design.

Its first eight floors and basement are used in the preparation of Dove Brand hams and bacons and include a number of cold storage rooms; the ninth, for storing supplies and for miscellaneous purposes; the tenth, for the office of The John C. Roth Packing Co. and the eleventh as a beautiful roof garden.

The special features of design, such as the cold storage wall construction up to the ninth floor, the picturesque roof garden with its sunken lake and its ornamental balustrade, were executed with ease in Ferro Concrete construction. Indeed, Ferro Concrete in limited to no one type of construction but embodies the best in them all. It is the result of years of practical study and experience with all types of reinforced concrete construction.

No matter what the purpose of the building, Ferro Engineers know from actual experience what construction is best. They know how to take advantage of the peculiar characteristics of concrete and reinforcing steelwhere to save without decreasing the usefulness or the strength of the building. Their experience and the organization behind them enable them to complete buildings on time, to keep their promises to the owner.

Ferro Concrete has been used in almost every type of large building in the United States-manufacturing and office buildings, factories, warehouses, hotels, banks, hospitals, etc. We will gladly answer inquiries from interested owners and executives concerning the various features of our work and organization. It will cost you nothing to get in touch with us. Write.

Out-out view showing how the UNINERFEEL burnes coul on the "sandle" principle. Coul for

Everywhere, from Maine to California, UNDERFEED Furnaces and Boilers are being installed as rapidly as we can turn them out. Forty-two thousand, three hundred and twenty-seven!—That's the number of Williamson UNDERFEEDS in use at the writing of this advertisement. The number grows daily. And back of every one is a guarantee of coal bills reduced 34 to 34. Just figure the millions of dollars saved to users the UNDERFEED way—guaranteed, mind you!

Back of that guarantee stands a million dollar concern. No matter where you live, or what dealer sells you an UNDERFEED, this guarantee is always good, provided the apparatus is properly installed and operated.

Read the letters shown to the left—picked at random from thousands just like them—letters telling of more and better heat, and of coal bills cut 1/2 to 2/2 guaranteed with the UNDERFEED!

IN BUILDINGS LARGE AND SMALL For Warm Air, Hot Water, Steam or Vapor

Forget how large or how small your building may be. Remember the UNDERFEED guarantee. The UNDERFEED saves, first, by burning the cheaper grades of coal as effectively as others burn the costlier grades. That's a first great saving you're always sure of!

Then, again, the UNDERFEED burns coal on the "candle" principle. Fuel is always below the hot, clean, effective fire, which is never smothered or chilled by new coal being dumped on. The fire never has to fight its way up against fresh coal. Smoke, soot or gas—valuable heat elements—are transformed into clean, effective heat as they pair up through the fire!

WILLIAMSON UNDERFEED Furnaces

Cut Coal Bills 1/2 to 1/3 Guaranteed

And the same great guaranteed saving can be yours, whether you heat with warm air, hot water, steam, or vapor. It's all the same to the UNDERFEED. No stooping. No grabbing. No partly burned coals. Everything burned to a clean white ash!

BIG MONEY-SAVING BOOK FREE

"From Overfed to UNDERFEED" pictures and fully describes the unique, scientific UNDERFEED principle. Shows how easily operated by a bor of twelve. You will find this free book mighty interesting. What is more, you will find it really, downright money-saving—guaranteed with the UNDERFEED. The coupon brings it without tost or obligation. Send the coupon NOW.

12 Months Ended December 31, 1916

Gross from Operation Operating Expenses	\$3,228,666,40 1,704,934.83		
Net from Operation Interest Charges	\$1,523,731.57 679,019.58		
Balance Amount required to pay 6	\$ 844,711.99		
dends on \$1,500,000 Prefer	red Stock 90,000,00		

Dividends are earned over nine times.

The investment in the Company is largely in excess of all outstanding bonds and Preferred.

The Company is engaged in supplying gas and electric light, heat and power; and the stability of this business is shown by a continuous growth of earnings over a long period of years.

The City of Denver is among the leading com-munities of the country, and the total popula-tion served by the Company is estimated to exceed 260,000.

The Preferred stock is prior, as regards both assets and dividends, to the \$10,000,000 of Common stock, and the Company has a continuous dividend record since 1907.

Additional Preferred stock can be issued only when earnings are at least twice the dividend requirements on the amount outstanding, plus the stock proposed to be issued.

A highly efficient and progressive management has established a secure earnings position and excellent public relations. The Company is a subsidiary of Cities Service Company, one of the largest Public Utility holding companies in America.

Price 95 plus accrued dividend

THE REAL CAUSES OF HIGH FOOD-PRICES-POOR CROPS COMBINED

HE real cause of the high cost of food I in this country to-day, according to a writer in the New York Times Annalist, "is not that we have exported so much, but that we have not had more to export. Two-dollar wheat, he says, "is the product of short crops even more than it is of war, and what is true of wheat is true of food in general." In fact, prices in 1916 were such that the farmer more than made up the difference in the size of his crops by the prices he was able to charge. As to what an embargo would mean, the writer

There has been talk of the need of an embargo on the export of food, and particularly of wheat. The fact is that we have retained out of the last three wheat-erops a good deal more wheat than we retained out of the crops of the three years preceding the war. The exports have been larger, but so, too, has the aggregate yield been larger; despite larger sales abroad, we have had more for home use. That refutes the argument that an embargo is needed to retain enough for our own requirements.

A table is presented by the writer to give a comparison of production, imports, and exports of wheat for the last three years with the three years before the war, "which disproves much which has been said about the reasons for the high cost of wheat." Following is this table;

WHEAT-SUPPLY BEFORE THE WAR AND SINCE

		тра.	4.77

	Detrived for	Home Use	

While the war stimulated the demand for food-products, "it alone does not by any means account for the prices which we and other consumers of food are paying at present." In fact, "it was not until short crops in other words, a shortage of supply - were added to the exceptional demand that prices advanced in extraordinary manner." The writer says further on this subject:

1,774,343,535

1,866,349,243

J years

"Had the crops last year been as much above the normal as was the demand, the price record of 1916 and of this year, too, would have been very different. Had there been no war, the demand for food products would have been less keen, of course, but a corresponding falling off in the supply would inevitably have found decided reflection in price.

"The normal increase in population calls for a corresponding increase in crops to maintain a stable price level, other things being equal, but in 1916 the production of farm-products not only did not come up to the large figures of the previous years, but, in fact, fell considerably below the average. The total crops of 1916 fell 1.4 per cent. under the average of the five-year period from 1909 to 1914. And American experience in this respect was the experience of practically the whole world.

"Here is a table of the average price per bushel of eight breadstuffs and other food-products which brings out clearly the effect of last year's short crops upon the price of food. It shows that the great bulk of the increase in price occurred not upon the outbreak of war, but only well along in 1916, when it was becoming evident that the year's crops were going to be short:

	1914	1915	1910
January	\$0.90	80.68	\$1.00
February	0.91	1.07	1 14
March	0.92	1:08	1.11

Namuber	9.96	un.	1.61
December	0.90	1.02	*1 66

· Applee and beans included at the November price,

"The products included in this table are wheat, corn, oats, rye, buckwheat, pota-toes, apples, and beans. The average shown is the average prices paid in each month to producers, as reported by the United States Department of Agriculture.

Another table presents a comparison of the Annalist's index-number by commodities for a week in February with the figures for one, three, five, and ten years back, It shows the high prices of food at present compared with other years and brings out also the fact that prices "were still very much below the present level long after the war had started." A year ago food-prices were only about 10 per cent, above the average for the year 1912, "whereas now they are over 60 per cent, above the average five years ago." These data all have to do with wholesale prices. As to retail prices, the New York City Commissioner of Health in February conducted an inquiry into the relation of retail to wholesale prices in a number of New York City districts and made public a record of retail prices charged in eleven districts, compared with wholesale prices paid by dealers in those districts. The Annalist's writer presented an average of these retail prices, compared with wholesale prices, showing the difference between the two in price and in percentage, and cited the City Health Commissioner, as commenting on this showing, that it made it evident that the retailer "did not make more than a reasonable profit." Following is the record:

Whalesale Average P. C. Mint-Ret. Price. Ant. Price 20.95 5.20 64 3 25.54

That last year's wheat-crop, taking the whole world into the reckoning, was a short one most people knew; that it was the smallest since 1908 was not so well known, or that it was 22.5 per cent. below the high record of 1915. Bradstreet's believed real interest attached to the comparative showing that was made by various important countries of the world during the past two years, and hence presented a table with comments as follows, quantities being given in quarters of 480 pounds, there being eight bushels to the quarter:

Europe	1010-17	1013-15

6 Per Cent -Plus Profits

The conditions which surround timber ownership and lumber manufacture in the United States and Canada are not paralleled in any other industry. To those fully conversant with them (and to no others), these conditions offer unique opportunities for profit with complete security.

LACEY **Profit-Sharing Bonds**

are a new type of investment which enables the average investor to turn this situation to account. It enables him, with all the security of a high grade First Mortgage Bond, to receive interest at 6 per cent and at the same time to share in profits, which are usually very aubstantial. It goes without saying that this puts Lacey Profit-Sharing Bonds in a class by themselves. One of the reasons for their prompt popularity is the fact that they are available in denominations of

\$100, \$500 and \$1,000

The whole subject of this type of security is of extraordinary interest, and can be no more than hinted at in this announcement.

The name of Lacey is identified throughout the timber world with 37 years of unbroken conservative success in timber investments. We therefore feel that we can fairly presume to speak with some authority concerning timber securities.

that of the short-erop year 1915, but is nearly 100,000,000 bushels below the average yield in years previous to the war.

"The largest single decrease shown by any country, that by the United States, amounts to 368,000,000 bushels; Canada is credited with producing 176,000,000 bushels less, or about the same sized decrease as Russia; Argentina shows a loss of 92,000,000 bushels, and North and South America together return a decrease of 645,-000,000 bushels, or nearly seven-tenths of the entire world's decrease; Australasia returns a yield 60,000,000 bushels below 1915; and the only important gain, in fact, shown in the entire world is that by India, whose crop -a forecast of the crop of next March, by the way-is 64,000,000 bushels larger than the crop ripening in March, 1916.

"The almost general tendency toward reduced yields noted in 1916 sets that year apart as a period of disappointing outturn, and the only redeeming feature is that old supplies earried over from the preceding year were liberal. It is hardly necessary to remark that the coming crop season's developments will both attract and deserve

close attention.

AS TO CUMULATIVE PREFERRED DIVIDENDS

With investors and others interested in eorporation dividends, it is believed that a misunderstanding frequently exists us to just what the status is of a deferred dividend on cumulative preferred stock. It is not true, as some shareholders have inferred, that the cumulative provision attaching to a preferred stock gives shareholders something like a lien upon the property; in other words, that a euroulative preferred stock is allied to an interestbearing obligation, which a corporation can be forced to pay. This misconception was noted recently in Financial America by a writer who pointed out that cumulative preferred stock does not represent an obligation of any sort on the part of the company issuing it, but that it is "a profit-sharing proposition pure and simple." He says:

"The rights accruing to such stock represent, therefore, those of a partner in, but never as a creditor of, a corporation. The cumulative dividend is not a right at all, but a contingency. It becomes effective only if the profits of the corporation are realized and then distributed. The holder of a cumulative preferred share has a preferred position only in case profits are actually earned and, then, only if the company's interests permit of their being distributed. His claims for dividends obviously must be subordinated to the requirements of the property. This is requirements of the property. This is evident as a matter of law and of common sense. The common shareholder and the preferred shareholder are, after all, partners and upon exactly the same footing, except that the cumulative preferred stock must get dividends and be paid in case of liquidation before the common stock shares at all in the profits or assets of the company.

"The cumulative dividend, where adverse iness conditions have unexpectedly intervened, has always been a troublesome factor in corporation finance. It came into popularity during the reorganizations which preceded the formation of the United States Steel Corporation in 1901. But the capital readjustments of the last decade show that the cumulative dividend is frequently misleading and often unpractical. For this reason the action of various corporations in arranging with shareholders to adjust unpaid accumulated dividends on some equitable basis to provide a fresh start with a capitalization in line with proved possibilities is of the highest importance.

scientific circles.

Your oil runs low. You stop for a fresh supply.

You now come to a vital question. What oil will the dealer pour into your oil-reservoir? Will it be just "oil" or will it be the correct lubricant for your engine?

Among thousands of dealers this is what happens:

The dealer recognizes the make of your car-and the year's model. He runs his finger down the Vacuum Oil Company's Chart (shown above in miniature) until he finds your car's make and model. Then he supplies you with the grade of Gargoyle Mobiloils specified for your car by the Chart. This oil will effectively seal your piston rings against power-waste, gasolinewaste and oil-waste.

Why are thousands of dealers placing such reliance in this Chart?

Experience has taught them that something like 50% of all engine troubles are due to incorrect lubrication.

proven correct by repeated practical tests. But nothing has given dealers such faith in this Chart as their experience with the oils themselves. For an owe knows better than the dealer how difficult it is to excite efficient lubrication—and how much efficient lubrication means

They realize that scientific lubrication is a problem for specialists.

CERTAIN-TEED stands out conspicuously for quality, satisfaction, and economy. Any product bearing the name CERTAIN-TEED will measure up on all of these points. These are cold facts.

Certain-teed Certain-teed Roofing Paints and Varnishes

is the efficient type of roof. It is suitable for factories, office buildings, farm buildings, etc. For residences it is made in slate surfaced shingles.

CERTAIN-TEED costs less to buy, less to lay, and less per year of life. CERTAIN-TEED is light weight, clean, sanitary, and fire retardant. It will not dry out and is weather-tight.

It is made in three thicknesses—but only one quality—the best. It is guaranteed 5, 10 or 15 years, according to thickness (1, 2, or 3 ply).

This guarantee is backed by the largest manufacturer of prepared roofings and building papers in the world.

If you are building, or need a new roof, it will pay you to investigate CERTAIN-TEED before deciding upon any type of roof. For sale by dealers everywhere. are good, dependable products made by expert paint men, and guaranteed to give satisfaction. They are sold at a price which would not be possible if we depended upon an exclusive paint organization to market our product.

The enormous resources of the Certain-teed Products Corporation, and its extensive organization for the distribution of all CERTAIN-TEED products, make it possible to take advantage of every economy in buying, manufacturing and selling.

Even the professional painter can afford to use CERTAIN-TEED paints rather than to mix his own. All uncertainty is eliminated,

> all waste and left-overs avoided, and the quality is assured.

> Whether you do your own painting or employ a professional painter, your own interests will be best served if you insist on CERTAIN-TEED paints and varnishes.

"Prominent industrial corporations in the country report to-day unpaid dividends ranging from 10 to 81 per cent, of the face valuation of their cumulative shares. The work of readjusting the capital of corporations reporting these deferred dividends should proceed as rapidly as possible, both in the interests of the preferred shareholders and of their great organizations.

"In considering the allowance which they may ask for as to any unpaid ac-cumulation, preferred stockholders must bear in mind that they have a contingency to a preferred right should profits be earned. Their position is, therefore, not based on any realities of profits earned. This possibility for which they can ask an allowance on a readjustment, when discounted to the basis of present actuality, often shows for the first time that the preferred shareholder is after all only a shareholder and not a creditor. It is held, however, that this should not blind a stockholder to the necessities of the readjustment and to the mistake of continuing an unpaid accumulation.

NINE HUNDRED AND SIX LOCOMO-TIVES ORDERED IN TWO MONTHS

During the month of February orders were given to American manufacturers for 347 new locomotives. Of these orders, only 95 came from foreign countries. Since the beginning of the year, orders for locomotives have reached 906. This influx has been of such proportions that leading builders of locomotives are now "booked to capacity over the rest of this year and well in 1918," says The Journal of Commerce. Many railroads have been compelled to accept delivery in the first quarter of 1918. Inability to cope with the prevailing freight congestion and a desire _ prepare for crop movements have impelled this ordering of locomotives. Among the orders in February were 56 from the Lehigh Valley Railroad, 75 from the Illinois Central, 45 from the New York Central, and 20 from the Chicago & North Western, These and other February orders are shown in the following list:

December	111	241	111	464
Total	764	2,714	142	2,302

Meanwhile, the inability of ear-builders

to assure an early delivery of equipment has resulted in inducing railroads to build large numbers of freight-ears in their own shops. In February, the St. Paul road announced that its Milwaukee shops would build 2,700 ears and its Taeoma shops 1,000 cars. The Southern Pacific, after arranging for 3,250 cars at its Sacramento shops, announced that its Houston shops would build 1,365 ears. The French Government, after months of negotiations, closed in February a contract with the Standard Steel Car Company for 14,000 small freight-ears, to be shipped in parts and assembled at the plant the company owns in France. Orders for a total of 20,781 freight-cars were reported in February. Subjoined is a table as compiled for the writer in the Journal of Commerce. which shows how foreign and domestic orders contributed to the total business in January and February with the figures for each month last year:

	Demestic		For	reign	
January Yelemary March April May June June June June June June June June	2917 14 mis 4 7+1	1938 14.513 14.513 14.513 1.514 1.514 1.514 1.514 1.514 1.514 1.514 1.514 1.514 1.514 1.514 1.514 1.514 1.514	1917 5.300 Horo	1,000 1,200 2,075 1,300 2,140 7,240 4,000 1,000 8,300	
Total	21,679	111,045	\$9,500	29,724	

In the matter of passenger-cars, it appears from the same paper's showing that, while high prices had the effect of stimulating freight-ear construction, they placed a drag on the building of passenger equipment. With freight-cars the railroads can forego the complete use of steel and so can pare down costs, but with passengerears "there can be no step backward." Unless such ears can be built completely of steel, railroads would prefer to withhold altogether from placing orders for them. In February contracts for only 76 passenger-ears were placed as against 168 in January and 211 in December,

Rebuked.-Many stories are told of a former Canadian bishop who had passed his youth in Scotland, but flattered himself that not a hint of his origin could be gained from his speech or manner. One day he met a Scotchman, to whom he said at last, abruptly.

" Hoo lang hae ye been here?"

"About sax years," was the reply.
"Hoot, mon!" said the bishop sharply. "why has ye na lost your accent, like mysel'?"-Christian Register.

WARNING!

BEWARE OF SUBSCRIPTION SWINDLERS

Swindlers are at work throughout the country soliciting subscriptions for popular periodicals. We urge that no money be paid to strangers even the they exhibit printed matter apparently authorizing them to represent us, and especially when they offer cut rates or a bonts. The Litterary Distert mailing list showing dates of expiration of subscriptions is never given out to any one for collection of renewals. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect that the members of your community are being swindled, notify your chief of police or sheriff, and the publishers, and arrange another interview with the agent at which you can take such action jointly as may seem proper.

CURRENT EVENTS

EUROPEAN WAR

WESTERN FRONT

March 1.—The Germans continue to retreat along the Anere line, assert reports from London and Berlin. They are fighting rear-guard actions of in-ereasing severity, and the day's gain by the British is only 600 yards on a front of one and a half miles.

March 2.- The British Headquarters in France announces that the Germans have checked their retreat along the Bapsume line and have begun counter-attacks on the advanced English positions. The Kaiser's Army has already retired on a front of fourteen miles to the depth of from two to three miles, and the British are still pushing forward.

March 3.-London states that the British troops north of the Auere advanced a quarter of a mile on a front of five miles despite stubborn German resistance. A German counter-attack on outposts northeast of Gueudecourt was repulsed.

March 4 .- The British Army has taken over the French lines for twenty-five miles southward on the Somme front, and now holds the entire sector, states London. The replacement has been going on gradually for two months, and was completed to-day. German lines. on both sides of the Ancre are stormed and first-line trenches for two-thirds of a mile are captured.

The Austrians near Coritz make a vain effort to storm the Italian lines. The Italian War-Office announces that the attacks failed with heavy Austrian loss,

The Germans attack the French positions north of Eix on the Verdun front, but are repulsed, says Paris.

March 5, - London announces that the British advance on the Ancre has ceased, and it is believed that the Germans have reached the lines where they intend to make a stand.

The Germans win some trenches on the Verdun front, but are driven out by a French counter-attack later in the day.

The Italian War-Office reports that a mountain peak, 2,700 meters high, in the Costabella group has been captured from the Austrians.

March 6.—The Germans make a counterattack on the Somme front to recover the first-line trenches which they lost Sunday. They are repulsed by shellfire.

Italians repulse Austrian attacks in St. Pellegrino Valley, Rome announces, and capture a cannon and a machine

March 7. - A brisk battle in the air takes place over the Somme front. London admits that eleven British machines were brought down, while Berlin claims fifteen. Six German fliers are de-stroyed. Sir Douglas Haig reports that the information and photographs he required were secured, despite German resistance. There were a few local raids and artillery-duels in the Verdun

EASTERN PRONT

March 1.—During the night the Russians recapture the heights along the Kimpolung road on the Roumanian front. say dispatches from London,

March 3.—The Germans make a successful raid on the Russian trenches in Volhynia, reports Berlin. Two hundred and seventy-nine prisoners are taken and a mile of trenches won.

March 6.—The Russians make a night attack on trenches near Brzezany in

TURKISH CAMPAIGN

March 1.—General Mande notifies London that the Turkish troops retreating from Kut-el-Amara have been completely shattered. He places the losses of the Turks on the Tigris at over 20,000.

March 3.—The British Admiralty reports that the British river-gunboats on the Tigris passed the retreating Turkish Army on February 26, inflicted heavy loss by shell-fire, and destroyed four steamers and two barges filled with ammunition.

The Russians have captured Hamadan, an important Persian city near the Turkish border, London announces. From this position it is thought possible for the Russians to advance into Mesopotamia and assist the British Bagdad expedition.

March 4.—The Russian Army drives back the Turks on a front of eighty miles, near the border of Mesopotamia, according to an official dispatch from Petrograd. The Turkish town of Bijar is threatened.

March 7.—Reports indicate that a great Russo-British drive has begun in Asia. British cavalry is only nine miles from Ctesiphon, where a British army was decisively defeated last year. The Russians under the Grand Duke Nicholas are advancing in the rear of the Turkish Army at the rate of about ten miles a day.

GENERAL

March I.—The sinking of six ships, whose tonnage aggregated 8,953, is announced from London. Two American sailors from the bark Galgorm Castle are missing, and are believed to be drowned.

March 2.—A dispatch from Berlin via London says that the German Admiralty announces that no warning will be given to any ship found by submarines in the forbidden area of the Atlantic. The period of grace for sailing ships expired March 1.

March 3.—Vienna dispatches to London assert that Emperor Charles of Austria-Hungary has dismissed Field-Marshal von Hoetzendorf, who was the Austro-Hungarian Chief-of-Staff.

The U-boats sink one ship of 2,760 tons.

March 4.—Berlin announces that a 34,494ton transport was sunk in the Mediterranean on February 24. The report has not been confirmed from Paris, London, or Lloyd's.

U-boats torpedo four ships having a total tonnage of 36,562.

March 5.—One ship of 11,483 tons is sunk by a submarine.

March 6.—The United States Supreme Court decides that the German prize ship Appan must be returned to her English owners. The decision is unanimous.

March 7.—A report from Berlin states that submarines returning to their base between March I and March 3 reported the sinking of 204,000 tonnage of ships.

London reports a decided slump in U-boat sinkings during the past week. Twenty-three British merchant vessels were destroyed last week by submarines or mines; of these, 14 were over 1,600 gross tons and 9 under. Three fishing-smacks were sunk. The percentage of destruction has dropped from 1.04 per cent. of the ships entering British ports sunk in the first two weeks of February, to 0.46 per cent. sunk in the week ending Sunday. The British Admiralty

says that 12 vessels fought off their assailants, and 6,005 ships passed the blockade without incident.

FOREIGN

March 1.—The Entente Allies invite China to enter the war. It is reported that the remission of the Boxer indemnity and a revision of the tariff are offered as inducements.

March 4.—Commander R. R. Belknap, representing the United States, signs an agreement with the leaders of the Cuban Revolution guaranteeing fair elections and the recognition of Major Fernandez, one of the revolutionary generals.

The Chinese Cabinet decides that China should join the United States in breaking off negotiations with Germany, but President Li Yuan-Hung refuses his consent. The resignation of the entire Chinese Cabinet is expected.

The Belgian Government declares that Germany has issued a new edict closing many Belgian factories, thus increasing considerably the number of deported Belgians.

March 7.—Ex-President José Miguel Gomez, leader of the Cuban rebels, and his entire staff are prisoners in the hands of Colonel Collazo, leader of the Government forces, cables Hayana.

The Irish Nationalists in the Commons, headed by Mr. John Redmond, present a resolution calling for the immediate application of the home-rule statute to Ireland, says London. The resolution forces the Government to declare its Irish policy, namely, that any part of Ireland which wished self-government might have it, but that no coercion would be employed to compel Ulster to accept it.

DOMESTIC

THE GERMAN-AMERICAN CRISIS

March 1.—President Wilson informs the Senate officially that the United States Government is in possession of authentic documents disclosing how Germany intrigued to ally Japan and Mexico with her in war on this country.

Ambassador Sato of Japan denies emphatically that such a proposal would be entertained by his Government, both because of Japan's obligations to the Entente and her friendship with the United States,

A bill to empower the President to arm merchant ships, but not extending the authority he requested to use "other instrumentalities in defending American rights against the submarine meaner," is passed by the House, 403 to 13.

March 3.—In an interview given to the Overseas News Agency on the Mexican-Japanese plot, Foreign Secretary Zimmermann admits in part that he bad attempted to ally Mexico and Japan against the United States. He defends his note on the ground of military necessity, saying that it is a defense measure in the event of war with America, and that the measures proposed are conditional on American

An official statement from the Japanese Foreign Office at Tokyo denounces the German intrigue, and refers to the frequent attempts of Germany "to sow seeds of distrust between Japan and Great Britian and to cause the estrangment of Japan and the United States."

belligerency.

The State Department claims to possess information showing that Carranza might be an ally of Germany in the event of hostilities, and that German

If your brakes grab or slip-

Learn how leading car-makers guard against it

Your life depends on the efficiency of your brake lining. Grabbing or slipping brakes menace your safety.

In traffic, on hills, in an emergency, your brakes must work promptly and smoothly.

Realizing the importance of good brake lining, 22 leading car manufacturers and 10 leading axle makers select for their cars and axles the brake lining that won't grab or slip—Thermoid Brake Lining.

These cars use Thermoid Brake Lining:

Pierce-Arrow Briscoe Auburn
Paerless Pathfinder Service Truck
Marmon Cadillac Metz
Haynes Cole Hadson
Studebaker Apperson
Kissel Premier LexingtonDodge Chalmers Howard
Autocor White Rauch & Lang
Lippard-Stewart Motor Truck

These axles use Thermoid Brake Lining:

Timhan-Detroit Sheldon Hese
Columbia Torbensen Celfor
Russell
Peru Empire American

Why experts select Thermoid Brake Lining

These car makers and their engineers select Thermoid Brake Lining because they find, by scientific tests, that it gives consistently efficient SERVICE. They find its "co-efficient of friction" is ideal for a brake lining.

This means its surface is so made that brakes equipped with Ther-

To the property of the state of the property of the state
moid Brake Lining cannot grab or slip.

Three tests that prove Thermoid Brake Lining's worth

Thermoid Brake Lining proves its superiority in passing all three drastic tests by which brake lining efficiency is determined.

Co-efficient of friction test—Whether brakes act promptly and smoothly depends on the surface of the brake lining—i.e., its co-efficient of friction. Thermoid Brake Lining's co-efficient of friction is found by test to be ideal.

Absorption test—Tests show that Thermoid Brake Lining does not absorb water, gasoline or oil. Woven linings do. This moisture-proof feature means Thermoid is efficient in wet weather or dry.

Durability test—Tests show that Thermoid Brake Lining wears longer than ordinary lining. Also it wears down uniformly.

Scientific construction of Thermoid Brake Lining

The reason Thermoid Brake Lining has the ideal co-efficient of friction, is impervious to moisture, and is durable, lies in its scientific construction. In its process of manufacture, it has three exclusive features:

It has 50% more material than any woven brake lining

This means longer service—better service. Thermoid is 50% heavier than any woven brake lining on the market. That is why it is better fitted to stand the responsibilities placed on it.

2. It is grapualized

Graphalizing is an exclusive process that makes Thermoid impervious to all moisture and foreign matter, such as gasoline, oil, water, dust, etc. No other brake lining is graphalized, or can be. That is why ordinary brake lining goes to pieces rapidly.

3. It is hydraulic compressed

Powerful hydraulic presses compress Thermoid into a solid mass. This makes it far tougher and stronger than woven lining. It makes the surface ideal for brake lining: it can't grab and it can't slip. "The coefficient of friction" is just right.

Specify Thermoid

When you reline your brakes, specify the brake lining the experts specify—Thermoid. Jobbers, garages and dealers will be glad to supply you. It costs about the same as inferior brake linings.

Remember, your life depends on the efficiency of your brakes, and the efficiency of your brakes depends on your brake lining. Be sure your brakes are lined with Thermoid Brake Lining.

Our guarantee-

Thermoid will make good or WE WILL.

Why the Allies' "Great Drive" Was Delayed

Last Summer the whole World was asking: "When will the Great Drive of the Allies get started?" Field Officers and public were equally uncertain. The troops were ready. Transportation systems, food, ambulances—everything was there, except Guns and Shells.

Shells were needed by the million; orders were placed everywhere, but production had hardly begun. Why? Because nothing can be made rapidly and accurately, in large quantity without Gages. Before manufacturers could start their lathes they must have Gages, which require time and skill to make.

The Men Who Made the Gages Knew Why the Drive Was Delayed

The War has made momentous changes in manufacturing processes. The nations learned during awful sacrifice that to make shells, Gages are an absolute necessity. Let American manufacturers apply that lesson.

For sixty years America led the world in economical production of machinery. But they fell down on the first War orders because their standards of accuracy were too low. Soon they realized that Limit Gages

were absolutely necessary for rapid and accurate work. Gages will measure profits in the severe competition certain to follow the War.

The illustrations above show a thread limit gage in use—gaging a screw. If the screw is too small it will pass both sets of points, as shown at the left. A screw too large will fail to pass either set of points (center). If just right, it will pass the upper set and hang on the lower, the "touch" being governed entirely by the weight of the screw.

The two sets of points are fixed at a certain variation above and below the required diameter, and sealed. This variation depends on the work; the parts of a road scraper are not nearly so close to standard as those of an automobile, yet even the scraper must have some limits as to the size of its parts, in order that they may go together at all.

Whatever the product, Limit Gages are a prerequisite to accurate, economical production in quantity. Absolute accuracy is unattainable and unnecessary; a Limit Gage is made to check dimensions within the variation decided upon as permissible, and with it an inexperienced workman can gage thousands of parts in a day.

The parts that pass this inspection will be interchangeable, and will positively fit into the complete machine. Assembly is made easy and rapid. Since parts can be gaged so easily and cheaply, more frequent inspection is practicable, errors are quickly discovered and corrected, rejections are minimized. The result is a higher quality product at a lower cost.

For further information, write for General Catalog 37, or the Bulletin, "How to Measure Screw Threads."

AutoStrop Safety Razor

The Razor

The AutoStrop Razor has advantages which will be instantly appreciated by every razor user.

Instead of a blade that grows duller with every shave, the AutoStrop Razor blade grows sharper. Instead of continuous blade buying, the AutoStrop Razor effects a wonderful blade saving.

Instead of the trouble of taking apart after using, the AutoStrop Razor is cleaned and dried without removing a single part—not even the blade.

Yet it is as safe, as simple and as durable as any razor made.

The Offer

Any man would gladly buy a safety razor with these practical, desirable advantages. Are they real? Do they exist in the AutoStrop Razor? We know they do, but we prefer to let you prove them to your own satisfaction. Go to any razor dealer and borrow an AutoStrop Razor.

He will require no payment whatever. Take the razor home and use it for thirty days. If you like the razor, keep it and pay the dealer its price, \$5.00. Otherwise return it.

If your dealer cannot accommodate you, write direct to us.

The Truck That Began Right

O Pierce-Arrow truck has ever worn out. No Pierce-Arrow truck has become obsolete. Mileages as high as 150,000 are reported. Trucks that have seen six years' service are still in satisfactory operation. There is a good reason for this record. Five years of test and experiment preceded the sale of the first

PIERCE-ARROW

Motor Trucks

The result was that the first Pierce-Arrow truck went to its purchaser a perfect mechanism. No radical change in design or construction has been necessary in the thousands of Pierce-

Arrow trucks built since.

Set the pioneer 1911 Pierce-Arrow beside a 1917 Pierce-Arrow truck, and the difference is barely discernible. In those same six years other motor trucks have changed fundamentally in design and construction. It is because the first Pierce-Arrow trucks were built on fact, not theory, that they are all in satis-

factory operation today.

Specific data is available covering the cost of operation of Pierce-Arrow Motor Trucks in many different lines of business, such as Transport, Grocery, Contracting, Coal, Brewery, Tentile, Oil, Dry Goods, Chemicals, etc.

All Pietce-Arrew

trucks are equipped

with the worm-gost drive, which is u

TOPICS - OF - THE - DAY

THE RUSSIAN REVOLUTION

HE CRUCIBLE OF WAR has produced the Russian revolution, which, the New York Globe says, means "the overthrow of Germanism in Russia," and "destroys the last chance of a German victory," while The Evening Sun expects to see Russian "generals and battalions go forward with new

energy." Expert writers on Russian affairs are pointing out that when a nation is ruled, as Russia was, by a semialien bureaucracy, amazingly inefficient and corrupt. it can not face an enemy upon its own soil with much prospect of success, but when its bureaucracy was working, almost openly, to assist the enemy, an explosion was bound to occur, and from March 9 to March 15, the Russian people, headed by Michael Rodzianko, President of the Duma, set about cleaning house with quiet but successful thoroughness. The New York Sun describes the revolution as "one of the most remarkable risings in history," and proceeds:

"Beginning with minor foodriots and labor strikes, the cryfor food reached the hearts of the soldiers, and one by one regiments rebelled until finally those troops which had for a time stood loyal to the Government gathered up their arms and marched into the ranks of the revolutionists."

THE MAN THAT LED THE BEVOLT.

Michael Rodzianko, President of the Dume, and head of the Provisional Government of Russia.

While Russia has, for months past, been seething, the boilingpoint came with unexpected swiftness, the New York World tells us:

"The change came with startling and dramatic rapidity. As the situation is described from London and Berlin, the Duma refused to obey the Imperial rescript to dissolve, and voted to continue its meetings. An Executive Committee was appointed, headed by the president of the Duma, which, after arresting the Ministers, declared itself a Provisional Government

and announced its intention of creating a new Government. With the assistance of the Army it was soon in control."

One curious feature of the situation was that, unlike most revolutions, the people rose not against their sovereign, but against his ministers. The Czar, however, like the weak but

> amiable man he is, took matters into his own hands and sought his personal peace by abdicating.

> The effect of the revolution on Germany, American observers predict, will be twofold—it will darken her military outlook, and give a tremendous impetus to the latent liberal forces within her Empire. Its effect on the war, says the New York Times, "is almost equivalent to bringing a new nation into the camp of the Allies." And of its meaning to German democracy the Washington correspondent of the New York Tribune writes:

"Germany has been taught to believe that the European War was inaugurated by Russia for aggressive purposes. Germany's democratic leaders repeatedly pointed to Czarism as the evil spirit dominating the Entente. The object of the Central Powers was proclaimed to be the overthrow of the Russian autocratic menace. Therefore, the Russian revolution may profoundly move German democracy. This is

probably its greatest disillusionment since the war began."

Perhaps the clearest picture of the conditions that produced the revolution is that given by the London Daily Chronicle, which says:

"From a very early period the German-born Czarina and the elique of pro-German reactionaries whom her influence made | powerful with the Czar were bent on ending the war prematurely in the interests of maction. The Ministers set up under these auspices have for over two years acted in defiance of public

TERMS: \$3 a year, in advance; three months, \$1; single copy. 10 cents; postage to Canada, \$5 cents a year; other foreign postage, \$2.00 a year. BACK NUMBERS, not over three months old, 25 cents each; over three months old, \$1.00 each. SEMIANNUAL INDEXES, issued in January and July, will be sent free to subscribers who apply for them. RECEIPT of payment is shown in about two weeks by date on address-label; subscription including the month named. CAUTION: If date is not properly extended after each payment, notify publishers promptly. Instructions for RENEWAL, DISCONTINUANCE, or CHANGE OF ADDRESS should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. DISCONTINUANCE: We find that many of our subscribers prefer not to have their subscriptions in-

terrupted and their files broken in case they fall to remit before expiration. Notwithstanding this, it is not assumed that continuous service is desired; still, subscribers are espected to notify us with reasonable promptness to stop if the paper is no longer required. PRESENTATION COPIES: Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

opinion. Their policy was not obscure; they hampered the Army in respect of munitions, disorganized the country in respect of its distributive services, brought about artificial famine in a land which is one of the world's chief food-producers, and themselves, through police agents, tried to stir up abortive revolts in order that they might plead military failure and internal revolution as a reason for withdrawing from the war.

"The people foiled them for long by magnificent and muchenduring patriotism. When the Government left the Army without munitions, the local authorities—the zemstvos and unions of towns—stept in and organized their supply. When police agents tried to bring about riots and strikes, the workmen's

EMPEROR FOR A DAY

Grand-Duke Michael Alexandrovitch, the brother of Czar Nicholas, was Regent for the twelve-year-old Alexis for less than twenty-fear hours on March 16. Then he abdiented, as Nicholas had done the day before.

own leaders prevented their breaking out. When secret negotiations were opened up with Germany, the Duma blasted them by public exposure on the popular side.

"The Duma's demand for sympathetic and really national government was enforced, first by the Council of the Empire, normally the stronghold of high officialdom, and then by the Congress of Nobles, which represents the landed aristocracy.

"With the nobility, much of the bureaucracy, the Army, the Navy, the Duma, the professional classes, and the working classes all ranged against them, the 'dark forces' held obstinately on their way. The murder of the Czarina's favorite, the infamous Rasputin, only intensified the reaction, tho its story and sequel showed significantly how far many members of the Imperial family were from supporting the reigning head and his consort in the policy which was jeopardizing the dynasty. But the Czar's blindness was incurable. In a kind of panic he got rid of every remaining progressive Minister; a nonentity of no importance from the Czar's personal circle was made Prime Minister, and the real power fell to Protopopoff, the strong man of the camarilla, who was to see their design through."

Behind the "dark forces," and directing them, stood the sinister figure of A. D. Protopopoff, the Minister of the Interior. His appointment was hailed by the Liberal press as a triumph for the progressive element, and the Petrograd Novoye Vremya wrote at the time: "The peculiarity of the appointment is that the new choice belongs entirely to the social workers and not to the bureaucracy." Once in power, Protopopoff immediately changed and became the leader of the most persistently reaction-

ary element in the Russian Government. Isaac Don Levine, the well-known authority on Russian politics, writing in the New York Tribune, tells us that the now murdered Minister of the Interior worked with all his might to further the pro-German element, and he continues:

"Protopopoff inaugurated a series of repressive measures that were calculated to paralyze Russia's fighting capacity in a brief time. The big social organizations cooperating with the War Ministry in the prosecution of the war were put by him under police regulation. The Army and the Duma made every effort to oust Protopopoff. But he was invincible. He defied all Russia. He became a menace that had to be removed at all costs.

"Protopopoff thus precipitated the revolution. He and Stürmer are reported killed. That ends the career of the 'dark forces' in Russia. All that is efficient and intelligent in that country will now come to the front. A new leaf has been turned

in the history of the great Slavic nation.

"There can be no doubt that henceforth Russia will be ruled in the manner of Great Britain. The fact that Michael Rodzianko, the President of the Duma, is the head of the Executive Committee responsible for the revolution, means that Russia is to have a fully constitutional form of government with a Ministry responsible to the Duma."

The advent of Russia among the democratic nations is hailed with delight by the Russian press in America. The New York Russkoye Slove expresses its satisfaction that "the great movement which has been so long in preparation is at last under way," while the Socialist organ, the New York Novy Mir, is so enthusiastic that it almost sees the millennium at hand. It says:

"The Russian people are opposed to war and to militarism, but they believe that their own success as revolutionists will mean revolution on the part of the Germanic peoples. Then they hope and believe there will come a consolidation of all the revolutionary peoples, Russian and Germanic, a combination that by its very force and weight will compel the militarists of Europe's warring nations to cease their strife. And so out of revolution will come the great peace."

Mr. Herman Bernstein, editor of The American Hebrew, who knows Russia, makes the following illuminating comment on that country's awakening:

"Until now there were two Russias, two entirely different Russias, with different hopes, aspirations, achievements, and claims to the attention of the world. There was the Russia that made treaties with other nations, that sent diplomats abroad and received diplomats at home, that employed the Army to crush the people, that built prisons instead of schools, that banished the best sons and daughters of Russia to Siberia, and that incited, organized, and participated in massacres of Jews and other opprest nationalities within the Russian Empire.

"That Russia has now been overturned by the other Russia, which gave to the world Tolstoy, Turgenef, Metchnikoff, Antokolski, Rubinstein, Tchaikovsky, Solovyov, and countless other great Liberals, such as Milyukov, Petrunkevitch, Vinaver, Reditzchev, which produced martyrs, which wanted schools instead of prisons, which fought for liberty, for the opportunity of development and independence, which sent real ambassadors to the other nations through the literature, the art, and the spirit of liberty created within the Russian people. . . .

"The Liberals saved the Russian Government from a revolution earlier in the war, in the hope that a united Russia would be victorious, and that reforms would then be introduced leading to emancipation. The Liberals and the Revolutionists saved the Government from a general strike which was threatened as a protest against the incompetence and corruption of the Government about a year ago.

"The reactionary Russian Government was so short-sighted that it failed to appreciate this spirit on the part of the real patriots of Russia. Instead of turning toward the road of reform, the Russian Government resolved to throttle the will of the people in the Duma, to crush the Liberal tendencies which swept the Russian Empire, and extreme measures were met by extreme measures on the part of the people.

"Freedom for the Russian people must lead to the emancipation of the Jews. The Jewish question is intimately interwoven with all phases of the political, social, and industrial life of the Russian people, and without the emancipation of the Jews the rejunevation of Russia is inconceivable."

NATION-WIDE APPROVAL OF ARMING OUR SHIPS

ITHOUT BLINKING THE CONSEQUENCES, the press of the country with virtually one voice approve the President's decision "to place upon all American merchant vessels sailing through the barred areas an armed guard for the protection of the vessels and the lives of the persons on board." Altho, as the Boston Journal remarks, "the outcome commonly expected is war," newspapers in all sections agree with the Galveston News that the step from neutrality to armed neutrality was inevitable and unavoidable, and that the alternative course would have been "intolerable" to a self-respecting people. The President "could do no less, and the nation would tolerate no less," declares the Duluth Herold, "He has taken the right course, and the dangerous." says the Detroit Journal, which adds: "We must accept thatand be ready to go through with it to the end." His decision to put guns and gunners on our merchant ships, remarks the Milwaukee Journal, "will be indorsed by every American citizen who believes that his country should be defended against lawless aggression," and the Nashville Tennessean believes that "at least 90 per cent. of the people of the country will applaud him." The country speaks with one voice in support of the President's course, notes the Boston Transcript, but it speaks without hysteria or excitement: "One voice-yes; but a voice of calm determination, of completest resolution to do whatever has to be done." All in all, remarks the Louisville Times -

"The situation looks clearer than for some time past. The people, as shown, are loyal to the core, the Senate is in a position to attend to business, and the House promises to let patriotism actuate its movements. Despite the fact that pusillanimity and demagogy still squeak and gibber in some corners, our Nation is united, our press patriotic, and our preparations are said to be progressing with satisfaction to those officials charged with the public defense."

Among the many hundreds of papers of all sections which soberly and unqualifiedly indorse the Administration's decision,

NOTHING IS SACRED.

"It is an entirely new thing that President Wilson has done to meet the German submarine menace," according to Stevenson

Copyrighted, 1915, by the New York Tribuse Association

ARMED PEACE

-Darling in the New York Tribung

H. Evans, Washington correspondent of the New York Tribune, who goes on to explain:

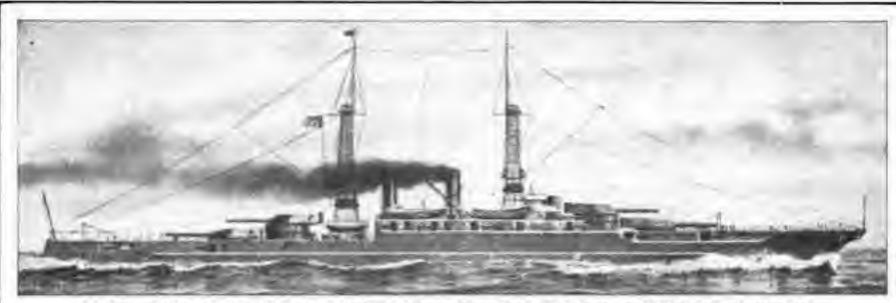

"There is no precedent in international law for armed guards on merchant ships. Members of the diplomatic corps are frankly amazed at the announced course of the United States. They are practically at one, however, in the belief that the American plan will be effective.

"Diplomats from whom it has been possible to draw an opinion are convinced that the declaration of the Government of the United States to use an armed guard on merehant ships means in effect armed conflict with Germany. Most of them incline to the view that neither the United States nor Germany need formally declare war. Germany, in the view of those who have been close to Teutonic circles here, will do so as soon as a submarine is sunk by an American gun."

The placing of a Government "armed guard" on privately owned merchant ships is "without precedent in history," writes David Lawrence to the New York Evening Post, but "since it is derived from the right of every nation to enforce its understanding of international law, the hope is that other neutral Governments will adopt a similar policy." He adds:

"The State Department, it developed to-day, intentionally omitted the word 'eargo' from its statement. The armed guard is solely 'for the protection of the vessels and the lives of persons on board' American ships. Objections raised by Senator Stone and others, to the effect that the United States in arming ships would be protecting munitions and war-supplies, have been met by the announced purpose of the Government to see that visit and search are exercised. If the German submarines by their approach indicate a purpose to disregard visit and search, they will be fired upon. Should they act in accordance with international law, halting the American vessels and examining cargo, no resistance will be offered to the destruction of contraband cargoes. But protection will be given to the vessel itself and persons on board."

With the order to arm our merchant ships the President issued a summons to Congress to meet in extra session on April

ONE OF THE BATTLE-SHIPS OF THE COLORADO CLASS, NOW BUILDING, CARRYING BEINGH GUNS.

16. This convening of Congress, which alone has the power to declare war, is, "in a sense, a final warning to Germany," notes the New York Commercial. The significance of this warning is increased, the same paper points out, by the fact that the Navy Department has appealed to the press to refrain from

publishing any information about the armament of ships, and to the cable companies to suppress all information about transatlantic sailings, "An extra session of the Sixty-fifth Congress was indispensable," thinks the New York Tribune, "not only that American sea rights should be properly maintained, but, primarily, that the work of securing the nation against attack should be completed."

The people and the press agree with the President, who, in his second inaugural address, declares that: "There is no turning back." The Chicago Herald speaks for a multitude when it says:

"Every step that has been taken has been taken because national dignity and rights made it inevitable. Every step that has been officially suggested has represented the alternative to abject surrender of national rights. Neither turning back nor standing still! Firm in the right as God gives us to see the right, we must go forward in courage and patience to

"If the war-clouds blow over now without a storm it will be wonderful indeed," thinks the Cleveland Leader, and the Brooklyn Citizen says it would be folly not to recognize that the present situation "requires Germany either to back down or give battle." As the St. Joseph News-Press reminds us, the issue rests with Germany, as it always has. "Any one who now declares that President Wilson by arming our merchant ships has in effect declared war is simply befogging the issue," declares

the end-which is to be the beginning of a better time."

"By arming her merchantmen, the United States is merely acting as an individual would, who, being notified that an out-

the Cleveland Plain Dealer, which goes on to say:

law had denied him the use of the highways and was lying in wait to destroy him, decides to earry a gun for self-protection.

"The United States proposes to go about its legitimate business, using the ocean highways as it is privileged to use them under international law. Because the outlaw of the seas has threatened to take the lives of American citizens and destroy their

> property without the possibility of redress, America will carry a gun. It is a purely defensive measure.

> "Americans do not want war. They still hope, in spite of every indication to the contrary, that Germany will not force them to the final step. All Americans ask is to be let alone. Everything they ask, and more, is conceded by international law and not denied except at Berlin.

"Still loving peace, we will fight if the issue be forced upon us."

Count von Bernstorff, on his way to Germany, is quoted by the Copenhagen correspondent of the Berlin Tageblatt as saying that the issue of peace or war with America rests with the German U-boats;

"If we sink an American ship we get war. If not, I suppose we can avoid it,"

Almost while he was speaking the United States freighter Algonquin, with a cargo of foodstuffs for England, was sunk without warning, sixtyfive miles off the Cornish coast, by the German submarine

U-.19. The Government officials at Washington expect war, reports the Washington correspondent of the New York Eccning Sun, "unless Germany should suddenly adopt an unforescent course and abandon her submarine campaign." War may be nearer, says the Houston Chronicle, "but public confidence, which was greatly shaken by recent events, is restored." "There is one way for Germany to remain at peace with the United States, and that is to stop making war on the United States," says the New York World. If there is unfavorable comment from American papers which we have not seen on the arming of merchant ships it is virtually drowned in the chorus of approval.

PREPARED TO MINE OUR COASTS.

United States mine-layers at work pear Region Harbor.

MR. STONE HEARS FROM THE COUNTRY

RANT HAD HIS SUMNER, Wilson has his Stone, and there is a country-wide demand that the Demoerats of to-day profit by the example of the Republicans of a generation ago, who ousted the Chairman of the Foreign Relations Committee who would not assist in carrying out the policies of his President. This demand is joined by people in Senator Stone's own State and has been led by the head of the national organization of the Democratic party, but the Demo-

cratic caucus has not heeded, perhaps believing with Senator James Hamilton Lewis that it would be "unethical." The retention of the Missouri Senator as head of the Foreign Relations Committee is roundly denounced by Democratic editors as a "seandal" and "an offense to the country," and his voluntary resignation, or later dismissal by the Senate, is now called for. The Philadelphia Record, for example, declares that if " 'Gumshoe Bill' holds on to his chairmanship after the recent demonstration of public disapproval he will show himself what he is generally believed to be, a decidedly thick-skinned politician of third-rate ability." The Washington Herald (Ind.) remembers that Mr. Stone is an old man, and remarks: "His monumental blunder will be forgotten in the future by an indulgent public and an indulgent nation, and at the present time it makes him look a pitiable and solitary figure who requires to be 'set straight." But such

gentleness is rare in newspaper expressions. Stone, says the Louisville Courier-Journal (Dem.), "has surpassed the annals of fat-headedness and peanut polities." The Atlanta Journal (Dem.) observes that "the Kaiser has no eause to regret the dismissal of von Bernstorff from Washington as long as William J. Stone is there." In Senator Stone's own State the St. Louis Post Dispatch (Ind.) quotes from German papers which speak of Mr. Stone as a "stanch friend" who, "fortunately for Germany," is at the head of the Senate Foreign Relations Committee, and proceeds to denounce him in these emphatic words:

"Senator Stone's conduct in the armed neutrality crisis was merely the climax of a wabbling, contemptible course which showed him to be wholly unreliable and out of sympathy with the Administration and sound Americanism. He was pro-German on the Lusitania case and on the resolution to warn Americans to keep off belligerent ships. He has always been dickering with and coddling the pro-German traitors. He has never stood squarely for American honor and American rights. In his last act he betrayed America to Germany. But Stone has never stood squarely for anything. He has ever been an artful dodger and underhand conspirator.

"Gumshoe Bill's usefulness at the head of the Foreign Relations Committee, from the first doubtful, is now completely ended. He has forfeited the confidence of the President; he has forfeited the confidence of the Army and Navy chiefs; he has forfeited the confidence of his fellow Senators; he has forfeited the confidence of his countrymen."

Senator Stone has not allowed his critics to go unanswered. He defends himself in a long copyrighted statement in the St. Louis Republic. He tells how he went to the President before the latter addrest Congress, and told him that the Administration's policy would bring on war. When the measure asked by the President was before Senator Stone's Committee, he tried in vain to amend it so that ships carrying munitions would not be protected. He then had the bill brought promptly before the Senate, frankly announcing his opposition and turning its management on the floor over to Senator Hitchcock. In course of time Senator Stone took the floor, and for four hours "discust the constitutionality of the bill and also discust it

> After this there were nineteen or twenty hours left for debate, in the course of which Senator Stone stated his willingness to have the bill voted on. As he puts it:

"I did not at any time, by any objection or otherwise, obstruct the legitimate consideration of the bill pr stand in the way of a vote upon it. I was, and am still, opposed to plunging this country into this horrible war, if we can honorably keep out of it."

But Senator Stone's innocence in this matter of the filibuster is disputed by several editors and Washington correspondents, who emphasize the four hours' duration of his speech, Mr. C. W. Gilbert, of the New York Tribune, asserting that he exhausted himself in the first two hours, afterward merely "rambling and drooling along," And, further, the New York World contends, Senator Stone is not being condemned for mere filibustering, but for something

worse: "a partizan of Germany in the position that he now occupies is as intolerable as an avowed secessionist at the head of the Union armies would have been in the Civil War."

Senator Stone's worst offense, others declare, was his exposure on the floor of the Senate of one of the Navy's plans for dealing with the submarine menace. The Philadelphia North American (Prog. Rep.) does not stop short of calling this "treason." The Cleveland Press (Ind.) asserts that Mr. Stone made the statement because he "has no other way of getting this information to his friends in Berlin." The secret, says the Boston Transcript (Rep.), "was told him in confidence." and by giving it away "he has carned the contempt of the people of the United States speaking through their press."

The call for Senator Stone's retirement from the Foreign Relations Committee is also loudly voiced in the East by the Boston Advertiser (Ind.) and Journal (Ind.), Springfield Republican (Ind.), Buffalo Express (Rep.), New York Sun (Rep.), Newark News (Ind.), and Richmond Journal (Dem.). What some Washington correspondents regard as coming as near to an official expression of the Democratic party as could be given is the editorial in National Chairman McCormick's Harrisburg Patriot, concluding with the words: "Senator Stone should have the foresight and patriotism to quit. If he does not, the duty of the Senate is plain." In Ohio, the Cleveland Press (Ind.) and Plain Dealer (Dem.), and the Columbus Citizen (Ind.), take up the chorus, as do the Indianapolis News (Ind.) and Star (Rep.), and South Bend Tribune (Rep.), in the adjoining State

of Indiana. "Stone must go," says the Chicago Econing Post (Ind. Rep.), and The Daily News (Ind.) agrees. "Stone should go," echoes The Journal (Ind.), a few miles north in Milwaukee. Still farther north the Daluth News-Tribune (Rep.) calls the Senator a "poltroon as well as dastard," and warns the Democratic party that it will have to remove this "Stone about its neck." In Kansas the Wichita Beacon (Prog. Rep.) declares

WHERE THE ALLIES ARE DRIVING THE TURKS

The Bagdad arrow indicates General Maude's advance up the Tigris from Busca. At Hamadan the arrow points the direction of the Russians in Persia against the Turkish rear to join with the British. At El Arish arrows indicate the advance, cast and northeast, of a British army from the Suez Canal.

"He should be deposed," and on the Pacific Coast the Portland Originian (Ind. Rep.) launches a peculiarly bitter attack upon the senior Senator from Missouri.

Nowhere has the movement to compel the retirement of Senator Stone from the Foreign Affairs Committee been more vigorously pushed along than in his own State of Missouri, the Pittsburg Press (Ind.) notes. The editorial already quoted from the St. Louis Post Dispatch is but one of a series of denunciations of Senator Stone. "The shame of the people whom he so unworthily represents" has been voiced by The Globe Democrat (Rep.). The Republic (Dem.) admits that the Senator's failure to support the President is considered by his friends "equivalent to political suicide." Outside of St. Louis, the St. Joseph News-Press (Ind.) joins in the demand for his resignation. Letters of like tenor from citizens of Missouri have been appearing in the pages of these newspapers. One asks him to "stop talking," as "we prefer to bear our disgrace in silence." The Missouri legislature passed a resolution commending the President. "Many telegrams of applause reached me," Senator Stone was heard to say. "No doubt," replies the New York Sun, but "were they written in English?" The Dallas News and the Chicago Evening Post have attributed Sevator Stone's course to the influence of his German constituency, but the Sa Joseph News-Press, however, denies that the Senator has a "German constituency." The there are many men of German blood in the State.

"The number of pro-Germans in this cause of the President against the Kaiser is so small and covert that it dare not stand up in the open and be counted. Senator Stone reflects no Missouri opinion but his own and that of a few unpatriotic persons. He stands entirely contrary to the opinion of the State to which he is accredited in the Senate, and the voice of censure that comes from every section of the commonwealth thoroughly proves this."

GERMANY'S LOSS IN BAGDAD

ORE THAN CONSOLATION for the repulse by the Turks at the Dardanelles and at Kut-el Amara is enjoyed by the Entente Allies in the capture of Bagdad by British forces commanded by General Mande, according to the Pittsburg Disputch and other jou nals, which note as the great significance of the victory the control it gives of the Persian-Gulf terminal of the projected German "corridor to Asia," the Berlin-Constantinople-Bagdad railroad that was to furnish the Central Powers with an overland route to India. The New York World calls Bagdad the broken-down back door of the Central Powers and says it was worth winning, for "with a tunnel under the Bosporus and the Bagdad railway pushed to Busra, a man might go from Hamburg without change of car to a deep-water port off the Persian Gulf, where, before the war, a Hamburg steamship line was established." How the Turk is to get Bagdad back, or even avoid further reverses, is a study for Berlin, according to The World, which adds that meanwhile, for the time at least, Berlin's war-cry is reversed. In Entente lands it reads: "Bagdad to Berlin!"

From Busra, at the head of the Persian Gulf, famed for having been the home of Sindbad the Sailar, the New York Sun reminds us, the British have fought their way for the second time up the Tigris, "through marshes that seemed interminable, until the deserts that succeeded them stretched still more interminably, past Kut-el-Amara, where Townshend and his 10,000 men were starved into subjection; past Ctesiphon, with its Chosroes arch still standing, dating back to before the time of Christ, to a period when Britain was not and the Germans were in their state of original barbarism, to which their Government has lately reverted; and so on to Bagdad of Harun-al-Raschid, the miraculous carpet, and the 'Thousand and One Nights.'"

But legend and romance are not engaging the minds in conference on the Wilhelmstrasse, this journal goes on to say, for the occupation of Bagdad scals the doom of the third great ambition with which Germany entered this war. First she was balked of entrance to Paris, then she failed at Calais, which meant the final abandonment of a foothold on the Channel whence Britain might be menaced for decades to come. Now the loss of Bagdad is the "death-stroke to the Kaiser's ambitions for a place in the sun, for a port on the Persian Gulf," and it blocks the plan for a German empire in the southeast and competition with England for the rich trade of the Orient. We read then:

"From the rugged Caneasus in the northwest the forces of the Grand Duke Niebolas are making their way toward a point of rendezvous. Last year at this time they were at Hamadan, 240 miles from the eamp of General Townshend. But his surrender freed an army of Turks to operate against the Russians, who were forced back into Armenia. For six months the Grand Duke disappeared altogether from the daily war-news. Now ho is back with increased forces at a point which promises an early juncture with the British.

"When that is done a Russo-British line extending from the Black Sea to the Mediterranean will take up the task of driving the Turks north upon Constantinople. It can be readily reenforced by water at either end of the line. Its victories already have been so significant that the Syrians, Arabs, and Persians left in the rear are renouncing their former allegiance to Turkey, declaring they have been betrayed. The Turks themselves echo the complaint, for in the Orient nothing succeeds like success, and failure terminates loyalty.

"Bagdad has tenfold the importance to the world to-day that has Verdun. Germany has lest both."

The occupation of Bagdad, taken in connection with the advance of the British force in Palestine and of the new signs of Russian activity in the Caucasus region, remarks the New York Globe, seems to indicate an approaching collapse of Turkish power. Nor is it impossible that the future historian will say that the "turningpoint of the war came, not in France, or on the Karpathian front, or at Saloniki, but far away in semidesert Mesopotamia,"

BOTH SIDES OF THE RAILROAD QUARREL

NCREDIBLE, to many editorial observers, was the threat that the leaders of the four great railroad Brotherhoods would choose this moment, with the shadow of war hanging heavy over the country, and the Adamson Law decision pending in the Supreme Court, to eall a strike that would paralyze the nation and add incalculably to the burdens of the Administration in this hour of national crisis. Such an idea, declares the New York Times, "never took shape in any wellordered mind." Yet, from the point of view of the leaders who issued such a call, the imminence of war is their chief excuse and justification. As W. G. Lee, president of the Brotherhood of Railway Trainmen, explained to a Times representative, the men are determined to get the eight-hour day before the country gets into war, because, should war come, patriotism would compel them to stay at work. In ease of war, he said, nothing would be done to embarrass the nation or the Government, According to a statement issued by the Brotherhoods, the conditions under which their members now work are "even worse than on September 2, 1916, when the Adamson Eight-Hour Law was enacted." The men, we read, "are working for the same rates of pay, with longer hours and worse conditions than prior to the enactment of this law "while "nearly all other classes of labor have been given substantial increases during the past year, which in a measure affect the increased cost of living."

The demands of the Brotherhoods are thus summarized in The Times:

- "I. That the provisions of the Adamson Law be put into effect at once as of January I.
 - "2. Men shall receive ten hours' pay for eight hours' work.
- "3. No one shall receive less for a day's work than he now does.
- "4. Time to be computed from time-call for duty until released.
- "5. All excess mileage, differentials, and other advantageous arrangements now enjoyed by the men to be retained.

"6. All overtime to be paid for pro rata."

After the conference in New York, on March 15, had failed to reconcile the differences between the railroads and the Brotherhoods, and the latter had issued a strike order, each side made public a statement of its case. In that issued by the Brotherhoods we read:

"It is apparent to us that the purpose of the railroads is to avoid any settlement of the matter until such time as the country becomes involved in war, when they expect to escape any settlement of whatever character, even the the Supreme Court should decide that the law was constitutional. We have notice that they will not accept our interpretation thereof, which is practically the same as the President proposed when he recommended the enactment of the law. Therefore, a decision of the Supreme Court upholding the constitutionality of the law would not even indirectly secure for the employees the purpose of the law."

The statement of the railroads reads in part as follows:

"The ultimatum presented to the railroads by the organizations was that we must immediately put into effect their interpretation of the law now before the Supreme Court for a determination of its constitutionality and meaning, without waiting for the decision of the Court.

"We declined to accept this proposition, feeling that we must abide by the judgment of the Court, and we thereupon made the following formal offer for a settlement of the issues involved:

"1. If the Supreme Court holds the Adamson Law to be constitutional and the two sides can not agree upon the application of any of the points, we will agree that the Eight-Hour Commission shall determine how the law shall be applied.

"2. In case the law is declared unconstitutional, we offer to join you in asking the Eight-Hour Commission to determine the whole controversy, any settlement to be arrived at to be effective from January 1, 1917."

A compromise was reached on March 19.

IRELAND'S CRY TO US FOR HELP

RELAND'S APPEALS TO HER CHILDREN and their descendants overseas have been many, but none has ever come at so ominous a moment as that in the manifesto issued by Mr. John Redmond, M.P., leader of the Irish Parliamentary party. The Springfield Republican considers it "managed and timed quite as if Herr Zimmermann had arranged it," and the St. Louis Republic says we will take much more interest in this conflict in Irish polities "because it is within the possi-

Com" Im Imo Works

BOW IRELAND DIVIDES ON HOME RULE.

The white section of the map shows where the Home-Rulers live, and the shaded section shows the Ulster counties against Home Rule. The Irish World claims that 17 of Ulster's 23 representatives in the House of Commons are for Home Rule. Five of her nine counties favor it by a large majority. The shaded section has a Unionist majority, but also a strong Home-Rule minerity, represented by five members in the House of Commons.

bilities that the conduct of the war and the life of the Ministry may be involved." The crisis was precipitated on March 7 in a debate in the House of Commons by the statement of the Prime Minister that the Government was prepared to grant Home Rule to that part of Ireland which demands it, but would not take action to enforce it on the part to which it was repugnant. He said that in the northeastern part of Ireland the population was as hostile to Irish rule as the rest of Ireland was to British rule. This raised a storm of protest, and Mr. Redmond and about sixty of his supporters marched from the House, shouting and cheering as they went. In explanation of their stand, Mr. Redmond gave his manifesto to the press, in which is included the plea for aid from America as follows:

"The constitutional movement can yet be saved, but only by the active assistance of all level-headed Nationalists in Ireland, and to a special degree by the millions of the Irish race in the Dominions and in the United States. To them we appeal most earnestly to come to the aid of those who have rescued Ireland from being made the catspaw and tool of Germany, and who are struggling against terrible odds to keep open the road to Irish liberty through peaceful, constitutional means—a struggle in which we are hampered by the British Government, which plays into the hands of the Irish Pro-German

revolutionary party with stupid perversity worthy the worst reactionaries of Petrograd.

"So far as Ireland is concerned, the Government is doing its utmost to aid Germany's work, and so long as this attitude is followed we, as Irish representatives, while retaining our attitude toward the war and remaining firmly convinced of the justice of the Allies' cause, and unchanged in our resolve to do all in our power to aid in bringing it speedily to a successful issue, feel bound to oppose the Government by every means in our power.

"The Australian Senate has already spoken effectively in support of Irish freedom, and in behalf of the Irish nation we

tender them grateful thanks.

"To the men of Irish blood in the Dominions and the United States we appeal. They should promptly use all means in their power to bring pressure on the British Government to act toward Ireland in accordance with the principles for which they are fighting in Europe, and we especially appeal to the American people to urge upon the British Government the duty of applying to Ireland the great principles so clearly and splendidly enunciated by President Wilson in his historical address to the United States Senate."

The manifesto makes sorry reading for the Irish people, remarks The Irish World, which maintains that "there would be quite a different story to tell if the policy of recruiting for the English Army had not been injected into Irish polities," for "from the time Mr. John Redmond delivered his first recruiting speech, his influence began to wane till it has now reached so low an ebb that Premier Lloyd George thinks he can safely flout both Mr. Redmond and the Parliamentary party." The Gaelic American (New York) observes:

"Redmond's walking out of the House and the shouts of the follows who cheered the execution of Pearse were stage-play to eatch fools, and there are fewer fools in Ireland now than before the war. His address to the Irish in America will fall on deaf ears, while his appeal to the Colonial Premiers and President Wilson—whom he bunched all together as if they were all of equal rank and importance—will surely anger the stubborn and stiff-necked English people. The Colonials would do the bidding of the English Government, and if President Wilson interfered at all he would surely not recommend any measure bigger than the British Ministry would be willing to give."

Ireland (New York) declares that the British Government,

"so fearful of rebellion in Ulster, has not shrunk from actions which foment rebellion in Ireland," and we are told that the Coalition made it impossible for Mr. Redmond and the friends of ordered liberty to appeal with confidence or success to Ireland. Lloyd George has "banged the door against them when they appealed to him," and this journal adds:

"With what hope we can not guess, they now appeal to the Irish and the sons of Irishmen beyond the seas, and especially in the United States, where England seeks an ally. There, as they well know, the same malign influence is to be met. . . . The manifesto inveighs against the British Government. against meddling Germans, and against Irish revolutionists: it is clear that the Government which incites to rebellion and betrays constitutionalism is the one enemy by which the other two are supported and without which they could not continue. The party will do well to contrive its defeat if it can be defeated. Meantime, Lloyd George has brought the minds of Irishmen abroad pearer to an agreement than they have been since the war began. They do not want Ireland to play the game of her enemies and offer an opening to those on the pounce to destroy her, but they do foresee that there may soon be need for a return to that mingling of courage and of craft with which they ever gratefully associate the name of Parnell."

The point of view of a distinguished Ulsterman appears in the New York Tribune in a letter from Mr. John Butler Yeats, who says that "as a Protestant and as an Ulsterman, I long for Home Rule, especially to see the Ulsterman at work, radical and progressive as he is, patriotically at work and looking for allies among his old Catholic opponents." He claims to know the Orangeman perfectly well and says he is "a fighting man and is hard-headed, quite ready to use his head as a batteringram or for thinking about things. He will fight against Home Rule up to the last moment, and then if he finds the opposition too strong for him, he will drop the fight and show himself ready to be the born Home-Ruler he is." We read then:

"If Home Rule were enforced in Ireland, there might be some broken heads, just for diversion's sake; there would be no civil war, and the Belfast man would become the finest Home-Ruler of them all. It is he who would see that the Home-Rule Government got extension of its powers and that it would not be left to be the mere simulacrum that is now offered."

FOREIGN - COMMENT

HUNGRY EUROPE

THE UTTER DISORGANIZATION of the world's shipping, due to the submarine campaign and the British blockade of Germany combined, has cut off from Europe the regular supply of raw materials. England, once one of the great sources for boots and shoes, can not obtain hides, and the people, owing to the searcity of brather, are now

reverting to the wooden shoes worn by their fore-fathers in the Middle Ages. But it is the short-age of cereals and other foodstuffs that is pressing most heavily on Europe. Russia, one of the gran-eries of the world, lacks bread because traffic facilities in the Empire are absorbed by military needs. The Petrograd correspondent of the London Morning Post writes:

"The question of the food-supply of the capital of Russia has reached a crisis. Petrograd is particularly badly situated on

the confines of the Empire, in a region incapable of producing breadstuffs, and therefore wholly dependent upon railways for the necessaries of daily life. Military needs necessarily absorb the greater part of railway activity, and the war-traffle naturally tends to increase rather than diminish as time goes on. The people have cheerfully endured every manner of inconvenience throughout the long winter in obtaining food-supplies. Latterly, however, there has been witnessed the phenomenon of shortage in certain quarters of the city of the staple food of the common people, namely, the favorite Russian black bread."

The complacent English recently received a shock when Sir Edward Carson said that "the people's food is really threatened," and he tried to rouse the nation to a sense of the necessity of economy by saying:

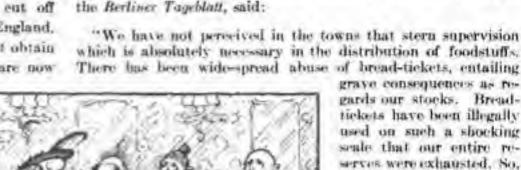

"I am neither a pessimist nor a coward, but we must face the facts and not allow the people suddenly to be confronted with a situation not anticipated—because remedies conceived in panie lead to revolution. England will fight and endure despite the German measures."

Lord Devonport, the Food Controller, has placed the people upon its honor not to consume more than the maximum weekly ration of certain commodities, which is two and one-half pounds of meat, four pounds of bread, and three-quarters of a pound of sugar per person. Meanwhile, the people can not be roused to face the seriousness of the food-problem, and many of the papers are demanding compulsory rations. The London Dealy Express says:

"The momentary cutting down of meals is a thousand times to be preferred to the prolonged insufficiency that may result if every one is allowed to overest and to waste if he pleases."

It is in Germany, however, where the pinch is greatest, and there can now be no doubt that, while actual starvation does not, as yet, figure in the situation, distinct shortage is a fact. The Prussian Minister of Agriculture, speaking in the Diet, says that it is not due to the British blockade. He remarked

"For the small bread ration one can only make the Almighty responsible, who has not given us the harvest we expected."

He was followed by the Prussian Food Controller, Dr. Georg

when potatoes failed and

no longer hold out. The

In the Essen Rheinisch-Westfalische Zeitung's account of the session the speech of the Socialist member, Dr. Hufer, is given, and from it we glean that the food-shortage is such that even the munition-workers are undernourished. He said:

"The selfishness of the agrarians is the cause of the high prices. The war would long since have been ended if everybody had to suffer hunger equally. The present meat ration is insufficient. To withhold such a necessary from the people in the interest only of an agrarian tariff is damnable. I recall Professor Abbes's retirement from the council of the War Feeding Department. The strikes of munition-workers in Essen and Berlin, owing to underfeeding, have only too well justified him."

The view of the Swiss Socialist organ, the Berner Taycacht, a paper in close touch with conditions in the l'atherland, is that the British blockade is in part responsible. It notes that—

"To-day it is operating with such reality that we can now speak without exaggeration of Germany's being starved out."

It goes on to consider what effect, if any, the food-shortage will have in bringing peace nearer, and says:

"But the German civil and military authorities will have nothing to do with such a peace, at least so long as the soldiers in the field have something to eat. As they are quite clear that the military resources of the Central Powers are not great enough to bring their adversaries down in any practicable period of time, they are now staking everything on the one card of ruthless submarine warfare. . . . Either the great coup is achieved with the so-called U-boat blockade, in which event the game is won, or the world revolts against it, or the game goes wrong, in which event all is lost, and apon the rulers of Germany descends the Twilight of the Gods."

GERMANY FLIRTING WITH THE ORIENT

East to West, and the possibility of a highly evolved nation, with a distinctive culture of its own, turning its face from the West to seek the East is a phenomenon which must cause all serious-minded men to stop and think. The interpretation that some observers put upon Dr. Zimmermann's offer of an alliance between Germany and Mexico with Japan, taken in conjunction with the Turco-German alliance, is that the Fatherland is about to turn its back upon the West and seek its future in conjunction with the Near and Far Eastern

MAKING WOODEN SHOES IN ENGLAND.

In England they are wearing wooden shoes because leather is unobtainable. Here is a man engaged in the revived industry of making
them. The present demand for wooden "closes" and shoes is so great
in England that an order of 100,000 pairs of sabets placed by the
Belgian Government had to be declined, as the workers were too busy.

Powers. As one editor, by no means unfriendly to the German cause, wrote when the "Zimmermann plot" was revealed:

"The Zimmermann note is either a ghastly blunder, a foolish bluff, or an announcement that Germany has cut loose from the West and will cast her lot with Russia and Japan as fast as they can be detached from the Entente. The ease of their detachment will be in exact proportion with the success of the German submarine campaign. Who dares to-day predict with certainty that it will be unsuccessful?"

Viewed in this light, many puzzling articles in the German press become clear and even acquire a new significance. During the whole of the régime of Boris Stürmer the German papers were full of hints that Russia was about to make a separate peace, and we know that the Premier fell from power because popular suspicion fastened on this point. Under the premier-ship of Prince Golitzin these hints in the German press have revived. For example, the Kölnische Zeitung, before the war bitterly anti-Russian, now writes on Russian affairs with marked sympathy for the reactionary trend of polities in the Czar's dominions. In a recent article it says:

"In spite of all failures, the Russian Government seems still to be resolved to win the war, which is to give new food to its lust for expansion and at the same time remove the domestic danger; and yet it can not make up its mind to surrender a portion of its power to the Russian people, without whose energetic cooperation such a war can not be successfully fought out."

The Kölnische Zeitung goes on almost to offer Russia a separate peace, and this acquires a peculiar significance when we remember that this semiofficial organ is the mouthpiece of the German Foreign Office. It says:

"Surely Russia has already made enough sacrifices, and has, next to France, contributed considerably more to the common aims of the Allies than England, the author of the pact of September, 1914. Moreover, Russia is much more independent of England than France, which, in its blind hatred of the Germans, has completely indentured itself to its former hereditary enemy. If it were declared at Petrograd that Russia can go on no longer, Lloyd George and Briand would have to withdraw their claws. The question only is whether a man could be found who could lead Russia out of the cul-de-sac into hich she has been driven. In the light of all the experience of the last years, it could only be one of those men who were on one occasion characterized by our former Petrograd correspondent, who, on March 2, 1914, had so correctly foretold the danger threatening from Russia, as reactionaries rich in knowledge. From the Liberal mouth-heroes no redeeming act can be expected. If it did not involve the necessary prolongation of the war, we should only be too glad if those Liberal men were really to obtain power, and then, as can be foreseen with certainty, cover themselves with disgrace."

Where German sympathy lies as between East and West can be seen in an article in the powerful Frankfurter Zeitung, written before the Zimmermann note was made public. It said editorially:

"Japan can not look on with indifference if mighty and rich America militarizes herself to support the Allies against Germany. Japan has good hope of defeating unmilitary America in the event of a conflict. But if America now puts her finance and man-power and industry into the service of the war, Japan will lose all prospect of ever being able to assert herself victoriously against America. We refer to these facts without desiring to arouse excessive hopes. Japan is bound by her alliance to England, and she will not break the treaty of alliance unless she is compelled."

The military correspondent of the Frankfurter Zeitung then takes up the tale and writes:

"One must admit that Wilson is wise, and that all the Americans are wise, if they now arm. For us Germans this wisdom is not of much importance, for-a fact which does not yet seem to be fully realized-it is only half directed against us. There is another who must be expected to watch attentively the seizure by America of this favorable opportunity to put off her military weakness without seeming guilty of 'militarism.' This other is Japan. Nobody can doubt that a reckoning between Japan and America lies in the womb of time and must infallibly be born one day. What a splendid opportunity for America now to catch up Japan's immense military advantage, and, under the temporary pretense of hostility to Germany, to work for permanent motives of hostility toward Japan, while remaining pretty sure that not everybody will see it. The moment could not possibly be chosen more skilfully. For Japan can only be annoyed, and can not protest. Outwardly Japan must clasp the new friend to her heart."

THE UNWATCHED RHINE—The London Evening Standard quotes a dispatch from the Zurich correspondent of the Central News Agency which runs:

"The Strasburger Post reports, with fitting indignation, that the Rhine—the German Rhine!—is actually being utilized as a means of propaganda aimed against the Hohenzollern dynasty.

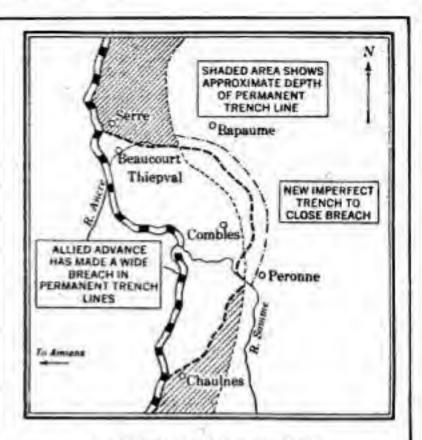

"A number of pamphlets secretly printed in Switzerland and destined for South Germany appear to have been thrown into the Rhine at Basle, in the hope that they would reach the hands of persons ready to listen to good advice. The contents of the leaflets were nothing less than a demand that the German Imperial Crown should be handed over to the House of Bavaria."

Redeave from "The Sphare," Lautie.

THE WESTERN FRONT AS IT IS TO-DAY.

Note how small is the advance made on the Somme in comparison with the amount of French and Belgian territory in German hands, but the "push" is made there, as no fortresses lie in the rear to block an advance should the British break through. The fortresses are marked by stars.

THE RETREAT ON THE ANCRE.

The general result of the battles of the Somme and the Ancre has been to drive a salient twenty-five miles at its base into the German defenses. The head of the salient projects well beyond the original rearward line of trenches.

EFFECTS OF THE ANCRE RETREAT

UCH CRY AND LITTLE WOOL" seems to apply to the lamb of the Ancre retreat offered in sacrifice by the British press. It is true that the German troops retired on the Apere, but that retirement was made to previously prepared positions on what seems to be a strongly defended line of hills to the northwest of Bapaume. While this may be true, the fact that this is the first voluntary retirement of German troops since the Marne is not without significance, and perhaps accounts for the shouts of triumph ascending from the London papers. The London Sphere lets us have a glimpse at the reason why the Allies chose the Somme as the scene of their greatest pressure. In the country behind the German lines, between Péronne and Bapaume, through which the Entente troops would advance in the event of a break-through, there are practically no fortified places; at other points, says The Sphere, "the Germans have a possible advantage if their lines are broken in the number of fortresses or old fortresses which lie in their rear. If many of these have been newly prepared for defense they will constitute valuable points d'appai for the retiring sections." Passing on to describe the situation in more detail, The Sphere says:

"For over two years the Germans had employed all their resources in fortifying their Western front. For all practical purposes it was a far-stretched fortress, and in many places the works and trenches were of such elaboration, so strengthened by armored-gun positions and concreted easemates, that they approximated to the character of permanent works, and were hardly in the nature of field-fortifications. The armament of artillery and machine guns also was extraordinarily complete.

"The victories of the Somme and Ancre drove a broad, blunt wedge into this intricate maze of heavily fortified positions. The base of this wedge now extends, roughly, from Serre to Chaulnes, a distance of about twenty-five miles. Its head, the advanced line of our attacking wave, projects well to the rear of the original last line of German trenches. Two advantages are gained thereby. In the first place, the German positions which still bar the Allied advance are of a hurriedly improvised nature, and lack the elaborate and carefully defended character of those which have fallen into our hands. Advance, therefore, is likely to be easier and less costly in human life. Secondly, the enemy positions to right and left are liable to be enfilled by our artillery-fire from the wings of the great salient, while exposed at the same time to a frontal cannonade.

"Finally, there are signs that the German infantry is growing exhausted, both as regards numbers and quality. Attempts have been made to compensate for this by deep digging and by lavish use of artillery and machine guns. But the artillery has been mastered, the machine guns are unable to hold out against the wide-reaching barrages, and the deep subterranean shelters are not invulnerable by the new high-explosive shells."

The Sphere passes on to consider the German position, which it defines as "by no means favorable," and proceeds:

"It is, however, possible that several of the old fortified places in their rear have been improved and prepared for defense, and might prove considerable obstacles to an Allied advance. On the other hand, it may be that prolonged defense would not be possible owing to the difficulty of adequately provisioning them. Still, it is possible that some of them, even the incapable of withstanding prolonged siege operations, might prove very trouble-some, if temporary, obstacles. They might also, if in good condition for defense, serve as powerful supports to new enemy defensive lines in rear of those which they now occupy. This possibility must not be ignored. Its consequences depend very much on the condition of the German Army. If it be so badly defeated in the near future as to become demoralized, no fortified places are likely long to delay its dissolution."

As a sample of the optimism with which the British, from Field-Marshal Sir Douglas Haig downward, regard the prospects on the Western front, we may quote that organ of academic Socialism, the London New Statesman, which says:

"Apart from the numerous successful 'raids' that have been carried out on all parts of the line, some really important work has been done on the Somme. The line has been pushed forward to an extent which amounts in the aggregate to what six months ago we should have reckoned a very substantial advance, and it is not merely so much ground but commanding points that have been gained. The number of prisoners captured runs altogether into thousands. Our troops have been uniformly successful; they have learned that they can capture the trenches in front of them easily and at any moment, and the Germans have learned the converse lesson.

"The contrast with the days of Hill 60 and the later Ypres fighting is very striking. We hear neither of hard fighting nor heavy losses. Doubtless both will come when what Sir Douglas Haig describes as our 'great offensive' begins, but it is evident that the fundamental problem of how to make the defensive more costly than the offensive has been solved by the British as well as by the French. In many of the recent operations the number of unwounded German prisoners has alone exceeded the total British easualties."

COSTA RICA'S "COUP D'ÉTAT"

THE PRESIDENTIAL BEE causes commotion in other countries besides the United States, and we learn that the Costa-Rican Revolution of January 27 was caused by the desire of Alfredo Gonzalez to succeed himself in the Presidential chair, in spite of the fact that second terms are distinctly prohibited by the Constitution. A curiously comicopera touch was given to the situation since ex-President Gonzalez was a perfectly legal candidate, for altho he had ruled

the country since 1914 he had never received a single vote as President and had never held that office in the technical sense of the term. Just how that came about and what it led to we find set out in The Pan-American Magazine, a New York monthly devoted to the affairs of Latin America. It says:

"There were three candidates at the Presidential election held in 1913: Dr. Duran was the representative of the National Union party; Don Rafael Yglesias was the representative of the Civil group, which is a split from the first; and Don Maximo Fernández was the candidate of the Republican party, which has existed only since 1901 and represents the more turbulent and less informed section in Costa Rica."

Fernandez, it appears, received a majority of the votes, but not the constitutional one-half necessary to elect him President, and the election passed to the Costa-Rican Parliament:

"The National Assembly contained 18 National Unionists, 12

Civilists, and 17 Republicans; the junction of the first two ranks would have given Duran a majority of thirteen over the Republicans, but unluckily the Republicans were able to win over Yglesias, the Civilist candidate, to withhold his support, and, in their anxiety at all costs to defeat Duran, the Republicans offered to compromise with the Civilists on an entirely new choice—a citizen who should be elected by Congress as 'Designate,' an office equivalent to that of Vice-President under ordinary circumstances, who should exercise office during the 1914–1918 term. The name of Don Manuel Castro Quesada was first suggested, but that of Alfredo Gonzalez was finally agreed upon.

"Senor Gonzalez thus assumed the reins of office without having received a single vote from Costa-Rican citizens, in violation of the agreement made between the two sections of the strongest political group in the country and in disregard of the constitutional law."

This curiously elected President then proceeded to make himself somewhat unpopular by doubling the expenditure of the country, imposing a heavy income tax, and further, it is said, surrendered himself to foreign and capitalistic advisers. The imposition of a land tax, in a country which had previously known nothing but indirect taxation, was the penultimate offense:

"Even this burden might not have roused Costa Rica to action had it not been made clear soon afterward that Gonzalez proposed to secure another term of office. By Costa-Rican law a President may not immediately succeed himself, but Gonzalez disposed of this objection by the assertion that he had never been elected President—which was quite true—and that as he was only acting as 'Designate' he could follow possession

of the office with a term as popularly elected President. This was too much; the country seethed with discontent, and it became plain to many lookers-on that if some bold stroke were not made there would undoubtedly break out a revolution with the disrupting qualities of social disorder and of bloodshed. Costa Rica has not seen bloodshed in public anger for forty years, and there is no one among her friends who would not lament to see her record of peaceful progress thus broken.

"Such an occurrence was averted by the coup d'état of January 27. On that morning President Gonzalez was quietly informed by a band of responsible citizens that his administration would be no longer recognized, the majority of the Army

declared their allegiance to a new order of affairs, and the deposed leader took refuge in the American Legation—a proceeding quite unnecessary in view of the peaceful nature of the movement. Not a single person was injured, and no one was even placed under arrest longer than twenty-four hours, before which time the degree of public excitement caused by the news had entirely subsided; as a matter of fact, the fait accompli was hailed with rebef and content by the whole of Costa Rica."

GERMANY'S HUGE CASU-ALTIES The enormous toll of battle has caused many neutral observers to wonder whether the German Army can maintain its numbers at the present figure in view of the fact that the Fatherland has practically no new sources of supply. It is true that Poland is a reservoir of as yet unused men, and the Paris Polonia calculates some 1,026,000 men are available for the German Army if conscription is introduced. Signs are not wanting to show that the

subject is giving the Teutonie authorities food for thought, and when we consider that Germany's casualty list has now passed the 4,000,000 mark this is not surprizing. To the end of January the totals reported in the German official lists amount to:

Killed and died of wounds		(0.0)	15033151	029,116
Died of sickness.	17		- IVIVIAL	59,213
Prisoners			-10040 0	247,991
Missing		0.00	100111001	276,278
Severely wounded				
Wounded	-		1-111	290,907
Slightly wounded				
Wounded, remaining with units			1 0 0	223,261
				4,087,692

The London Morning Post quotes these figures and remarks:

The above ligures include all German nationalities— Prussians, Bavarians, Saxons, and Wurttemburgers. They do not include naval ensualties or casualties of colonial troops.

"It should be noted that the above figures do not constitute an estimate by the British authorities, but merely represent the casualties announced in German official lists. It should also be noted that the casualties are those reported during the month of January—not reported as having been incurred in January."

That the need of men is urgent can be seen from the fact that the Berliner Zeitung am Millag reports that medical reexamination of all males born after September 7, 1870, who have hitherto been found permanently unfit, has been ordered in the Hamburg district.

"WILL THEY LAST LONG ENOUGH, FATHER?"

-Land and Water (London).

SCIENCE - AND - INVENTION

RED-CROSS DOGS

HE "DOGS OF WAR" in these days are not ferocious, but helpful. It is estimated by Ellwood Hendrick, writing in The Red Cross Magazine (February), that the various combatants now have in training some ten thousand dogs doing Red-Cross work. Prior to the war the number could

probably have been written with two figures. Many breeds are used, but the best physical type seems to be of medium size, strong, gray or black, kind, and of good eyesight. A cross between bulldog and mastiff is said to be desirable; so are sheep-dogs, retrievers, pointers, large Airedales, and many "out-and-out curs." Character and training outweigh ancestry every time, just as they do on the human side of the war. Says Mr. Hendrick:

"These army, or Red-Cross, or sanitary dogs, as the Germans call them, are first trained to distinguish between the uniform of their country and that of enemies. Then the dog must learn the importance of a wounded man as being his principal business in life. News of the wounded must also be brought to his master. He must not bark, because the enemy always shoots. Thereare various ways in which the dog tells his master of his discovery. One method is, if no wounded have been discovered, to trot back and lie down. whereas if he has found a wounded man be urges the master to follow. United States Consul Talbot J. Albert. of Brunswick, tells of a method

in use in the German Army in which the dogs have a short strap buckled to their collars, and they are trained, when they find a wounded man in hunting over the battle-field at night, to grasp the straps in their mouths and so return, thus signifying that there is a man in uniform alive out there. Then they lead the way back to him. This invention was necessary to overcome an evil that became evident among dogs taught to retrieve; that is, to bring back some piece of clothing belonging to the wounded manhis cap, glove, or something from the neighborhood, such as a piece of cord, a stone, or a bunch of grass. The trouble with the method was that the dogs, in their abundant zeal, never returned without something from the injured man, and usually they took that which first struck their eyes. This was most often a bandage, which the dog would tear off. If taught to bring back a cap and the soldier had none, the dog would very likely seize him by the hair.

"Dogs are never trained to scent out the dead. Their business is to assist the wounded. Each one carries a first-aid package strapt about its back or neck and knows that when a wounded man is found he may take the package.

"They are trained to carry letters from post to post and they learn to distinguish the various posts by name. They are also of aid to soldiers on the watch. A French officer tells of one night while on watch as a private in one of the front trenches, when every dog became suddenly uneasy, continually growling and very excited. This was enough for the soldiers; they knew their army dogs and believed in them; so they telephoned to the main entrenchments for support. Fully twenty-five minutes after the reenforcements arrived, a German attack was made from the trenches opposite, which was turned back because of the superior numbers that answered the telephone call. The

distance of the German trenches opposite those of the French is not given, but that does not stand in the way of a very interesting question: By what sense did these dogs know of the approaching attack?

"In the Belgian Army dogs have largely displaced horses for rushing machine guns from one location to another, according to a correspondent of the Boston Post. Officers claim that under fire they are more dependable than horses and may be relied upon to keep the gun out of the hands of the enemy even tho the entire escort be killed. And they can be kept in trenches safe from hostile bullets, which is impossible with larger animals.

"In Russia dogs have been used to carry ammunition to the firing-lines and by the quickness of their work, which was formerly done by crouching and creeping men, have kept the soldiers well supplied from the ammunition-wagons which are always likely to be far in the rear of advancing files.

"There are canine sentries on duty on both sides in the Great War, and dogs that are dispatch-bearers. Marquis, a French dog, fell dead from a bullet-wound almost at the feet of a group of French soldiers to whom he bore a message across a shell-raked stretch of country. But the message

was delivered! And there are Stop, of the Fifteenth Army Corps, the savior of many wounded, and Flora of the Twelfth Alpine Chasseurs—mereiful dogs of war with reputations for distinguished service. There are many Stops and Floras actively engaged in humanitarian service, and it is quite unfair for me to single out individual animals—a conference of dogs of war would doubtless so decide—except as a means of giving typical stories of what are every-day exhibitions of intelligence, devotion, and self-sacrifice on the part of dogs of numerous breeds in the vast zone of battle.

"The people in the warring countries are called on for many and varied contributions. The French War Department has on record a communication from the father of a family which poignantly illustrates this, for he wrote: 'I already have three sons and a son-in-law with the colors; now I give up my dog, and Vice la France!'

"Other stories of the heroism of dogs are likely to come to us when the war is over, and from them we may gain more wisdom about dogs. We are likely to become informed—but whether we learn it or not rests with us—that a chance for education and training is important for a dog if it is to lead a useful life, and that in the economy of a better order of things there is a great deal of work for dogs to do.

"In dealing with dogs we should be philosophical and remember that misplacement is a cause of disorder; that dogs as

A RED-CROSS DOO WEARING HIS GAS-MASK.

well as men, women, and even boots and shoes, are most useful in those places where they can do most good. Unfortunately, we do not employ much philosophy in our dealings with dogs. We use them for our left-over emotions. I know an excellent woman who ruins every dog she owns by sheer spoiling; by letting it have its own way without restraint. And I know a man, a good citizen, who strives to deal justly with his kind, but who is disposed to kick dogs if they bother him. Both take

IN ACTION

This Red-Cross don is carrying the cap belonging to the helpiess soldier at the right, who will thus be identified, and to whom ald will at once be brought.

out their emotions on dogs. This does not give the dog a fair chance,

"However, we do not have to go killing people to make dogs worth while."

ELECTRICAL TREATMENT OF WOUNDS

I MAY BE NEWS to some readers that various electrical methods are now used in military hospitals for treating the wounded men. Such treatment, we are told by Dr. W. J. Turrell, in The Lancet (London, December 16), appears to have been first systematically used by the French in Morocco about a decade ago. Dr. Turrell tells particularly about what has been done at the Radeliffe Infirmary, Oxford, England, which had a fully equipped electrotherapentic department at the outbreak of the war. The method most largely used there seems to be treatment by the electrical decomposition of salt solutions, known as "ionization." Common salt is the substance usually employed, and the chlorin due to its decomposition seems to be the active agent. Writes Dr. Turrell:

"We make use of large pads, strong currents, and scances of as long duration as the time of the department will permit. Cases treated in this way include subneute and chronic rheumatism, some cases of neuritis, septic and indolent wounds, stiff joints, etc. Where the limitation of movement in a stiff joint is due to fibrous bands or adhesions, ionization is often very useful; in these cases massage and manipulation should be performed as soon as possible after the conclusion of the clastrical scance.

"The ionic medication of foul, extensive, and sloughing wounds with the chlorin ion quickly allays the odor and leads to rapid healing with smooth, flexible sears and free movement in the surrounding tissues. I believe that this class of case is far too rarely sent to the electrical department for treatment......

"Nerve injuries, contusion, concussion, compression, and section, partial or complete, form a large proportion of the cases that are sent to the department for treatment. If the nerve reacts to the faradic current [alternating current from a medical induction-machine] we utilize a rhythmically reversed faradism from a coil of low coefficiency, and in this we follow the generally recognized practise. . . Some prefer . . . rhythmically reversed galvanism [which is] quite painless and very efficient. We are told that when a nerve is severed or otherwise rendered functionless the muscles which it supplies hang flaceid, like hammocks from their attachments: waste and toxic products

accumulate within their substance; fatty degeneration takes place; and, finally, if untreated, conversion more or less complete into fibrous tissue occurs; so that by the time the nerve has regenerated the muscle has lost all contractile power. Our object in treatment is, therefore, to maintain the nutrition and contractility of the muscle while the nerve is undergoing the process of regeneration. The sudden sharp contraction elicited by the rhythmically reversed galvanic current seems to me the

ideal one for the removal of these waste and toxic products and for the maintenance of the muscular tone.

"Bergonie's apparatus for the production of electrically provoked exercises we find most useful in restoring the tone of muscles wasted from disuse, or slight nerve disturbance. We have recently been extensively using it with great success.

"Electrotherapy, like other methods of treatment, has usually failed in most cases of severe shell-shock; many of these cases have very marked electrophobia, and electrical treatment then tends to aggravate their symptoms. There is, however, one class of nerve-shock in which the Bergonié treatment generally results in a speedy cure. These are the cases which are under the fixt impression that they have lost all power in their lower limbs, and are unable to walk or even to stand up. One or two vigorous séances on the Bergonié chair are usually sufficient to convince them that there is still some contractile power in their muscles, and they are then soon able to stand and walk without assistance."

The method of treating the interior of the body by the use of electric currents, known as "diather-

my," is also said to be of great use with wounded men, especially in alleviating severe pain and improving local nutrition:

"The high rate of oscillation of the electrons in the tissues excites tissue drainage as well as producing frictional heat. It has several times been pointed out how completely and efficiently diathermy fulfils the indications for treatment in trench-feet, relieving the pain when all other means have failed, reducing the stasis and congestion of the parts by tissue drainage, and diminishing to a minimum the loss of tissue. The results claimed for diathermy in this treatment have now been confirmed by many workers.

"In relieving the pain of sciatica, neuritis, lumbago, and many like conditions diathermy is of the greatest value. In dealing with sciatica I have practically abandoned all other methods of physical treatment, early cases quickly are cured, some old-standing ones require much perseverance and patience, and occasionally one shows no improvement.

"One of the most useful and indispensable forms of apparatus in the treatment of wounded soldiers is the static [old-fashioned 'frictional' electric machine. The equipment of no electrical department is complete which does not include an efficient instrument of this kind. The unidirectional current of the static machine, with its enormously high potential and its minute amperage, can be produced by no other form of electrical apparatus; and it is the possession of these specific properties which renders it capable of producing results in certain cases which are unobtainable by any other means. . . . So vigorous and of such amplitude is the resulting muscular contraction that we are enabled by this method to free muscular fibers from involvement in scar-tissue by the force of their own contraction. So readily and accurately can the force of this contraction be regulated that, by alternately widening and approximating the discharging balls, we can make use of this current as a form of electrical arthromoteur for the movement of stiff joints in the hands and feet, and as a means of breaking down slight adhesions. This method is especially useful for breaking down the adhesions which persist in trench-feet after the subsidence of the acute and painful symptoms."

PERISCOPELESS SUBMARINES—The construction of recent German submarines without periscopes is reported by way of Holland by the Italian Rivista Marittima. Says the writer of an abstract in The Scientific American Supplement (New York):

"There is a lens on each side of the boat, which, combined with mirrors and other lenses properly arranged, makes it

possible to carry out the necessary observations. It is admitted that this improvement carries with it the disadvantage of requiring the boat to navigate closer to the surface than is the case with boats provided with a periscope, but this disadvantage is more than compensated for, so it is said, by the absence of a periscope tube extending above the water surface. A powerful beam of light can be projected at night through the lens opening."

NEW TREES AND PLANTS

WIDE VARIETY of promising foreign plants now being propagated and tested by the United States Department of Agriculture are described in a recent press bulletin of the Department. The gardens where these

tests are made may be called the "Ellis Islands" of the plant immigration service, says the writer. He goes on:

"In them the plant immigrants are earefully studied in order to make sure that they earry with them no disease, and only those which are known to be desirable additions are permitted to make a home in this country. The plants which have successfully passed this scrutiny are distributed to the State experiment stations and to thousands of experimenters and breeders throughout the country.

"At the present time, says an article by P. H. Dorsett in the 1916 Year-book of the Department. much attention is being bestowed upon recent importations from China. Among these are the jujube. This, it is said, may well prove commercially profitable in California and the semiarid South and Southwest. When prepared with came sugar, jujubes have as delieate a flavor as many dates. It is also a very good fresh fruit and has

long been popular in China.

"The Chinese pistache is another importation which has been suggested for use as an avenuetree. Thousands of young trees have been distributed to parks throughout the country for this purpose. One advantage of this tree is the great age to which it lives. For the production of nuts the variety of pistache found in central and western Asia is being tried. At present the entire supply of the nuts used in the coloring and flavoring of ice-cream and candy comes from abroad, but it is said that there is no reason why this country should not grow its own supply. The Sacramento and San Joaquin valleys in California appear to be well suited to the industry.

"Chinese persimmons and Chinese chestnuts are also being tested. It is believed that the Chinese chestnut may prove exceptionally valuable because of its power to resist the chestnut-bark disease, which is doing so much damage among the native chestnuts. The persimmon, it is thought, might be grown commercially in California and in those sections in the South where the temperature does not fall much below zero. In China and Japan dried persimmons are a staple food and there seems to be no reason why they should not be eaten largely in the future in this country.

"Still another importation is an early sweet cherry which has been introduced from Tanghsi, China. This may prove profitable to growers as an early cherry for the Eastern markets."

Besides fruits, we are told, a number of oriental vegetables are being tested in the Department of Agriculture's plant introduction gardens, which may prove money-makers for adventurous farmers and make the way of the vegetarian more interesting:

"Among these are the chayote from tropical America. This vine produces pear-shaped fruit in abundance in the fall. They somewhat resemble in flavor summer squash or vegetable marrow, and may be used as a fresh vegetable throughout the winter. The udo is a new salad plant from Japan that may be grown in practically every State. This is grown in much the same way as asparagus and may be cooked as well in the same way. A few plants of udo, says the article, should be in every home garden."

THE NAVAL SMOKE-SCREEN

THAT THE SMOKE-SCREEN, or smoke-attack, which has been used so frequently and effectively in the present war, originated in the United States Navy is asserted by the author of an article on "The Destroyer and the Torpedo," in The Scientific American (New York, March 3). The writer says that it was first used in our destroyer fleet under the command of Captain Eberle, and he goes on:

"The writer well remembers being present at such an attack off Block Island several years ago, when five groups of destroyers, twenty in all, crossed the head of a column of battleships until they were in the windward position, and then, with the leading destroyers smoking heavily, swept down the line of

Copyrighted by & Miller, Jr., New York

THE SMOKE-SCREEN DEFENSE-AN AMERICAN DEVICE. These 31-knot destroyers of the United States Navy are making heavy smoke which completely hides them from the enemy.

the enemy at a distance of about 1,300 yards. The pall of dense smoke rolled down to leeward, enveloping the enemy and screening the destroyers from observation; but above the dense and low-lying bank of smoke could be seen the successive pairs of fighting tops of the battle-ships; and, had the maneuver been an actual battle, some of the capital ships would have been heavily torpedoed. In the battle of Jutland, the German destroyers made use of this smoke-screen as a protection to their own battle-ships, when they were being heavily hit by the battle-ship divisions under Admiral Jellicoe. A noticeable feature of that fight was the use of fast 30- to 35-knot light eruisers, armed with 6-inch guns, as leaders of the destroyer flotillas. One well-placed shot from a 6-inch gun will usually eripple a destroyer, if indeed it does not sink her; and the object of these light cruisers is to lead the attack, break up the counter-attack of the enemy, and bring their own destroyers within torpedo range."

IF THE GERMANS HAD IRRIGATED

RRIGATION, if it had been employed, would have given Germany the ample food-supply that she admittedly does not now possess. As the publicity agent of one of the great pump companies is reported to have put it, rather strongly: "If the Germans had thoroughly understood irrigation, they would not now be starving." This quotation is used by Engineering and Contracting (Chicago), as the heading of a brief

article, most of which we quote below. The pump man went on to state, so we are told, that the potato crops in Germany have been subnormal since the war started, and that the shortage has been due to in-

sufficient rainfall. With irrigation, as has been demonstrated in Ameriea, not only is a crop insured, but its abundance is increased. The writer goes on:

"In many eases the yield of potatoes per aere has been doubled by irrigation. In all cases the yield has been very materially greater as a result of irrigation, even in socalled humid districts. Apparently the Germans have not fully appreciated the worth of American experience in irrigating garden truck potatoes, etc. - or they would have spent more time making pumps and pipe than making Zeppelins.

"In a nutshell, this expert of a big pumping company a man who has been gathering irrigation data for years -asserts that a campaign of irrigation in Germany, even if begun after the war started, might have entirely changed the outcome of the war. We must admit that there is more than mere speculation back of this suggestion. In fact, the evidence all points toward the soundness of the contention that irrigation of German crops would have so increased the yield as to have eliminated the present short-

age of food.

"It should be remembered that America leads the world in agriculture, and that in irrigation by pumping its leadership is unquestioned even by those who insist that America is behind Europe in 'intensive farming. By the sophistical method of comparing our average yield of grain per acre with that in Europe, it has been frequently attempted to prove that America has much to learn in agriculture from Europe. But the fact is that not the yield per acre but the cost per bushel should be the final criterion of efficiency in grain production, Judged by that criterion, America has led every nation on earth ever since McCormick developed his first harvester."

SUCCESS WITH ARTIFICIAL SILK-A remarkable growth of the use of artificial silk in this country is reported on the editorial page of The Textile World Journal (New York, February 24). Says this paper:

"It is only a matter of five years since this substance was introduced to textile-manufacturers. It is a matter of history that the first fabric produced by a cloth-manufacturer was opposed vehemently by the individual who was in charge of the styling of this particular mill. It was during his absence that a sample piece was made, and he was so imprest with it that he ordered a complete line of colors to be made. To-day this mill's lines of shirtings—the product of several hundred looms all contain artificial silk to a greater or less degree. But the cloth-mills are not the largest users of artificial silk. It is stated that one hosiery-manufacturer consumes more of this product than any individual concern in this country."

FLOATING SAFES FOR SHIPS

ON-SINKABLE SAFES OR VAULTS for all sorts of valuables on shipboard are described in a leading article in The Popular Science Monthly (New York, March). The writer reminds us at the outset that every ship is to some extent a treasure-ship. Her purser is in charge of much money, and her passengers carry valuables. Fortunes have been lost in trying to raise sunken treasure, but until recently

> no one thought of preventing the treasure from sinking. whatever happened to the ship. He goes on:

> "Why bother about ways to recover sunken treasure when a non-sinkable purser's safe would prevent the

sinking? When a steamer-passenger sees his jewelry stored away in the ship's safe he doesn't know whether it is going to a salt-water

grave or not.

"Inspired by the knowledge of the lack of preventive measures of this kind, Menotti Nanni has devised a non-sinkable vault which is not only large enough to hold the purser's safe, but which also provides ample storage-space for registered mail, gold bullion, and valuables owned by the passengers.

"Nauni plans to install several of his floating safes in a large, vertical, cylindrical steel casing placed in a well amidships, the top of the well being flush with the upper deck and covered with a loose-fitting, easily removed cap. The safes are placed one on top of another, the first-, second-, and third-class passengers each having a safe for their valuables. The two lower safes serve as a repository for registered mail and for the most precious part of the ship's cargo.

"Ready access is gained to the safes through doors provided in both the outer and inner casings at the various decks. Thus, the firstclass passengers, for instance, could place their valuables in the safe at night and remove them in the morning. Of course there would be a guard in charge of each safe.

A SHIP EQUIPPED WITH FLOATING SAFES

A cross-section showing the well and the safes in position, one for each dock.

> "If a ship equipped with such a system of floating safes should sink, the cover of the well would float off and the water would enter the steel easing and force the safes to rise to the surface. Once on the surface the safes bob about, to be eventually picked up by a passing craft.

> "The inventor has also provided for hermetically scaled floats to be placed at the extreme bottom of the well under the last safe. Attached to this float is a cable which serves to indicate the position and identity of the ship.

> "It is said that the value of cargoes annually lost on the British coast in time of peace is \$45,000,000. Of course the loss has increased with the war.

> "The Merida, sunk in collision with the Admiral Farragut, in 1911, sixty-five miles east of Cape Charles, in three hundred feet of water, had about \$200,000 in valuables in the purser's safe. The Oceana, sunk off Beachy Head, in 1912, had on board \$5,000,000 in gold and silver. The Lusitania had about \$1,000,000 in gold and jewelry and several millions in securities aboard. The Islander, sunk near Juneau, Alaska, had \$2,000,000 worth of Klondike gold abourd. The Pawabiac, sunk in Lake Huron, had \$800,000 in treasure. The General Grant, wrecked on the Auckland Islands, in 1866, in eighty feet of water, carried \$15,000,000 in gold bars and bullion. The flag-ship Florentia, lost in Tobermory Bay, off the west coast of Scotland, also carried \$15,000,000.

> "Then, remember the fleet of seventeen Spanish galleons with an accumulated treasure of \$140,000,000, which was sunk in Vigo Bay, Spain. Six of the galleons, being in shallow water, were later raised, and about \$20,000,000 recovered. But the others, containing \$120,000,000, still rest at the bottom of Vigo Bay."

"RUM" AND "SODA": A COMPARISON

" UM" has long been used as a generic term for alcoholic beverages by those opposed to their consumption. "Soda" has been similarly employed for "soft" drinks as a class. An interesting comparison of the businesses of dispensing these two kinds of drinks-one apparently on the wane, while the other is increasing is made in an editorial

article entitled "Temperance Drinks and the Soda-Fountain," in The Journal of the American Medical Association (Chicago, January 27). The writer is struck with the fact that the soft-drink business has been, on the whole, regulated more stringently than the alcoholic. Those who want to touch the latter at all seem to be in favor of "reforming it altogether." Says the editor of The Journal:

"Millions of dollars, representing the return to the Government as revenue from the manufacture and sale of alcoholie beverages, attest the enormous consumption of the latter in this country each year. Whether it is attributable to the wave of prohibition which is slowly sweeping over this country, or to the development of new tastes side by side with the long-standing demand for spirituous liquors, or to both factors combined, in any event a rapidly developing trade in so-called temperance beverages has manifested itself-for some time. In part, this has represented an augmented consumption of drinks like ginger ale and root beer, which have long enjoyed a limited popularity in the United States. In larger measure the new trade involves a growing sale of products scarcely used at all in a commercial way a decade or two ago. Thus, referring to the grape-juice industry, a recent writer reports some as-

tonishing figures for the stimulation of trade in this beverage. The production of American unfermented grape-juice in the year 1914 amounted to nearly five million gallons in the Chautauqua belt alone.

"The consumption of what is commonly termed soda-water in this country must be much larger. The United States has been called the greatest soda-fountain country in the world. In fact, soda-water of the sort dispensed, flavored with fruit-sirups as a fountain beverage, is distinctly an American drink which has found popularity in few other countries, with the possible exception of Australia, where the soda-water business is said to be conducted much as it is here. The habit of drinking sodawater at a 'stand' of some sort in summer has gradually stimulated a demand for 'bot drinks' at the same establishments in winter, so that hot coffee, chocolate, malted milk, bouillon, etc., have likewise come into vogue for sale to those who drink cold non-alcoholic beverages in summer.

"It is not easy to estimate the magnitude of the current enterprise in this field. The retail value of the sodas, 'sundaes,' and other fountain beverages or refreshments for 1916 has been placed at \$500,000,000. For ice-cream it was estimated by a statistician of the National Association of Ice-Cream Manufacturers that 200,000,000 gallons would be consumed in this country in 1916. At forty cents a gallon, which is about the minimum price at which ice-cream is sold, the American public would be expending no less than \$80,000,000 for this deliency.

This leads the medical writer to note the sharp contrast between the stringent health regulations imposed on the sodafountain and the absence of such restrictions on the saloon. The hand of the health-officer has extended not only to the soda ingredients, but to the containers and the employees. Would it

> be possible to treat the saloon in the same way? We read:

"During all the years in which the liquor-saloon has been in existence, scarcely any attempt has been made to regulate its practises in the interest of public or personal hygiene. On the other hand, public sanitary regulation of the operation of the sodaountain business has already loen introduced within the few years in which the new trade. has begun to thrive so promimently. In some places the regulations have become more stringent than the restrictions on restaurants or saloons in which eating- and drinkingutensils are used. For example, in one region the health authorities have decreed that all glasses, eups, spoons, etc., used at fountains must be sterilized after much service, Another State has ordered the no of individual paper cups unless all glasses are sterilized. Similar legislation having in view the prevention of the spread of communicable disease through the use of unclean glasses has been adopted by local health boards or sanitary authorities in various places. Furthermore, provision has been made here and there for medical examination of conployees, so that the beverages shall not be dispensed by persons liable to spread disease in their occupation. How difficult it would be either to secure or to put into practise comparable sanitary regulations in the liquor-saloon, where, under existing educitions, the hygienic hazards must be decidedly more prominent."

> HOOKWORM AND EARTH-EATING-Mrs. Frances S. Forrester-Brown, of Miami, Fla., the widow of a British consular officer in Guatemala, writes us, with regard to the facts on "Earth as Medicine and Food," quoted in this department on October 21 last, that her wide observation has convinced her that earth-eating is always a symptom of hookworm, and that the eraving for elay disappears when the disease is cured. She says: "All these reasons for earth-eating-such as its being medicinal, nourishing, appetizing, sweetening, and a delicacyare only excuses indeed; for the desire for it is a craving produced by the presence of the bookworm, which takes all the red corpuscles of the blood for its own nourishment, leaving the victim practically water for blood. The use of pepper and earth or any hard, gritty substance seems to allay a sort of gnaving sensation, and gives a warmth that should be there naturally when the blood is normal. These people themselves have no idea why they desire, so irresistibly, to eat these substances I have mentioned; but after they have been cured of the hookworm, these perverted appetites entirely disappear."

LETTERS - AND - ART

MUSIC AND DRAMA IN THE GERMAN PRISON-CAMPS

HAT THE STAGE MAY PROFIT as a result of dramatic training afforded by the war prison-camps is a revelation of the future. The immediate effect is, of course, alleviation of long and burdensome days. Cares enough there are at best, even in a model camp such as Ruhleben, but the tedium has been relieved at times by music and playacting. This camp has been fortunate in having a large contingent of musicians, actors, and artists, and, says Mr. Israel

by 'Strife,' which was much too somber for the majority of the camp, and 'The Silver Box.' which was a popular success. Jerome K. Jerome contributed 'The Passing of the Third Floor Back' and Conan Doyle 'The Speekled Band.' We also had, among a host of others, such favorites as 'The Importance of Being Earnest,' 'The Private Secretary,' 'What Happened to Jones,' 'Mr. Preedy and the Countess,' 'Liberty Hall,' and 'Mary Goes First.' Ibsen's 'Master Builder' was also produced, not in Mr. William Archer's authorized translation, but—such was the spirit of conceit—in a prisoner's English version of a

German translation of the original. We also had some evenings devoted to one-act plays, one of the most successful being an evening occupied by three plays of Stanley Houghton. Probably the most notable triumph on our stage, from the artistic point of view, was achieved by 'L'Enfant Prodigue, the pantomime drama by Mr. Carré, with the musical accompaniment by A. Wormser. The first. attempt at comic opera was made with 'Trial by Jury,' which was witnessed by a number of English military prisoners, who happened to be transferred to Ruhleben for a few days on their way from one prison-camp to another.

"There was a certain diffidence about the presentation of Shakespeare, as it was feared that he would not be entertaining enough for the taste of the camp. The first attempt was made in June, 1915, with the forest scenes of 'As You Like It,' upon which a great deal of labor was lavished. The producer was Mr. C. Dun-

ean-Jones; the scenic setting, apparel, procession, and dance were arranged by Mr. Leigh Henry, a disciple of Mr. Gordon Craig; and the music was specially composed and conducted by Professor Treharne. Altho gratifying from an esthetic point of view, the performance did not appeal to the majority, and hence Shakespeare was allowed to rest until the following April, when his tercentenary was celebrated upon an elaborate scale. Three performances were given of 'Twelfth Night,' which was remarkably well acted, and three of 'Othello'; while the two intervening nights were devoted respectively to a program of Elizabethan music and to a literary symposium on Shakespeare's England."

There were two popular productions wholly created in the camp, both words and music. One was a revue, "Don't Laugh," produced by a former ballet master of the Metropol Theater, Berlin. The other was a pantomime, "Cinderella."

"The revue was in eight episodes, and its distinguishing feature was a 'beauty chorus,' which was a tribute to the wondrous power of costume, paint, and powder in transforming a number of athletic youths into a bevy of alluring beauties. The production was rendered topical by the inclusion of an episode in which one of the characters sang a rollicking song, 'Has Anybody Here Seen Jackson' and alluded to the efforts made by Mr. Jackson, of the American Embassy in Berlin, to effect the release of certain classes of prisoners. Mr. Jackson

A GERMAN REHEARSAL IN AN ENGLISH CAMP.

"Making up" for a diversion permitted by England to her German war-prisoners at Dorchester Prison-Camp.

Cohen, writing in the London Outlook, "it was particularly due to the efforts of our musicians and actors, who received no reward for their self-imposed labor, and who were really exposed to candid criticism, that we were able to maintain a cheerful spirit throughout the long and weary months of our internment." During the first winter an orehestra of from forty to fifty was organized and concerts were given on Sunday evenings. when the program ranged over a considerable field, and included selections from Handel and Wagner, Verdi and Puccini, Beethoven and Bellini, Sullivan and F. H. Cowen. But more activity was displayed in the dramatic field, and plays were performed on three or four successive nights, giving a majority of the prisoners the opportunity of seeing it. Two dramatic societies were formed, one animated by the spirit of edification, and the other by the spirit of amusement. There were offered comedy and tragedy, faree and problem-play, pantomime and melodrama, comie opera and revue. There was, we are told, a notable predilection for living playwrights:

"Bernard Shaw was the first to be chosen, his 'Androcles and the Lion' having been performed—for the first time in English on German soil—in the middle of March, 1915, and later 'Captain Brassbound's Conversion' and 'John Bull's Other Island' were also successfully produced. John Galsworthy was represented was present at a special performance, and was greatly amused by the parodying of his personality. The 'Cinderella' pantomime was also produced by Mr. Roker, and as it was such a success a 'command' matinée was given on New year's day, 1916, in honor of the American Ambassador, Mr. J. W. Gerard, and his wife, and several members of his staff with their ladies."

Nationality began to assert itself after the parent dramatic society had proved a success, and there were formed an Irish, a French, and a German dramatic society. We read:

"The Irish players specialized in Hibernian drama, and their best productions were 'John Bull's Other Island' and 'Cathleen in Houlihan.' The French Society produced several amusing

comedies and farces, including 'L'Anglais Tel Qu'on Le Parle, The German Society began with a sucressful production of the popular musical comedy, 'Der Fidele Bauer,' and then ambitiously produced the comic opera, 'Der Graf von Luxemburg, which failed owing to the inability of the men who took female parts to work up a soprano voice. This opera, however, also had the bonor of a 'command' performance, the distinguished visitor being General von Kessel, the Commander-in-Chief of the Military District of the Mark of Brandenburg. Other German plays produced were 'Doktor Klaus' and 'Der Erbförster.' Spanish play and a Russian play have also been performed, and oceasionally variety entertainments were given by the Ruldelsen Empire Company."

Early in the summer of 1915, we are told, the professional musicians formed a musical society, "to secure accommodation for practise and study for the professional musicians and students interned, and to organize concerts and other musical entertainments in the camp." We read:

A FRENCH VOICE IN AMERICA

AMERICA IS THE ONLY NATION which was founded by and for an idea—the idea of justice and liberty—which did not grow up step by step. This statement is made by Henri Bergson, the French philosopher, before the American Academy of Arts and Letters. It is his first public address on his visit here, and, unlike the utterances of most of our foreign visitors, it was given in part in English. "Approximate English" was Professor Bergson's apologetic description, but the New York Times assures us that what he uttered was, "in fact, English of faultless phrasing." France, he declares, "feels

THE PLAY IN PROGRESS.

The testium of prison-camp life in both England and Germany is relieved by theatrical performances. This seems at Dorchester could be duplicated at Rubleben.

"It was a long time before the Society was able to secure special accommodation for musical practise, especially on the piano: ultimately, in combination with the artists, it had a wooden shed built beyond the barracks at the extreme west of the camp, half of which was used as a musical salon and the other half as an artists' studio. Henceforth, the conductorship of concerts presented an agreeable variety. . . . Mr. Peebles-Connintroduced the popular promenade concerts on Tuesday evenings, which have enjoyed two summer seasons. Mr. Bainton, who had already delivered an interesting course of lectures on European Schools of Music, with pianoforte illustrations, trained a madrigal choir, which proved a popular attraction at subsequent concerts. Some of the works performed were the compositions of prisoners, including a few written among all the distractions of the camp."

The graphic arts were not neglected by the prisoners, the the "artists could naturally not attain such continuous publicity as that of the musicians and actors,"

There were a number of portraitists who worked either in oils or erayon, and who were always busily engaged in limning the features of their fellow prisoners or guards. The first Art Exhibition was held in a partitioned portion of the Grand Stand Hall in July, 1915, and was successfully organized by Mr. E. Hotopf. There were about a hundred and fifty exhibits, comprising portraits, landscapes, Spandau sunsets, humorous camp scenes, imaginative creations, a few sculptures, and cunningly designed marble paper-weights. The exhibition, after being passed by the military censors, was thrown open for three days, and many of the objects were bought by prisoners. The second exhibition was held the following Christmas in the studio which the artists had built in conjunction with the musicians; and the third exhibition, held in April, 1916, was more varied in character and also more successful than its two predecessors."

the profound affinity in ideals between the two republies, which has been revealed by the present war—by your charity and unexampled generosity, by the spirit of your soldiers who have died heroically in battle." This fundamental sympathy, he points out, finds also new proof in a barmony between the academies of the two nations. The aims of the French Academy have rarely been better or more succinctly exprest than by Professor Bergson in this address. Thus:

"The work of the Academy in fixing the standard of what is and is not the French language answers one of the great wishes of the French nation, that its language and literature always express ideas of a general nature that can be accepted not only by Frenchmen, but by the whole civilized—I mean the whole really civilized—world. This can only be done if every word is given, for a certain time, a precise value, so that it can circulate like a coin and be accepted elsewhere."

Then, coming to what he called the particular excellence of the Academy, the task of rewarding deeds as well as literary works, Professor Bergson spoke in French, saying:

"The distribution of the prizes of virtue rewards deeds performed obscurely by obscure persons. This is an expression of the union which has always existed among our people between literature and moral ideals, despite certain ideas to the contrary that may have become current abroad. There has been no 'transformation in France'; France has remained the same as always. But we have had a certain shyness in expressing these things and displaying them to the world; we have reserved our entire strength for the great work which we are now on the way to accomplish.

"In the spirit of French literature, if not of all literature, the

fact that the soul of the writer is full of generous and noble sentiments is held to create beauty of expression, and the fact that the Academy distributes the recompense of virtue, as well as of literary merit, is symbolical of this profound relation between literary and moral beauty. No one boasts in France to-day and no one complains. We are fighting against the anti-democratic and antihuman ideal that might makes right; if this idea became dominant, life would no longer be worth living. The resolution has been irrevocably taken to fight to the end for an eternal ideal; our soldiers fight not for themselves, not for France even, but for all humanity."

IF THE GERMANS USED THE ROMAN ALPHABET

In THE EARLY DAYS of the war we heard of a virulent "word-phobia" breaking out in Germany, that drove all, or nearly all, true patriots into an effort to cast out all unclean words. Words were called unclean if they chanced to derive from any non-Teutonic source or had been taken over bodily

.. WORD HUNT IN BERLIN

"Good Heavens, what's the matter? A man hunt?"

"Nothing of the sort. It's only that there's a foreign word in circulation which the police haven't caught yet."

- Paczer in Ulk (Berlin).

from the despised enemy. The above cartoon from Ulk shows that not all in the Fatherland had lost their sense of humor. Probably some still remain so gifted, for we read of an internal warfare lately broken out over a proposed change in the characters used in printing and handwriting. Some there are who think one of the chief reasons for Germany's being so misunderstood by all the rest of the world is to be found in these same archaic characters. The cry, as we learn from a Berlin cable dispatch to the New York Times, was first raised by a Rhenish manufacturer of pens; but his protest was taken up by newspapers, save the Conservative party organs, who "entrenched themselves behind tradition to fight off the onslaught of the iconoclasts." The merry war goes on thus:

"The Berliner Tageblatt sought to prove that many foreigners would not take the trouble of learning German for the mere reason that they would not only have to learn to speak a new language, but also to write a new alphabet. If Roman characters were used instead of the German, the Tageblatt urged, there would be many more students of German literature, and German ideas would become better known and more appreciated by the rest of the world. It was also contended by the modernists that the so-called German characters have been developed from the Gothic, which would give them a French origin, and that, therefore, the enemies of the proposed reform were really fighting for something that was not German at all. Lastly, it was argued that Roman characters were more easily read and less trying to the eyes than the somewhat twisted German characters.

"These were the three principal salients from which the attack on the German characters was conducted. Meanwhile,

their defenders had brought their heavy artillery into position, and the battle now rages with great bitterness. The defenders, being hard prest, looked about for allies, and found one in a Paris newspaper which in 1911 requested competent Frenchmen to express their opinions as to what style of printing was most suitable for the German language. Eighty-one per cent. voted for the retention of the present German characters.

"Not contented with this French support, the Conservatives sought allies in other countries, and formed a regular entente against the supporters of Roman characters. One of their biggest guns was Prof. Dr. Achmed Emin, of Constantinople University, who declared it unthinkable that German should be written or printed in any other characters than those used at

present.

"As further proof that foreigners were not prevented from learning German by German characters, it was pointed out that in certain German cities which were particularly frequented by foreigners, like Leipzig, Nuremberg, Stuttgart, and Darmstadt, all public directions, names of streets, and even directions on street-cars were in German characters, which would not be the case if foreigners found them too difficult. The first-page titles of newspapers printed in Gothic in France, England, and America were also mentioned as proof of the beauty of the German characters.

"Whereas, on one side, opticians, doctors, and professors have done their best to show that Roman was less trying to the eyes, the defenders of Gothic now bring forth Dr. Schackwitz, of the Physiological Institute of Kiel, to gainsay them. He has made experiments which, he says, prove that while for the reading of a fixt amount of printed matter the Roman characters require 24.500 movements of the eyes, the same document in German characters can be read with only 17,000 movements.

"As to the contention that the German characters are of French origin, the conservatives quote whole libraries as proof that they are absolutely home-grown, and that Gothic is only a somewhat independently developed branch of German.

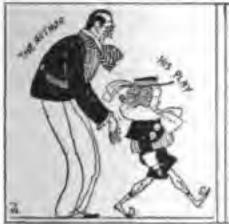

"The battle is by no means ended, but the conservatives received a severe blow recently when in both the Turkish and Bulgarian Parliaments the adoption of Roman characters was advocated."

WHO WRITES AMERICAN PLAYS?

UR FARCES AND MELODRAMAS go well in England, but our real dramss almost never. Is it because we are light-headed and unequal to the production of a serious comedy. The question is answered with a variety of subtle suggestions by an American playwright with enough plays to his credit to give him authority along the line he speaks. He is Mr. Harvey O'Higgins, and he contrasts the plight c' himself and I hallow playwrights here with practitioners of the eraft in France and England. There, he declares, "the author of a play is the person who writes it"; here he is chiefly the person who is blamed for it. If a play fails in France it fails "as is"; the dramatist is "the captain and master of his fate." In England "the playwright is a sort of constitutional monarch"; whatever his advisers might offer he holds the final right of veto. What we have here, Mr. O'Higgins tells us in the New York Tribune, is something which holds over as a legacy from our dramatic Colonial days:

"A few decades ago there was almost no native drama. It was imported from England or translated from France. The author did not often come with it. He was not at rehearsals. He did not see his play performed or know what was done to it. The producer, the adapter, the stage-director, and the actors were free to cut and rewrite and change and 'gug' the lines as they pleased, within the limits of their rival interests. It became the tradition, the unwritten law, that 'plays are not written-they're rewritten.' And this tradition still persists. The American author, at rehearsals, has no conceded authority. He has no natural standing, no constitutional power of veto, no inalienable rights. He has to be well established by previous successes before he can make any stand in defense of his lines. It is consequently true to-day that most American plays are not written, but rewritten, and the rewriting is not done by the nominal author, or it is done by him unwillingly and under moral duress.

"On the other hand, the English play, as we get it now, is a play that has succeeded in London. It has been produced

THE PLAY RETURNS TO ITS DOTING PARENT.

Barton in the New York Tribune.

WHAT HAPPENS TO NEW PLAYS.

there under the author's supervision; the lines have been set; the stage business has been fixt and decided on; the tempo has been taken. The New York production is made by a director who has seen the play in England. He reproduces it faithfully, because its success has stamped every detail with the authority of public approval. He often imports the original east. He always imports a play that has been written by the author, rewritten by him, and largely directed and rehearsed by him."

By comparison with such plays the American product is "strong in dramatic climaxes, noticeably spotty and convulsive, with tricky cortain and good exit and entrance speeches and ingenious turns of plot that achieve theatric surprizes by wrenching the back of probability." That is to say—

"It is strong in all the qualities that producers and stagedirectors and actors desire in drama. It lacks what the author alone can give it—a theme, a point of view, a consistency of pith and meaning in plot and characterization, a subordination of its component parts to its end and effect. It lacks singleness of creative purpose, as compared with the French or English play. It is the product, not of one mind, but of many minds, and those minds are interested in professional details and special appeals, not in the whole composition or its point. It is at its best when it is a melodrama, because a melodrama is at its best when it is a bag of tricks, without any particular theme or moral contents, unhampered by too eareful a consideration of the limits of probability or the realities of characterization. For the same reasons, when it is not a melodrama, but a comedy, it is best when it is a farce-for farce bears about the same relation to comedy that melodrama does to tragedy. We are sending melodramas to England. We send farce-comedies there. But we are not exporting any real dramas, any tragedies, any satirie comedies, any plays of the better sort that we receive from London. We are not producing such plays. We are not training authors to write them."

Mr. O'Higgins attempts to answer for us why we have no plays by such American novelists as Howells and Henry James and Edith Wharton, altho we import plays by such English novelists as Barrie and Galsworthy and Arnold Bennett. Of course, one weakness of Mr. O'Higgins's comparison is that all three of these Americans have, at one time or another, written plays. Their fate on the boards is a complex story, but Mr. O'Higgins resumes:

"No one who knows our theater could imagine Mr. Howells or Mrs. Wharton struggling with the typical adversities and indignities of an average Broadway production. It is a struggle for the humbly young and patient, the unknown, the new and inexperienced author. And he is welcomed by the producer, His inexperience is no bar. The producer is not inexperienced. Neither is his director, nor his star, nor his consulting playwright, who will probably come in for a share of the royalties before the box-office opens. That is one reason why the authors' names are new on our theatrical bill-boards every season and their plays are so strangely reminiscent. That is one reason why it is so easy to tell a Barrie play from a Galsworthy play, and so difficult to tell a play by any one American author from a play by any other American author. 'I am not writing my plays,' one of them says. 'I am only being blamed for them.' If a play succeeds, everybody connected with it gets some credit. If it fails, only the play is found guilty, and the author. He is like the king in one of those uneasy European countries where the governing class keeps a figurehead on the throne, so that the bombs of the discontented may be sure to hit the wrong person. He sits up after his opening night in New York and hears the hand-grenades of the newspaper critics exploding all about him. The monthly magazines shell him at three months' distance with Jack Johnsons. He is properly blown up on every side. That is all in the day's work. He accepts it philosophically. But when some sharpshooting-commentator on the American stage remarks invidiously upon the excellence of the English plays on Broadway and the natural superiority of the British author, you should pity the poor American playwright and listen to his wail: 'I'm not writing my plays. I'm only being blamed for them,'"

ONE OF BARRIE'S SLIGHT JOKES

R. BARRIE SEEMS ABLE to play his little dramatic jokes tho the times be sad. Indeed, there may be all the more reason for his lightsome touch in endeavoring to dispel the gloom. His last joke was perpetrated in London for a war-charity and is called "Reconstructing the Crime." By this reconstruction he aided a war-hospital depot to the amount of over \$15,000. The London Times's dramatic reviewer feels "occasionally that the jokes are so slight that they do not add anything to Sir James's artistic reputation"; but, at any rate, he sees that "they achieve their primary object of raising money in profusion for the charities concerned." The current one also served to advertise the pet foibles of some of London's leading actors and actresses, as we see:

"Nobody else, for one thing, has the knack of working out such fantastic ideas as Sir James Barrie. Who but the author of 'Peter Pan' could conceive the notion of a Court of Justice with Mr. II. B. Irving as judge and the audience as jury assembled to try various prominent actors and actresses for their alleged fuibles in private life? Mr. Dion Boucieault, for instance, has apparently a weakness for wearing a gray bowler hat: therefore Mr. Donald Calthrop has determined to kill him with a earving-knife in his own 'peacock drawing-room'; Mr. Nelson Keys confides to Mr. Arthur Playfair that his weakness is to fall in love with his own likeness on the screen; Mr. Gerald du Maurier discovers that the only reason the ladies in the Punjab make love to a newly arrived subaltern is to transfer their mosquitoes to him; the Gaiety Theatre Company illustrate the accidental circumstances which led to the origin of harlequin and columbine (this, by the way, was quite the best feature of the afternoon); shining lights of the stage show how the shining lights of society behave at amateur theatricals.

"It is all good fun, even the it dragged at times yesterday afternoon, but happily the audience entered into the spirit of the thing and seconded Sir James Barrie's efforts to raise money in noble style. Thus, when the Court imposed a fine on Miss Irene Vanbrugh, it was promptly paid by members of the audience on condition that she bought Mr. Boucieault a new hat of any color but gray; bail was forthcoming for other fair delinquents in substantial sums; a rare specimen of an English sovereign was disposed of at five times its market value, and finally Mr. George Robey sold by auction a picture painted for the occasion by Mr. Tom Mostyn and obtained £150 for it."

RELIGION-AND-SOCIAL-SERVICE

"WAR-SUNDAY" IN NEW YORK

N FLAG-DRAPED PULPITS the pastors of New York, men of peace, sounded the call to arms. Thus was virtually observed a War-Sunday in the churches of the metropolis on March 11, the such a day does not appear in the churchcalendar. It happened at the behest of the New York Federation.

of Churches, who wished to "mobilize its Christian strength behind President Wilson, pledging to him 'all the service of which we severally and collectively are capable, and coming out for the immediate establishment of a system of universal service." In Dr. Hillis's Brooklyn ehureh, the New York Tribane reports, a reference to Theodore Roosevelt in a sermon on the theme, "Why We Should Go to War with Germany," brought the congregation to its feet cheering. One hundred and fiftyeight churches voted for the declaration, The Tribune tells us, and fifty-two voted against it. Only the Presbyterians of the six leading Protestant bodies registered a close vote. Twenty - seven favored declaration and twenty opposed it. The Baptist vote stood 16 to 1; the Congregationalist 10 to 0; the Protestant Episcopal, 27 to 3; the Methodist Episcopal, 23 to 4; the Reformed, 19 to 3. In a group comprising the

Evangelical Association, the Society of Friends, the German Evangelical Symod, the Lutheran Danish Ohio and General Synods, and the Reformed Episcopal and Universalist churches, the Federation's principles were rejected by a vote of 11 to 2. The declaration itself, as The Tribane prints it, was sent out as a referendum to the churches, and reads in this wise:

"After exhausting the resources of diplomacy in an effort to avert war, the President has now taken the only course consistent with national self-respect.

"War with Germany will not ensue unless the Imperial German Government knowingly violates well-settled principles of international law and violates them with intent definitely hostile to the United States. In that event war will inevitably follow, not by our own act, but through the deliberate aggression of another nation. "If any honest doubt exists respecting the cause of war in Europe, the awful responsibility for extending it to this hemisphere will rest upon Germany, and upon Germany alone.

"It may be that the Imperial German Government is misinformed respecting the temper of the people of the United States, just as that Government is supposed to have misconceived

I a sentiment of the British Empire at the outbreak of the European War. If so, and before fatal action based upon so grave a mistake is taken, Germany should be made aware of the essential unity of our people and of their loyal determination to make all sacrifices necessary to protect our liberty and to maintain our honor. To this end we eall upon all bodies similar to ours throughout the country and upon all groups of citizens organized for whatever purpose, to meet without delay and express themselves with no unecriain voice respecting the course that they will be prepared to follow.

"We urge all such groups of citizens, secular and religious, large and small, societies, clubs, and institutions of every sort, to unite with us in giving immediate public expression to such convictions as those which we now solemnly record:

"First—That the act
of the Executive in severing diplomatic relations with Germany is
one to be approved and
commended by all who
have the best interests
of the United States at
beart.

"Secondly—That the German declaration of January 31, 1917, represents an unjustified and

unjustifiable attempt to destroy the freedom of the sea and to abridge the commercial liberty guaranteed to us by established law and custom; and that if the Government of the United States were to acquiesce therein such action would be resented by all good citizens as in the highest degree pusillanimous and as altogether inconsistent with the spirit and traditions of a free people.

"Thirdly—That the President will be justified in recommending to Congress the most extreme measures that may be deemed necessary to protect life, liberty, and property; and that it is our duty and that of all loyal citizens to tender immediately to the Government all the service of which we severally and collectively are capable."

The Federation makes its plea for a system of universal service, recommending that Congress be urged "to exercise its Constitutional power to raise and support armies" by establish-

ONE OF NEW YORK > BEFLAGGED CHURCHES.

Pulpits as well as exteriors of many of New York's choreins were draped in flags for the observance of War-Sunday, March 11, and in some cases, notably a Brooklyn church a rmon-time was turned into a strong resemblance of a patriotic raily.

immediately a permanent and democratic system of defense based upon universal service and training under direct and exclusive Federal control." It urges Congress to go to the root of every citizen's duty and not fall back upon the aid of volunteer service, saying—

"That while all should stand ready to volunteer, if voluntary service is called for, yet Congress in providing for our common safety should not adopt emergency measures merely, but should definitely recognize the principle that the duty of defending the nation rests equally upon all citizens capable of service, to the end, therefore, that the burden of safeguarding the country should no longer be cast exclusively upon the loyal National Guard and upon other patriotic military and naval volunteers."

Dr. Leighton Parks declared in St. Bartholomew's Church that "Christ was not always a man of peace in the sense of being a pacifist. Our extreme pacifists are going further than he went. I feel sure the majority of the American people in their stand behind President Wilson are following the example of Christ." In Manhattan the biggest demonstration was aroused by Dr. Charles A. Eaton, of the Madison Avenue Baptist Church, who sees Americans "now in a period fraught with the greatest danger":

"This time is the erucial test of our prosperity, peace, and apparent security. Some people are afraid we shall become involved in war. We ought to be afraid we shall not?

"America has been masquerading in effectinacy and living in a moral vacuum. Our Churches have been teaching what amounts to a moral asphyxiation. Pacifists afflict the country. Their sentiments produce a conflict of emotions in me. They make me want to swear, pray, laugh, and weep."

MILITARY CENSUS TAKEN BY CHURCHES—The churches of Connecticut have been enlisted by Governor Holcomb to gather a census of the State's war-material in men, because he counts church members as people of the greatest influence. The letter sent to the ministers and reproduced by The Living Church (Milwaukee), after pointing to the pass reached in public affairs, declares that "we should be blind if we did not recognize the dread possibilities in our situation, and we would be false to the responsibilities which belong to us if we did not face honestly the future, and do what each of us can to prepare against whatever need may arise." Going on:

"Feeling the responsibility which rests upon me as Governor, I have sought from the legislature permission to have made an examination of the resources of the State in men and material available in the event of war. The first step involves the gathering of information as to the number of men in the State whose services might be made useful, not necessarily, or perhaps principally, in the actual battle-line, but in all the occupations which have become incident to modern warfare. Because I recognize that the churches of Connecticut count among their members and attendants the people whose influence as a whole can, perhaps, do more than that of any other body of its citizens, I have decided to make a direct appeal to you to assist in this work. I ask that no man shall prove unwilling to give the information which may be asked of him; I ask that all men, and the women as well, may use their influence to make easy and complete its gathering: I ask that any men who are so situated that they can give time to the work may freely offer their services. I have never lost faith in the patriotism of the people of Connecticut; and the response which has already been made to the call which has been issued has justified my faith; but I hope that, as the days go on, the willingness of all our people to join together in the common undertaking of making ready against whatever fate the future may hold will become ever clearer.

"I have not forgotten that our God is still the God of Love, and our Prince the Prince of Peace; I would have the earnest prayers of all directed to the maintenance of peace; I would have them seek for every one in authority the fullest measure of divine guidance. But, as I believe that this country has a mission to perform in the world, so I believe that it is the duty of every one who claims citizenship in it so to act that its destiny shall not be stayed."

CLEANING UP NEW ORLEANS

THE GOOD WOMEN of New Orleans have been asking for years the question, "What is the matter with our homes and our husbands?" The answer has now been furnished them by one of their own citizens, Miss Jean Gordon, a Unitarian whose parents were one a Presbyterian of liberal faith and the other a Catholic. Miss Gordon is a middle-aged woman of wealth and social position, and her reply to the above question is "Storeyville." She seems to have been "one of the first to comprehend clearly the fact that the answer lies in 'Storeyville'—the name locally applied to the vice district in the race-track, and in the city's attitude toward them." Miss Gurdon discovered, says Mr. Rolfe Cobleigh in The Congregationalist (Boston), that "wrong and immoral practises which are dealt with severely in other States have passed unrestrained in Louisiana because there were no laws against them." Offenses against morality which are crimes in other States are said to be not even misdemeanors in Louisiana. Miss Gordon, with the help which she solicited, has secured the passage of a law which "places some limitation, altho only a mild one, upon race-track gambling; and another law in a similar mild degree limits the practise of commercialized vice, prohibiting solicitation upon the streets." They are opening wedges for the abolition of anachronistic conditions that the writer in The Congregationalist thus reveals:

"New Orleans has two institutions which could not exist in any other city in America to-day with a single exception. One is its race-track, where gambling is carried on openly and as a regular, legitimate part of the sport. The other is a large red-light district, in which commercialized vice in its worst forms is practically legalized. As a resort for race-track gambling, New Orleans stands alone. San Francisco, with its Barbary Coast, comes nearest to being in the same class with New Orleans as a vile and shameless market-place of fallen humanity. Even San Francisco is better than it used to be:

"I reached New Orleans the day that the racing season opened and found it difficult to get a room in a hotel because the city was full of race-track gamblers from far and near. Race-track gambling seemed to be the principal topic of conversation throughout the city. At the same time I found plenty of evidence that the most serious and hopeful reform movement of

this generation in New Orleans had actually begun.

"Miss Gordon told me that her determination to fight race-track gambling followed the shock which came to her when the son of one of her friends committed suicide. He was only a boy, and, after losing heavily at the races, he blew his brains out. Her determination to fight commercialized vice was spurred to action by the stories which came to her during Mardi Gras. Most of us think of Mardi Gras as simply a season of gaiety and barmless parades and festivities. As a matter of fact, the Mardi Gras season is one in which thousands of the revelers descend to debauchery, and it is a popular saying in New Orleans that 'everything goes in Mardi Gras.' Young people from the best families of the city finish their nights' revels during Mardi Gras by trips through the red-light district and for weeks afterward laugh and joke over the vile and degrading scenes which they have witnessed."

The new laws when passed were complacently ignored, and then the Joan of Are of New Orleans organized a Citizens' League of Louisiana, a reform organization of one hundred for law enforcement. Clergymen, well-to-do business men, and club women are in the organization. "The city government is complacent, and the vice, liquor, and gambling interests of New Orleans are strongly entrenched in the political affairs of the city." This is shown by such maneuvers as these:

"Miss Gordon secured two shares of stock in the race-track company, and then brought suit against the company's officers for alleged unlawful practises that jeopardized her investment. Judge Skinner ruled her out of court two or three times. The State Supreme Court each time sustained her and sent her back for trial. Just now she awaits Judge Skinner's next move."

Another instance deals with a race-track man from Havana

who purchased land in New Orleans and proposed giving a liberal share of it to the city for a public park. Then he asked the city for a franchise to run a race-track. The Mayor and his associates "were unwilling to allow any one to 'butt in' as competitors of the track already established," and the disappointed race-track man from Havana, after buying a newspaper, began a campaign against the city government that served the purposes of the real reformers. Raids were made in "Storeyville," and "New Orleans had its first dry Sunday in the memory of man." We read further:

"Some of the worst cabarets and saloons were closed, but only a few of them, and the two most infamous places, were allowed to continue unmolested. The lowest and vilest streets of Storeyville are filled with 'cribs,' so called, in which the women of the underworld sink to their deepest depravity and in the most shameless condition ply their calling. There they were flagrantly violating the law against street solicitation. With only a few hours' notice seven thousand of these women were driven into the streets and the 'cribs' were closed by the heavy hand of the law. Only in a limited and entirely inadequate fashion was anything done to care for these women, and the inhumanity of the action taken by the police was increased by the fact that the raid was made during the cold wave which was the most severe that the South has suffered in many years."

The "logic of New Orleaus" is something Mr. Cobleigh finds it hard to understand:

"The city learned how to stamp out yellow fever and bubonic plague by ridding itself of mosquitoes and rats. It did not maintain a 'restricted district' for disease in the heart of the city. But when any one has suggested that the vice district should go, the answer has been that the best way to deal with commercialized vice is by segregation. Thus, it was said, vice can be watched and regulated, thus the rest of the city may be kept clean and safe. But vice, like disease, spreads. To-day New Orleans is infected with vice throughout. Evidence is piled high that scores of streets supposed to be respectable contain disorderly houses. Perhaps the time is near when New Orleans will rise as she rose against yellow fever and treat her vice as any terrible disease must be treated.

"Let no one say that I have done what no one has any right to do—indicted a whole people. New Orleans not only has Jean Gordon, but it has thousands of good citizens, and while no one of them can shirk his share of responsibility for the city's open and wicked shame, they have felt that the forces against them were too strong to combat and have not known what to do until a brave and strong-souled woman had the vision and courage to throw herself into this fight, whatever the cost. Now their duty is plain, and we shall expect them to do it."

"CANNED" WORSHIP—The large demand for phonograph records of religious music is taken by The Northwestern Christian Advocate (Meth. Epis., Chicago) as a marked indication of the popularity of sacred things. And it hears that the demand for such records has even led to the preparation of a complete phonographic church service which could thus be heard comfortably at home. The Advocate notes that "while there are a number of gospel and other sacred songs of a somewhat ephemeral character recorded, there are, in addition, numerous selections from the great oratorios—Mendelssohn's 'Elijah,' Handel's 'Messiah,' Haydn's 'Creation,' Gounod's 'Redemption,' and similar works." This editor continues:

"Extensive efforts have been put forth to secure the records of famous church choirs, such as the Trinity choir of New York, the Sistine Chapel choir in Rome, Trinity chimes, and Russian cathedral choir. Unlike opera companies, church choirs and choir singers do not go on tours, and their music is, therefore, heard only by their own congregations and a few wandering pilgrims.

"An enterprising company has arranged a phonographic service to be unrecled at home with the following program: 'Holy City,' Adams; 'The Crucifix,' Faure; 'Lead, Kindly Light,' Dykes; 'Ave Maria,' Bach-Gounod; Scripture lesson, St. Mark 4:35-41, the Rev. J. Wilbur Chapman, D.D.; and hymn, 'Peace, Be Still,' mixed quartet; 'Hallelujah Chorus' from 'The Messiah,' Handel, Sodero's Band.

"We are not giving this with a view to suggesting a substitute for the regular Sunday service, tho it is possible some who sit under the sound of the foregoing might salve their conscience with the persuasion that they have done their duty. If the phonographic art reaches that stage of perfection and universality of use that sermons are 'canned,' and thus phonetically opened at home, then we be to the preacher. He may as well himself be 'canned.'"

TWO YEARS' SOBRIETY IN RUSSIA

PRAWING SOBER BREATHS of rejoicing, Russia does not forget the time when "there were entire drunken villages, drunken cities, a drunken army, a drunken Russia." So the Petrograd correspondent of the New Züricher Zeitung presents a survey of the results of the prohibition ukase of July 29, 1914. "What would have become of Russia without the revolutionary proclamation?" is a question put by many. A representative of the Duma has said that "the very thought of the fateful consequences on the battle-fields and in the country itself of a continuation of the inveterate alcohol régime makes every patriot shudder." The writer continues:

"We are, therefore, more than overjoyed to know that it has been statistically proved that the daily producing capacity of the workingman, since the promulgation of that message of salvation, has been increased by 15 per cent., and that Monday, the day when millions of muzhik (farmers) were found in the gutters, has become a normal work-day in Russia. But not only the wir (village community) felt the consequences; the life also in the city was as if of a sudden transformed. The population rushed to the schools and savings-banks, cooperative societies opened their counters by the hundred. The whole aspect of the family life, the very looks of the people on the street were changed. How quickly the population grasped the prospective benefits of the great reform is best shown by the fact that when it became known that the Imperial ukase, in order to become legally valid, will need the express consent of the majority of the mirs, only an exceedingly low percentage refused the indorsement. To-day there is hardly a village in the vast Empire where the blessings of heaven are not called down on the Little Father in Petrograd.

"January last (1916) the Zemstvo (County Assembly) of Moscow circularized the pensants in order to ascertain in the most direct possible way the impression of the population. A few of the replies made by the village elders, most of them as illiterate as their charges, have a great economic and psychological value:

"The men feel stronger. Their treatment of their women folk and attitude toward their neighbors is not the same as before."

"'The children are now nicely drest and have even shoes on their feet. One hears no more quarreling in the izbas (farmhouses).'

"'I was amazed to find among our farmers some who subscribe to newspapers."

"The people have become more bonest."

"There are, however, some who do not give up all hope to see again the vodka bottle in its ancient glory: 'The war will end with our victory; our heroes will return, and then, of course, moderately, one will have to drink again."

Our authority states that the malcontents are mostly found among the lazy farm-hands and the city loafers, who try to replace the old wine and alcohol by all possible substitutes. The substitutes offered by the Government and the municipalities are theaters, moving pictures, reading-rooms, clubs, ten-houses, and similar institutions.

"Nobody has so quickly and completely grasped the import of the social revolution as woman, the greatest sufferer from the old alcohol curse. We are, therefore, not astonished to learn that as soon as the saloons were definitely closed the peasant women marched to the churches in Indian file to burn a candle each, thanking the Lord for the great delivery.

"When, last spring, the question of repermitting the sale of beer and red wine came up in the Duma, Tarasov, a farmerdeputy, exclaimed: 'If the women would hear you, they would

pull you down from this platform."

A RECEIPT FOR \$300,000

THE LITERARY DIGEST.

Gentlemen:

120 BROADWAY, NEW YORK, March 9, 1917.

I beg to acknowledge the receipt of your first check for \$300,000 for the Relief of the Belgian children. I am sure you and those who have contributed this sum must feel as I do a deep sense of satisfaction and pride in the comfort which this will bring to so many Belgian mothers, and the cheer it will maintain to so many Belgian children. This is the support which justifies to America the overwhelming love and gratitude which we hourly and daily receive from the Belgian people.

There can be no cessation of effort on your part and ours in this task, which has come to be looked upon throughout the world as so peculiarly a responsibility and duty of America—to preserve these people until the day they are able again to support themselves. The task is one of gigantic dimensions in charity because to alone provide the imports necessary to give a daily meal to the 1,250,000 destitute children in supplement to the family ration, requires a check such as yours every week. Yet surely this is a task not too gigantic for American wealth, American pride, and the American heart.

Yours faithfully,

(Signed) HERBERT C. HOOVER.

OVER \$40,000 ADDITIONAL FOR BELGIAN CHILDREN

EVEN A STATE OF WAR, if that should follow, between Germany and the United States would not stop the raising of funds in this country for Belgian relief. This official assurance went out from the Relief Commission's headquarters on Tuesday, the 13th inst., a few hours after Chairman Herbert C. Hoover sailed en route to Paris, London, and Belgium. Just before sailing he said:

"When Cardinal Mercier ordered prayers offered in all the churches of Belgium that the American Commission might remain in Belgium he looked confidently to America, not only for the day-to-day moral and material support from a little handful of Americans in Belgium, but for the larger support, which would mean that when Belgium is restored to freedom her returning Government might not find her an empty husk, but a people of high spirit and regenerated ideals.

"We have sixteen ships loaded with grain on the ocean now and will start six more this week. Ten millions of people are dependent for their very lives upon the arrival of these cargoes before mid-April. The Commission has pass 4 through a dozen crises before, but the cry of 10,000,000 help as people can not remain unheard, and the ability, courage, and resolution of my colleagues have weathered every storm so far."

According to Mr. Hoover, only fifteen relief ships, all insured, had been lost, out of five hundred sailings; and "it is unthinkable," he asserted, "that most of our ships should not reach their destination. Every one of these ships that leaves a North-Atlantic or Gulf port carries with her a safe conduct from the Swiss Minister, acting upon authority from the German Government, guaranteeing our flag, and their routes are accepted by the German Government as safe from German attack.

"Approximately \$300,000 a month are contributed by Belgian refugees in England," Mr. Hoover explains, "from their earnings in British industries. Of 220,000 Belgian refugees in England only 15,000, mostly women and children, are unemployed. I want particularly to emphasize this point, because the Belgians have a right to impress upon the world that they are not hanging back without a struggle and permitting themselves and their friends to become dependents."

THE GIVING SPIRIT IS CONTAGIOUS. The way it spreads now among readers and friends of The Literary Digest is remarkable. Prominent and influential among these, of course, are the editors and publishers of other periodicals who offer the glad hand of helpful publicity in characteristic fashion. Three enterprising Southern papers have come into active cooperation since our last report—the Macon Telegraph and the Augusta Chronicle, in Georgia, and the Memphis Commercial-Appeal, in Tennessee. The Telegraph will care for the 650 children of Vist, involving \$7,800; The Chronicle adopts the 910 children of Oostacker, involving \$10,920; our Memphis contemporary will begin a week later.

The fine chivalry of the South responds munificently. From the officers and employees of the West Virginia Paper Company has come the largest single subscription yet received, for \$15,000, payable \$1,500 monthly for ten months, to care for the children of Willebrocck in Belgium, where paper-making has been the important industry. How many other large manufacturing concerns are there who will emulate this splendid example? There should be a large number, and they should soon be heard from.

An inspiring "leader" in wide-organizing relief work is afforded by that rich agricultural State of South Dakota, where Mr. George R. Douthit, the generous State Agent of one of our largest life-insurance companies, has proceeded to put that whole State behind the needy children of Belgium. He telegraphs as follows: "Out of her fulness of unprecedented prosperity South Dakota will gladly make necessary sacrifice to save from starvation three thousand homeless hungry children of Menin."

From far-away Korea comes \$120, from the same donor, we think, who contributed to our Belgian Flour Fund.

Make all cheeks, money-orders, or other remittances payable to Belgian Children's Fund, make them as large as possible, and address all letters to Belgian Children's Fund, care of The Literary Digest, 354-360 Fourth Avenue, New York.

Contributions to THE BELGIAN CHILDREN'S FUND-Received from March 7 to March 13 inclusive.

\$15,000.00—This, the largest subscription yet received, comes from the officers and employees of the West Virginia Pulp & Paper Company to rare for the cilibros of Willebreck in Belgium, where the important industry has been making paper.

\$3,385.95—The People of New Bedford, Mass (through the spiendled work of Mrs. W. N. Swift, Mrs. Lawrence Grinnell and others), for the Children of the Commune of Beersbeek.

\$1,500.00—The People of the City of Lake Forest, Ill. (More coming.)

3841.39 Citizens of Brownsville, Tenn.

Late Bulletins .- An editor in the Far West dropt into church for the first time in many years. The minister was in the very heart of the sermon. The editor listened for a while, and then rushed to his office.

"What are you fellows doing? How about the news from the seat of war?"

"What news?"

"Why, all this about the Egyptian Army being drowned in the Red Sea. The minister up at the church knows all about it, and you have not a word of it in our latest. Bustle round, you fellows, and get out an extra-special edition."-Tit-Bits.

WARNINGI

BEWARE OF SUBSCRIPTION SWINDLERS

Swindlers are at work throughout the country soliciting subscriptions for popular periodicals. We urge that no money be paid to strangers even the they exhibit printed matter apparently authorizing them to represent us, and especially when they offer cut rates or a homes. The LITERARY DIGEST mailing list showing dates of explestion of subscriptions is rever eigen out expiration of subscriptions is never given out to any one for collection of renewals. Hetter send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect that the members of your community are being swindled notify your chief of police or sheriff, and the publishers, and arrange another interview with the agent at which you can take such action jointly as which you can take such action jointly as may seem proper.

FUNK & WAGNALLS COMPANY. 354-360 Fourth Avenue, New York City.

There is nothing so desirable as painted walls

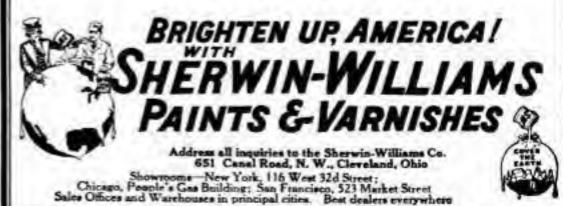

The soft, rich, restful effects that Flat-Tone produces cannot be secured with any kind of wall covering. It is a heavy, durable oil paint that can be cleaned when soiled, is not easily marred and does not crack or loosen.

Although when measured by years of service given, and by general standards of economy, Flat-Tone has always led, it is now under existing conditions, almost invariably lower in initial cost than ordinary wall covering. The Sherwin-Williams dealer near you has the goods and the color cards. Ask us his name.

Decorative Suggestions Free

We maintain a decorative department that is unequalled by any paint and varnish company in the country.

This department is at your service without cost. Suggestions are furnished in colors, with complete specifications for carrying out the effects shown. Write us fully as to the help you require.

OW and then you see a talented man, a remarkable play, a great work of art, a beautiful building. The finest things are never to be found in possession of the many. You do not see Outo Electrics wherever you go. Only those who can appreciate what it means to own a car that is almost entirely hand made will appreciate and mon the Outo Electric.

Every detail in the appointments, warkmanship and mechanism of the Onio Execusive is planned to give the utmost in comfort, service and convenience, regardless of out. The hand-hammered aluminum bodies are the nearest to a seamless carriage which it is possible to achieve. The exclusive magnetic control enables milady to operate her Onio as easily as she turns on the electric light in her bondoir. This method of control is based on the same principle that governs the operation of the great gates in the Fanama Canad and the trains in the New York Subwars. No more perfect device has ever been produced for the purpose of simplifying and adding to the case of automobile driving. It is typical of all the contriviances and appointments which are built into the Onio Electric. And with all its elegance and laxary, an Onio can be bought for as little as twenty-three hundred and eighty dollars.

In every community there are some to achom only the best appeals. There awant the distinction in appearance, the individuality in interior decoration and the luxurious comfort achieh only such a supreme car as the Onto Electric can provide. Usually, too, there is a dealer in each community to achom these people naturally turn. To such a dealer the Onto Electric is the means both of pleasing his best patrons and establishing a very definite presting for himself. Communications from such dealers are cordially invited. And are shall but very glad to send, upon request, some rather unusual literature to any one interested in the Onto Electric.

OHIO ELECTRIC

THE OHIO ELECTRIC CAR COMPANY TOLEDO, OHIO

CURRENT POETRY

WHEN the first poetry magazine was published, some years ago, it was generally regarded as a rash venture, destined to failure. But the poetry magazines are still with us; only one of them has failed-Others, the organ of the most advanced rers librists. In February appeared the first number of The Sonnet, edited by Mahlon Leonard Fisher, at Williamsport, Pennsylvania, and published at 201 East Twelfth Street, New York City. This beautifully made little periodical prints nothing but sonnets no other sort of verse, no eriticisms, no letters. If in future the high standard of the first number is maintained, Mr. Fisher (himself a distinguished poet, known especially for his exquisitely contrived and imagined sonnets) will do a real service for the cause of poetry. The first sonnet in the new magazine is this delieately wrought study. The octave is richly pictorial, and the sestet strong in emotion.

ARRAIGNMENT

BY LIZETTE WOODWORTH REESE

What wage, what guerdon, Life, asked I of you? Brosches; old bouses; yellow trees in fall: A gust of daffedlis by a grey wall; Books; soud lads' laughter; song at drip of dew?

Or said I, "Make me April; I would go, Night-long, day-long, down the gay little grass, And therein see myself as in a glass." There is none other weather I would know?"

Content was I to live like any flower,

Sweetly and humbly; dream each season round

The blossomy things that serve a girl for
broad.

Inviolate against the bitter hour,
You poured my dreams like wateron the ground;
I think it would be best if I were dead

The second is more conventional in form, and less poignant in feeling. It has the classical associations which we are accustomed to find in Mr. Woodberry's work.

THE EMBLAZONED SHIELD

BY GITAMAE EDWARD WOODBERRY

From what a far antiquity, my soul,

Thou drawest thy urn of light! what other one
Of royal seed—yea! children of the sun—
Doth so divinely feel his lineage roll
To the full height of man? the immortal seroll
Of thy engendering doth from Plate run.
Columnes singling, Simols, Marathou!
Into the Jorth such secret glory stole.

The kings of thought and lord of chivalry Knighted me in great ages long ago: From Daxid's throne and lowly Galilee. And Shaa's brook, my noble titles flow: Under the banners, Love, devout and freestoring all time, thy child. I come and go.

On February 26, 1916, The Liveson't Droest printed this paragraph:

"At Naney, at Soissons, in the Argonor, and at Ypres men talk with hushed voices of 'Le Camarade Blane.' After many a hot engagement, a man in white has been seen bending over those who lie on the field. Shells fall all around him. Nothing has power to touch him. Many of the men from the Eighty-seventh and One Hundred and Twenty-sixth Infantry have seen him. On several occasions he has walked

The Riddle of the Unused Tire

The unused tire tells no tales. Under its sleek and unscarred tread the riddle of its goodness or fault remains inscrutable.

It is only when you put it on your car, and give it usage over road and boulevard, that it reveals its true character.

And you cannot put it on your car, and force its secret, until after you have bought it.

But there is one reasonably safe indication of a tire's capacity available to the average buyer.

That is the type of service ordinarily rendered by that tire in general use.

If it serves efficiently and enduringly there, the chances are it will serve

So we suggest that you inquire, the next time you propose buying a tire, as to the service it commonly gives.

We are confident your findings will lead you to Good year Tires.

More Good year Tires are sold in these United States than any other brand. And the margin of Good year leadership is steadily widening.

If Goodyear Tires were anything less than unusually good, they could not have attained this leadership.

If Goodyear Tires were anything less than pronouncedly superior, they would not be increasing it.

The immensely broad and varied service they perform in all parts of the country every day, we think is the most comprehensive and severe test a tire can possibly be given.

That they successfully perform this service and meet this test, we feel provides you a safe and sensible reason for preferring them.

We believe it finally answers the riddle of the unused tire.

Goody ear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goody ear Service Station Dealers everywhere.

The Goodyear Tire & Rubber Co.

A production tire is but one of a huge quantity. One picked at random from the output of a frenzied day's work. A unit which has helped swell the big output by one.

Do you believe such a product can give you mileage? Can service and satisfaction be put into a tire when all effort is concentrated on the number produced?

WE COULD SPEED UP AND BUILD MORE MILLER TIRES!

They could be thrown into the vulcanizing pits, the steam jammed on; they could be jerked out again, and their appearance wouldn't be marred a bit. But the natural vegetable wax and oil in the fabric might be burned out, might be carbonized, leaving a lifeless tire incapable of standing up against ponishment.

The Miller plan of building fewer tires makes each one a representative Miller. It explains the satisfaction motorists receive from them.

Here are the instructions given to all Miller tire builders:

"You must build this tice as the it were the only one you have to make. Think of it as the it was for use on your car. Concentrate all your shills, knowledge and shill on this one. If poorly built it may destroy the requisition earned by a hundred perfect ones."

"This tire must be perfect before you build snother. If you see a flaw in any material, discard it."

"Don't rush—take your time. Until you finish this one lorges son have others build. At the same time, do not waste time or material. That thereases cost with out bettering the product.

Do you wonder that being built under such instructions MILLER "GEARED-TO-THE-ROAD" TIRES have established a reputation both for productiveness and uniformity of service. They don't vary. All produce the fundamental thing for which they were built—mileage.

through their trenches. He has been chiefly observed after severe fighting - bending over the dying and helping them to pass away in peace."

There have come to our attention two poems based, their authors tell us, on THE LITERARY DIGEST'S account of this apparition. The first was printed last summer in The Watchman-Examiner. It is strongly devotional in spirit, and an important addition to the poetry of the war.

THE COMRADE IN WHITE

BY MARTHA ELVIRA PETTUS

The battle? Ay, the battle has been dire. My captain shot to death: his dying sigh, His parting words I heard above the fire And the guns' thunder; his last low "good-by "-

"No war in heaven, brother." Then he smiled And died. While I (the pang no words can tell!) First knew that I was wounded: anguish wild Clutched me with iron hand, and then-I fell.

Yes. I have seen the vision. That dark night When all the world seemed vanishing in flame. Wounded, I lay upon the ground-my sight Striving to pierce that blackness: then, he came,

The One who walks the field of Death and Night-Who hends down to the dying: his eyes meet The closing eyes; his touch, his arm is might-Nor Death, nor darkness, check those coming feet.

I bear the rifle shots, the bullets groan Fast through the sir. On him they have no power.

He speaks his arms outstretched, "If thou hadst known

The prace ... 'the hidden from thine eyes,

And he was close bodde me-Comrade, friend-Genily his hand had touched my throbbing

All rolls was some all terror at an end. Soon, gathered in his arms, I lay at rest.

He carried me where ran a mountain stream, He washed my wounds, bound them with tender care.

I strove to speak my thanks—so poor they seem! But he spake not; his hands were clasped in

The while he prayed, a drop of crimson blood Fell slowly from his hands. I cried in pain: "Whener are these wounds that pierce thy hands, my friend?"

"An old wound, yes," he said, "but keen ngain "

And then I saw the blessed sign-he bore Upon his feet, the cruel crimson, too. I had not known-I had not known, before, But when I saw his wounded feet-I knew.

Friend of the dying! Is it not like thee To stand beside us, in our deadliest wo? Ah, when our eyes thy radiant presence see Our hearts cry out, "We will not let thee go!"

No, in the darkest battle hour, be sure Brother, the serely stricken, do not fear; He's by thy side. Know this: thou canst endure-All is not lost. Our Comrade will appear.

There, on the dreadful field, among the slain Bending above the wounded, drawing nigh To every passing soul; comforting pain, Yes, we have seen Him. We fear not to die.

Robert Haven Schauffler's poem, based also on The LITERARY DIGEST's paragraph,

is more dramatic, but less convincing. We take it from a recent issue of The Outlook.

THE WHITE COMRADE

BY ROBERT HAVEN SCHAUFFLER

Under our curtain of fire, Over the clotted clods, We charged, to be withered, to reel And despairingly wheel When the bugles bade us retire From the terrible odds.

As we ebbed with the hattle-tide, Fingers of red-hot steel Suddenly closed on my side, I fell, and began to pray. I crawled on my hands and lay Where a shallow crater yawned wide; Then,—I swooned.

When I woke, it was yet day.
Fierce was the pain of my wound,
But I saw it was death to stir,
For fifty paces away
Their trenches were.
In torture I prayed for the dark
And the stealthy step of my friend
Who, stanch to the very end,
Would creep to the danger zone
And offer his life as a mark
To save my own.

Night fell. I heard his trend,
Not stealthy, but firm and screec.
As if my comrade's head
Were lifted far from that scene
Of passion and pain and dread;
As if my comrade's heart
In carnage took no part;
As if my comrade's feet
Were set on some radiant street
Such as no darkness might haunt;
As if my comrade's eyes.
No deluge of flame could surprise,
No death and destruction daunt,
No red-beaked bird dismay,
Nor sight of decay.

Then in the bursting shells' dim light
I saw he was clad in white.
For a moment I thought that I saw the smock
Of a shepherd in search of his flock.
Alert were the enemy, too.
And their bullets flew
Straight at a mark no bullet could fail:
For the seeker was tall and his robe was bright;
But he did not flee nor quail.
Instead, with unburrying stride
He came,
And gathering my tall frame,
Like a child in his arms.

Like a child, in his arms Again I swooned, And awoke From a blissful dream In a cave by a stream, My silent comrade had bound my side. No pain now was mine, but a wish that I spoke,-A mastering wish to serve this man Who had ventured through hell my doom to revoke, As only the truest of comrades can. I begged him to tell me how best I might aid him. And urgently prayed him Never to leave me, whatever betide; When I saw he was hurt-Shot through the hands that were clasped in Then, as the dark drops gathered there And fell in the dirt, The wounds of my triend Seemed to me such as no man might bear. Those bullet-holes in the patient hands Seemed to transcend All horrors that ever these war-drenched lands Had known or would know till the mad world's Then suddenly I was aware That his feet had been wounded, too: And, dimming the white of his side, A dull stain grew. "You are hurt, White Comrade!" I cried. His words I already foreknew: "These are old wounds," said he

"But of late they have troubled me."

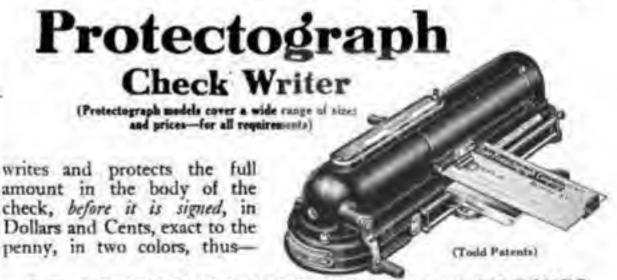

\$5,100 Lost on Raised Checks

A Chicago business man (name on request) described to a convention of Todd salesmen, at the Sherman House in January, howhe had just been victimized through check raising in his office.

All during 1916, he said, his profits seemed to shrink below normal.— In December, he ordered an audit. For months, it appeared, the young woman in charge of the office had been making a practice of changing little \$5 and \$10 checks to \$100 and \$200, winding up by "boosting" one issued to the cartman, from \$5.75 to \$575.00.

The method was simple. The checks were made out and signed by the proprietor. Then the clerk erased the amount and the payee's name with ink eradicator, substituted her own name, and multiplied the amount by ten or a hundred. In all, the Chicago man lost \$5,100.00 during 1916 alone.

This fraud has happened in thousands of concerns where business men were careless enough to sign a check before it was protected. But now, the

THE TEST OF TESTS

The illustration on this page is from an actual photograph of Signor Ciccolini actually singing in direct comparison with the New Edison's Re-Creation of his voice, thus adding to the already overwhelming proof that the New Edison Re-Creates the voice or instrumental performance of any and all artists with such literal fidelity, that the original cannot be distinguished from the Re-Creation. Marie Rappold, Margaret Matranauer, Anna Case, Giovanni Zenatello, Jacques Urlos, Arthur Middleton, Otto Gorius and Thomas Chalmers are among the other great artists who in a similar way have proved the localibility of this wonderful new invention.

The NEW EDISON

"the Phonograph with a Soul"

is conceded by the music critics of more than three hundred of America's principal newspapers to be incomparably superior to all other devices for the reproduction of sound. This remarkable new musical invention brings into your home a literally true presentation of the art of the world's great musical artists. After you have heard the New Edison you could scarcely be contented with a talking machine. In your locality there is a merchant licensed by Mr. Edison to demonstrate this new instrument. You will not be importuned to buy.

Write us for the booklet "What the Critics Say"

Phone do not set an Edison design to sell you Edison Re-Creations if you intend to attempt to play them on any other instrument than the New Edison. No other instrument can bring out the true musical quality of Edison Re-Creations. Furthermore, injury to the records is likely to result if you attempt to play them on an ardinary phonograph or talking machine.

THOMAS A. EDISON, Inc., Dept. 1473, Orange, N. J.

CICCOLINI, the Italian Ienor, a great favorite of Milan and Paris, who has just completed a triumphant tour of America. Signor Ciccolini has already achieved a brilliant career, and seems destined to win the highest laurels in the world of opera.

PERSONAL GLIMPSES

ZEPPELIN IN SUCCESS AND FAILURE

OUNT ZEPPELIN was a courageous man, and as the prejudice of war dies away his career will be remembered for the unfaltering courage with which he pursued his vision of a practical dirigible through disappointment to ultimate success, and for the complete failure of the Zeppelin as an instrument of "frightfulness." The net result of some half-dozen raids on London has been to unite the public opinion of all England against Germany and to kill some 137 people, During the same period the motor-busses. of London have been responsible for 954 fatal accidents. As a military weapon the Zeppelin is far inferior to the omnibus.

When Zeppelin began his work he did not intend to use his machines for civil raids. The Count had been assigned to the Army of the Potomac as military observer for Wurttemburg, and he noticed. the value of the stationary balloon for observation purposes. He made his first ascension in the United States, and when he retired from active service in the German Army, at the age of fifty-three, be begun practical invention in aeronauties. The New York World quotes him as saying at the outset of his eareer:

"I intend to build a vessel which will be able to travel to places which can not be approached by other means of transportation, and for observations of hostile fleets and armies, but not for active participation. in actual warfare. My dirigible balloon must be able to travel several days without renewing provisions, gas, or fuel."

A long period of disappointment followed. At fifty-three the Count was a wealthy nobleman living on his estates; at seventy he was only a poor mechanic living in a small cottage on an allowance supplied by his friends. For seventeen years disaster overtook every Zeppelin that was constructed. "Another Zeppelin blows up" became a time-worn jest. Still Zeppelin persevered. Then in a day, reports the Detroit Free Press, the tide turned:

He electrified a skeptical world in 1908 by staying aloft for thirty-seven hours in the fifth air-ship he had built and by sailing it in a straight course for a distance of nearly 900 miles. Emperor William-all Germany, in fact—hailed him as "the conqueror of the air."

This monster balloon, 465 feet long, and of the rigid type and resembling a huge eigar, soon met with disaster, as had its predecessors. Each wreck was a great financial loss, for Zeppelin's balloons were valued as high as \$500,000 each. These disasters, however, also proved the affection in which the German people held the aristocratic aviator.

When one of his air-ships was torn from its moorings by a gale and wrecked, the public subscribed \$1,000,000 to a fund, of

Two minds with but a single thought -

Under the evening lamp, in the hour of quiet contemplation, when hopes and aspirations take possession of the mind, the appermost thought in thousands upon thousands of homes is—the automobile.

As a convenience, as a means to health and recreation, nothing can compare with the family car.

Every indication points to a demand very much in excess of the possible supply of automobiles this year.

We are prepared.

This year we apply the economies of vast production for the first time to a complete line of automobiles-an end toward which we have been working for eight years.

Light Fours, Big Fours, Light Sixes and Willys-Knights, including the marvelous Willys-Knight Eight, are built and sold with

- one executive organization,
- -one factory management,
- -one purchasing department,
- -one sales force,
- -one group of dealers.

All general expense is now distributed over many models instead of a few.

Greater values than ever before are now possible in the low-priced field.

New values are thus established in the high-priced field—in fact, this Overland accomplishment brings moderate prices to the high-priced

There is now an Overland or Willys-Knight for every class of buyer.

Body types-all brand new-include

- -readsters, two and three-passenger,
- -Country Club, a four-passenger sport model,
- -touring cars, five and seven-passenger,
- -coupes, three and four-passenger,
- -Sedans, five and seven-pussenger,
- -and a luxurious limousine.

Every one of these beautiful cars is a better car -better in appearance, in performance and in riding comfort.

One of them is the car of your dream under the evening lamp.

See these cars now. Get a car yourself this

In convenience, in health, in pleasure, no investment will repay you and all your family so

Spring is at hand with all its wealth of outdoors. Drive your own car.

Go to the Willya-Overland dealer-pick it outride in it -drive it -now.

Every indication is that there will not be enough cars this spring.

FUNK & WAGNALLS COMPANY, 354 Fourth Avenue, New York

which the Crown Prince was president, for the inventor. The German Emperor frequently helped him out of financial difficulties and the German Reichstag appropriated several hundred thousand marks for the purchase of his air-ships for the German Army.

From that day forward the place of Zeppelin in the history of aviation was secure, for the mechanical detail of the rigid dirigible has been steadily perfected. Longer and longer flights were successfully negotiated, and a one time a passengerservice was undertaken. Yet in this success accident and misfortune bounded the Count, and, as the New York Sun observes, Zeppelin had need of all his faith even in his day of triumph.

He has seen all Germany acclaiming his name as the result of some specially successful test of one of his earlier machines, and forty-eight hours later has been brought to bankruptey by an accident that wrecked at once his ship, his popularity, and his hopes. He has seen his own fortune vanish in his experiments and the Government for which he was working turn upon him the cold shoulder. Once at least his disappointment was so peignant that only the earnest encouragement of his wife and daughter induced him to give further thought to his invention or to life itself. He has known at once the favor and the coldness of monarchs. The Kaiser has kissed him upon the cheek and proclaimed him the "most eminent of all Germans," and again in a moment of pique has rebuked him coldly because a Zeppelin failed to appear in Berlin when his Majesty expected it.

And in the end, failure. In an article written two weeks before Count Zeppelin's death the New York Sun remarks:

The report from Geneva that the Zeppelin works at Friedrichshafen have been closed down and are being dismantled may be untrue. It is interesting, however, as a new evidence of the growing opinion in Germany that the "Zep" as an instrument of war is a failure.

It is undeniably a fact that the record of the monster aircraft, which were once Germany's pride and reliance, has been one of repeated failure. Even in the constructive period before the war some malign fate seemed to pursue these ships. Of the twenty-five Zeppelins completed before the war, thirteen were so badly wrecked by accidents of one kind or another that they had either to be abandoned altogether or rebuilt at costs narrowly approaching the original expenditure.

Exposed to the hazards of war the "Zeps" have shown their vulnerability even more clearly. In the last raid on London two were brought down, and it has been noticed that, the months have elapsed, no more raids have been undertaken, Early in the war the impossibility of effective raids on Paris was tacitly admitted by the Germans.

If now, with the war still at its height, the German War Office has indeed abandoned the Zeppelin, the stout old Landgraf, "the lord of the air," as Wilhelm II. once called him, may feel that his life draws to its end amid tragedy as black as Lear's.

THE POET-SCOUT

THE great seouts who led Custer and the Seventh Cavalry into the sage-lands or "took the dust" of the wily Apache chief Geronimo are all dead now, for "Captain Jack" Crawford has followed his friend Buffalo Bill on the long trail, A sketch of his life is printed in the Brooklyn Eagle:

Captain Crawford had little or no early schooling. When the Civil War broke out he was only a lad, and twice ran away to go to the front, but had difficulty in joining the Army on account of his youth. He finally succeeded in enlisting in the Forty-eighth Pennsylvania Volunteers and was severely wounded in action. It was while lying wounded in a military hospital in West Philadelphia that Captain Crawford was taught to read by a Sister of Charity.

Captain Crawford went West at the close of the war and was long engaged as a Government scout, later becoming chief of scouts, and won a high place for himself in that dangerous service. He held the place of chief of scouts under General Custer at the time of the massacre, but it is said that at that time he was on his way to Custer's headquarters with dispatches, having made one of the longest and most dangerous rides in the history of Indian warfare in carrying the messages. Later he played an active part in the pursuit of Sitting Bull.

When the red-flannel shirts and predatory Indians of the West gave place to linen collars and taxi-drivers, Captain Jack turned his attention to verse and the lecture-platform, speaking and writing of the men he had known and the events he had shared. The New York Eccning Sun remarks of this portion of his career:

Picturesque of appearance, Captain Crawford was best known for his stories and poems, perhaps the most famous of the latter being "Rattling Joe's Prayer." He was a familiar figure on lecture-platforms and was a stanch prohibitionist. He boasted that through a promise he made his mother he had never tasted whisky, altho a frontiersman. Recently he had attacked the pacifists at every opportunity, and one of his protests against peace at any price was "My Mother Raised Her Boy to Be a Soldier," written in answer to a popular song.

Before he "answered to taps," as he would have phrased it, he had been sick for weeks with a complication of diseases, and was kept alive only by his extraordinary constitution. In the words of The Evening Sun:

As he lay in bed ill from a complication of diseases he got the news that Colonel Cody, with whom he had ridden in many a wild charge against the Sioux, had gone over the great divide. It deprest him.

"So Bill Cody has gone!" said Captain Jack. "I guess they will be sounding taps over me pretty soon. Well, when we meet Tall Bull and that tough old eodger Sitting Bull on the other side and stick up our hands, palms forward, and say, 'How, Kola!' there will be a lot to talk about."

Sparton Superiority Recognized by Leading Motor Car Makers

Just how general is this belief in the superior quality of Sparton products is shown by the fact that 42 of America's high grade automobile manufacturers use Sparton Motorhorns as standard equipment.

Only quality was considered by the engineers of these 42 companies who selected Spartons after gruelling competitive tests had demonstrated their superior efficiency and reliability under all conditions.

Packard, Chalmers, Winton, Stutz, Kissel, Mercer, Peerless, Hudson, White, Marmon, Cole, Jordan, Briscoe, Haynes, Pathfinder, Owen Magnetic, Jackson, Marion-Handley, National and 22 others. Prices \$3 to \$15.

This new Sparton Gasoline Vacuum System has proved itself highly efficient under the severest conditions. On all types of motors, on the steepest grades and in the heaviest pulls, it is equally effective and never fails to feed the carburetor a plentiful supply of gasoline. Properly designed, skillfully manufactured, it is the most efficient device of its kind yet produced.

Sparton Honeycomb Radiators and Radiator Fans are used by a great number of the best known motor cars and continue to meet with universal approval. These Sparton products are in such demand that we have made an extensive addition to our factory to increase their manufacture.

FLAG ETIQUETTE

WHEN Dewey's fleet returned to New York after the Battle of Manila Bay, a Swedish janitor in a large department store hoisted an American flag with the Union down, and flew the signal of distress throughout the celebration. A patriotic citizen would hardly have made so flagrant an error, but in displaying flags or bunting there are many fine points to be observed, remarks Harry Lee King, Deputy Commissioner of Boy Scouts. In the New York Tribune he gives these rules for flying the national colors:

1. The proper time for raising the flag is sunrise or after, never before.

The flag must be lowered at sunset. In draping the flag against the side of a room or building, the proper position for the blue field is toward the north or toward

It is a mark of disrespect to allow the flag to fly throughout the night.

There is no uniform usage in the display of bunting, but it is just as easy to bang it in the correct fashion. When buildings are decorated in bunting draped horizontally, the red should be at the top, according to a letter from the War Department published in the New York Sun:

WAR DEPARTMENT, OFFICE OF THE QUARTERMASTER-GENERAL WASHINGTON, D. C.

There are no regulations prescribing the method of utilizing bunting for decorative purposes, but good taste requires that the order shall be red at the top, followed by white, then blue, in accordance with the heraldic colors of the national flag. . .

Lieut.-Col. John T. KNIGHT, Deputy Quartermaster-General, U. S. A.

A WHITE BLACK SHEEP

WALTER GREENWAY was an educated and able man who went dead wrong from choice. He had received an excellent education, and was a welltrained and capable clerk, with an uncommonly good knowledge of foreign languages, but he had an inborn love of mischief, and took to second-story work for pure love of it. Greenway was arrested on a charge of felony, says the London Public Opinion, quoting Blackwood's Magaziac, but when he was brought before the Court he pretended to be a deaf-mute. After his release he asked to be sent to sea, says the officer who tells the story.

"I shall never do any good where there are houses with atties, or with any other sort of upper story," said Greenway.

"I should be out of all temptation on a sailing-ship. I could climb the rigging, and do no harm to anybody. Or an Indian wigwam village might do, or a Bedouin encampment - no atties there, I understand.

"Send me somewhere out of the country, to sea for choice; I shall be at my accomplishments again if I stay in a civilized community."

He sailed on a sailing-ship, and for a

year nothing but good was heard of him. Then the Old Adam broke out again, and he deserted. Two years later his friend in England reserved a letter from him which is printed in Blackwood's—

It was most difficult to arrange and follow, being written on five-and-twenty different scraps of faded yellow paper, in a scrawl with a blunt lead-pencil, often illegible, so that words had to be guessed at and filled in.

He had become a Bedouin, and had married a woman of Arabia. Of his wife and three bonny children he speaks in endearing terms. But the war comes to his adopted land, and once more he becomes a deaf-mute as in England, so that he may learn what "his Mohammedan countrymen, their Turkish masters, and the German superbosses" are about. Knowing German, he hears all they say, while they think he is deaf. He goes from camp to camp, kindly treated as one afflicted by Allah. Then he enters the British lines.

But when he returns to the Turkish Army it is known that he has been in the British camp, and here we quote from his letter, which tells the story indirectly.

"A deserter who came into our lines told how the mute's visit to our camp had become known to the enemy, and how ho was received back by his brethren with some suspicion. They fired rifles immediately behind his ears to see if he would start at the sound; they marched him up to a big gun and stood beside it till the air concussion of twenty explosions caused him to bleed from ears and nostrils. He was deaf as a stone; it was evident be heard not the semblance of a sound. They were satisfied about his hearing; but could be speak, after all."

"Hot from applied to various lender parts were reckoned one good means for proving this. These being ineffective, the he will hear their sears to his grave, they tried tearing out a finger-nail or two; tears rained down his cheeks, but he uttered no more than a guttural mean. They were convinced,

"A week later the mute turned up in our lines for the last time. Gangrene had succeded that wrenehing out of finger-nails. The doctors had to take off his left arm. Then a marvel happened. He began to speak. Vengeance fell heavily upon those miserable followers of the true prophet for their lack of charity. He gave away all their plans, describing their positions, and batteries, and encampments with a precision and accuracy I should never have thought possible in a simple child of the desert.

• The black sheep had proved be was elear white inside and had done his bit for England at the cost of torture and mutilation. His work done, he wanted to go home, not to England, but to his wife in Arabia. His letter in Blackwood's continues, still partly in the third person.

"I have slipt away as quietly as I came. I could do no more good there, a bit of a wreek physically, and my spy game was played out. But somebody is waiting for me at home, thank God. I wish every one were sure of such a welcome as I shall get. It will pay for all.

"That Bedouin mute I told you about he had a job to get home. The windows

The Magic of Standardization

Standardization means economy, and in this age true economy means success.

In this country cheap raw materials have made us careless and wasteful, and we have triumphed industrially in spite of it. Now prices are going up.

Waste of material, time and labor must be stopped if American superiority is to be maintained.

Inaccurate work done by poor tools or poor workmen means a large proportion of rejections. Production is too expensive if hand labor is used where machines could be used. Not cost alone, but cost and effectiveness measure the value of any machine or process.

Work must be accurately gaged to insure interchangeability, but this inspection must be done cheaply. By the use of Limit Gages, two types of which are shown below, even an inexperienced helper can gage thousands of parts in a day. With a Limit Gage, errors are quickly discovered and remedied. There is certainty as to dimensions within predetermined limits. By constant checking, rejections are reduced, assembling is speeded up, production increased, estimating made exact. This is a form of standardization that is simple, efficient and very profitable.

For information on the proper kinds and uses of thread gages, send for the Bulletin, "How to Measure Screw Threads."

of heaven were open day and night. He toiled and waded, slipt, and slurred, through mud-bottomed lagoons and miry sloughs. Dysentery returned. He struggled along on hand and knees till strength gave out, and he was compelled to wriggle along like a snake, groaning in the morning, 'Would Allah it were even!' and at even, 'Would Allah it were morning!' from sorrow of heart. His pace, when he crawled out of the region of perpetual rain, was the pace of a snail. Now, frost by night and a scorehing sun by day only varied his misery. Most men would have prayed to die, but not he.

"Soft, beautiful brown eyes, blazing with love, peered beseechingly into his own through all. He prest on, the it cost him exerueiating torture. He was determined to kiss again the sweet brown face those eyes were set in. He would feel once more the rapture of those soft, delicious cheeks laid upon his own. The music of children's voices stirred him to tears. Fancy must be clothed in reality. He would not die till once again those darling heads had nestled their curls upon his breast, and once again those sweetest lips had breathed into his ears the magic

word 'father.'

"At Bassora he fell in with his fatherin-law ('an Arab with an English heart'), and was conveyed to Mocha in the fatherin-law's ship. As he approached his home, images of which had sustained him through everything, he saw nothing but a heap of ruins. His all had been destroyed by marauding Turks. Weak from dysentery, wounds, burnings, and other sufferings, he fell senseless. When he recovered he found himself in his wife's arms. She had watched unceasingly by the ruins for his return. The children were there, too."

But the hardships of his journey home had been too much, and he died of acute dysentery a week later. He may have been a burglar, but England is proud of him.

THROUGH INDIA BY RAIL

T used to be done by elephant, or mule, or boat, or even in some parts by camel; but with the coming of the British, tracks were threaded through the jungle, and now we take the trip across the peninsula by the same means as we used in the early days from New York to Omaha. Yet, there is a curious anachronistic appearance to the sluggish trains toiling through the picturesque scenes of Bengal. One feels that the railway does not quite belong here, and if we are to believe an author in Harper's Magazine, the strangeness of the population and the mixture of old and new convey just this impression to every one. It is regrettable that we can not reproduce the article in its entirety, but a few glimpses are more than welcome. For instance, we are told:

Upon the Indian railway there is no roar. no towering locomotives rush headlong with whirl of wind and einders, vomiting billows of black vapor. The trains of India sit low upon the tracks, jog complacently across the sun-baked country, half hidden in a haze of heat and dust. The erew of an

CITY.....NTATE....

Indian train consists chiefly of the engineer. There are no brakemen in blue cloth and brass buttons, no pompous conductor, no obsequious trainman with ticket-puncher to work his way along the running-board. A rather sorry-looking individual with bare legs, a tattered coat, and a dilapidated cap which has slipt down upon his ear, who goes for the lack of a better name by that of guard, is occasionally to be seen sauntering aimlessly along a station-platform; but he speaks no English, and if you need information, and question him with aid of your native servant, you find that he has no ideas and will only gaze at you blankly, or else tell you to wait for the next important station where you may ask the stationmaster. The engineer himself is generally a Hindu. Sometimes you see a Mohammedan at the throttle with his fez and tassel, but for the most part the engine-driver wears a turban and a easte-mark adorns his forehead.

His easte-mark is vital to the engineer. Once at the lower station of Benares—the Kashi station at the bridge where the rail-way crosses the river—my train was kept waiting while the engine-driver had a new design painted on his brow, the old one having been obliterated by steam and soot.

It was at this stop that he says he had the first glimpse of the Holy City of the Ganges, with its bathing pilgrims and its sluggish stream meandering through the clustered temples, a stream choked and clogged with naked brown forms. We see the crowds with a first-hand clearness, as we read:

It was late afternoon, the sun was setting, and the sky was golden. The Ganges reflected the sunlight like a mirror. On the west bank rose the jumble of the city. I could see the flights of ghate descending to the river and the throngs bathing in the holy water. From the burning shat a column of smoke rose straight into the air, then spread, hanging in thin layers above the temple spires. As at most stations, the platform was filled with waiting natives; this time it was a pilgrimage homeward bound. They were a disheveled lot, clad in every sort of rag or garment, each person grasping a pot or bottle filled with Ganges water. Fakirs and hely men mingled in the erowd, daubed with sandalwood paste, with their conch-shells and their bends, and their long hair in knots and tangles. Every one was at last aboard, but still the train stood motionless. The engine waited panting, steam-hissing. The engineer was not yet ready. He had his turban off, and was on his heels before a half-clothed priest who with his thumb was secoping a bright-red substance from a bowl, and with wide sweeps of his arm was describing flamboyant lines upon the forehead of the engineer-lines sacred to the great god Siva.

The Indian locomotive, we are given to understand, seems nearly always to be stopping to take water. At every station there is a tank, and the engineer appears to think it his duty to show no partiality to any particular one. Consequently, he stops at all of them. The author narrates what happened at one of these halts:

At one village where we stopt the tank was empty. Its well had gone dry. The engi-

may not know motor truck construction, but they know how to figure the return on an investment-earning power

The Four Wheel Drive principle A as applied in F-W-D Trucks, has proved and is proving its earning power to the business men of many industries.

Every wheel a driving wheel—the pulling power equally between front and rear wheels-means that all the power is delivered to the wheels, each wheel doing an equal amount of actual work. None of the power is lost in overcoming the brake-like backlash of idle wheels.

The first F-W-D, built six years ago, is in active daily service today.

ur market is to business men who want a truck that will be a good investment. We spare no expense in manufacture where that expense is an investment that will pay dividends in extra life, extra efficiency and extra economy.

The dealer handling F-W-D Trucks has the advantage of offering a truck that pays the greatest dividends on the investment in continuous service, length of life and economy.

How Hudson Solved the Gasoline Problem

Now Furnished on the New Light Super-Six

The gasoline saver is one more new invention of the Hudson Super-Six.

It was shown for the first time at the New York Automobile Show in January. Now most all Hudson dealers are showing the new cars equipped with this and ten other important new features. The gasoline saver is the only new feature shown on automobiles at this year's shows.

Overcomes the Poor Gasoline

Hard starting and wasteful gasoline consumption due to cold weather and the low grade gasoline are overcome. Radiator and hood covers are not needed on the new Hudson Super-Sixes even in the coldest weather.

This device has been in use on hundreds of Hudson Super-Sixes during the coldest winter weather. Its effectiveness has been proved. It is as easily operated as the damper on a stove.

Low grade gasoline gives low mileage and is wasteful and harmful to the engine, unless the motor is operated steadily at a high temperature.

Primer Insures Easy Starting

In zero weather, even at 20 below, the new Hudson Super-Six motor starts. The primer is another new feature of the new Super-Six.

On the new cars there are also other worthwhile features you should see. There is the new plaited upholstering, more attractive door fasteners, hard rubber handles, an improved body finish and other details you can see. And then we have made many improvements in the building of the car. The car that last year won every worth-while record is a much better automobile now because we have learned to build them better. We made those records of endurance for acceleration and speed with cars of the earlier production. No one has yet equaled anything we have done with stock Super-Six cars. And yet the cars we turn out today are infinitely better because of the increased skill and experience Hudson workmen have acquired in building the 25,000 cars that were produced last year.

Think What a Year Has Shown

Remember what was claimed for the Super-Six one year ago. Then we had only our own records to show—records proving the Hudson Super-Six the fastest stock car built.

We then had established only the 100-mile and the one-hour records for a fully equipped stock touring car. But since we have won the 24-hour record for a stock chassis, the Transcontinental Run both ways, the fastest stock chassis mile, and have outsold any other high grade car in the world. So, if you want a fine car that out-performs any other car that is built, your choice must be a Hudson Super-Six.

Buyers Waited for Months

At this time last season orders exceeded our production by 8,000. At no time during the season were there enough Hudsons to go around. From this you can see what the demand will be this year. We are only producing 30,000 cars as against last year's 25,000 because we cannot build more and build them well. That is not a large increase. It shows, however, that if you want a Hudson you cannot afford to postpone buying. Unless you act now you may be like other thousands who will be disappointed this year because they could not get prompt deliveries.

Don't fail to see the gasoline saver.

Phaeton, 7-passenger . \$1650 Cabriolet, 3-passenger . 1950 Touring Sedan 2175

neer and station-master consulted together. There was another well, the station-master said, a mile farther down the road. It belonged to a farmer, and still had water in it. There was yet steam enough in the engine's boiler to earry the train a mile or so, and soon we had drawn up in a sandy stretch of country where only a few yellow patches of grass were to be been, and where a lean, black Hindu was rhythmically bending and rising above a well, pouring out little bucketfuls of water upon the parched surface of his field. The lean Hindu was the farmer, and for one rupee he agreed to sell enough water to earry the train on to the next station. The engineer came down along the train, calling upon the passengers for help, and soon was formed a line of darkskinned figures stretching from the engine to the well. The farmer had two shallow pails. These went back and forth along the line, and little by little, drop by drop, the water of the well passed into the tank of the locomotive. When the train resumed its journey, we were three hours late.

But the sights of the natives in the fields are as nothing compared to the seenes at the stations, or in the carriages themselves. It is not only a case of the butcher, the baker, and the candlestick-maker, but of the priest and the fakir, and often their respective ménages and retinues. Of these crowds he observes:

You read in the writings of the Abbé Dubois that a Brahman who but steps into the shadow of a low-easte Hindu must hasten home to bathe and cleanse himself from contamination. No such fear of Brahmans for defiling shadows do you observe within the third-class Indian railwaycoaches. Here Brahman, Vaisya, Sudra, the highest and the lowest, the richest and the poorest, crowd and jostle. The windows become wedged with heads and arms. Between chinks you eatch glimpses of the jammed interiors. Beggars, you see, clothed only in scant rags; sleek Brahmans with sacred cords across their shoulders; gurus, clad in ceru, their heads shaved, with gold beads about their neeks and grasping ivory and silver staves; peasant women with children at their breasts; others in flaming silks, arms laden with bangles; purdah women also, bidden in white from head to foot, with large glass holes for eyes.

At statious come the clicks of locks, the doors fly open, the crowds pour out upon the platforms. Venders roll up tables with eatables for sale-betel-nut, ghee, or melted butter, strange-looking cakes, and hot paus filled with frying things, smelling of grease and pouring off blue smoke. The natives. throng about the tables, buying greedily, bargaining with loud voices. The question of a fraction of an anna brings forth a burst of yells. The native Hindu lives to bargain. Sometimes he strives to bargain for his ticket. He does not realize that the price to ride upon the British railway is unalterably fixt.

I remember a station in Rajputana. The platform had been filled with natives that had been waiting for the train. They were gorgeously costumed. The turbans of the men were orange and vermilion. Their coats were vivid blue, bedeeked with flowers. Their slippers were embroidered with silver. Many carried long, curved swords with inlaid hilts. The skirts of the women were trimmed with gold. Their

Message From The Great Outdoors

Where the air is pure and vitalizing -where quiet reigns-where the music of the trees, the birds, the flowers, the brooks, soothe; where rest restores jaded nerves and aching body; where you can renew your strength for coming duties. Yes-a call from the great outdoors. You've been going to respond to it for years. This year do it. It's great fun and pays big dividends. Find the place and then put on it one of our beautiful and substantial

hangles flashed and jangled. Their toerings glittered. With the piping whistle from the engine all scrambled on board the train. Doors slammed. At the last moment there came the sound of an excited voice. At the ticket-window a native, evidently new at railway travel, was trying to bargain with the clerk. He was fat and well-to-do, drest in silk, and wore a chain of turquoise beads. With the toot from the engine, with loud vociferations, he threw down the full price of his ticket and came running across the platform. He was too late. The doors were closed. The train was moving. He ran after it, his turban flying, shouting and whirling his arms. From the windows of the train lines of dusky heads gazed back at him.

Leaving Rajputana, and going northward into the provinces, the author notes. that the changing costumes marked the transition from one locality to another, The gaudy costumes now disappeared, the flowing coats and voluminous trousers. And he adds:

The women now wore trousers, Sikha were to be seen-towering men, with tightly-curled beards; Afghans, too, from the Khaibar Pass; slanting-eyed Mongolians from Tibet and the Himalayas. Then, farther east beyond Delhi, I began to see folk from Calcutta way-the Bengalis. These had a mixture of European and Asiatic dress. They were freek-coats or cutaways, closely fitting, beneath which emerged loose dhoti cloths and long, bare legs. Upon one individual with abnormally long, lean legs I saw a derby hat.

When an English army-officer takes a train, all other passengers fall back into insignificance. After all, it is for him the trains are run. He drives up to the station lete, with elatter of hoofs and swirls of dust. As he steps through the gates, the station-master hurries up with bows, and escorts him to the compartment which has been reserved for him. The officer's baggage fills the platform. His servant, perhaps a Hindu from Madras, his long hair tied into a knot, strides about giving orders to coolies who stream to and fro staggering beneath trunks and boxes. There are portmanteaus and creaking hampers; crates of bottled water; valises and bulging earryalls; enormous rolls of bedding; a rubber bath-tub and a queershaped hat-box; a folding-table, a cage with a noisy bird in it; a doll and a child's perambulator; polo-sticks, knapsacks, and guns,

It is long past the scheduled hour of departure. Everybody else is long aboard. From the third-class cars Hindu faces lean out watching. As the last box is lifted to the back of a groaning coolie, again is heard a clatter, a rattle of wheels, and the officer's wife drives up. She walks across the platform swiftly, her long veil blowing rut behind. An ayah follows, shrouded in white, with two children by the hand, who, in turn, are leading a toy elephant on wheels and a frisking puppydog. Then comes a burst of English voices, of barks and children's trebles, of yells from coolies as the servant pours coppers in their hands. The station-master looks inquiringly at the officer, who nods and steps into the car. The last door slams. The station-master waves his arms and blows his whistle. There is an answering toot from the engine, and, as the coolies

drop exhausted on the platform, the train begins to move.

The last stage of my journey was by night to Calcutta. I awoke in the morning in a country thick with mist through which the first rays of the sun were penetrating. Palms towered through the mist; there were forests of bamboo. Then came clearings and flooded rice-fields, where, already in the early light, waterbuffaloes and naked, dark-skinned figures toiled.

The train rolled on. The mists melted rapidly. The sun was quickly growing hot. Signs of civilization began to show themselves-modern buildings, a factory, a well-paved highway. Lakhshman appeared and began to roll up my bedding. We were nearing Calcutta.

A DUTCHMAN'S CROWN

HANS WAGNER has begun his twenty-sixth year of major - league baseball. And he is not going along as an old-timer" to sit on the bench and tell the youngsters how to do it, either. Not Hans. He is still on the firing-line, and is to be a regular first baseman, shortstop, outfielder, or any other position that the Pirates need a good man to fill. For, altho Honus has a longer record of bigleague ball to his credit than any other man who ever played the national game, he is still the base-hit spearer and twirler's nightmare he was ten years ago. He's forty-three years old, but, like the Irishman, he isn't sinsible of it. Wagner's eareer is reviewed by Bozeman Bulger in the New York World as follows:

A few years ago we thought it wonderful when Cy Young started on his twentyfourth year, but old Cy didn't finish. We also thought Matty was going to last forever, but his pitching years were limited to sixteen. This man Wagner now steps out on his twenty-sixth with the same spryness that characterized his playing ten years ago. He wins, pulled up!

To repeat Wagner's record would be like ealling attention to the fact that Christmas comes on December 25. Everybody knows it. Instead of trying to fix these figures in your head, just remember that he is the best hitter and the best infielder that the game has ever known and that will be sufficient. He led the league in hitting so

often that it became a habit.

Not only is Honus Wagner still enthusiastic about professional baseball, but he has never got over his inclination to step into a game played by small boys on a town lot. One day last summer, a crowd of kids were playing near Schenley Park, in Pittsburg, and for an bour they had Wagner playing with them. And he was just as eager to win among those little shavers as any man on the club. The name of this club, by the way, was the "Slugtown Yellow Jackets."

For years the managers of the Pittsburg teams have had to watch Honus after every game to keep him from giving the extra balls to kids that he happened to pass on his way to the club-house. To sneak a baseball out of the little black bag and toss it to some kids is an irresistible impulse of the Flying Dutchman.

The fans love Wagner because he loves

for distance and accuracy!

baseball. In all his twenty-six years he has never broken into print for trying to hold up his team for a larger salary or for baiting an umpire. As the Kansas Emporia Gazette points out, Hans is as time a sportsman as a ball-player.

Certainly the career of Hans Wagner is a great argument for clean living. Also it is another argument for the newly accepted theory that professional athletics and decency can go together. In this way, Hans Wagner has done as much to advance decency and clean living as a lecturer, a hygiene expert, or a college teacher.

Hans Wagner will be remembered when he has passed on as the foremost exponent of clean sport. He has played hard, but he has played clean. Wagner never has been "chased" by an umpire, and for his long service to American sport he is worthy of the gratitude of a sport-loving, red-blooded people.

HAVE YOU ONE OF THESE?

WE mean a Luneheon Thriller. It is not a new kind of dish, nor is it a variety of Coney Island amusement, yet it is coming to be a sine que non in every smart European home. Aristocratic America, who must have everything that is to be had by Europe, will be having the Thrillers soon, too, if we are to credit au account of this new institution quoted from the London Times by the New York San. But all this does not tell just what the Thriller is. He is the logical successor to the Brazilian baron of a decade ago, of the African explorer of the early Victorian days, and of the Chinese trader of the Jacobean era. He is the man the hostess relies upon to entertain the guests with personal-observation tales of adventure and perils passed. And, of course, nowadays, he is taken for granted as a survivor of a battle or two of the Great War.

According to the account, he knows all about the war, for he generally has a Government position, whether that of secret messenger or merely something so prosy as a relief commissioner. We read:

"In London, and, I am very certain, in Berlin, in Paris, in Petrograd, and in Vienna also," says a writer in The Times, "a new figure has appeared in the social world, of great currency and vivacity there. One may call him the Luncheon Thriller. He is variously ranked and stationed, according to the society which he frequents, but his headquarters are the War Office and the Admiralty.

"He may be a general or a clerk, a politician or a censor, an ex something or other, or one of those highly unpermanent officials who seem to enjoy for a few days or weeks at a time almost the supreme direction of the war. But, whatever be his rank or station, he is always on duty between the hours of 1:30 and 3:00, and his headquarters are the luncheon-tables of his friends.

"He is a confirmed and epicurean free, fooder, and one of the few possibilities of minor social success open to hostesses at the moment is to annex a Thriller during his

Havana and Porto Rico Filler with Sumatra Wrapper

Get out your letterhead-here's a new Shivers cigar

If you stepped into our factory in Philadelphia we'd be very glad to hand you one of these El-Nelsor eights.

After you had smoked it, courtesy would prompt you to tell us that you thought it was a very good eigar, and even though you didn't like it, we might be able to talk you into buying a box.

Which would be unfair to you. But when we ask you to write for a box and invite you to smake ten and return the remaining forty at our expense, with no charge for the ten smoked if you don't like them, we know that we are giving you a square deal. You must realize this.

The strongest thing we can say about this new rigar of ours -El Nelsor-is to tell you that it is just as good a cigar as our Shivers Panarela.

ust as good but different.

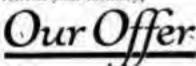

Different in shape, in size and in flavor.

But not different in quality:

Just as much care is taken in the selection of the tobacco and in the character of the workmanship, and the same uniform high standard of excellence will always be maintained.

El Nelsor is hand-made of long, high quality Hay and filler blended with Porto Rico and wrapped with a genuine Sumatra leaf. This is a very happy combination of tobaccos. It produces an even burning cigar with a pleasant flavor and that delicate bouquet which adds so much to the enjoyment of a cigar.

Now, draw up your letterhead and write us your request for a box. You probably know our selling method—it's been rouning now for fifteen years—but just to refresh your memory

Upon request we will send fifty El Nelsor Cigars, on approval, to a reader of the Literary Digest, express prepaid. He may smoke ten cigars and return the remaining forty at our expense and no charge for the ten smoked if he is not satisfied with them; if he is

pleased and keeps them, he agrees to remit the price \$2.50, within ten days. You know that such a method of selling merchandise would min any business unless the goods actually proved themselves satisfactory—more than satisfactory, in fact—no man will continue to order our cigars unless he feels that they are a better horgetic than he could obtain at a retail

The fact that our enormous business has been built up entirely by such methods, proves that our

cigars are more than satisfactory. We manufacture every cigar that we sell in a clean, sanitary factory and we sell direct to the smoker. All the intermediate profits, which are included in the price you pay for rigars at the retail store, are eliminated, with the result that we can and do give you ten-cent or 3 for a quarter quality for five cents.

If you don't think we do—send the cigars back.

And, if you would like to know more about our business and the other cigars we make and sell on the same plan, write for our booklet. All our cigars are illustrated in actual size, shape and color including our brand of clear Hayana cigars, the El Rolinzo.

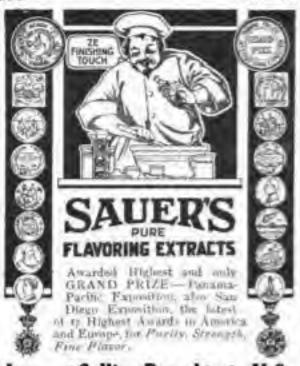

And in ordering please use your business stationery or give reference and state whether you prefer mild, medium or strong cigars.

a Bran Dish That Helps Millions

This is what countless Jolke are doing to keep fit.

They etart the day with Pertijohn's - a delightful soft-wheat

The bran is so hidden that people forget it. It is in flake form, which is doubly efficient

So they get Nature a lasative in a form they all enjoy, They get all its pleasing effects.

If you will try this simple plan for a week, you will make it a constant regime. And your days will be sunnier for it.

Pettijohns

Rolled Wheat-25% Bran

A breakfast dainty whose flavory Bakes hide 25 per cent unground bran.

Pettijohn's Flour - 75 per cent fine patent flour with 25 per cent bran flakes, Use like Graham flour in any recipe.

Both sold in packages only. (1554)

few weeks of heyday and collect at table a few select people to hear things 'at first hand.' The Thriller is not only particular about his food, but about his audience. He prefers it to be feminine, as being more easily thrilled and less likely to ask awkward questions. He insists that a due proportion of it shall be beautiful.

"You may meet him anywhere between Pimlieo and Tyburnia. He prefers to go not further south than Belgrave Square or north of Upper Brook Street. A certain importance of setting is demanded, and this can best be secured in the establishment of a friendly resident neutral-say American-of whom patriotism has not demanded that she should dispense with those outward trappings of luxury that so greatly facilitate the gathering together of two or three in these busy and harddriven times.

"The Thriller is always a little late, and his hostess has time to prepare the ground. 'So and so from the War Office, you know; I just asked very few so that he can speak in absolute confidence.' When all are assembled the Thriller arrives, serious, heavy-laden, but with an appearance of keeping up, of seeing disaster whole, but seeing it steadily. Hungry, too.

" I suppose we must eat,' he sighs to his beautiful neighbor as one of the eligible young men in livery hands the face gras and the butler fills his glass with Hochheimer. He talks for a time pointedly about the weather, or on personal matters; possibly in low tones to one of his neighbors, while the remainder make general conversation as best they can. It is not until the butler and the ineligibles have departed that he is able to speak at large, with a glance at the doors.

"'Now,' says the hostess, 'you can speak quite freely, General. Do tell us

exactly what happened.'

"And, having lit his cigar, the Thriller tells them his thrills; how the fleet only has coal for a week; how all the sights of all the rifles are wrong; how this army has rifles but no ammunition, and this one ammunition but no rifles; how the true facts about Hill 2,000 were that our army had no boots and that the Germans ate all our rations for a week. There can be no doubt about all these things; they are cold facts, volleyed out amid the strawberries and peaches."

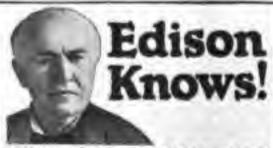

This is the Thriller's supreme hour, for there is an inarticulate pleasure in baving so many hang upon the mere word of one's mouth. He is able, we are told, to flood them with facts, and carry them away with his own volubility and conviction. It is a distinct triumph for the hostess. Finally, we learn:

"The company disperses to its various duties. But where the Thriller goes (exeept that somebody drops him) or what he does is hidden from mere mortal

eognizance. "That, of course, is the case of the Thriller as pessimist. Sometimes you may meet him as optimist; and as such he has a broader, tho perhaps less exclusively select company. It is then that we hear, from some one who has had a letter from some one who has seen it, of the authentic funerals of the Crown Prince and the Kaiser; of the great chain across the

Channel; of starving Berlin, and potatoes sent by the pound by parcel post to the American Embassy there; all of those vast and imposing sums in subtraction, with a most handsome allowance for all possible margin of error, which reduce the Germany Army to a handful of shaking graybeards and the Austrian Army to a minus quantity of some millions.

"It is then we meet in the very flesh some one who has just seen a commander-in-chief or Cabinet Minister 'smiling all over his face; says everything is going perfectly; every one as cheery as can be.' It is then that we hear of the German front-line trenches being filled by men with wooden legs and plaster arms; in-deed, I should not be surprized to learn that the German Army has all been killed and that the trenches are filled with dead men or stuffed figures.

"And, according as our natures and digestions incline, we are imprest by the optimist or pessimist Thriller, and willingly forget that facts are facts and have nothing to do with optimism or pessimism, and are not in themselves affected by the angle at which we regard them."

THE OLD "OPERY-HOUSE" PASSES

HIRTY years ago, there was not a town in America, capable of supporting a population of three thousand, which did not also have an amusement-hall of some sort for giving plays or concerts. And of the 986,654 odd halls of such caliber scattered between Portland, Me, and Portland, Ore., no less than 986,651 of them were probably known as the "Grand Opera-House." It seems, says a writer in the Philadelphia Public Ledger, a curious comment on the searcity of opera in America that all these buildings should have had such high-sounding names and be apparently dedicated to the very Muse which shunned the entire land. For, save in one or two of the coast cities, opera in America was unknown. The account proceeds:

It is unlikely that grand opera, as we commonly understand the term, was ever heard within the walls of the majority of the opera-houses throughout the country. yet the people who built these halls considered them too fine to be called by any but an imposing name, and "Grand Opera House" was naturally the highest reach of their imagination. That the name was shortened to, or degenerated into. "Opery House" was but a matter of course in some towns. The place was never referred to, however, as the "Grand Uproar House," a name that latter-day wags have invented to describe the old opera-houses which are making way for "Palace Theaters," where motion-pictures, three times a week, have supplanted the uncertain one-night stands of traveling theatrical companies.

In my day I have known three operahouses in three distinct country places. My memory is rather hazy concerning the first one, which was not really in a country town, but rather in an old and very pretty suburb of an Eastern city. This operahouse was, after all, not much more than a good-size hall on the second floor of a brick block. It is particularly associated in my mind with the earliest safe-and-sane

"2½ Days' Addressing Done In 2½ Hours"

TimeSavedHere

"We are pleased to advise that we have found the DIREX-ALL all you claim it to be. If we were to address our envelopes for circulars, of which we send out about 2500 to 3000 the end of each month, it would probably take a stenographer two to two and a half days to get them out, whereas with your machine the entire number can be addressed in about two and a half to three hours."

(Signed) F. C. BOWEN, Burber & Cn., Inc., Steamship Agents, 17 Battery Place, New York

More than a mailing machine—more than a listing machine—more than a billing machine. Combines the functions of all three, and can be used for miscellaneous other work now done by hand.

Speed, accuracy, convenience, simplicity, versatility. Mailings out on time. Returns back on time.

Read Barber & Company's letter to the left. Hundreds more like it. Some from concerns in your own line of business.

The DIREX-ALL is the addressing machine that prints through a ribbon—the machine that uses one-piece metal plates. Your mailings have the touch of individuality. No parts of the plate to become lost or inter-mixed.

The plates that do the printing also serve as a useful index. A boy can do it all. The DIREX-ALL makes no mistakes.

"Doing the Day's Work Better." That's the title of a book you may have for the asking. Pictures and describes the DIREX-ALL for you—the one designed to save your time and money—guaranteed.

A Desk-Book of

Twenty-five Thousand Words Frequently Mispronounced

By FRANK H. VIZETELLY, Lie.D., U.D.

Indicates the correct pronunciation of English words, foreign terms, Bible names, personal names, geographical names, and proper names of all kinds current in literature, science, and the arts. In addition to this, all words that are likely to prove stumbling-blocks to the mon-English speaking settler in America are included. In so far as the last feature is concerned, this work is unique

Each term needing explanation is concisely defined, and wherever necessary, notes, or quotations illustrating usage, are appended. The preferences of all the principal dictionaries of the English language are placed on record, and national peculiarities indicated and explained. Thus the volume, containing the recommendations of the leading lexicographers of three centuries, presents the most complete consensus of English pronunciation that has ever been compiled

12mo, cloth, 942 pages, \$1,60 not; by mail \$1.72. Funk & Wagnalls Company, 354 Fourth Ave., N. T. City

Fourth of July that I can remember, and that may have been the earliest on record.

Just before the city schools closed for the summer, about a week before the Fourth, there were distributed among the pupils tickets which would admit them to halls situated in various sections of the city and suburbs, where good entertainments were provided for the children's pleasure. These entertainments were held at stated intervals on Independence Day, so that children who missed the first performance had opportunities to go later.

At these "shows" there were usually magicians, who delighted the children with tricks, and ventriloquists, who puzzled them; and, of course, there was always music of some kind. I remember to this day a man whom I heard sing at one of these Fourth-of-July entertainmentin that particular opera-house. chorus of his song stated that his name was "Woolly," and that it was spelled "W," double "o," double "l," "y,"

The second of these palaces of amusement appears to have been in a small New England town, one of the typical places with green streets lined with elms and fringed with little white wooden houses of the primmest kind. Says the author, describing the town further:

It was, and is, the seat of a large and well-known academy for boys, and from September until July the students thought they owned the town, and brought into it. all the life it ever knew. There were no dormitories in the days that I remember, and the boys boarded "around the town," the people with whom they lived being more or less responsible for them to the school authorities.

The opera-house in this town supplanted an old hall, and the new building was made as much up to date as possible in order to influence traveling theatrical companies to place "Eton" upon their list of one-night stands. The architecture of this operahouse was along the lines of the then popular Queen Anne style, and the private boxes resembled bay windows. They were, however, large and convenient, a fact which the students were not long in discovering. Instead of buying separate seats for any performance the boys found that by clubbing together and buying all the boxes they could get admission for less money. The first comers took the chairs in the boxes, and as soon as these were filled the others sat along the plush railings of the boxes, with their feet hanging over-

After a few experiences of this kind, however, the managers naturally objected, refusing to admit any one to a box after the seats in it were filled. In retaliation the boys boycotted the opera-house, and, until the boxes were either changed or removed (I have forgotten just what was done), the audiences were comparatively small and far less enthusiastic than before.

It was at the Grand Opera House in "Eton" that I saw a play in which Napoleon was supposed to be a character. His white satin small-clothes and blue coat, as well as Josephine's trailing velvet robes, edged with near ermine, were in sad need of pressing. They showed the wrinkles which come not with age but with too frequent packing and unpacking, and these rather detracted from the dignity of royalty. If electric flat-irons had only been common in those days, how much more royal an

CHANDLER SIX \$1395

There is No Other Six Like This For Anything Like This Price

THE Chandler offers intrinsic value greater than other cars for which you are asked to pay much more. Greater value in materials, design, equipment, and, above all else, in the decondable and enduring service of its marvelous motor.

You may say it is easy to make such a claim for the Chandler. It is. And It Is Easy to Prove Such a Claim for the Chandler.

Year-old Chandlers command as high or higher price in the used car market than year-old cars of other makes selling, when new, for two or three hundred dollars more.

Could any further evidence be asked, to prove Chandler leadership in value? It wouldn't seem so, but let's make thorough inquiry.

What other make of car, at anything like the Chandler price, offers you a motor which has been developed, refined and perfected throughout four years of conscientious manufacture and not subjected to radical changes or experimental devices? Name.

What other make of car, at anything like the Chandler price, offers you such a proven nuchanism as the whole Chandler chassis? None.

What other make of car, at anything like the Chandler price, offers you all those features characteristic of the highest priced, highgrade cars—Bosch high tension magneto; solid cast aluminum motor base, extending from frame to frame; big silent chains instead of noisy gears for driving the motor shafts; full floating and silent spiral bevel gear rear axle and light running annular ball bearings in transmission, differential and rear wheels? None.

What other make of car, at anything like the Chandler price, offers you more beautiful and comfortable bodies than the Chandler? None.

Chandler policy has always kept the Chandler price low. Relatively it is lower to-day, when so many prices have been inflated, ' than ever before.

appearance Napoleon and Josephine might have presented!

The next opera-house with which I became familiar has not been out of existence very long. It "passed" in flames, but fortunately when the auditorium was vacant. It had been given over to motionpictures for some time, and as the entrance was up a long and winding stairway it was really a blessing, in the opinion of many in the community, that the fire took place. Nearly everybody in the town turned out to see the opera-house go, and some were disappointed that, owing to the arrival of a motor water-tower, it did not go entirely after all. However, it did not become an opera-house again, altho, so strong is the association of ideas, the stores which occupy the lower part of the remodeled building are spoken of to-day as being in the Opera-House block.

In the old days everything that went on was held in the opera-house, and altho we now have a pretty hall for more exclusive entertainments and a fire-proof. one-story motion-picture theater-not an opera-house-there are times when we think sentimentally of the good old days of the opera-house period. In our more sober moments, however, we give thanks that our opera-house passed as it did and that no disaster ever occurred in a place

so well fitted for one.

Our regrets for the passing of the country opera-houses are, I presume, mostly based upon sentiment. The more safely constructed motion-picture theaters represent a new era. Our children and their children never will know the thrills we felt upon going for the first time to a real "opery-house." As is said in the elipping which I have before me, "Little Willie is never the same little Willie once he has douned his first pair of knickerbookers."

JOHN BULL'S SURNAMES

THE man who signed his name in a hotel register as John Phtholonyrrh, and said it was prononneed "Turner," was perhaps an Englishman. The "phth," he said, was sounded as in "phthisis"; the "olo" as in "colonel" and the "nyrrh" as in "myrrb." In no part of the world are the sound and the spelling so at variance. In other lands they may seem haffling enough, but at least they go hand in hand, as twin children should; in Great Britain there is often a deadly family fend between them.

It is related of an American student eyeling through England that he stopt a workman on the road and asked the way to Beaulieu, which he pronounced Bo-lyuh. The workman had never heard of the place, but later, when it was spelled out to him, replied with sudden illumination, "Oh, you mean Bew-lev!" British spelling was at fault.

A writer in the Philadelphia Ledger recently recapitulated a few of the more flagrant examples of British mispronunenation. He brought out some startling examples, the very existence of which moved him to say:

Andrew Lang once said that should a cultured Englishman want to realize how

instantly relieves the trouble by supporting the hones in normal position by means of soft inserts. Builds up fallen arches. Removes pressure on callouses and they disappear. Relieves the pain in bunions and swollen joints. No metalno breaking in. Made of leather, soft, flexible, featherlight; feels fine. Comes with Arch Builder and Callous Remover in combination or either separate. Guaranteed to give relief or money refunded.

If you have any form of foot trouble, write for our free book "Orthograxy of the Foot" —a complete treatise on foot troubles.

Wizard Foot Appliance Co., 8t. Louis, Mo.

Makes It Go, Grandma?"

Swiftly moves the needle, leaving a straight unbroken trail of stitches, while Grandma sits at ease, with nothing to do but guide its course.

What makes the machine go? A simple little device, the Westinghouse Sew-Motor, that changes any ordinary sewing machine into an electric machine.

How different from the old-fashioned way of sewing! No treadle to work up and down till one's legs are stiff and one's back aches. No more fatiguing toil to make the doctor say "You'll have to stop running a sewing-machine,"

The Westinghouse Sew-Motor has brought a new joy into Grandma's life, just as it will into the lives of thousands of other women, old and young. To many it means that they can again enjoy the pleasure and economy of doing their own sewing. To many others it means relief from the tax on health and strength they have been paying for running a machine.

The Sew-Motor is the latest Westinghouse appliance to be added to the list of household lamp-socket utilities, such as the electric iron and the vacuum-cleaner.

It has a number of distinct Westinghouse advantages. A few are mentioned here:

It never has to be removed from the machine, as any modern machine can be closed with it attached.

It permits sitting in a natural position at the machine. To regulate the speed the foot rests on the treadle, not the controller.

It runs at any speed from I to 1000 stitches per minute.

It has belt-drive—not friction drive—insuring steady, quiet operation. With belt-drive there are no parts to slip or wear out.

Sold by electrical dealers, light and power companies, department and hardware stores. Price \$15. It must be a Westinghouse or it isn't a Sew-Motor. If your dealer can't supply you, write us.

ignorant he really was, he should attempt to pronounce a selected list of, say, a hundred English proper names. Lang was of the opinion that should the Englishman succeed in pronouncing correctly a score of such names he was "entitled to pat himself on the back."

It is not by any means every man who knows that Leveson-Gower is properly pronounced Looson-Gore; that a famous general is called by his friends Bay-den Pole; that another popular soldier is rightly addrest as Pool Carey, or that Lord Knollys, the King's private secretary, is known as Noles.

Who, without special enlightenment, would pronounce Dalzell, Dee-ell; Claverbouse, Clayverse, or Gilzean, Gilcen, altho he would certainly convict himself, in British eyes, of ignorance if he failed to do so?

Why, it may reasonably be asked, should Home be changed into Hume and Hotham into Hutham, and why should Jervis become Jarvis? Keighley is pronounced Keely by all except the good people who live in that Yorkshire town, and they call it Keethly, while Keightly is, to those who know, Keetly. Ruthven, for some obscure reason, is metamorphosed into Rivven.

Serymgeour, that good old Scottish name, comes as Serimjer from British lips, and Tyrwhitt is given as Tir-rit to rime with spirit. Menzies is not what it seems in print—it is Minges, or Meenyes: Meux degenerates into Mewes, while Lord Wemyss would not know he was addrest unless you pronounced his title Weems. Mr. Yerburgh answers to the name of Yarborough.

Lord Coke is addrest as Cook; Mr. Featherstonbaugh as Festunhaw. Also, it must be added, the knowing Englishman must never fail to pronounce Foljambe as Fool-jam, Dillwyn as Dillon, Belvoir as Beever, and Bertie as Barty.

From all of which it will be observed that our British cousins evince curious and contradictory ideas with reference to proper names.

A DIFFERENT SORT OF GAMING

THERE are more ways of arranging games of chance than there are laws to cope with them. Yet every now and then we learn of a new way by which man suceeeds in winning another's money, orwhich is, it would seem, more usual, losing his own. The latest addition to the list is fish-fighting. Never heard of fish-fighting? Well, you have heard of bull-fights, and bear - fights, and cock - fights - this is merely a different twist to the game where it is fish that do the combative part. So says an author in Every Week, and he places the locale of this enticing sport in Siam. It is said to be the national sport of that far-away country, and the Siamese find it just as attractive as the West-Indians find cock-fighting. We are told:

The men of that country will stake on fish-fights not only all the money they have, but even their wives and children.

It is no uncommon thing, in Siam, to see a man slinking along the street with a peculiar bulge distending some part of his clothing. The bulge represents a small glass bowl of water containing a fightingfish which the owner is anxious to match

Where Long Time Service Is Desired Armco Iron Proves Its Economy

Architects and contractors who plan for lasting efficiency, and owners who seek greatest safety for their investment, specify Armco (American Ingot) Iron for Water Storage Tanks. The ease of construction and the long, low-cost service of Armco Iron Tanks are in strong contrast with the repairs and replacements that must be made constantly in inferior installations. Armco Iron is the most economical tank material.

ARMCO IRON Resists Rust

Armco Iron resists rust because it is pure—
the purest iron made. It is almost wholly free
from gas bubbles and pockets, as well as from
impurities in solid form so common to ordinary
sheet metal. Armco Iron resists rust because it
is evenly dense throughout, slowly and carefully
made—reheated and annealed until no part is
more dense, more hardened than another.

Manufacturers know that Armoo Iron works easily, welds perfectly, eliminates waste in making up, and gives long service. That is why you will find Armco Iron being made into roofing, siding, fences, metal sash, stoves, enameled ware, grave vaults, culverts, silos, closet tanks, safes, metal lath and many other products too numerous to mention here.

Armco Iron Tanks are made by S. F. Bowser & Co., Inc., Fort Wayne, Ind.; The Heil Co., Milwaukee, Wis.; The Leader Iron Works, Decatur, Ill. Write to them for catalogs and prices.

"THE STORY OF ARMCO IRON"-Sent on request. A valuable book that tells how to prevent rust-waste and save money on up-keep.

against somebody's else's finny champion. The reason for the concealment is that fish-fighting is a Government gambling monopoly in Siam. Licenses to exhibit fish-fights are sold, bringing a considerable annual revenue to the coffers of the King. The unlicensed fish-fight is like a cockfight in the United States: the managers and spectators are liable to be arrested and jailed.

Just as cocks are bred for fighting, so are these fishes in Siam, where a special race of game fighting-fish has been developed. They are so tiny that they are commonly kept in tumblers of water, and fed with mosquito-wrigglers and other

aquatic insects.

Despite their small size, no living creatures are more fiercely pugnacious. It is the males that do the fighting, always in the manner of the duelle. The object sought by each of the combatants is to maim and mutilate its adversary. They go at each other in rough-and-tumble fashion, like two roosters, trying, with their strong jaws and sharp teeth, to infliet disabling injuries by biting off fins.

The fins and tails of these fighting-fish are huge relatively to the size of the little creatures. In the breeding-season the males enhance their brilliant markings with a lustrous olive-green bue, overlaid by fleeting prismatic color-flashes, which seem to be controlled by the fish, the tail and fins outlined in brilliant red and yellow.

If this seems an odd accomplishment for a fish, consider, then, this one. These fighting-fish differ from the ordinary species in that they do not depend for air, as others do, on the oxygen in the water liberated by plants or held with the liquid in microscopie quantities. They breathe air quite as land-animals and frogs do. And the account adds:

Hence they will thrive and reproduce their species under conditions that for other fish would be impossible. No other kind of fish is so easy to breed in captivity.

These Sinmese fighting-fish have been bred for centuries in small glass bowls and other such receptacles, being fed with earthworms and chopped raw meat when house-flies, mosquito larvæ, or other insects were scarce. It is necessary, however, to separate the female from the male, except in the breeding-season, because the latter will attack even his mate when

offspring are not in prospect.

Most interesting of all, perhaps, is the nest-building habit of this finny species. It makes a veritable fairy nest of airbubbles, which, extruded from the mouth of the male, are coated with a gelatinous matter that gives them permanency, like soap-bubbles blown from a prepared fluid. The female lays her eggs in the mass of bubbles thus prepared, and her mate guards them until they hatch. Indeed, after they are hatched, he will not allow her to approach the young until they are big enough to take care of themselves.

Too Restricted .- "You have sworn to tell nothing but the truth."

" Nothing but the truth, your honor?"

" Precisely."

"Then, judge, with that limitation upon me, I might as well warn you that I'm not going to have much to say."-Detroit Free Press.

Mitchell Junior-a 40-h.p. Six 120-inch Wheelbase

7-Passenger—48 Horsepower 127-inch Wheelbase

Consider These Extras

Hundreds of Them—Due to John W. Bate

Please go see the Mitchell extras. See what they add to a car. They are all paid for by factory savings.

> 31 Extra Features 24% Added Luxury 100% Over-Strength

These things cost us millions of dollars. But we save those millions by factory efficiency, developed by John W. Bate.

New Standards

Our new margin of safety is 100 per cent. That means each vital part is twice as strong as need be.

It means oversize parts. It means a wealth of Chrome-Vanadium steel. Over 440 parts are made of toughened steel. Gear teeth are tested for 50,000 pounds. It means cantilever springs so made that not one has ever broken.

It means safety, low upkeep, endurance, and a lifetime car.

Rare Attractions

There are 31 features in the Mitchell most of which all other cars omit. Beauty and luxury are increased to the limit. This year we add 24 per cent to the cost of finish, upholstery and trimming. That is paid for by savings in our new body plant.

See these unique attractions. John W. Bate, the efficiency expert,

TWO SIZES

Mitchell a roomy, 7-pessenger Six, high-speed, economical, 6-horsepower motor. Disappearing extra seats and 31 extra features included.

Price \$1460, f. o. b. Rucine

Mitchell Junior - 5-passenger Six with 120-inch wheelbase. A 40-horsepower motor - 14-inch smaller bore than larger Mitchell.

Price \$1150, f. o. b. Rocine

Also all styles of enclosed and convertible bodies. Also demountable tops.

has worked many years to attain them. He built and equipped this entire plant to build this one type economically. The result is a value far beyond what other fine cars offer.

Also \$1150 Now

In the Mitchell Junior we now offer a smaller Six. It is about the same as the 7-passenger Mitchell, but reduced to a large 5-passenger size. Your Mitchell dealer now exhibits both sizes, and with all the latest features.

The word efficiency may sound trite to you. But you will be amazed to see what it means when applied to motor cars. It is winning tens of thousands to this Bate-built car.

MITCHELL MOTORS COMPANY, Inc. Racine, Wis., U. S. A.

THE STANDARD DICTIONARY IS NOT IN FIRST

THE SPICE OF LIFE

She Had 'Em.—STUDENT—" What are your terms for students? "

LANDLADY -" Dead beats and bums."Brunonian.

Located.-Gny-"Do you know Lincoln's Geftysburg address?"

JANE-"I thought be lived at the White House."—Ohio Sun-Dial.

Agreed.—The "Swanky "One.—" I'm smoking a terrible lot of cigals lately."

The Other (with conviction)—" You're right, if that's one of them!"—Tit-Bits.

Wed and Won.—WUNCE.—" He lost all be had in Wall Street, but later he married a widow with three million dollars."

Twyce-"I see. Lost on the stocks but won on the bonds,"-The Lumb.

Cantion.—Aspining Author.—" Candidly, now what do you think of my new story?"

The Curric—"Please don't ask me.
You are so much bigger and stronger
than I am."—Puck.

The Reason.—Shor-walker.—"Do you realize that you were four hours selling those two women a yard of ribbon?"

Salaswoman "I know, sir. But just as they got to the counter they discovered that they each had a baby just learning to talk."—New York Times,

Trial Size.—A six-weeks-old calf was nibbling at the grass in the yard, and was viewed in silence for some minutes by the city girl.

"Tell me," she said, turning impulsively to her hostess, "does it really pay you to keep a cow as small as that? "- Harper's.

A Long Drought,—A Western Congressman, in discussing the droughts that sometimes afflict his State, tells this story:

"One day some one asked an old farmer, 'How would you like to see it rain?'

"'I don't care about it myself,' said the old man, 'but I've got a boy six years old who would like to see it rain."— Harper's Magazine.

Unlucky Answer.—Her husband had just come home and had his first meeting with the new nurse, who was remarkably pretty.

"She is sensible and scientific, too," urged the fond mother, "and says she will allow no one to kiss baby while she is near."

"No one would want to." replied the husband, "while she is near."

And the nurse was discharged. - Tit-Bits.

The Usual Program.—Punch once had a scene in which a district visitor is shown entering the cottage of a poor woman. The visitor is evidently new to the business and somewhat embarrassed. The cottager says to her: "I'm quite well, thank yer, miss; but I ain't seed you afore. Y're fresh at it, ain't yer, miss?"

"I have never visited you before, Mrs.

Johnson."

The woman dusts a chair. "Well," she says, "yer sits down here, an' yer reads me a short Psalm, yer gives me a shillin', and then yer goes!"—Punch.

Rebuffed.-Mrs. Barron (to small daughter saying prayers)-" A little louder. dear. I can't hear."

DAUGHTER-" Yes, but I'm not speaking to you."-New York Times.

Social Error.-" Mother, dear, what is economy?"

"Ethel, where on earth did you pick up that vulgar expression? Don't ever let me hear you use it again."-Puck,

A Sine Qua Non .- MOTHER-" Your father didn't take his cold bath this morning, did ho? "

JOHNNY-" Nope. I heard him kicking because there wasn't any hot water."

"No Man's a Hero."-Professor-"The boys were so entranced this morning that they remained in my lecture all through the dinner-hour."

HIS DAUGHTER-" Why didn't you wake them up? "-Tiger.

It Paid.—"Has your husband quit work? "

"Yes. He has figured it out that he can save more by staying home and running the furnace economically than he can earn by going down-town."-Washington Star.

Legitimate,—Churchwarden Brown -" Excuse me, Mr. Smith, but are you aware that you put a false half-crown in the contribution-plate this morning?"

MR. SMITH-" Yes; I owe the heathen a grudge for eating a missionary uncle."-Glasgow Record.

Esthetic.-Two fair munition-workers were discussing their personal affairs.

"Got a chap yet, Liz?" inquired one. "Yes; and he's a regular toff. He's manager at-."

"You don't say so! Why, they tell me

he's real refined."

"Rather! Why, he took me to a restaurant last week, and when we had coffee he poured it into a saucer to cool it, but he didn't blow it like common people would-he fanned it with his hat!" Tit-Bita.

Knew His Business.-Mrs. Smith hired a Chinese servant, and tried to teach him how to receive calling-cards. She let herself out the front door, and when the new servant answered her ring she gave him her card.

The next day two ladies came to visit Mrs. Smith. When they presented their eards, the alert Chinaman hastily compared them with Mrs. Smith's card, and remarked as he closed the door:

"Tickets no good; you can't come in." -Los Angeles Times.

Her Answer .- The pretty girl of the party was bantering the genial bachelor on his reasons for remaining single.

"No-o-o, I never was exactly disappointed in love," he meditated. " I was more what you might call discouraged. You see, when I was very young I became very much enamored of a young lady of my acquaintance; I was mortally afraid to tell her of my feeling, but at last I screwed up my courage to the proposing point. I said, 'Let's get married.'

"And she said, 'Good Lord! Who'd

have us! "-Everybody's.

A DITCH IN A JIFFY

A few pounds of Red Cross-a blast-and the ditch is made,—quicker than you could say "Jack Robinson"—far quicker than men could dig it-many times cheaper, too.

RED CROSS FARM POWDER

FOR DITCHING, DRAINING, STUMP BLASTING, SUB-SOILING, TREE PLANTING AND ROAD BUILDING

is the modern farmer's magic power. It lightens labor and lessens time. Thousands of farmers the country over have found it a short cut to easier work, bigger results and greater profits.

Vegetable Growing for Amateurs

A practical handbook by H. H. Thomas, the well-known gardening expert, showing how to sow, plant and culti-vate all kinds of vegetables, anlads, and useful berbs, how to prepare soils, etc. Closs, illustrated, by moil, 67c, Funk & Wagnale Ca., 254-00 Fourth Avenue, New York

DE LUE'S GOLDEN GIANT SWEET CORN

The most important horticultural acquisition of recent years. Awarded the only Silver Medal ever given by the Massachusetts Horticultural Society for novelty and excellence in Sweet Corn. DE LUE'S GOLDEN GIANT is the result of eleven years' selection by Dr. Frederick S. De Lue of Boston, Mass., from the product of "Howling Mob" crossed with "Golden Bantam."

With its 12 to 16-rowed ears it gives nearly four times the yield per acre that the Golden Bantam does with its smaller 8-rowed ears. The stalks are short and frequently produce two ears each. Its orange golden color is richer; it is more delicious in flavor and is equally early.

To introduce DE LUE'S GOLDEN GIANT we offer a limited quantity in packets containing 25 kernels each at 25 cents the packet, not more than 4 packets to any one customer, postpaid anywhere in the United States and possessions.

51 and 52 No. Market Street,

Our 170-page Annual Catalog and Gardeners' Guide, 450 illustrations, several colored plates and cultural directions, will be mailed on application.

WINGFOOT

LAWN HOSE

A little domain of your own
—your flower garden!
How your hope centers in
each tiny seed as you wait for
it to sprout, to bud, to flower.
And then the scarlet cluster
in the vase. And then the
joy, "I have created it!"

Freshening the garden plot is such a pleasant task when Goodyear Wingfoot is your lawn hose.

Free from tagging and untangling, for Goody ear Wingfoot is kinkless lawn hose. Free from cracks and leaks, for Goody ear Wingfoot is burst-proof lawn hose.

And then the inbuilt goodness in every foot of Wingfoot Lawn Hose—rubber goodness, structure goodness, wearing goodness, Goodyear goodness.

Be sure it's Goodyear Wingfoot Lawn Hose you buy. It is guaranteed for two whole lawn hose seasons.

The Goody eat Tire & Rubber Co.

CURRENT EVENTS

THE EUROPEAN WAR

WESTERN FRONT

March 8.—Paris announces that a vigorous counter-attack recovered the trenches in the Champaigne sector which were taken by the Crown Prince on February 15.

March 9.—The Italians on the Carso repulse attacks by the Austrians, announces the Italian War-Office.

The Germans make a counter-attack against the trenches on the Champaigne front which were retaken by the French yesterday. The attack is repulsed, says London,

March 10.—There is hard fighting on the Verdun front, without gain by either side.

British troops resume their advance on the Ancre and the town of Irles is stormed and captured, London announces. Nearly three miles of trenches are captured.

March 12.—French troops complete their success in Champaigne by the capture of Hill 185, which dominates the positions in this sector. Germany disputes this claim.

March 13.—British troops make another successful drive on the Anere front, reports London. The Germans are driven back for a mile on a front of three and a half miles, and the crest of the ridge west of Bapaume is won. The village of Grevillers and the fortified Loupart Wood are captured.

March 14.—Sir Doulgas Haig gains near Bapaume. Von Hindenburg is reported to be in personal command on the West front, says London.

EASTERN PRONT.

March 9.—The Germans on the Moldavian front attacked the important railway town of Ocna, They fail to take the town, but capture 600 Russians, a bill crest, and a trench gun.

March 10.—Russians make a vain counterattack on the trenches near Oena won by the Germans yesterday. German official reports reduce the number of prisoners taken in yesterday's attack from 600 to 291.

March 13.—Berlin reports that Russian trenches in Galicia are successfully raided, and that 550 prisoners and 13 machine guns are taken.

March 14.—An attempted French advance in Macedonia is repulsed, says Berlin.

MESOPOTAMIAN CAMPAIGN

March S.—General Maude informs London that the British cavalry is within fourteen miles of Bagdad. The Russian Army in Persia is moving forward more and more rapidly. The Russian center is now forty miles beyond. Hamadan, and the Turks are in general retreat all along the line.

March 10.—London reports that a battle for the possession of Bagdad is in progress along the Diala River, six miles from the city.

March II.—Bagdad falls. The Turkish Army defending the city is completely out-maneuvered and out-fought by the British under General Maude in a three days' battle, and early this morning his army occupied the Mesopotamian capital. British cavalry has advanced beyond Bagdad.

FEDERAL Motor Trucks will reduce your delivery problem also to "time table certainty." You can schedule their operation, hour by hour—twenty-four hours a day if need be—confident that FEDERAL stamina will meet your severest needs—the unexpected emergency as well as the daily grind.

Write today for the "FEDERAL Blue Book of Traffic" also "FEDERAL Traffic News"

Federal Motor Truck Company, Detroit, Mich.

JOHNS-MANVILLE

Service to you-through Public Utilities

March 12.—General Maude reports to London that the Turkish Bagdad army is in a desperate plight, and that he has captured two-thirds of their artiflery in the battle before Bagdad. The Russian advance continues unchecked, and their army is less than 150 miles from Maude's troops.

March 13.—The British continue to pursue the Turks beyond Bagdad by cavalry and gunboats on the Tigris.

March 14.—Russian troops in Mesopotamia capture the important Persian city of Kermanshah, while the British forces advance thirty miles beyond Bagdad.

GENERAL

March 8.—Food conditions in Germany are critical, says a Kenter dispatch from Amsterdam. Dr. George Michaelis is reported to have said before the Prussian Diet that more serious distress, particularly in the industrial centers, could hardly be imagined. He blamed the shortage on abuse of the food-cards.

The Gallipoli failure is laid to the late Lord Kitchener, in the report of the Dardanelles Commission, which is published in London, Technical officers are censured for not expressing their disapproval of the project more vigorously.

March 9.—The closing of the Dutch-Belgian frontier by the Germans is reported in a Central News dispatch from Amsterdam.

March 10.—The Belgian Relief steamship Storstad is torpedoed. One American sailor was on board, but is rescued.

March 11.—A Reuter dispatch from Petrograd says that owing to frequent foodriots in the Russian capital the military authorities have forbidden all assemblages in the streets, and are prepared to use force in maintaining order.

A complete tabulation of official and authenticated semiofficial records of men killed, wounded, and missing in the European War is received in Washington. Among the military proper 4,441,200 are reported dead; 2,508,-500 wounded, and 2,564,500 missing. Civilian dead and wounded, especially on the Russian and Balkan fronts, are estimated at 400,000 more, bringing the total war loss to over ten million. The Entente's losses are 6,318,400, those of the Central Powers 3,384,800.

March 12.—The British campaign against the German forces in German East Africa is virtually ended, says General Smuts in a dispatch to London.

March 13.—About 60 U-boats were captured or destroyed between January 1 and February 15 assert dispatches received in Washington.

March 14.—A Norwegian ship en route to Belgium is sunk without warning outside the blockade-zone.

During the last week only 20 British ships are sunk by U-boats, of which but thirteen were over 1,600 tonnage. Two French ships, one American vessel, and two Norwegian freighters make the total 25 ships. This is the smallest damage done by submarines since the campaign opened, London announces.

FOREIGN

March 8.—The Irish demonstration in Parliament is followed by the decision of the Nationalist party to engage in opposition to the Government while supporting a strong national policy toward the war.

Count Ferdinand von Zeppelin, inventor

Dioxogen

Why in dusty places do we instinctively breathe through the nose?

Breathing through the nose protects the mouth. Dust is always irritating, very frequently infectious, and the mouth is the place where disease germs get their start.

To keep the mouth clean and to guard against infection, use-

Dioxogen

(One teaspoonful in a little water) as a mouth wash night and morning.

No better health insurance is obtainable, the premiums are not large, but the benefits are beyond calculation.

of the famous dirigible, dies at Charlottenburg, near Berlin, aged seventy-

Santiago cables that four hundred American marines were landed at the request of the Cuban civil anthorities. As a result the rebels did not attack the city.

Wireless dispatches from Berlin state that the fifty-nine Yarrowdale men are released from quarantine, and are on their way to Switzerland en route for the United States.

March 10.-London receives official announcement that Austria has granted autonomy to Albania under its protectorate.

Mrs. Wheeldon, her daughter, Mrs. Mason, and the latter's husband are found guilty in London of an attempt to poison Premier Lloyd George. They are sentenced for terms ranging from ten to five years.

March 11.—Count von Bernstorff arrives safely in Christiania, Norway. "It's news to me," he says, when told of the German-Japanese-Mexican plot.

Gen. Venustiano Carranza is elected President of Mexico by what is believed to be the largest vote ever east in the Republic. Altho the voters had the privilege of writing in any name they desired, Carranza received all but a few scattering ballots. Altho there was no opposition to the President, the Congressional contests were bitterly fought.

March 12.—A large deputation of politicians and capitalists from Man-chester calls upon Austen Chamberlain, Secretary of State for India, to protest against the recent increase in the Indian tariff duty on cotton-goods. The Government's decision is being op-posed in the Commons.

March 14.—General Obregon, Carranza's ebief general and Minister of War, announces his resignation.

China severs diplomatic relations with Germany, and seizes five small German ships interned in her harbors, assert reports to Washington. China is ex-pected to supply the Entente with metals and munitions.

Lloyd George wins the India cotton-tariff battle. Both the Houses pass the resolution on the cotton-goods duty by a large majority after the Premier promises to reconsider the question at the close of the war.

March 15.—Gen. Louis Lyantey, Minister of War in the French Cabinet, resigns as a result of opposition in the Chamber of Deputies.

DOMESTIC

GERMAN-AMERICAN CRISIS

March 8.—Germany is financing Villa in his revolt against Carranza and his border brigandage, while at the same time German agents in the United States and Mexico City are attempting to aline the Carranza Government against the United States, reports the United Press, alleging the highest authority for the facts.

March 9.—President Wilson decides to arm American merchantmen at once, and supply them with naval gunners without waiting for authority from Congress. Secretary Daniels says that the Navy has both guns and gunners

The President issues a call for an extra session of Congress "to consider all matters collateral to the defense of our merchant marine." It will convene on April 16.

March 10.-Immediate construction of a

How the U.S. Bureau of Standards tests automobile oils

Do you know the greatest weakness of ordicary automobile oils! Do you know the chief cause of wear and expense! Do you know how the U. S. Bureau of Standards tests auto-

mobile oils what tests this Bureau considers most important ?

You will find the answers to these questions in the U. S. Bureau of Standards Tech-tologic Paper No. 73-"Data on the Oxidation of Automo-bile Cylinder Oils." This explains the testing of oils by the sedimentation method and shows the great importance of this test.

Showing Operating Temperatures
These high operations temperatures cause
rapid destruction of ordinary
automobils sile Today it is a generally rapid destruc-accepted fact that absence of sediment is the best test of a lubricant's efficiency.

Sediment causes permanent damage

Oil that contains sediment causes metal to metal friction because the sediment takes the place of a large part of the liquid oil. Then the pressed into e microscopic teeth grab and cut in. That means friction, wear and expense.

The damage caused by sediment cannot be repaired. Eventually the worn parts must be thrown away and new parts purchased and in-

How to reduce sediment 86%

The illustration at the top of the page shows the sediment test which the U. S. Bureau of Standards has approved. Notice that the lefthand bottle contains fully seven times as much sediment as the other bottle. The first bottle contains ordinary oil after 500 miles of running. The other contains Veedol.

Notice that there is fully 50 % rediment in ordinary oil as against 5% or 6% in Veedol. 86% less sediment! This means that by using Veedol you will save friction and wear and greatly reduce your operating expense.

Veedol is unlike ordinary oil because it is made by the Faulkner Process. This new discovery gives Veedol its remarkable heat-resisting and wear-resisting properties.

Ordinary automobile oil current he made like Veedol and connect have the same lubricating properties. Veedol resists heat, does not

evaporate rapidly, does not carbonize if your motor is in good condition - and finally, reduces sediment 86 %.

60c to make test will save you over \$50

Five gallons of Veedol will only cost you about 60c more than five gallons of ordinary oil. With miles, probably two or three times the mileage you get from ordinary oil. Thus you can easily compare costs.

Since sediment is the chief cause of friction, when you eliminate 86% of the sediment you save wear and save expense. Users of Veedol who have kept records say these savings run from \$50 to \$115 a year.

Make the test as follows: Clean out the crank case of your engine. Fill it with kerosene. Run your motor about thirty tecends under its own power. Draw out all kerosene and refill with Veedol. Then make a test run over a familiar road and straight, level stretches.

You will find your motor has acquired new

pick-op and hill-climbing ability. It will have less vibration and will give greater gasoline mileage. You save friction and cut down expense.

Buy Veedol Today

Over 12,000 dealers sell Veedol. Each dealer has a Veedol Lubrication Chart which specifies the correct grade of Veedol for your car or tractor for both Summer and Winter use. If you cannot get Veedol write for name of dealer who can supply you. Buy a can of Veedol today-begin now to get full efficiency from your car.

A convenient pour-ing derice to supplied with each metal sum-laster. Supplied in-

flotilla of armed high-speed motor-boats for the protection of the country's coast and shipping is recommended at the annual meeting of the Naval Consulting Board.

The leaders of the four Railroad Brotherhoods assure President Wilson that there will be no railroad strike in the event of war.

March 11.—Washington dispatches state that the responsibility for the protection of armed merchantmen is to be placed with the naval officers commanding the gun-crews, who will not be subject to the ship captains as far as operating the guns are concerned. There will be no assumption on the part of the navy men that this Government is at war with any nation, nor will the guns be used unless absolute necessity compels it as a means of protection against lawless attack. No submarine is to be sought for attack, but Secretary Lansing is quoted as saying that since meeting a U-boat in the barred zone implies that an attack is to be made on the merchantmen, the naval officers have a right to fire at sight.

Ambassador Gerard reaches Havana without mishap, and is expected in Washington Wednesday. He is greatly relieved at reaching the end of his trip, as he had been warned that the vessel on which he traveled was to be sunk.

G. L. Gupta, a Bengalese student in Columbia University, confesses that he was employed by Franz von Papen to foment sedition in India. He admits that he went to Japan a year and a half ago to buy munitions for India with money furnished by von Papen.

President Wilson directs that the Navy Department proceed at once with the arming of merchant ships and the detail of naval gunners necessary for manning the guns.

March 12.—Ambassador Gerard lands in Florida bearing official dispatches and papers for Washington. Among these is the draft treaty which Berlin attempted to compel him to sign.

In a meeting held in Washington, organized labor announces its war-program.
The gist of the long statement is, first, that labor should have a voice in the form and limitations of national defense, and secondly, that organized labor should be consulted as to the conduct and methods of operation involved in the war.

President Wilson formally announces to all the nations of the world, except Germany, his decision to arm American merchantmen against illegal assault. The statement is the official reply to Germany's barred-zone announcement of January 31.

March 14.—Army officers say they have received additional confirmation of an offer made to Carranza officials to raise a regiment of German reservists in ease of trouble between Mexico and the United States. Four German officers are said to be with Villa.

The American steamer Algonquin is shelled without warning by a German submarine, the crew driven into life-boats, and the vessel sunk by bombs. No lives are lost.

GENERAL

March 7.—George W. Guthrie, of Pittsburg, the American Ambassador to Japan, dies in Tokyo.

March 8.—The United States Senate adopts by the majority of 76 to 3, the Closure Rule, which makes the limitation of debate possible. Of the twelve Senators responsible for the Armed Ship Bill filibuster, only two—Senators La Follette and Gronna—vote against the Closure Rule.

Turkey again attempts without success to secure the consent of the United States to abrogation of the ancient "capitulations" under which foreigners under Turkish rule enjoy extraterritorial rights and are exempt from many peculiarities of Moslem law.

March 9.—The Hell Gate Bridge over the East River in New York City is formally opened to traffic. The bridge connects the New Haven and Pennsylvania railway systems and facilitates through service to the South and West.

The Supreme Court begins consideration of the Federal dissolution suit against the United States Steel Corporation, its subsidiaries, and officers.

Forty-two coal-dealers, representing the soft-coal interests of Virginia and West Virginia, plead not guilty to the charge of violating the Sherman Antitrust Law.

March 10.—Tony Denier, noted pantomimist, and the original Humpty-Dumpty, dies in Kingston, N. Y.

March 11.—Cyrus A. Sulloway, of New Hampshire, dies in Washington after more than twenty years of Congressional service.

A tornado sweeps over Newcastle, Ind., and kills 22 people, injuring 200 others. The storm lasts but five minutes, yet over 300 homes are wrecked. Everything in a path two blocks wide and more than ten blocks long is demolished.

March 12.—The four Railroad Brother-hoods set Saturday, March 17, as the date of a series of railroad strikes to paralyze every railroad in the country, unless the railroad managers yield to their demands. The Brotherhoods refuse to wait for the Supreme Court decision on the Adamson law, which has not yet been announced. The railway managers intend to resist.

Turkey abandons her attempt to draw from the United States recognition of the Moslem abrogation of the "capitulations" under which foreigners in Turkey are subject to the laws of their own country.

The New York State Senate passes the Woman-Suffrage Amendment, and it will be submitted to the voters next November.

The Democratic caucus retains Mr. Stone, of Missouri, as Chairman of the Committee on Foreign Relations.

March 13.—Formal orders are issued for the opening of the railroad strike in the East. The Brotherhoods announce that they will refuse to run mail-trains, which might compel President Wilson to put the roads on a military basis.

Michael Herlihy is sentenced to serve from ten to twenty years for having been one of the union officials responsible for setting fifty sticks of dynamite in the New York subway during the late traction strike.

March 14.—William F. Sheehan, lawyer and politician, dies at his home in New York.

President Wilson nominates F. W. Taussig, of Harvard; D. C. Roper, of South Carolina; D. J. Lewis, of Maryland; William Kent, of California; W. S. Culbertson, of Kansas, and Edward P. Costigan, of Colorado, to the non-partizan Tariff Commission.

LEA & PERRINS SAUCE

The Original Worcestershire

THE FEATURE OF THE FEAST

THERE is a tempting, alluring piquancy—a zest, a smack, a gusto—to Lea & Perrins Sauce that makes it quite the feature of the feast.

Lea & Perrins is different from all other condiments. It possesses the peculiar property of blending with the most delicate flavor, producing an effect enhanced, augmented, exquisite in its perfection.

For steaks, chops, fish, cold-cuts and gravies. For curries, cheese dishes, eggs—everything from soups to salads.

-a sort of hall-mark of cafes and restaurants the wide world over—the right-hand helper in the kitchens of thousands of homes.

OUR STOCK-MARKET IN WAR-TIMES

N order to arrive at some hint as to the course of prices on the New York Stock Exchange, should actual war occur between this country and Germany, a writer in the New York Times Annalist has presented a compilation of data as to what the effects were in 1898 when we were at war with Spain. While the analogy that would exist might not be perfect, it would be "the only modern parallel in our own experience," and hence of some value as well as of real interest. The writer points out that in 1898 the low point of the market was reached "not upon the declaration of war, but upon the sinking of the Maine, which occurred in February, while war was not declared until May." He has compiled averages for each month of high and low prices of fifty stocks which were active in 1898. They show first that in these fifty stocks there was a fall of about 10 points from the high of January to the low that came with the break on news of the sinking of the Maine; secondly, that upon the declaration of war they did not stay within 4 points of the low of March. and thirdly, that by December they were 10 points higher than they were in January and 20 points higher than they were at the low of March. By classes of stocks, the fluctuations, as this writer gives them, were as follows:

	Tenemen	E RAMBOADS	
Hiph in January 59 63	Low in March 50,49	May 33, 45	High in December 60.94
97.22	ELEVEN PUR	Sec Uraires 89.12	217.04
56.14	FOUNTERS 40.36	INDUSTRIALS 51.47	74.40
66,93		COMMENTS 60.81	77.04

The stocks included in the compilation of the above average quotations were the following:

Railreads	Industrial and Public Utility
Atchinery	American Cotton Gil
Chrispsake & Olic	American Sugar
Change & Gt. Western	American Tobsem
Chescy, Bur. & Query	Consolidated Gas
	Consolidated Ice
Chrones, Md. A.St. Paul	
Chemen & North Western	Laclede Cine
Chenan, Ruck Librat & Pacific	National Lissens
Delaware & Hudson	National Lead
Denver & Rio Grande pf.	N. V. Air Brake
Ene	Pacific Mail
Illimoir Central	People's Gas
Missesori, Kanesa & Texas	U.S. Leather pf.
Museum Parafic	U.S. Rubber pl.
Learnedle & Nuchrille	Western Lincon
New York Central	Amer, Spirits Mfg. pf.
New York, N. H. & H.	Amer. Tele. & Cable
New York, Unt. & West.	Brooklyn Union Gas
Norfolk & Western	Edwo Elec Buminut'g
Northern Pacific	Hawan Sugar
Pennys reams	B. R. T.
flew load	General Electric
Southern Parific	Himeir Steel
Southern Railway pf.	Metropolitan St. Hys.
Union Paritie	North American
Walnut of	Polimen

In another table the writer gives the average by months in 1898 of prices for these stocks, both high and low, as follows:

1898	High	Low
January.	66.92	61.52
February	67.43	60, 07
March.	63.77	56 55
Apal	61.47	57.04
May	67.83	50, 51
June	58, 17	64.73

1898		High	Low
July		70.63	55 04
August		75.31	67.41
September.		74 73	68.67
October	- 2	73.76	67.76
November	- 4	76.12	69.82
December.	100	77.04	73.68

On turning to the course of the market for the present year, he finds that as represented by the average for fifty stocks, it so far has been analogous to that of 1898. From the January high of 90.40 the average on February 3, two days after the German Ambassador was dismissed and diplomatic relations with his Government broken off by the United States, had fallen to 77.24. Since that time, "with war almost in view," there has been a gradual recovery in prices, amounting on March 9 to 10.46 points for the industrials and to 1.98 for the railroads, or to 12.44 for industrials and rails combined. The range he gives was as follows:

			Rollewade		March 0
High	61.72	Jan. 1	Low .72.34 Fr	b. 1	74.32
			Industrials		
High	01.27	Jan. 1	Low 82 14 Fe	b. 3	92.60
			Combined		
High.	90.46	Jan. 4	Low . 77 24 Fe	6. 3	83.26

Provided the precedent established in 1898 were to be followed in 1917, the price level, in case of actual war, might be expected to fall back to the combined low of 77.24 of February 3, and from that point to move steadily upward to a new high, as was done in the year of the war with Spain. The writer ventures no prediction as to whether or not the analogy is to be continuous. Only time and the ticker-tape can tell that.

BANK CLEARINGS IN MANY CITIES

Bank clearings in this country for the week ending on February 22, as reported by Bradstreet's, aggregated \$4,501,230,000. a loss of 4 per cent. from the previous week, but a gain of 14 per cent, over the same week last year, and of 79 per cent. over the corresponding week of 1915. Outside of New York City the total was \$1,909,129,-000, a decrease of 4.8 per cent, from the previous week, but an increase of 24.5 per cent, over the corresponding week of last year and of 64.4 per cent. over 1915. In New York City the gain over last year was 7.5 per cent. Bradstreet's has reports from ninety-four cities reporting gains over last year, and from nineteen showing losses. In Chicago the gain was 28 per cent.; in Philadelphia, 30 per cent.; Boston, 12 per cent.; St. Louis, 38 per cent.; Kansas City, 40 per cent.; San Francisco, 30 per cent.; Cleveland, 117 per cent.; Detroit, 78 per cent.; Cincinnati, 20 per cent. Following are returns from the principal cities of the country for the week ending February 22 and for the week ending February 15, both of this year:

	February 22	L or D.	February 15

Later reports, covering the whole month, showed a total for the United States of \$21,462,963,627, which was "the heaviest ever recorded for any February." It, however, reflected a decrease of 14 per cent. from January, which ratio of loss "was really negligible when one considered that February was a short month, that it was marked by two holidays, and that it usually stands for a between-seasons period in retail trade." Incidentally,

"War Loans and the United States"

The Story of War Financing and Its Bearing on National Growth

ISTORY proves that the sacrifices and discipline of War have served to increase thrift, create efficiency and develop resources. The financial record of American Wars is one of patriotism and vision. War obligations have been readily met and economic progress made.

For the first time in its history, the United States has now become a creditor nation, and by meeting the needs of other nations is able to strengthen its own financial and commercial position.

Every citizen is concerned in the situation presented and its relation to its own affairs.

How American Wars since 1776 have been financed and these War debts discharged; the economic effect of War loans in this country and in Europe; lessons taught by experience and the opportunities offered for the future are described in a booklet entitled "War Loans and the United States," issued and sent upon request by the

the German submarine issue restricted speculation, put off certain financing and made for more or less unsettlement, in trade circles. At the same time, one had to remember "the influences of high prices, which naturally expand operations, exprest in terms of money, without, however, bringing about a similar degree of enlargement in physical volume." Again, "payments on account of the British war-loan made during the fore part of February increased clearings at New York and Boston," Nevertheless, Bradstreet's found it a fact that payments in February "never were larger than in the month just ended." Clearings increased 18.1 per cent. over February, 1916; 80 per cent, over the like month in 1915; 68 per cent, over that time in 1914, and 59 per cent, over the corresponding month in 1913. New York City's total for February, \$12,794,087,244, while being the smallest reported since August, 1916, was the largest ever noted for the month named.

Outside of New York, bank clearings for the whole month aggregated \$8,668,876,-383, the smallest total registered since August, 1916, but likewise "the largest ever recorded for February." This sum indicated an advance of 22.7 per cent, over February, 1916, while disclosing a gain of nearly 40 per cent, over the like month in 1913. Following are Bradstreet's aggregates of elearings for the whole month at all cities compared with the like periods in four

preceding years:

THE HIGH PRICES FOR COPPER

While other metals have registered "startling advances" in price since the war began, copper, says The Wall Street Journal, "still holds the center of the stage." Production has been greatly stimulated by the war, and yet high prices continue to prevail. Late in November, copper was selling for 3512 cents per pound, an extremely high price, but within the present year the price has reached 37 cents. Not since 1872, when the price reached 44 cents, has copper sold so high as it has this year. Further items as to the copper situation are set forth in the same paper:

"Refinery output in 1916 totaled 2,311,-000,000 pounds, an increase of more than 41 per cent, over the previous year. But it is not expected that 1917's refinery output will show much of an increase over 1916. Freight congestion, coupled with stormy weather and labor troubles, delayed shipments of adequate supplies to refineries through January and February, and producers are still experiencing shipping troubles.

"Assuming that refinery output this

year approximates 2,400,000,000 pounds, the question has been asked, Where will this copper go? Exports last year took care of about 733,000,000 pounds of copper and domestic consumption 1,585,429,666 pounds. Sales totaled 2,318,429,666 pounds. In September the Allies purchased 448,-000,000 pounds, to be delivered through the

first six months of this year.

"Since practically all available copper for delivery before July has been sold, we may assume that domestic buyers have already contracted for about 752,000,000 pounds. This export and domestic business already booked for the first six months would total 1,200,000,000 pounds, leaving 1,200,000,000 pounds of last-half metal to be contracted for. If the needs of the Allies are as great this year as they were in 1916, then 285,000,000 pounds additional will have to be purchased here and shipped abroad in the last six months of 1917. And if domestic buying is on a par with last year, this will mean the purchase of 833,000,000 additional pounds for this country's consumption, making a total of 2.318,429,666 pounds to be sold this year, or 81.570,334 pounds less than the estimated 1917 refinery production of 2,400,000,000 pounds. And yet the copper trade does not look for a surplus at the end of 1917, since 1916 exports showed a big increase over 1915; while apparent domestic consumption also increased about 550,000,000 pounds. As a matter of fact, domestic consumption has almost doubled since 1913.

"Another factor which might necessitate a revision of all estimates for 1917 consumption would be the entrance of this Government into the copper market for its preparedness needs. Should the war end in a few months the copper demands of the Allies for war-purposes would be greatly reduced, but the German market will be open and Germany is said to need something like 800,000,000 pounds of the metal. Peace will bring a copper demand for purposes other than war. It will mark the beginning of reconstruction in the devastated sections of Europe, and for this alone an immense quantity of copper will be needed. Large copper producers feel that the metal through 1918 will command a relatively high price as compared with 1913 and 1914, even the hostilities cease and a sudden lessening of demand paves the way for a substantial drop in prices."

SAVINGS-BANK DEPOSITS THE LARGEST KNOWN

That, during "a year of extraordinarily high prices," the savings-banks of New York State should have been well patronized by men and women in making deposits, while at the same time favored by light withdrawals, are two facts which Brodstreet's thinks "worthy of the attention of agitators, who are wont to proclaim that the rich are getting richer all the time, while the poor are getting poorer.' Considering all the circumstances, the writer thinks we ought not to have expected that savings-banks would show any thing but increased deposits in a year such as 1916, "when wages ascended to record high levels and when employment was well-nigh continuous." At the same time 633,407 accounts have been opened or reopened during the year, as against 533,-032 in 1915, a fact which dissipates the notion that savings-banks are suffering seriously from the more or less strenuous competition of the postal-savings system, or the one that savings-bank deposits are more and more being withdrawn and invested in standard stocks and bonds.

Deposits during 1916, not including

An Advertisement by THE PULLMAN COMPANY

Coast to Coast.

Through the far-reaching service of the Pullman Company it is often

possible to arrange a railroad journey so that the night may be spent on the train, thus effecting a saving in hotel accommodations and the hours often unnecessarily used for day time travel.

The Pullman car includes in its construction not only the asset of increased safety, but every convenience afforded by the most modern hotel that can possibly be adapted to the limitations of car construction. And the service further includes the personal attention of employes trained to anticipate the individual requirements of the traveling public.

In the deserts of the Southwest; in the western mountains in rural communities throughout the country, everywhere, regardless of local conditions. the traveler today can obtain, wherever he may board a Pullman, the same high standard of service that he would find in a Pullman car leaving the terminal of the great metropolis.

Standardized and extended to serve in equal measure travelers in practically every community, the facilities which the Pullman Company affords for convenience, safety and comfort are equalled by no other similar organization in the world.

Conservative Investors

The Book of Hardy Flowers

A VOLUME of encyclopedic scope by H. H. Thomas, A the well-known author of "The Ideal Garden," "The Complete Gardener," etc., forming a simple yet exhansitive guide to the cultivation in gardens of the trees and shruts, perennial and annual flowers that are hardy or are suitable for planting out of doors in summer in temperate regions. For convenience of reference the piants are described in alphabetical order ander their botanical names, but an index of popular names is also furnished, but an index of popular names is also furnished, but an index of popular names is also furnished, but an index of popular names is also furnished, but an index of popular names is also furnished, but an index of popular names is also furnished, but an area of which any one can be promptly located. The color, size, and remertal description of each plant are given, with the correct method of sowing, planting, pruning, making ruftings, grading, budding, lavering, etc., the best mixture of soil for each plant, time of biososoning, and probable diseases. Every gardener and garden owner should have this book, which covers the whole field of netdoor gardening so thoroughly that one never fails to find just the information needed. It is beautifully illustrated by 32 color photographs and 170 plates in like and what many of them reproductives from ph tographs.

Rapal fin, Cloth, son pages, \$1,50; by sond, \$1,70.

Fenk & Wagnalls Company, 354 Fourth Ave., New York

interest credited or paid, went up to the high-water mark of \$488,678,661, a gain of \$76,176,398, or 18 per cent., over 1915. This volume of increase was "truly remarkable and, considered in connection with the relatively light deposits of 1915 and 1914, sets up the inference that foreignborn residents here have worked their minds back to a point where they deem it wise to deposit instead of hoard their savings." One must keep it in mind here, however, that there has been little or no emigration from the country, which has tended to keep funds from being carried to Europe. Withdrawals in 1915 aggregated only \$422,988,549, which was a decrease of about \$7,000,000 from the preceding year and of \$26,000,000 from 1913 when withdrawals were exceptionally heavy. Withdrawals in 1915, 1914, and 1913, had execeded deposits, and thus paralleled trends witnessed in 1908 and 1907. Following are two tables that give the resources and total deposits as of January 1 for seventeen years past, as well as the deposits and withdrawals in certain particular years:

Jessery 1	Resources	Total Deposits
1917.	\$2,139,299,637	\$1,951,663,729

1904	330,634,132	202,643,984
1900		28A, 884, 600
1902		266,550,112
1001		252,549,576
1900	268,023,343	240.013.371
-	35,455,354	1

Supplementing these interesting data, Bradstreet's writer presents other details as to the condition of the savings-banks of New York State on January 1 this year, as compared with their condition in the previous year:

The second second	INIT	1916
Number of banks	141	140
Total resources	\$2,129,299,637	\$1,974,046,375
Amount due depositors	1,953,00X,729	1,810,204,637
Other liabilities	709,517	715,279
value stocks and bonds	184,925,701	154,124,167
bonds		183,009,354
Number of open accounts.	3,417,312	3,243,362
Number of accounts opened or reopened during year	103,407	533,932
Number of accounts closed dur- ing year.	459,457	\$60,312
Amount deposited during year,	The second	and the State Comme
not including interest credited.		\$412,502,563
Amount withdrawn during year. Amount of interest paid and	422,988,549	429,908,102
eredited during year	55,752,450	65,124,623
Salaries paid for the year	3,419,366	3,245,975
Espenses other than salares for year	1,251,683	3,644,019
the state of the s		

As to the figures for other States, the writer remarks that comprehensive statisties are not available, because the years of different State banking departments do not all end on exactly comparable dates. But his opinion is that it is "more than probable that savings for all of the country mounted to new high figures, employment having been so wide-spread at high wages, while the incomes of small investors largely expanded."

THE LEXICOGRAPHER'S EASY CHAIR

In this rolumn, to decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"B. B.," Muskogee, Okla.—"Is the word tasty correctly used in the sentence, Dress your hair tasty?

No. Use "tastily" instead, and follow the rule that adverbs are employed to modify verbs.

"H. S.," Danbury, Conn.—"(1) To settle an argument, my friend insists that Newfoundland is pronounced with the accent on land. Is he right? (2) Is this sentence correct; 'Please send me samples of invitation cards showing the style of lettering, etc.? Is style used correctly or should it be styles?"

(1) Your friend is not in error. There is a stress on the final syllable which gives to the a the sound it has in "at" rather than that which it has in "sofa"-a sound heard in the final syllable of "New Zealand" but not in that of "Maoriland." The dictionary places the primary stress on the first syllable and the secondary on the last. (2) It should read "styles of lettering."

"A. G. F.," Washington, D. C.—"(1) What is the proper pronunciation of the word pilaster iparticularly with reference to sound of '1')? Is there any disagreement amoung authorities as to the proper pronunciation of the word? (2) May certain syllables of words be properly ac-cented in speaking, contrary to proper accent when such words are used alone, for the sake of contrast? For example, 'His plan was to do nothing of fensive or de fensive'."

(1) Pillaster is pronounced pi-las'ter-i as in pin. The LEXICOGRAPHER is hot aware of any disagreement as to the pronunciation of this word. (2) Yes; that is the only way to bring out the contrast.

"K. L. M.," New York, N. Y.—"Is the claim recently made in a New York newspaper that the word 'Rye' in the Scottish song, 'Comin' Thro' the Rye, means a village green and not a stream, correct?"

In view of the fact that one of the verses of this song explicitly states that-

"Ob. Jenny's a' wat, poor body, Jenny's seldom dry; She draiglet a' her petticoatic 'Comin' thro' the Rye."

it is quite evident that a stream is referred to. There is no Scottish word ree which means village

"F. A. W.," Demorest, Ga.—"For about forty-five years I have been under the impression that the croplet. 'A little nonsense now and then, etc., came from the pen of 'Brick' Pomeroy, who, as long age as that was at La Crosse, Wis., and was quite popular as the editor of The Democrat, which had a wide circulation through the then 'West."

The couplet to which you refer is given in our reference-books as anonymous. But the idea has been exprest by many writers, from Horace down. and it may be that it was used by Pomeroy in "Nonsense," which he published in 1868.

"D. W. M.." Emery, Tex.—"(1) Why is rough pronounced ruff; dough, dou; bough, bou, etc. (2) Which one of President Wilson's Cabinet members is a native of Great Britain? Where and when was he born? (3) Is Mr. Bryan's (ex-Secretary of State) son-in-law a captain in the British Army; what is his name?"

(1) The varying pronunciation of words ending in ough arises from the circumstances of their evolution during a period when English orthography was in an unsettled condition. Thus, in Early English "rough" was spelled "ruhh." In the seventeenth century "dough" was spelled "doe." In Early English "bough" was spelt "bou." each case, when the spelling changed, the pronunciation was retained. (2) William Bauchop Wilson, Secretary of Labor, was born at Blantyre, Scotland, April 2, 1862. (3) Mr. Bryan's daughter. Ruth, married an Englishman named Owen. but we are not aware that he is an officer in thu

"E. S. C.," Lake Sunapee, N. H.—"(1) Which is the correct form: 'The intention, the duty, the privilege, the purpose to do or of doing?' (2) Which is the correct form of answer: 'What is your intention? Ans. 'To go home or of going home?' (3) Which is the correct form: 'I have the intention of going home or to go home?'"

(1) It depends on the context. Thus, we should say, "It is my intention to do," but "I have the

The Liberty-Built for the Buyer

TERE IS A CAR designed from the first for youthe man who buys.

It is not a one man creation.

It is the work of the combined brains of the most experienced men in the industry.

These men have known and driven cars of many makes -and in the Liberty they have built a car to satisfy themselves and you-by the inclusion of all features of owner interest.

That's how the Liberty blazed the way as the owner's car. Other companies, realizing the rightness of its ideal, are including and advertising single features for the owner's benefit.

The Liberty has them all.

ET THESE FEATURES: Simple chassis designthere is none simpler—the heavy, sturdy, five-inch frame—correct balance, causing it to hold the road under all conditions—the easy steering—the easily operated clutch—the smooth and silent gear shift—the easily operated, but powerful brakes—the absolutely reliable emergency brake-the elimination of grease cups-the upholstery designed to fit the passenger's body-the easily adjusted curtains-the wide doors-the handy tool compartment-the weather-tight windshield-the ventilated front compartment-the easy springs-the detachable robe rail—the big fenders—the double lamps.

All these remarkable features—for your satisfaction for your service-are now combined for the first time in one car, together with a snappy, eager motor-plenty of pep, ginger, get-away-without the addition of a pound of weight.

The difference between the Liberty and all other cars lies then, not in sales talk-not in theories-but in the way the Liberty satisfies the owner and driver-in actual use.

That's the reason for Liberty driving ease, which has made effort in driving a thing of the past,

That's the reason for Liberty riding comfort, which has made rattles and shocks and picking the smoothest road things of the past. No matter how rough the road, the Liberty covers it with a long, easy swing-for your comfort.

D IDE IN IT-DRIVE IT. Get into a Liberty today. Compare it with every other car made. The Liberty has been bought by thousands. They prove that we have succeeded in at last producing "the car of the owner's interest.

A Florida owner who has owned and driven 23 cars says: "The Liberty is the best purchase I ever made." Mr. I. J. Helborn of California says: "I have owned ten other cars-the Liberty is the best on the market." "The easiest car I have ever driven," says Mr. E. H. Shore of Nebraska. And so on, by hundreds, come the endorsements of owners who know, who at last have a car built for their interest.

The Liberty has come to stay. It marks an epoch in automobile manufacturing. It is years ahead of its time in thought of the owner's interest-in thought of your satisfaction. Let the car prove it.

intention of doing." The same rule applies to "duty," "privilege," and "purpose." (2) In answer to the question, "What is your inten-tion?" we should say, "To go home." (3) The correct form is, "I have the intention of going home.

"C. S. F.," New York,—"Can you tell me why sait crackles when thrown on a fire?"

Because salt contains water, and when it is thrown into a fire the water is rapidly turned to steam, and to this sudden conversion the crackling is due.

"T. K." San Francisco, Cal.—"From a pamphlet called 'Some Reasons for Chinese Excussion, I learn that between 20,000 and 25,000 Chinese were slain by the Spaniards at Manila. P. I., and that thirty or forty years later another massacre took place in which a larger number was died in the same place. When did this butchery happen'

"In 1574 the city of Manila was sacked and burned by Chinese pirates," says the "New International Encyclopedia" (vol. xv: p. 3: 1916). and continues: "In 1602, an insurrection of the Chinese residents of the city was put down with great severity, several thousands of the insurgents being killed." Subsequent uprisings were of Fillpinos for their independence of Spain, but these were of much later date.

"H. C. C.," Olean, N. Y.—"Kindly give me the genealogical process by which a name be-comes 'hyphenated.' How, for example, and when, the Smiths and the Joneses unite their names and become 'Smith-Jonese'."

Compound names are recognized as legitimate where property is represented as having descended through an heiress, and when one family has held possession of an estate for several generations which has subsequently descended by inheritance in male line to another who is actual proprietor. Compound names of the kind reflect the status of the record or in Great Britain of the warrant of royal license. The extinction of one family and the devolution of its estate to another has produced such compound names as Godolphin-Osborne and Spencer-Churchill. Here each surname represents a fact in the history of the family. The Earl of Buckingham, for instance, is a Hobart-Hampden-Mercer-Henderson. In many instances, however, there is no such warrant for compound names.

In the United States they are sometimes formed by linking a bride's maklen name to that of her husband; or by adding a testator's name to one's own in accordance with the condition of a bequest. One who has a very common surname sometimes inserts a hyphen between it and his second Christian name. Again, a child whose father dies when he is quite young and whose mother marries again. may add his stepfather's name to his own. Fermerly, it was the custom in England to give the surname of the godfather or godmother to the child for whom they stood sponsor.

"A. E. G.," Parma, Mich.—"(1) What is the force of the word kelat—'Not merely to keep them busy, or to give the function proper kelat, but because Uncle Sam has found by careful experiment that about 30 per cent, more real to put in with entate than without. (2) Also, where is the origin of Josephen, meaning heighters.

(f) The definition of felat is "showings of achievement; brilliance of conduct or action; plendor," It is a French word, (2) "Yeggmen" is derived from the kipsy word "yest," which arous "chief tidet."

The Greatest Endorsement of a Great Car

DECEMBER 4th, the day after the New Series 18 Studebaker was announced, a nation-wide Prominent Buyers' Day Campaign was organized, and during this Prominent Buyers' Day Campaign one or more of the most prominent citizens of every community throughout the entire United States bought a Studebaker car. Government Officials, Bankers, Jurists, Captains of Industry, leaders in every field of human endeavor, have selected Studebaker from the entire field of cars on the 1917 market as the one that best expresses their idea of what an automobile should be.

This instantaneous, nation-wide endorsement of Studebaker by the most fastidious, most discriminating motor purchasers was based on the following Studebaker characteristics

VALUE Men who have built their success on their ability to make every dollar they spend bring its fullest return shrewd, calculating Bankers and Corporation Executives recognized at once that Studebaker offered them all the essentials usually found only in cars costing many hundreds of dollars more.

QUALITY Government Officials, Mayors of Cities, the dignity of whose office is an object of constant consideration, bought Studebakers because they found the necessary richness of finish combined with a perfection of design that reduces inspection, adjustment and repair expense almost to the vanishing point. STYLE Leaders of Society, notables of the stage, bought Studebakers for their grace, their luxury of appointment, for the hundred and one small details that so often escape the average eye, the importance of which Studebaker's 65 years of experience in fine coach building recognizes as essential to real smartness.

SERVICE Men and women of the types mentioned, prominent people generally, have the leisure that permits of extended use of their cars. Hence, the assurance of permanent service satisfaction guaranteed them by the vast Studebaker organization with its 21 factory branches and 6500 loyal dealers, played no small part in the volume of sales made to this most exacting class.

Such are the people who own Studebakers, such are their reasons for buying—the list of their names is most convincing evidence of their faith in Studebaker.

Let us send it to you. Ask for the Studebaker Blue Book of Prominent Buyers—write today.

TOPICS - OF - THE - DAY

A "STATE OF WAR" WITH GERMANY

HEN GERMAN U-BOATS on March 18 sank three more American ships—the Vigilancia, the Illinois, and the City of Memphis-and added five to their already heavy toll of American lives, official Washington. the correspondents tell us, realized that we had passed, by the inexorable logic of events, from "armed neutrality" to "a state of war." We are informed that was the view taken by the Cabinet in its meeting of March 20; and the following day the President issued a second call to Congress to meet on April 2, two weeks earlier than the date named in his first summons, "to receive a communication concerning grave matters of national policy which should be taken immediately under consideration." These "grave matters," in the opinion of the press, relate to Germany's attacks upon American ships and American citizens, and, as the New York Times remarks, "it will be the duty of Congress to recognize the fact of war and to authorize the President to take the necessary measures for national defense." A state of war between Germany and the United States actually exists, admitted Vice-President Marshall in a speech at Montgomery, Ala., on the 20th, and this opinion is echoed by such eminent authorities as Charles E. Hughes. Elihu Root, and Theodore Roosevelt. "There is now a state of war, and the people of the United States should recognize the fact," says Mr. Hughes. "Germany is making war on us," and our reply must be "either war or submission," affirms Mr. Root. And Colonel Roosevelt, after pointing out that she has "steadily waged war upon us" ever since her declaration of unrestricted submarine warfare on January 31, goes on to say:

"It has been a war of murder upon us. She has killed American women and children, as well as American men, upon the high seas. She has sunk our ships; our ports have been put under blockade.

"She has asked Mexico and Japan to join with her in dismembering this country. If these are not overt acts of war, then Lexington and Bunker Hill were not overt acts of war, It is well to remember that during the last two years the Germans have killed as many, or almost as many, Americans as were slain at Lexington and Bunker Hill, and whereas the British in open conflict slew armed American fighting men, the Americans whom the Germans have slain were women and children and unarmed men going peacefully about their lawful business.

"Such are the conditions. Any American citizen who is now pro-German is a traitor to this country—as much a traitor as

"There is no question about 'going to war.' Germany is already at war with us. The only question for us to decide is whether we shall make war nobly or ignobly. Let us face the accomplished fact, admit that Germany is at war with us, and in turn wage war on Germany with all our energy and courage and regain the right to look the whole world in the eyes without flinehing."

"Germany is at war with the United States, and the United States ought to be at war with Germany," agrees the Boston Transcript, "Our citizens have been murdered; our rights have been invaded; and treason has been plotted by German agents within our frontiers," notes the New York Tribune, which asks, "What are we going to do about it now?" "The Imperial Government is at war with this country," affirms the Scranton Republican; and the same fact is acknowledged in various terms by such papers as the Buffalo News and Express, Springfield Union, Philadelphia Public Ledger, Washington Herald, Baltimore News, Los Angeles Times, Indianapolis News, Manchester Union, Paterson Press-Guardian, Savannah News, Brooklyn Citizen, New York Evening Post and World, and the Cleveland Proces. "The United States is not impotent and the people of the United States are not cowards," remarks the Cleveland paper. "Therefore, war is inevitable."

In the opinion of the New York Globe, it will not be necessary for Congress to declare war, but merely "to recognize and to certify to the fact that a state of war exists." The World has this to say of the relations now existing between the two countries:

"It is because Germany is already making war against the United States that the President has changed the date of the special session, and Americans who have been looking for an international miracle which would keep the peace between the United States and Germany must face the situation as it is.

. . Nor need we waste time in lamentations. Rather should we face the future with pride and confidence, conscious that the United States will be fighting the battle of democracy alongside of the other great democracies of the world.

"When Congress meets, there should be no doubt about the determination of the American people to perform their full duty and play their full part, soberly, sanely, and effectively. There should be no doubt about their determination to support the Government and give to it whatever it requires, men and money and service.

TERMS: \$3 a year, in advance; three months, \$1; single copy 10 cents; postage to Canada, \$5 cents a year, other foreign postage, \$2.00 a year. BACK NUMBERS, not over three months old, \$5 cents cach; over three months old, \$1.00 rach. SEMIANNUAL INDEXES, issued in January and July, will be sent free to subscribers who apply for them. RECEIPT of payment is shown in about two weeks by date on address-label; subscription including the month named. CAUTION: If date is not properly extended after each payment, notify publishers promptly. Instructions for RENEWAL, DISCONTINUANCE, or CHANGE OF ADDRESS should be sent free treeks before the date they are to go into effect. Buth old and new addresses most always be given. DISCONTINUANCE: We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiraters.

tion. Notwithstanding this, it is not assumed that continuous service is desired; still, subscribers are expected to notify us with reasonable promptiness to stop if the paper is no longer required. PRESENTATION COPIES: Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnalls Company, 354-360 Fourth Avenue, New York, and Salisbury Square, London, E. C.

Entered as second-class matter. March 5, 1890, at the Post-office at New York, N. Y., under the act of March 3, 1879.

Entered as second-class matter at the Post-office Department, Ottawa, Canada.

"In whatever sacrifices this country may make, there is the additional assurance that the entrance of the United States into the war means an earlier and a better peace. The war will be shortened and the common people of every country will be nearer to the new emancipation because the greatest of republics has cast its lot with the other democracies in resistance to a ruthless German militarism and a lawless German autocracy."

It will be the duty of Congress, other papers agree, not only

to recognize the fact that a state of war exists, but to provide for the prosecution of that war on our part with all the speed and power possible. There is a growing demand that the President call the ablest men of the country to his council-table. In the meantime our Government is setling in motion all its available machinery to expedite preparedness-rushing orders for submarine - chasers, speeding up the work on the naval-construction program, and hastening the mobilization of our industries. The New York World, in its issue of March 21, listed the following ten steps that are "now under consideration by the Government":

"I. The mobilization of the entire naval forces, supplemented with adequate auxiliary facilities to assist in exterminating the submarine peril to neutral nations, with the full uses of

Allied bases on both sides of the Atlantic for the necessary

ampplies.

"2. The granting of permission to the war-ships of the Allied nations at war with Germany to use American ports as supply-bases, while doing patrol duty, and the removal of all restrictions, such as the armament of merchantmen entering and clearing United States ports.

"3. The unlimited provision of war-equipment to the Allied nations at war with Germany, with particular favor to be

shown the new Russian Government.

"4. The passage by Congress of a universal military training and service bill, designed to provide an army of 500,000 men within six months.

"5. The mobilization of the National Guard, following the adoption of a resolution declaring the existence of a state of war, so as to bring the land forces to an immediate strength of 300,000 men; this army to be used for domestic service until eventualities, not now anticipated, may compel the dispatching of it as part of an expeditionary force that the United States may feel compelled to send to foreign soil.

"6. The requisitioning of German-owned war- and merchant ships now held in American continental and insular waters for war-purposes, to be compensated for at the termination of hostilities between the United States and Germany unless they should be confiscated as a reprisal for the destruction of American vessels by Germany.

"7. The mobilization of the merchant marine by the Government for national uses, including the conveyance of cargoes to the Allied nations.

"S. The passage by Congress of legislation extending the credit of the Government for any purposes that it may find necessary in protecting its interests against German aggression.

"9. The mobilization of the railways, industrial and all other forces that may be taken over by the Government or operated under its direction to supply unlimited facilities for both the naval and military establishments of the Government.

"10. The mobilization of the financial resources of the country so as to insure an adequate supply of money necessary to finance the war-operations of the Government."

The preparations for naval war actually ordered are thus summarized by the New York Evening Sun: "Construction of sixty 35-knot submarine-chasers at the New York Navy-Yard.

"Construction of two hundred or more submarine-chasers by private ship-building companies under rush orders.

"Utilization of the \$115,000,000 naval emergency fund for speeding up the Navy's defensive measures.

"Suspension of the eight-hour day on all work for the Navy Department, the men to work ten hours a day and to be paid

time and one-half for overtime.

"Graduation of the first class at the Naval Academy next Saturday with the rank of lieutenant, skipping the grade of ensign, and the graduation of the second class in September.

"Increase of the enlisted personnel of the Navy to 87,000,"

Meanwhile the Governors of many Eastern and Southern States have appealed to the President to put the National Guard on a war-footing at once, and the Senate Committee on Military Affairs "is preparing to rush to enactment in record time all measures of national defense that may be asked for by the Administration." To quote further from the Washington correspondence of the New York Times:

"The fact that the Senate Military Committee reported favorably on Senator Chamberlain's bill for universal service, appending it as a committee

amendment to the Army Appropriation Bill, which failed with the end of the last session, shows that he will have the full support of his committee for any intermediate step he may have in contemplation. There is good reason to believe that his measure for universal service, which followed a plan prepared by the General Staff, will now have the support of Secretary Baker."

"When we go in, we will go in to the hilt," this dispatch quotes a "high official" as saying; and the same sentiment was the key-note of the great mass-meeting held in New York on March 22, under the anspices of the Defense League. The New York Globe presents the case against "timid" war and half-hearted participation in the following vigorous paragraphs:

"The murder of Americans on the high seas is merely one symptom of a generalized disease. The Germany that gives orders to her submarines is the same Germany that wantonly precipitated this atrocious war; the same Germany that invaded Belgium and brought the torch and the firing-squad to that inoffensive land; the same Germany that has bombarded civilian cities and reestablished military slavery; the same Germany that would sack New York and ravage Texas via Mexico except kept otherwise busy by Britons, and Frenchmen, and Russians, and Italians, and Belgians, and Servians, and Roumanians, and Portuguese, and Montenegrins. In select German military circles the United States is called 'creation's richest crib,' and great is the longing to crack it. Were it not for the sacrifices other men are making we would not be free of anxiety.

"When Hercules tackled the Lernscan hydra he did not confine himself to assailing one head. An octopus which has seven
arms left is not a pleasant companion, even the one is maimed.
The place to fight a fire is at its center. Sanitary work must be
done at the source of infection. We are not likely to induce
Germany to respect maritime law until such a time as she is
induced to respect other laws just as essential to human happiness. The plain purpose of the Teutonic imperialist is to garrote
self-government, and if she succeeds she succeeds altogether,
Our peace must be made in conjunction with the general peace,
and if we wish its early arrival every ounce of power should be
applied toward securing this general peace. The best place to
defend America is in Europe."

- Darling in the New York Tribune

THE GERMAN RETREAT

"RETREAT TO VICTORY" and "another von Hindenburg master-stroke" are the terms used by the German War Office to describe the great movement on the Western front which began with the fall of Bapaume and resulted in a few days in the withdrawal of German troops from a hundred miles of elaborately entrenched and supposedly impregnable positions, and the surrender of more than a thousand square miles of French territory held by the Germans almost since the

beginning of the war. They claim that it takes the German Army back to a shorter, stronger, and more scientifically prepared line, and throws into confusion all the claborate preparations of the Allies for a spring offensive. And another Berlin dispatch quotes a high German military authority who exults in the fact that "we are now getting the enemy out of their trenches." But as one American editor ironically remarks, a few repetitions this master - stroke would take the German armies back to Berlin; and the New York World notes that while the French and English are certainly coming out of their trenches it is "on the side facing away from Paris." Altogether, thinks the New York Times, the attempt of the Germans to call their retirement a victory rather than a defeat "is simply forlorn whistling in a graveyard."

But the German papers, apparently, accept the theory of a strategic withdrawal, as do some editorial observers on this

side of the water. "This is not the first strategic retreat von Hindenburg has executed in this war, and thus far these retreats have always borne fruit a hundredfold," recalls the Berlin Deutsche Tageszeitung, which adds: "It is only necessary to remember his great retreat from before Warsaw and the partial evacuation of Transylvania." "Developments may be awaited with calm confidence." declares the Marges Post. and the Vossische Zeitung reminds its readers that "the same von Hindenburg who began the Transylvania campaign with a retreat, and who in 1914 evacuated a conquered strip of Poland to strike the Russians like a bolt of lightning, now stands master of the battles on our Western front." All the German military experts, according to a Berlin dispatch, "explain the movement as part of the strategical plan of the German General Staff for a decision on the Western front, and a master-stroke to vitiate the preparations of the Entente for an offensive." And we read in a statement given by the German War Office to the United Press on March 21:

"Germany is retreating to a victory because her armies are taking their places in new positions, long prepared.

"Those positions embody the newest lessons of the war. They will force the enemy to learn their trade all over again. They would astound tacticians if their full details were revealed.

"They may transform the entire character of war.

"In the meantime Germany has been clearing the whole country in front of these new positions. They are miles back of the present line. The whole country intervening between the old German line and the new one has, by necessity of war and

necessity of the new German plans, been made a

wilderness.

"Roads have been destroved, the whole terrane has been made difficult of passage, all means of communication have been effaced. Some villages have utterly disappeared. Some have been only partly wrecked. Not only has a free zone of fire been obtained by such a procodure, but the enemy must come forward slowly over ground hazardous of passage.

"In their new positions the German forces will face an enemy either hurriedly brought up over this difficult wilderness, and, because of this hurry, insufficiently supplied, or an enemy which has come forward very slowly, because of necessity of building up the country.

"In either event, the enemy will be at a disadvantage. Months of toil by a million German soldiers have been expended in perfecting the new Ger-The German man lino. forces will be entrenched in the strongest possible defenses, protected by forests of barbed-wire entanglements. A free firezone in front will give them clear view of the enemy. Gons have been carefully ranged over all this forefield.

The shortened line will free a large number of troops. Not only will

which subdued Roumania is likewise free." A few days earlier another Berlin dispatch explained that one purpose of the German retirement was "to secure our

troops freedom of movement and to end trench warfare."

Germany have these men, but the victorious German Army

"We expect the Entente to claim all this as a great victory. They will say they recaptured these cities. They have not. They have not won them by battle. We are not moving back because of enemy pressure, but we are reshaping the Western front lines so that we will have an aggressive initiative."

American army officers, according to a Washington dispatch, are convinced that this wholesale withdrawal, which was apparently accomplished with inconsiderable loss of men and material, is "a great strategic movement," but they confess their mystification as to its outcome. And no less an authority than Mr. Frank H. Simonds, of the New York Tribunc, agrees that "one of the most successful retreats in all military history

WHERE THE WESTERN DEADLOCK BROKE.

The heavy line marks the entrenched and supposedly impregnable position held by the Germans on July 1, 1916, when the British and French began their offensive on the Somme. The heavy dotted line shows what had been gained when weather conditions checked this offensive in November. The shaded area shows the ground surrendered and made into a wilderness by the Germans between March 17 and 22.

It said further:

still leaves the riddle of German strategy unanswered." "Few of the British generals with whom I talked six weeks ago at the front believed that such a retreat could be made," says Mr. Simonds, and the New York Evening Post suggests that it must have been made possible by Germany's recovery of her mastery in the air. Whatever its ultimate object, insists the New York

POSSIBLE STAGES OF A GERMAN RETREAT.

The shaded territory was that occupied by the Allies on February 1. The westernmost line, from Arras southward, represents approximately the "Hindenburg line," to which the Germans retreated last week. The heavy black line, and the broken line to the right show the next two reserve lines of defense which the Germans are thought to have prepared in view of a possible partial withdrawal from Belgium and northern Prance. This map was prepared by the New York Tribune, whose war-editor, Mr. F. H. Simonds, recently returned from a visit to the French front.

Eccuing Mail, the withdrawal is "a maneuver and not a defeat."
It is certainly not a rout, remarks the Chicago Teibuse, which
goes on to discuss some of the considerations that may be
dictating German strategy:

"One of these considerations is probably the collapse of the Turkish Power. If German reports are to be believed, Turkish troops have been used extensively along the Russian front. They were reported as far north as Riga. Recent developments in Asia Minor have unquestionably created in the Turkish Government an intense desire for the return of these troops. Germany would have to find substitutes. She can gain more troops for work on this front by shortening her Western line.

"Already her withdrawal must have released more than 150,-000 men from the Western front.

"But it is unnecessary to assume any such reason for the German withdrawal. There is obviously little more to be gained by Germany in France and Belgium. Capturing Paris is now out of the question. The offensive at Verdun demonstrated that the Germans could make no advance proportionate to the number of men lost.

"Germany's retreat may have as its purpose not only the release of troops for use against Russia but the devitalizing of the French desire to fight on. With France free of the invader the Kaiser may reckon the French people will hesitate to spend another million men to invade Germany."

The retirement of the Germans may have been in accordance with their military "plan," remarks the Baltimore Sun, "but it is evidently a plan very different from that with which they entered France, and one which has been forced upon them by superior military pressure." "No army enjoys retreating," as the New York Times reminds us, and "Hindenburg is shortening his lines, not because he wants to, but because he has to." The French and British people, says the Philadelphia Press, "can not but regard the backward movement of the Germans

as a glorious victory and the beginning of the end." The Allies have every reason to be gratified by this breaking of the deadlock on the Western front, says the Springfield Republican, and the Cleveland Plain Dealer declares that "what has now been achieved is sufficient to justify all the immense outlay of the French and British since July of last year." The Cleveland paper goes on to say:

"The victory of the French and British in a warfare in which it was said a year ago that the offensive must lose five times as heavily as the defensive is now admitted. A victory that Germany confidently asserted to be impossible is now a fact.

"The Allies have more men than the Germans; they have more and seemingly better guns; they have immeasurably greater resources; and now they have the added advantage of buoyant confidence."

"It is to be doubted whether defenses could be possibly devised stronger than those which the Germans held so tenaciously during two years of trench warfare, and which have now been smashed," remarks the Washington Star. "Such a retreat can not be explained away," insists the New York Commercial, which goes on:

"Press dispatches relate the desperate efforts of the German Government and the newspapers to explain this surrender of valuable territory. It may have disarranged the plans of the Entente Allies for a spring drive, but the projected drive could not have been planned for a more sweeping victory at the outset than has been won without a serious struggle. It may be that the German Emperor is afraid of a revolution to follow the one which drove his cousin, the Czar of Russia, from the throne. If such a danger impends it would be wise to draw the German armies back on German soil to meet foes within.

"The most plausible explanation of the situation is that the German Government pins its sole hope of winning favorable terms of peace on starving England into submission by submarine warfare. While this forlorn hope is being ventured Germany will try to defend her frontiers from invasion and keep in subjection the revolutionists who threaten the Hohenzollern dynasty from within. The dream of an empire in the East is fading fast, and the German people will realize that they are beaten if the submarine campaign also fails. The Kaiser's position will be desperate the moment his subjects find that he

has led them to defeat in a war that he provoked and which he could easily have prevented by accepting Sir Edward Grey's offer to mediate and to take sides against the Powers that began a war without giving time for a conference to settle the Balkan question. Famine stalks through the streets of the great cities of Germany and Austria-Hungary, and will not be borne patiently if the people find out that the hated English have enough to eat."

DEMOCRATIC RUSSIA AS OUR ALLY

As WE ARM AGAINST GERMANY and consider alining ourselves among her banded foes, American editors rejoice that instead of reluctantly taking the corrupt despotism of the Romanoffs as an ally, we may proudly join hands with the self-governing people of Russia in a war of peoples

Copyrighted by the Prilmer Assertation-

"COME OFF THAT PENCE."

-Darling in the New York Tribune.

against kings, the a revolution in Germany, of course, would again transform the situation. The revolution in Russia, as the Dallas News observes, "gives a political and spiritual unity to the alliance of Germany's enemies that has heretofore been lacking, for the reason that democracy was in league with autoeracy." But with Russia a republic, or, at worst, a constitutional monarchy, "the cause of anti-Prussianism has been advanced to a definite stage," in the Des Moines Capital's opinion, and "the battle-ery can well be now that the absolute rule of royalty, the lodgment of the power of church and state in one man, can not exist in Europe." Out of Russia, declares the New Haven Journal-Courier, has now come the illumination which we in this country "required to make us see even more clearly the duty which confronts us. We need no longer haggle over details, as to whether, for example, we are being treated with scrupulous justice by the Allied nations. We have come upon the larger vision of this mighty struggle, and it is with that we have to deal. So long as democracy is under attack, there is but one place in the sun for the United States to occupy, distressing little details to the contrary." The New Orleans Item, which "has not seen that the quarrel of Europe is our quarrel," is none the less constrained to ask: "Is there a real liberty-loving American who will not breathe a sigh of relief that if our country is finally alined with the Allies, it can not enter a partnership with the most cruel and despotic Government in the World?"

Hitherto, notes the Springfield Republican, any one who urged that "democracy was staked on the defeat of the Central Powers" would be asked, "Why should we support a war continued for the sake of making the ukase of the Czar the supreme law in Constantinople? Why should we prefer the Russian Cæsar to the German Cæsar? Was not the Turk's beastly oppression of Christians matched by the Russian's cruel persecution of the Jew?" For nearly three years, says The Republican, Americans have had to face these questions. "and they have been a deadly blight to the sympathies which naturally are evoked by the appeals of the battling democracies over the seas to our democracy in America." The Massachusetts editor continues:

"The frenzied enthusiasm of the million Jews in New York City over the Russian emancipation reveals some measure of the difference this tremendous development may soon bring about in the currents of American opinion. In so far as pro-Germanism has been anti-Russian in essential quality among our Jewish population—and, one might add, among the Scandinavians and the Poles in America—the change in sentiment is likely to be immediate and radical.

"William of Germany is now the only living exponent of absolutism that the democracies of the world need fear. The Romanoffs have gone the way of the English Stuarts and the French Bourbons; the Hohenzollerns are the last strong prop of the outworn system which vests in a dynasty of princes a God-given right to rule mankind.

"If the United States can not bonorably escape from participation in this great war of the nations, events seem to have determined that Americans may uphold their principles without the taint of a decadent and besotted Casarism defiling their consciences and mocking their faith in democracy's final triumph throughout the world."

Even if we do not join Russia in the war against Germany, the democratization of that country makes for closer relations with the United States, which was the first nation formally to recognize the new régime. Here is a word to that effect from an Associated Press interview with the new Foreign Minister, Paul Miliukoff. He says:

"Nothing now stands in the way of a new commercial treaty between Russia and the United States. I think I am right in saying that the United States is eager for the resumption of old commercial relations and for the removal of all the disabilities governing Jews here. There now appear to be no obstacles to such an event. . . . This will only be one manifestation of the closer relations into which the new Russia hopes to enter with the democratic world."

The American-Russian Chamber of Commerce has issued a detailed statement showing how a liberal and progressive Russia "will naturally turn toward the United States for assistance

FAMILY DISCIPLINE FOR A "LITTLE FATHER."

American trade with Russia," The editor of The RussianAmerican Journal of Commerce, as quoted in the New York
Times, expects not only closer trade relations but "a tacit alliance, sentimentally speaking, between Russia and the United
States," for "the Russian people will never from this on suffer
their Government to stand quietly by and see democratic
America assailed by any monarchical Power." Russia's formerly
enormous trade with Germany is said to have been stimulated
by the pro-German forces in the Government, to the detriment
of America and other lands, and these forces are now being climinated, with correspondingly brighter prospects for our merchants.

Looking at the Russian revolution in its broadest aspects, the American press find it almost impossible to exaggerate its importance to Europe and the cause of world democracy. In truth, says the Boston Transcript, "it is a nightmare taken from the breast of the whole liberal world." The vital thing, as the Macon Telegraph sees it, is that "the last great, forbidding, seemingly impregnable stronghold of autocracy" has been "taken in the twinkling of an eye-in a bloodless uprising." It seems a miracle to the Washington Herold "that Czardom should be east out during the progress of the world-war." Dr. Stephen 8. Wise, looking ahead, predicts in a sermon that "a war that started as a conspiracy of kings against the people will end in a triumph of the people." In the Worcester Gazette's picture sque phrase, "the Russian revolution is the morning whistle for the parasitie despots and aristocrats of Europe to get up and go to work. That crew the people will earry on their backs no longer." "The Russian revolution, effective and complete, means more democracies," reads a New York Morning Telegraph head-line. And the Pittsburg Leader concludes that "all forms of human oppression have been cataloged and doomed to extermination."

In congratulating the new regime in Russia our editorial writers do not forget the dangers that confront it. There are the forces of reaction. Among them the New York Times sees a large part of the nobility of Russia. Besides, as Mr. Isaac Don Levine points out in the New York Tribune, there are the million men who were employed in the old Governmental machine. Again, an appeal to the peasantry might bring about a successful counter-revolution. According to Mr. Levine, "the tens of millions of semicivilized, illiterate muzhiks"—who reverence the "Little Father"—might easily be swayed in this direction. The extreme radicals are held to be a disturbing

factor, from both military and political standpoints. Russia, the Buffalo Times notes, "lacks that saving factor in a nation, a great, well-informed, capable middle class." Then, writes Dr. T. L. Stoddard in the Philadelphia Public Ledger,

"There is the question of the non-Russian nationalities. Of Russia's 180,000,000 inhabitants, less than half are genuine Muscovites. . . . To-day they are in a bitter mood, and some of them may take this occasion to revenge themselves upon their Muscovite oppressors.

"Lastly, there is the likelihood of a great German military offensive to try to sweep the new Russian Government off its feet before it has had time to establish itself and get things into running order."

But if such handleaps were to hinder, asks the St. Louis Post Disputch, "could liberal rule ever make progress anywhere?" and "surely if democracy has maintained itself against many difficulties in China, it has a promise of victorious permanence in Russia." Among many favoring circumstances this paper notes the fact that "Russia has long been thinking in republican terms." As the New York Sun reminds us, "reform in Russia has been moving with the steady and irresistible progress of a glacier since the Zemstvo Congress formulated its bill of rights in November, 1904." A Russian business man, a Liberal, tells The Sun that the Duma has long been working out the essential machinery now in motion, and that the whole program of reform legislation is now ready to be put into effect. The structure will endure, another Russian tells the New York Tribunc, "because the statesmen who have come forward to form the new Cabinet have stept logically to their present posts from the leaderships of great bodies which represent the people." The New York Times is certain that they have the people behind them and "they appear to have behind them the Army." The Times believes "the soldiers know that their boots and shoes, their uniforms, their warm clothing, their food, and such comforts as have been supplied to them have come from the very people," largely through the zemstvo organizations, and not from the inefficient, corrupt, and treacherous bureaucracy. This is bound to influence their action toward the revolution, to say nothing of the fact that the mere "coming together of millions of men from all over the Empire, the communing one with another of these men drawn from the ranks of the people, is of deep meaning for the future of Russia." In particular, says the New York Journal of Commerce, "the development of

Russia into a constitutional monarchy will be the easier because its autocratic administration was superinduced on an essentially democratic framework." In the zemstvos, or rural county councils, established after the emancipation of the serfs in 1861, Russia has what has been called "a skeleton upon which popular government can easily be built up."

THE SUPREME COURT'S WAR-MEASURE

THE PEACEFUL United States Supreme Court is held responsible for one of the most effective "warmeasures" undertaken in these days of preparation. There were fears lest an industrial dispute during hostilities might find our Government, owing to Constitutional limitations, as helpless as the Welsh miners' strike found England. But the high Court's affirmation of the constitutionality of the Adamson Eight-Hour Law is held in Washington to be a complete reassurance on this point, so a correspondent of the New York Times reports. For the decision means clearly, we are told, "that a strike in an interstate munitions corporation at a time when such a strike threatened the public safety—as it would in time of war-could be met by a Congressional mandate in the form of law, directing that the business continue to operate at terms set forth in the law." Yet the importance of the decision is by no means confined to its value as a "war-measure," for the press hold it to be of great and permanent significance, the Brooklyn Citizen terming it "the most important decision of an industrial character arrived at in the past twenty-five years."

This decision did not avert a railroad strike, as the danger had already been averted by the railroad managers' agreement to accept the Brotherhoods' interpretation of the law and to put it in force regardless of the Court's action. But "incidentally the right of public-service corporation employees to strike when unable to settle their differences with their employers is denied in the opinion written by Chief Justice White," and the New Haven Journal-Courier is confident that this "incidental opinion" will be generally considered "the real far-reaching thing." In

AUTOCRACY.

-Cassel in the New York Evening World.

effect, observes the Chicago Herald, the decision practically says to the railroads and their employees:

"You have a 'private right' to agree as to work and wages. If you exercise that right so as to permit uninterrupted flow of interstate commerce, well and good. If you can not or will

not agree, the Congress, under the power to regulate commerce, has the power to step in."

The Supreme Court "holds the scales level as between carriers and employees," as the New York Evening Post sees it. Or, in the words of the Brooklyn Eagle, "the trainmen have been told that they can not have their pie and eat it, too." Gaining their point now, the New York World remarks, "they have

WHY WAIT FOR MERE FORMALITIES, TO BE SURE?

-Darling in the New York Tribune.

given new life at Washington to a power that will surely regulate them as it long has regulated their employers." The decision, in the opinion of one of the railroad's counsel before the Supreme Court, is "a complete answer to the idea that railroad trainmen have an unrestricted Constitutional right to insist upon whatever wages . . . they desire, and tie up the transportation service of the country whenever their demands are not granted,"

On the other hand, Timothy Shea, assistant president of the Brotherhood of Locomotive Firemen and Enginemen, regards the declaration of the Chief Justice on this point a mere expression of personal opinion. "The right of laboring men to strike is fundamental," he declares, "and can not be taken away except by Constitutional amendment." He furthermore does not believe that Congress will ever pass a law prohibiting strikes. President W. G. Lee, of the Brotherhood of Railway Trainmen, would have been better pleased had the eight-hour law been declared unconstitutional, as "we prefer to make our own bargains with the roads." But "as to the ruling that we have no right to strike without submitting our demands to investigation, we'll interpret it for ourselves when we reach the occasion " President Compers, of the American Federation of Labor, is thoroughly indignant at the "reactionary" implications in the opinion, making this statement:

"The Supreme Court, by interpolating into the law and argument before it for consideration a foreign matter, namely, denial to workers of the right to quit work in furtherance of their just and necessary rights, pointed out the way to those who wish to tie workers to their work in order to protect the supposed convenience of the public."

The fact that representatives of labor, like some just quoted, "resent the suggestion of any restraint upon their right to strike," persuades the Philadelphia Record that the decision does not bear equally upon both parties, for while the employer may be compelled to submit, the men deny Congress's right to compel them to work. The Socialist New York Call, which professes to represent the working people, looks upon the decision as a complete surrender to labor. The Court merely "yielded to circumstances," and "the real power lies with the Brotherhoods."

The immediate effect of the Supreme Court decision of March 19, affirming the validity of the Adamson Law, will be to fix a permanent eight-hour basic day in computing wage-scales on railroads doing an interstate business, and to give, effective from January 1 of this year, increases in wages to trainmen, estimated to be about 25 per cent., at a cost to the roads of perhaps \$50,000,000 a year. The Court was not unanimous. A minority of four dissenting Justices variously asserted, as the New York Times briefly summarizes their views, that the Adamson Law "was void because beyond Constitutional powers of Congress, because it takes railroads' property without due process of law, or because it was not an hours-of-labor statute nor a legitimate regulation of commerce."

Chief Justice White, in the majority opinion, first discust the history of the case, emphasizing the urgency which compelled Congressional action. His main argument was based upon the power of Congress to enact. He declared that the Adamson Law fixes permanently an eight-hour standard of work, Congress here exercising a power which is generally conceded. The law also fixes a standard of wages temporarily, employers and employees being free to make new wage-contracts after the time specified in the law. The Chief Justice asked what would be the use of all the vast body of acknowledged rate-making and regulatory rights of Congress over interstate commerce if it could not remedy a situation created by a dispute between employers and employees over wages which was about to result in a great national disaster. Where, for instance, is the power to enforce operation, if that power may not prevent the complete stoppage of operation? Or, why recognize the Government's right to pass laws regulating relations between employer and employee, for safeguarding the latter, "if there was no power to remedy a situation created by a dispute between employers and employees as to rate of wages, which if not remedied would leave the public helpless, the whole people ruined, and all the homes of the land submitted to a danger of the most serious character?" Answering such questions as these the Court declares that Congress has full power to enact an eight-hour law in interstate commerce and also

"that in substance and effect it amounted to an exertion of its authority under the circumstances disclosed to compulsorily arbitrate the dispute between the parties by establishing as to the subject-matter of that dispute a legislative standard of wages operative and binding as a matter of law upon the parties—a power none the less efficaciously exerted because exercised by direct legislative act instead of the enactment of other and appropriate means providing for the bringing about of such result."

As for interference with the private rights of employer and employee, both are reminded that their right to make agreements free from legislative interference does not deprive Congress of the right to protect the public from injury resulting from a failure to exercise the private right mentioned. The employer is particularly reminded that by engaging in the business of interstate carriage, he becomes subject to the regulative power of Congress. The employee, for his part, is told that—

"Whatever would be the right of an employee engaged in a private business to demand such wages as he desires, to leave the employment if he does not get them, and by concert of action agree with others to leave upon the same condition, such rights are necessarily subject to limitation when employment is accepted in a business charged with a public interest and as to which the power to regulate commerce possest by Congress applied, and the resulting right to fix in a case of disagreement and dispute a standard of wages as we have seen necessarily obtained."

After disposing of minor objections, the Court concludes that in holding the Adamson Law unconstitutional the lower court erred in the case under consideration, since,

"Congress had the power to adopt the act in question, whether it be viewed as a direct fixing of wages to meet the absence of a standard on that subject resulting from the dispute between the parties, or as the exertion by Congress of the power which it undoubtedly possest to provide by appropriate legislation for compulsory arbitration—a power which inevitably resulted from its authority to protect interstate commerce in dealing with a situation like that which was before it."

FOREIGN - COMMENT

ENTENTE AND GERMAN PRESS ON THE RUSSIAN REVOLT

IGOROUS PROSECUTION OF THE WAR is what the foreign press, almost without exception, expect from the new Government of Russia. Indeed, the utterances of Professor Miliukoff, the new Minister of Foreign Affairs, are distinct and emphatic on this point, and in a dispatch sent

to all the Russian diplomats abroad he reiterates the determination of the Duma to bring the war to a successful conclusion, and renews Russia's pledge of loyalty to her partners in the Entente. The Foreign Minister writes:

"The Government can not forget for a single instant the grave external circumstances in which it assumes power, Russia did not will the war which has been drenching the world with blood for nearly three years. But, victim of premeditated aggression prepared long ago, she will continue as in the past to struggle against the spirit of conquest of a predatory race which has aimed at establishing an intolerable hegemony over its neighbors and subjecting Europe of the twentieth century to the shame of domination by Prussian militarism.

"Faithful to the pact which unites her indissolubly to her glorious Allies, Russia is resolved, like them, to assure the world at all costs an era of peace among the nations on the basis of stable national organization guaranteeing respect for right and justice. She will fight by their side against the common enemy until the end, without cessation and without faltering."

Turning to the Russian press in America, we find some diversity of views, and these are

typically exprest by the Russian dailies published in New York.

The Russky Golos is delighted with what it terms the disappearance of party lines in Holy Russia:

"This revolution was successful because the people have learned how to fight the Government which has long looked upon them as upon enemies. It was successful because the leaders forgot their differences and acted together.

"There are no party lines at present in Russia. All parties and all nationalities have united for a new freedom for all. All are for freedom of speech, of religion, of press—for full selfgovernment, for universal education, and for full Russian citizenship."

The enthusiasm for the new régime carries the Russkoye Slovo to such lengths that it urges its readers to aid the new Government with eash contributions:

"The Russian people will be victorious over all their foes. But money is needed for the struggle—uncounted, unlimited amounts of money. In that lie power and might and the lifeblood of the modern state.

"The watchword of the Russian people must be, 'We shall be in Germany this summer.' And money must flow to Russia from every part of the world. American Russia must respond to this great cause of Russia. Purchase the bonds of the Russian

> war-loans. Contribute money to the victory fund. This money will be cabled to the President of the Duma, who will use it as he sees fit."

> The Novy Mir, a Socialist organ of somewhat extreme views, is very angry because it does not think the revolution has gone far enough, and it hopes for more radical developments

"There is no doubt that the first move of the revolution was successful. Strikes of the working people and the demonstration of starving women and children turned out to be the mass movement that, with the help of the Army and the Navy, brought about the great changes.

"But it is the irony of fate that the Rodziankos, Miliukoffs, and Shingareffs, who have always been afraid of a revolution and preferred the darkest reaction of the old régime, should be the men who to-day are at the head of this movement.

"We all know that they are going to betray the revolutionary movement. The attempt of the temporary Government to persuade the Czar to abdicate in order to save the dynasty gives a warning to the Russian people of what is going to happen. They want only to establish an imperialistic grand Russia in which the power will lie in the

hands of the captains of industry and the great capitalists.

"But too deep and too important are the causes that drove the people to the streets. The revolutionary proletariat will lead the great masses of the Russian people still further until the old régime will be entirely overthrown—until Russia will become a real democracy, ruled and controlled by the people themselves. The revolution is still going on."

Professor Miliukoff's determination to wage vigorous war is hailed with delight by the press of Russia's oldest ally, France. The Paris papers greet the revolution with enthusiasm, for they see in it a guaranty of the impossibility of a separate peace. Writing in Le Petil Journal, Mr. Stephen Pichon says:

"The constitution of the new regime brings to the Powers united in war against Germany new strength and delivers them from the anxieties caused by the perpetual threat of trouble in the great Northern Empire."

The Matin thinks Germany will misinterpret the event:

"Once more the deception of Germany will be great and we

RUSSIA'S NEW PREMIER.

Prince George Lvoff. "He is the most popular man in Russia, head and chief of the combined Urban and Rural Zemstvo Committees, organizer and feeder in chief of the Russian armies in the field. He is a Russian of the Bussians, a Slav in fact as well as in name, and is perhaps the only man alive who has the entire confidence of the Russian people both high and low," says Mr. Montgomery Schuyler in the New York Times.

can be assured that Russia, under parliamentary régime, will continue with as much resolution but perhaps with more certain effect the heroic struggle to drive out the invaders and realize the aspirations of her people."

La Liberté is particularly pleased with the appointment of Prince Lvoff as Premier and Professor Miliukoff as Foreign Minister.

"The new Government, with Prince Lvoff, President of the

Association of Zemstvos, and with Prof. Paul N. Miliukoff, Leader of the Liberals, is entirely committed to the policy of maintaining an intimate alliance with the Entente and the intense prosecution of the war. We could wish nothing better."

Similar satisfaction is exprest by the London journals, but some of them are inclined to think that there will be a rally of the reactionary forces and further trouble before the democratic element is firmly established in the saddle. The Westminster Gazette considers that-

"An old autocracy with a vast bureaucracy grafted on it is not only a form of government, it is also an immense vested interest, in which thousands of individuals will fight to the last gasp against any change which threatens their positions, and will fight not openly, as in democratic countries, but in secret, sinister, and devious ways, which of necessity become treachery to the

Berlin is frankly puzzled at the turn of events, and the Socialist Vorwarts is inclined to agree with The Westminster Gazette in expecting further trouble, but the Socialist paper expects it to come not from the reactionaries, but from "a war-wearied people"

"This revolution is not, as might first appear, the rebellion of a people who want peace against a warlike Government. It is true that hungry and war-tired crowds in the labor quarters of Petrograd played a decisive rôle, but they were only a tool. Their dissatisfaction was used by political leaders who are anything but pacifists. Nor is the revolution one of landless men, but a revolt of national superpatriots and Russian Liberals, like Miliukoff and Rodzianko.

"This war-party has crowded Czarism into a corner because the latter demonstrated its incapacity to carry the war into a victory for Russia. There are only two possibilities of success to the Russian Liberals: one is a great victory over Germany and the fulfilment of all Panslavic desires of conquest, the other is the hurried conclusion of an honorable peace. Between these the new Russian Government must choose. Will it recognize that the first of these aims is an impossibility, while the second is within reach? The question is, Will it, desiring the first solution, be forced by the influences to which it owes its victory to accept the second? If the Russian Government does not want peace the Russian people will demand it, and then the remarkable development which helped the war-party to victory will sweep beyond the men who are at present in power.

"The mass of the laboring classes of the Russians in the cities

are not ready to support a war to a finish."

Other organs in the German capital hold contrary views and believe that a vigorous Russian campaign may be expected. The Berliner Tageblatt writes:

"One fact about which there can be no doubt is that the leaders of the new movement, above all other things, intend a determined prosecution of the war and will do all in their power to avoid any friction that may hinder their plan."

The disappearance of a fundamental cause of friction between the Eastern and Western Allies is seen by the Berlin Lokal Anzeiger, which remarks:

"If the question is treated impartially it can not be concealed that with the passing of Russian absolutism there disappears a great element of weakness which was always apparent in the French and Russian union and was always a certain danger for the maintenance of the Entente. The war-objects of the Western democratic Powers could not possibly in the long run bave remained the same as those of Russian absolutism."

The Frankfurter Zeitung believes that the new Russian Government will have no little difficulty in transforming its bellieose desires into practical effects:

"It may be assumed that the new men in power will attempt to put new vigor into the fight against the Central Powers, especially as nothing did so much to undermine the old régime as the accusations that it was seeking an unsatisfactory peace with Germany. But to convert these intentions into acts at the present stage of the war will be difficult, particularly as internal weakness is sure to follow the events in Petrograd.

The New-Yorker Staats-Zeitung greets the Russian revolution as an omen of German success, and it sees the entire Entente cracking under the strain of war:

"The revolution in Russia spells the doom of the Entente Alliance. Signs have not been wanting during the past few months that the breakdown of the Russian Governmental machinery was near at hand. Reports of food-shortage, lack of transportation facilities, and disappointment over the conduct of the war have filtered through from time to time. Evidences were at hand of the extraordinary rise in the prices of necessities of life. The sudden changes in the ministries, the strange names that appeared at the head of Russian affairs, all pointed to a condition of unrest and disorganization.

"The answer is now given us: it is revolution; and revolution in Russia means tearing asunder the ties of national Russian life. The revolutionary party in Petrograd will now be opposed by the agrarian and reactionary elements in other parts of the Empire. The Russian people will turn from the

war to the settlement of their internal problems.

"War as it is conducted nowadays requires the united efforts of all the people of a nation. It demands a solidarity such as the world never realized. It requires the closest cooperation between the military, the industrial, and the civil populations. Successful war can only be earried on when a people is united to withstand sacrifice and to subdue personal ambitions.

"Regardless of the fact which element has triumphed in Russia to-day, a division of sentiment makes the carrying

on of the war practically impossible."

THE CHANCELLOR'S DEMOCRATIC SPEECH

HE DAWN OF DEMOCRACY in Germany is fore-shadowed in Chancellor Bethmann-Hollweg's dramatic speech in the Prussian Diet, tho the Chancellor's conversion was anticipated by the similar interview with Foreign Minister Zimmermann which was quoted in our issue of December 23. According to the Rheinisch-Westfalische Zeitung it was evoked by a demonstration of the Socialist members of the Diet against the composition of the Herrenhaus, or Prussian House of Lords, the membership of which is anything but democratic. Strangely enough, it was a member of the moderate National Liberal party, Prof. Robert Friedberg, who introduced a resolution which ran:

"The House resolves to request the Royal State Government to present a bill by which membership in the Herrenhaus will be changed in such a way that, while retaining the royal privilege of appointment, but abolishing all privileges of families and dignitaries which now exist in relation to membership in the Herrenhaus, representation by means of elections and corresponding to their importance shall be granted to all large municipalities and to all professions of importance for the economic life and the civilization of our people."

The feeling of the German workers was shown when the Socialist Deputy Leinert said:

"We must abolish the Herrenhaus, which is a millstone around the neck of any progressive development in Prussia. . . .

"It wants the people to be commandeered into war and out of it, and that things afterward should remain as they were. That is impossible. The people demand peace at the earliest possible moment. We are no longer serfs whom the King can buy and sell or order us to bleed and die at the word of command. We are a nation that has reached political manhood."

"THE PROPOSITION IS BEATEN."

The Russian Duma has voted to drive the Germans out of Russia.

There is only one vote against it—Hindenburg's!

-0 Lustige Blätter (Berfin).

Entering the House during the course of the debate, the Imperial Chancellor made an unpremeditated speech in which he stated that—

"After the war we shall be confronted with the most gigantic tasks that ever confronted a nation. They will be so gigantic that the entire people will have to work to solve them. A strong foreign policy will be necessary, for we shall be surrounded by enemies whom we shall not meet with loud words, but with the internal strength of the nation. We can only pursue such a policy if the patriotism which during the war has developed to such a marvelous reality is maintained and strengthened."

"Oh, dear! Oh, dear! How my dollie has changed!"

— Lustige Blötter (Berlin).

The Chancellor declared that the maintenance of patriotism could be secured only by granting the people in general "equal cooperation in the administration of the Empire." He proceeded:

"Wo to the statesman who does not recognize the signs of the times and who, after this catastrophe, the like of which the world has never seen, believes that he can take up his work at the same point at which it was interrupted. I will devote my last effort to the carrying out of this idea of making our people strong. Only one thought fills me and all of us at present—how to end the war victoriously. As the war can only be won by the exertion of our greatest possible man-power, the truth of which must be admitted. I have freely spoken my thoughts on the internal policies of our people for the future."

The effect of this speech in Germany was electric, and with the exception of the ultra-Conservative and militaristic Berlin Kreuzzeitung, all the German papers have exprest approval. A dispatch from Berlin to the Copenhagen National Tidende runs:

"The speech of Chancellor von Bethmann-Hollweg in the Prussian Diet has made a tremendous impression throughout Germany. Such an absolutely explosive answer to the Diet's undemocratic attitude was entirely unexpected. The speech, taken as a whole, has the character of a great political demonstration. What made the greatest impression was the firmness with which he declared he would carry through his new policy against every opposition, together with the warmth with which he defended the Reichstag against the criticism of the Herrenhaus.

"The Liberal parties, the members of the Central party, and the Independent Conservatives stood while the Chancellor was speaking and interrupted him repeatedly with prolonged applause. The House felt in every sentence of the Chancellor's speech that he was dealing with a subject which be had deeply at heart and that he regarded the moment of the delivery of his speech as a decisive one in his career as a statesman."

The Manchester Guardian regards the Chancellor's speech as the direct result of the Russian revolution, and remarks:

"If the Russian people win and establish their liberty upon an impregnable basis, then they will have given a new aspect to civilization. Already its first workings are visible in the speech of the German Chancellor, in which he promises an internal political reorganization to Germany and a less illiberal franchise to Prussia. The revolution in Russia promises to isolate Germany as the one bureaucratic, despotic, and militarist Power in the European world, not only during the war, but after it unless Germany follows a similar course."

WHY CHINA JOINED THE ALLIES

INDISQUISED DISTRUST of America and Japan is the real reason why China has climbed upon the Allies' band-wagon. The German submarine menace was but a convenient excuse to enable China to obtain friends who will protect her against possible aggression by a combination of

IT LOOKS LIKE CHINA.

"Don't be afraid, Mr. President, it's only a piece of watermelon that she's cating."

—Puck (Osaka).

"American money and Japanese brains." Such at least is the view of the Peking Daily News, which solemnly warns the capitalists of the United States of the danger they run in "entering an economic alliance with Japan at the expense of China." It proceeds to deal with Baron Shibusawa's proposal in the Japanese Diet, that China's vast resources should "be developed by the cooperation of Japanese brains and American capital," and says:

"The whole story of Japanese intercourse with China since the China-Japan War is a story of persistent pressure, of unremitting inconsiderateness, of studied disregard of Chinese susceptibilities. The committal of any American project into Japanese keeping may perhaps be a guaranty of eventual materialization, but this may be bought at too high a cost. If we simply look at the thing from the point of view of what will pay best, we find an insuperable objection to the 'American money and Japanese brains' form of cooperation. It will not pay American interests to link themselves up with interests that reck nothing of Chinese feeling or rights. American enterprise in this country stands remarkably free from the taint of inconsiderate commercialism, perhaps freer than that of any other nationality. The highest American interests can only be conserved by the maintenance of the American tradition. 'Evil communications corrupt good manners' internationally as well as in private and personal life, and it is to be hoped that American capitalists will realize this. The history of the past few months shows that it is quite unnecessary for American interests to be entrusted to Japanese manipulation. Several loans, a big railway building contract, and other by no means negligible pieces of business stand to the credit of American enterprise unassisted by Japanese cerebral convolutions. There is no necessary conflict of interest between gray matter and clean bands."

The Chinese vernacular press applaud the break with Germany, for, they argue, if China remains isolated at the end of the war she would be an easy prey to Japan, whereas if China is one of the Entente, the other allies will safeguard her interests. The Peking Kuo Min Kung Pao writes:

"Interest demands that China should associate herself with the Entente, which represents the group of Powers who will control the destinies of the world. Germany can not help her nor harm her. If China is not with the Entente she will be isolated. Not only that, but she will have no voice in the peace conference, which will adjust international interests in this country as well as in other parts of the world. Without representation in the peace conference China may suffer further humiliation and perhaps spolintion. Fortunately, our statesmen are beginning to realize this, and their action should be indered by all real patriots who understand the military situation in Europe."

On the Japanese side some of the more far-sighted publicists frankly admit that there are grounds for China's suspicions, and they plead for a franker relation between the two countries. For example, Dr. Kazutami Ukita, of Wasada University, writing in the Tokyo Taiyo, says:

"The reason why China has hitherto been unable to trust Japan is because the Chinese could not understand the exact meaning of the principle of preserving the integrity of China advocated by this country. Japan's policy toward China has been very unstable since the first revolution in 1912. It is true that she has occasionally declared to the world her advocacy of the principle of preserving China's integrity, but her actions have not been in strict accord with her avowals. There were, indeed, circumstances that justified the suspicions entertained by the Chinese that Japan instigated the dissension between the North and South, and that she was secretly working for a partition of China.

"Hitherto Japan's diplomacy vis-d-vis China has been running counter to a canon of bushido, namely, bullying the weak. It would be a diplomatic miracle if Chino-Japanese friendship

were to result from such a line of diplomacy.

"The best way to establish the desired intimacy between Japan and China is for the Japanese to formulate the guiding principle of their diplomacy toward China, instead of grumbling about the attitude assumed by the Chinese toward them. When once this guiding principle is established, it is most important that it should be adhered to firmly and unflinchingly."

Very similar conclusions are arrived at by Professor Yoshino in the Yokohama Boycki, where he states that Japan's economic future is dependent on good relations with China:

"Unfortunately Japan has hitherto strayed from the rightful path in dealing with China, and in consequence the latter has turned her back upon Japan, showing an inclination to go to Westerners rather than to the Japanese for both advice and assistance.

"This is a regrettable state of things for the Chinese as well as ourselves, for if China were to be allied to any highly developed foreign Power, she runs the risk of completely forfeiting the opportunity to self-exertion, which may culminate in her making herself the economic slave of such a Power. From Japan's standpoint there are practically no bright prospects for the future of Japanese commerce and industries unless she succeeds in enlisting China's cooperation. If she fails in this, Japan's economic position will be completely ruined."

JAPAN ON OUR BREAK WITH GERMANY

MMENSE ASTONISHMENT has for more than a year been exprest in the Japanese press at President Wilson's efforts to maintain diplomatic relations with Germany under the strained condition he has had to face. Not a few journals have been inclined to regard our Executive's attitude toward the Kaiser as inconsistent and vacillating. When, therefore, Mr. Wilson handed his passports to the German Ambassador on February 2, the Japanese uttered a sigh of relief, and, as if with one voice, exclaimed, "At last!"

The unanimous nature of Japanese approval of the President's action may be judged from the comments of two newspapers, one being decidedly friendly toward us, the other known to be particularly critical,

The Tokyo Jiji-shimpo, which has always been sympathetic in commenting upon our activities, thinks that no other Power than the United States, "the pacifist among the nations," could be so tolerant and patient in dealing with such a recalcitrant nation as Germany. This journal does not see how America can stop at breaking off diplomatic relations with Germany, and predicts that we shall sooner or later be drawn into an armed conflict. It argues:

"We know that a rupture of diplomatic relations between two nations does not necessarily mean a war. But under the circumstances in which Germany and America find themselves, it is hard to see how the two Powers will manage to avoid actual war. To all intents and purposes Germany means to carry on the submarine campaign as outlined in her note to Washington, and America can not honorably acquiesce in the intolerable condition which such a campaign must entail upon her obvious rights of commerce and intercourse upon the high seas. Heretofore, President Wilson's means of protest against the ruthless German campaign has been diplomatic notes addrest to Berlin, but now that he has no longer any diplomatic relations with the Kaiser he can write no more notes to the German ruler. Hereafter the President's only means of protest must be direct action supported by the provess of the arms under his command."

Here the Jiji-shimpo pays high compliments to our Navy, and says that—

"Once America resolves to enter the war her magnificent fleets of war-ships will at once be put to use, and will, in cooperation with the French and British squadrons, sweep Germany's marauding submarines and cruisers from the Atlantic, the Mediterranean, and the North Sea. . . . We can not but welcome America's joining hands with the Entente Powers!"

The other newspaper which we have referred to as extremely critical toward us is the Tokyo Nichi-nichi. In reading the comments of this influential journal upon American affairs in the Far East and with regard to Japanese immigration, one can not help recalling the attitude of the Chicago Tribune toward Japan. Each is inclined to be extreme in criticizing the country whose public opinion the other professes to represent.

Yet in discussing our breach with Germany the Tokyo Nichinichi has nothing but kind words to say. It expresses sincere admiration for the splendid mental poise which President Wilson has invariably exhibited in handling the difficult situation. It agrees with the Jiji-shimpo in saying that the next inevitable step for the United States would be actual employment of force to compel Germany to observe the established rules of international law. Condemning the German methods of warfare, this journal says:

"Ever since the beginning of the present war in August, 1914, Germany has displayed a callous indifference to the recognized international code of law. If such wilful disregard of the established rules of warfare can be tolerated by the civilized world, nothing will hereafter be relied upon to regulate the conduct of nations. The international law of to-day was formulated mostly in the latter half of the nineteenth century. It was based upon the experiences and precedents in warfare during

the preceding century or two. And yet the audacity of Germany has been such as to destroy the value of the law thus established. This is a great revolution in the lives of nations, a backsliding of civilization and the return of the world to the medieval ages, when there was no humane law of warfare.

"The United States has striven with might and main to stem this tide of degradation and preserve the law of nations. Her peaceable efforts as a neutral Power having been set at naught

JAPAN'S DREAM.

"Will she slide over the precipice?"

—Nebelspatter (Zurich).

by the persistent outrageous conduct of the Germans, the only course now open to her is to insist upon the enforcement of the law through employment of force."

"ENGLAND'S WAY OF SORROW"—Any Englishman who left the country in the middle of 1914 and returned to-day would be unable to recognize his native land, says the Kölnische Zeitung, because of the total abrogation of the people's rights and privileges. The Rhenish organ proceeds to paint a dismal picture of Albion to-day:

"Free England has been dragged from one stage to another on its way of sorrow, and it has not yet reached the end. It has lost all its freedom. In England passports are controlled, books are confiscated, and authors are expelled. Compulsory service has robbed the citizen of his right to dispose of himself; the young Englishman can no longer go and come as he pleases, but must report to the military authorities, just like the enslaved Prussian. And when he goes out into the world to do business, is he sure that he will find this world unchanged? In the Far East the Japanese have made their nest while he has been breaking his head on the Somme, and the Yankees are in South America. But, worst of all for Old England, the State is interfering with everything. It confiscates mines and factories, and who knows what it will confiscate to-morrow? . . . On the top of everything come the food crisis and the shipping crisis, due to the German submarines, and imports are becoming smaller and smaller. Cheap bread and cheap meat have long been dreams of the past. This is what we have brought England to, and we can well bring her yet to things that may be quite different."

SCIENCE - AND - INVENTION

SWATTING THE SUBMARINE

HOEVER BEATS THE GERMANS must beat the submarine. Whether or not we are to have our try at it, the possibility of devising an effective weapon of defense is certainly interesting as a subject of discussion. That it must be a small motor-boat of some sort the authorities

seem to be decided; but of what sort? The submarine itself has developed, since the war began, into an armored craft with deck guns; its opponent must be prepared to meet these changes. In an article, under the above heading, contributed to The Motor Boat (New York, February 25) by William Washburn Nutting. the author describes the type of boat that he thinks is destined to be "The Scout of the Future." Writes Mr. Nutting, in substance:

"If we were to believe all the pseudoscientific statements which have appeared in certain Sunday supplements and emasculated pastry periodicals, it would seem that swatting a submarine is the simplest sort of an amateur pastime to be indulged in by any one in possession of a motor-boat. That such an idea actually is prevalent on this side of the Atlantic is proved by some of the designs for submarine - chasers which have come to light recently-cute little toy boats, for the most part, and utterly unsuited to the rigors of offshore work.

"Altho the conditions have changed, many people have clung to

the old idea that the runabout or hydroplane equipped with a machine gun or a 1-pounder is a match for the modern U-boat. But the fact is that while the motor-boat has become one of the most efficient instruments for hunting down the submarine, it is an entirely different sort of boat than is popularly imagined. Furthermore, the development is still going on, and there is no way of telling how soon the most efficient submarine-destroyer of the present will be obsolete.

"We haven't the immense fleet of steam trawlers to call upon that England had at the start of the war, and while we have ocean-going tugs and the like, most of our vessels, besides those destroyers actually available or being built, and the comparatively few private craft suitable, must be built, and it stands to reason that the smallest unit that will do the work is the one to choose. In other words, is it not better to have fifty \$5-footers than one destroyer, especially when they may be had in a small fraction of the time?"

To devise a suitable boat for our present need, Mr. George Crouch and the writer we are quoting got together recently and studied the designs which have already been produced. Since

> the boat is solely to destroy submarines, they concluded that the torpedo-tube may be dispensed with in favor of as large a gun as can be carried. Experience has shown, Mr. Nutting thinks, that a three-inch gun with universal mounting is about the best for the purpose, the others say nothing less than the six-inch will do. He bids us remember that the threeinch gun shoots a shell which weighs in the neighborhood of fifteen pounds. He goes on:

"These, in brief, were the considerations with which Mr. Crouch went to work. The first feature of the boat is her size. She is 85 feet in length by 13 feet 6 inches beam, which was found to be the smallest craft that would carry the equipment we had decided on, and be comfortable in any weather,

"In the second place, she is of a form of hull which could be driven easily at speeds up to thirty miles an hour, but with sufficient underwater body to make her capable of keeping the sea in any weather.

"Her third feature is that she is built of steel. The advantages of steel over wood for such a boat are severalfold.

Altho it would take longer to get out the first boat, the ease with which the parts could be standardized and erected would enable a great number to be turned out in much shorter time than it would take to build them of wood. Then there is the matter of splinters. Every one knows the advantages of a steel car over a wooden one, and the same applies to a vessel under fire. Furthermore, there is the feature of safety from fire—an important one in a fighting vessel driven by gasoline.

"The fourth point is the armament, the feature of which is the three-inch gun, as described above. We wish particularly to call attention to the foundation for this gun, which is mounted directly above the steel bulkhead. An arched steel plate over the door ties the parts of the bulkhead together, and the steel sides of the lockers on either side of the door form what amounts to large built-up T beams to support the weight and take the

From a drawing by W. W. Nothing: Copyrighted and used by courters of "Motor Boat," New York.

IS THIS THE IDEAL U-BOAT-CHASER?

The men who have designed it as the most effective type of motor-boat for use against submarines are open to suggestions for improvement.

recoil when the gun is working at high elevations. The decks are of wood, but a heavy steel plate and a teak foundation take up and distribute the weight of the gun and the shock of its recoil.

"In the fifth place, notice the accommodations. The usual arrangement has been turned back-end-foremost, as was done successfully on some early torpedo-boats, and instead of housing the crew in the forecastle we have placed them aft. Accommodations are provided for three officers, or two officers and an engineer, forward in close communication with the pilot-house, and these forward quarters are so arranged that the boat would be suitable for the use of a private owner, altho this has been a secondary consideration.

"The sixth feature is the enclosed pilot-house which, like the rest of the vessel, will be heated. This is a most important point, as any one familiar with the North Atlantic in winter time will appreciate. In fine weather the boat may be handled from the bridge above, which is provided with a duplicate

steering equipment.

"Instead of using a single built-up mast, the crow's nest has been mounted on a tripod of steel angles—a stronger and lighter method and one dispensing with the usual stays. The searchlight is mounted at this point and may be controlled either from above or from the bridge. The signal mast which carries the radio-aerial is high enough to display signals successfully, and, further, the signal equipment, search-light, and control of the boat are centralized.

"This, in brief, is the boat to meet the present requirements of the country as we see them. Mr. Crouch has turned out an excellent design. He realizes, as does the writer, however, that it incorporates ideas based on the experience and observation of but two men, and that doubtless there are features which can be improved. We have done the job to the best of our ability and shall feel well rewarded if there is any feature of it upon which the Government will look with favor. If any of our readers can suggest improvements or can point out wherein we may have fallen down we shall be glad of their criticisms. Let us hear them—it is all for the good of the cause."

NOT SO DRY, AFTER ALL

Is A LOCALITY "DRY" when it prohibits the sale of straight whisky, but allows it when the liquor is flavored with plant extracts and denominated "bitters"? This query is made pertinent by various recent news items, of which the following from the Baltimore Sun is a specimen:

"Danville, Va., February 23.—So great has become the demand here for a certain proprietary medicine which contains 25 per cent. alcohol that the city Police Department has laid the condition before the Prohibition Commissioner. An investigation has just led to the discovery that during Saturday and Sunday more than seven hundred bottles were sold in Danville and Schoolfield.

"The police had to deal with more drunkards this week than during the entire month of January and each man admitted

that he became intoxicated on the medicine,"

The editor of The Journal of the American Medical Association (Chicago, March 10) telegraphed to the chief of police of Danville, asking for the name of the medicine containing 25 per cent, alcohol which was reported to be responsible for several cases of intoxication. The reply named a popular and widely advertised brand of "bitters." The editor's comment is:

"It is surely more than a coincidence that the alcohol-containing 'patent medicines' seem to be most widely advertised and most popular in those parts of the country which are commonly designated as 'dry.' It is a pity that there are no statistics to show the change in the volume of sales of 'patent-medicine' 'tonies' that follow the enactment of prohibition laws. Far be it from The Journal to deprecate the spread of prohibition. So long, however, as individuals can sell, unrestrictedly, preparations containing small amounts of plant extractives in alcohol one-half the strength of raw whisky under the guise of 'tonies,' prohibition will not have the terrors for certain persons it might otherwise possess. In view of the new 'bone-dry' law recently enacted it would seem that now is a good time for the Internal Revenue Department to turn its attention to a class of remedies that might bring to the Government considerable revenuethe alcoholic 'patent medicines.'"

ARE WE IN A FOOL'S PARADISE?

THAT WE AMERICANS are living in a fool's paradise, and that after the war we shall speedily find it out, is the disquieting assertion made by James O. Fagan, in an article on "The Human Side of Industry," contributed to The Electric Railway Journal (New York, February 17). Industry in Europe, he says, is going to be "humanized and harmonized to the limit," after the present conflict. We, on the other hand, are making not a single step in this direction. We will be "handicapped by the clashing of classes," and, accordingly, unless all signs fail, European industry "will have industry in America beaten from the start." Law after law is being "put over by those who do not work on to those who do." The wings of enterprise are elipt; every kind of a surplus is taxed surplus brains, profits, initiative, and democracy. The people are "putting their trust in commissions." Political interference takes the form of a bull-fight, with industry as the bull. These are striking charges. It is interesting and reassuring to find that Mr. Fagan does not yet despair of finding a way out of the muddle that he has depicted. He writes:

"A new, a healthier attitude of mind toward good business from one end of the country to the other is the one thing needful. The same kind of human policy that is being consistently promoted in so-called big business in this country transferred to the propaganda and policies of the State and Federal authorities would introduce a new form of human relationship into American industry. As a matter of fact, the world to-day is splendidly disposed toward industrial workers of every description. Healthier and better conditions, expanding pay-rolls, permanency of employment, consideration for old age, everywhere you hear the same story, slowly but surely on the way. Consequently, a better feeling, closer and better relationship between employers and employees, should be the new gospel of industry. It is the all-important industrial issue of the times. All kinds of readjustments after the war will depend absolutely on this new human propaganda. To expect employers and employees to settle their differences in an atmosphere of sensationalism is all wrong. To expect them to do it in a political atmosphere is also all wrong. So it is actually up to the people all over the country to provide the atmosphere in which these adjustments of wages and conditions can be made, and this atmosphere must not be sensational or political but widely considerate, human, and square. This is the only way out. It is the key to the problem of industrial unrest. It is the educative process that is absolutely necessary for the protection of the worker and for the conservation of American industry after the war. Its root is Humanity, its name is Good-will,

"We find this brotherhood tendency working itself out in every trunk line of American progress at the present day: in religion, in art, in education, in science, and most persistently and thoroughly, perhaps, in American industry. Industry in this country is now being humanized from cellar to garret. For every day that passes, work in the mills, in the shops, and on the railroads is becoming safer, pleasanter, more healthful, more secure, and more remunerative. Furthermore, never in the history of the world have individuals as human beings and neighbors been so kindly disposed toward each other in personal and social relationships, and yet, at the same time, never have the groups of these same individuals been so restless in their industrial relationships, and never, perhaps, has society been so menaced by different political and industrial problems. What is the reason for this seemingly inconsistent situation? Why is it that from the beginning of historical times your group, large or small, in its relationship to other groups has nearly always been From the beginning, I say, your political groups fighting among themselves, as it were, have always been making trouble for society, and now your industrial groups are very busily playing the same game. In the past the human individuals in any given group have seldom been sufficiently numerous or plucky to dominate the group machinery. In Europe to-day the spirit of humanity and righteousness is engaged in a lifeand-death grapple with group machinery. An industrial struggle of the same desperate nature is now under way in America. Happily, however, the eyes of the people are beginning to open to the real nature of the situation. In other words, there is a revolt to-day in this country against group savagery, regardless of its nature or interest. For example, a railroad brotherhood

"In a word, industry in America needs to put on the whole armor of its administrative and operative humanity. Peace and good-will in industry, peace and good-will in society and in the home—this is the combination that can not be divorced. Not a rainbow vision or a star dream, but a healthy Christian interest in the conservation of American industry by the human route. This is the good word to all the people in every land; it is the gospel of the Galilean sifted down through the centuries and focused in all its penetrating significance on American industry, on American civilization at the present day."

"SCIENTIFIC MANAGEMENT" IN ARITHMETIC

by what is called "cross multiplication" is familiar to most arithmeticians. The simple enough, it is not usually taught in schools, probably because it involves holding partial products in the memory and adding them mentally. It is easier in cutting out most of the "figuring," but harder in that it requires more mental work and leaves no record of the partial products. An article entitled, "Is This the Next Job for Scientific Management?" by the late Prof. Hugo Münsterberg in System (New York, March) asserts that this method should be taught in schools and universally used. It first calls attention to the fact that in the study of scientific management some of the simplest and most trivial activities, such as handling a shovel or laying bricks, are those capable of the greatest timesaving through motion-study. It goes on:

"May it not be that we perform acts of our own mind also after traditional patterns which are handed down from generation to generation? As soon as we have acquired the habits, especially those which we have learned with much effort in our school days, we are hardly inclined to change them and remain

slaves to a method, however clumsy it may be.

"I should like to point to a typical case. We all have learned to multiply figures, and while many of us have never succeeded in doing it without mistakes, certainly we could not imagine a boy or girl leaving school without some thorough training in the routine of multiplication. Many have discovered that they have not learned it for the school examination only, but that they need it in their life-work at every step. Their businesses, their technical interests, or what not, constantly force them to multiply perhaps a three-digit figure by another set of three digits or more.

"When it comes to four or five digits multiplied by four or five more, the pencil goes on patiently through the four or five rows of numbers, mechanically written down like a flight of stairs, until faithfully added together. All of it appeared so tiresome and inane when we learned it in the classroom. We went through the performance without knowing why we had to do it. It was simply the prescribed rule, and we had to learn the trick in order to get the correct result. But it remained meaningless and was at the same time cumbersome.

"The art of multiplying, as we perform it to-day, is, to be sure, not so old as the art of bricklaying. We can easily place the beginnings of the methods of multiplication which bring so much heartache to our boys and girls in school.

"The Italians were the pioneers of our present system. In the year 1478 they published the first printed arithmetic in which methods of multiplication and division are demonstrated with Arabic numerals. This is the way which is learned to-day in every little schoolhouse. Like the way in which we shovel, it has gone unchanged through the centuries. Can it really not be improved?

"If I have to multiply 32 by 31, I may well begin to analyze my object. Thirty-one means there are 3 tens and 2 ones. They are to be multiplied by 3 tens and a one. I want to find out by multiplication how many ones, how many tens, and how many hundreds, result. Evidently we get the hundreds by multiplying the tens by the tens. We get the tens in the product by multiplying the tens by the ones, and we get the ones by multiplying the ones by the ones.

"The case of the hundreds is very simple. There were 3 tens in the first figure and 3 tens in the second figure; the product is therefore 9 hundreds. The case of the ones is also very simple. There were 2 ones in the first figure and 1 one in the

second: the product is therefore 2.

"But how can we get the tens? We must multiply the tens by the ones. But that is more complicated, because we must take the tens of the first figure, multiplied by the ones of the second, and the tens of the second figure, multiplied by the ones of the first. That is to say, the 3 tens of the first figure, multiplied by the 1 of the second figure, and the 3 tens of the second figure, multiplied by the 2 ones of the first figure.

"The first multiplication gives 3, the next gives 6; or, together, 9. We have therefore 9 tens. Hence the whole product is 9 hundreds, 9 tens, and 2 ones. The ordinary way of writing

it would be:

"That is, we should write the tens and the units sufficiently distant to leave room for a figure between them. In this way every figure in the product can be placed just below the figures which have been multiplied. The process resolves into the following three steps.

This is simple enough. With larger digits there are of course figures to "carry," but this presents no great difficulty to the trained arithmetician. When the numbers whose product is to be taken consist of more than two digits each, the trouble increases; for more and more "cross products" have to be held in the mind and added mentally. We shall not follow Professor Münsterberg in his explanation of further details, but say simply that in his opinion the game is worth the candle, and that in all cases cross multiplication is of the nature of "scientific management" in arithmetic. He concludes:

"Of course if we have done a process in one fashion for twenty years, and suddenly begin a new fashion, we shall at first be handicapped. The long training in the old method gives an advantage which at first makes the two methods incomparable.

"Yet even under these conditions this new method does not make a bad showing. I made the following experiment. I asked ten students one after another to show the greatest possible speed which they could develop in multiplying in the way in which they learned it in school. When I had them multiply two figures of five digits each, their time varied between 55 and 115 seconds.

"The multiplication of a three-digit figure by a three-digit figure, for instance, 782 by 549, varied from 22 to 43 seconds. After these preliminary tests, I explained to them individually the new Ferrol method in the way in which I have stated it here. The explanation took but a few minutes. Without any additional instruction, I asked them to multiply 573 by 624 according to the new method. The time varied between 21 and 48 seconds for the different students.

"On the whole, those who were longest with the old method needed the longest time with the new method, too. They were

simply slow mentally.

"But no one found any difficulty with the new process itself, and while only two did the task the very first time more quickly with the new way than the old way, most of them using practically the same length of time, almost all felt they got a distinct enjoyment from using the new idea. It imprest them as a relief that instead of the four rows of figures which they would have previously dashed down in a thoughtless way, only one row was needed, and that every figure in this one row was secured with a clear insight into its meaning. Their whole commentary was a variation of the one regret that this new way had

not been taught to them in their school days and much monotonous, tiresome figure-writing thereby avoided.

"But the chief point, after all, is this: how much more would they have profited if this intelligent method had been the one which they had learned as little boys and in which they had been trained through all their school experience! If the start with the new way gave practically as good results as years of training in the other, how much could have been hoped for if all this training had been given over to the new method."

BUCKING RECORD DRIFTS

THE GREATEST SNOW-DRIFTS over encountered on the Union Pacific were those of January and February just past. At one time, we are told by J. Cecil Alter, of Cheyenne, Wyo., who writes in Engineering News (New York, March 8), no less than forty transcontinental passenger-trains were snow-bound and idle in Wyoming between Laramie and Rawlins. The Union Pacific System, concentrating its attention

on the forty-six miles of line between the Lookout and Hanna stations, waged what is considered to be the most important fight in its history against wind and snow-a battle that did not cease night or day for two weeks. Mr. Alter goes on to give details as follows:

"From January 22 until February 4, the double- and triple-track roadway was sealed in by deep, hard snow for the first time in history. When the army of snowfighters 'holed through' for the last time, the wind blew a practically continuous gale from the west, filling the cuts with snow sometimes

within half an hour after opening them by the rotary snowplows. Within this period trains were forced through the blockaded region with the greatest difficulty, and delays of from six to thirty-six hours were common. Freight movement was entirely suspended; and from January 25 to 27 and from February 1 to 3, when the wind seemed at its height, no trains penetrated entirely through the blockade.

"Beginning, however, on the night of February 4, the wind subsided and trains began to move. In this movement new records for train-handling are said to have been established. There was a congestion of between forty and forty-five passengertrains, many of which were stalled between stations. Practically all had to be dug out by the work of approximately a thousand laborers with picks and shovels. The tracks were entirely cleared in both directions in the twenty-four hours of February 5. Then followed the movement of freight, which, until date (February 18) has been flowing in each direction from the continental divide in streams of from ninety to ninetyfive trains, of from twenty to twenty-five cars each, per day. Added to these were sixteen daily passenger-trains, and the exchange movement of freight-helper engines between Cheyenne and Laramie over Sherman hill. The ten-minute limit between movements has often been approached for many hours at a time in spite of the full use of the double track."

The contention seems reasonable, Mr. Alter thinks, that the wind blowing across the Great Divide Basin, in south-central Wyoming, is forced between the Medicine Bow Mountains and a range to the north, and the velocities, under favorable conditions become abnormally high. In any event this narrowing of the plains causes a definite broadside discharge of wind across the Union Pacific tracks. He goes on:

"Only four or five cuts of any great length in this comparatively even-surfaced plain are necessary to maintain the desired grades, and these are broad and shallow as a rule. Two of these, at Lookout and Rock River, have filled at times in the past, notably when the wind and snow were accompanied by intense cold. The two cuts at Sulfur Lake, of a half-mile length, and a one and one-half stretch near Wilcox are said never before to have required any important service from the rotaries. These cuts have a more westerly trend, parallel with the prevailing winds.

"In many of the drifts the depth was greater than the capacity of the rotaries, and short holes were drilled, into which the sides and top were broken by laborers -a slow, tedious process. In regions where desert sand was mixed in large proportions with the drifted snow the deposit was so compact that only the huge Juli steam-propelled rotary snow-exeavator, having a large steel corkserew projecting from the center of the rotary, could attack it successfully, and then only when three of the largest locomotives available were pushing it against the snow.

"Four other steam-driven rotaries were busy every hour for fifteen days, a commissary car being attached to the rear for the workmen. In addition there were two Fuller, or wedge, plows

built on box cars; two Russell plows, similar to the Fuller plows, but larger; six locomotives having wedge snowplows attached in front; and eight engines fitted with circle flangers, or disks for throwing the snow from the rails only. . . . Snow fences of the common kind . . . were early drifted under, the from four to seven lines were placed about seventy-five feet apart.

"For the future, defense by snow-fences is being improved in every possible manner, to defleet and accumulate snow in the most desirable places; and a large part of the main yards at Rock River is being covered with a steel

A DRIFT THAT BALTED A PLOW WITH THREE LOCOMOTIVES. snow-shed.

"The damage to track and equipment, aside from wear and tear, was practically negligible, in spite of the frequent deaths of a great many engines stalled out of reach of water or coal. One fatal accident occurred, when, in the blinding snow, a young employee on a private errand stept from a caboose in front of an approaching train. No other injuries of any kind were reported, and not a passenger suffered any special hardship or physical inconvenience, as food, heat, and bedding were provided just as in ordinary travel, but without expense to any one. Even special entertainment was offered by citizens of Cheyenne, Laramie, Rock River, and Rawlins; and for some travelers the joys of jack-rabbit hunting were too abruptly terminated by the clearing of the lines."

WATERING PLANTS DROP BY DROP -- Mr. Lucien Daniel, a French botanist, has made some experiments with cabbages, chicory, lettuce, etc., which prove that they thrive far better by a system of continuous watering than by drenching the soil thoroughly every other day.

The new method, which is simplicity itself, depends upon the law of capillary attraction. As presented to the Academy of Sciences in Paris, it consists of placing near each plant a largemouthed jar containing water, in which is dipt one end of a strip of linen or cotton whose other end lies near the plant. Mr. Daniel determined the exact amount of water required by any given plant for its best development, and proved that in general this uninterrupted supply of water, drop by drop, gave infinitely better results than the usual method of intermittent drenching, and with a minimum expenditure of water.

LETTERS - AND - ART

FRENCH AND GERMAN MUSIC IN AMERICA

O QUOTE TENNYSON and say "the old order changeth, giving place to new," is perhaps putting a forced interpretation upon what is merely a musical coincidence. Still, the music public are taking their farewells of the Kneisel Quartet, whose programs have mainly, the not exclusively, furnished German chamber music, and

or what is practically the violin), the 'viola d'amour' (a viola with an extra set of metal strings under the finger-board, which are not touched by the bow, but sound sympathetically), the 'viol da gamba' (or knee viol, Sir Andrew Aguecheek's 'viol de gamboys'), the bass viol, which in the modern orchestra has been replaced by the contrabass, and the clavecin, the precursor of the pianoforte as a concert instrument. The concert brought

to the hearers a revelation of the effect of the *timbre* of the instruments, which was as fascinating as it was novel.

"Nearly all the music was new to local programs, and so were the names of the majority of the composers. There were a 'symphony' by Antoine Barthélémy Bruni, a Piedmontese violinist and composer (1759-1823); a fantasia for 'viola d'amour' by Nicolini, and some ballet music by André-Cardinal Destouches (1672-1749), who figures in musical history as one of the King's Musketeers, inspector-general of the Académic Royale, and superintendent of the King's music,

"Most winning and lovely of the voices which spoke to the audience out of the past were those of the 'viola d'amour' and claveein; but in the ensemble the blending of tone, the sympathetic meeting of limbres, the great variety of color introduced by the clavecin through the agency of different kinds of pleetra, octave coupling, and other devices, made one wonder why modern composers, instead of torturing their instruments to obtain variety of tone-color, do not bark back to these viols of the long ago."

Genuine regret is exprest over the dissolution of the Kneisel Quartet. The leader gives as the reasons for his decision "the increasing personal burden of

maintaining the quartet at high standard" and his desire to devote all his time to teaching. Already these musicians have made their last bow to Boston, whence they derived, and the music critic of *The Transcript* thus speaks of their farewell performance:

"The playing of Beethoven is the result of a lifetime of love, research, fond devotion, and careful practise, and as it is only this long devotion which can justify the rare and enlightened performance of the final quartets, so it produced the swift, light, and accurate playing of the earliest one yesterday, which may be taken to represent the most precious store of Haydn and Mozart, who could not be included in a last concert. There were also a particular devotion to Brahms, a particular dramatic and rhythmic cagerness and understanding in the playing of his 'Quartet,' and a particular carnest enthusiasm, admiration, and sympathy for the 'Sextet of Schönberg,' and a faithful response to the moods, the matter, and the intentions of the composer.

"The fact that such fidelity, devotion, care, and broadly searching musical intelligence have become an accepted inheritance, and a perpetual delight to the most ardent lovers of

Photographet by Asso. Depent

THE DEPARTING ENEISELS.

"The service to the world of the performer is the most tragic of all, in that it is not only self-sacrificing to the promulgation of the music of others, but must inevitably pass with time."

reacting with delight to another group whose product is French, the Société des Instruments Anciens. These players of chamber music about whom we shall hear more are only one of the expressions of the new or renewed artistic entents between this country and France. The French Military Band—"The Band from the Trenches"—composed of soldiers from the front, selected from the prize soloists of the Conservatoire, National Opera, and the Band of the Garde Républicaine, is another; and so also is Joseph Bonnat, the eminent French organist and composer; all these are bringing us the music of old and of new France. By the same token Yvette Guilbert should not go unmentioned; and her work has had a patriotic importance in showing forth the chansons of old France as well as the songs of the modern Gallic music-hall.

A "new phase and a new interest" have been created by the French players on the old instruments, says Mr. Krehbiel, of the New York Tribune, continuing:

"The instruments employed were the quinton (treble violin,

music, far back into the longest of memories, made the sadness and the impending loss in this final manifestation of it hard to realize. The service to the world of the performer is the most tragic of all, in that it is not only self-sacrificing to the promulgation of the music of others, but must inevitably pass with time. Having ably and inestimably given their long careers to the service of music and humanity, it is perhaps wise that they cease before the decline might come, that the memory of their last concert might remain in our memories, vividly faultless and rare."

The coming April concert of the organization in New York will complete its twenty-fifth season here and the thirty-second of its existence, upon which the New York Globe remarks:

"The Kneisel Quartet has really been the pioneer of chamber music in this country. Other more or less ephemeral organizations had played it, but not until the Kneisel Quartet, springing from the Boston Symphony Orehestra, set out to spread that special evangel had it been played here with the finish and the authority that we accept now as a matter of course. *Besides publishing the beauties of the great classic masters of chamber music-Haydu, Mozart, Schubert, Schumann, Brahms, and, above all, Beethoven—the Kneisel Quartet has never failed to investigate modern men and movements as they came along. They did yeoman service for Cesar Franck when the great Belgian was still eaviar to almost everybody. They did not balk at Reger. Of Schönberg's sextet they have made in the last year almost a specialty. It is the honorable record of devotion to the great ideals of the past and of alert interest in the tendencies of the present and the future that has made the fundamental value and vitality of the contribution of the Kneisel Quartet to the musical life of America.

"If it were not that other organizations worthy to bear aloft the banner of chamber music in America have risen in their path, we should indeed be disconsolate. Still, no other organization, however good, can quite fill the place of the departing one in the affections of a great body of our musicians and music

lovers."

We shall doubtless still have much German music, the here and there arise jingoistic threats to cast it out. Rumors have even been affeat that Wagner's operas, in spite of the success of the recent Ring cycle, would be eliminated from the Metropolitan's roster. Mr. Gatti-Casazza has contradicted this, however. The editor of Musical America (New York) takes a vigorous stand against such efforts:

"When the English and the Germans began to boycott each other's music after the outbreak of war, when César Franck disappeared from Berlin programs and Petrograd put Wagner on the black list, and London musical authorities insinuated that Strauss was passé-what did most of us do in this country? Most of us did the only thing that a normal and rational person could do under the circumstances: we leaned back and laughed good-naturedly. We had the proper perspective; we estimated the whole panorama of folly at its proper value and realized that the veil of prejudice, nationalism, and ignorance would one day drop from the eyes of the embittered and stupid censors of art and music. Considerable of the force of this puerile movement has been dissipated, in England, at least, if recent concert programs from London may be believed. Bach, Mozart, and Weber are regular fare, greatly to the dismay of certain extremists.

"Until a few weeks age we in America were immune from this encroachment of nationalism on the domains of art. Only minute symptoms have appeared here, a few inconsequential and scattered efforts to fling up the flag of jingoism in music. A certain conductor thought it advisable to eliminate the German portion of his program. Mozart and Beethoven, don't you know, are inflammatory sort of characters and might incite us to bloodshed and riot! Certain New York newspapers heap a lot of glory on the efforts of some rowdies to howl down an estimable singer whose offense was to present Brahms and Dvorák (who happens to have been a Bohemian). Then, again, an artist advises us that some New England organizations have practically canceled his engagements plainly because he is supposed to be a German. As a matter of fact, he is a Hungarian.

"Of all the exhibitions of misplaced patriotism now rampant this latter is perhaps the most contemptible—to cancel an artist's appearance because of his nationality!

"It is, indeed, time to scotch such zealots, to crush these lethal foes of music."

THE SWISS UNIVERSITY MELTING-POT

A MELTING-POT for Europe, in the intellectual sense, is the mission that a Swiss professor sees for his country. His neutrality is constructive, for in his address delivered at the twenty-fifth anniversary of the raising of Lausanne's French Academy (founded in 1537) to the status of a university,

MME. PATORNI AT THE CLAVECIN.

One critic wonders "why modern composers, lastead of torturing their instruments to obtain variety of tone-color, do not tark back" to the instruments of an earlier day, such as this early plane.

Prof. Ernst Bovet, of the German University of Zurich, begged his hearers not to forget "that there are in all the countries participating in the present bloody struggle men who dream of a more beautiful society than that in which we live." Ho sees it as the special mission of the Swiss to bring these men together. That done, he has a vision of the seven Swiss universities not only as "the hearths of our regional and national life, but also as real temples of concord." The seven universities of which he speaks are Basle, Bern, Geneva, Lausanne, Neufchatel, Freiburg, and Zurich. In the Neuc Züricher Zeitung his address is given in this form:

"Our seven universities are centers of our regional and national life; there are perhaps too many in view of the small size of our country, but we should be loath to miss any one of them, and if to-morrow, beside our German and French, an Italian university were to be established at Lugano, we should also welcome this new sister. But, so much said, it is necessary to lay the finger on the open wound; the sacrifices imposed upon the population are heavy, perhaps too heavy to bear.

"In order to maintain the equilibrium in our intellectual and

financial budget, we have to appeal, for students and professors, to our neighbors to our right and to our left. Let us lay aside our national vanity and look the facts in the face. To sum it up in one blunt sentence, our national thinking and feeling are gravely menaced by the invasion of foreign thought and

foreign sentiment.

"Scientific objectivity is a very praiseworthy thing, but we must not forget in our intellectual and political aloofness the inheritance of our fathers; we are Swiss citizens, children of a demoeratic republic and are, or at least should be, anxious to maintain the national unity of our fatherland. The Republic is not a form of government imposed upon us by outside agencies, but the expression of our political ideals and four centuries of independent political existence. We do not intend to force these ideals of ours upon our guests, but we believe we have, on the other hand, the right to ask of them to respect, in their turn, our individual Weltanschauung.

"In exchange for this logical and natural demand, we have something to offer to the students and professors belonging to often mutually hostile countries; our ambition is to bring them nearer one to the other on our free and neutral soil. We seem to be destined for this noble mission, since we are a living example of the possibility of a harmonious working together of the German and Latin rages. We scholars, we learned people at least, ought to know how to distinguish between the sound principles of nationality and the jingo elements of a hybrid nationalism, between justified pride and siekly vanity.

"We Swiss university men-and women-are willing, in the sense of our great countryman, Alexandre Vinet (1797-1847), the famous theologiau and historian of literature, to become the forerunners of a new humanity appearing in forms, hazy as yet, on the horizon of Europe. As well as we prefer the manly idiom of justice to a convenient but cowardly silence, as well do we Swiss, as a nation and as individuals, prefer constructive love to destructive hatred. We professors and students of the Swiss universities are in a more favored position than our colleagues at the institutions of other countries to appreciate impartially the noble traits in every nation and to flud out its real contribution to mankind's common civilization. We are the heirs to a wealth created in conturies past by sons belonging to almost all the nations of the world. It is our solemn duty, above all in this fateful hour of Europe's history, to show ourselves worthy of our predecessors and ancient teachers by planting on this free soil of ours the tree of genuine love and liberty."

THE NEGLECTED PUBLIC LIBRARY-Is it the letterwriting habit in people in general or the failure of the public library to function that causes a certain previshness in The Saturday Evening Post (Philadelphia) over a matter where most public journals will offer sympathy? "Many times every year," it says, "we are asked to recommend a book containing information on this or that subject of general interest." The Philadelphia editors, like ourselves, are "glad to comply to the best of our limited ability," yet "we never answer one of these letters without wondering why public libraries do not impress themselves more definitely and extensively upon the public." More than this:

"The writer of the letter is obviously intelligent or he would not be seeking information. By the same token, he is interested in subjects of general concern. Yet, as obviously he does not know that about three times out of five there is a public institution not far from him, supported at large expense, which not only contains standard books on the subject he wants to know about, but makes a special business of supplying him with those books promptly and without expense.

From its card-index he can learn in five minutes what books there are on the subject, and attendants will fetch them to him on request. Invariably, in our experience, the library staff is informed and attentive. It will go to any pains, most willingly, to put the resources of the library at the disposal of an inquirer. Within its own walls the institution functions admirably; but a great many people do not know of it in such a way that, being athirst for information, they turn to it as naturally as a dry man turns to a water-faucet.

"The library habit is one of the best that any person can form. There should be a more strenuous effort to inculcate it. Meantime take the initiative yourself. Get acquainted with your public library."

AN IRISH WRITER OF ONE-ACT PLAYS

UNSANY is a name that both play and fiction are making known to us better and better every day. It crossed the Atlantic very quietly, points out Mr. Harry Esty Dounce, but already its owner's larger public fame has been won here, and not at home. A "discerning coterie" are given credit for being aware of Dunsany in Britain; but otherwise "he is not yet recognized there as being anybody of extraordinary consequence, except, of course, in Burke." He won us by his plays, and the appreciation of these was not in any way eked out by his name, for, at least according to Mr. Dounce, "dearly as we, the people, love the lords we jibe at, we should, I think, be rather predisposed to look upon one in the dramaturgic line as an interesting but futile dilettante." The three seasons that his plays have been in evidence here have made him "a ruling salon topic"-almost "as great a nuisance in that respect as ever was Macterlinek, with whom he is being much, the unintelligently, bracketed." Mr. Dounce avers in the New York Sun that the vogue is "rather more than a vogue," tho it is based on seven one-act plays. Yet this is too slight a foundation for lasting fame:

"The best of them have been taken around the larger Eastern cities. If the vogue is to continue, one of two things must happen; he must send along more and more manuscripts, for doing which he is anything but favorably situated, or he must die and become a funeral and a classic, and for doing that his situation is favorable in the extreme."

Lord Dunsany is Irish, and is a friend of those better known Irish writers, Yeats and "A. E." (George Russell), who form the Celtic renaissance. For many years this manifestation has been one of the pet literary themes, and Mr. Dounce sees Lord Dunsany helped to securing attention by his connection with the leaders of this movement. He writes:

"I believe the first successful public performance of a Dunsany play in New York was that made of 'The Glittering Gate' at the Neighborhood Playhouse exactly two calendar years ago. Theatrically this work is about the weakest of the seven; nevertheless, given a production if it with anything like competent treatment and half a chance for notice, all the rest was assured. Honors at present lie between the Neighborhood organization and Stuart Walker and his Portmanteau players, but there probably is not now a commercial producer in the city with soul (or eye to business) so dead that he would not pay a pretty sum for exclusive rights in a new Dunsany manuscript,

"These gentlemen were 'shown' in the only way in which most of them could be shown about imaginative costume plays which read with so unusual a literary quality. The scripts might have been peddled around their offices for years. They would have been unlikely to perceive Dunsany's great merit, that, well as he reads, he plays a hundred times better.

"You can not conceive of the extraction from any thirtyminute performance of more sheer theatric force than flows quite naturally and spontaneously from one of 'A Night at an lun.' Anybody can enjoy it who can enjoy a movie thriller. Consequently everybody does enjoy it, and as soon as they have time to breathe and spirits for something more than farce in England they are sure to produce it and like it as well as we.

"Meanwhile Dunsany, whose kingdom of art is the imagination and his luminary the light that never was and his philosophy, so far as he has one, a loathing of the sordid shams and traffies of modern commercial reality, paradoxically has come into his kingdom of worldly glory in the most commercial city of the most commercial country of Christendom. He did not jimmy his way in like his burglar of 'The Glittering Gate'; he did not toot a Shavian horn outside till the walls fell down. He did nothing; would sooner have starved, if that had been the alternative. His work was good enough to do it all. Now it is done, he is glad, and he hopes to come among us and find a general sympathy and understanding."

Mr. Dounce might not like to have himself ranked with those of whom he has already spoken, who love and follow a lord. At any rate, he seems able to conceive what it must be like to be a lord, at least a literary one:

"As we read about Dunsany's ways of life in times of peace, they suggest the magnificent and leisured independence of the versatile renaissance masters. Able to decline to be a plodding, industrious specialist, he declines and still escapes from becoming a dilettantish amateur. When he happens to feel like shooting he goes shooting, and shoots well, at the ends of the earth, or over the nearest bog. When he happens to feel like cutting a seal on silver he does that; how prettily has been shown to his correspondents on the envelops of such letters as the censor has been pleased not to deflower.

"When he happens to feel like writing a little tale, a prose vignette, he writes one, delicately cynical and sad; there are

collections of them, and they are charming. When he feels like making a play he makes a play, rigging up no puppet stage décor, oblivious to any audience but himself and Lady Dunsany, unfettered by any Archerian canons, contemptuous of hokum tricks for insuring the groundlings' enjoyment.

"He has what the others, who lack it, labor to acquire and never do acquire—a genuine elemental dramatic imagination. To say he thinks in drama would be wrong. He feels in drama, not crudely, not emotionally, rather esthetically. Still it is always drama, live and moving, a story, and never a Maeter-linekian indigestion of the soul.

"Most of us have fallen into a vicious way of thinking that to understand very simple things, we must treat them as very complex. The answer to Dunsany is the easy answer, as his method is the easy method. Take his plays as you find them, and don't fret about symbolizations and philosophies. . . . If people would only appreciate the royal indolence of such an artist's nature they would, for instance, stop wasting time and ink on Dunsupposed wondrous sany's visions of a country of his

"There are those who would have us believe that he passes half his days in a dream state, of the sort popularly but wrongly believed to be con-

ferred upon eaters of hashish and such drugs, where he finds a blissful refuge from the every-day man's state and the vulgarities of the every-day man's doings. The fact, I would wager my hopes of seeing any more Dunsany, is simply that when he has in mind the germ of a dramatic story it is easier to tell himself the story with a background of pure make-believe than it would be to go forth and get up the authentic color of the nearest Irish town or dig in the British Museum for little pedants' facts about old Babylon.

"He says quite sensibly that the play is the thing which matters, and archeological accuracies are the concerns of the school-room. What he does not say is that altho you can have these accuracies if your artistic conscience happens to require them, to get them means work, and to use them and still keep your notion alive means a really terrible effort of stedfast concentration. It was done on the grand scale in 'Salammbô,' but every one knows that 'Salammbô' was written in the bloody sweat of its author's anguished brow."

Lord Dunsany is at present at the front, a captain in the Fifth Royal Inniskilling Fusiliers. He has been a man of arms along with other things, and has a record of five battles in the Boer War as well as action in the Dublin riots of last summer, where he received a wound.

HOW SPEAKEST THOU?

THE "TONGUES OF MEN AND OF ANGELS" never had their distinctions so clearly differentiated, perhaps, as by a "comédienne discuse," Miss Beatrice de Holthoir, whom the New York Evening Sun has persuaded to speak to us. Ours has surely never been the speech of the angels, for ten years ago Mr. James and others described it as "twanging and whinnying," "mumbling," "yocally limping and shuffling." All of this now seems to be caused by the lack of muscular

training in the organ most responsible. At least Miss do Holthoir points out the peculiar physiological differences in tongues which she discovered in her necessity of employing her racial endowments of Russian and English in an environment first French and afterward Irish:

"This experience . . . gave me a most valuable insight into the technical side of speaking, the different things that an English or a French person does with his or her tongue and mouth. I learned that there is an actual physiological difference between the French and the English tongue which I attribute to the different muscular action necessary for speaking each language. The French tongue is long and clastic. Just as we develop museles for dancing or tennis, so a Frenchwoman develops a longer and more flexible tongue with a mercilessly strong tip. This is how she pronounces that 'r,' with its vibrating stroke against her teeth, that usually defeats all our best efforts. English tongue is rounder and thicker. Certain English tongues [one does not know whether this applies to the American tongue as well, and Mile, de Holthoir did not explain are like an incapacitated jellyfish. The cockney is the best example of this. Certain

hest example of this. Certain sections of your East-Siders produce their peculiarly thick utterance by turning up the point of their tongues and using the under side."

Put thus in terms of muscle, says the New York Tribune, grasping at practical means of improvement, "our national speech seems almost feasible and practical." For—

"We go through all sorts of gymnastic exercises to increase our lungs and reduce our belt-measure. We spend untold brain and energy in teaching our bricklayers to handle bricks efficiently. Why not take up tongues, put muscle into them, teach them how to do their job efficiently, and so make speech surer and more agreeable? Why not a standardized American speech and a standardized American tongue? The former would, of course, be canned, and thus distributed to every school-house in the country.

"Would the standard stick after grammar-school was over? We fear not, universally. Yet certain modern forces may help—the telephone, for instance. The telephone companies make a business of teaching their operators clear, correct speech. And the great public has to mind the consonants and vowels rather more than usual if it is to send talk over a wire. At any rate, national efficiency is the word, and tongues can contribute to it quite as well as brains or legs or arms."

LORD DUNSANY,

Whose success as a playwright is so pronounced that "there probably is not now a commercial producer in the city with soul (or eye to business) so dead that he would probably not pay a pretty sum for exclusive rights in a new Dunsany manuscript."

RELIGION-AND-SOCIAL-SERVICE

SHOWING THEIR COLORS.

The London office of the Pocket Testament League preserves over 250,000 piedge-cards signed by soldiers on the field. It is estimated that they are joining the League at the rate of one thousand a day.

TESTAMENTS ON THE BATTLE-FIELD

"EVENTEEN MILLIONS of "Active-Service" Testaments, "Khaki" and "Navy" Gospels, and text-books in eightyeight languages, including all the tongues of the nations engaged in the war, have been distributed among the world's fighting forces. The cost of this is estimated at \$350,000-"the free-will offerings of God's people." These numbers and figures are given by Mrs. Grace Pettman Pont, of Brighton, England, who surveys for The Missionary Review of the World (March) the work of the Scripture Gift Mission among the soldiers of the Entente Allies. In each of the Testaments is reproduced the autograph message of Lord Roberts, penned just before his death:

"I ask you to put your trust in God. He will watch over you, and strengthen you. You will find in this little Book, guidance when you are in health, comfort when you are in sickness, and strength when you are in adversity. - Roberts, F.-M."

For the men of the Navy is a message from Admiral Sir John Jellicoe:

H.M.S. Iron Duke

Be strong and of good courage, be not afraid, neither be thou dismayed; for the Lord thy God is with thee whithersoever thou goest. Honor all men, Love the brotherhood. Fear God. Honor the King.

Yours very truly,

JOHN JELLICOE.

At the end of each Gospel are printed a few familiar hymns and a "decision" form, which reads:

"Being convinced that I am a sinner, and believing that Christ died for me, I now accept him as my personal Sarior, and with his help I intend to confess him before men."

What this has meant to thousands of soldiers when face to face with danger and death has been attested by hundreds of letters "telling the story of God's blessing on this work":

"A lance-corporal wrote from the trenches 'Somewhere in France,' enclosing a British Treasury note for £1, dirty and crumpled, looking as if it had been through many engagements, to help send out more Gospels to his comrades. This lancecorporal said it was part of his work to go and reverently tend the bodies of those who had laid down their lives upon the battlefield, to collect their belongings, and search their pockets. He found in nearly every case that the man possest an 'Active-Service' Testament containing Lord Roberts's message, but the most cheering thing about it was that the men had signed the Decision Form! Indeed, in the case of one young officer, whose body had been stript of every identification mark before it was found, the only clue to his name was his signature to this Decision Form in an 'Active-Service' Gospel, and this, sent back to England, brought comfort and solace to his widowed

"The secretary of the Scripture Gift Mission has seen numerous well-worn and much-read Testaments that have passed through the fiercest of the warfare. In many cases, too, the copy of the Word of God, carried in the breast-pocket, has stopt the bullet and saved the soldier's life, and the mutilated Testament has come back as a trophy. It is no idle boast to say that the best way of recording this wide work of distribution of the Word of God is to take a war-map of the world and enumerate every one of the fighting nations, for the Word of God is spreading everywhere. In France, open doors have been entered in all directions. The Belgians in England and Holland have received the Word of God. The workers of the Scripture Gift Mission among the soldiers in Belgium were allowed to go right to the front-line trenches, and had the honor of an interview with the heroic Queen of the Belgians herself. She accepted a 'khaki' French Testament, and said: 'I think this is very nice for the soldiers to have, and it is very kind of you to give it to them!' In Roumania, too, a princess of the royal house has taken the deepest interest in the work of distributing the Word of God to the soldiers of her country. But the story of the distribution of the Scriptures in Russia is the most wonderful of all, for the honorary superintendent of the work of the Scripture Gift Mission in that country has been able to circulate

among the Russian troops Testaments, Gospels, and smaller portions of God's Word to a total of over five millions!"

The royal family of Russia will, in their exile, have probably many well-wishers among these who have been benefited by similar gifts bearing the following message printed in each Gospel and underlined in red:

"His Imperial Highness the Heir-Apparent to the Russian Throne most graciously gives this Gospel, which has been sent to him by Sunday-school scholars in the British Isles and Colonies."

The secretary to the Empress of Russia wrote recently:

"Her Imperial Majesty the Empress has asked me respectfully to report: Concerning the gift of Testaments and Psalms by the Sunday-school children of England and the English Colonies placed by you at the disposal of his Imperial Highness the Czarevitch for consignment to the active Army, her Imperial Majesty has graciously commanded me to thank the contributors in the angust name of his Imperial Highness for the abovementioned gift, and to have the same forwarded to the active Army by means of her Imperial Majesty's own supply-train."

A Canadian cavalry officer confest that he had set little store by the Bible until the day came in France when his battalion found itself in a perilous quarter. They were under fire and dared not move when the officer noticed a few of his men who had crawled into a group together, and saw one man take out his knife and cut a Testament into half a dozen bits and distribute

them among his comrades, who there and then began to read:

"It must be wonderful to read the story of Gethsemane, the story of Calvary, the story of the Redemption, while lying under fire, and those men had learned by actual experience what it means to be obedient unto death—learned, too, that nothing else matters but the things of the soul, the sinner and his Savior, the reality of God's message in his Word concerning salvation when face to face with eternity."

Another agency for the distribution of Scriptures to the soldiers is the Pocket Testament League. This venture was not born with the war, but has been on the field of conflict since the beginning in 1914. In the London office alone over 250,000 soldiers' pledge-cards are filed, and it is estimated that the men in arms are joining the League at the rate of one thousand a day. In a report issued by the League we read:

"A worker writes of a corporal returned from the front who told him that when death was striking all around him in the trenches he offered all the money he had (about fifteen pounds) for a Testament, but not one of the men could be induced to part with his treasured little book.

"We find everywhere," writes an enthusiast from the field, 'that the men are absolutely changed when the Word of God has been presented and explained to them, and when they realize that the message of God is a message to them personally. Do you know that many of the men with whom we have been working had little idea that God cares for them or that the Bible is God's message to them? They thought that the Bible was simply for those who attend church. Again and again we had crowds of men who came to us early in the morning to make their decision for Christ.'

"Up in the corner of the Pocket Testament League military membership-eard, printed opposite the flag, is a small blank square where the men, making their decision for Christ, mark 'A. C.' (accept Christ). Such men sign 'My Decision for Christ' printed inside the back cover of their League Testaments and are publicly acknowledging Jesus as their Savior.

"Many a sad mother or wife has been comforted beyond words when one of these worn, possibly blood-stained, little Testaments has been returned home and on the Decision page they have found written the loved one's name."

REGULATION FOR EVANGELISTS

PVEN AFTER GREAT CARE has been taken in selecting an evangelist, The Christian Work (New York) remarks, a Church sometimes discovers that the man called for leadership in a revival movement "is lacking in a large degree in intelligence, tact, personality, and general ability necessary for success in the work." Realizing this, the Commission on Evangelism of the Federal Council of Churches of Christ has

established a standard of principles, for which evangelists working under its approval must have regard. The Christian Work congratulates the Council on taking this step and hopes it will result in "the elimination of a good deal of discreditable and reprehensible mountebanking, which for years past has flourished in the land." The principles to be observed by evangelists are these:

"I. They shall conform themselves in accepting or declining any invitation for a campaign to the standard of faith clearly set forth by the Federal Council, and therefore conduct all their work upon the doctrinal basis of the Deity of Jesus Christ.

"2. They shall secure the appointment of a committee of pasters who shall endeavor, so far as possible, to guard the work of the press with a view both to securing ample and appropriate reports of the work, and to guarding carefully against exaggerated reports of conversions, scating capacity of buildings, and nightly attendance, as well as sensationalism of every kind.

"3. They shall report all decisions made in the meetings conducted by them under the twofold division of (a) Decisions—Referring to what are commonly known as conversions (decisions by children under twelve to be so indicated); (b) Reconsecrations—No matter what form of decision card used, these facts to be made known in some way on the cards before being handed to the pasters.

"4. They shall use the Word of God in the after-meeting, briefly explaining the way of life, and asking those seeking Christ to make an audible public confession of faith.

"5. They shall urge upon pastors to put into execution at the close of the evangelistic campaign at least one of the plans for conservation of results adopted by the Commission, and, when possible, the evangelist shall make this one of the conditions of his accepting the invitation to conduct the campaign.

"In addition, the Commission has secured the appointment of a committee vested with the function of furnishing to the Commission reliable and studied information concerning the evangelists of their respective denominations. This information is furnished on the basis of a carefully prepared questionnaire by the Commission itself, and relates to the evangelist's education, experience, thoroughness, size of work he is best adapted to, and his general fitness for the same."

"IT MEANT ME"-A MESSAGE FOR THOSE WHO WAIT

ERE IS A HEART MESSAGE, given precisely as it came to The LITERARY DIGEST, which will be read with sympathy by all who have or have not contributed to the Belgian Children's Fund. Especially is it a message for those who wait:

BELGIAN CHILDREN'S FUND.

THE LITERARY DIGEST, New York.

I am one of your readers—only one of a multitude. When I saw your appeal, "In the Name of God the Father," I said: "Good! I hope they'll get the money to save those children

from starving. They ought to get it; they have so many readers." It didn't seem to mean me.

"My own business needs more money than it has. My own family wants more money. Debts are waiting to be paid. An appeal for starving children in Belgium doesn't concern me," I told myself.

Starving children! The words shocked and haunted me. couldn't get away from them. began to wonder if I really meant to try to stop my ears to such a cry.

I never saw a little child really starving. My own children have always had plenty, with extras thrown in. How would I feel if I saw them starving-if I heard their mother say they were starving?

A shivering feeling came over me as I seemed to see a Belgian mother holding her baby in thin, trembling arms, close to her wasted breast, and to hear her crying out in agony and despuir to me, "In the Name of God the Father, save my baby!"

All around were other mothers and children being helped by some-

body else; but this mother seemed to be waiting for me, and calling to me, to save her baby. How can I do otherwise than leap up from the comparative bounty of my own comfortable home and make haste to send life and health to at least one starving baby, and put into that one mother's mouth a ery of joy in place of her cry of despair?

It is true that business, and family, and debts are pressing. It will mean a little inconvenience—a little sacrifice—but what are such things in the face of the STARVATION OF CHILDREN!

I guess I am, after all, one to whom the appeal comes. In all honesty, I must admit that, judging by what I have received, I owe something to these Belgian children. Even the some things are not just as I would like them, I have received some blessings in business, in home, in family, in love. I have some things to make life joyous and to put thankfulness into my heart. So how can I refuse to give something to those from whom everything has been swept away-business, home, loved ones, even the food to keep them alive?

And I can't feel comfortable in the thought of those Belgian children sending up prayers and songs of gratitude for the nation of which I am a part for help which we haven't givenespecially when I am one of the citizens responsible for that neglect. Really, it begins to be plain that I must do my part, with the rest.

Now your latest issue has come to me, and I see that more than \$300,000 has been contributed. Some of your readers have done nobly. They didn't wait as I have done. But, as I understand it, the total amount needed to give the extra ration to 1,250,000 children for all this year would be \$15,000,000. It looks as if this amount will be raised only if every man, woman, and child who reads THE DIGEST gives some part. If this means me IT MUST MEAN A LOT OF OTHERS, also, who have hesitated, as I did.

In the Name of God the Father "SATE MY BABY !"

Somewhere I have read that every decision we make and every act we do affects the decisions and acts of others. I wonder if my delay and hesitation have caused any one else to delay and hesitate. If that is true, I can only hope that my positive decision and act now may help some others to decide that this ery of the Belgian children comes straight to them; that their gift is necessary to the success of this splendid effort; and that they will have part of the joy in giving life and comfort to the little ones so dearly loved by the Divine Father of us all.

> Here is my gift, to care for hee Belgian children. I wish it were more. I may add to it later. Do not use my name at all. In fact, I think I will just sign myself

> > "IT MEANT ME."

ENGLEWOOD, N. J.

AN ENTERTAINMENT WEEK PROPOSED-From a preacher in the neighborhood of Boston comes the following with reference to church and community effort to increase the Belgian Children's Fund of THE LITERARY DIGEST:

"The successful collection of funds in large amounts often depends upon specific suggestions as to method. However worthy the object, and however skilfully the appeal is made, it often fails in the purpose if it is merely an appeal. Scarcely a week goes by which does not bring several appeals for money, and both ministers and people find the raising of funds rather an appalling matter. We are tempted toand often do-pass them by through sheer lack of ability to answer so many,

"A single definite and practical suggestion for raising this money would, I believe, result in the raising of a very considerable fund from most of the churches throughout the country.

"My specific suggestion is this: that each church, or in small towns, each community, have a Drama Week-or Entertainment Week-eall it what you will. Let it be country-wide. Young people enthuse over a play, and are always glad to put one on. In our own little town we often find our receipts amounting to \$50 or \$100. I presume this would more especially apply outside the large cities, but in most places every one will patronize a 'show,' especially to see local talent.

"An appeal for every community, or church, to have a drama or play during a certain week would come with the force of a new appeal. Money would be raised outside the ordinary methods (and in large amounts), which in my church I must confess are pretty nearly exhausted. We have already taken collections several times for this same object, and for other things many more times, within the past year.

"I believe if you could have a 'Drama Week,' and get it to the people, the movement would sweep the country. Everybody would get their money's worth and feel no poorer for it."

NOTABLE STATEMENTS BY GERARD AND ROOSEVELT

F GUARANTIES ARE BROKEN, promising safe conduct to ships of the Commission for Relief of Belgium, and an occasional one of those ships be sunk, it is well to remember that insurance upon such a ship and its cargo protects the Commission from loss. Furthermore, the incident probably means that some subordinate commander blundered; and we must not conclude that all guaranties are futile, or not given in good faith. Since March 15 every ship of the Commission has been safeguarded from intentional attack while following the northern route; and as this is written more than twenty Relief ships are at sea on that route. If any one of them should be sunk by mine or submarine, all the more reason why Belgian relief ought to be speeded up and additional supplies sent forward.

Under date of March 16, there went out from Washington to the press of the country a statement by James W. Gerard, formerly Ambassador to Germany, in which Mr. Gerard said:

"I hope the people of this country appreciate the splendid work which is being done by the American Commission for Relief in Belgium. Their devoted efforts have now continued for a period of over two years, and despite the complication of the present situation the full staff is remaining in Belgium to carry on its great humanitarian task upon which depend the lives of ten million innocent civilians.

"It is a privilege for the American people to be able to support this fine work. The only way that this can be done is through financial help. The need has never been greater; and I sincerely hope that our country will rise to the occasion and give generous support to the Commission."

Writing to his "Fellow Members of the Rocky Mountain Club and the Men and Women of the West," Theodore Roosevelt says: "It is the literal truth that rarely since the days of Herod has child-life been so menaced as to-day in Belgium." And Colonel Roosevelt continues:

"I shall not deal with the material side of this question, or tell how 1,250,000 children are compelled to go hungry and are threatened with disease and slow starvation. All this is being told in the West in speeches, in letters, in literature, in eartoons. and in personal pleas. Suffice it to say that Belgium to-day stands in mortal danger of losing both its bodily life and its soul.

"But what of us? What of our soul if, like the Levite and the priest, we pass on our business with averted eyes." The nation that turns a deaf ear to the sufferings of ten million people, including a million and a quarter children, is committing moral suicide. Diseases born of want and bunger are spreading with dreadful rapidity among these 1,250,000 children of Belgium. Shall we look idly on while these children die?"

THE PUBLIC SCHOOLS in several States-into many of which The LITERARY DIGEST goes every week as a text for classes in Civies, History, and English-have nobly contributed, as our acknowledgments reveal. What private schools can do when they become interested is eloquently attested by Miss Haskell's School in Boston. Beginning with January 24, "Miss Haskell's" has forwarded eight remittances aggregating \$243.50. A noble example indeed!

The Central High School of St. Joseph, Mo., devoted one school week to considering Belgium's needs, held two auditorium meetings, and used the English and History classes as their special mediums. Four students, representing these classes, defivered addresses; special music was provided; a special speaker from outside addrest the closing auditorium assembly, and "following his address," the principal writes, "a collection was taken, from which a sum of \$205.00 has been received." It represented sacrifice, the principal says; "a good many students went without lunches."

School children can astonish themselves and their friends with their collecting results out of school-when they try. They did it out in Coffeyville, Kan., from which place Mrs. Roberta Patton sends draft for \$350.51, and says: "This money was collected by the young girls of Coffcyrille."

More towns are coming into line through their school children, for the care of children in designated towns of similar size in Belgium. Tazewell, Va., proposes to care for the 100 children of Dongelberg, which will require \$1,200. Thomasville, Ga., will provide for the 165 children of Gelrode, requiring \$1,980.

The churches are moving out nobly. From Saltville, Va., a rector writes: "We are launching a community campaign," and sends \$100.00 to prove it. "Over \$100 was pledged," he says, "by a group of twenty women"; and he recites the sacriflees made by some of them, and by one six-year-old lad.

Pasted to a copy of The Laterary Digest's first appeal on behalf of the Belgian Children comes the subscription list of the Engineering Corps of the Arizona Extension Railroad, carrying forty-two signatures and covering the handsome sum of \$103.00, "as a humble expression" of their "heartfelt sympathy."

Make all cheeks, money-orders, or other remittances payable to Belgian Children's Fund, make them as large as possible, and address all letters to Belgian Children's Fund, care of Tur. LITERARY DIGEST, 354-360 Fourth Avenue, New York.

Alexander of Beltdom His Mark, And Its Meaning

DELTS differ widely in efficiency—as much as 50 per cent-while a difference of 5 per cent, or even less, may mean a fortune in factory production.

That is why Alexander has spent-and is now spending-great sums for laboratory research.

To compare tannages and invent formulas, to minimize stretch and abolish pulley slippage, to attain balance and multiply mileage, and, in the end, to give top transmission at lowest net cost per horsepower.

So comes this super-belt that has won the lead in the service of America's many master mills, and stands alone today on this peak of efficiency. The belt that binds down over the crown of a pulley and grips both rims with a live power pull.

The famous Tight-Line Belt that abolishes pulley slippage-the wanton waste of powerthe major cause of damage to belts.

The belt of perfect balance by micrometer measurements; the belt of utmost mileage by metered tests.

Depend on Alexander Tight-Line-the Rim-Grip Leather Belt-for the mighty tendon to pull your main power load or the last slender sinew to whirl a clock-size wheel.

Let him turn your wastes into winnings.

A Heavenly Donnybrook Fair, This Irishman on Sunday heard a elergyman preach on the judgment-day. The priest told of the hour when the trumpet shall blow and all peoples of all climes and all ages shall be gathered before the Seat of God to be judged according to their deeds done in the flesh. After the sermon he sought out the pastor and he said, "Father, I want to ask you a few questions touching on what you preached about to-day. Do you really think that on the judgment-day everybody will be there?"

The priest said: "That is my understanding."

"Will Cain and Abel be there?"

"Undoubtedly."

"And David and Goliath-will they both be there?"

"That is my information and belief." " And Brian Born and Oliver Cromwell

will be there?" "Assuredly they will be present."

"And the A. O. H.'s and A. P. A.'s?"

"I am quite positive they will all be there together."

"Father," said the parishioner, "there'll be little judgin' done the first day !"-From a speech by Irvin S. Cobb at the American Irish Historical Society's dinner in New York.

WARNING

BEWARE OF SUBSCRIPTION SWINDLERS!

Swindlers are at work throughout the country soliciting subscriptions for popular periodicals. We urge that no mousey be paid to strangers even tho they exhibit printed matter apparently authorizing them to represent us, and especially when they offer cut rates or a bonus. The LITBRARY DIGEST mailing list showing dates of expiration of subscriptions is never given out to any one for collection of renewals. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect that the members of your community are being swindled, notify your chief of police or sheriff, and the publishers, and arrange another interview with the agent at which you can take such action jointly as may seem proper. may seem proper.

PUNK & WAGNALLS COMPANY. 354-360 Fourth Avenue, New York City.

Know Your Truck Tire Costs

Some business men know where every pencil goes, and save the stubs, but still operate fleets of motor trucks not equipped with odometers.

Mileage, therefore, is not measured and they have no accurate basis for figuring cartage costs.

The trifling expense of the recording device is saved and all exact knowledge of truck operation is lost.

We urge executives in all lines of business to remedy this condition, to install accurate cost systems in their trucking service, based on the sound truth of odometer records.

We urge this in self-protection, knowing that where such records are kept the superior economy and service of Goodyear S-V Pressed-On Truck Tires must be proved.

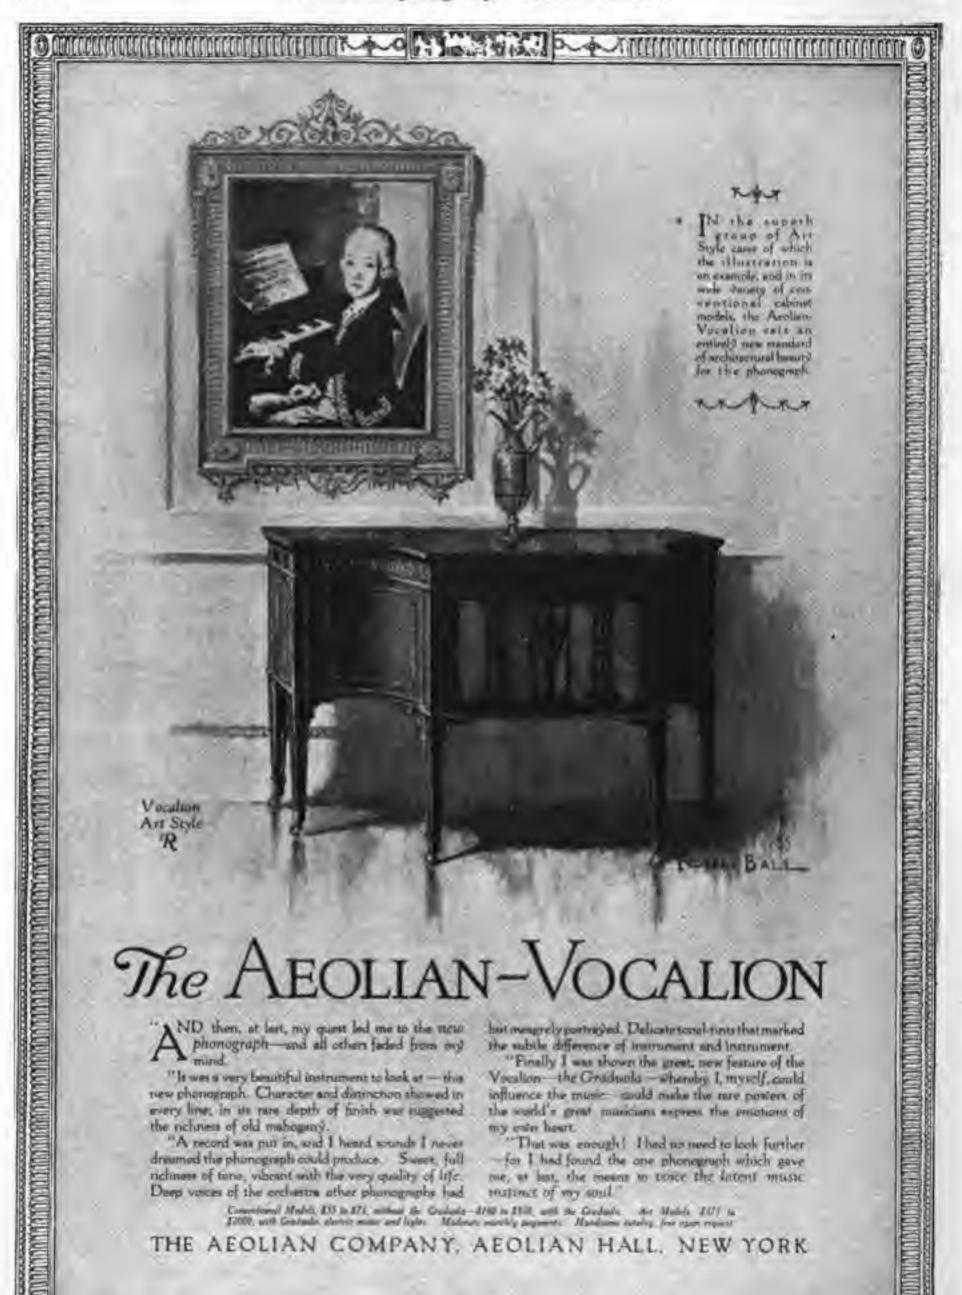

Men who keep such records send us astounding accounts of S-V performance-mileages exceeding 40,000 in strenuous city bus service, and more than 20,000 on rough country routes.

Having no direct interest in the sale of odometers we urge you to buy one of these inexpensive, truth-telling instruments for each truck you have in service.

Because this will be your first step toward standardizing on S-V as your truck tire equipment.

The Goodyear Tire & Rubber Company Akron, Ohio

REVIEWS OF NEW BOOKS

In deference to some hundreds of requests from subscribers in many parts of the country, we have decided to act as purchasing agents for any books reviewed in The Literary Digiss. Orders for such books will hereafter be promptly filled on receipt of the purchase price, with the postage added, when required. Orders should be address to Funk & Wagnalls Company, \$54-360 Fourth Avenue, New York City.

CARDINAL GIBBONS'S RETROSPECT

Gibbons, James, Cardinal. A Retrospect of Fifty Years. Two vols. Pp. 335 and 287. Halti-more: John Murphy Company. Price, cloth \$2. Postage, 20 cents.

We have here a collection with current comment of the prelate's writings, including the inner history of the Vatican Council, the threatened condemnation of the Knights of Labor by Rome and its prevention by Cardinal Gibbons, the work of the Catholic Church in the making of the Republic, etc. It is an extraordinary cycle of secular and religious history which is included. Cardinal Gibbons's "Retrospect of Fifty Years" may be regarded as the intellectual autobiography of the most distinguished of American Catholic churchmen. At eighty-three its author is an imposing figure. Revered and loved beyond the boundaries of his own communion, he stands out as an exponent of much that is best in the national ideal. The range of his activities, covering a period of development which has been described as unique in modern history, is probably unparalleled among living churchmen. There is peculiar pathos, as well as interest, in these words from the preface of his book: "I am speaking for a generation which, with the exception of myself, has passed away. I am the last living Father of the Vatican Council. Now, alone upon this earth I can report what happened within those sacred walls-not by hearsay, nor from books, but from what I actually saw and heard." Referring to his long experience as churchman and as citizen, he says further:

"I have lived a long time, and I have lived through a very critical time. Not only have I held office many years, but I have held office during a time of transition, when the old order was changed. There are few Americans living now who can remember the things which I can. I followed Mr. Lincoln's dead body in procession when it was brought to this city (Baltimore); I have seen every President since his death, and I have known most of them personally; I was a grown man and a priest during the Civil War when it seemed as if our country were to be permanently divided. Very few people now living have seen the country in such distress as I have seen it. But I have lived, thank God, to see it in wonderful prosperity and to behold it grown into one of the great Powers of the earth. Younger men may tremble for the future of this country, but I can have nothing but hope when I think what we have already passed through, for I can see no troubles in the future which could equal. much less surpass, those which have afflieted us in bygone days. If only the American people will hold fast to that instrument which has been bequeathed to them as the palladium of their liberties the Constitution of the United States and fear and distrust the man who would touch that ark with profane hands, the permanence of our institutions is assured."

This young ecclesiastic from the Western world at the Vatican Council saw the Church as in a living picture, and that picture never left his memory. At the Council were represented by its hierarchy

Die, Thou Villain!

TE had thought of being a great Indian Chief, or a soldier -but the biggest idea of all had come to him, would be a Pirate!

Now his facure lay plain before him. His name would fill the world and make people shudder. And, at the zenith of his fame, he would suddenly appear at the old village and stalk into church, brown and weatherbeaten, in his black velvet doublet and trunks, his great jack-boots, his crimson such, his belt bristling with horse-putols, his crime-rusted cuthus at his sule, his abouch hat with waving plumes, his black flag unfurled, with the skull and crombones on it! His career was determined.

that was one of Tom Sawyer's dreams that he turned into play. Remember the days when you dreamt of being a Pirate-when you thought you would be a black avengor of the Spanish Main?

Cet back the glamar of that splendid joyounness of youth. Read once more of Tom Sawyer, the best loved boy in the world; of Huck, that precious fittle raccal; of all the small folks and the grown folks that make Mark Twain so dear to the hearts of men and women and boys and girls in every civilized country on the face of the globe.

25 columes Novels - Stories - Humor - Essays - Travels - History

BOUNTIFUL giver of joy and humor, he was yet much more, for, while he laughed with the world, his lonely spirit struggled with the sadness of human life, and sought to find the key. Beneath the laughter is a big human soul, a hig philosopher.

Out of the generous west came Mark Twoin, giving widely and freely to the world such hughter as monliad never seen. It was longhter whole souled and clean, and yet the laughter of thoughtful men.

At first it seems a long way from the simple, burnan from of Huckleberry Finn to the spiritual power of Joan of Arc, but look closer and you will find beneath them both the same ideal, the same humanity, the same spirituality, that has been such a glorious answer to those who accuse this nation of being wrapped up in material things.

There seems to be no end to the things that Mark Twain could do well. When he wrote history, it was a new kiml of history, unlike any other except in its accuracy. When he wrote books of travel, it was an event, and the world sat up and no-ticed. He did many things stories, novels, travel, history, essays, humor-but behind each was the loree of the great, earnest, powerful persmality, that dominated his time, so that even then he was known all over the face of the globe. Simple, unassuming, democratic, he was welcomed by Kings, he was loved by plain people.

He was a callact fortier for irred ing, for torounity. The simplicity, the knodly los-nor, the assertiors, the spirituality bull revealed, that we like to think is America. -all these were in Mark Peale. If foreign to the solove fact, we on the country give him first place in our hearts. The home withor Mark Twom is not an American be

The Centennial Half Price Sale Must Close

Mark Twate canted these books in the hards of all the people. He canted semi-make good-booking, substantial tooks, that every team could afford to own. So we made the set, and there has been a presendour sale on it.

But Mark Twain could not foresee that the price of paper, the price of ink, the price of cloth, would all go up as they have in the last two years, possible to continue the low price. It should have closed before this.

Because this is the one hundredth annivervary of the founding of Herper & Bruthers we have decided to continue this half price sale while the present supply lasts.

Get your set now while the price is low. As an American you must have Mark Twain. Send the coupon today before the present edition is all some.

EXPERIENCE

Certain principles and materials in building construction are accepted as standards. For ages they have withstood every test that time and use could give. That greatest of all teachers, Experience, has stamped them O.K.

The dove-tailed lock-joint, the Asphalt Mastic water-proofing, the creosoted preservative, the fibre-board insulation — all O.K'd by Experience, are the principles and materials that combine to form Bishopric Stucco Board.

Sample of Bishopric Board with book. Huilt on the Window of Ages, tree on request. Bond tells all about Histopric Board gives scientific tests, distartain bosses and other buildings constructed with Histopric Board and gives letters from builders.

Stucco can't crack on Bishopric Board of Ages' free or tells all about for the life of your building.

The dove-tail lock clinches the stucco. The creosoted lath imbedded in asphalt mastic on heavy libre-board is fire-resisting; water, weather and vermin proof, and a non-conductor of heat, cold and sound.

Bishopric Board is the most rigid background for stores made. It can't break from its fastenings, sag, and cause the stucco to crack and flake off.

Don't experiment—use Bishopric Stucco Board that Experience, based on the wisdom of ages, unqualifiedly recommends.

The Bishopric Manufacturing Co. 909 Este Avenue Cincinnati, Obio

(197)

100 PURCHASE ST., BOSTON, MASS.

"every continent, every island of importance, every nation on the face of the globe, except Russia." There were assembled the venerable patriarchs and bishops of the East who still hold allegiance to the See of Rome, prelates who had nothing in common with their Western colleagues "except their faith," their peculiar rites and ceremonies, their liturgical and popular language, their costume and their "long - flowing beards recalling to mind the patriarchs of the Sacred Scriptures, literal successors of Moses and Aaron":

"These Orientals came from the banks of the Tigris and Euphrates, the cradle of the human family; from the banks of the Jordan, the cradle of Christianity; from the banks of the Nile, the home of the oldest historic civilization. They came from Chaldea, from the lands of the Medes, the Persians, and the Abyssinians; from Mosul, built near the site of ancient Nineveh, and from Bagdad, founded not far from the ruins of Babylon. They assembled from Damaseus and from Mount Libanus, and from the Holy Land, sanctified by the footprints of our Blessed Resleemer. What a spectacle they presented; what reverence they excited! Unchangeable as the hills and valleys of their native soil, they were the same turban and the same pale and thoughtful countenance that their fathers were in the time of John the Baptist; they exhibited the same simplicity of manners that Abraham did nearly four thousand years ago when he fed his flocks in the valley of Mamre and gave hospitality to angels.

To the history of the Vatican Council the Cardinal has allotted more than one-half of his first volume. His descriptions of the external splendor of papal Rome when Pius IX. was Pops-King are tinged with something of the fire and enthusiasm which personal contact with the Eternal City never fails to awaken in ardent natures.

What is of more immediate import to Americans, possessing, as it does, contemporaneous and vital interest, is the Cardinal's chapter on the Catholic Church and the Knights of Labor. It is in this paper, which is perhaps the most significant of the prelate's public utterances, that the fundamental democratic principles and tendencies of Cardinal Gibbons stand out strongest. In an explanatory note to the eclebrated memorial presented to Pope Leo XIII., in February, 1887, urging on the Vatican the claims of the Knights of Labor, then threatened with papal condemnation, Cardinal Gibbons gives the world for the first time his intimate views and opinions upon a question still of imminent concern. Glancing at the historic conditions of the question, he asserts that "ever since the Reformation the democratic and cooperative institutions of medieval Europe have been upon their death-bed. Taking England, a natural example, he points out that in the year 1500 most Englishmen, for instance, owned their own homes; by the year 1900 less than one-tenth of the population possest all the land of the country. Trade and business in the Middle Ages were conducted on the principle of mutual aid and assistance, and unlimited competition was never thought of; but, with the breaking down of the corporate feeling of united Christendom, methods of business were introduced which would have seemed deeply immoral one hundred years before. The discovery of the New World, "with its abounding riches and consequent opportunities for exploitation," is declared by the Cardinal to be another factor which greatly increased the evil. But what brought all these evils to a head was the invention of machinery, which was brought to something

like perfection in the first half of the nineteenth century. The prelate remarks that those who live in the present day can not conceive of the state of society as it was

some generations ago.

The Cardinal goes on to recite some of the details of the historic incident. The affair was coincident with his elevation to the cardinalate. Accordingly, when he sailed for Europe (in 1887) to receive from the hands of Leo XIII. the cardinal's hat, he signalized the event by presenting his famous plea for the Knights of Labor to the Cardinal Prefect of Propaganda. Cardinal Gibbons concludes his narration of the incident with these words: "I can not say that the task which I had imposed upon myself was an easy one, but I am thankful to say that it proved not an impossible one, and that the Knights of Labor in the United States were not condemned."

THREE BOOKS ON EAST INDIAN SUBJECTS

Whitehead, Henry (D.D.). The Village Gods of India. Small 8vo, pp. 172 New York: Oxford University Press. 85 cents. Postage, 10 cents.

Macdonell, Arthur Anthony. A Vedle Grammar for Students. Svo., pp. sii-50 New York: Oxford University Press. #1.40. Pentage, 16 cents.

Dr. Coomaraswamy is Indian born, but trained in Western science, and has read deeply in the mysticism and learning of the West—Tauler, Ruysbroeck, Schelling, Schopenhauer, Rhys Davids, and Oldenberg. He thus has a broad basis for exposition of his subject, and a knowledge of the way to mediate between East and West.

He first (Part I) sketches in two pages what is actually ("scientifically") known of the Buddha. Then follow eighty pages on "The Legendary Buddha," which give the orthodox belief of the course of a wonderful life. Part II expounds "The Gospel of Early Buddhism," setting forth the doctrines of Dharma, Samsara, and Karma. Buddhist Heavens, Nirvana, Ethies, and teachings on various subjects. The tale here differs little from others available, except in its unusually attractive form. Part III, "Contemporary Systems" (Vedanta, Samkhya, Yoga, Buddhism, and Brahmanism) is brief, and remarkable for one important conclusion, seldom stated. This is that Buddha's criticism of Brahmanism did not reach fundamentals; he assailed only the popular aspect, while at the root Brahmanism and Buddhism were philosophically much the same. Here is an important fact not generally apprehended. Part IV, "The Mahayana," is an attractive setting forth of the differences between the two schools of Buddhism (Hinayana and Mahayana), which we may broadly call Ceylonese and Tibetan, and he sympathetically expounds the latter. Part V discusses briefly, with many illustrations, the literature and art of the religion, and is followed by bibliography, glossary, and index. We have many expositions of Buddhism, but few possess either the charm or the forcefulness of this. The volume is sumptuous in form, beautifully printed, appropriately illustrated in color and in black and white, and fitly suggests in its tout ensemble the essential orientalism of its subject.

The little volume by Dr. Whitehead, Bishop of Madras, is one of a projected se-

An eight mile section of concrete on the Saltillo-Verona Road in Lee County, Miss. Built in 1915 by the Capitol City Construction Co. of Nashtrille, Tenn. L. G. Smith was the Engineer.

Permanent Roads an Essential of Preparedness

A million men, perfectly trained and fully equipped, are of little use in defending a country as extensive as ours, unless they can be rushed to any point of invasion and be kept steadily supplied with the enormous quantities of food and munitions which modern warfare demands. The railroads are unable today to handle the peace traffic; what could they do with war traffic added? Railroad facilities should be supplemented by hard roads for the short haul traffic.

The Safety of the Nation

might depend, as did the safety of Verdun, upon unlimited motor truck service. A few thousand trucks can transport an army corps with all munitions and equipment. But motor traffic is limited by the extent of good roads available. Heavy loads and high speed require

Hard, Durable, Unyielding, Mudless, Dustless Roads

It takes the durability of concrete to stand up under the pounding, thrusting and shearing strains of heavy motor and truck traffic—and a connected system of such roads is required to be of any real service. Scattered stretches of good road surface will not do. A whole fleet of trucks might be blocked by a few feet of mud.

Every citizen can serve his country to advantage right now by doing his best to influence the systematic building of permanent highways in his own county or state; and by advocating and voting for good roads bond issues, which is the adequate and equitable way to quickly raise the money needed.

No main highways should be built of any less durable material than concrete. For many years concrete has been the standard material for important dams, locks, bridges and other works where durability and strength are the chief consideration.

The service of this Association is at your disposal. It has facts and figures of value to present to communities contemplating road improvement. Write for Bulletin No. 136 and then urge your own road authorities to act.

See that he or she is provided with the best collection of material on the subject. This is

THE BOOK OF THRIFT

a big new book of over 350 pages.

You and every other member of the family will enjoy and profit by this attractive volume. The young folks will be inspired with its true stories of the magical rise of men and women who were thrifty.

TEACHERS: This is the best text-book on the subject of Thrift that has been published. A copy should be in every teacher's hands. Get your copy today, 12mo, cloth, illustrated, \$1.00 net; by mail \$1.12. Funk & Wagnalia Company, 354-360 Fourth Avenue, New York.

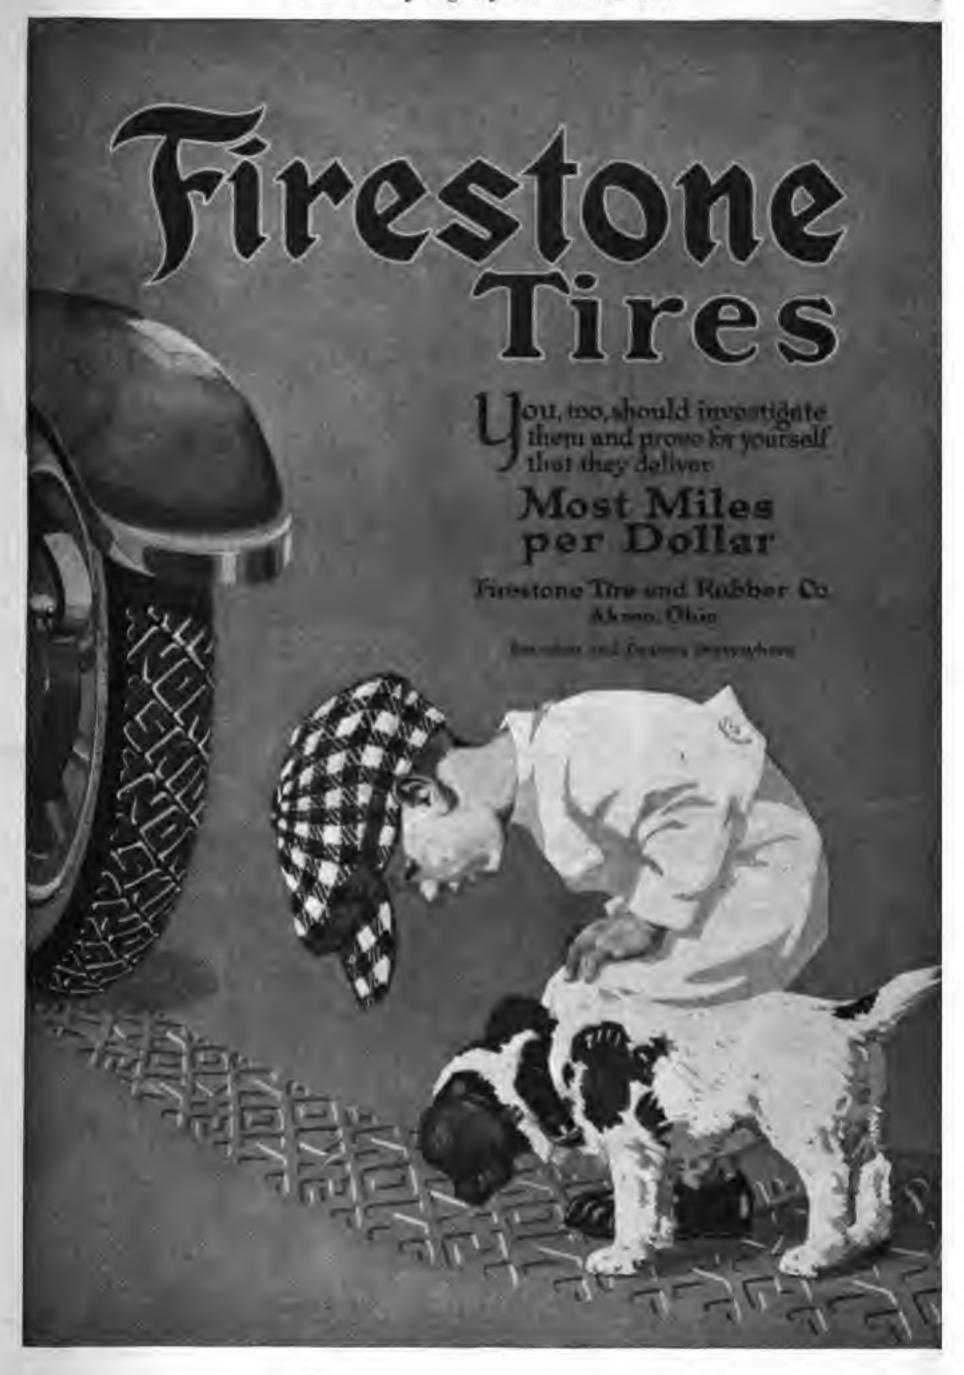

ries on "The Religious Life of India" under the general editorship of Mr. J. N. Farquhar. It is typically Western in its method and setting forth of the province it sets out to describe. This province is the folk - religion as contrasted with the philosophic systems, cults, and beliefs of the books. The religion here described is an inheritance transmitted from pre-Aryan times, the the individual deities are often quite modern, hit upon quite by chance as a result of superstitious fears. The deities here described are local, with no reference to the universe as a whole; they are mostly female, they receive animal-sacrifice, and their ministers or priests are not usually drawn from the priestly caste. The volume contains detailed descriptions of these gods and of the cults and folk-lore, and discusses the probable origin of the worship and the social, moral, and religious influence of the system. A glossary and three indexes furnish the apparatus for using the book. It is a needed volume, handy, straightforward, and not antipathetic.

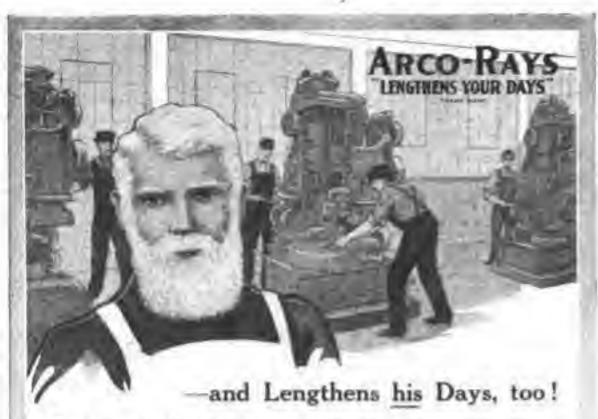

The Sanskrit of the Vedas differs from classical Sanskrit much as Anglo-Saxon from Middle English, and an elementary grammar of the first was a desideratum. Professor Macdonell issued in 1910 a Vedio grammar suitable as a reference-work for advanced students. The present volume is for beginners. Transliteration, not the Nagari character, is here used, and this has both advantages and disadvantages. The student is, on the one hand, compelled to "think back" into its Nagari form any given word or ending. On the other hand, indications of roots, stems, inflectional endings, etc., can now be easily indicated. Where forms of a given word do not occur, the normal conjugation or declension is supplied, so that it may be recognized in' other words which have the given ending. A "Vedic Reader" is to follow, so that at last the student will have helps which will enable him to master with comparative ease India's earliest and most interesting literature.

OTHER BOOKS WORTH WHILE

Jacks, L. P. Philosophers in Trouble: A Volume of Stories. From the Human End: A Collection of Essays. Two Volumes, 8vo. New York: Henry Holt & Co. London: Williams & Norgate. \$1.25 each, net. Postage, 20 cents.

Some people were disposed to accuse Professor Peabody (of Harvard) of excess of assurance when he called one of his volumes "The Religion of an Educated Few would quarrel with the editor of The Hibbert Journal, bowever, had he made his subtitles read "Stories and Essays for Educated Men." Subtlety, delightful nuance of an intellectual type, sly digs at failings, faults, and frets theological, sociological, philosophical, and political, abound in these volumes. But to appreciate these things either in story or essay one must know quite a little theology, sociology, philosophy, and political science. He who is capable will find many chuckles and some food for serious thought tucked away in these two small and delightful books. Just one example: Mr. Jacks suggests that Abel, perhaps, did not realize that he was in some sense Cain's keeper, to whom he might have given some wise and "saving" instruction. Yet Mr. Jacks notes a few of the practical embarrassments that could have resulted from this course in the crude condition of society that then obtained.

NOT ALONE does Arco-Rays "Lengthen your Days," by creating material savings and benefits, when applied to factory walls, columns and ceilings. Better still, it immediately gives an atmosphere of cheer, safety and comfort to interiors which makes these factories the goal of good workmen. Such bright, clean, sanitary rooms conserve health and eyesight, and long years of uninterrupted endeavor answer the call of employers for the best in their men.

Write us today how to get an Arco-Raved interior that reflects and diffuses all the light it receives, both natural and artificial, and one that helps hold human efficiency superior to mechanical efficiency.

DEBO-

Gerould, Katharine Fullerton. Hawali: Scenes and Impressions. Pp. 181. Illustrated from photographs. New York: Charles Scribner's Sons. \$1.50. Postage, 12 cents.

"The wandering record of a month," this author calls her singularly attractive book. "The remembered sweetness of Hawaiian voices has haunted each sentence as it was written," and she says further, "palms should droop over every page; the white Pacific surf should beat round every margin." It will be surmised that she literally fell in love with that "loveliest fleet of islands"; and she confesses this, in varying phrase. "Hawaii waits with open arms, under the Southern Cross, to give more than I have even hinted," is one admission; "my great fear is simply that I have not hinted enough." But she has hinted and has told much, in a style which adds to the charm of what she saw and learned—much about the people, their habits, their conditions, their surroundings. "Politically," she testifies, "the Hawaiians have no hope; America has absorbed them; they know they are dying, the they do not quite know why; but they have not enough sternness or strength for the black pessimism that Stevenson recorded among their cousins, the cannibal Marquesans." Yet one is less imprest with the picture Mrs. Gerould paints, in many sittings, of a dying race, than of the surpassing scenic beauties among which they are passing away, as portrayed by the author's graphic pages, and by the photographs which illustrate them. Even the full third of the book that is devoted to the Leper Settlement on Molokai is not saddening to the degree which might be expected. The fact that lepers may suffer much is mellowed by the descriptions and pictures of where they live and how.

Eastman, Charles A. From the Beep Woods to Civilization. Pp. 206. Illustrated. Boston: Little, Brown & Co. 1916. \$2. Postage, 16 cents.

Here is a book both original and aboriginal, well characterized in the subtitle of it as "Chapters in the Autobiography of an Indian." Its author is proud of the fact that he is a Sioux, or that he was born one. "His childhood and youth," as stated in the Foreword, "were a part of the free wilderness life of the first American—a life that is gone forever." His later life, we are likewise told, "throughout eighteen years of adolescence and early maturity," was devoted to "a single-hearted quest for the attainment of the modern ideal of Christian culture"; since when he has given a quarter-century "to testing that bard-won standard in various fields of endeavor, partly by holding it up before his own race, and partly by interpreting their racial ideals to the white man."

His recital, beginning as a boy of fifteen, is plain and unpretentious. It covers an uncommon range of experience -in the wilds of Minnesota and Manitoba; in the more civilized region of North Dakota; in a Government school at Santee, Nebraska; in a college at Beloit, Wis.; in Dartmouth College, New Hampshire; as a doctor among the Indians at Pine Ridge Agency in South Dakota; as an active participant, because of his medical position, in "The Ghost - Dance War" of 1890-91; as a practising physician in St. Paul, when he had lost his Government relation by loyalty to his race; as a lobbyist in Washington for Indian protection by Congress and the Administration; as a disappointed native "back to the woods"; and, in the fulness of his manhood, as a field-worker for the Y. M. C. A., and a Chautauqua lecturer.

It is a story which no other man could have written. While it betrays, now and then, the possible disillusionment of an aborigine who can never forget his early teaching and whose wide contact with civilized society has not satisfied all his inherent longings, it is not bitter or eynical. When Dr. Eastman married Elaine Goodale, whose poems had won her a place in literature, he surrendered wholly to the spirit of supreme Americanism, altho he did not eliminate his native endowments. How could be? And his readers, who must honor him for holding by his racial ideals, will read with satisfaction this volume's closing words:

"When I reduce civilization to its lowest terms, it becomes a system of life based upon trade. The dollar is the measure of value, and might still spells right; otherwise, why war? Yet even in deep jungles God's own sunlight penetrates, and I stand before my own people still as an advocate of civilization. Why? First, because there is no chance for our former simple life any more; and, secondly, because I realize that the white man's religion is not responsible for his mistakes. There is every evidence that God has given him all the light necessary by which to live in peace and good-will with his brother; and we also know that many brilliant civilizations have collapsed in physical and moral decadence. It is for us to avoid their fate if we can.

"I am an Indian; and while I have learned much from civilization, for which I am grateful, I have never lost my Indian sense of right and justice. I am for development and progress along social and spiritual lines, rather than those of commerce, nationalism, or material efficiency. Nevertheless, so long as I live, I am an American."

May, Max B. Isaac Mayer Whe, the Founder of American Judalsin. Syo, pp. xii-415. New York, G. P. Putnam's Sons. \$2,00 net. Postage, 14 cents.

For American Hebrews, especially those who belong to the "Reformed" school, the biography of this distinguished leader he his grandson will have intense interest It contains practically a history of the advanced school of Judaism in America, inasmuch as Rabbi Wise was an indefatigable laborer in the modernizing of the liturgy and worship of his coreligionists. For the Gentile, on the other hand, there is less to attract him, so absorbed is the interest in things Jewish. Moreover, the din of arms and clash of conflict, the reiteration of the word attack, are so incressant that be might rise from its perusal with prejudice either created or intensified. The book exemplifies the loyalty of the Jew to those of his own family. To those, however, who belong to the same school of Judaism, no encomium would be regarded as extravagant for "the founder of Ameriean Judaism"-if Rabbi Wise be judged worthy of that honor-or for the creator of the Hebrew Union College at Cincinnati.

Nevius, Winfield S. Witcheraft in Salem Village in 1692. 5th ed., 18mo. Salem Salem Press Company.

This edition differs from earlier ones chiefly by the addition of an extensive new Preface (fifty-nine pages), which attempts to indicate the recent views of specialists in psychology, such as the late Dr. Münsterberg and Professor Leckey, and of historians like Professor Burr. Some other minor additions in the Preface also increase its value over that of previous issues. The result is a neat and useful

Madison, Wisc., Plant of Gisholt Machine Works.

Waterproof When You Build!

ENGINEERS and contractors agree that the time to waterproof the basements, walls, floors, tunnels, retaining walls, etc., of industrial buildings, banks, homes, etc., is when you build—and more—that the best way is the integral method.

MEDUSA WATERPROOFING

is the original integral waterproofing. It is not a paint or surface mixture but amaterial that becomes an inseparable part of the Portland Cement, making a concrete everlastingly watertight and damp-proof.

Medusa does not affect the strength, color or setting of the cement. It is inexpensive and can be used by inexperienced workmen.

In the Gisholt Machine Works (Worden-Allen Co., Chicago, Contractors,) it made the floors, basement and an under-street tunnel absolutely watertight. It will do the same for your home or factory.

It will pay industrial and building engineers to investigate Medusa—the scientific Waterproofing. Be prepared to waterproof when you build.

Write for literature, information, data, etc., today. Put your waterproofing problem up to our engineers.

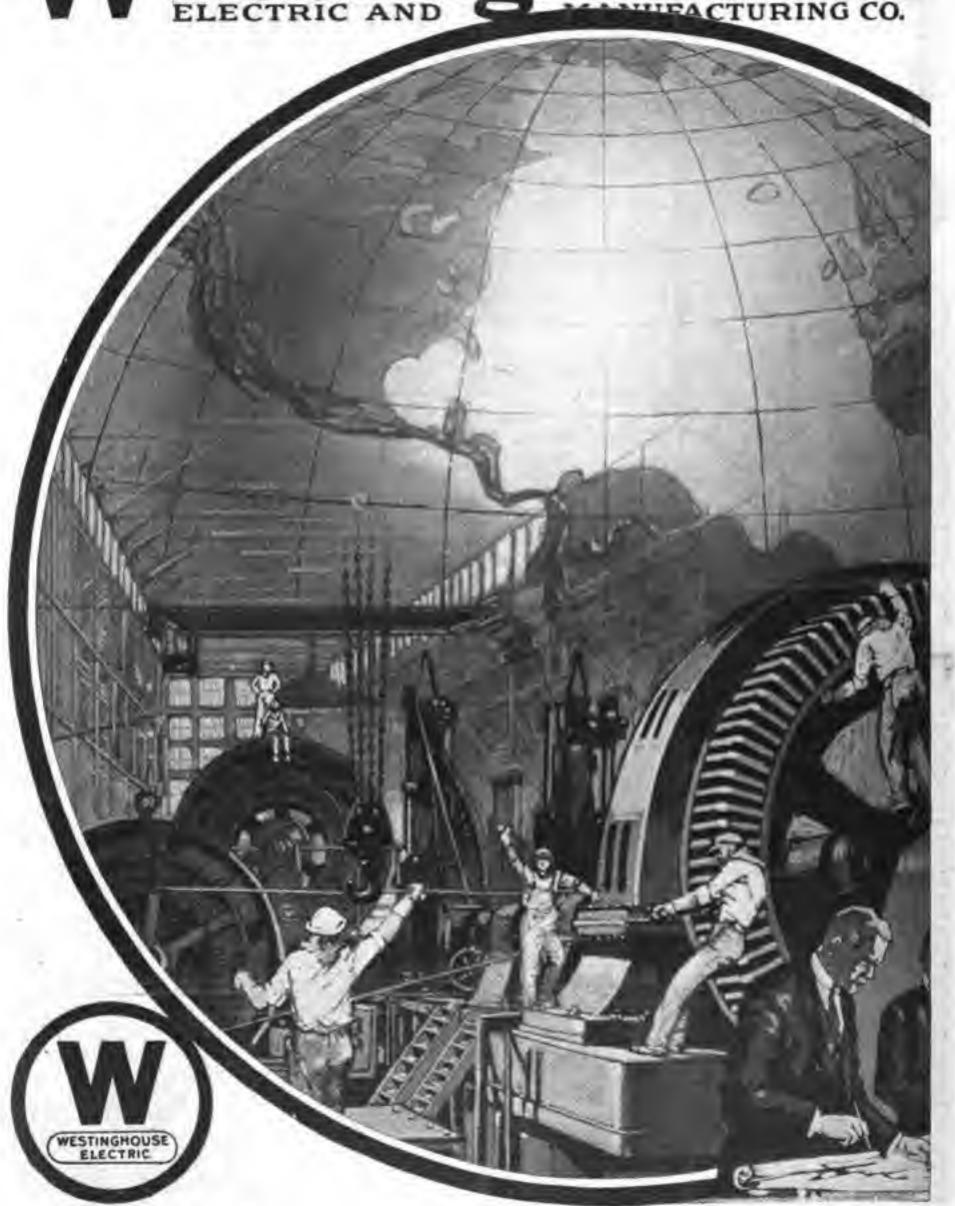

Whether you contemplate building immediately or not, write for your copy of booklet "Medusa Waterproofing" today.

THE SANDUSKY CEMENT COMPANY
CLEVELAND, OHIO, U.S.A. II

Westinghouse

Westinghouse MANUFACTURING CO.

MEN

Money, machines and methods are three great factors in modern industrial progress, but each is dependent on a greater factor —men.

Machines and methods may increase output, decrease cost and eliminate liability to human error, but for their perfection and successful operation we must have human resourcefulness, ingenuity and experience.

Money, representing the solid financial backing of great enterprises—is available only because of public confidence in human integrity and business ability.

Therefore, man-building is the first duty and it is the greatest achievement of the far-reaching organization known to the world as Westinghouse.

It is your best guaranty that when you buy any electrical product stamped with the name of Westinghouse, you can rely upon it as representing the quality of materials, excellence of design and care in construction that mean efficiency and durability.

George Westinghouse surrounded himself with men capable of visioning the best possibilities of the coming electrical age.

And to this nucleus were attracted other men whose abilities have added greatly to the human resources of an already great institution. Men who knew how to create organization, increase engineering and financial resources and provide manufacturing equipment.

Thus the Westinghouse Electric organization today includes many individuals who have gained wide recognition, and is constantly developing others from within its own ranks.

Its engineering and manufacturing resources range over the entire electrical field from the electrification of a great railway system to the construction of a small meter with the accuracy and precision of a watch. They also extend to the selecting and testing of materials, the designing of machines and tools, the mastery of economical production and the solving of the individual problems of customers.

Whether you are equipping a power plant or purchasing an electrical convenience for the home, you can rely upon the human factor represented by the name Westinghouse.

The Westinghouse Electric trade-mark assures you of the highest specialized training of men whose abilities are devoted to any specific group of products plus the engineering, manufacturing and financial resources of an organization covering the whole range of electrical generation, transmission, application and control.

ore than moth- and dust-proof

\$2 to \$6 according to use.

osgard Wardrobe Co. 1211 Pennsylvania Ave., N. W. Washington, D. C.

Sharkleton, Robert. The Book of Boston. Pp. 326. Illustrated by R. L. Boyer. Philadelphia; The Penn Publishing Company. \$2. Postage, 12 cents.

"Boston, with the soft twilight into which its more distant history vaguely merges, and with its possessions of beauty and dignity, assuredly possesses the brave association with a remote time past," says Mr. Shackleton. And again: "History and buildings, great achievements, picturesque events-Boston may point to them all." Boston is "a city of idols as well as ideals, and with some of the idols clay; a city rich in associations, rich in memories of great men and great deeds, rich in its possession of places connected with those men and deeds." Mr. Shackleton writes well of place and people. When, here and there, he has his little joke at Boston's expense, his amused laugh at Boston's foibles and peculiarly typical traits, it is always with affection and kindly appreciation of the city's charm. Boston Common is his first subject, and genial understanding and comprehension of what Boston Common means to all her inhabitants, past and present, are shown in every appreciative word. So of Beacon Hill, with its famous streets, with its traditions of aristocracy, and its famous homes, and their association with literary men, and women, and historical events. Dickens, Thackeray, James T. Fields, Hawthorne, Emerson, Longfellow, T. B. Aldrich, and many other names familiar to us in history and rorunnee, help to make the book a real treasure-house of information. It is the style of the author that grips and charms the reader. His intimate knowledge of traditions and history makes his most casual allusions important and inter-"The Hub of the Universe," "The City of Holmes," and Holmes, who was "Boston epitomized," are described appreciatively, and the whole is lightened by aneedotes of the noblest men of past and present. Famous buildings, historical spots, churches, and parks appear in the story with a startling fund of information. It would be impossible to indicate all the points of charm in this comprehensive book—an ideal guide to Boston and its environs-for the writer believes that to write properly of Boston is to write also of neighboring towns that have come to be associated with her in common thought (Concord, Lexington, Cambridge, Dedham, Plymouth, and Provincetown), the places over which the mantle of Boston has been flung and which stand hand in hand with her in the light of tradition and history. Altho the city is full of crooked little streets, Mr. Shack-leton reminds us that it "has opened more turnpikes that lead straight to free thought, free speech, and free deeds than any other city."

Marden, Orison Swett, Selling Things. Pp. 275. New York: Thomas Y. Crowell Company. \$1 not. Postage, 10 cents.

In this new addition to his "Efficiency Books," Dr. Marden had the assistance of Joseph F. MacGrail, an expert in salesmanship. Without it, perhaps, he would have made a volume singularly helpful, for Dr. Marden has large endowment of common sense and is able to impart some glow of his own enthusiasm to his reader.

Concentration Spells Success

when rightly used, but when wrongly used it is sure to bring failure. Most persons concentrate on that which annoys, irritates and makes for failure. When we are sick it is bard to concentrate on the thought of being well. When we are despondent it is difficult to concentrate on the idea of ever being happy again. When we have lost money it is easy to concentrate on our loss but almost impossible to concentrate on our laving an abundance again.

The Power of Concentration, when rightly used is man's greatest asset, but when wrong'y used becomes his greatest liability.

We all lock the doors and windows of our homes to keep out intruders, but do you lock the doors and windows of your thought world and so keep out the thoughts which take away one s strength, hope, faith, courage, ambition, power and ability? Do you belong to the class of people who have used their concentration rightly or wrongly? Do you own your own man? Has your concentration brought you success or failure; happiness or sorrow; health or sickness; brilliancy of mind or bas of memory? Can you concentrate for five minutes on any one thing you want, shutting out entirely every random, stray, tramp thought? Try it.

"Concentration -Its Mentalogy

By F. W. Sears, M. P. (Muster of Psychology), teaches how

to develop and use the Power of Concentration rightly.

The person who can concentrate rightly for what he wants, when and where he wants to—whether it is for money, health, love, increased business, a better job, political power, social position, good memory or anything else he may desire—has at his command 'the greatest power in the world, a power which, when he learns to use it rightly, gives him the mastery of himself and his environment, and makes his body strong, healthy and vigorous.

You can win for you have this Power and can learn to use it rightly by persistently applying the lessens taught in this book. No other book like it. You need to learn its lessons. Price 50 cents postpaid. Of priceless value to one who will study and apply its lessons. Remit by money order, registered letter, personal check; U. S. Stamps accepted. Money back if you want it.

One of the largest and most successful Business Colleges in the world uses Dr. Sears' "Concentration" as a text book, purchasing them in lots of 100 at a time.

Centre Publishing Company, Suite 647, 110 W. 34th Street (at Broadway), New York NOTE-Dr. Sears lectures every Sunday at 11.15 A.M. in the Criterion Theatre, Bway, at 44th St., N. Y. City

Much of the advice in these pages has in it the ring of success. "You should seek admission to a house," is one sentence of it, "as the you were the bearer of glad tidings." Other quotable sentences abound, of which these are samples: "If you earry your goods in a hearse you will not sell them." "There is a good deal of truth in the remark, 'If you can not learn to smile you can not learn to sell." "To be a whole man, mentally, physically, and spiritually, is your business."

Van Doren, Mark. Henry David Thoreau: A Critical Study. Pp. 138. Boston and New York: Houghton Mifflin Company. \$1.25 net. Postage, 10

"In the twentieth century," says Mr. Van Doren, "it is desirable not so much to condemn or justify the whole of Thoreau as to describe and explain his parts." The whole of Thoreau, judging by his journal, from which this study was founded, appears to have been egoistie-a constant consideration of himself. "An exaggerated confidence in his own mind was what Thoreau had to start with," is one assertion of Mr. Van Doren concerning him. He retained it. He owed nothing to the world; he "went out to Walden Pond in order to 'have a little world all to himself.'" He was his own ideal. "The world could not seem hard to him, because he was padded on all sides by his ego." Yet here he is credited with six "qualities of mind and heart which a wise reader will not forget: sensibility, concreteness of vision, thoroughness, wild combative self-suffi-ciency, humor, and wistfulness." He was a disciple of Emerson, yet Emerson said of him: "Thoreau is with difficulty sweet." He could even be bitter about "R. W. E." in his journal; but Emerson pronounced him "as free and erect a mind as any I have ever met." And Hawthorne said "that Thoreau prided himself on coming nearer the heart of a pine-tree than any other human being." As a piece of literary microscopy this contribution to Thoreau literature is worth while.

Bollander, Bernard (M.D.). Nervous Disorders of Men. Nervous Disorders of Women. Abnormal Children. Pp. 252; 215; 224. London: Kegan, Paul, Trench, Trubner & Co. New York; E. P. Dutton & Co. \$1.25 each. Postage, 10 cents each.

Here are three books by one author upon topics closely akin. Dr. Hollander has given careful study to psychotherapy and believes that his fellow practitioners may profit by what he has learned and can teach. He does not, however, seek to make a text-book of any of the volumes, but writes in non-technical language which the layman can understand; and in "Disorders of Men," he considers the modern psychological conception of their causes, their effects, and their rational treatment. In the same manner does he treat of women and their nervous disorders; and a leading feature of his own practise appears to be suggestion, or the application of hypnoidal influence. To prove its benefits he cites the cases of many men and women, for some of whom he added other agencies. What he says of Insomnia, Nervous Dyspepsia, Mental Instability, The Effects of Alcohol, etc., will interest the non-medical reader, and may be helpful.

Dr. Hollander's chapters on "Abnormal Children" ought to be read in the home, as well as by the family physician. So many babes are born into the world with defective nervous organizations, the evidences thereof are so multiform, and the methods of cure often so simple, that the education of parents along this line is more and more a demand of humanity. In all that he says this author is conservative, prudent, and governed by a strong sense of professional responsibility.

MacCorkle, William Alexander (LL.D.). The White Sulphur Springs. Pp. 410. New York: The Neale Publishing Company. 35 net. Postage, 18 cents.

No other place on American soil has been so long famous, politically, socially, and hygienically, as the Greenbrier White Sulphur Springs, the traditions, history, and social life of which are presented in this very sumptuous volume. For almost a century before the Civil War they were a distinctly Southern "institution," "rendezvous," as Charles Dudley Warner once wrote, "of all that was most characteristic of the South, the meeting-place of its politicians, the haunt of its belles, the arena of galety, intrigue, and fashion." Whoever visited them during that long period, or has seen them since, will read with peculiar interest and greatly enjoy the annals and the description, the gossip and the numerous illustrations, of these de luxe pages. Having even once beheld "the Old White" and their environment, it is easy to agree with ex-Governor MacCorkle when he says: "Nothing more beautiful charms the eye nor touches the heart on the continent of America." With a view to making an unparalleled resort for tourists and health-seekers from all sections, in all seasons, enormous expenditures have been lavished upon and about the Springs, of which this work tells, but its reminiscences of the past fairly match its pictures of the present, attractive as these are.

Ebericin, Harold Donaldson, and McClure, Abbott. The Practical Book of Early American Arts and Crafts. Illustrated by 232 pictures by Abbott McClure. Pp. 339. Philadelphia and London: J. B. Lippincott Company. 36. Postage, 16 cents.

The aim of this book is "to present a thoroughgoing, informative, and practical guide to the arts and crafts of our forefathers, for the use of the collector and general reader." Attention is directed to the things that are to be found and where they are likely to be found. For the general reader, there is the record of early American achievement in the decorative arts, which is intimately interwoven with the story of the nation's social and economic growth as an aid to an intelligent and comprehensive knowledge of American history. It is a beautiful book. It has a "Chronological Key of Silver" which is quite notable. No form of metal-work, weaving, patching, stitching, wood- and stone-carving, furnituremaking, architectural use of iron, copper, brass, lead, and tin, decorative painting and pottery, seems to have been omitted. There is a chapter on "Early American Lace," by Mabel Foster Bainbridge.

Coe, George Albert. The Psychology of Religton. 8vo, xviii-365 pp. Chicago: University of Chicago Press. \$1.50 not. Postage, 14 cents.

Professor Coe, now of Union Theological Seminary, New York City, will be remembered chiefly for his contributions (along with those of Professors Starbuck and James) to the application of psychology to problems of religion, especially the problem of religious education. The present treatise is a survey of religion from the psychological point of view. In such a study, since "religious experience is a

WORN BEARINGS

What do they mean?

THE repair man says: "That knock? Worn bearings." Tightening will temporarily remedy the trouble. Refitting or renewing is the only permanent remedy. But it is more important to know what will help prevent this expensive operation.

To the eye, the surface of a bearing is smooth. But under the microscope it has a very different appearance. You see a succession of little hills and valleys.

Now, imagine the engine in motion.

What happens?

Surfaces are in motion. Unless protected by a correct film of lubricating oil, the microscopic hills of metal meet and rub. The enginepower overcomes this resistance, but tiny particles of metal grind off.

By degrees the snug fit becomes a loose fit. Noise follows. To correct this condition now, the bearings must be refitted or renewed.

The only protection against undue wear of bearingsisthethinfilm of oil.

This thin film of oil must be highly elastic. It must fill-in the valleys. It must cushion the peaks and withstand pressure. It must stand up under the heat of service. These requirements call for oil of the very highest quality and of the correct body and character.

Gargoyle Mobiloils meet these requirements with scientific exactness. Used as specified in the Chart of Recommendations they effectively cushion the bearing surfaces, and meet the most severe de-

mands of service and heat.

A grade for each type of motor

In buying Gargoyle Mobiloils from your dealer, it is salest to purchase in original packages. Look for the red Gargoyle on the container. If the dealer has not the grade specified for your car, kindly write our peacest branch, giving dealer's name and address.

VACUUM OIL COMPANY Rochester, N. Y., U. S. A.

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable overywhere in the world.

Domestic Branches:

Detroit Boston New York Kansas City, Kan.

Chicago Philadelphia Indianapolis

Pittsburgh Des Moines

Correct Automobile Lubrication

Explanation: - The four grades of Gar-oyle Mobileds, for engine lubrication, purigoyle Mobileds, for engine lubs fiel to remove free carbon, are:

Gargoyle Mobileil "A Gargoyle Mobileil "B Gargoyle Mobileil "E Gargoyle Mobileil "A

In the Chart below, the letter opposite the car indicates the grade of Cargoyle Mobiloibs that should be used. For example: "A" means Cargoyle Mobiloil "Arctic." etc. The recommendations cover all models of both pleasure and commercial vehicles unless otherwise

highly involved psychical complex," the need of an expert guide is essential. This need is more evident when it is noted that "religion has a peculiar relation to the valuational phase of experience." And Dr. Coe is such an expert.

After four chapters dealing with preliminaries, Dr. Coe treats of Racial Beginnings in Religion, the Idea of God, Religion as Individual and Group Conduct, Conversion, Mysticism, Future Life as a Psychological Problem, Prayer, etc. The chapter on Mental Traits of Religious Leaders (Joseph Smith, Mrs. Eddy, and Dowie; Paul and Mohammed, Jesus, and others), in connection with an analysis of types of shamans, priests, prophets, etc., is illuminating and of immense practical value. Similarly, one may not overlook the diseussion of Religion and the Subconscious. The two bibliographies (alphabetical and topical) are of high value, the not claiming completeness.

The student of religion, lay or elerical, can not afford to miss this book. It is lucid, and is entirely within the reach, financially and in comprehensibility, of the "man in the street."

Franklin, Benjamin, Autohiography of. With Bustrations by E. Boyd Smith. Edited by Frank Woodworth Pine. Pp. 346. New York: Henry Holt. & Co., 1916. \$2 net. Postage, 12 cents.

"The surprizing and delightful thing about this book," Woodrow Wilson has written (referring, we understand, to an earlier edition of the 'Autobiography'), "is that, take it all in all, it has not the low tone of conceit, but is a stanch man's sober and unaffected assessment of himself and the circumstances of his eareer." That it was a wonderful career is more clearly shown as years go by. Franklin's own account of it has both quaintness and candor, and makes good reading for young folks particularly - is of interest for all who admire success and good cause for it.

Van Loon, Hendrik Willem. The Golden Book of the Dutch Navigators. Illustrated with Seventy Improductions of Old Prints. Pp. 345. New York: The Century Company. 1916. \$2.50 net. Postage,

"This is a story of magnificent failures," begins Dr. van Loon, writing as a preface, "for Hansje and Willem." Yet on his last page but one, referring to the cleven voyages here told of, be says: "It is true they added some positive knowledge to the map. They located new islands and described rivers, and reefs, and currents, and the velocity or absence of wind in distant parts of the Pacific Ocean; but they always cost the lives of many people, and they ruined the investors in a most cruel There seems not to have been fashion." much of the "golden" about them, except as daring men gathered all the guilders they could—and carned them in their venturesome quest for lands of gold and spices. They and their several ships' companies endured privation, sickness, and suffering; sailors died of scurvy or were killed by the natives; ships were sunk or abandoned, in the arctics and the tropies; and yet through all those closing years of the sixteenth century, and a generation of the seventeenth, those Dutch pavigators fared forth from Holland, seeking a northeast passage, eircumnavigating the globe, opening wide the sea-gates of commerce. Their navigation was mainly guesswork. Reading of them, their courage, and their faith, one must admit that they deserved the memorial this volume forms.

Sever Relations With Inefficient Accounting

That is what the Diebold Safe & Lock Co. did when they put all their figure work on the Comptometer

The break with slow methods started when practical test showed them the advantages Comptometer Speed and Accuracy. Their at Comptometer made good.

When a second machine was needed to take re of the growing burden, the order read: Send os another Comptometer."

That order has been repeated an times in e last nine years. Other machines Tuve en considered—their merits tested—but wh time the order has read; "Send us tother Comptometer."

Amr. Treas. A. J. Ross discloses the reason why when he says:

"It would cost us the salaries of sky more men if we had to give up these Complometers.

"They have enabled us to cur down the time and labor of all figure operations and have greatly increased the efficiency of this office.

"The valuable service rendered by your representative has played no small part in this result."

Work handled by Comptometers in the Diebold office includes:

Proving Postirus Balancine Ledger Accounts 2 Adding Trial Balance Adding Monthly Statements Adding Distribution Sheets Figuring to and Ont Bills Figuring Payroll Figuring Inventory Figuring Contrant Percentages Figuring Stop Requestions

What makes the Comptometer to effective in this, and thousands of other offices, is its one-mution, rapid-fire action - its adaptability to every form of arithmerical calculation - Addition, Multiplication, Division, Substruction - its superior speed and accuracy on such of these operations.

A Comptometer man will try it out on your work simply for the asking.

CURRENT POETRY

'OR several years lovers of poetry have been interested by brief lyrics bearing the signature Pai Ta-shun. These lyries have appeared in the leading magazines and been widely quoted. Now they are made into a beautiful book, bound in Chinese silk and illustrated with ten collotype repoductions of ancient Chinese paintings. The volume is published by Kelly & Walsh, of Shanghai, China. The selections which we reprint from it are Chinese in atmosphere, full of the rich imagery of the East, but their appeal is general, for the emotions they so delicately and surely express are the exclusive property of no race. The poems are not the deft translations they appear; they are the original work of Dr. Frederick Peterson, a prominent New York physician. Dr. Peterson is a student of Chinese philosophy, painting, and poetry, and in his verses he has endeavored to render the message of the East-to give to Western readers a vision of China's spiritual beauty.

Our first selection is rich in emotion and color. It is vividly interpretative of the painting that inspired it.

THE BRIDGE

BY PAI TA-SBUN

Across the feaming river The old bridge bends its bow; My father's fathers built it In ages long age.

They never left the farmstead Past which the waters curied, Why should one ever wander-When here is all the world;

Family friends and garden; Small fields of rice and tea; The cattle in the meadow; The birds in stream and tree;

The pageant of the seasons As the slow years go by; Between the peaks above us An agure bridge of sky.

The dead they live and linger In each familiar place With kindly thoughts to hearten The children of their race,

Here is a tragically beautiful romance condensed into twelve lines. The poem is based on the ancient Chinese legend of the slain lover whose spirit, in the guise of a parrot, revisits his lady.

THE PARROT

BY PAI TA-SHUN

A parrot at my lattice Came beating starved and thin. I opened wide the window And let the starveling in.

And now he preens his feathers. The many-colored bird, And tries in vain to utter A broken happy word.

Is my love dead or dying On some wild hattle-plain? I can not see the peach-trees Because of mist and rain.

Homesickness is the theme of much poetry-it drew songs of melancholy beauty from the lyres of the ancient Greeks, and it stirs the hearts, now and then, of Imagistes and Vorticists. Here is a poem on this subject which, in spite of its Oriental associations, reminds us of some modern Celtie verse-such as, for instance, Eva Gore-Booth's "Little Waves of Breffny."

HOMESICKNESS

BY PAI TA-SHUN

It is not the wind in the mediars. It is not the drifting leaf, It is not the Three Stars rising At the end of the autumn brief, But I see the road to Kinsay And my heart is full of grief.

Through leagues of perished popples And league on league of tea. Through the winding river gorges From Tibet to the sea, To the heary walls and towers And great gates swinging free.

From one of the thousand bridges I hear the biwa's strain As the golden dragon-barges Passed and returned again-I see the road to Kinsay And my heart is full of pain.

Most Chinese paintings are landscapes, but they have always an emotional, or rather a spiritual, content. The tendency of the Chinese mind to symbolism is well illustrated in this poem.

THE DRAGON

BY PAI TA-SHUN

Ever-changing the cumulus surges above the horizon.

Black with thunder or white with the glitter of snow-capped mountains. Rosy with dawn or with sunset, an age-long

shifting pageant.

Stuff of chaos for dreamers to forge into magical visions.

Ranged below it the common earth and the tigerforces.

Behind and above it unfuried the starry deeps of the heavens.

Out of the formless clouds we shaped the deathless Dragon.

Symbol of change and sign of the infinite, symbol of spirit.

And here, for a final quotation from a book that invites quotation, is an exquisite little song of the sorrows of love. The simplicity of the refrain gives its pathos special poignancy.

BARCAROLE

BY PAI TA-SHUN

Small fingers on the sliken strings: Sunset and rising moon; Far hills of lapis, whire of wings Of homing birds in June: And thou wert there, the twilight on thy brow-O bitter is the biwa's music now!

Beneath the scented tamarinds On some celestial trail We drifted with the purple winds That filled our sampan sail: The purple winds blow once and not again-O bitter is the biwa's tender strain!

A war-poem out of the ordinary-a warpoem with a gay lift to its lines, and yet something about it that pulls at the reader's heart-strings, is this, which we quote from the London Punch.

ST. OUEN IN PICARDY

T is significant of Brascolite efficiency that among the largest users of Brascolites are those concerns that maintain big engineering departments in connection with their own business and those others whose fixture investments were so big and whose lighting demands were so exacting that they bought only after comparative tests. They turned the whole matter of illumination over to their engineers, saying: "Can the fixture live up to these promises?"

Better illumination lower current expense a pure, white light, best suited to the eye no glare lower cost of maintenance lamps last longer bulbs blacken less readily.

These engineers put the Brascolite through its scientific paces measured its efficiency. They made it compete with all other known fixtures and systems.

When this is done, Brascolites go in

We give herewith a few of the Brascolite users who bought after test and who have found since installation that the system lives up to all promises and bears out all tests. No wonder over 305,000 Brascolites are now in use.

Lock at the cross section. Note the simple, substantual construction. Be designed that there is small expertently for collection of dust. Note the banks, making cleaning the work of lost a immerent. Designed to give propose scoutlation, which prevents the large from over heating. It is this over heating that before out larges as another. that burns out lamps so quickly. Also, in the sery beginning of the lamp's life, over feeting blackens the bulb. A blackened bulb means a big deep in efficiency.

Ask any fixture dealer write so for portfolio, contiming photographic reproductions of many kinds of outsilations, explaining the Brascolite principle and disstrating the infinite variety of designs.

THE ARLINGTON COMPANY New Yark 725 Broadway

"Kisa me quick; après la querre Promenade en Angleterre.

English hearts are gladdened when Out of children's lips again Comes the lilt of English song When their absence has been long, Children running through the street Beating time with merry feet-"Kiss me quick; après la guerre Promenade en Angleserre.

But to hear them as they sine Brings a sudden questioning: Here the children play and roam-How's my little one at home? In St. Ouen the simple strain Takes the heart with bungry pain-Kiss me quick; après la guerre Promenade en Angleterre."

We find this exquisite little epigram in McClure's Magazine. An authoritative American critic of poet y, Miss Rittenhouse has recently been showing the world that she can practise what she preaches. A volume of her lyries would be a desirable addition to the spring list of some enlightened publisher.

PARADOX

BY JESSIE B. BITTENDOUSE

I went out to the woods to-day To hide away from you, From you a thousand miles away-But you came, too.

And yet the old dull thought would stay. My spirit to benumb-If you were but a mile away You would not come

Municipal controversies seldom produce poetry of any importance, but the agitation concerning Riverside Park and the New York Central Railroad has many dramatic and picturesque aspects, and these have caused Miss Theda Kenyon to write some verses of real distinction. We reprint them from Our City, a magazine issued by the Woman's League for the Protection of Riverside Park.

THE HERITAGE OF A CITY CHILD

BY THEFA KENTON

I saw her first half-buddled on the steps Of a wan tenement. Her scrangly arms Twisted around the shapeless, dirty mass That spoke her "little motherhood" too well. Her wild, quick-moving eyes distrusted me And all the world. Her rough hair felt like scars Acress her sagging shoulders, and her mouth Hung open lifeless, in the forid heat, And then . . . I saw her under gracious trees

Flat on her stomach on the bumpy ground. Watching a family of eager ants And funny, wriggly worms. A pop-eyed tond Leered at her harmlessly. Her quick, wild eyes Had caught the glimmer of a fairy wing Shrined in a little flower, and bent-legged elves

Hid under mushrooms, and flat, brown-winged My dream broke as her doubting eyes met

I knew the little, gentle, clever things Would have to leave this sacred place of theirs I knew that smoke-veiled, blinded trains would

spawis Like pailld, creeping margets in the night Begutten of man's just for naked trade, Would drive 'ne elves and birds-and heraway . .

And she would slink back to the slime and sin And dangerous squalor of that flithy street . . She would leave all her childhood's right-the glimpse

Of fairles and perhaps an angel's face With that dumb question on her stupid lips And that distrust returned to her wide eyes.

PERSONAL GLIMPSES

MILIUKOFF, "THE AMERICAN"

HE man of the hour in the Russian revolution appears to be Professor. Paul Miliukoff, historian, statesman, editor, leader of the Constitutional Demoeratic party in the Dnma, and the new Foreign Minister in Russia's Provisional Government. By birth, to be sure, he is a Russian, but America is proud to claim that many of his ideas for remaking the old autocratic Russia were learned in this country during his long stay with us, and is glad to remember that he was at one time denounced and attacked for his "Americanism," particularly for his daring in coming to America as Deputy of the Duma and informing the Americans of what was happening in Russia, and what the Russian Government was doing to muzzle the aims and aspirations of the Russian people.

Herman Bernstein, the editor of The American Hebrew, says in an article written for the New York Evening Sun:

Professor Miliukoff was widely known in Russia as a historian before the uprising in 1905. During that revolution he sprang into prominence as the founder of the Constitutional Democratic party, which numbered in its ranks some of the poblest and finest men in Russia. Before that time Professor Miliukoff had lived in America, where he lectured at Harvard and at the University of Chicago. He studied American life and familiarized himself with American institutions and the American form of government. During the revolution of 1905, Count Witte, then Premier of Russia, offered him a portfolio in the Cabinet. Professor Miliukoff declined it because Count Witte would not outline to him the new program of the Government. Professor Miliukoff insisted upon a definite policy of reconstruction and reform before he would accept a post in the new Ministry.

The Duma was created and a so-called constitution was granted. It was forced from the Czar by the swelling of the wave of unrest, by the general strikes, by terrorist acts, by the aroused anger of the people.

But at that time the great mass of the Russian people was unprepared for the Even the revolutionists, the radicals, and the fiberals could not agree upon the method of the uprising twelve years. ago. The leaders disagreed among themselves, and the autocracy, supported by the troops, succeeded in regaining control of the situation.

A counter-revolution was organized throughout Russia in the form of massacres. Jews, students, and other "politieally unreliable" nieu and women were slaughtered in the streets in various parts of the empire.

The Duma was dispersed several times on the eve of a crisis. Professor Miliukoff. as the leader of the Constitutional Demoeratic party, was one of the strongest and most effective men in the opposition. A brilliant orator, direct, forceful, learned, yet practical and shrewd, he became the most feared man in governmental spheres. Neither a firebrand nor an extreme radical, he had the backing of the liberal conservative elements of Russia which have gradually been won over on the side of the

epposition.

Professor Miliukoff, invited by the Civic Forum to acquaint America with the true state of conditions in Russia in 1908, came all the way from Petrograd to deliver his lecture. He spoke in Carnegie Hall. The press of the country reproduced widely his striking account of his country's hopes, of the activities of the reactionary régime, and the workings of the Duma.

The reactionaries at home decided that his comments on Russian affairs had been too frank, and when Professor Miliukoff returned to Russia a storm of abuse burst upon him. The facts of his lectures were grossly distorted, and it was reported that he had gone to America to preach a policy of terrorism and assassination against Russian officials. Telegrams were sent to the Duma branding him as a traitor, and the Black Hundreds, a reactionary society, demanded that he be hanged. But, the article in The Erening Sun continues. Miliukoff never faltered. He said at this time:

"My trip to America is not yet forgotten in the Duma. From time to time I am interrupted in the course of my speeches by some one shouting 'American' or 'American citizen.' Since then I have purposely quoted American legislation whenever I had an opportunity. I frequently begin my speeches by quoting something American. I try to make some reference to America whenever the opportunity presents itself."

His comments on the third Duma were very characteristic: "Why should the third be dissolved by the Government? The third Duma is an obedient, a very obedient, Duma. Even the reactionaries

are decidedly pleased with it.

"But, obedient as it is, it is a good thing that it exists. We must get the Russian people accustomed to the idea that there must be a Duma, that there must be a representative body. In time, step by step, the Duma may really become a representative institution which will do constructive work toward the emancipation of all nationalities in Russia."

Like most intelligent Russians, Professor Miliukoff seems to have looked forward to an eventual triumph of liberalism, for The San reports that he said in 1908:

"With this Government it is impossible to say whether violent outbreaks will occur soon or not. This Government always misses its opportunities. It is never in time. It makes half concessions when it is too late. But whatever political course the events may take, Russia will henceforth always remain democratic in its social make-up. The old form of Government is now undergoing a process of dissolution."

The part played by Miliukoff in the present revolution can hardly be overestimated, affirms the Philadelphia Public Ledger:

Professor Miliukoff is the man who virtually decided the time was ripe for revolt. It was his speech in the Duma some months ago, in which he attacked Premier Stürmer's policy, which led to the downfall of Stürmer and his succession by Trepoff. When Stürmer was forced to resign, the day of the pro-German bureauerat was joomed,

and Miliukoff kept pushing the issue until it reached its rebellious success.

Miliukoff, too, is one of the greatest European authorities on international polities, and when the war broke out was the leader of the Constitutional Democrats. It was but a step for him to become the leader of all the liberal and disgruntled elements of all Russia, those who prayed for the downfall of the bureaucrats.

In a word, he is the brains of the revolution, altho the new Cabinet represents all the leaders of political thought in modern Russia. If the revolution is sucressful, the future of Russia will depend very largely on the wisdom and tact of the group of men guided by Professor Miliukoff. The responsibility could not be greater, but it is in sure hands. To quote again from The Evening Sun:

The revolution in Russia, which terminates the Romanoff dynasty, is unparalleled in history because of its swiftness and the small number of lives sacrificed.

The Russian liberators have profited by the lessons of the French revolution as well as by the example of the Turkish revolution.

The leaders who have now restored the Government of Russia to the people, who have liberated the martyrs to Russian freedom, who are champions of equal rights for all nationalities constituting the population of Russia, of freedom of the press, freedom of speech, and freedom of conscience, are men who may be trusted to earry out these promises. They are the real master builders of the new Russia.

And among these, Miliukoff, "the American," occupies one of the most conspicuous positions.

NICHOLAS ROMANOFF

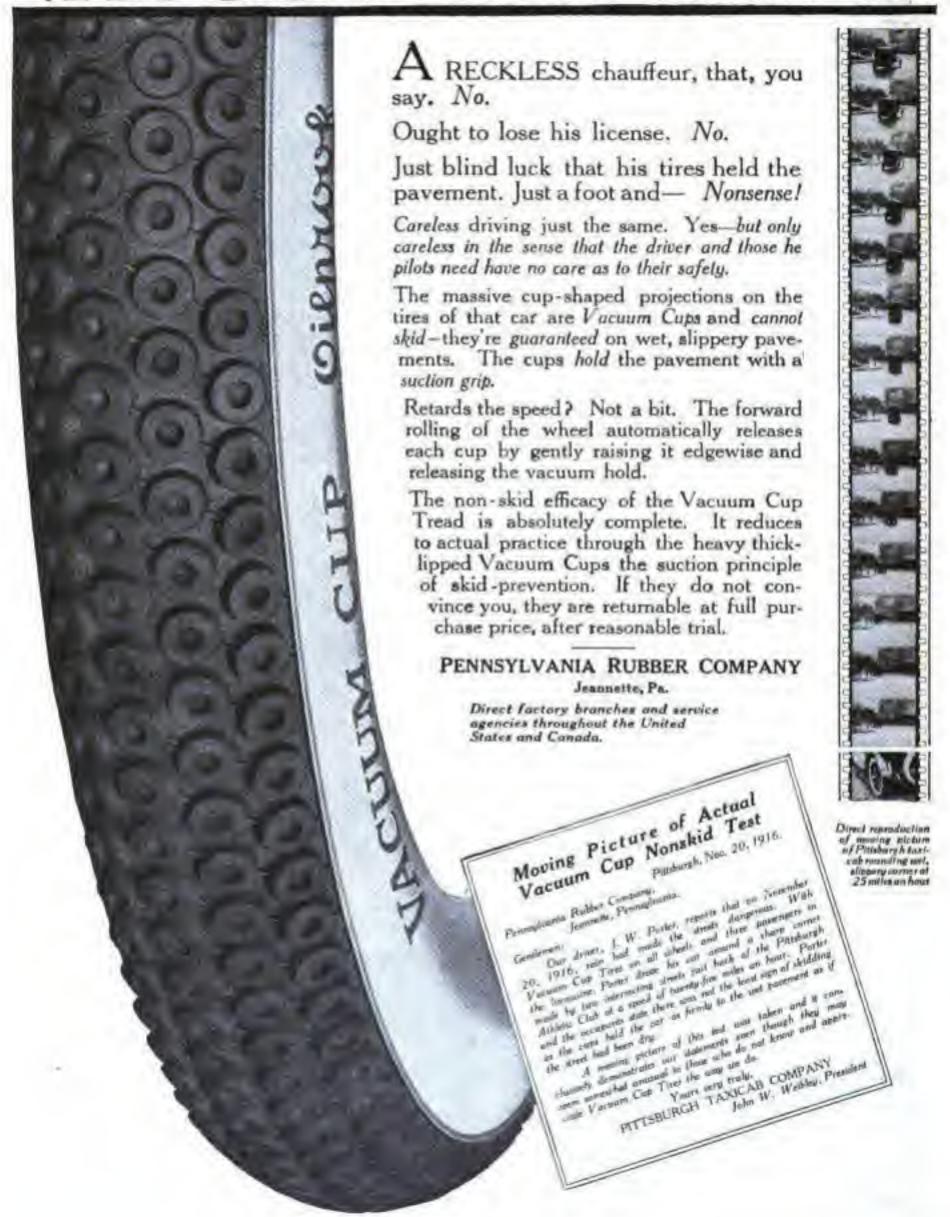

THROUGHOUT his twenty - three years' reign as Czar, Nicholas Romanoff dreaded two things; assassination and revolution, and neither was a vain fear. Since 1891, when he was assaulted and wounded by a Japanese named Sango and escaped death only by the prompt action of Prince George, of Greece, up to his recent abdication, there have been thirteen attempts to assassinate him. One wonders why, for of all the Romanoff line Nicholas II. was probably the least despotic, and apparently the most anxious to improve the condition of his people. At the time of his accession to the throne, says the New York Herold, the Russian people expected much of him.

The people of Russia, who had always preserved the usages of democracy in their local institutions, the Zemstvos, began to awake from their long lethargy and to demand an extension of their powers.

Russia, exhausted by the régime of violence, hoped for a new era in the life of the country. All felt that the young Emperor would introduce reforms for the better. He came to Petrograd and exprest his desire to come into close touch with the people. He found fault with the police, who kept him away from the people. He received a delegation of Poles. and spoke to them in friendly terms. To a delegation of Jews he said that he was

national opposed to religious and persecutions.

Petitions from various quarters were addrest to him asking him to put an end to lawlessness and violence. A petition was also prepared by the representatives of the press. But on January 17, 1895, the Czar shattered the hopes of the best people in Russia. All expectations for reforms were declared by Nicholas II. to be "senseless dreams."

He had fallen under the influence of the bureaucratic party, from which he never escaped. It is interesting to mark the parallel with Louis XVI. Both were personally amiable and well-meaning, but weak; both were under the domination of a corrupt "court party" which prevented them from earrying their plans for the improvement of their people into effect. The New York Sun remarks of this phase in his career:

The Czar undertook more enlightened projects than any Czar since Peter the Great. In 1898, he appealed to the world to establish international peace, the Russia had the world's largest standing army. That move led to the Hague conferences. He reformed conditions among his people, but his outstanding act in that direction was the establishment of the Dums in August, 1905. Even that act, however, was said to have been forced upon him by revolution and the tottering of his throne.

Nicholas's great opportunity to put himself at the head of a liberal Russia came in 1905, and he did not seize it. At the moment it was possible to proclaim Russian freedom and to break the bureaucrats utterly, but instead Nicholas called on his Cossacks. Since the massacres of "Red Sunday," observes the Philadelphia Public Ledger, the Russians were compelled to look to revolution as the only way out.

In November, 1904, delegates from the zemstvos, or municipal councils, held a secret meeting in Petrograd, and finally submitted a report to the Czar, warning him that his bureaucratic administration had lost touch with the people and asking for free speech, a free press, and civil and religious liberty. Again, in December, a stronger petition was presented, virtually demanding that a legislative assembly of two houses be formed.

Meanwhile there were strikes in the Government iron-works and numerous disturbances in Petrograd and other eities. The leader of the workingmen was Father Gapon, a priest. With the consent of the Government he had begun to organize labor-umons, to wean the work ingmen away from revolutionist agitators.

It was on January 21 that Father Gapon sent a letter to the Czar telling him that on the following day the strikers would march to the Winter Palace and present their grievances in person.

With Father Gapon at their head, the workingmen started for the Winter Palace on Sunday. Women and children accompanied them. It was not a threatening parade. It was a joyous one. All thought it would bring what Russia had dreamed of for centuries-a liberal Government.

Name
Address

For the marchers there was a rude awakening. Cossacks and other troops had been stationed at strategic points commanding the Winter Palace. As the joyous paraders came along they were shot down, singing. The parade became an enraged mob, but that merely made more work for the soldiers. Hour after hour the slaughter continued, until the streets were littered with dead and wounded.

Perhaps the deepest criticism made of Nieholas is that he was easy to influence. He was swayed by every new figure in court, as is shown by the fact that there have been forty changes in the Russian ministry in the last two years. It was too easy to gain a high place at the Russian court by playing upon Nicholas's superstition. Rasputin was the most notorious mystic, but he was only the last of a long series. His assassination was a sign that the Russian element was beginning to triumph over the pro-German court faction.

There is no need to search for the "cause" of the Russian revolution, for the history of Russia during the last hundred years is one long cause for the events of 1917, but just what precipitated the revolt is harder to determine. In an interview published in the New York American, Count Tolstoy says:

Russia's revolution is not due to the food shortage. The idea is ridiculous. Underlying the whole thing is the question of reactionary Ministers and the pro-German Ministers in the Cabinet.

This view is exprest at somewhat greater length in the New York Sun, and may be accepted as the current opinion three days after the first news of the revolution was received in America.

It is the consensus of recent opinion that the Czar was forced from his throne because he could not keep step with the growth and awakening of Russia because, either through his own determination or his weakness for bad counsel, he could not free himself from the old autocracy, the old superstitions that were the Russia of the past.

His overthrow, however, is a direct result of the war and Russia's part in it. the the moving forces are of origin as old as the movement for Russian freedom. The people felt they could not trust the Czar. They were in constant fear that he intended to stamp out if he could the spark of freedom burning in the Duma, this tho it was Nicholas II. who created the Duma and was the first Russian Czar ever to grant a shadow of popular government to the peasants.

It became coar to enlightened Russians, finally even to the peasants, that the cause of the Allies and the cause of Russian freedom were one; the cause of Germany and the cause of autocracy and the old corrupt bureaucracy were one. The Czar seemed to lean first toward one, then toward the other. This was alarming enough, but of late it had appeared that the latter was winning. The shadow of a separate peace loomed, bearing with it a return to despotism-and the Czar fell.

LOVE'S LABOR SUNK

THE British bark Galgam Castle was shelled without warning and sunk by a U-boat recently. The captain's wife was saved. Perhaps you remember the meager announcement? And, since every ship on the ocean has a tale of adventure and sacrifice, perhaps you wondered what was the history of the little bark before it met the torpedo off the Irish coast? It was a tale of toil, patience, and long years of love, aftirms the Philadelphia Evening Ledger:

More than forty years ago a sturdy lad sailed away from Plymouth, an English Channel port, to see the world, make his fortune, and return to claim for his bride a young woman who had waved a loving farewell to him from the quay.

Years passed. John Frampton "sailed the seven seas." He became mate, chief mate, and captain. He prospered. Two or three salvage payments for his part in snatching ships from the deep helped swell his bank-account.

His sweetheart, Mary, was fortunate. She became a governess, then a teacher in a private school, and later principal of a fashionable school for girls,

The frugal woman invested her savings in profitable shipping ventures. Mary and John hoped to own a ship, or the greater

part of one, "some day."
Years flew by, and their funds grew. When they approached fifty years of age they decided it was time for them to become life partners in love and business, So they bought a large share of the bark Galgam Castle. Then they were married and sailed away in her.

Careful management and good seamanship won fame for the Galgon Castle. In all the big ports of the world John Frampton and his wife were known.

When little Mary arrived, they told me they believed they had reached the zenith of their happiness. She was a "child of the sea," for she was born as the Galgom Castle tossed in a storm off the west coast of South America.

Mrs. Frampton made a real home aboard ship. She taught Mary her daily lessons and every Sunday she told the child of the Master Pilot, who ruled the deep.

When the child was eleven years old the great war came.

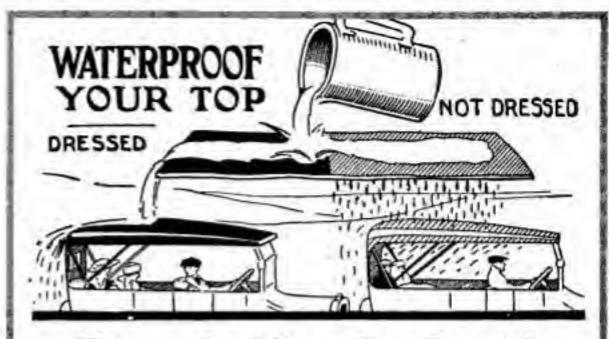

An officer of the British Admiralty has said that of all the seamen risking their lives for England the sailors on the unarmed merchant ships performed the most valuable service and underwent the greatest peril, and while Captain Frampton was willing to take the risk himself, he did not wish to expose his wife and daughter to the tender mercies of a U-boat captain. So he stopt at Falmouth, remarks The Evening Ledger, and sent his little girl to a boarding-school.

"You better stay ashore, too," Captain Frampton told his wife.

"Indeed, I'll not," she replied. "I've sailed with you all these years and I'll sail on. If they get you they will get me at the same time."

And the Germans finally "got" the ship as she was near home.

Mrs. Frampton told the short story of

Waterproof and Renew Your Tops with

the sinking that was cabled to this side. She said:

"When we were approaching the Irish coast, a submarine, without warning, fired several shells from a distance of two miles. The vessel was hit several times. We took to two life-boats. The submarine continued the shelling. One life-boat's fate is unknown. At dusk the submarine was seen alongside the missing boat. Though badly damaged, the Galgon Castle was not seen to sink. We lost our rudder, and the boat was so leaky three men were always bailing.

This ends the sea career of the Framptons. Their vessel is gone, and with it their savings of years and their means of earning

Captain Frampton, perhaps, is a prisoner of the Germans, as the news dispatches made no mention of him.

War wreeked the eraft that love bought, but it didn't crush the spirit of John Frampton, for he's a "fighting man."

EDUCATING THE ESKIMO

A PART from spreading American "Kultur" in the wilds of Mexico, the nation
is also trying to bring light to the people
who dwell under our share of the arctic
circle, the Eskimo inhabitants of Alaska.
Some inquiring souls have asked, "Why
are you trying to educate the Eskimo; he
was well off and happy as he was. Why
don't you let him alone?"

The answer to all the questions is to be found in The Eskimo, a new monthly magazine published in the interests of the Eskimo and of northwestern Alaska. It is devoted to the life and the community, to the part played by the Eskimos, and the future which the astute among the natives can make theirs. For instance, we read in the new magazine:

The people who ask these questions, if they are really sincere enough to warrant any consideration, can be divided into two classes. First, those who display their scientific knowledge by quoting the law of "the survival of the fittest," with the assumption that the Eskimo is not fit to survive. The second class claim a peculiar insight into the frame of mind of the ancient Eskimo, who, they assert, was an especially contented individual, and, furthermore, they insist that the Eskimo of to-day is not contented. This set of critics insists on taking the position, indefensible in this day and generation, that education is a bad thing for a people. The claim of our service is that the Eskimo by reason of his inherent qualities and because of his geographical position is fit and able to survive, and we claim that by our system of education for him we are making him not only more fit to survive, but that he will be a vital factor in the development of northern Alaska.

The Eskimo is not dependent. On the contrary, he is, even in his present condition, a real and vital factor in the wealth of the country. He has never received a ration from the Government; he can support himself, not always according to our standards, it is true; but it is better for him to eat strictly native food than for him to learn to expect the Government to support him. The wail so often heard

INTENSIVE GARDENING

There is a garden expert who has a suburban home near New York. He has achieved remarkable success with intensive culture of a plot only 35 feet square. His records as given here are suggestive. This year's values will be greater than those of last year, all prices having advanced.

"Last year, a poor season for gardening. I raised \$50.00 worth of green vegetables on a plot 35 feet square (less than half the area of a tennis court).

"The varieties, quantities and value of vegetables actually obtained from the plot follow:

		LTSOL		NO. OF TOWN	
Vegetables	Quantity	Each	Value	35 ft. long	Remarks
Radish	50 hunches	No	\$1.95	4	
Lettuce	43 heads	10e	4.30	2	
Spinnels	10 quarta	15c	1.50	2	
Pens.	21 -	12c	2.52	4	Poor crop
Culdage	14 hnede	100	1.40	1	a con true
Bests	93 banches	100	9.36	U	
Carrote	27 "	10e	2.70	3	
fitting Dents	71 quarte	10e	7.10	4	
Com	276 ears	-3e	8.28	8	
Lima Beans	32 quarte	10e	3.20	3.	Poor erop
Tomalone	244	20	6.88	2	
Squash	38	3e	1.90	1.	
Ean Plant		10:	-50	1	Poor erop
Turnipe	8 bunches	be	.64	1	E mine
			\$50.17		

"This year I expect to do much better. Anyone can equal these results by giving a little thought to planning, planting and caring for a garden.

"Select your garden on a gentle southern slope, protected on the north by a fence or hedge if possible, and free from obstructions which cast shadows. Stake out your plot accurately, placing stakes 2 feet apart on each side to mark the rows.

"First make a list from a seedsman's catalogue of the vegetables you prefer to est. Cut off this list those that are difficult to raise, such as cauliflower, celery, etc. Then eliminate those that give a small yield per square foot per month, such as melons, potatoes, parenips, salsify, etc. You will then have a list such as this: radish, spinach, lettuce, peas, cabbage, beets, carrots, string beans, corn, tomatoes, turnips, egg plant, squash and lima beans; the last two may be classed with those that give a small yield.

"With this list you can now decide what relative quantities of each you desire, or how many rows of each vegetable to plant.

"With a seed book from a reliable house, make your selections, choosing dwarf or bush varieties in preference to large varieties wherever possible.

"Tall plants cart shadows which are undesirable in a plot where maximum sun light is the aim.

"Your seed order should have been already sent. If you have delayed, rush it at once, for this year there will be beavy plantings and seed shortages.

"Give considerable time to the planning of your garden, using all the best systems of inter-planting and rotation of crops in order to make each square foot of soil work all sesson. This is the important secret of successful intensive gardening.

"The soil must be dug up the full depth of the fork at least, and all lumps of earth pulverized.

"Order enough stable manure to cover the ground 2 inches deep. Two double loads will do for a plot 35 feet square. Be sure the manure is well rotted, but not fire fanged, and is free from straw.

"After spreading, turn it all in well beneath the surface and rake the garden off level. Seventyfive pounds of well-balanced commercial fertilizer should next be distributed and raked in.

"We are now ready to plant. After planting, frequent light cultivation should be given, even before the seeds come up.

"This surface cultivation kills thousands of young weeds and saves endless weed troubles later."

DEPARTMENT The iterary Digest

from ignorant, but presumably charitable, people, "Why don't you give the poor people some food?" if heeded, would make paupers out of a self-supporting and noble race. We are proud of the fact that we have not fed the Eskimo. We are proud of him as a man because he feeds himself.

One reason why primitive races have so often been pushed to the wall by the white race has been that the white race have coveted and needed the land. As far as we can see, for years to come the white man will not make any attempt to push the Eskimo off his part of the map. While there will undoubtedly be developments in mining, yet for a long time to come the Eskimo will have plenty of room in northern Alaska. Therefore, even if this northern part of Alaska, through some unexpected development, should become desirable for a large white population, we believe that with what development the Eskimo has already received, and the additional development that even five years more of undisturbed possession of his northern fastnesses will give him, he will be well fitted to meet advanced economic conditions,

The key-note of our school system for the Eskimo is its direct relation to the village life. Thus the school republic becomes the village council, the school garden soon becomes the village garden. the cooking-class becomes the breadbaking class for the village, the clean-up of the school ground becomes the village clean-up, the bench - work for the boys' class becomes the boat- and sled-building center for the village. And, most striking of all, the schoolboy who is sent to the reindeer herd as an apprentice, in four years becomes the trained herder, the supporter of his family, and a future leader of his people.

THE NEW LEADERS IN RUSSIA

TOT so very long ago-in 1908-Professor Miliukoff was asked whether revolution would ever be effected in Russia without a long and bloody struggle, and whether, under any circumstances, a democracy were possible. His reply at that time is recorded in the New York American:

"I am not a prophet and I will not undertake to speak of the future, but I will say that the antidynastic feeling is already very strong in Russia and will continue to grow, provided the Government continues its present and long-continued oppression, and provided also that the Liberals, who are struggling for liberty, do not lose their heads and resort to assassination.

"How long it will take, I do not know. I must say that the possibility seems out of reach of practical polities at the present day. It is quite out of the question now to think of introducing a commonwealth into Russia. I think myself that the greatest success we can hope to achieve in this generation will be to secure a constitutional and representative régime; even that has been too difficult thus far. But we do not despair. We shall move along that line until we reach the goal, althofew men in our day may live to see it achieved."

The first question has already been answered, for the upheaval in Russia was

un Shade and Orchard Trees against Canker Worms, Climbing Ces Worms, Woolly Aphides, Ants, and Tumoek, Gypsy and Brown-rail Caterpillars. It is equally effective against any crawling insects.

ONE-BUTTON UNION SUIT even to the point of protecting you from careless work at the laundry. Its ONE master button at the chest, does the work of eight or ten on other underwear; it gives the laundry one chance, instead of eight or ten, to rip off buttons and tear buttonholes. It concentrates strength and quality at that one point—and then it takes this extra precaution:

If the laundry should take off ONE button, you will find a second buttonhole ready for any flat collar-button.

You can get these suits in knit goods or in the famous KEEP KOOL mesh at most good department stores and haberdashers', but if you have the least difficulty send your size with remittance to the manufacturers at Albany, N. Y., and we will gladly supply you direct, delivery prepaid. Satisfaction guaranteed.

PRICES:

almost bloodless, and the answer to the second depends almost wholly upon the new provisional Cabinet, of which Professor Miliukoff is a member.

Prince Lvoff, the new Premier, observes the New York Times, is the strongest man in Russia, and his position and power make it practically certain that the pro-German influences which precipitated the uprising will be eliminated.

The real power remains in the best hands it could possibly be in, namely, those of Prince Lvoff, the new President of the Council of Ministers. He is the most popular man in Russia, head and chief of the combined Urban and Rural Zemstvo Committees, organizer and feeder-in-chief of the Russian armies in the field, the man whom all students of Russian affairs have expected to see made head of any provisional Government, or President, or Prime Minister, or whatever title the real head of the new Government may have received. He is a Russian of the Russians, a Slav in fact as well as in name, and is perhaps the only man alive who has the entire confidence of the Russian people, both high and low.

Premier Lvoff's companions in this duty, in addition to Foreign Minister Miliukoff, are all men who have worked their way to the head of Russian affairs from humble beginnings. They are thoroughly in touch with Russian needs, of large experience, and wise judgment, remarks the New York American:

Michael V. Rodzianko, President of the Duma, is the real leader in the revolution. He is a Conservative, like Professor Miliukoff, the new Foreign Minister; his family is of high rank; he has two sons who are officers in the Imperial Guard of Russia, the most aristocratic regiment.

A. J. Guerchkoff, Minister of War and Navy, has won renown as an organizer. He has great executive ability and has risen through long adversity to be a leader of the people by sheer ability. He is a genuine leader of the people by natural selection and gifts.

M. Ichingareff, the new Minister of Agriculture, was the quickest and readiest debater in the Duma. His passionate love of liberty is restrained by long experience and knowledge of economic matters, in which he is expert. He is probably one of the best authorities in all Russia on finance and agriculture.

Mr. Kerenski, who is the labor leader in the new People's Ministry governing Russia, is in private life a clever lawyer. He is by far the most radical member in the new ministry and he will bring to the support of the new Cabinet the Russian radical democracy, which is united in favor of carrying on the war to the bitter end. He will probably be a leader in the movement to make Russia into a republic. He has labor at his back, and it is significant that the post given to him in the new Cabinet is that of Minister of Justice.

Mr. Manuiloff, the new Minister of Public Instruction, was formerly president of the Imperial Moscow University and is now editor-in-chief of the Russkya Vyedomosti. He resigned the professorship in the leading Russian university in 1911 because of the oppression of freedom of

thought and teaching by the Russian Covernment. He is also a professor of economies with a reputation throughout Europe.

GAY LIFE IN GUAM

'UAM, you know, is that little spot in G the Ladrones where the United States keeps a coaling station, a flying flag, a few inhabitants very proud that they are Americans, and the Guam News Letter. This last is the principal and only newspaper in the colony. But it is by no means a weak little sheet, for, according to the New York Sun, it is as full of news, and life, and general doings as any metropolitan daily. Life, while not overcomplex in Guam, is apparently far from uneventful. We hardly realize that so much can happen in those few square miles far out in the Pacific. But, says The Sun:

The July issue of this Government publication is far more juicy than The Congressional Record as it lies before us with its budget of news from the most lively isle of the Ladrones. Its front page looks serious, it is true: a chunk of advice as to the growing of the alligator-pear, little brother of indigestion. But on the next page is a piece about the ball given by the citizens of Guam in honor of Gov. Roy C. Smith. Salad and other refreshments were served and the evening was pronounced a great success. This is official. The Governor made a speech at the closing exercises of the Guam schools, for which entertainment Corporal Floeck, of the Marines, illustrated a hundred programs, some with comical designs. The Misses Beatius Perez and Remedios Aguon danced the Spanish jota.

San Antonio's day (June 18) was celebrated as usual. There was a parade, and "one could go up to any house and was always offered something to eat and drink."

Happy Guam!

The streets are being repayed. Calle Hernan Cortes, Calle de Isabel la Catolica, Calle de Padre Aniceto are in good condition. The Evening Bridge Club met with Paymaster Rose on June 20. The Paymaster, the item reassures, was one of the winners. The schooner Sadie, out of San Francisco, put into Apra Harbor to get a doctor for the skipper. The young Masters Francisco and José de la Cruz are home from school in Manila. Paymaster Coyle gave a moonlight dance on the tennis-court. A court of equity for the island has been established. Private Rice, of the Marines, was appointed an insular patrolman. The transport Sheridan arrived with "one hundred tons of freight, including two thousand feet of pipe and Sub-Inspector Sanderson." A son is born to Carmen San Nicolas, wife of Guillermo Quintanilla.

Additional activity in the colony is denoted by announcements that:

In action brought by the United States Naval Government, Vicente Dy-Dasco is found guilty of the theft of a bull, and must lie in the Presidio Correccional for six months and one day. Most of the schoolchildren of Yigo spent their vacation at Tarague Beach with their parents for the purpose of catching fish. The 40th Company of Marines offers to trade its messsteward for a fairly good ball-player. The Agama Garage is open day and night;

Not a bad place to be, this Guam. No infantile paralysis, no trolley tie-ups, no campaign. The Government is a benevolent autocrat who gives, or goes to, a luncheon or a dance almost every day. He yields weakly to such demands, but probably without murmuring that the festivities have the sanction of society. He has an island, an army, a newspaper. He is lord of the high justice, the middle, and the low. A great nation is behind him, but at a convenient distance. What more could a Smith ask?

WHAT A BILLION MEANS

In the days of millions of men in the field for one nation or another, and fortunes at every hand amounting to multimillions, it is no longer startling to hear people speak of billions of this or that; the two-billion Congress startled no one but the Republican party. To the rest of the public it was hardly extraordinary. But a writer in the Los Angeles Times, wondering whether people really conceived how great a number they were handling, has been at some pains to set together a few illustrations of what a billion really means.

We understand readily that a billion is a thousand millions, and that a million is in turn a thousand thousands. But if it is applied to objects, it seems to pass almost beyond imagination. It is easy to think of a billion dollars as belonging to Mr. Rockefeller, but suppose it is a matter of time, remarks the writer. If we look into the question carefully, we shall see that since the birth of Christ, there have been but a few more than a billion of minutes! And along the same train of thought he continues:

A minute is such a trifling measure of time and a dollar is such a small sum. Yet, since the beginning of the Christian era there have been but a few more than a billion minutes, and the silver dollars would plate the sides of every war-ship in our Navy.

If Rockefeller, assuming that he possest a billion dollars, had his pile in silver dollars they would make a stack, piled as coins are ordinarily piled, 248 miles high. Set edge to edge these dollars would form a glittering ribbon from New York to Salt Lake City. To coin the dollars would require the use of 31,250 tons of silver and to haul them to the mint would call for 2,083 freight-cars, drawn by 104 locomotives. The combined length of the trains carrying this fortune would be in excess of fourteen miles.

At an ordinary valuation of agricultural lands in the best farming sections of the country, a billionaire could buy a farm as large as the combined area of the States of New York, Massachusetts, and New Hampshire. If he could purchase land at \$1 an aere, he could buy all the territory of the United States east of Montana, Wyoming, Colorado, and New Mexico.

Pictures have often been drawn of the wealthiest man counting his hoard; but he never counted it dollar by dollar. If he had the entire sum before him and could handle it as rapidly as his watch ticksabout \$5 to the second—it would take him, working night and day, six years and four months to complete this task. If, of course, he worked on a union-labor scale, he would be just nineteen years on the job. In order to have it coined for this pastime the mint would have to work making dollars for thirty-two years without pause, day or night.

The speediest element with which the mind is acquainted is light, for we are not, it is claimed, yet certain of the speed of electricity. Light travels approximately at the rate of 186,000 miles a second, which, so far as earthly distances are concerned, is practically instantaneous. Yet, if a searchlight sufficiently powerful to east its rays a billion miles into space were turned on from the earth it would not light up its objective point for more than two months afterward. If our sole illumination were a sun a billion miles away and the fire were suddenly extinguished we would see that sun for sixty-two days afterward, that length of time being required for the rush to the earth of the rays that were sent forth before its death.

A striking point is made by the statistician when he observes that we all comprehend the speed of the ordinary rifle-bullet, that is, about half a mile a second. Now, he supposes, if a rifle a billion miles away were shot at a man (granting that the bullet would carry the distance), the intended victim and all his descendants for twentyfour generations would have plenty of time to pack up their household goods and move to the other side of the world to dodge the bullet, for it would not arrive for eight hundred years.

Assuming the question of a railway-train on a straight track, we are told:

If a railway-train, proceeding at the rate of a mile a minute, had been, at the dawn of the Christian era, started around the earth on a straight track, its object being to run 1,000,000,000 miles without stop, it would have been necessary for that train to circle the earth 40,000 times and it would not have come to the end of its journey until nearly New-year's eve, 1628-sixteen centuries after Christ was born. During its frantic flight it would have seen the Savior live and die; Rome rise, flourish, and decay; Britain discovered and vanquished by the Roman legions, and London and Paris built. It would have proceeded on its journey throughout the dark ages. It would have witnessed the birth of Columbus, the discovery of America, and have a couple of hundred years yet to continue.

In the ordinary box of matches there are fty sticks. If a consignment of 1,000,000,-000 were ordered from the manufacturer. the boxes in which they were packed would make a pile 158 miles in height. Packed in freight-cars, they would fill twelve to the roofs. To box them alone, not to take into consideration the labor of making and labeling the boxes, 1,000 girls would be kept busy a month, working in eight-hour shifts.

On the entire surface of the earth there are but a comparatively few more than 1,000,000,000 human beings. Yet science assures us that for untold ages they have been increasing with steady regularity.

Keep the Handy Oil Can Handy!

The pointed spout puts a drop or more of good, pure 3-in-One Oil just where it's needed. SPICE OF LIFE

Mere Man .- " Did Fussleigh take his misfortune like a man?"

"Precisely. He blamed it all on his wife."-Tit-Bits.

Prominent. - Hokus - "Is Harduppe pretty well known in your town?"

Pokus-" I should say he is. He's so well known he can't even borrow an umbrella."-New York Times.

Truthful.-" What is bread worth, today?" she asked, pointing to a loaf about the size of a biscuit.

"Worth about two cents, lady," responded the truthful grocer, "but we're charging ten."-Puck.

At the Tea.-Two Ladies-" Do you believe in reincarnation?"

PRODIGAL SON-" Well, when I left here, twenty years ago, you girls were getting along toward thirty, and now I find you about eighteen."-Life.

Eyeball or Highball.—An old Scotsman was threatened with blindness if he did not give up drinking.

"Now, McTavish," said the doctor, "it's like this: You've either to stop the whisky or lose your eyesight, and you must choose."

"Ay, weel, doctor," said McTavish,
"I'm an auld man noo, an' I was thinkin' I ha'e seen about everything worth seein'." -Tit-Bits.

Couldn't Qualify. - Pengy - " Daddy, what did the Dead Sea die of? "

DADDY—" Oh, I don't know, dear."
PEGGY—" Daddy, where do the Zeppelins start from?"

Dappy—"I don't know."
Proor—" Daddy, when will the war end? "

DADDY-" I don't know."

Proor-" I say, Daddy, who made you an editor? "-The Sketch.

De Mortibus.-Upon the recent death in a Western town of a politician, who, at one time, served his country in a very high legislative place, a number of newspaper men were collaborating on an obituary notice.

"What shall we say of the former Senator?" asked one of the men.

"Oh, just put down that he was always faithful to his trust."

"And," queried a cynical member of the group, "shall we mention the name of the trust? "-Puck.

His Method.—Two Tommies were strolling idly along the street when they chanced to gaze into an attractive shop window.

Being soldiers, they both had an eve for a pretty girl, and there within the shop was a real winner.

"Sandy," whispered Mike, "shure, she's just the fairest colleen my eyes hiv iver rested on. It's mysilf that'll go in and buy something, an' perhaps she will have a smile for me."

His companion came from "ayont the Tweed," as his answer proved.

"I'll gang wi' ye," he said. "But, hoot, mon, ye neednae spend a bawbee. A' ye hev tae dae is tae ask her fur change o' a shillin'."-Tit-Bits.

CURRENT EVENTS

THE EUROPEAN WAR

THE RETREAT IN THE WEST

March 15.—The British troops in the Ancre sector occupy German trenches on a front of two and a half miles south and east of Bapaume, and begin to envelop Péronne, London announces.

March 16.—London reports that the British advance on the Somme continues.

March 17.—An extended German retreat begins on the West front, reports London. The French and British armies advance without resistance for from two to four miles on a front of thirty-five miles. The British occupy Le Transloy and the Grand and Petit Achiet-le-Grand; the French hold Roye.

March 18.—Péronne is occupied. The German retreat continues on a front of one hundred miles, to a depth of twelve miles. The French take Noyon and Nesle. It is now certain, says London, that the Germans are evacuating the entire Noyon salient and are falling back to the "Line," twenty-five miles to the rear of their former positions.

March 19.—The British and French continue to advance on a one-hundred-mile front, reports London. The French go forward from five to ten miles, the British from two to eight. Two hundred and fifty towns and villages have been occupied and 1,300 square miles rewon by the Entente since this retreat commenced.

March 20.—The Entente advance on the West front continues, altho at a slower rate. Fourteen more villages, including the railroad junction of Tergnier, are occupied. German armies are devastating the country on the line of their retreat.

March 21.—The German retreat almost reaches the "Hindenburg Line" and the armies are in touch about five miles from St. Quentin. Fifty-one villages are occupied by the Allies. There is increased patrol activity in Arras, announces London.

ITALIAN PRONT

March 16.—Austrians penetrate an Italian trench, but are driven out at night, says Rome.

March 17.—Rome announces that Austrian patrols are repulsed at many points.

March 21.—Austrians attack the Costabella line after a heavy bombardment with gas-shells, but are repulsed, announces Rome.

EASTERN FRONTS

Macedonia

March 15.—London reports an advance of 1,000 yards on a two-mile front near Doiran in the Macedonian theater.

March 16.—Berlin admits that the French, win some local successes west of Monastir on the Macedonian front.

March 17.—The British continue to advance in Macedonia, and occupy a railroad station, admits Berlin.

March 20.—French troops in Macedonia capture Hill 1248, two towns, and take 1,200 prisoners after a five-day assault, claim dispatches from London.

Turkish Campaign

March 16.—General Maude reports to London that the Turkish Army in

Mesopotamia is divided and in precipitate retreat.

March 18.-London announces three serious Turkish defeats. General Maude routs one Turkish army on the Tigris and pursues the stragglers fifty miles beyond Bagdad. In Persia the Russians cut off one army, and are twenty miles from the Mesopotamian border, threatening the Turkish rear. The Russian army in Armenia reports a Turkish defeat, and occupies the important city of Van.

March 19.—General Maude routs the Turkish army on the Diala, driving them toward the Russians, announces the British War-Office.

March 21.-London announces that the Russian Army crosses the Mesopo-tamian frontier, another Arabian sheik rises against the Turks, and that the Turkish army at Aden is cut off from

GENERAL

March 17.-London reports an air-raid on Kent, about eighty miles from London. Bombs were dropt without doing any damage.

The Zeppelin L-39 is shot down near Complegne, forty-five miles from Paris, reports the French War-Office. All the crew are killed.

Captain Guynemer brings down three German seroplanes in one day, raising his total to thirty-four, says Paris.

March 18.-During the week sixteen British ships of over 1,600 tonnage, and eight under, were sunk by U-boats. Nineteen vessels were unsuccessfully attacked, says the British Admiralty.

March 19.-The German Admiralty reports the sinking of 116,000 gross tons of shipping in the harred zone since the first of March.

The Dutch steamer Selien, earrying supplies for the Belgian Relief Commission, is shelled by a German submarice. Three officers and five men take to a life-boat and are drowned, says London.

London announces that in a German naval raid on Ramsgate a British destroyer was torpedoed.

March 20.-A French battle-ship is sunk by a U-boat, says Berlin.

March 21.-Reuter reports serious riots in Berlin over food-shortage. Frontier regiments are sent for to maintain order.

FOREIGN

THE BUSSIAN REVOLUTION

March 15.-The revolution in Russia is a complete success, reports Petrograd, after censoring all Russian news for three days. The members of the Duma, led by President Michael Rodzianko, refused to dissolve when ordered to do so by the Czar's ukase. The uprising begins with minor food-riots and laborstrikes, and rapidly wins over the soldiers stationed in Petrograd. The Czar abdicates the throne for himself and his small son, and it is said to have been offered the Grand Duke Michael by the Duma. The former pro-German Ministry has been thrown into prison and an entirely new Cabinet appointed. The new revolutionary provisional Government pledges itself to conduct the war vigorously.

March 16.—Petrograd reports that Grand Duke Michael has abdicated. The Government is vested in a Council of Ministers, chosen from the Duma. This Council pledges complete religious liberty and freedom of speech, political

MINUTES

you can dictate six letters, sign fifty letters, add seventy lines of figures.

What can you accomplish over

'phone in the same time?

The average man when making a toll or long distance telephone call speaks for only a minute and a half, but he pays for three minutes. This loss aggregates more than \$60,000,000 annually. Your share can be saved by the Phonometer costing only \$5.00. The Phonometer graphically shows the passing of every second without distracting attention from the conversation. It gives you a new conception of time—it enables you a new conversation of the passing of every second your pay for leisurely and in comfort to use every second you pay for, leisurely and in comfort—it cuts out hurry and makes telephoning 50% more efficient. Accurately checks excess and interruptions and prevents overcharges.

Because of these money saving efficiency increasing advantages, it is used by such firms as the General Electric Co., U. S. Rubber Co., Remington Typewriter Co., and thousands of others.

Keep a Phonometer on your desk. It is compact, accurate, guaranteed. Costs only \$5.00 and lasts a life-time. Send \$5.00 today and a Phonometer comes by next mail. If you don't think it a good investment, return it and get your money back. Do it ness.

amnesty, universal suffrage, and promises to prepare and convene a Constitutional Assembly based on universal suffrage, which will determine the form of the new Government.

Reuter's news agency reports that Great Britain, France, and Italy recognize the provisional Russian Government.

March 17.—The Grand Duke Michael Alexandrovitch accepts the throne. He declares that he does so only with the consent of the Russian people, and not until they establish by a plebiscite a new form of government and new fundamental laws. In the meantime, he requests the people to submit to the provisional Government, reports the semiofficial Petrograd Telegraphic Agency.

March 18.—The Russian armies in the field have enthusiastically supported the new Government, reports Petrograd through London.

The Holy Synod supports the "Government Constitute" and removes the Czar's chair from the conference-room, announces Petrograd.

The entire fleet and the fortresses of Viborg and Sveaborg, which have been holding out for the Czar, join the GovernmentConstitute, announces London. Copenhagen reports that large quantities of grain have reached Petrograd and prices are again normal.

Foreign Minister Miliukoff informs Russian diplomats that Russia will stay in the war to the end.

March 19.—A manifesto issued by the Russian Government Constitute pledges equality for all and extends freedom to all exiles.

According to the Russian correspondent of The Times, the new Government decides that no Romanoff can head the Russian Army.

March 20.—American Ambassador Francis reports that absolute quiet prevails in Petrograd and throughout Russia. There is no opposition to the Government Constitute, but whether there will be a republic or a constitutional monarchy is still uncertain, he says,

March 21.—Foreign Minister Miliukoff officially notifies the Allies of the abdication of Nicholas II., and the Government Constitute is unofficially recognized by the Entente Ambassadors, declares the London Times.

Premier Lvoff announces complete quiet in Russia. General political amnesty is proclaimed in a ukase, and the Finnish Constitution and Diet are confirmed, reports London.

The Russian Government Constitute orders the Czar and his consort brought to the palace at Tsarskoe Selo, where they shall reside till further orders, says Reuter's Petrograd correspondent.

GENERAL

March 15.—Paris announces that Admiral Lacaze, Minister of Marine in the French Cabinet, is appointed Minister of War to succeed Gen. Louis Lyautey.

March 16.—Rumors reach El Paso that General Obregon, former Minister of War, is joining a revolutionary coalition against Carranza.

March 17.—The French Cabinet, headed by Premier Aristide Briand, resigns, says Paris.

There is a food-shortage in Denmark owing to the interruption of trade with America, reports Copenhagen. The bread card-system will go into effect April 1. March 19.—The French inhabitants of the villages lately under German control say they would have starved had it not been for American aid, reports

Paris announces that a new French Cabinet has been formed, headed by Premier Alexandre Ribot.

March 20.—The British Imperial Council holds its first meeting in London. All the colonies save Australia are represented.

Irish Nationalists in Parliament, led by Mr. Dillon, threaten to oppose the Government unless the court-martial proceedings during the Sinn-Fein uprising are published.

Berlin reports via London that Phillip Scheidemann, Socialist leader in the Reichstag, demands Prussian election reforms, pointing to the example of Russia.

The Berlin Lokal Anzeiger admits the Russian revolution has strengthened the cause of the Entente.

DOMESTIC

THE CRISIS WITH GERMANT

March 16.—Ambassador Gerard replies to New York City's welcome by urging the United States to prepare for war.

March 18.—Three American steamships, the City of Memphis, the Illinois, and the Vigilancia, are sunk by German submarines. The vessels were manned almost entirely by Americans, and twenty-two men are still missing. Vigilancia was sunk unwarned. The two others were in ballast, returning to the United States.

March 19.—Plymouth reports that fifteen men, some of them Americans, were drowned when the Vigilancia was sunk yesterday.

President Wilson gives orders to the Navy to prepare for action, and requests Secretary Daniels to use the emergency fund to hasten the construction of submarine-chasers.

Major-General Barry suspends the de-mobilization of the National Guard in the Central Department until further

Seven interned German seamen from the commerce-raiders Kronprinz Wilhelm and Prinz Kilel Friedrich attempt to make their escape, but all except two are recaptured.

The Massachusetts legislature passes an emergency defense appropriation of \$1,000,000.

March 20.—Washington officials are said to be of the opinion that a state of war exists between Germany and the United States in spite of the technicality of armed neutrality. The Cabinet is reported to be in favor of an immediate call for Congress and the formal declaration of war.

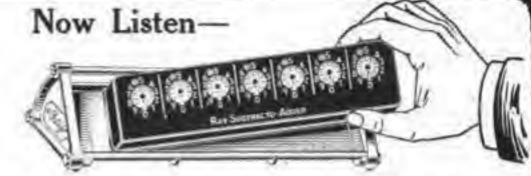

Six leading munitions-manufacturers are appointed by the Council for National Defense to prepare standards and devise methods for the supply of munitions.

Secretary McAdoo announces that the War-Risk Bureau will insure cargoes to European countries more generally. This means, it is said, that the ban on shipments of conditional contraband. munitions only excepted, is to be removed.

Secretary Daniels convenes the General Board of the Navy, and discusses plans for the cooperation of the Navy with the Entente.

agree to supply the Army and Navy with forty-five million pounds of copper at less than half the market price.

March 21.—President Wilson calls a special session of Congress for April 2, two weeks in advance of the date originally set, "to receive a communication concerning grave matters of national policy which should be taken immediately under consideration."

American destroyers leave port under scaled orders. According to Secretary Daniels, nothing must be printed on their whereabouts for the present.

March 21.—American journalists in Berlin are warned that Germany expects war with the United States within fortyeight hours, say dispatches from Amsterdam to London.

Albert Sander and Karl Wunnenberg plead guilty of plotting here to establish a German spy system in England.

Secretary Daniels announces that women may enroll in the Navy as nurses and clerks.

Germany and Austria-Hungary refuse a safe conduct to American ships delivering relief supplies to destitute Americans and Syrians in Beirut. Turkey has given such a pledge.

THE THREATENED STRIKE

March 15.—The nation-wide railroad strike is imminent, as a peace parley between the managers and the "Big Four" Brotherhoods is held without result.

March 16.—President Wilson appeals to both sides in the railroad controversy, asking them to adjust their differences, and the strike is postponed forty-eight hours.

March 17.—Trainmen quit work at many points, as they are not informed of the forty-eight-hour postponement. The mediators persuade the managers to agree that if the Supreme Court upholds the Adamson Law, it shall be interpreted according to the Brotherhoods' construction of it.

March 18.—In view of the impending warerisis, the railroad managers grant all the demands of the men. Four hundred thousand trainmen gain the eighthour day, and maintain the present wage-schedule and rate of overtime.

March 19.—The constitutionality of the Adamson Law is upheld in the Supreme Court by a vote of 5 to 4. The decision fixes a basic eight-hour day in computing wage-scales on interstate roads, holds that Congress has the right in emergency to fix wages and hours, and by the same principle the Court decides that employees engaged in interstate trade are public servants, and that they may be compelled by Congress to arbitrate their disputes with the roads.

GENERAL

March 15.—The Senate confirms the nomination of Dr. Cary T. Grayson to the office of Medical Director of the Navy, with rank of Rear-Admiral.

March 17.—John M. Studebaker, manufacturer of carriages and automobiles, dies in his home in Indiana at the age of eighty-four.

March 20.—The United States rejects Carranza's peace-plan. Mexico proposed to end the European War by placing an embargo on shipments of munitions.

"But," said the railroad president to the government auditor, "haven't you forgotten something?"

THE auditor, representing the United States Government, had been making a valuation of the entire railway system.

He had figured the cost of replacing its tracks; the value of its engines and cars and terminals; the value of its franchises and rights of way and good will.

He gathered the figures together and laid them on the railway president's desk.

"But," said the president, "haven't you forgotten something?"

"I think not," the auditor answered.

"How about our employees?" the president asked. "Have you valued them?"

The auditor was nettled. "Of course not," he replied, "why should I?"

"We have been more than sixty years in building that force," the president responded. "We should have to spend millions of dollars to replace it. Our employees are the most valuable asset we have."

Your employees also are your most valuable asset

It has taken you years to gather them together and train them. To replace them would be costly, if not impossible.

You can insure your buildings and raw mate-

rials; you have insured them.

Have you thought of insuring your men and women.

You can insure their enthusiasm and their loyalty. You can, by a group insurance policy, covering them all, give them a powerful added reason for wanting to remain permanently in your employ.

The largest, most successful employers in the country have looked ahead.

> In these days of prosperity and large earnings they have taken out group insurance policies covering all their employees.

Your company belongs side by side with successful, farseeing leaders like these.

STRIKING LAPSES AND BORROWINGS IN LIFE INSURANCE

ELMER E. RITTENHOUSE, in a recent address on the present era as an era of great extravagance, gave some striking figures as to the number of lapsed and surrendered policies that come into the experience of the large life-insurance companies and as to the extraordinary totals of loans they have made on policies in recent years. While the life-insurance business is "a great thrift-promoting institution," its operations disclose evidence of gross extravagance and improvidence among large numbers of people. Even after a person has had himself insured, it is far too often a great task to prevail upon him to stay insured. The same improvident tendency, so prevalent among us, induces many already insured to let their policies lapse or to abandon their insurance altogether. While some of these lapses are due to financial reverses, the most of them are cases where the practise of real economy would have prevented loss. Following is a table presented by Mr. Rittenhouse to show the new business written and the old business lost by lapses and surrenders during the past thirty years by the companies that make reports to the New York State Insurance Department:

For	New Insurpace Written, Multima	Lust by Layer and Surtender, Millims	Ratio Loss to See Insurance, Pet Cent.
1965	8327	\$123	37.6
10,07,111	7.86	240	33.1
1665	7101	415	54.4
(SORT)	1.230	425	04.10
1916.	3,412	644	41.2
Pripa	1,351	514	87.7
1915	1,926	-515	42.4

In his comments on these figures, Mr. Rittenhouse notes that extraordinary progress in American life insurance has been made "in spite of the fact that in many years, owing to the lapsing habit, it had to advance three steps to get ahead two." In some years the increase was "cut in half by the same cause." An estimate shows that it "cost policy-holders over twenty-eight million dollars to put on the books the 818 million dollars of insurance which they voluntarily abandoned in 1915."

Another impressive evidence of "the tendency of people to succumb to the temptation to withdraw and spend savings which they have deposited" was shown by Mr. Rittenhouse in "the extraordinary increase in the money borrowed by policyholders from their insurance reserves during recent years." Following is a table which relates to all American companies:

Year	Lucia to Puliry-halders	Per Cent. of Louis In Reserve
lest lan	\$19,903,212 25,524,539 88,500,575	3.6
1946 1940 1915	225,346,149 F91,046,534 779,636,369	9 8 15 4 17 9

Mr. Rittenhouse remarks that in thus withdrawing their reserves, policy-holders have in effect been borrowing from the widow and orphan. Only about 10 per cent, of these loans are ever repaid, and, therefore, must be deducted from the insurance money when the claim is paid.

Other points made by Mr. Rittenhouse in his address were these:

"The amount spent annually by our people for automobiles would give every married woman in the United States, rich and poor alike, \$1,000 of life-insurance protection. The money saved from a 30 per cent, reduction in the yearly consumption of intoxicating drinks, tobacco, jewelry, and confectionery, would give every married woman in the United States \$2,000 of life-insurance protection. The total amount spent annually for intoxicating drinks would buy each married woman in the United States, \$3,500 of life insurance. Every insurable adult person in the United States could have an average of \$1,000 of life insurance by saving the price of a daily ten-cent eigar.

In spite of these facts it remains true that, with the possibility for almost any man to make a living and save something out of it in this country, "we have an excessive number of people who are living up to their entire earnings; many living beyond their means and mortgaging their future earning power in the pursuit of pleasure and luxury." Men in this country "have a horror of being charged with stinginess or miserliness." And so, to guard against the humiliating disgrace of being accused of conserving their earnings, they "freely dissipate the fruits of their labor." When the inevitable day of reckoning comes, and they are minus earning power, "their pride and independence is suddenly changed to humiliation and dependence upon others for their daily bread." The result is that "scattered throughout the homes of our land, from miserable shacks to humble and pretentious cottages and dwellings, and even in mansions, are thousands of dependent people who have passed out of their earning period financially helpless." With all our wealth, pride, and independence, we have "a large number of men who are willing to leave their families to eat the bread of charity from the reluctant hands of relatives or of the State rather than to practise a little economy for future protection.'

ERIE'S BETTERMENTS SINCE 1901

President Underwood, of the Erie Railroad, recently prepared an interesting statement as to what his road has spent for betterments since 1901. In 1916, he said, the net income of the road was over \$6,000,000, notwithstanding expenditures for maintenance of equipment exceeded those for 1915 by more than \$3,000,000. The larger expenditures for 1916 were made "in order to increase the efficiency and capacity of the road's equipment and to better enable it to handle its largely increased and growing business, which required that all its equipment be made available for use." Notwithstanding this expenditure, the company's debit balance for hire of freight-cars in 1916 was over \$1,300,000 in excess of such debit balance for 1915, "largely owing to the congestion of terminals and yards-particularly in the East-in connection with the unusual difficulties in handling export freight, which conditions are regarded as temporary and

\$2,000,000

First Mortgage 6% Serial Bonds

(Safeguarded Under the Straus Plan)

Secured by

Huntington, Green and Maryland Hotels

Pasadena, Cal.

(Owned and Operated by California Hotel Co.)

Dated March 15th, 1917. Interest Coupons due May 1st and November 1st. Principal and Interest Payable at the office of S. W. Straus & Co., Inc. Denominations \$5,000, \$1,000 and \$500. Trustee, Mr. S. W. Straus.

SECURITY—The land and buildings comprising the Huntington, Green and Maryland Hotels, Pasadena, California. These three hotels are owned and operated by the California Hotel Co., and form one of the most firmly established, most popular, and most profitable hotel properties in the United States, known all over the country.

LOCATION—Pasadena is one of the nation's garden spots and a mecca for thousands of visitors to California each year, assuring constant patronage of these hotels.

VALUATION -Our valuation of the property, based on appraisals by several banks and independent real estate experts, is \$4,287,000, more than double the amount of the bonds.

EARNINGS—Based on past profits, we estimate the annual net earnings of the three hotels on a conservative basis at \$445,000, nearly four times the greatest annual interest charge.

SERIAL MATURITIES-The bonds mature in annual serial installments in one to ten years.

MONTHLY PAYMENTS—The issuing corporation must deposit each month one-twelfth of the current year's interest charge, to pay the semi-annual coupons. On February, March and April 1st, it must deposit one-third of the year's serial principal requirement. Thus a sinking fund is maintained to assure prompt payment of both principal and interest.

FEDERAL INCOME TAX-The mortgagor covenants to pay the normal federal income tax.

We offer the bonds with our unqualified recommendation as a thoroughly safeguarded investment for the funds of institutions and individuals. Orders may be telegraphed or cabled at our expense.

should be relieved in part during the current year."

Having presented these figures, Mr. Underwood proceeded to set forth what the road has done in betterments since 1901. It actually has expended in fifteen years, "in improving the physical property of the company, including double-tracking, improvement of grades and alinement, additional tracks and sidings, new equipment, etc., chargeable to capital," a sum in excess of \$119,000,000. During the same time the net debt in the hands of the public increased only about \$66,890,000, or about 56 per cent. of the amount expended for capital improvement. The balance of funds expended on the property "was derived from surplus income, substantially all of which has for many years been devoted to additions and improvements, and for the purchase of equipment." As to results, Mr. Underwood said:

"These expenditures have resulted in giving the company a line having the lowest grades on east-bound traffic of any of the roads operating between tide-water and the western gateways at Pittsburg. Buffalo, and the Ohio State line, and have made possible the increase in revenue freight-train lead from 375 tons in 1901 to 698 tons in 1916. This increased efficiency resulted in the moving in 1916 of freight-traffic yielding a revenue of \$57,104,902 with 13,988,697 freight-train miles (or \$4.08 revenue per train-mile), as compared with the movement in 1901 of freight-traffic yielding a revenue of \$29,-284,396 with 13,300,036 freight-train miles (or \$2.20 revenue per train-mile). During the period from 1902 to 1916 gross revenue has increased from about \$41,000,000 for the fiscal year ended June 30, 1902, to over \$74,000,000 for the fiscal year ended December 31, 1916, or more than 80 per cent., while the revenue train-mileage increased but slightly over 12 per cent."

AS TO SOME OF THE STANDARD RAILS

A reader of The Wall Street Journal, owning some shares of Northern Pacific, bought in 1910 at 136, and some Great Northern preferred, bought at 124, recently asked the editor if in his judgment it "would be desirable to lower the average by buying Northern Pacific around 104 and Great Northern around 113." The editor replied that in his opinion it "would be safe and prudent from an investment standpoint to buy more of these stocks at the present lower levels, but, on general principles, it would be well to diversify one's investments." As to diversification, he said:

"To that end you would do well to consider the stocks of well-established and wellmanaged roads in other parts of the country. At 103 and 113 Northern Pacific and Great Northern yield, as 7 per cent. stocks, 6.8 per cent. and 6.2 per cent. respectively, on the investment. Chesapeake & Ohio, which may be regarded as on a 4 per cent, basis, at 59 yields 6.8 per cent.; Baltimore & Ohio may be expected to continue to pay not less than 5 per cent. on par and yields 6.6 per cent. on a price of 76; Southern Pacific is well able to maintain its 6 per cent, rate and at 93 yields 6.5 per cent. Pennsylvania, one of the best investments among the rails, sells at 854 per \$50 share and yields 5.6 per cent. Union Pacific, paying 8 per cent., sells at 135, and Atchison, paying 6 per cent., with a fair prospect of a higher rate, sells at 102, both of these yielding 5.9 per cent., with Illinois Central yielding practically the same. Chicago & North Western at

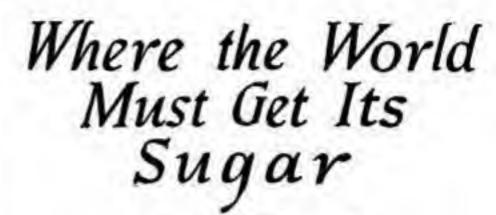

116, paying 7 per cent. and with a long record for regular dividend payments, yields 6 per cent. New York Central sells at 96, pays 5 per cent., yields 5.2 per cent. on the investment, earned 17.5 per cent. on its stock in 1916, and is not unlikely to pay 6 per cent. on par when the railroad horizon clears somewhat."

THE RISE IN RUSSIAN CREDIT AFTER THE REVOLUTION

Within a few hours of the overthrow of the Czar and his ministers, a notable result was the rise in Russian exchange in this country and of Russian national credit. Jacob H. Schiff, the famous Jewish banker of New York, in response to an inquiry from the New York Evening Post, declared that he was "quite convinced that, with the certainty of the development of the country's enormous resources, which, with the shackles removed from a great people, would follow present events, Russia would before long take rank financially among the most favored nations in the money markets of the world."

Elsewhere in financial circles the revolution was accepted as having at once brought a stimulus to dealings in ruble exchange and considerable relief to bankers who had been worrying for some time about Russia's credit. Business men and bankers, according to the New York Times Annalist, "had known for weeks that all was not well behind the barriers of silence along the borders of the late Czar's realms." Russia had not been paying her bills "with the promptness of early months of the war," and this, in spite of the fact that Russian balances in New York were known to be "substantial." All this indicated that it was not that Russia "could not liquidate many pressing obligations," but that officials "were not receiving directions from Petrograd to pay out money." Only a day before news came of the uprising rubles suddenly turned strong under active buying. Nothing was known in banking quarters as to the reason. It was evident only that the situation, whatever it was, had caused better feeling. The advance continued briskly. The check rate was at 28.15 cents. per ruble when dispatches arrived telling of the revolution. The day before quotations were as low as 27.70, which was the lowest of the year. The writer in The Annalist presented other interesting facts connected with this matter:

"London buying was said to have absorbed the greater part of ruble offerings on Wednesday, indicating presumably that news of the Russian developments was known in the British center fully twentyfour hours before the wireless message from Berlin reached New York. English bankers continued to buy during the balance of the week, and the result was to close rubles at the top quotation, the figure being 28.45 cents for checks. If the real situation could be learned here, it is possible that traces of more anxiety over Russian finances previous to the revolt would be uncovered than there were imagined by the financial district generally. Russia has big contracts for supplies in the hands of manufacturers, including shells, clothing, and other goods for the armies. The actual result was just the opposite from that which caused worry. The cabled statements of the Duma leaders indicated that the war was to be prest with greater vigor than before, and as the Duma's personnel was substantially the same as that which voted the purchases and

HIGH PRICES AS A PART OF OUR INCREASE IN EXPORTS

As pointed out in the New York Times Annalist, computations show that the increase in our foreign export trade for thirty months embraced, as to volume, \$3,371,000,000, and as to a rise in prices, \$1,441,000,000; that is, more than onefourth of the increase was due to higher prices. While, in the more recent of these thirty months, the total has continued to increase, the quantity has increased but slightly, the real cause of the increase being a continual rise in prices. The fact is, as the writer points out, that if the goods exported from the United States since the outbreak of the war had gone out at pre-war prices our total exports since July 30, 1914, would have been \$1,441,077,344 smaller than they actually were, which is a measure of the part that rising prices have played in swelling our exports. The following table presents the figures in detail:

Geo-Traction	Artual Value	Estimated Value at
	Experts	Pre-War Priva
August	\$15G,36T,494	\$109,200,000

Total	\$10,562,177,344	\$9,121,100,000
Extension		

The effect of the rise in prices has been cumulative. With all sorts of commodities prices, with few interruptions, have been rising for a long time. At the present level our exports would, in fact, show an increase of from 40 to 45 per cent, in value over pre-war exports without any increase whatever in quantity." For the entire thirty-month period, the increase in exports, due to price, is in the neighborhood of 14 per cent. The writer's calculations are based on Dun's index-number of commodity prices covering a wide range of goods. Seventy-five commodities for which the Department of Commerce regularly reports monthly export prices show practically the same increases.

B. F. OWEN & CO., Printers READING, PA., U.S.A. Established 1857

Swoboda, himself, is a wonderful example of what Conscious Evolution can accomplish. As Swoboda gains in years, he grows younger in enthusiasm, younger in vitality, younger in health; he is becoming stronger, more energetic, more confident, more dominant and more alive by capitalizing his creative powers through Con-scious Evolution. What Swoboda is accomplishing for himself you too can accomplish every individual can accomplish, for every individual is governed by the same laws and principles, and every individual has it within himself to make use of these laws and principles. Swoboda's mind and body are so alert and so active that in his presence one feels completely overpowered. His personality dominates everything with which it comes in contact; yet Swoboda is real!—there is absolutely nothing mysterious about him. He knows not what fatigue is—he is a tireless worker. He delights in making sick people well and weak people strong. He loves his work because he feels he is of benefit to humanity making a better, more vital, more potent race of men and women.

Over 260,000 Followers!

25,000 in New Yord 14,000 in Chicago 1,200 in Cincinnati 15,000 in Philadelphia 2,000 in Les Angeles 1,000 in Pittsburgh 25,000 in England 4,000 in St. Louis 162,000 in other places

Total, 262,000 Men and Women

Conscious Evolution has fullowers all over the world, in all countries of the globe. Swobods has followers in Fiji Island, in Java, in New Zesland, in Austria, in the Philippines, in China, in Japan, in Brazil, in Argentina, in Bolivia, and in all of the Southern and Central American countries as well as in Canada and Mexico.

WHAT OTHERS HAVE TO SAY

"Can't describe the satisfaction I feel."
"Worth more than a thousand dollars to me in increased mental

"I have been enabled by your system to do work of mental char-cher previously impossible for me.
"I was very skeptical, now am pleased with results; have gained

17 pounds.

The very first lessons began to work reagic. In my gratifude I am selling my croaking and complaining friends. Try Swobods.

"Words cannot explain the new live it imports both to body

nd brain.

"It reduced my weight 29 pounds, increased my thest expansion inches, reduced my waist 6 inches.

"I cannot recommend your system too highly, and without flatters elive that its propagation has been of great benefit to the health.

believe that its propagation has been or great owners as of the country.

"My reserve force makes me feel that nothing is impossible, my capacity both physically and mentally is increasing daily." I have heard your system highly reco. mended for years, but I did not realize the effectiveness of it until I tried it. I am glad indeed that I am now taking it.

"Your system developed me most wonderfully."

"I think your system is wonderful. I thought I was in the best of physical health before I wrote for your course, but I can now note the greatest improvement even in this short time. I cannot recommend your system too highly. Do not heatate to refer to me."

Why Not Live the Thoroughly Successful Life?

Successful in Health, Successful in Business, Successful in Living and Enjoying Power, Successful in Every Way

F someone told you, and proved to you, that you are only half as alive as you must be to realize the joys and benefits of living in full; and that you are only half as well as you should be, half as vigorous as you can be, half as ambitious as you may be, and only half as well developed as you ought to be - you would be amazed, yet this is true!

The fact is that no matter who you are, whether you are young or old, weak or strong, rich or poor, I can prove to you readily by demonstration that you are leading an interior life, and I want the opportunity to show you the way in which you may completely and easily, without inconvenience or loss of time, come in possession of new life, vigor, energy, development and a higher realization of life, success and happiness.

Become Superior to Other Men

The Swoboda System can make a better buman being of you, physically, mentally, and in every way. It creates a greater activ-ity of the forces of life which in you are partially dormant, thus compelling them to become more alive and positive, enabling you to grow and evolutionize to a higher state of perfection. The Swoboda System can do more for you than you can imagine. It can so vitalize every organ, tissue and cell of your body as to make the mere act of living a joy. It can give you an intense, thrilling and pulsating nature. It can increase your very life. I not only promise

Why Take Less Than Your Full Share of Life and Pleasure?

Are you living a full and successful life? Why not always be at your best?—thoroughly well, virile, energetic. Why not invest in yourself and make the most of your every opportunity? It is easy when you know how. The Swoboda System points the way. It requires no drugs, no appliances, no dieting, no study, no loss of time, no special bathing; there is nothing to worry you. It gives ideal mental and physical conditions without inconvenience

The Swoboda System of Conscious Evolution

is no experiment. I am giving it successfully to pupils all over the world. I have among my pupils hundreds of doctors, judges, senators, members of cabinet, ambassadors, governors, thousands of busi-ness and professional men, farmers, mechanics and laborers, and almost an equal number of women - more than two hundred and sixty-two thousand people have profited through this system.

Your Earning Power

your success depend entirely upon your energy, health, vitality, memory and will power. Without these, all knowledge becomes of small value, for it cannot be put into active use. The Swoboda System can make you tireless, improve your memory, intensity your will power, and make you physically just as you ought to be. I promise it.

MY NEW COPYRIGHTED BOOK IS FREE

Swoboda System is as Effective for Women for

It explains the SWOBODA SYSTEM OF CONSCIOUS EVOLUTION and the human body as it has never been explained before. It will startle, educate and enlighten you.

My book is not a dry treatise on anatomy and physiology. It tells in a highly interesting and simple manner just what you have always wanted to know about yourself.

You will cherish this book for having given you the first real understanding of your body and mind. It shows how you may be able to obtain a superior life; It explains how you may make use of natural laws for your own advantage.

My hook will give you a better understanding of pourself than you could obtain from a college course. The information which it imparts cannot be obtained elsewhere at any price. It shows the unlimited possibilities for you through conscious evolution of your cells; it explains my discoveries and what they are doing for men and women. Thousands have advanced themselves in every way through a better realisation and conscious use of the principles which I have discovered and which I disclose in my book. It also explains the DANGERS OF EXERCISE and of EXCESSIVE DEEP BREATHING.

Unless you already know all about the SWOBODA SYSTEM OF CONSCIOUS EVOLUTION for men and women, you should lose no time in securing my tree book. It will give you information which you will value, because it will open new avenues through which you may become successful in satisfying your most ALDES P. I offer my System on a basis which makes it impossible for you to lose a single penny. My guarantee is startling, specific, positive and traud-proof. **SWOBODA** 2040 Amilia Bidg. THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary is remembed as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"J. P. A.," Boone, N. C.—"Is it correct to say:
"He married a widow woman?" If not, why? If
correct, on what grounds can it be defended?
If incorrect, what is it called—redundancy,
tautology, or what?"

The phrase "widow woman." altho inelegant, is grammatically correct. But the use of the word "woman" in such construction can not be condemned as producing tautology or redundance without a knowledge of the context. The phrase is in common use in more than twenty English counties: in Edinburgh, Forfar, and Hirkcudbright, Scotland; and in County Cavan and Ulster, Ireland. There are in Great Britain and Ireland such phrases as widow-body, widow-gentleman, widow-man, widow-wife, and widow-woman, so that if any one used the word widow without the qualifying term, as is very commonly done in the regions referred to, there would be no means of determining the sex of the person spoken of.

"W. A. K." New York, —"Is Robert Louis Stevenson's story 'Treasure Island' founded upon fact, or is it a romance of Stevenson's imagination?"

According to Sir Sidney Colvin, "in this story the force of invention and vividness of narrative

A delightful book of recreation outdoors as enjoyed by the people in and around Paris. Numerous illustrations. 12mo, cloth, \$1,50.

FUNK & WAGNALLS COMPANY, 354 Fourth Ave., New York

appeal to every reader" and the story has taken its place in literature "as a classic story of pirate and mutineer adventure." The "force of invention," emphasized by Sir Sidney, caused such "scorn for the tricks of the trade that the eye can not travel over the print with speed enough to keep pace with the breathless interest." "Treasure Island" first appeared as a serial under the title "The Sea-Cook," more than thirty years ago: in 1883 it saw the light under the new name. The story relates a series of incidents that closely resemble facts recorded by Capt. Woodes Rogers in his "Cruising Voyage Round the World," an extremely rare work, published in 1712.

In May, 1703, Capt. William Dampler, British bueaneer and navigator, was put in command of two Government privateers and ordered on an expedition to the South Seas. Among the members of his crew, he numbered Alexander Selkirk whom he had engaged as sail-master of one of the vessels, the Cinque Porte, of which Thomas Stradling was captain. During the cruise, which lasted from 1703 to 1707, several prizes were taken, but on the whole the expedition met with "grievous success," for in 1704 Stradling and Dampier parted. In September of that year, the Cinque Porte put into Juan Fernandez, an island west of Chile, and recovered two men who had accidentally been left on the island some muntishefore. While there Solkirk picked a quarret with Stradling the former threw up his job and determined to leave the ship. Stradling then had Solkirk and his effects landed on the outhabited island and there the latter stayed until rescued.

In 1708 Capt. Woodes Rogers, who had been appointed captain of the Durke and commander of an expedition consisting of two," private menoricants of Bristol, England, among whom were several Qualores, set all.

some merchants of Bristol, England, among whom were several Qualores, set all.

some mortants of Bristol, England, among whom were several Qualores, set all.

so the burke and the boules, stalk, some mortants of the boulds, and his private of the sexuals. In will be remembered that English propose of seeking treasure. Day for the purpose of seeking treasure. Day for the purpose of seeking treasure, and the rest "tailors, tinkers, pediers, findlers, and haymakees—a crew notable for its more of the sease of the captures and the rest "tailors, tinkers, pediers, findlers, and haymakees—a crew notable for leaving Cork, steered for the Canary Islands, but on the way Rogers had to suppress a mulney, not unlike the task that beful Captain Smollet in the story, and setting the ring-leader had "one of his chief comrades whip him, which method I thought best for breaking any unlawful friendship among

of Captain Rogers's adventure was a wound in the heel (it will be remembered that Captain Smollett also was wounded), and two hundred thousand pounds, that of Captain Smollett was a "great mass of gold. . . English. French. Spanish. Portuguese, Georges, louises, doubloons, and double guineas . . . nearly every variety of money in the world."

Up to Him .- " Are you sure Miss Richly is not in? " he questioned.

"Do you doubt her word, sir?" replied the maid .- Dallas News.
